COK-H06715-194-RP325

NATURE

A WEEKLY JOURNAL OF SCIENCE

"To the solid ground
Of nature trusts the Mind that builds for aye"—WORDSWORTH

PHYSICS DEPARTMENTAL LIBRARY.

RGP
12/8/61.

Volume 190

APRIL 1, 1961, to JUNE 24, 1961

194

LONDON
MACMILLAN AND CO., LTD.
NEW YORK: ST. MARTIN'S PRESS, INC.

INDEX

AASA, Roland, and others : Electron Spin Resonance Line-Widths in Solutions of Copper and Silver Dithiocarbamates, 258
Abbie, Prof. A. A. : Physical Anthropology of Australian Aborigines, 972
Abdomen (Calcified Asymmetrical) : A Bathyal-abyssal Hermit Crab with a (Torben Wolff), 931
Abelian Groups (L. Fuchs), *review* by Dr. Hanna Neumann, 571
Abnormal Haemoglobins : Absence of, in Colombian Tunebo Indians (Tullio Arends), 93
Abnormalities in the Fine Structure of the Neuromuscular Junction in Patients with Myasthenia Gravis (Dr. S. I. Zacks, W. C. Bauer and J. M. Blumberg), 280
Abnormalities (Congenital), in Mouse and Man : Effects of Maternal Age on the Incidence of (Dr. W. F. Bodmer), 1134
Aborigines (Australian) : Physical Anthropology of (Prof. A. A. Abbie), 972
Abrams, Leroy, and Ferris, Roxana Stinchfield : Illustrated Flora of the Pacific States—Washington, Oregon and California, Vol. 4, Bignoniaceae to Compositae (Bignonias to Sunflowers), (Roxana Stinchfield Ferris), *review* by G. P. DeWolf, 49
Absence of Abnormal Haemoglobins in Colombian Tunebo Indians (Tullio Arends), 93
Absence of Chitinase in *Limnoria* (J. Ross Stevenson), 463
Absence of Phosphatase Repression by Inorganic Phosphate in some Micro-organisms (Mau-Huai Kuo and Prof. Harold J. Blumenthal), 29
Absence of Photosynthesis : Gibberellin Action on Growth of Seedlings in the (Alan H. Haber, William L. Carrier and N. Jean Enochs), 1034
Absence of Thyroid Auto-Antibody in Experimental Radiation Thyroiditis (Dr. Geoffrey Taylor and G. Sclare), 183
Absence (Presence and), of Boron : Effects of Quality of Light on Development of Roots on Dwarf Bean Hypocotyls in (Dr. E. C. Humphries), 701
Absolute Measurement of Average Energy lost by Very Soft X-Rays per Ion Pair in Air (Prof. B. Rajewsky and Dr. D. Lang), 249
Absorption of Amniotic Fluid in the Gut of Foetal Sheep (G. H. Wright and Dr. D. A. Nixon), 816
Absorption (Gastro-Intestinal), of Heparin and Synthetic Heparinoids (E. Windsor and G. E. Cronheim), 263
Absorption (Resonance), in Nuclear Reactors (Lawrence Dresner), *review* by J. Codd, 1046
Absorption Events (Polar Cap) : Enhancement of Night-Sky Molecular Nitrogen Emission in (B. P. Sandford), 245
Abstract Set Theory (Prof. Abraham Fraenkel), second edition, *review* by Dr. R. G. Cooke, 1047
Abstracts of Human Developmental Biology (Excerpta Medica Foundation), Vol. 1, No. 1, 133
Abwasser-Biologie (Frischwasser- und) : Handbuch der (Prof. Hans Liebmann), Band 2, *review* by Dr. H. B. N. Hynes, 1043
Abyssal Hill on the Floor of the North Atlantic Ocean : Lavas from an (D. H. Matthews), 158
Acacia georginae : Isolation of the Toxic Principle in (P. B. Oelrichs and T. McEwan), 808
Academic Freedom in South Africa, 747
Academy of Sciences of the U.S.S.R. : The Cathode Ray Tube Memory of the High Speed Electronic Computer of the (V. N. Laut and L. A. Lyubovich), translated from the Russian by Ruth Feinstein ; edited by F. A. Sowan, *review* by J. C. Cluley, 383
  Information Bulletin I.G.Y., No. 8, 493
  Bibliography of Publications relating to the I.G.Y., 493
  Retirement of Academician A. N. Nesmeyanov as president, 959
  Election of Academician N. Keldysh as president, 959
  Mineraly (Minerals, a Reference Book), Vol. 1, *review* by Prof. C. F. Davidson, 1047
  Yadernaya Geokhronologiya (Nuclear Geochronology), (Dr. I. E. Starik), 1062
Acarapis woodi (Rennie) : Distribution of (A. R. Brimblecombe and C. Roff), 561
Acclimatization (Seasonal), of Oxygen Consumption to Temperature in a Tropical Poikilotherm, the Earthworm, *Megascolex mauritii* (K. Saroja), 930
Accretion (Terrestrial), from the Solar Wind (C. M. de Turville), 156
Accumulation in Biological Systems : Transport and (Dr. E. J. Harris), second edition, *review* by Dr. I. M. Glynn, 848
Accumulation of Indole Compounds in Cultures of *Chromobacterium violaceum* (Prof. William A. Corpe), 190
Accuracy in Gas Chromatographic Analysis : Precision and (R. S. Evans and P. G. W. Scott), 710
Acenaphthene : Detection of Trace Quantities of, by Gas Chromatography (Prof. W. G. H. Edwards, J. G. Clarke and A. G. Williamson), 531
Acetate (Linalyl), Linalol and Terpinyl Acetate as Attractants of Larvae (Citral,) : (Food Selection by Silkworm Larvae, *Bombyx mori*), (Yasuji Hamamura and Ken-ichi Naito), 879
Acetate (Terpinyl), (Citral, Linalyl Acetate, Linalol and), as Attractants of Larvae (Food Selection by Silkworm Larvae, *Bombyx mori*), (Yasuji Hamamura and Ken-ichi Naito), 879
Acetate Metabolism in Sheep : An Effect of Glucose on (I. G. Jarrett and O. H. Filsell), 1114
Acetobacter melanogenum : Aspects of the Conversion of Glucose to α-Ketoglutarate in (Dr. D. H. Bone), 562
Acetophenetidin (Barbiturate, Salicylate and) : A New Technique of Chromatography and Ionophoresis on Ion-Exchange Paper—Application to the Separation of (Harold V. Street and Dr. S. K. Niyogi), 537
Acetophenetidin (Promazine, Quinine, Sulphacetamide and) : A New Technique of Chromatography and Ionophoresis on Ion-exchange Paper—Application to Separation of Compounds of Toxicological Interest—Separation of a Mixture of (Harold V. Street and Dr. S. K. Niyogi), 1199
Acetophenetidin and *p*-Acetylaminophenol (Barbiturate, Salicylate,) : A New Technique of Chromatography and Ionophoresis on Ion-exchange Paper—Application to Separation of (Harold V. Street and Dr. S. K. Niyogi), 718
Acetylacetonate (Nickel-(II)), in Solution : Trimerization of (Dr. D. P. Graddon and Dr. E. C. Watton), 906
p-Acetylaminophenol (Barbiturate, Salicylate, Acetophenetidin and) : A New Technique of Chromatography and Ionophoresis on Ion-exchange Paper—Application to Separation of (Harold V. Street and Dr. S. K. Niyogi), 718
Acetylase (Choline), in the Human Placenta at Different Stages of Development (Gordon Bull, Dr. Catherine Hebb and Dobrila Ratković), 1202
Acetylcholine : A Proposed Dual Neurohumoral Role of—its Functions at the Pre- and Post-Synaptic Sites (George B. Koelle), 208
Acetylcholine Responses of the Denervated Rat-Diaphragm Preparation : Influence of Gamma-Aminobutyric Acid on the (Dr. R. S. Watson), 724
Acetylcholine, Calcium and Depolarization : Interaction of, in the Contraction of Smooth Muscle (Dr. K. A. P. Edman and Dr. H. O. Schild), 350
Acetylcholinesterase and the Life-span of the Erythrocyte (J. Metz, N J. van Rensburg, K. Stevens and D. Hart), 1208
N-Acetylhexosamine ^{35}S-Sulphate Esters : *In vivo* Metabolism of (Dr. A. G. Lloyd), 914
N-Acetylhexosamines : Paper Chromatography of Hexosamines and (Dr. R. Heyworth, H. R. Perkins and P. G. Walker), 261
Acher, R., and others: A 'Natriferic' Principle other than Arginine-Vasotocin in the Frog Neurohypophysis, 828
Acheta : Termination of Diapause in, by Urea (T. W. Hogan), 367
Acid Complex (Steroid) : Formation of Helical Microfibrils from a (Dr. N. Ramanathan, A. L. Currie and J. Ross Colvin), 779
α_1-Acid Glycoprotein : Polymorphism of (K. Schmid and J. P. Binette), 630
Acid-Base Balance (Association of Clinical Biochemists Symposium on), 493
Acid-Base Reactions : The Possibility of Obtaining E.M.F. directly from—Electrodes of the Third Kind reversible to Alkaline Earth and other Ions (W. H. Beck), 712
Acoustics (Biological), Committee for, in collaboration with the British Institute of Recorded Sound : To set up a Library of Recorded Animal Sounds, 395
Acrania and Invertebrates : Occurrence of Catecholamines in (Prof. U. S. von Euler), 170
Acrylic Acid Excretion (Imidazole), in Kwaskiorkor (Dr. R. G. Whitehead and Dr. H. R. V. Arnstein), 1105
Action of Bovine Pancreatic Ribonuclease : The Active Site and Mechanism of (Dorothy Findlay, D. G. Herries, Dr. A. P. Mathias, Dr. B. R. Rabin and C. A. Ross), 781
Action of Interferon : Inhibition by Cortisone of the Synthesis and (Dr. Edwin D. Kilbourne, K. Marilyn Smart and Barbara Ann Pokorny), 650
Action of Mycophenolic Acid on Unstable Diploids of *Penicillium chrysogenum* (Dr. A. Ballio and Dr. G. Sermonti), 108
Action of Proteolytic Enzymes on the Human Erythrocyte Surface (Dr. G. Uhlenbruck), 181
Action of Substrate and Hormonal Inducers of Rat Liver Tryptophan Pyrrolase : A Difference between the Modes of (Dr. Olga Greengard and Prof. Philip Feigelson), 446
Action (Antileukaemic), of Reserpine : Effect of Iproniazid on the (Richard A. Salvador, Stewart R. Humphreys, Robert Main Burton and Abraham Goldin), 723
Action (Anti-tumoral), of New Sarcomycin Derivatives (Prof. A. Caputo, B. Giovanella and R. Giuliano), 819
Action (Gene), in the X-Chromosome of the Mouse (*Mus musculus* L.), (Mary F. Lyon), 372
Action (Gibberellin), on Growth of Seedlings in the Absence of Photosynthesis (Alan H. Haber, William L. Carrier and N. Jean Enochs), 1034
Action (Hydrolytic Enzyme) : Molecular Mechanisms for (Richard M. Krupka and Keith J. Laidler), 916
Action (Pharmacological), of some Methoxyindolealkylamines (Peter K Gessner, Dr. William M. McIsaac and Irvine H. Page), 179
Action Pattern of β-Amylase (Dexter French), 445
Activated Natural Crystals (Dr. Giovanna Mayr), 229
Activation of Ferritin Synthesis and Induction of Changes in Fine Structure in HeLa Cells *in vitro*—Implications for Protein Synthesis (Prof. G. W. Richter), 413
Activation of Hurain by Bivalent Iron (Dinah Sharon de Seidl and Karl Gaede), 1112
Activation of Spermatozoa and Development of Spermatophores in the Cockchafer : Use of an Artificial Spermatophore in the Study of (Dr. V. Landa), 935
Active Centre of Carboxypeptidase *A* : Nitrogen and Sulphur at the (Dr. Bert L. Vallee, Dr. Robert J. P. Williams and Dr. Joseph E. Coleman), 633
Active Site and Mechanism of Action of Bovine Pancreatic Ribonuclease (Dorothy Findlay, D. G. Herries, Dr. A. P. Mathias, Dr. B. R. Rabin and C. A. Ross), 781

Active Transport of Foreign Pyrimidines across the Intestinal Epithelium (Dr. Lewis S. Schanker and Dr. John J. Jeffrey), 727
Active Transport of Sodium from Sodium-rich Frog Muscle by Insulin and Lactate : Stimulation of (Roderick P. Kernan), 347
Activity (Aldolase), in Blood Serum : Increase of, following Irradiation (Dr. B. Dalos), 817
Activity (Anti-Viral Chemotherapeutic), against Ectromelia Infection : Derivatives of Isatin β-Thiosemicarbazone with (Dr. D. J. Bauer and Dr. P. W. Sadler), 1167
Activity (Biological), of some Humic Fractions isolated by means of Partition Chromatography (Prof. A. Paszewski, J. Trojanowski and A. Lobarzewska), 277
Activity (Carcinogenic), of Apocholic Acid (A. Lacassagne, Prof. N. P. Buu-Hoï and F. Zajdela), 1007
Activity (Catalytic), of Coloured Alkali Halides (Ian D. Gay and Prof. Kenneth E. Hayes), 256
Activity (Chitinoclastic), in the Luminous Bacteria (R. Spencer), 938
Activity (Cholinergic), of Hyoscyamine (Prof. A. Teitel), 814
Activity (Cyclical Feeding-), in Colonized Mosquitoes (Dr. J. D. Gillett), 881
Activity (Enzyme) : Determination of, by a Linear Measurement (Andrew G. Tsuk and Prof. Gerald Oster), 721
Activity (Glutamine Synthetase) : Is *Mycobacterium phlei* Glutamotransferase endowed with (Y. S. Halpern and Prof. Nathan Grossowicz), 812
Activity (Karroo Igneous), and Tectonics in South-east Southern Rhodesia (K. G. Cox, J. R. Vail, L. J. Monkman and R. L. Johnson), 40 ; (D. N. Wood), 802
Activity (Mental) : Effects of, on Vestibular Nystagmus and the Electroencephalogram (William E. Collins, George H. Crampton and Jerome B. Posner), 194
Activity (Nitrate Reductase) : Effect of Water-soluble Polymers on (H. R. Schreiner and A. P. Rinfret), 1110
Activity (Non-specific Esterase), in Histiocytes (Syun Hosoda and Sadao Takase), 927
Activity (Paraphenylenediamine Oxidase), and Copper-Levels in Mammalian Plasmas (P. J. McCosker), 887
Activity (Phagocytic), of the Reticulo-Endothelial System : Effect of Dexamethasone on the (Prof. T. Nicol and C. Druce), 91
  Effect of Haemophagin on the (Prof. T. Nicol, P. McKelvie and C. Druce), 92
  Effect of *B.C.G.* (Prof. T. Nicol, P. McKelvie and C. G. Druce), 418
  Effect of Tri-*p*-anisylchloroethylene, Dienoestrol and Stilboestrol Diphosphate (Prof. T. Nicol, Dr. D. L. J. Bilbey and C. G. Druce), 419
Activity (Phagocytic), of the Reticulo-Endothelial System in Mice : Influence of a Liver Fraction on the (Prof. B. N. Halpern, C. Stiffel and J. Dedichen), 279
Activity (Phagocytic), in Squamous Epithelia and its Role in Cellular Susceptibility to Foot-and-Mouth Disease (Dr. H. Platt), 1075
Activity (Prolactin), of Human Growth Hormone (K. A. Ferguson and A. L. C. Wallace), 632
Activity (Protective), of Fractions of Tubercle Bacilli against Isologous Tumours in Mice (Dr. David W. Weiss, Rose S. Bonhag and Dr. Kenneth B. DeOme), 889
Activity (Proteolytic), of Crude Stem Extracts from Normal and Tumour Tissues of Plants (Prof. C. Gainor and F. D. Crisley), 1031
Activity (Wood-boring), of *Limnoria* (Isopoda) in relation to Oxygen Tension (Dr. S. K. Eltringham), 512
Activity-based Diffusion Coefficients for Liquid Solutions (F. A. L. Dullien and Prof. L. W. Shemilt), 526
Acute Digitalis Toxicity in Dogs : Œstrogen Protection against (Edward H. Grinnell, J. Raymond Johnson, James R. Rhone, Albert Tillotson, Jim Noffsinger and Dr. Max N. Huffman), 1117
Acute Effect of Three Antibiotics on Diuresis in the Rat (R. J. Girerd and C. L. Rassaert), 536
Ada, Dr. G. L., and Lind, Dr. Patricia E. : Neuraminidase in the Chorio-allantois of the Chick Embryo, 1169
Adams, P. J. : Exhibition of the Raw Materials of Ceramics, 310
Adamski, Tadeusz : Some Features of the Precipitation of Barium Chromate by an Extra-slow Technique, 524
Adaptive Euryhalinity in the Cyprinodont *Lebistes reticulatus* Peters (Dr. T. Mohsen and M. Emerit), 932
Addiction-producing Drugs (United Nations, World Health Organization, Technical Report No. 211, Eleventh Report of the Expert Committee on), 775
Adelman, Dr. William J., and Taylor, Dr. Robert E. : Leakage Current Rectification in the Squid Giant Axon, 883
Adenosine Triphosphate of Adrenal Chromaffin Granules : Incorporation of Phosphorus-32 into (W. H. Prusoff, Dr. H. Blaschko, Dr. Margery G. Ord and Dr. L. A. Stocken), 354
Adenosine Triphosphate- and Coenzyme *A*-dependent Decarboxylation of Oxalate by Extracts of Peas (John Giovanelli and Noel F. Tobin), 1006
Adhesion to Glass : Effect of Temperature on, and Histogenic Cohesion of Dissociated Cells (Prof. A. Moscona), 408
Adhesive Tape (Transparent) : Use of, in the Preparation of Microsections (D. S. Gowers and R. E. Miller), 424
Adjuvant (Freund) : Growth of Tumours in Rats fed with 4-Dimethylaminoazobenzene injected with Homogenized Tumour mixed with (Prof. Nikša Allegretti), 1207
Administered (Orally) S,β-Aminoethylisothiuronium.Br.HBr : Protective Effect of, against X-Radiation Death in Mice (Major M. P. Dacquisto and Capt. E. W. Blackburn), 270
Administration (Duodenal), of Highly Unsaturated Fatty Acids: Effect of, on Composition of Ruminant Depot Fat (Bridget M. Ogilvie, Prof. G. L. McClymont and Dr. F. B. Shorland), 725
Administration (Oral), of Cadmium : Serum Changes in the Rat following (D. J. Lawford), 815
Administration (Peripheral), of Flavins : Changes of Quantity of Flavin in the Brain after (Ikuko Nagatsu-Ishibashi, Toshiharu Nagatsu and Kunio Yagi), 728
Admission of Students : Third Report of an *ad hoc* Committee on Procedure for (Committee of Vice-Chancellors and Principals of the Universities of the United Kingdom), 401
Admission to Universities in Britain, 401
Adrenal Chromaffin Granules : Incorporation of Phosphorus-32 in Adenosine Triphosphate of (W. H. Prusoff, Dr. H. Blaschko, D Margery G. Ord and Dr. L. A. Stocken), 354
Adrenal Cortical Steroids : Reaction of Antimony Pentachloride with Pregnane-3α, 17α, 20α-Triol, Pregnane-3α, 17α, 20α-Triol-11-One and other (Capt. Robert H. Herman and Joseph Bruton), 444
Adrenal Gland of the Rat : Replacement of Adrenaline and Noradrenaline in the, following Depletion and Redepletion with Reserpine (Dr. B. A. Callingham and Dr. Monica Mann), 1201
Adrenalectomized Animals : Increased Toxicity of Serotonin in (Prof. S. Garattini, P. Gaiardoni, A. Mortari and V. Palma), 540
Adrenaline and Noradrenaline : Replacement of, in the Adrenal Gland of the Rat, following Depletion and Redepletion with Reserpine (Dr. B. A. Callingham and Dr. Monica Mann), 1201
Adrenocortical Function : Effect of Chronic High and Low Salt Intakes on, (Dr. Lewis K. Dahl, Lawrence Silver, Sanford Spraragen and Malcolm Smilay), 348
Adrenocorticotrophin and the Sugar-Level in Plasma in Young Fowls (Dr. D. J. Bell), 913
Adrian, Rt. Hon. Lord : *Obituary* of Prof. K. Koshtoyants, 958
Adsorbents in Enzyme Purification : Controlled Use of (Dr. I. T. Oliver), 810
Adult Cerebellum (Human), in Culture : Spontaneous Potentials from Explants of (Prof. A. W. B. Cunningham), 918
Adult Romney Ewes : Bundles of Follicles in (D. F. G. Orwin), 1026
Advance of Fluid Mechanics : The, *review* by Prof. P. A. Sheppard, 62
Advanced Study in the Behavioral Sciences, Center for : Conference on Behavior Genetics, 1156
Advanced Technology, College of (Birmingham) : Establishment by Joseph Lucas, Ltd., of the Joseph Lucas research fellowship in production engineering, 962
Advances in Analytical Chemistry, *review* by Dr. D. T. Lewis, 944
Advances in Analytical Chemistry and Instrumentation (edited by Charles N. Reilley), Vol. 1, *review* by Dr. D. T. Lewis, 944
Advances in Biochemistry : More Recent, *review* by Prof. D. C. Harrison, 569
Advances in Biochemistry : Recent (Prof. T. W. Goodwin), fourth edition, *review* by Prof. D. C. Harrison, 569
Advances in the Biochemistry of Glycogen and Starch : Recent (Dr. W. J. Whelan), 954
Advances in Biological and Medical Physics (edited by Cornelius A. Tobias and John H. Lawrence, assisted by Thomas L. Hayes), Vol. 7, *review* by Dr. N. M. Blackett, 74
Advances in Clinical Chemistry (edited by Harry Sobotka and C. P. Stewart), Vol. 3, *review* by Dr. J. N. Davidson, 74
Advances in Entomology : Recent, *review* by Harold Oldroyd, 945
Advances in Human Genetics : Recent (edited by Prof. L. S. Penrose, with the assistance of Helen Lang Brown), *review* by Prof. J. B. S. Haldane, 1042
Advances in Human Nutrition, with special reference to Clinical Medicine : Recent (Prof. J. F. Brock), *review* by Prof. J. Yudkin, 751
Advances in Organic Chemistry (edited by Ralph A. Raphael, Edward C. Taylor and Hans Wynberg), Vols. 1 and 2, *review* by Dr. J. Idris Jones, 56
Advances in Plant Physiology, *review* by Prof. Walter Stiles, 48
Advances in Polarography—Proceedings of the Second International Congress held at Cambridge, 1959 (edited by Ian S. Longmuir), *review* by Dr. D. T. Lewis, 476
Advances in the Radiation Chemistry of Aqueous Systems : Recent (Prof. Gabriel Stein), 16
Advantage (Heterozygote) : The Evolution of Overdominance—Natural Selection and (Dr. P. A. Parsons and Dr. W. F. Bodmer), 7
Advisory Council on Research and Development : Terms of reference, 1060
Advisory Council for Scientific Policy (Belgian) : First Annual Report (1959-60), 313
Advisory Council (National), on Education for Industry and Commerce : Organization of Sandwich Courses, 590
Aebi, Dr. A. (Haler, Dr. David, and) : A New, Highly Effective but Non-Toxic Antibacterial Substance, 734
Aedes (*Stegomyia*) *aegypti* (L.): Experimental Hybridization of, with *A.* (*S.*) *simpsoni* (Theobald), (G. A. H. McClelland), 369
Aerial Photographs in Geologic Interpretation and Mapping (Dr. Richard G. Ray), 1155
Aerobic Metabolism (Aortic), in Rats : Modification of, by Gonadectomy (Effect of Œstrogens on Atherosclerosis), (Dr. M. R. Malinow and Dr. J. A. Moguilevsky), 424
Aerodynamic Theory : Higher Approximations in (M. J. Lighthill), *review*, 118
Aerology : A Pioneer of—Prof. Vilho Väisälä, 1059
Aeronautical Multilingual Dictionary : AGARD (edited by G. H. Frénot and A. H. Holloway), *review* by Dr. D. Küchemann, 851
Aeronautical Research Council : Appointment of Prof. George Temple as chairman, 680
Aeronautical Society (Royal) : Election of Air Marshal Sir Owen Jones as president, 862
  Honorary Fellowship conferred on Sir Sydney Camm and on J. D. North, 862
  Honorary Companionship awarded to J. N. Toothill, 862
  Simms Gold Medal awarded to Prof. D. B. Spalding, 863
  George Taylor (Australia) Gold Medal awarded to A. J. Troughton, 863
  Edward Busk Memorial Prize awarded to C. Bourque and Prof. B. G. Newman, 863
  Orville Wright Prize awarded to Prof. W. H. Wittrick, 863
  Herbert Akroyd Stuart Memorial Prize awarded to J. S. Alford, 863
  Branch Prize awarded to Lieut.-Comdr. D. J. Whitehead, 863
  Usborne Memorial Prize awarded to T. W. F. Moore, 863
  Silver Medal awarded to R. Hafner, 863
  Bronze Medal awarded to L. Haworth, 863
  British Gold Medal for Aeronautics awarded to Dr. S. G. Hooker, 863
  R. P. Alston Medal awarded to R. P. Dickinson, 863
  Wakefield Gold Medal awarded to Dr. E. Eastwood, 863
  British Silver Medal for Aeronautics awarded to Pierre Satre, 863
  N. E. Rowe Medal awarded to J. Wilding and to W. Bishop, 863

INDEX

Aeronautics : Weather Forecasting for (Joseph J. George), *review*, 846
Aeronautics, College of (Cranfield) : Appointment of E. R. Norster and J. H. Dunmore to lectureships in aircraft propulsion, 218
  Appointment of H. B. Gatland to a lectureship in electrical engineering, 218
  Appointment of D. Hodgetts and G. H. Tidbury to lectureships in automobile engineering, 218
  Appointment of Dr. G. T. Csanady to a Senior Research Fellowship in the Department of Aerodynamics, 218
  Appointment of Dr. W. D. G. Bennett to a Senior Research Fellowship in the Department of Materials, 218
  Appointment of D. Hyde to a Research Fellowship in the Department of Flight, 218
  Appointment of A. Kaye to a Research Fellowship in the Department of Materials, 218
Affinities (Electron), of some Diatomic Molecules : Spectrophotometric Determination of the (J. Jortner and U. Sokolov), 1003
Afforestation of Open Land in National Parks : The Case for Control of (Standing Committee on National Parks of the Council for the Preservation of Rural England and Wales and the Joint Action Group for the Protection of Dartmoor and Exmoor), 496
Afforestation of Upland Heaths (J. W. L. Zehetmayr), 136
Africa South of the Sahara, Scientific Council for : Publication No. 52, Open Forests in Tropical Africa, 141
Africa (South) : Academic Freedom in, 747
  The Brandberg and other Rock-Shelter Paintings of the Union of (Revel Mason), 311
Africa (Tropical) : Open Forests in (Scientific Council for Africa South of the Sahara, Publication No. 52), 141
Africa (West) : Erythrocyte Glucose-6-Phosphate Dehydrogenase Deficiency in (Dr. A. C. Allison, L. J. Charles and I. A. McGregor), 1198
  Science in, 1
African Conference on Bilharziasis : Second (Lourenco Marques, 1960)—Report (United Nations, World Health Organization, Technical Report Series No. 204), 24
African (East) Institute for Medical Research : Report for 1959-60, 864
African (South) Prehistory, 961
African (West) Rice Research Station (H. D. Jordan), 773
African (West) Science Association : First Meeting, 1
Africans : White Man, a Study of the Attitudes of, to Europeans in Ghana before Independence (Dr. Gustav Jahoda), *review* by Dr. Margaret Read, 946
Agadir Earthquake (E. Tillotson), 138
Agar Diffusion and Fluorescent Antibody : Use of (Richard de Long), 1126
AGARD : Schedule of Meetings, 864
AGARD Aeronautical Multilingual Dictionary (edited by G. H. Frénot and A. H. Holloway), *review* by Dr. D. Küchemann, 851
Agble, Dr. : Science in the Development of Ghana (Some Aspects of Genetic Expressions in Agricultural Experimentation in Ghana), 1064
Age of a Basic Igneous Intrusion : Determination of the, by the Potassium-Argon Method (Dr. Ian McDougall), 1184
Age of Conferences : The, *review* by Prof. F. S. Dainton, 844
Age of the Orogeny and Granites in South-West England (N. E. Butcher), 253
Age of Radioactive Fall-out : Seasonal Variation and (R. P. Parker and J. O. Crookall), 574
Age of Science : Forecasting Man-power Needs for the (Organization for European Economic Co-operation), 941
Age of the World—Moses to Darwin (Prof. Francis C. Haber), *review* by Dr. V. A. Eyles, 53
Age (Geological), of the Sandringham Sands (Dr. R. Casey), 1100
Age (Maternal) : Effects of, on the Incidence of Congenital Abnormalities in Mouse and Man (Dr. W. F. Bodmer), 1134
Age and Molecular Weight of Dextrans—their Coating Effects, and their Interaction with Serum Albumin (Dr. Eric Ponder and Dr. Ruth V. Ponder), 277
Ageing : The Problems of, *review* by Prof. P. L. Krohn, 1144
  The 'Psychological Refractory Phase' and (John Brebner and Dr. Jacek Szafran), 195
Ageing in *Drosophila subobscura* : Independence of Temperature of the Rate of (Jean M. Clarke and J. Maynard Smith), 1027
Aging : Man against (Dr. Robert S. de Ropp), *review* by Prof. P. L. Krohn, 1144
Agerter, Sharlene R., and others : Classification and Multiplicity of Growth Layers in the Branches of Trees at the Extreme Lower Forest Border, *review* by Prof. F. W. Jane, 850
Ages (Cosmic Ray), of the Treysa and Sikhote–Alin Meteorites (Prof. David E. Fisher), 225
Ages (Isotopic), of the Weardale Granite (M. H. Dodson and S. Moorbath), 900
Ages (Potassium–Argon), of the Dartmoor and Shap Granites using the Total Volume and Isotopic Dilution Techniques of Argon Measurement (M. H. Dodson, J. A. Miller and D. York), 800
Agglutinating (*Leptospira*-) Factors in Turtle Sera (Prof. J. van der Hoeden, Esther Szenberg and Z. Evenchik), 95
Agglutination of Sensitized Alligator Erythrocytes by Rheumatoid Factor(s), (E. Cohen, A. Nisonoff, P. Hermes, B. M. Norcross and L. M. Lockie), 552
Aggregation of Protein Particles in Tumour Cells (A. Bolognari), 358
Agitated Solutions : Nucleation in (Dr. J. W. Mullin and K. D. Raven), 251
Agricultural Advisory Service (National) : Appointment of J. Butt-Evans as county advisory officer for Yorkshire (North Riding), 312
  Appointment of G. P. Chater as director of the Rosemaund Experimental Husbandry Farm, Preston Wynne, Hereford, 312
  Appointment of E. L. Jones as a livestock husbandry officer for Wales, 312
Agricultural Botany, National Institute of : Appointment of Dr. P. S. Wellington as assistant director, 1154
  Election of Dr. G. D. H. Bell as a vice-president, and a vice-president member of the Council, 1156
Agricultural Chemicals, Association of British Manufacturers of : Conference on British Insecticides and Fungicides, 1063
Agricultural Chemists (Official) : Official Methods of Analysis of the Association of (edited by William Horwitz), ninth edition, *review* by H. V. Hart, 749
Agricultural Crops for the Wet Humid Tropics : National Forests of (Antony Santiago), 1070
Agricultural Economics at Nottingham, 132
Agricultural History Society (British) : Annual Conference (J. W. Y. Higgs), 681
Agricultural Materials, Foods and Drugs : Analysis of, *review* by H. V. Hart, 749
Agricultural Research, Indian Council of : First Rafi Ahmed Kidwai Memorial Prize awarded to Dr. B. P. Pal, 312
Agricultural University (State), Ghent : Third International Symposium on Phytopharmacy and Phytiatry, 493
Agriculture : Nuclear Applications in (Comitato Nazionale per l'Energia Nucleare Symposium on), 219
Agriculture, Ministry of (Northern Ireland) : Leaflet No. 47, Sheep Husbandry, 962
Agriculture (Peasant), in the Tropics (E. W. Momber), 962
Agriculture and Fisheries for Scotland, Department of (Ministry of Agriculture, Fisheries and Food and the) : Post-graduate Training Grants in Fishery Research, 679
Agriculture, Fisheries and Food, Ministry of : Bulletin No. 146, Poultry Breeding (G. E. Mann), third edition, 394
  Bulletin No. 70, Ducks and Geese, fourth edition, 394
Agriculture, Fisheries and Food, Ministry of, and the Department of Agriculture and Fisheries for Scotland : Post-graduate Training Grants in Fishery Research, 679
Agriculture and Horticulture : Fungicides in (Pesticides Group of the Society of Chemical Industry Symposium on), 593
Aharoni, Yohanan, and others : Hazor II—an Account of the Second Season of Excavations, 1956 (James A. de Rothschild Expedition at Hazor), *review* by Peter J. Parr, 381
Ahuja, B. S., and Singh, K. P. : Ecological Problems in the Tropics (Humid Tropics), 773
Aid (International), for Economic Development—Possibilities and Limitations (Dr. V. K. R. V. Rao), 1041
Air : Absolute Measurement of Average Energy lost by Very Soft X-Rays per Ion Pair in (Prof. B. Rajewsky and Dr. D. Lang), 249
Air of a Jamaican Banana Plantation : *Botryodiplodia theobromae* Pat. and *Nigrospora* sp. in the (Dr. D. S. Meredith), 555
Air Ministry (Meteorological Office) : British Rainfall, 1957—Report on the Distribution of Rain in Space and Time over Great Britain and Northern Ireland during the Year 1957 as recorded by about 5,000 Observers (Ninety-seventh Annual Volume), *review*, 201
  Appointment of Dr. Frank Stacey and Dr. H. M. Iyer to Gassior research fellowships, 676
  Handbook of Aviation Meteorology, *review*, 846
  Scientific Paper No. 5, An Experiment in Numerical Forecasting (E. Knighting, G. A. Corby, F. H. Bushby and C. E. Wallington), 973
  Scientific Paper No. 6, Seasonal Variation of the Sea Surface Temperature in Coastal Waters of the British Isles (F. E. Lumb), 1164
Air Radioactivity in Italy : Measurements of, and their relation to the First Sahara Atomic Explosion (L. Argiero, Dr. S. Manfredini and Dr. G. Palmas), 618
Air Safety Award (Laura Taber Barbour) for 1961 awarded to E. W. Calvert and J. W. Sparke by the Flight Safety Foundation Award, Inc., of the United States Society of Automotive Engineers, Inc., 312
Air, Argon, Carbon Dioxide, Carbon Monoxide, Hydrogen, Nitrogen, Oxygen and Steam : Tables of Thermodynamic and Transport Properties of (Joseph Hilsenrath, Charles W. Beckett, William S. Benedict, Lilla Fano, Harold J. Hoge, Joseph F. Masi, Ralph L. Nuttall, Yeram S. Touloukian and Harold W. Woolley), *review* by Prof. A. R. Ubbelohde, 58
Air, Precipitation, Drinking Water, Milk and Beef : Caesium-137 in, in Norway during 1959 and 1960 (T. Hvinden and A. Lillegraven), 402
Air (Still) : Precipitation of Sub-Micron Dust in, by Cloud-size Water Droplets (Dr. M. M. Bhadani and N. G. T. Ludlow), 974
Air (Upper) Densities : A Preliminary Model for the Variations of (Dr. H. K. Paetzold), 35
Aircraft Establishment (Royal), Farnborough : Appointment of J. R. Mills as head of the Radio Department, 392
Aiyar, Dr. A. S., and Sreenivasan, Dr. A. : Intracellular Distribution of Ubiquinone in Rat Liver under certain Stress Conditions, 344
Akimoto, S., and others : 'Memory' of Initial Remanent Magnetization and Number of Repeating of Heat Treatments in Low-Temperature Behaviour of Haematite, 620
β-Alanine from *Iris tingitana* (var. Wedgewood) : Isolation of (Clayton J. Morris, John F. Thompson, Sam Asen and Filadelfo Irreverre), 718
Alberta, Research Council of : Forty-first Annual Report (1960), 872
Albrecht, P., and others : Comparison of an Attenuated and Virulent Louping Ill Strain, 508
Albumin (Bovine Serum) : Prevention by Cysteamine of Radical Formation in, by γ-Rays (D. Libby, M. G. Ormerod, Prof. A. Charlesby and Dr. P. Alexander), 998
Albumin (Serum) : Age and Molecular Weight of Dextrans—their Coating Effects, and their Interaction with (Dr. Eric Ponder and Dr. Ruth V. Ponder), 277
Albumin Auto-Antibodies : A Possible Specificity of (W. L. Marsh and W. J. Jenkins), 180
Alcan Industries, Ltd. : Donation of £10,000 to the University of Southampton centenary appeal, 397
Alcohols : Effect of Strong Electric Fields on the Boiling Points of some (Dr. P. K. Katti and Dr. M. M. Chaudhri), 80
Alcyonium digitatum L. (Octocoral) : Filtration of Phytoplankton by the (Dr. H. M. Roushdy and Dr. Vagn Kr. Hansen), 649
Aldehydes : Histochemical Demonstration of, by *p*-Phenylenediamine (Dr. V. Scarselli), 1206
Alderman, Prof. A. R. : Mawson Institute of Antarctic Research, 1157
Aldolase Activity in Blood Serum : Increase of, following Irradiation (Dr. B. Dalos), 817
Aldosterone in Peripheral Plasma of Intact Unanaesthetized Dogs : Influence of Changes of Blood Volume on the Concentration of (Ejgil Bojesen and Hans Degn), 352
Aldosterone-stimulating Substance : Evidence of Secretion of an, by the Kidney (Dr. William F. Ganong and Dr. Patrick J. Mulrow), 1115
Alexander, Prof. M. (Mitchell, R., and) : The Mycolytic Phenomenon and Biological Control of *Fusarium* in Soil, 109

Alexander, Dr. P., and others : Prevention by Cysteamine of Radical Formation in Bovine Serum Albumin by γ-Rays, 998
Alford, J. S. : Awarded the Herbert Akroyd Memorial Prize of the Royal Aeronautical Society, 863
Ali, S. M. : The Place of Food Science and Technology in the Campaign against Malnutrition (Problems and some Solutions), 398
Aliphatic Amines (Primary) : Phase-Velocity of Ultra-sound in the (L. V. Kite), 1183
Alkali Halides (Coloured) : Catalytic Activity of (Ian D. Gay and Prof. Kenneth E. Hayes), 256
Alkaline Earth and other Ions : The Possibility of Obtaining E.M.F. directly from Acid-Base Reactions—Electrodes of the Third Kind reversible to (W. H. Beck), 712
Alkaline Phosphatase : Hormonal Induction of, in Human Cells in Tissue Culture (Dr. Rody P. Cox and Dr. Colin M. MacLeod), 85
Alkylcyclohexanones in the Strecker and Bucherer Hydantoin Syntheses (L. Munday), 1103
Allan, R. R. : Satellite Orbit Perturbations in Vector Form, 615
Allegretti, Prof. Nikša : Growth of Tumours in Rats fed with 4-Dimethylaminoazobenzene Injected with Homogenized Tumour mixed with Freund Adjuvant, 1207
Allen, D. E. : The Flora of the Rugby District, First Supplement (Rugby School Natural History Society), 492
Allen, Dr. N. P. : Elected president for 1961-62 of the Institution of Metallurgists, 962
Allen, Shirley H., and Marston, Dr. Hedley R. : Primary Metabolic Defect supervening on Vitamin B_{12}-Deficiency in the Sheep—Lack of Influence of Vitamin B_{12}-Deficiency on the Sheep's Capacity to Metabolize Glutamate, 1091
Allen, Shirley H., and others : Primary Metabolic Defect supervening on Vitamin B_{12}-Deficiency in the Sheep—Demonstration, *in vivo*, of the Site of the Metabolic Defect, 1087
Allergen (House Dust) : Preparation and Properties of Purified (Dr. L. Berrens and E. Young), 536
Alligator Erythrocytes (Sensitized) : Agglutination of, by Rheumatoid Factor(s), (E. Cohen, A. Nisonoff, P. Hermes, B. M. Norcross and L. M. Lockie), 552
Allis, Prof. William P. (edited by) : Nuclear Fusion, *review* by Sir Basi Schonland, 750
Allison, Dr. A. C., and others : Erythrocyte Glucose-6-Phosphate Dehydrogenase Deficiency in West Africa, 1198
Allium cepa : Effect of Temperature on the Concentration of Free Radicals in Melanins from (M. L. Edwards, Dr. G. A. Kerkut, Dr. K. A. Munday and K. Leach), 1005
Allomyces : Nucleic Acids and Sexual Differentiation in (Dr. G. Turian), 825
Alloxan Diabetic Rat (Normal and) : Incorporation of Ethanol-1-^{14}C into Fatty Acids in the (Dr. Marion E. Smith), 273
Alloxan and Hypersensitivity (Dr. George E. Thompson), 822
Alloy (As-Cast Titanium–Aluminium) : Occurrence of an Ordered Phase in an (Prof. P. Pietrokowsky), 77
Alloy (Ferro-Silicon), at Room Temperature : Formation of Silicon Nitride Whiskers on a (E. Johnson, Prof. K. Grjotheim and C. Krohn), 523
Alloys : Tin and its (edited by Dr. Ernest S. Hedges, with the collaboration of Prof. J. W. Cuthbertson, Prof. E. C. Ellwood, Dr. W. E. Hoare and W. R. Lewis), *review* by Prof. F. C. Thompson, 753
Alloys (Dilute Silver–Manganese), at Low Temperatures : Inelastic Scattering of Conduction Electrons in (M. S. R. Chari), 994
Allyl*iso*propylacetamide : Effect of, on Liver Metabolism (Prof. C. H. Gray, Margaret Kelly and V. Moses), 1014
α_1-Acid Glycoprotein : Polymorphism of (K. Schmid and J. P. Binette), 630
α-Chains of Human Haemoglobin *A* and *F* : Identity of the α-Chains of the Minor Human Haemoglobin Components A_2 and A_2' with the (Prof. Titus H. J. Huisman, Dr. Bennett Horton and Tine B. Sebens), 357
α-Chains of the Minor Human Haemoglobin Components A_2 and A_2' : Identity of the, with α-Chains of Human Haemoglobin *A* and *F* (Prof. Titus H. J. Huisman, Dr. Bennett Horton and Tine B. Sebens), 357
α-Conarachin (J. M. Dechary, K. F. Talluto, W. J. Evans, W. B. Carney and A. M. Altschul), 1125
α-Ferric Oxide : Giant Grain Growth in (R. F. G. Gardner and D. W. Tanner), 1166
α-Hydroxy Acids : Electron Spin Resonance Spectra of γ-Irradiated Carbohydrates and (A. J. Bailey, Dr. S. A. Barker, J. S. Brimacombe, D. Pooley and D. H. Spence), 259
α-Ketoglutarate in *Acetobacter melanogenum* : Aspects of the Conversion of Glucose to (Dr. D. H. Bone), 562
α-Particles in a Cyclotron : Radioactivation Analysis of Oxygen in Silicon by Irradiation with (T. Nozaki, S. Tanaka, M. Furukawa and K. Saito), 39
α-Tracks and γ-Background : Discrimination between, in Ilford Nuclear Emulsions (K. Van Camp, M. Dorikens and L. Dorikens-Vanpraet), 38
Alrichs, J. L., and others : Infra-Red Investigation of the Migration of Lithium Ions into Empty Octahedral Sites in Muscovite and Montmorillonite, 342
Alston (R.P.) Medal of the Royal Aeronautical Society awarded to R. P. Dickinson, 863
Alterman, Z., and others : Terrestrial Spectroscopy, 498
A.C. Modulated Flame Ionization Triode (J. Middlehurst and B. Kennett), 142
Altman, David, and others : Liquid Propellant Rockets, *review* by Prof. D. B. Spalding, 66
Altschul, A. M., and others : α-Conarachin, 1125
Aluminium Fluoride–Silica System (AlF_3–SiO_2): Mullite Formation in the (Béla Löcsei), 907
Alvarez, Dr. Anibal, and Sas, José : β-Galactosidase Changes in the Developing Intestinal Tract of the Rat, 826
Ambrose, Dr. E. J.: Applications of Interference Microscopy (Cell Division), 315
Ambrose, Dr. E. J., and others : Interaction of Enzymes with Normal and Tumour Cells, 1207
America, Optical Society of : Translations into English of the Russian journal *Optika i Spektroskopiya*, 769
America (Latin) : Scientific Institutions and Scientists in (Unesco), Vol. 4, Part 5, 769
America (North-West) : Cultural Sequences in (Dr. G. H. S. Bushnell), 775
American Academy of Arts and Sciences : Grants-in-aid, 768
American Chemical Society : Amino Acids, Proteins and Cancer Biochemistry—Papers presented at the Jesse P. Greenstein Memorial Symposium, Division of Biological Chemistry, 1959 (edited by Dr. John T. Edsall), *review* by Dr. F. H. Malpress, 203
  Dexter Award given to Prof. J. R. Partington, 680
  Austin M. Patterson Award given to Dr. G. Malcolm Dyson, 680
  Monograph Series No. 147, Organometallic Chemistry (edited by H. Zeiss), *review* by Dr. M. L. H. Green, 1143
American Cyanamid Co. : Lederle Medical Student Research Fellowships for 1961, 134
  Medical Faculty Awards, 768
American Geophysical Union : Election of Officers, 312
  William Bowie Medal for Unselfish Co-operation in Research awarded to Prof. K. E. Bullen, 591
American Institute of Biological Sciences : To undertake a Biological Sciences Communication Project, 13
  An Annotated Bibliography of Influenza, Vol. 1, No. 1, 863
American Manned Ballistic Rocket Flight : First, 587
American Meteorological Society (Section of Geological Sciences and Division of Oceanography and Meteorology of the New York Academy of Sciences, in co-operation with the) : Symposium on Solar Variations, Climatic Change and related Geophysical Problems, 967
American Philosophical Society : Transactions, New Series, Vol. 50, Part 10, Cultural Sequences at the Dalles, Oregon—a Contribution to Pacific Northwest Prehistory (Prof. L. S. Cressman, in collaboration with David L. Cole, Wilbur A. Davis, Thomas M. Newman and Daniel J. Scheans), 775
American Rocket Society : Solid Propellant Rocket Research—a Selection of Technical Papers based mainly on a Symposium of the, held at Princeton University, 1960 (edited by Dr. Martin Summerfield), *review* by Prof. D. B. Spalding, 66
American Society for Engineering Education : Report on Evaluation of Engineering Education, 1952-1955, 113
  Election of Officers, 679
American Society of Pharmacognosy : Annual Meeting, 865
American Type Culture Collection : Grant of 865,500 dollars from the United States National Science Foundation, towards the construction of a new building to house its collection of micro-organisms, 766
American Vacuum Society, Inc. : Vacuum Technology Transactions—Proceedings of the Sixth National Symposium, also Cumulative Author and Subject Indexes of 1954-59 Symposia (edited by C. Robert Meissner), *review*, 296
Amesz, J., and others : Two Photochemical Systems in Photosynthesis, 510
Amici, A., and others : New Herbaceous Test-Plants for Study of the Infectious Degeneration of Grape Vines, 371
Amination : Glutamic Dehydrogenase in Single-Gene Mutants of *Neurospora* Deficient in (Dr. B. D. Sanwal and Dr. Madhu Lata), 286
Amines in Silage (H. Neumark), 839
Amines (Primary Aliphatic) : Phase-Velocity of Ultra-sound in the (L. V. Kite), 1183
Amino-Acid Derivatives (Decarboxylated) : Inhibition of Proteolytic Enzymes by—Effect of Toluenesulphonyl(Tosyl)agmatine (4-Toluenesulphonamidobutylguanidine) on Thrombin and Trypsin (Dr. L. Lorand and Dr. N. G. Rule), 722
Amino-Acid Sequence of Sperm Whale Myoglobin—Chemical Studies (A. B. Edmundson and C. H. W. Hirs), 663 ; A Partial Determination by X-Ray Methods, and its Correlation with Chemical Data (Dr. J. C. Kendrew, Dr. H. C. Watson, Dr. B. E. Strandberg, Dr. R. E. Dickerson, Dr. D. C. Phillips and Dr. V. C. Shore), 666 ; Comparison between the Amino-Acid Sequences of Sperm Whale Myoglobin and of Human Haemoglobin (Dr. H. C. Watson and Dr. J. C. Kendrew), 670
Amino-Acid Synthesis from Hydrogen Cyanide under Possible Primitive Earth Conditions (Prof. J. Óró and S. S. Kamat), 442
Amino-Acids : Incorporation of, into Protein and Ribonucleic Acid of the Lens of the Rat—Effect of Heavy Metals (Dr. Anima Devi, Dr. Sidney Lerman and Dr. Nirmal K. Sarkar), 1193
  Photochemical Synthesis of, and a New Transamination Process by Transfer of Free Amino-Radicals (Giovanni Ferrari and Prof. Rolando Cultrera), 326
  The Quantitative Estimation of (Biochemical Society Colloquium on), 1063
Amino-Acids (Intracellular Free), of certain Dermatophytes (Dr. F. W. Chattaway, C. Toothill and A. J. E. Barlow), 87
Amino-Acids, Proteins and Cancer Biochemistry—Papers presented at the Jesse P. Greenstein Memorial Symposium, Division of Biological Chemistry, American Chemical Society, 1959 (edited by Dr. John T. Edsall), *review* by Dr. F. H. Malpress, 203
Amino-Radicals (Free) : Photochemical Synthesis of Amino-Acids and a New Transamination Process by Transfer of (Giovanni Ferrari and Prof. Rolando Cultrera), 326
γ-Aminobutyric Acid : Influence of, on the Acetylcholine Responses of the Denervated Rat-Diaphragm Preparation (Dr. R. S. Warson), 724
S,β-Aminoethylisothiuronium.Br.HBr : Protective Effect of Orally Administered, against X-Radiation Death in Mice (Major M. P. Dacquisto and Capt. E. W. Blackburn), 270
Aminoglycolipids (Human Brain) : Hot Methanol Extraction of (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch, Peter C. Belval and Dorothy Winer), 152
Aminoglycolipids and Glycoproteins of Human Brain—Quantitative Fractionation of Brain Glycolipids by Silicic Acid Chromatography (Dr. Samuel Bogoch and Dr. Louis A. Faillace), 150 ; Hot Methanol Extraction of Human Brain Aminoglycolipids (Dr. Samuel Bogoch, Peter C. Belval and Dorothy Winer), 152 ; Quantitative Separation and Determination of Brain Glycoproteins, Neuraminic Acid, Hexosamine and Hexoses by means of Whole Tissue Emulsion-Fractionation (Dr. Samuel Bogoch), 153
β-Amino*iso*butyric Acid in Iris : Origin of (W. R. Evans, Chi Shiun Tsai and Prof. Bernard Axelrod), 809
Tris(*p*-Aminophenyl)-Carbonium Salts and related Compounds : Effects of, on Experimental Schistosomiasis and Paragonimiasis (E. F. Elslager, F. W. Short, D. F. Worth, J. E. Meisenhelder, H. Najarian and P. E. Thompson), 628

Amiran, Ruth, and others : Hazor II—an Account of the Second Season of Excavations, 1956 (James A. de Rothschild Expedition at Hazor), *review* by Peter J. Parr, 381
Ammon's Horn : Electron Microscopy of Mossy Fibre Endings in (Dr. L. H. Hamlyn), 645
Ammonia on Tungsten : Field-Emission Microscopic Investigation of Catalysed Synthesis of (K. Azuma), 530
Ammonia Dehydrogenase, Hydroxylamine Dehydrogenase, Hyponitrite Dehydrogenase and Nitrite Dehydrogenase (Kazuo Yamafuji and Yutaka Osajima), 534
Ammonium Nitrate–Potassium Nitrate : Solid Solutions in the System (R. V. Coates and J. M. Crewe), 1190
Amniotic Fluid : Absorption of, in the Gut of Foetal Sheep (G. H. Wright and Dr. D. A. Nixon), 816
Amoebocytes (Insect) : Multiplication *in vitro* of a Nuclear Polyhedrosis Virus in (M. E. Martignoni and R. J. Scallion), 1133
Amounts (Very Small), of Hydrogen Peroxide : Determination of (H. Perschke and Prof. E. Broda), 257
Amphibia : Bile Pigment Excretion in (Roger Lester and Prof. Rudi Schmid), 452
Amphibians in the United States National Museum : Type Specimens of Reptiles and (Doris M. Cochran), 863
Amsterdam, Daniel, and others: Enhancement of Intraperitoneal Staphylococcal Virulence for Mice with Different Bile Salts, 829
β-Amylase : Action Pattern of (Dexter French), 445
Analogue (Photon and Gravitational Field) : The Parametric Line—a (O. Nourse), 522
Analogues (Purine and Pyrimidine), incorporated in Deoxyribonucleic Acid : Radiosensitization of *E. coli* by (Prof. Henry S. Kaplan, Dr. Kendric C. Smith and Patricia Tomlin), 794
Analysing Random Structures : Two-Dimensional Fourier Transform Technique for (Dr. Douglas M. C. MacEwan and H. H. Sutherland), 431
Analysis : British Food, *review* by Joyce Doughty, 477
  Crystal-Structure (Prof. Martin J. Buerger), *review* by Dr. A. D. Booth, 752
  Methods of Polymer Characterization and (Bradford Institute of Technology Course on), 312
  Official Methods of, of the Association of Official Agricultural Chemists (edited by William Horwitz), ninth edition, *review* by H. V. Hart, 749
  Qualitative Organic (B. Haynes), *review* by Dr. J. D. Loudon, 753
Analysis of Agricultural Materials, Foods and Drugs, *review* by H. V. Hart, 749
Analysis of Irradiated *Drosophila* Populations for Meiotic Drive (Prof. E. Novitski and G. D. Hanks), 989
Analysis of a Supposed Clay Fulgurite from Ontario (Maxwell K. Carron and Paul D. Lowman, jun.), 40
Analysis (Chemical), of Cast Iron and Foundry Materials (W. Westwood and A. Mayer), second edition, *review* by F. L. Selfe, 383
Analysis (Crystal Structure) : An Apparent Paradox in (Prof. G. N. Ramachandran and R. Srinivasan), 159
  Correction for Extinction Errors in (Prof. S. Chandrasekhar and Dr. D. C. Phillips), 1164
Analysis (Fourier) : Prediction of the Effect of Night-Time Fraction on the Critical Flicker Frequency—an Insight from (K. Gibbins and Dr. C. I. Howarth), 330
Analysis (Gas Chromatographic) : Precision and Accuracy in (R. S. Evans and P. G. W. Scott), 710
Analysis (Histochemical), of some Dehydrogenase Systems in the Erythrocytes of some Lower Vertebrates (Prof. A. Stolk), 926
Analysis (Micro-) : Radiometric Precipitation in Filter Paper—a Rapid Method of (M. Thackray), 434
Analysis (Organic) : Spot Tests in (Prof. Fritz Feigl), sixth English edition (translated by Prof. Ralph E. Oesper), *review* by Dr. D. T. Lewis, 479
Analysis (Pollen), in Uganda (Dr. M. E. S. Morrison), 483
Analysis (Radioactivation), of Oxygen in Silicon by Irradiation with α-Particles in a Cyclotron (T. Nozaki, S. Tanaka, M. Furukawa and K. Saito), 39
Analysis (X-Ray Crystal) : Computing Methods and the Phase Problem in—Report of a Conference held at Glasgow, 1960 (edited by Ray Pepinsky, J. M. Robertson and J. C. Speakman), *review* by Dr. D. A. Booth, 752
Analytical Chemistry : Advances in, *review* by Dr. D. T. Lewis, 944
  Comprehensive (edited by Prof. Cecil L. Wilson and David W. Wilson), Vol. 1*B*, Classical Analysis, *review* by Dr. D. T. Lewis, 294
  Treatise on (edited by I. M. Kolthoff and Philip J. Elving, assisted by Ernest B. Sandell), Part 1, Theory and Practice, Vol. 1, *review* by Prof. R. Belcher, 60
  A Treatise on, *review* by Dr. D. T. Lewis, 294
Analytical Chemistry and Instrumentation : Advances in (edited by Charles N. Reilley), Vol. 1, *review* by Dr. D. T. Lewis, 944
Analytical Instrumentation of Industrial Process Control (Elliott Brothers (London), Ltd., Private Symposium and Exhibition on), 865
Analytical Techniques for Non-Linear Control Systems (Prof. John C. West), *review* by Dr. E. M. Deeley, 947
Ananthakrishnan, Dr. R. : Anomalies in the Light Curves of Meteors resulting from Fragmentation, 896
Anati, M. : Le Grande Roche de Naquane (Institut de Paléontologie Humaine, Mémoire 31), 140
Anatomy of Grasses : An, *review* by Prof. T. G. Tutin, *erratum*, 16
Anatomy of Management, *review* by F. J. Willett, 382
Anatomy of the Monocotyledons (Dr. C. R. Metcalfe), Vol. 1, Gramineae, *review* by Prof. T. G. Tutin, *erratum*, 16
Anatomy of Plants (Prof. P. Font Quer), *review* by G. R. Noakes, 64
Ancestry : Man and his (Alan Houghton Brodrick), *review* by Sonia Cole, 1044
Ancient Radii of the Earth : Palaeomagnetism and the (Prof. L. Egyed), 1097
Andean Year : International (Unesco Discussion on the Planning of an), 966
Andersen, Dr. Jørgen : Production of *B* Character on Human Erythrocytes by Haemosensitization with Purified *Escherichia coli O* 86 Substance, 730
Anderson, B. W., and others : Ekanite, a New Metamict Mineral from Ceylon, 997
Anderson, Dr. D. T. : A Differentiation Centre in the Embryo of *Dacus tryoni*, 560
Anderson, Dr. E. S. : Slime-wall Formation in the *Salmonellae*, 284
Anderson, Dr. J. S. : Unnatural Products, *review*, 59
Anderson, Leland I. : Extra-Terrestrial Radio Transmissions, 374
Anderson, L. J. : 108-216 Mc./s. Radio Signals from Satellites below the Horizon, 708
Anderson, Prof. M. L. : Afforestation of Upland Heaths, 136
  Tree Planting in the National Parks, 496
Anderson, Walter R., and others : A New Preparation of Gastrin—Preliminary Characterizations, 448
Andrade, Prof. E. N. da C., and Jolliffe, K. H. : Creep of Metals under Simple Shear, 431
Andrewes, Sir Christopher : Retirement as head of the Division of Bacteriology and Virus Research at the National Institute for Medical Research, 1153 ; work of, 1153
Androgenic Steroids : Effects of certain, on the Increase of Endometrial Carbonic Anhydrase caused by Progesterone (Dr. Kazukuni Yamashita and Ken-ichi Kurouji), 1013
Angola : Termites and Coal Seams in, 767
Angus, H. C. : Electrical Contacts (Cleanliness of Precious Metal Surfaces), 866
Angus, N. S. : Awarded a Research Grant by the Leverhulme Trust, 678
Anhydrase (Endometrial Carbonic), caused by Progesterone : Effects of certain Androgenic Steroids on the Increase of (Dr. Kazukuni Yamashita and Ken-ichi Kurouji), 1013
Animal Behaviour, *review* by Dr. N. Tinbergen, 570
Animal Behaviour : Current Problems in (edited by Dr. W. H. Thorpe and Prof. O. L. Zangwill), *review* by Dr. N. Tinbergen, 570
Animal Behaviour, Association for the Study of : Symposium on Orientation and Migration, 1063
Animal Cells : Formation of the Nucleolus in (The Nucleolus), (Dr. Henry Harris), 1077
Animal Disease (Laboratory) : Problems of (International Committee on Laboratory Animals Symposium on), 677
Animal Echo-Location : Perception of Distance in (L. Kay), 361 ; (J. D. Pye), 362 ; (Jan Nordmark), 363
Animal Husbandry, *review* by Sir John Hammond, 47
Animal Husbandry Heresies (Dr. Allan Fraser), *review* by Sir John Hammond, 47
Animal Material (Living), for Biological Research (Proceedings of the International Committee on Laboratory Animals Symposium on), 677
Animal Mycology (Human and), International Society for : *Sabouraudia*, Vol. 1, No. 1, 15
Animal Sounds (Recorded) : Library of (To be set up by the Committee for Biological Acoustics, in collaboration with the British Institute of Recorded Sound), 395
Animal Tissues : Isolation of Peptides containing Hydroxyproline from (V. Kobrle and M. Chvapil), 909
Animal Tissues (Human and) : Lead-210 in some (C. R. Hill and Dr. Z. S. Jaworowski), 353
Animal Viruses : A Chemical Basis for the Classification of (Dr. P. D. Cooper), 302
Animal Welfare, Universities Federation for : Opinions of British Scientists of Home Office Control of Experiments on Animals, 677
Animal and Vegetable Fats in Nutrition : The Relative Values of (Scottish Branch of the Nutrition Society Symposium on), 135
Animals : Experimentally Produced Selenium Poisoning in various (Hiroshi Tsuzuki, Kazuhoshi Osawa and Takashi Hosoya), 310
  Opinions of British Scientists of Home Office Control of Experiments on (Universities Federation for Animal Welfare), 677
  United States Senate Bill, S3570, for the Control of Experiments on, 677
  Reproduction in, *review* by Dr. Anita M. Mandl, 1045
Animals for Bio-Assay : Choice of (Dr. J. D. Biggers, Dr. Anne McLaren and Dr. Donald Michie), 891 ; (Dr. C. K. Chai), 893, 894 ; (Dr. Anne McLaren and Dr. Donald Michie), 894
Animals for Cancer Research : Provision of (Laboratory Animals Centre of the Medical Research Council Symposium on), 393
Animals showing Delayed Hypersensitivity : Mechanism of Increase of Endotoxin Susceptibility in (Dr. J. Johanovsky, M. Vrána, O. Vejbora and D. Francová), 182
Animals (Adrenalectomized) : Increased Toxicity of Serotonin in (Prof. S. Garattini, P. Gaiardoni, A. Mortari and V. Palma), 540
Animals (Canadian) : Wild and Free—Stories of (H. Mortimer Batten), *review* by B. J. G. Maitland, 851
Animals (Laboratory) : Welfare and Care of, 677
Animals (Laboratory), International Committee on : *Bulletin*, March 1961, 677
  Symposium on the Problems of Laboratory Animal Disease, 677
  Proceedings of the Symposium on Living Animal Material for Biological Research, 677
Animals (Living) : Determination of the Volume and Weight of (Prof. C. P. Gnanamuthu), 826
Animals (Unrestrained) : Determination of Physiological Rhythms of, by Radio Telemetry (Warren O. Essler and Prof. G. Edgar Folk, jun.), 90
Animals and Man : Fundamental Mechanisms of the Chromatic Discrimination in—Proceedings of an International Symposium on the (Paris, 1958), sponsored by the International Council of Scientific Unions—Mechanisms of Colour Discrimination (edited by Yves Galifret), *review* by Prof. R. W. Ditchburn, 201
Anisotropy : Variation in Height of, and Random Drift Velocity of the Irregularities in the Ionosphere (Dr. B. Ramachandra Rao and K. V. V. Ramana), 706
Annotated Bibliography of Influenza (American Institute of Biological Sciences), Vol. 1, No. 1, 863
Annual Review of Astronomy and Astrophysics (Annual Reviews, Inc.), 769
Annual Review of Entomology (edited by Edward A. Steinhaus and Ray F. Smith), Vol. 6, *review* by Harold Oldroyd, 945
Annual Review of Microbiology (edited by Charles E. Clifton, in association with Sidney Raffel and Mortimer P. Starr), Vol. 14, *review* by Dr. B. A. Newton, 662
Annual Review of Plant Physiology, Vol. 11 (edited by Leonard Machlis, in association with Winslow R. Briggs), *review* by Prof. Walter Stiles, 48

Annual Reviews, Inc. : *Annual Review of Astronomy and Astrophysics*, 769
Anomalies in the Light Curves of Meteors resulting from Fragmentation (Dr. R. Ananthakrishnan), 896
Anomalies (Congenital), Japan Association for Study of : Initial Meeting, 395
Anomalies (True and Mean) : Relationship between the (C. J. Brookes), 839
Anomalous Magnetostriction of the 'Grain-orientated' Silicon–Iron Sheet (Yûki Shirakawa and Ken'ichi Numakura), 523
Anomalous Thermoelectric Properties of Gadolinium Selenide (R. C. Vickery and H. M. Muir), 336
Anopheles in Trinidad : Resistance to Dieldrin in (T. A. Omardeen), 559
Anopheles gambiae and *Anopheles pharoensis* : Resting Habits of, in Salt Bush and in Crevices in the Ground (Dr. A. Smith), 1220
Anopheles pharoensis (*Anopheles gambiae* and) : Resting Habits of, in Salt Bush and in Crevices in the Ground (Dr. A. Smith), 1220
Anstey, E. : Science and Industry—the Problem of Communication (Films to Illuminate and Persuade), 966
Antagonisms : Œstrogen—19-Norprogesterone and 18,19-Dinortestosterone as Œstrone Antagonists (Richard A. Edgren), 353
Antagonists (Œstrone) : Œstrogen Antagonisms—19-Norprogesterone and 18,19-Dinortestosterone as (Richard A. Edgren), 353
Antagonizing Insulin : A Factor associated with 'Visking' Tubing capable of (M. Deloris Lilley and Dr. J. Vallance-Owen), 1196
Antarctic : Work in the, during I.G.Y., 677
Antarctic Research : Mawson Institute of (Prof. A. R. Alderman), 1157
Antarctic Research Ship *Eltanin* : United States, 765
Antarctica : Science in (Report by the Committee on Polar Research of the United States National Academy of Sciences—National Research Council), Part 1, The Life Sciences in Antarctica ; Part 2, The Physical Sciences in Antarctica, 1062
  Scientists wishing to work in (Special Committee on Antarctic Research of the International Council of Scientific Unions Register of), 311
  Total Magnetic Field Measurements between New Zealand and (Dr. D. A. Christoffel), 776
Anterior Pituitary Hormones : Starch-gel Electrophoresis of (K. A. Ferguson and A. L. C. Wallace), 629
Anthony, Dr. H. D. : Sir Isaac Newton, *review* by Dr. G. Burniston Brown, 71
Anthony, L. J. (edited by) : British Scientific and Technical Books, 1953-57, *review* by R. Brightman, 119
Anthropology : Lowie's Selected Papers in (edited by Dr. Cora du Bois), *review* by T. K. Penniman, 851
Anthropology (Physical), of Australian Aborigines (Prof. A. A. Abbie), 972
Anti-Le^a : Complement-fixing Blood Group Antibodies with special reference to the Nature of (Dr. F. Stratton), 240
Antibacterial Substance (Non-Toxic) : A New, Highly Effective but (Dr. David Haler and Dr. A. Aebi), 734
'Antibiotic Effects' in Plant Communities (J. R. Cannon, N. H. Corbett, K. P. Haydock, J. G. Tracey and L. J. Webb), 189
Antibiotics (Three) : Acute Effect of, on Diuresis in the Rat (R. J. Girerd and C. L. Rassaert), 536
Antibodies blocking Neutralization of Penicillinase by the Homologous Antiserum (Dr. Nathan Citri and Gill Strejan), 1010
Antibodies (Albumin Auto-) : A Possible Specificity of (W. L. Marsh and W. J. Jenkins), 180
Antibodies (Complement-fixing Blood Group), with special reference to the Nature of Anti-Le^a (Dr. F. Stratton), 240
Antibodies (Detectable), produced by *Haemonchus* spp. Infections in Cattle : Association of, with Serum Globulin Fractions (J. G. Ross), 1019
Antibodies (Incomplete), to Chicken Red Cell Antigens (Dr. I. Dunsford, T. Lodge, M. McDermid and Dr. D. G. Gilmour), 544
Antibody (Fluorescent) : Use of Agar Diffusion and (Richard de Long), 1126
Antibody (Rabbit): Similarity of Peptides in Two Antigen-combining Fragments released from a, by Papain (Prof. David Gitlin and Ezio Merler), 634
Antibody (Thyroid Auto-) : Absence of, in Experimental Radiation Thyroiditis (Dr. Geoffrey Taylor and G. Sclare), 183
Antibody Formation : Partial Inhibition of, by means of Anti-Ribonucleoprotein Serum (Prof. B. D. Janković, Dr. K. Isaković and J. Horvat), 1218
Antibody Techniques (Fluorescent) : Detection of C-Reactive Protein by (Dr. Robert Goldwasser and Dr. Rachmiel Rozansky), 1020
Anti-Emetic Agent in Dogs : Haloperidide (*R* 3201), a Highly Potent and Selective (Dr. P. A. J. Janssen and C. Niemegeers), 911
Antigen *in vitro* : Production of Pyrogenic Substances by Extracts of Delayed Hypersensitive Cells mixed with (Dr. J. Johanovsky), 355
Antigen (An Immunizing), from Rabbit-Pox and Vaccinia Viruses (G. Appleyard), 465
Antigen Transformation of Transplantable Rat Tumour : Mechanism of (Prof. K. Dux, A. Ryzewska and A. Czarnomska), 458
Antigen-combining Fragments (Two), released from a Rabbit Antibody by Papain : Similarity of Peptides in (Prof. David Gitlin and Ezio Merler), 634
Antigenic Groupings on Mouse Gamma-Globulin Molecules : The Distribution of (Dr. Brigitte A. Askonas and Dr. J. H. Humphrey), 1177
Antigenicity of Deoxyribonucleic Acids from Mouse Liver and from the Ehrlich Ascites Tumour (Dr. J. S. Colter and Dr. K. A. O. Ellem), 550
Antigens (Chicken Red Cell) : Incomplete Antibodies to (Dr. I. Dunsford, T. Lodge, M. McDermid and Dr. D. G. Gilmour), 544
Antileukaemic Action of Reserpine : Effect of Iproniazid on the (Richard A. Salvador, Stewart R. Humphreys, Robert Main Burton and Abraham Goldin), 723
Anti-Locust Research Centre : Annual Report (Colonial Office), 21
Antimatter : Matter and (Maurice Duquesne), *review* by G. R. Noakes, 64
Antimony Pentachloride : Reaction of Digitalis Compounds with (Capt. Robert H. Herman), 268
  Reaction of, with Pregnane-3α, 17α, 20α-Triol, Pregnane-3α, 17α, 20α-Triol-11-One and other Adrenal Cortical Steroids (Capt. Robert H. Herman and Joseph Bruton), 444
Anti-Ribonucleoprotein Serum : Partial Inhibition of Antibody Formation by means of (Prof. B. D. Janković, Dr. K. Isaković and J. Horvat), 1218
Antiserum (Homologous) : Antibodies blocking Neutralization of Penicillinase by the (Dr. Nathan Citri and Gill Strejan), 1010
Anti-Tumoral Action of New Sarcomycin Derivatives (Prof. A. Caputo, B. Giovanella and R. Giuliano), 819
Anti-Viral Chemotherapeutic Activity against Ectromelia Infection : Derivatives of Isatin β-Thiosemicarbazone with (Dr. D. J. Bauer and Dr. P. W. Sadler), 1167
Aono, Y., and others : Measurement of Positive-Ion Density in the Ionosphere by Sounding Rocket, 156
Aorta : Binding of Calcium Ions by the (Dr. I. Gordon Fels), 1012
Aortic Aerobic Metabolism in Rats : Modification of, by Gonadectomy (Effect of Œstrogens on Atherosclerosis), (Dr. M. R. Malinow and Dr. J. A. Moguilevsky), 424
Apatitic Calcium Phosphates : Hydrogen Bonding in (Louis Winand, Prof. M. J. Dallemagne and Prof. G. Duyckaerts), 164
Aphid Vectors : Negative Evidence against Passage of Whole Plant Virus Particles through Gut Wall in (Prof. Frej Ossiannilsson), 1222
'Apical Body' in the Galea Capitis of the Normal Bull Sperm (Dr. Erik Blom and Aksel Birch-Andersen), 1127
Apis indica Workers : Effect of Temperature on (J. B. Free and Yvette Spencer-Booth), 933
Apocholic Acid : Carcinogenic Activity of (A. Lacassagne, Prof. N. P. Buu-Hoï and F. Zajdela), 1007
Apparent Intermediate Supervelocity of Detonation (Dr. C. H. Johansson), 709
Apparent Paradox in Crystal Structure Analysis (Prof. G. N. Ramachandran and R. Srinivasan), 159
Apparent Release of Tobacco Mosaic Virus in Living Infected Cells (Prof. J. G. Bald and R. A. Solberg), 651
Appendage (Caudal), of *Priapulus caudatus* : Function of the (Prof. Ragnar Fänge and Artur Mattisson), 1216
Apple Fruits : Sorbitol Metabolism in (Prof. A. R. N. Gorrod), 190
Appleyard, G. : An Immunizing Antigen from Rabbit-Pox and Vaccinia Viruses, 465
Application to the Separation of Barbiturate, Salicylate and Acetophenetidin : A New Technique of Chromatography and Ionophoresis on Ion-Exchange Paper— (Harold V. Street and Dr. S. K. Niyogi), 537
Application to Separation of Barbiturate, Salicylate, Acetophenetidin and *p*-Acetylaminophenol : A New Technique of Chromatography and Ionophoresis on Ion-exchange Paper— (Harold V. Street and Dr. S. K. Niyogi), 718
Application to Separation of Compounds of Toxicological Interest—Separation of a Mixture of Promazine, Quinine, Sulphacetamide and Acetophenetidin: A New Technique of Chromatography and Ionophoresis on Ion-Exchange Paper— (Harold V. Street and Dr. S. K. Niyogi), 1199
Applications : Photomultiplier Tube (E.M.I. Electronics, Ltd., Symposium on), 769
  Physics of the Electron Microscope and its (Electron Microscopy Group of the Institute of Physics and the Physical Society Annual Conference), 591
Applications of Interference Microscopy (Royal Microscopical Society Symposium on), 315
Applications of Nuclear Magnetic Resonance Spectroscopy in Organic Chemistry (Dr. L. M. Jackman), *review* by Dr. J. C. D. Brand, 1043
Applications of Television in Medical Research and Teaching (Medical Committee of the Scientific Film Association in collaboration with the Association for the Study of Medical Education Symposium on), 1159
Applications (Nuclear), in Agriculture (Comitato Nazionale per l'Energia Nucleare Symposium on), 219
Applications (Technical), of Freshwater Biology, *review* by Dr. H. B. N. Hynes, 1043
Applied Bacteriology, Society for : Summer Conference, 397
  Symposium on Bacteria of the Intestine, 397
Applied Biologists, Association of : Paper-reading Meeting on Diseases caused by Plant Viruses in Crops, 220
  Election of Officers for 1961-62, 679
Applied Biology : Diploma in Technology in (Bristol College of Science and Technology and the Brunel College of Technology Courses for the), 495
Applied Biology in Technical Colleges, 495
Applied Mechanics (Theoretical and), International Union of : Proceedings of the Symposium on the Theory of Thin Elastic Shells, Delft, 1959 (edited by W. T. Koiter), *revew* by Dr. J. W. Craggs, 379
Applied Microbiology and Biology at the Royal College of Science and Technology, Glasgow, 764
Applied Physics (Pure and), International Union of, and others : Rutherford Jubilee International Conference, 679
Approximations (Higher), in Aerodynamic Theory (M. J. Lighthill), *review*, 118
Aqueous Solutions (Buffered) : Interaction of Proteins and Nucleotides in (Prof. Joseph R. Debro and Melvin Lee), 1008
Aqueous Systems : Recent Advances in the Radiation Chemistry of (Prof. Gabriel Stein), 16
'Araldite' in Museum Work (C.I.B.A. (A.R.L.), Ltd., Technical Notes No. 218), 394
Arc Initiation on Heated Metals by a Hydrogen Discharge (J. T. Maskrey, R. A. Dugdale and R. C. McVickers), 997
Arc Movement (Cold-Cathode), in a Magnetic Field : A Theory of (Dr. P. E. Secker and Dr. A. E. Guile), 428
Archaeological Investigations in British Guiana (Clifford Evans and Betty J. Meggers), *review* by Dr. G. H. S. Bushnell, 72
Archaeology in Israel, *review* by Peter J. Parr, 381
Archer, Dr. G. T. : Release of 5-Hydroxytryptamine from Rat Mast Cells *in vitro*, 350
Archibald, J. F. : Transmission of Gall-Diseases of Cacao, Mango and Pigeon Pea, 284
Arcos, Prof. Joseph C. (Gosch, Hans H., and) : Transmission of Swelling Characteristics by Mitochondria of Regenerating Liver, 272
Arctic Ice : Artificial Melting of the (I. S. Peschansky), 492
Area Measurements (Surface) : Use of Krypton for (Peter Cannon and George L. Gaines, jun.), 340
Arends, Tullio : Absence of Abnormal Haemoglobins in Colombian *Tunebo* Indians, 93
Argiero, L., and others : Measurements of Air Radioactivity in Italy and their relation to the First Sahara Atomic Explosion, 618

Arginine–Vasotocin : A 'Natriferic' Principle other than, in the Frog Neurohypophysis (F. Morel, J. Maetz, R. Acher, J. Chauvet and M. T. Lenci), 828
Arginine and 'Neurosecretory' Material in the Pituitary Gland of the Pig (Dr. A. Howe), 175
Argon in Ionization Detectors : Comparison of Helium and (W. A. Wiseman), 1187 ; (R. Berry), 1188
Argon Measurement : Potassium–Argon Ages of the Dartmoor and Shap Granites using the Total Volume and Isotopic Dilution Techniques of (M. H. Dodson, J. A. Miller and D. York), 800
Argon (Potassium–) Ages of the Dartmoor and Shap Granites using the Total Volume and Isotopic Dilution Techniques of Argon Measurement (M. H. Dodson, J. A. Miller and D. York), 800
Argon (Potassium–) Method : Determination of the Age of a Basic Igneous Intrusion by the (Dr. Ian McDougall), 1184
Argon, Carbon Dioxide, Carbon Monoxide, Hydrogen, Nitrogen, Oxygen and Steam (Air,) : Tables of Thermodynamic and Transport Properties of (Joseph Hilsenrath, Charles W. Beckett, William S. Benedict, Lilla Fano, Harold J. Hoge, Joseph F. Masi, Ralph L. Nuttall, Yeram S. Touloukian and Harold W. Woolley), *review* by Prof. A. R. Ubbelohde, 58
Argus Computer : Ferranti, 14
Arid Zone Technical Conference : Australian (C. S. Christian and R. O. Slatyer), 19
Armitage, Dr. Peter : Appointed to the University of London chair of medical statistics in the London School of Hygiene and Tropical Medicine, 680, 764 ; work of, 764
Armstrong, Gordon A., and others : Prevention of Manganese Deficiency in Oat by soaking the Grain in Solutions of Manganous Chloride, 824
Arnason, Prof. T. J., and others : *Obituary* of Dr. J. Unrau, 1057
Arnon, Prof. Daniel I.: Elected a Member of the United States National Academy of Sciences, 674
Arnon, Prof. Daniel I., and others : Photo-production of Hydrogen, Photo-fixation of Nitrogen and a Unified Concept of Photosynthesis, 601
  Separation of Two Light Reactions in Noncyclic Photo-Phosphorylation of Green Plants, 606, *erratum*, 1063
Arnstein, Dr. H. R. V. (Whitehead, Dr. R. G., and) : Imidazole Acrylic Acid Excretion in Kwashiorkor, 1105
Aromatic Compounds : Non-Benzenoid (edited by David Ginsburg), *review* by B. A. Ellis, 662
Aromatic Hydrocarbons : A Physical Theory of Carcinogenesis by (Dr. J. B. Birks), 232
  The Relation between Theoretical and Experimental Diamagnetic Susceptibilities for (Dr. D. W. Davies), 1102
Aromatic Substitution : Free Radicals in, *review* by Dr. J. Idris Jones, 294
  Homolytic (Dr. G. H. Williams), *review* by Dr. J. Idris Jones, 294
Aromaticity of the Organic Matter of a Podzol Soil : An Estimate of the (Dr. J. R. Wright and Dr. M. Schnitzer), 703
Arousal Response : Effects of Chlorpromazine and Lysergic Acid Diethylamide on the Rate of Habituation of the (Dr. B. J. Key), 275
Arsenide (Gallium) : Behaviour of Magnesium Impurity in (J. R. Knight), 999
  Crystal Growth of, using Carbon Boats (J. R. Knight), 1001
Art : Technology, Science and—Common Ground (Hatfield College of Technology series of lectures on), 397
Art (Primitive Rock-Shelter), in Australia, 767
Art and Nature : Form in, *review* by Prof. T. A. Stephenson, 44
Arteries in Chickens : Effect of Œstradiol on the Oxygen Consumption of (Effect of Œstrogens on Atherosclerosis), (Dr. M. R. Malinow and Dr. J. A. Moguilevsky), 422
Arteries (Incubated) : Effect of, on Œstradiol-containing Media (Effect of Œstrogens on Atherosclerosis), (Dr. M. R. Malinow and Dr. J. A. Moguilevsky), 423
Artery (Carotid) Occlusion : Internal (John G. Humphreys and T. H. Newton), 310
Arthenol (*Cyclo*-), a Minor Constituent of Linseed Oil (Dr. Pompeo Capella), 167
Arthropods (Land) : 'Preferred Temperatures' of (David S. Madge), 106
Arthur, Dr. D. R. : Disease Transmission by Ticks, 682
Artificial Earth Satellites : Minimum Range to (K. Toman), 333, *errata*, 865
Artificial Fever : Effect of, in Increasing Susceptibility to Bacterial Endotoxin (Dr. David G. Connor and Dr. Edward H. Kass), 453
Artificial Insemination : The Breeding of Improved Milking Cows through (Dr. J. Edwards and Dr. L. K. O'Connor), 759
Artificial Melting of the Arctic Ice (I. S. Peschansky), 492
Artificial Satellites : Use of, for Navigation and Oceanographic Surveys (Paul D. Thomas), 134
Artificial Satellites, their Impact on Human Destiny : The Conquest of Space—Moon Probes and (Albert Ducrocq), 567
Artificial Solutions: Replacement of the Protoplasm of a Giant Nerve Fibre with (P. F. Baker, Prof. A. L. Hodgkin and Dr. T. I. Shaw), 885
Artificial Spermatophore : Use of an, in the Study of Activation of Spermatozoa and Development of Spermatophores in the Cockchafer (Dr. V. Landa), 935
Arts and Sciences, American Academy of : Grants-in-aid, 768
Arya, Dr. V. P. : Awarded a CIBA fellowship (renewal) in natural products chemistry, 489
As-Cast Titanium–Aluminium Alloy : Occurrence of an Ordered Phase in an (Prof. P. Pietrokowsky), 77
Ascaris lumbricoides : Purification of the Toxic Fractions from, and their Effect on the Guinea Pig (G. Gazzinelli, M. M. Guia, A. G. A. Neves, J. Pudles, W. T. Beraldo and W. Dias da Silva), 813
Ascent of Life—a Philosophical Study of the Theory of Evolution (Prof. T. A. Goudge), *review* by P. G. Fothergill, 1042
Ascites Tumour (Ehrlich) : Antigenicity of Deoxyribonucleic Acids from Mouse Liver and from the (Dr. J. S. Colter and Dr. K. A. O. Ellem), 550
Ascites Tumour Cells (Sarcoma 37) : Effect of a Magnetic Field on (Indumati L. Mulay and Prof. L. N. Mulay), 1019
Ascorbic Acid Oxidase (*Myrothecium*) : Substrate Specificity of the (Gordon A. White and Prof. Frederick G. Smith), 187
Asen, Sam, and others : Isolation of Beta-Alanine from *Iris tingitana* (var. Wedgewood), 718
Ashton, H. L. : At the Australian Arid Zone Technical Conference (Physical Characteristics of the Australian Arid Zone—Climate), 19
Ashwell, Dr. D. G. (Webb, H. A., and) : A Mathematical Tool-Kit for Engineers, second edition, *review* by Prof. J. Greig, 76
Ashwood-Smith, M. J. : Preservation of Mouse Bone Marrow at —79° C. with Dimethyl Sulphoxide, 1204
Asian School Children : Eye Examinations of, 864
Askham Bog : Conservation of (Nature Conservancy and the Yorkshire Naturalists Trust), 1155
Askonas, Dr. Brigitte A., and Fahey, Dr. J. L. : An Investigation of Closely Related Gamma-Myeloma Proteins and Normal Mouse Gamma-Globulin by Partial Enzymic Degradation and Starch-Gel Electrophoresis, 980
Askonas, Dr. Brigitte A., and Humphrey, Dr. J. H. : The Distribution of Antigenic Groupings on Mouse Gamma-Globulin Molecules, 1177
Aslib : British Scientific and Technical Books, 1953-57 (edited by L. J Anthony), *review* by R. Brightman, 119
Aslib (Northern Branch) : Residential Conference at Durham, 219
Asparagine : Polypeptide Formation from, under Hypothetically Primitive Conditions (J. Kovács and H. Nagy (Kovács)), 531
Asparagine Supplements : Effect of Glutamine and, in the Dietary Regimen of Three Phenylketonuric Patients (Dr. Barbara H. Bowman and Dr. F. J. King), 417
Aspects of the Conversion of Glucose to α-Ketoglutarate in *Acetobacter melanogenum* (Dr. D. H. Bone), 562
Aspects of Disease Transmission by Ticks : Some (Zoological Society of London Symposium on), 682
Aspects of the Origin of Life (edited by M. Florkin), *review* by N. W. Pirie, 295
Aspects of Public Health Nursing (United Nations, World Health Organization, Public Health Papers No. 4), 490
Aspects of Sedimentation in Orogenic Belts : Some (Geological Society Symposium on), 139
Aspects (Chemical and Genetic), of their Structure : The Haemoglobin Particles— (Dr. G. Braunitzer, Dr. N. Hilschmann, Dr. V. Rudloff, Dr. K. Hilse, Dr. B. Liebold and Dr. R. Müller), 480
Aspects (Fundamental), of Radiosensitivity (Biology Department of Brookhaven National Laboratory Symposium on), 312
Aspects (Intensity), as Determinant of r'_e-r''_e in the Bands of the Lanthanum Oxide (LaO) $B\to X$) System (N. Sreedhara Murthy), 430
Aspects (Neurophysiological), of Hallucinations and Illusory Experience (Dr. W. Grey Walter), 394
Aspergillus niger Diploids : Mitotic Haploidization by Treatment of, with *para*-Fluorophenylalanine (Pol Lhoas), 744
Aspergillus and *Neurospora* : Biotin Requirement and Carbon and Sulphur Sources in (P. Strigini and G. Morpurgo), 557
Aspinall, Dr. G. O. : Carbohydrate Chemistry, *review*, 750
Assay of 5-Hydroxytryptophan Decarboxylation in Intact Brain (A. Pletscher and K. F. Gey), 918
Assay of Pyridine Nucleotide Coenzymes and associated Dehydrogenases with Phenazine Methosulphate (Dr. P. J. C. Smith), 84
Assistance (Technical), to Overseas Countries, 1039
Assistance (Technical), from the United Kingdom for Overseas Development (White Paper on), 1039
Association of Detectable Antibodies produced by *Haemonchus* spp. Infections in Cattle, with Serum Globulin Fractions (J. G. Ross), 1019
Association of a Steroid and a Pigment with a Diffusible Fruiting Factor in *Myxococcus virescens* (J. Jennings), 190
Assurance of Thermostatic Control during Electrophoretic Experiments (Dr. R. J. Wieme), 806
Assyriology in London, 676
Astarabadi, T. : Appointed a lecturer in physiology at the University of Edinburgh, 135
Astbury, the late Prof. W. T. : Molecular Biology or Ultrastructural Biology?, 1124
Astronautical Federation, International (International Academy of Astronautics of the) : Symposium on Space Flight and Re-entry Trajectories, 312
Astronautics, International Academy of, of the International Astronautical Federation : Symposium on Space Flight and Re-entry Trajectories, 312
  Election of new Members, 495
Astronomical Clock (Fourteenth Century) : Exhibition of a (Science Museum, London), 589
Astronomical Society (Royal) : Geophysical Discussion on Technique of Optical Observations, 1065
Astronomy and Astrophysics, Annual Review of (Annual Reviews, Inc.), 769
Astronomy and Space Research : The Space Encyclopaedia—a Guide to, second edition, *review* by R. H. Merson, 76
Astronomy (Radio), and Cosmology (Prof. Martin Ryle), 852
Astrophysics (*Astronomy and*), *Annual Review of* (Annual Reviews, Inc.), 769
Asymmetrical Abdomen (Calcified) : A Bathyal-abyssal Hermit Crab with a (Torben Wolff), 931
Asymmetry (Structural), in Cilia and Flagella (I. R. Gibbons), 1128
Atallah, Nicola A. (Sabry, Prof. Zakaria I., and) : Identification of Sugars in the Manna of Northern Iraq, 915
Atassi, Dr. M. Z. : Appointed Research Fellow in the Department of Chemistry in the University of Birmingham, 135
Atherosclerosis : Effect of Œstrogens on (Dr. M. R. Malinow and Dr. J. A. Moguilevsky)—Effect of Œstradiol on the Oxygen Consumption of Arteries in Chickens, 422 ; Effect of Incubated Arteries on Œstradiol-containing Media, 423 ; Modification of Aortic Aerobic Metabolism in Rats by Gonadectomy, 424
Atherosclerosis of Cholesterol-fed Rabbits : Effect of Essential Oils on (Dr. S. Benkö, A. Macher, F. Szarvas and T. Tiboldi), 731
Atherosclerosis Research, Journal of, 767
Atkins, Dr. Daphne : *Obituary* by Prof. C. M. Yonge, 586
Atkinson, Dr. M. R. : Unity and Diversity in Biochemistry, *review*, 479
Atkinson, Dr. R. d'E. : Technique of Optical Observations (Astrometric Techniques), 1065
Atlantic Hurricanes (Gordon E. Dunn and Banner I. Miller), *review* by Dr. F. H. Ludlam, 52

- Atlantic Biota (North) and their History (NATO Advanced Study Institutes Programme Symposium on), 769
- Atlantic Ocean (North) : Lavas from an Abyssal Hill on the Floor of the (D. H. Matthews), 158
- Atlas of γ-Ray Spectra from Radiative Capture of Thermal Neutrons (L. V. Groshev, V. N. Lutsenko, A. M. Demidov and V. I. Pelekhov), translated from the Russian by J. B. Sykes, *review* by Dr. E. R. Rae, 75
- Atmosphere : Medium-scale Diffusion in the (Royal Meteorological Society Symposium on), 591
  - Small-Scale Turbulent Diffusion in the (F. Gifford), 248
- Atmosphere Temperature Fluctuations (G. S. Callendar), 15
- Atmosphere (Upper) : Winds and Circulation in the (Royal Meteorological Society Symposium on), 591
- Atmospheres : Hydrodynamics of Oceans and (Carl Eckart), *review* by Dr. P. G. Drazin, 1044
  - Wave Motion of Oceans and, *review* by Dr. P. G. Drazin, 1044
- Atmospheric Events : Numerical Retracing of (Dr. Uwe Radok and D. Jenssen), 247
- Atmospheric Oxidation : Influence of, on Supercontraction of Wool Fibres reduced with Thioglycollic Acid (O. A. Swanepoel), 626
- Atmospheric Radon and Wind Direction : Concentration of (Dr. F. Barreira), 1092
- Atmospheric Waves associated with Ionospheric Storms : Possible Identification of (M. D. Wright), 898
- Atomic Energy (U.S.S.R. State Committee of the Council of Ministers for the Utilization of), and the United Kingdom Atomic Energy Authority : Collaboration on the Peaceful Uses of Atomic Energy, 960
- Atomic Energy : Peaceful Uses of (U.S.S.R. State Committee of the Council of Ministers for the Utilization of Atomic Energy and the United Kingdom Atomic Energy Authority Collaboration on the), 960
- Atomic Energy Agency (International) : Symposium on Radioisotopes and Radiation in Entomology, 15
  - Appointment of Dr. P. L. Balligand as deputy director general in charge of the Department of Technical Operations, 131
  - International Conference on Nuclear Electronics, 493
- Atomic Energy Agency (International), and others (sponsored by the) : Establishment at the University of Uppsala of an International School for Research and Education in Physics, 311
- Atomic Energy Authority (United Kingdom) : Appointment of L. B. Mullett as assistant director for accelerator and applied physics in the Rutherford Laboratory of the National Institute for Research in Nuclear Science, 393
  - Appointment of Dr. W. Wild as head of the Chemistry Division of the Atomic Energy Research Establishment, 393
  - Status of a Division head given to A. A. Smales in the Atomic Energy Research Establishment, 393
  - Appointment of G. H. Greenhalgh as nuclear energy attaché to the United Kingdom Delegation to the European Communities (Euratom), 1060
- Atomic Energy Authority (United Kingdom), (U.S.S.R. State Committee of the Council of Ministers for the Utilization of Atomic Energy and the) : Collaboration on the Peaceful Uses of Atomic Energy, 960
- Atomic Energy Commission (French) (Biology Division) : Colloquium on Use of Tracers in the Study of Diseases of Porphyrin Metabolism, 870
- Atomic Energy Research Establishment (United Kingdom), Harwell : Appointment of Dr. W. Wild as head of the Chemistry Division, 393
  - Status of a Division head given to A..A. Smales, 393
  - International Seminar on Nuclear Energy, 591
- Atomic Explosion (First Sahara) : Measurements of Air Radioactivity in Italy and their relation to the (L. Argiero, Dr. S. Manfredini and Dr. G. Palmas), 618
- Atomic Structure : Quantum Theory of (Prof. John C. Slater), *review* by Prof. C. A. Coulson, 1142
- Atoms and Electrons, *review* by Prof. C. A. Coulson, 1142
- Attempted Low-Temperature Syntheses of Kaolin Minerals (Prof. G. W. Brindley and C. De Kimpe), 254
- Attenuated and Virulent Louping Ill Strain : Comparison of an (M. Grešíková, P. Albrecht and E. Ernek), 508
- Attitudes of Africans to Europeans in Ghana before Independence : White Man, a Study (Dr. Gustav Jahoda), *review* by Dr. Margaret Read, 946
- Attitudes of Steelworkers to Technical Change (Dr. Olive Banks), *review* by F. J. Willett, 382
- Attractants of Larvae : Citral, Linalyl Acetate, Linalol and Terpinyl Acetate as (Food Selection by Silkworm Larvae, *Bombyx mori*), (Yasuji Hamamura and Ken-ichi Naito), 879
- Atypical Spermiogenesis of *Thermobia domestica*, a Thysanuran Insect (R. S. Mathur), 743 ; (Dr. S. R. Bawa), 743
- Aureli, G., and others : Content of Sialic Acid in Serous Glands of Equines, 914
- Austin, Carl F. : Impulse Loading of Rock Targets to produce Fracture Patterns similar to Naturally Occurring Radial Dyke Systems, 227
- Australia : Primitive Rock-Shelter Art in, 767
  - Strontium-90 in Fall-out and in Man in, January 1959-June 1960 (Dr. F. J. Bryant, L. J. Dwyer, D. J. Stevens, Prof. E. W. Titterton and J. R. Moroney), 754
- Australia (Western) : Rock Paintings in the West Kimberley Region of (P. E. Playford), 767
- Australia (Western), Royal Society of : *Journal* of the, Vol. 43, Part 4, 767
- Australian Aborigines : Physical Anthropology of (Prof. A. A. Abbie), 972
- Australian Arid Zone Technical Conference (C. S. Christian and R. O. Slatyer), 19
- Australian Commonwealth Scientific and Industrial Research Organization : Coal Research in C.S.I.R.O., Nos. 1-11, 14
  - Rural Research in C.S.I.R.O., No. 23, Control of Red Scale in Citrus Fruit (B. H. Martin and Dr. R. F. Black), 133
  - Rural Research in C.S.I.R.O., No. 34, 491
  - Appointment of H. J. Frith as officer-in-charge of the Wildlife Survey Section, 676
- Australian Museum, Sydney : *Magazine* of the, Vol. 13, No. 9, 1155
- Australian National University, Canberra : Appointment of Sir John Cockcroft as chancellor, 680
- *Australian Scientist*, Vol. 1, No. 1, 217
- Auto-Antibodies (Albumin) : A Possible Specificity of (W. L. Marsh and W. J. Jenkins), 180
- Auto-Antibody (Thyroid) : Absence of, in Experimental Radiation Thyroiditis (Dr. Geoffrey Taylor and G. Sclare), 183
- Automatic Control : Mathematics of (Hatfield College of Technology Summer School on), 865, 1063
- Automation : Computing Chemical Plant, 14
  - International Exhibition on Measurement Control, Regulation and (MESUCORA Association, in conjunction with the Fédération des Industries Mécaniques et Transformatrices des Métaux, the Syndicat Général de la Construction Électrique, and the Fédération des Industries Électroniques), 397
- Automation—Men and Money (British Conference on Automation and Computation Conference on), 219
- Automation and Computation, British Conference on : Conference on Automation—Men and Money, 219
- Automotive Engineers, Inc., United States Society of (Flight Safety Foundation Award, Inc., of the) : Laura Taber Barbour Air Safety Award for 1961 awarded to E. S. Calvert and J. W. Sparke, 312
- Autoradiographic Techniques in Medical Science (Comitato Nazionale per l'Energia Nucleare Symposium on), 219
- Autrum, Prof .H., and Burkhardt, D. : Spectral Sensitivity of Single Visual Cells, 639
- Autumn Courses : Summer and (Field Studies Council), 864
- Average Energy lost by Very Soft X-Rays per Ion Pair in Air : Absolute Measurement of (Prof. B. Rajewsky and Dr. D. Lang), 249
- Avian Schistosomes in Hertfordshire (Dr. D. L. H. Robinson), 827
- Aviation, Ministry of : Appointment of J. R. Mills as head of the Radio Department, Royal Aircraft Establishment, Farnborough, 392
  - Appointment of J. H. Briggs as director of electronics, research and development (civil aviation), 392
  - Promotion of W. O. Broughton to Deputy Chief Scientific Officer, and appointment as director of air navigation and reconnaissance research and development, 587
- Aviation Meteorology : Handbook of (Air Ministry : Meteorological Office), *review*, 846
- Awards to Students (Scottish Education Department), 217
- Awn Mutations (Induced) : Effect of, on Yield in Wheat (D. Jagathesan, C. Bhatia and M. S. Swaminathan), 468
- Axelrod, Prof. Bernard, and others : Origin of β-Amino*iso*butyric Acid in Iris, 809
- Axial Migration of Particles in Poiseuille Flow (H. L. Goldsmith and S. G. Mason), 1095
- Axiomatic Method, with special reference to Geometry and Physics—Proceedings of an International Symposium held at the University of California, Berkeley, 1958 (edited by Prof. Leon Henkin, Prof. Patrick Suppes and Prof. Alfred Tarski), *review* by F. I. G. Rawlins, 570
- Axiomatics and Foundations, *review* by F. I. G. Rawlins, 570
- Axon (Squid Giant) : Leakage Current Rectification in the (Dr. William J. Adelman and Dr. Robert E. Taylor), 883
- Axonal Conduction by Curare : Reversible Block of, after Treatment with Cobra Venom and a Detergent (Dr. Philip Rosenberg and Dr. Seymour Ehrenpreis), 728
- Aykroyd, Dr. W. R. : Malnutrition, 398
- Aylward, Dr. F. : The Place of Food Science and Technology in the Campaign against Malnutrition (Some African Problems), 398
- Azide : Localization of Ferrous Corrosion by (P. Hersch), 163
- *Azotobacter vinelandii* Lipman : Rhamnose for Detection and Isolation of (Vagn Jensen), 832
- Azulene Derivatives as Plant Growth Regulators (Prof. Robert M. Muir and Corwin Hansch), 741
- Azuma, K. : Field-Emission Microscopic Investigation of Catalysed Synthesis of Ammonia on Tungsten, 530

- BACCI, Prof. G., and Bortesi, O. : Existence of Multiple Sex Genotypes in the Hermaphrodite Polychaete Worm *Ophryotrocha puerilis siberti*, 838
- Bacharach, A. L. : The Literary Presentation of Science, *review*, 847
- Bacilli (Tubercle) : Protective Activity of Fractions of, against Isologous Tumours in Mice (Dr. David W. Weiss, Rose S. Bonhag and Dr. Kenneth B. DeOme), 889
- Bacillus (Hansen's), in Complex Symbiosis *in vitro* : Multiplication of (Dr. R. Devignat), 832
- γ-Background : Discrimination between α-Tracks and, in Ilford Nuclear Emulsions (K. Van Camp, M. Dorikens and L. Dorikens-Vanpraet), 38
- Bacteria : Colicine Factors as Fertility Factors in—*Salmonella typhimurium* Strain *LT2* (H. Ozeki and Sheila Howarth), 986 ; *Escherichia coli K-12* (R. C. Clowes), 988
  - Interspecific Induction of Transformation of, with respect to Phage-susceptibility (Shigeo Fukuda and Kiyoshi Tsuzuki), 937
- Bacteria of the Intestine (Society for Applied Bacteriology Symposium on), 397
- Bacteria exposed to Ultra-violet Light : Incorporation of Thymidine into Deoxyribonucleic Acid by Extracts from (C. O. Doudney and Daniel Billen), 545
- Bacteria (Gram-negative) : Extraction of Nucleic Acid-free Lipopolysaccharides from (G. J. O'Neill and Prof. J. P. Todd), 344
- Bacteria (Luminous) : Chitinoclastic Activity in the (R. Spencer), 938
- Bacteria (Motile) : A Bacteriophage for (Dr. Elinor W. Meynell), 564
- Bacterial Contamination in Tissue Culture : Pseudomonadaceae as a Source of (Dr. M. Likar), 1025
- Bacterial Endotoxin : Effect of Artificial Fever in Increasing Susceptibility to (Dr. David G. Connor and Dr. Edward H. Kass), 453
  - Increased Sensitivity to, of F_1 Hybrid Mice undergoing Graft-versus-Host Reaction (Dr. J. G. Howard), 1122
- Bacterial Growth : Fractions of Trypsinized Casein giving Different Patterns of (D. A. H. Hearfield and A. W. Phillips), 266
- Bacterial Polyglycerophosphate (Prof. F. S. Stewart), 464
- Bacteriology at St. Bartholomew's, 131
- Bacteriology (Applied), Society for : Summer Conference, 397
  - Symposium on Bacteria of the Intestine, 397
- Bacteriophage for Motile Bacteria (Dr. Elinor W. Meynell), 564

Baffuor, R. P. : Presidential Address to the Ghana Science Association, 1064
Bagdasarian, M. (Szafrański, P., and) : Possible Role of Nucleopeptides in Protein Biosynthesis, 719
Bailey, A. J., and others : Electron Spin Resonance Spectra of γ-Irradiated Carbohydrates and α-Hydroxy Acids, 259
Bailey, Dr. A. R. : The Brittle Fracture of Steel, *review*, 573
  Physical Techniques in Metallurgy, *review*, 661
Bailey, Dr. F. G. : Appointed to the University of London readership in Asian anthropology at the School of Oriental and African Studies, London, 396
Bailey, G. W., and others : Infra-Red Investigation of the Migration of Lithium Ions into Empty Octahedral Sites in Muscovite and Montmorillonite, 342
Baillien, Michelle, and Schoffeniels, E. : Origin of the Potential Difference in the Intestinal Epithelium of the Turtle, 1107
Baker (George Fisher) Non-resident Lectureship in Chemistry at Cornell University : The Proton in Chemistry (R. P. Bell), *review* by Prof. J. A. V. Butler, 57
Baker, Prof. J. F. : Theoretical Elasticity, *review*, 383
Baker, P. F., and others : Replacement of the Protoplasm of a Giant Nerve Fibre with Artificial Solutions, 885
Baker, Dr. W. O. : Elected a Member of the United States National Academy of Sciences, 674
Baker's Yeast : The Pasteur Effect in a Respiration-deficient Mutant of (A. Kotyk), 811
Balan, Jozef, and others : Chemical Structure of Citrinin, 1104
Balance : Acid-base (Association of Applied Biochemists Symposium on), 493
Bald, Prof. J. G., and Solberg, R. A. : Apparent Release of Tobacco Mosaic Virus in Living Infected Cells, 651
Baldacci, E., and others : New Herbaceous Test-Plants for Study of the Infectious Degeneration of Grape Vines, 371
Ball, D. F. : Weathering (A Deep Profile on the Isle of Rhum in which 50 ft. of Weathered Gabbro is preserved under Glacial Drift), 1067
Ball, J. N. : Appointed to a Harkness Fellowship (zoology) of the Commonwealth Fund, 308
Balligand, Dr. P. L. : Appointed deputy director general in charge of the Department of Technical Operations of the International Atomic Energy Agency, 131 ; work of, 131
Ballio, Dr. A., and Sermonti, Dr. G. : Action of Mycophenolic Acid on Unstable Diploids of *Penicillium chrysogenum*, 108
Ballistics (Interior), of Rocket Motors, *review* by Prof. D. B. Spalding, 66
Banana : Early Flower Initiation in the (W. G. Barker and D. E. Dickson), 1131
Banana Plantation (Jamaican) : *Botryodiplodia theobromae* Pat. and *Nigrospora* sp. in the Air of a (Dr. D. S. Meredith), 555
Banaras Hindu University : Appointment of Dr. S. P. Ray-Chaudhuri to the chair of zoology, 765
Banded Spherulites of Hippuric Acid (Dr. N. H. Hartshorne), 1191
Bands of the Lanthanum Oxide (LaO (B→X) System : Intensity Aspects as Determinant of r'_e-r''_e in the (N. Sreedhara Murthy), 430
Bands and Semiconductors : Bonds, *review* by Dr. B. R. Pamplin, 116
Bannerman, Dr. David Armitage : The Birds of the British Isles, Vol. 9, Scolopacidae (part), *review* by Sir Landsborough Thomson, 73
Banks, Dr. A., and others : Reactions of Cytochrome-c with Methyl Linoleate Hydroperoxide, 908
Banks, Dr. Olive : The Attitudes of Steelworkers to Technical Change, *review* by F. J. Willett, 382
Bantock, C. : Chromosome Elimination in Cecidomyidae, 466
Bar-Akiva, A. : Biochemical Indications as a means of Distinguishing between Iron and Manganese Deficiency Symptoms in Citrus Plants, 647
Barber, M., and Cuthbert, Dr. J. : Methane Oxidation initiated by Electrical Discharge, 1001
Barbiturate, Salicylate and Acetophenetidin : A New Technique of Chromatography and Ionophoresis on Ion-Exchange Paper—Application to the Separation of (Harold V. Street and Dr. S. K. Niyogi), 537
Barbiturate, Salicylate, Acetophenetidin and *p*-Acetylaminophenol : A New Technique of Chromatography and Ionophoresis on Ion-exchange Paper—Application to Separation of (Harold V. Street and Dr. S. K. Niyogi), 718
Barbour (Laura Taber) Air Safety Award for 1961 awarded to E. W. Calvert and J. W. Sparke by the Flight Safety Foundation Award, Inc., of the United States Society of Automotive Engineers, Inc., 312
Barclay, K. S., and others : Control of Self-heating and Gas Emission in Nitrate-containing Fertilizers, 1189
Barent, Dr. M. : Elected chairman of the Association of Consulting Scientists, 395
Barer, Dr. R. : Applications of Interference Microscopy, 315
Bargmann, W., und andere (herausgegeben von) : Vierter Internationaler Kongress für Elektronenmikroskopie, Band 2, Biologisch-Medizinischer Teil, *review* by Dr. V. E. Cosslett, 68
Barium Chromate : Some Features of the Precipitation of, by an Extra-slow Technique (Tadeusz Adamski), 524
Barker, Prof. D., and Chin, N. K. : Efferent Innervation of Mammalian Muscle-Spindles, 461
Barker, Dr. S. A. (Stacey, Prof. M., and) : Polysaccharides of Micro-organisms, *review* by Prof. W. T. J. Morgan, 55
Barker, Dr. S. A., and others : Electron Spin Resonance Spectra of γ-Irradiated Carbohydrates and α-Hydroxy Acids, 259
Barker, W. G., and Dickson, D. E.: Early Flower Initiation in the Banana, 1131
Barley and Brewing (Dr. A. H. Cook), 401
Barlow, A. J. E., and others : Intracellular Free Amino-Acids of certain Dermatophytes, 87
Barnett, Dr. E. de Barry : *Obituary* by Dr. A. M. Ward, 1058
Barr, T. (Blain, Dr. J. A., and) : Destruction of Linoleate Hydroperoxide by Soya Extracts, 538
Barr, William : Awarded the Bessemer Gold Medal for 1961 of the Iron and Steel Institute, 13
Barreira, Dr. F. : Concentration of Atmospheric Radon and Wind Direction, 1092
Barrowman, J., and Craig, M. : Haemoglobins of Foetal *C57BL/6* Mice, 818
Bartels, Prof. J. : Elected a member of the Basic Sciences Section of the International Academy of Astronautics, 495
Bartley, C. E., and others : Solid Propellant Rockets, *review* by Prof. D. B. Spalding, 66
Barton, Prof. D. H. R. : Terpene Chemistry (Underlying Chemistry of Clerodin), 19
Barton, K. J. : Protection of Cleaned Iron Objects, 15
Basic Igneous Intrusion : Determination of the Age of a, by the Potassium-Argon Method (Dr. Ian McDougall), 1184
Basic Medical Sciences, Institute of (Royal College of Surgeons of England) : Title of Sir William Collins professor of anatomy conferred on G. W. Causey, 396
  Title of Sir William Collins professor of pathology conferred on Dr. G. J. Cunningham, 396
Basic Notion in the Theory of Cognitive Systems (Dr. M. C. Goodall), 840
Basins (Ocean), and Continents : Origin of (Dr. J. J. Gilvarry), 1048
Basis (A Chemical), for the Classification of Animal Viruses (Dr. P. D. Cooper), 302
Basis (Genetic), for Graft-against-Host Immunological Reactions between Two Inbred Lines of Chickens (L. N. Payne and P. Jaffe), 373
Bass, Arnold M., and Broida, H. P. (edited by) : Formation and Trapping of Free Radicals, *review* by Dr. B. Brocklehurst, 478
Bassett, Dr. C. Andrew L., and Herrmann, Ingeborg : Influence of Oxygen Concentration and Mechanical Factors on Differentiation of Connective Tissues *in vitro*, 460
Bassindale, R. : Appointed to a senior lectureship in zoology in the University of Bristol, 396
Baston, V. J. D. : Appointed a lecturer in mathematics at the University of Southampton, 397
Batchelor, Dr. G. K. (edited by) : The Scientific Papers of Sir Geoffrey Ingram Taylor, Vol. 2, Meteorology, Oceanography and Turbulent Flow, *review* by Prof. P. A. Sheppard, 62
Bates, Prof. D. R. : Elected a member of the Basic Sciences Section of the International Academy of Astronautics, 495
Bathyal-abyssal Hermit Crab with a Calcified Asymmetrical Abdomen (Torben Wolff), 931
Bathynella and other Interstitial Crustacea in Southern England (G. M. Spooner), 104
Bats and Man : Echoes of (Prof. Donald R. Griffin), *review* by G. R. Noakes, 64
Batten, H. Mortimer : Wild and Free—Stories of Canadian Animals, *review* by B. J. G. Maitland, 851
Battersby, Dr. A. R. : Awarded the Corday-Morgan Medal and Prize of the Chemical Society, 16
Batty, W. R. H. : Appointed to a lectureship in chemistry in the University of Birmingham, 679
Bauer, Dr. D. J., and Sadler, Dr. P. W. : Derivatives of Isatin β-Thiosemicarbazone with Anti-Viral Chemotherapeutic Activity against Ectromelia Infection, 1167
Bauer, Prof. Hans (Brachet, Prof. Jean, and) : Awarded the Schleiden Medal of the Leopoldina German Academy of Science, 312
Bauer, W. C., and others : Abnormalities in the Fine Structure of the Neuromuscular Junction in Patients with Myasthenia Gravis, 280
Baumann, Prof. E. : Television and Film Techniques (Recent Developments on the Eidophor Large-Screen Projector), 869
Bawa, Dr. S. R. : Atypical Spermiogenesis of *Thermobia domestica*, a Thysanuran Insect, 743
Baxendale, Dr. J. H., and Mansell, A. L. : Flash Photolysis of Ferrous Sulphate Solutions, 622
B.B.C. and the Council for Nature : Competition for amateur cine-photographers for natural history films suitable for television, 963
B.C.G. : Effect of (Phagocytic Activity of the Reticulo-Endothelial System), (Prof. T. Nicol, P. McKelvie and C. G. Druce), 418
Beadle, N. C. W. : At the Australian Arid Zone Technical Conference (Physical Characteristics of the Australian Arid Zone—Vegetation), 19
Beam Output from a Synchrocyclotron : A Proposal for Increasing the (F. M. Russell), 335
Bean (Dwarf) Hypocotyls : Effects of Quality of Light on Development of Roots on, in Presence and Absence of Boron (Dr. E. C. Humphries), 701
Bearcroft, Dr. W. G. C. : The Liver in Infective Hepatitis, 549
Beard, J. W., and others : Science in Progress, Eleventh Series (edited by Hugh Taylor), *review* by Prof. Ritchie Calder, 45
Beardmore, Dr. J. A. (Clutterbuck, A. J., and) : Variation in the Behaviour of Different Genotypes of *Drosophila* towards Odoriferous Vegetable Oils, 1135
Bearn, J. G., and others : Function of the Foetal Thyroid of the Rabbit with regard to Cholesterol Metabolism studied by Foetal Thyroidectomy, 822
Beck, W. H. : The Possibility of Obtaining E.M.F. directly from Acid-Base Reactions—Electrodes of the Third Kind reversible to Alkaline Earth and other Ions, 712
Beckett, Charles W., and others : Tables of Thermodynamic and Transport Properties of Air, Argon, Carbon Dioxide, Carbon Monoxide, Hydrogen, Nitrogen, Oxygen and Steam, *review* by Prof. A. R. Ubbelohde, 58
Beckett, J. C. : Elected a member of the Royal Irish Academy, 492
Beckett, Dr. P. H. T. : Weathering (Relative Merits of Sampling Drainage Water or Water Direct from the Profile), 1077
Bed (Fluidized) : Bubble Formation at an Orifice in a (Dr. D. Harrison and L. S. Leung), 433
Beddoes, M. P., and others : A Reading Machine for the Blind, 874
Bedson, Sir Samuel : *Obituary* of Prof. Jules Bordet, 763
Beef : Caesium-137 in Air, Precipitation, Drinking Water, Milk and, in Norway during 1959-1960 (T. Hvinden and A. Lillegraven), 402
Beer : 'Sunlight' Flavour of (Y. Obata, M. Koshika and H. Tanaka), 635
Beetles (Water-) : Dynamics and Energetics of Swimming in (Dr. Werner Nachtigall), 224
Behaviour : Animal, *review* by Dr. N. Tinbergen, 570
  Similarity in, between Gas Bubbles in Liquid and Fluidized Solid Systems (P. D. Bloore and Dr. J. S. M. Botterill), 250
Behaviour of Different Genotypes of *Drosophila* towards Odoriferous Vegetable Oils : Variation in the (A. J. Clutterbuck and Dr. J. A. Beardmore), 1135
Behaviour of Magnesium Impurity in Gallium Arsenide (J. R. Knight), 999

Behaviour (Animal) : Current Problems in (edited by Dr. W. H. Thorpe and Prof. O. L. Zangwill), *review* by Dr. N. Tinbergen, 570
Behaviour (Animal), Association for the Study of : Symposium on Orientation and Migration, 1063
Behaviour (Flowering), of Vanilla (James E. Irvine and Norman E. Delfel), 366
Behaviour (Low-Temperature), of Haematite : 'Memory' of Initial Remanent Magnetization and Number of Repeating of Heat Treatments in (Prof. T. Nagata, M. Yama-ai and S. Akimoto), 620
Behaviour (Physical), of Colliding Solids : Impact—the Theory and (Prof. Werner Goldsmith), *review* by Dr. R. P. N. Jones, 947
Behaviour (Thermal Shock), of Brittle Materials (Dr. M. L. Levin), 521
Behavior Genetics (Center for Advanced Study in the Behavioral Sciences Conference on), 1156
Behavioral Sciences, Center for Advanced Study in the : Conference on Behavior Genetics, 1156
Beit Memorial Fellowships Trust : Election of Prof. Alexander Haddow as a member of the Advisory Board, 768
  Fellowship Awards, 768
Beiträge zür Physik und Chemie des 20 Jahrhunderts—Lise Meitner, Otto Hahn, Max von Laue zum 80 Geburtstag (herausgegeben von O. R. Frisch, F. A. Paneth, F. Laves und P. Rosbaud), *review* by Dr. C. A. Taylor, 118
Belcher, Prof. R. : Treatise on Analytical Chemistry, *review*, 60
Belforti, D., and others : Highly Oriented Boron Nitride, 901
Belgian Advisory Council for Scientific Policy : First Annual Report (1959-60), 313
Bell, Dr. D. J. : Adrenocorticotrophin and the Sugar-Level in Plasma in Young Fowls, 913
Bell, Dr. F. R. : Title of reader in veterinary physiology (at the Royal Veterinary College) conferred on, 396
Bell, Dr. G. D. H. : Elected a vice-president of the National Institute of Agricultural Botany, and a vice-president member of the Council, 1156
Bell, R. P. : The Proton in Chemistry (George Fisher Baker Non-resident Lectureship in Chemistry at Cornell University), *review* by Prof. J. A. V. Butler, 57
Bell Telephone Laboratories : New Superconducting Compound of Niobium and Tin, Nb_3Sn, 134
Bellamy, Ethel F. : *Obituary* by Prof. H. H. Plaskett, 391
Bellett, A. J. D., and Burness, A. T. H. : Nature of the 'Infective Ribonucleic Acid Component' in Cells infected with Encephalomyocarditis Virus and the 'Virosome' Concept, 235
Bello, H. R. (Bello, Dr. J., and) : Interaction of Model Peptides with Water and Lithium Bromide, 440
Bello, Dr. J., and Bello, H. R. : Interaction of Model Peptides with Water and Lithium Bromide, 440
Belton, Dr. J. G. : Elected a member of the Royal Irish Academy, 492
Belts (Van Allen), about the Earth : A Radio Wave Mechanism to account for the Known Distribution of (Joseph M. Boyer), 597
Belval, Peter C., and others : Aminoglycolipids and Glycoproteins of Human Brain—Hot Methanol Extraction of Human Brain Aminoglycolipids, 152
Belyea, E., and others : A Reading Machine for the Blind, 874
Ben-Porat, Dr. Tamar, and others : Effect of Mitomycin C on the Synthesis of Infective Virus and Deoxyribonucleic Acid in Pseudorabies Virus-infected Rabbit Kidney Cells, 33
Bénard, Prof. A. : Use of Tracers in the Study of Diseases of Porphyrin Metabolism (Present Knowledge of Porphyrin Biosynthesis), 870
Benditt, E. P., and others : Evidence for Multiple Caeruloplasmin Components in Human Serum, 927
Benedek, T. (Verona, O., and) : Iconographia Mycologica (*Mycopathologia et Mycologia Applicata*, Vols. 11, 12 and 13), *review* by Dr. David Park, 52
Benedict, William S., and others : Tables of Thermodynamic and Transport Properties of Air, Argon, Carbon Dioxide, Carbon Monoxide, Hydrogen, Nitrogen, Oxygen and Steam, *review* by Prof. A. R. Ubbelohde, 58
Benguela Current : The (T. John Hart and Ronald I. Currie), 1069
Benkö, Dr. S., and others : Effect of Essential Oils on Atherosclerosis of Cholesterol-fed Rabbits, 731
Bennett, E. L., and others : Sex and Strain Differences in Electroshock Convulsions of the Rat, 515
Bennett, J. P. : Movement of the Ovum in the Reproductive Tract—A Needle Probe Geiger-Müller Counter for the Study of the Passage of the Ovum in the Reproductive Tract, 788
Bennett, J. P., and others : Movement of the Ovum in the Reproductive Tract—A Possible Explanation for the Failure of Non-Surgical Ovum Transfers in the Cow, 789
Bennett, Dr. W. D. G. : Appointed to a Senior Research Fellowship in the Department of Materials at the College of Aeronautics, Cranfield, 218
Benson, Dr. R. S. : Appointed reader in mechanical engineering at the University of Liverpool, 963
Bensted, J. P. M. : Haemagglutinin Production in Pre-immunized Mice exposed to Continuous γ-Radiation, 99
Benzothiazol with Iodine : Ionization Potential and Molecular Complex of (Prof. J. Collin and M. Nagels), 82
Bentley, P. G. : Polymers of Carbon Dioxide, 432
Benzenoid (Non-) Aromatic Compounds (edited by David Ginsburg), *review* by B. A. Ellis, 662
Benzer, Prof. S. : Elected a Member of the United States National Academy of Sciences, 674
3,4-Benzpyrene : Detection of Small Quantities of, directly from Chromatographic Paper (Dr. B. A. Nešković and V. Soškić), 1199
Beraldo, W. T., and others : Purification of the Toxic Fractions from *Ascaris lumbricoides* and their Effect on the Guinea Pig, 813
Bereczky, Elizabeth, and others : Intracellular Structures in Tumours induced by Polyoma, 610
Beresford, Prof. M. W. : At the Annual Conference of the British Agricultural History Society (Development of the Unusual Settlement Pattern in Fourteenth-Century Cornwall), 682
Bering Strait Dam (P. M. Borisov), 491 ; (D. A. Drogaitzev), 491
Bernal, Prof. J. D. : Significance of Carbonaceous Meteorites in Theories on the Origin of Life, 129
  Technology, Science and Art—Common Ground (Science in History), 397
Bernini, L., and others : Favism and Thalassaemia in Sardinia and their Relationship to Malaria, 1179
Berrens, Dr. L., and Young, E. : Preparation and Properties of Purified House Dust Allergen, 536
Berrie, Alex. M. M., and others : Prevention of Manganese Deficiency in Oat by soaking the Grain in Solutions of Manganous Chloride, 824
Berry, A. J. : Henry Cavendish—his Life and Scientific Work, *review* by Dr. William P. D. Wightman, 42
Berry, L. : Weathering, 1067
Berry, L., and Ruxton, B. P. : Weathering (Weathering of Rocks in Hot Climates), 1067
Berry, R. : Comparison of Helium and Argon in Ionization Detectors, 1188
Berta, Ferdinando Della, and others : Presence of Sialic Acid in a Granuloma Pouch, 913
Bertram, Prof. D. S. : Some Aspects of Disease Transmission by Ticks, 683
Bessemer Gold Medal for 1961 of the Iron and Steel Institute awarded to William Barr, 13
β-Alanine from *Iris tingitana* (var. Wedgewood) : Isolation of (Clayton J. Morris, John F. Thompson, Sam Asen and Filadelfo Irreverre), 718
β-Amino*iso*butyric Acid in Iris : Origin of (W. R. Evans, Chi Shiun Tsai and Prof. Bernard Axelrod), 809
β-Amylase : Action Pattern of (Dexter French), 445
β-Galactosidase Changes in the Developing Intestinal Tract of the Rat (Dr. Anibal Alvarez and José Sas), 826
β-Lactoglobulins of Buffalo's Milk and Cow's Milk : Comparison of the (Dr. A. Sen and N. K. Sinha), 343
β-Sitosterol as one of the Biting Factors (Food Selection by Silkworm Larvae, *Bombyx mori*), (Yasuji Hamamura, Keizo Hayashiya and Ken-ichi Naito), 880
β-Thiosemicarbazone (Isatin) : Derivatives of, with Anti-Viral Chemotherapeutic Activity against Ectromelia Infection (Dr. D. J. Bauer and Dr. P. W. Sadler), 1167
Beth, Prof. Evert W. : The Foundations of Mathematics, a Study of the Philosophy of Science, *review* by F. I. G. Rawlins, 570
Betina, Vladimír, and others : Chemical Structure of Citrinin, 1104
Betto, E., and others : New Herbaceous Test-Plants for Study of the Infectious Degeneration of Grape Vines, 371
Beyond the Planet Earth (Konstantin Tsiolkovsky), translated from the Russian by Kenneth Syers, *review* by G. R. Noakes, 204
Bhadani, Dr. M. M., and Ludlow, N. G. T. : Precipitation of Sub-Micron Dust in Still Air by Cloud-size Water Droplets, 974
Bhatia, C., and others : Effect of Induced Awn Mutations on Yield in Wheat, 468
Bibliography of Interlingual Scientific and Technical Dictionaries (Unesco), fourth edition, 1061
Bibliography of Publications relating to the I.G.Y. (Academy of Sciences of the U.S.S.R.), 493
Bibliography (An Annotated), of Influenza (American Institute of Biological Sciences), Vol. 1, No. 1, 863
Biermann, Prof. L. : Elected a member of the Basic Sciences Section of the International Academy of Astronautics, 495
Bigg, P. H. : Standard Unit of Pressure in Vacuum Physics, 523
Biggers, Dr. J. D., and others : Choice of Animals for Bio-Assay, 891
Biggs, Dr. W. D. : The Brittle Fracture of Steel, *review* by Dr. A. R. Bailey, 573
Bignoniaceae to Compositae (Bignonias to Sunflowers), (Roxana Stinchfield Ferris), (Illustrated Flora of the Pacific States—Washington, Oregon and California, Vol. 4), *review* by G. P. DeWolf, 49
Bilatriene Pigment in the Green Terebellid Polychaete *Eupolymnia heterobranchia* (Johnson), (Dr. R. Phillips Dales), 168
Bilbey, Dr. D. L. J., and others : Phagocytic Activity of the Reticulo-Endothelial System—Effect of Tri-*p*-anisylethylene, Dienoestrol and Stilboestrol Diphosphate, 419
Bile Pigment Excretion in Amphibia (Roger Lester and Prof. Rudi Schmid), 452
Bile Salt Solutions : Micellar Solubilization of Fatty Acids and Monoglycerides by (Dr. Alan H. Hofmann), 1106
Bile Salts : Enhancement of Intraperitoneal Staphyloccal Virulence for Mice with Different (Dr. S. Stanley Schneierson, Daniel Amsterdam and Ely Perlman), 829
Bilharziasis : Second African Conference on (Lourenco Marques, 1960)—Report (United Nations, World Health Organization, Technical Report Series No. 204), 24
Billen, Daniel (Doudney, C. O., and) : Incorporation of Thymidine into Deoxyribonucleic Acid by Extracts from Bacteria exposed to Ultraviolet Light, 545
Binary Systems : Constants for, *review* by Dr. E. F. G. Herington, 661
Binary Systems in Concentrated Solutions : The Physico-chemical Constants of (Prof. Jean Timmermans), Vol. 4, Systems with Inorganic + Organic or Inorganic Compounds (excepting Metallic Derivatives), *review* by Dr. E. F. G. Herington, 661
Binding of Calcium Ions by the Aorta (Dr. I. Gordon Fels), 1012
Binette, J. P. (Schmid, K., and) : Polymorphism of α_1-Acid Glycoprotein, 630
Bio-Assay : Choice of Animals for (Dr. J. D. Biggers, Dr. Anne McLaren and Dr. Donald Michie), 891 ; (Dr. C. K. Chai), 893, 894 ; (Dr. Anne McLaren and Dr. Donald Michie), 894
Biochemical Changes accompanying Impaired Respiration in Staphylococci (Prof. G. F. Gause, G. V. Kochetkova and G. B. Vladimirova), 978
Biochemical Compounds on the Primitive Earth : Comets and the Formation of (Prof. J. Oró), 389
Biochemical Indications as a means of Distinguishing between Iron and Manganese Deficiency Symptoms in Citrus Plants (A. Bar-Akiva), 647
Biochemical Preparations (edited by Henry A. Lardy), Vol. 7, *review* by Dr. F. H. Malpress, 118
Biochemical Society : Colloquium on Metabolic Pathways of Foreign Compounds, 219
  Meeting in Dublin, 493
  Colloquium on the Quantitative Estimation of Amino Acids, 1063
Biochemistry : Insect, *review* by Prof. V. B. Wigglesworth, 1041
  More Recent Advances in, *review* by Prof. D. C. Harrison, 569
  Recent Advances in (Prof. T. W. Goodwin), fourth edition, *review* by Prof. D. C. Harrison, 569
  Unity and Diversity in—an Introduction to Chemical Biology (Marcel Florkin), translated from the French by T. Wood, *review* by Dr. M. R. Atkinson, 479

Biochemistry of Development (Prof. Jean Brachet), *review* by Prof. C. H. Waddington, 475
Biochemistry of Glycogen and Starch : Recent Advances in the (Dr. W. J. Whelan), 954
Biochemistry of Insects (Darcy Gilmour), *review* by Prof. V. B. Wigglesworth, 1041
Biochemistry (Cancer) : Amino Acids, Proteins and—Papers presented at the Jesse P. Greenstein Memorial Symposium, Division of Biological Chemistry, American Chemical Society, 1959 (edited by Dr. John T. Edsall), *review* by Dr. F. H. Malpress, 203
Biochemists (Clinical), Association of : Symposium on Acid-base Balance, 493
Biological Acoustics, Committee for, in collaboration with the British Institute of Recorded Sound : To set up a Library of Recorded Animal Sounds, 395
Biological Activity of some Humic Fractions isolated by means of Partition Chromatography (Prof. A. Paszewski, J. Trojanowski and A. Lobarzewska), 277
Biological Association (Freshwater) : Annual General Meeting, 963
Biological Characteristics of Colicine *X* (Dr. J. Paravassiliou), 110
Biological Control of *Fusarium* in Soil : The Mycolytic Phenomenon and (R. Mitchell and Prof. M. Alexander), 109
Biological Molecules : Electron Transfer in (British Biophysical Society Symposium on), 312
Biological Nitrogen Fixation : Effect on, of Nitrogen Gas treated with Ultra-violet Radiation (B. Zacharias and C. -G. Hedén), 817
Biological Research : Living Animal Material for (Proceedings of the International Committee on Laboratory Animals Symposium on), 677
Biological Research Association (British Industrial) : Appointment of Dr. Leon Golberg as director, 960
Biological Sciences (American Institute of) : To undertake a Biological Sciences Communication Project, 13
  An Annotated Bibliography of Influenza, Vol. I, No. I, 863
Biological Solids (Organic and) : Effects of Ionizing Radiations on (British Biophysical Society and the Société de Chimie Physique Informal Discussion on), 219
Biological Systems : Transport and Accumulation in (Dr. E. J. Harris), second edition, *review* by Dr. I. M. Glynn, 848
Biological and Medical Physics : Advances in (edited by Cornelius A. Tobias and John H. Lawrence, assisted by Thomas L. Hayes), Vol. 7, *review* by Dr. N. M. Blackett, 74
Biologie des Eaux Souterraines, Littorales et Continentales (Claude Delamare Deboutteville), *review* by Dr. D. J. Crisp and P. J. S. Boaden, 50
Biologie (Frischwasser- und Abwasser-) : Handbuch der (Prof. Hans Liebmann), Band 2, *review* by Dr. H. B. N. Hynes, 1043
Biologist : Mathematics for the, *review* by J. F. Scott, 945
Biologists (Applied), Association of : Paper-reading Meeting on Diseases caused by Plant Viruses in Crops, 220
  Election of Officers for 1961-62, 679
Biology : An Introduction to the Mathematics of Medicine and (J. G. Defares and I. N. Sneddon), *review* by J. F. Scott, 945
Biology, Institute of (Parasitology Group) : Spring Meeting at Bristol, 16
Biology, Institute of, and others : Symposium on The Soil—Problems raised by its Use and Misuse, 770
Biology of Sialic Acids and related Substances : The Chemistry and (Dr. Alfred Gottschalk), *review* by Dr. T. F. Slater, 57
Biology (Applied) : Diploma in Technology in (Bristol College of Science and Technology and the Brunel College of Technology Courses for the), 495
Biology (Applied), in Technical Colleges, 495
Biology (Applied Microbiology and), at the Royal College of Science and Technology, Glasgow, 764
Biology (Chemical) : Unity and Diversity in Biochemistry, an Introduction to (Marcel Florkin), translated from the French by T. Wood, *review* by Dr. M. R. Atkinson, 479
Biology (Freshwater) : Technical Applications of, *review* by Dr. H. B. N. Hynes, 1043
Biology (Human), Society for the Study of : Symposium on Natural Selection in Human Populations (edited by D. F. Roberts and G. A. Harrison), *review* by Kenneth A. R. Kennedy, 72
Biology (*Human Developmental*), *Abstracts of* (Excerpta Medica Foundation), Vol. I, No. I, 133
Biology (Medicine and) : Fourteenth Annual Conference on Electrical Techniques in (Joint meeting of the fourth International Conference on Medical Electronics with the), 397
Biology (Molecular), or Ultrastructural Biology ? (Prof. C. H. Waddington), 184, 1124 ; (the late Prof. W. T. Astbury), 1124
Biology (Ultrastructural)? : Molecular Biology or (Prof. C. H. Waddington), 184, 1124 ; (the late Prof. W. T. Astbury), 1124
Biophysical Society (British) : Symposium on Phloem Transport in Plants, 312
  Symposium on Electron Transfer in Biological Molecules, 312
  Discussion on International Organization in Biophysics, 312
Biophysical Society (British), and the Société de Chimie Physique : Informal Discussion on the Effects of Ionizing Radiations on Organic and Biological Solids, 219
Biophysics : International Organization in (British Biophysical Society Discussion on), 312
Biopoesis, *review* by N. W. Pirie, 295
Biosynthesis : Pigments of *Phoma terrestris* Hansen and their (Prof. A. J. Birch, R. I. Fryer, P. J. Thomson and Herchel Smith), 441
Biosynthesis of Choline *in vitro* by Rat Liver (F. R. Dalal, J. M. Noronha and Dr. A. Sreenivasan), 267
Biosynthesis of Citrulline in Plants (Dr. G. Reuter), 447
Biosynthesis (Protein) : Possible Role of Nucleopeptides in (P. Szafrański and M. Bagdasarian), 719
Biota (North Atlantic), and their History (NATO Advanced Study Institutes Programme Symposium on), 769
Biotin Requirement and Carbon and Sulphur Sources in *Aspergillus* and *Neurospora* (P. Strigini and G. Morpurgo), 557
Birch, Prof. A. J., and others : Pigments of *Phoma terrestris* Hansen and their Biosynthesis, 441
Birch-Andersen, Aksel (Blom, Dr. Erik, and) : An 'Apical Body' in the Galea Capitis of the Normal Bull Sperm, 1127
Bird, R. J., and Rooney, G. : Structure of Calcium Soap Fibres, 337
Birds : Sun Navigation in (Dr. Klaus Schmidt-Koenig), 1025 ; (C. J. Pennycuick), 1026
  Ubiquinone and Tocopherol in (J. Bunyan, E. E. Edwin, A. T. Diplock and Dr. J. Green), 637
Birds of the British Isles (Dr. David Armitage Bannerman), Vol. 9, Scolopacidae (part), *review* by Sir Landsborough Thomson, 73
Birds of the West Indies (James Bond), *review*, 1046
Birds killed by Poisonous Seed Dressings (British Trust for Ornithology and the Royal Society for the Protection of Birds), 218
Birds, Royal Society for the Protection of (British Trust for Ornithology and the) : Report on Birds killed by Poisonous Seed Dressings, 218
Birkbeck College, London : Appointment of Dr. D. J. Bohm to the University of London chair of theoretical physics, 219, 308
Birks, Dr. J. B. : A Physical Theory of Carcinogenesis by Aromatic Hydrocarbons, 232
Birmingham College of Advanced Technology : Establishment by Joseph Lucas, Ltd., of the Joseph Lucas research fellowship in production engineering, 962
Birmingham Museum of Science and Industry : Rebuilding of the, 491
Biró, Dr. G. (Lörincz, Prof. F., and) : Nature of Sarcolemma, the Striated Muscle Fibre Membrane, 317
Birth of Delinquents, 24
Bishop, Sir Harold : Television and Film Techniques (Topical Problems of Television in the United Kingdom), 868
Bishop, M. J. : Appointed a member of the University Grants Committee, 397
Bishop, W. : Awarded an N. E. Rowe Medal of the Royal Aeronautical Society, 863
Biting Factors : β-Sitosterol as one of the (Food Selection by Silkworm Larvae, *Bombyx mori*), (Yasuji Hamamura, Keizo Hayashiya and Kenichi Naito), 880
Bitter, Prof. Francis : Magnets—the Education of a Physicist, *review* by G. R. Noakes, 64
Bivalent Iron : Activation of Hurain by (Dinah Sharon de Seidl and Karl Gaede), 1112
Bivalent Metal Ions as the Coupling Factor between Cell Metabolism and the Rate of Cell Mutation (Dr. G. G. Jayson), 144
Black, Prof. M. : Technology, Science and Art—Common Ground (Art and Engineering), 397
  Elected a Member of the Geological Society of London, 492
Black, P. H., and others : Effect of *Staphylocci* on Leucocyte Pyridine Nucleotides, 516
Black, Dr. R. F. (Martin, B. H., and) : Control of Red Scale in Citrus Fruit, 133
Blackburn, Capt. E. W. (Dacquisto, Major M. P., and) : Protective Effect of Orally Administered *S*,β-Aminoethylisothiuronium. Br. HBr against X-Radiation Death in Mice, 270
Blackett, Dr. N. M. : Advances in Biological and Medical Physics, *review*, 74
Blackett, Prof. P. M. S. : Appointed pro-rector of the Imperial College of Science and Technology, London, 396
Blain, Dr. J. A., and Barr, T. : Destruction of Linoleate Hydroperoxide by Soya Extracts, 538
Blairs, S., and others : Effect of a Thin Oxide Film on the Reaction of Iodine Vapour with Copper, 1183
Blaschko, Dr. H., and others : Incorporation of Phosphorus-32 into Adenosine Triphosphate of Adrenal Chromaffin Granules, 354
Blaškovič, D., and others : Haemagglutinating Sub-Units released from Newcastle Disease, Para-influenza I and Mumps Viruses by Treatment with Ether, 834
Blicharski, Julian, and others : Intracellular Structures in Tumours induced by Polyoma, 610
Bligh, J. (Linzell, J. L., and) : Polypnoea evoked by Heating the Udder of the Goat, 173
Blind : A Reading Machine for the (M. P. Beddoes, E. Belyea and Prof. William C. Gibson), 874
Block (Reversible), of Axonal Conduction by Curare after Treatment with Cobra Venom and a Detergent (Dr. Philip Rosenberg and Dr. Seymour Ehrenpreis), 728
Blom, Dr. Erik, and Birch-Andersen, Aksel : An 'Apical Body' in the Galea Capitis of the Normal Bull Sperm, 1127
Blood as a Rheological Fluid : Some Recent Research Problems encountered in the Study of (Cambridge Rheology Club Discussion on), 1062
Blood (Foetal), in several Mammalian Species : Fructose as a Component of the (Prof. A. St. G. Huggett and Dr. D. A. Nixon), 1209
Blood (Mammalian) : Hydrolysis of Paraoxon in (Prof. Ervin G. Erdös and Lois E. Boggs), 716
Blood (Portal and Hepatic), in Normal and Cirrhotic Liver : Flow of (Dr. T. Nakamura, S. Nakamura and T. Kaneko), 812
Blood Cells : Incorporation of Palmitic-1-^{14}C Acid into (Dr. Constantinos J. Miras, Dorothy L. Fillerup and James F. Mead), 92
Blood Cells (Red) : Osmotic Pressure Effect of the—Possible Physiological Significance (Dr. A. Tybjaerg Hansen), 504
Blood Cells (White), from Normal and Leukaemic Human Beings : Immunological Differences of Deoxyribonucleoproteins from (Luigi Messineo), 1122
Blood Cholesterol Content : Influence of various Dietary Fats on the (F. S. P. Van Buchem, J. J. Speelman, A. A. Idema, A. T. Valkema and H. J. Thomasson), 310
Blood Group Antibodies (Complement-fixing), with special reference to the Nature of Anti-*Le*^{a} (Dr. F. Stratton), 240
Blood Groups (*Rh*) : Correlation between Ulcerative Colitis and (Dr. William C. Boyd, Dr. Mary Heisler and Prof. Egon Orowan), 1123
Blood Plasma of Rabbits poisoned with Carbon Tetrachloride : Quinine Oxidase in Liver and (Dr. Gilberto G. Villela), 807
Blood Potassium and Sodium of Hereford and Brahman Cattle and some Breeds of Sheep maintained in Florida (J. R. Howes, G. K. Davis, P. E. Loggins and J. F. Hentges), 181
Blood Serum : Changes in Density of, after Total-Body Irradiation (Dr. Z. Dienstbier and M. Rakovič), 98
  Increase of Aldolase Activity in, following Irradiation (Dr. B. Dalos), 817
Blood Volume : Influence of Changes of, on the Concentration of Aldosterone in Peripheral Plasma of Intact Unanaesthetized Dogs (Ejgil Bojesen and Hans Degn), 352
Bloore, P. D., and Botterill, Dr. J. S. M. : Similarity in Behaviour between Gas Bubbles in Liquid and Fluidized Solid Systems, 250

Blowers, Dr. R., and others : Hospital Infection, *review* by Kathleen M. Hawkins, 119
Blowfly : Control of the Responsiveness of the, to Water (Prof. David R. Evans), 1132
Bloxam, Dr. T. W., and Price, N. B. : Stilpnomelane in North Wales, 525
Blum, S., and others : Highly Oriented Boron Nitride, 901
Blumberg, J. M., and others : Abnormalities in the Fine Structure of the Neuromuscular Junction in Patients with Myasthenia Gravis, 280
Blumenthal, Prof. Harold J. (Kuo, Mau-Huai, and) : Absence of Phosphatase Repression by Inorganic Phosphate in some Micro-organisms, 29
Boaden, P. J. S. (Crisp, Dr. D. J., and) : Hypogean Faunas, *review*, 50
Boats (Carbon) : Crystal Growth of Gallium Arsenide using (J. R. Knight), 1001
Bobtelsky, Prof. Mordecai : Heterometry, *review* by Dr. D. T. Lewis, 380
Bock, Prof. Robert M. (Stanley, jun., Wendell M., and) : Mechanisms of Expression of Genetic Information, 299
Bockris, Dr. J. O'M., and others (edited by) : Physicochemical Measurements at High Temperatures, *review* by Prof. A. R. Ubbelohde, 58
Bockstahler, Larry E., and Kaesberg, Prof. Paul : Bromegrass Mosaic Virus, a Virus containing an Unusually Small Ribonucleic Acid, 192
Bodmer, Dr. W. F. : Effects of Maternal Age on the Incidence of Congenital Abnormalities in Mouse and Man, 1134
Bodmer, Dr. W. F. (Parsons, Dr. P. A., and) : The Evolution of Overdominance—Natural Selection and Heterozygote Advantage, 7
Body (Rigid) : Effect of a Resisting Couple on the Rotational Motion of a (Prof. A. K. Weaver), 335
Boggs, Lois E. (Erdös, Prof. Ervin G., and) : Hydrolysis of Paraoxon in Mammalian Blood, 716
Bogoch, Dr. Samuel : Aminoglycolipids and Glycoproteins of Human Brain—Quantitative Separation and Determination of Brain Glycoproteins, Neuraminic Acid, Hexosamine and Hexoses by means of Whole Tissue Emulsion-Fractionation, 153
Bogoch, Dr. Samuel, and Faillace, Dr. Louis A. : Aminoglycolipids and Glycoproteins of Human Brain—Quantitative Fractionation of Brain Glycolipids by Silicic Acid Chromatography, 150
Bogoch, Dr. Samuel, and others : Aminoglycolipids and Glycoproteins of Human Brain—Hot Methanol Extraction of Human Brain Aminoglycolipids, 152
Bohm, Dr. David J. : Appointed to the University of London chair of theoretical physics at Birkbeck College, 219, 308, work of, 308
  Appointment as reader in physics at the University of Bristol, 1156
Bohr Effect in the Haemoglobins of Marine Mammals (Austen Riggs), 94
Boiling Points of some Alcohols : Effect of Strong Electric Fields on the (Dr. P. K. Katti and Dr. M. M. Chaudhri), 80
Bojesen, Ejgil, and Degn, Hans : Influence of Changes of Blood Volume on the Concentration of Aldosterone in Peripheral Plasma of Intact Unanaesthetized Dogs, 352
Bokhoven, Dr. C., and Tommassen, P. H. : Continuous Determination of Traces of Nitric Oxide, 435
Boley, Prof. Bruno A., and Weiner, Prof. Jerome H. : Theory of Thermal Stresses, *review* by B. S. Owen, 65
Bolliger, Dr. A., and Varga, D. : Feather Lipids, 1125
Bolognani, Lorenzo, and others : Presence of Sialic Acid in a Granuloma Pouch, 913
Bolognari, A. : Aggregation of Protein Particles in Tumour Cells, 358
Bolton, H. L. : Flame Photometry, *review*, 66
Bombay, Government of : Annual Report of the Haffkine Institute for the Year 1959, 1162
Bombyx mori (Silkworm Larvae) : Food Selection by—Citral, Linalyl Acetate, Linalol and Terpinyl Acetate as Attractants of Larvae (Yasuji Hamamura and Ken-ichi Naito), 879 ; β-Sitosterol as one of the Biting Factors (Yasuji Hamamura, Keizo Hayashiya and Ken-ichi Naito), 880
Bomford, Brigadier G. : Technique of Optical Observations, 1065
Bond, Dr. G., and Hewitt, Dr. E. J. : Molybdenum and the Fixation of Nitrogen in *Myrica* Root Nodules, 1033
Bond, Dr. G. C. : Appointed to a senior lectureship in chemistry at the University of Hull, 1156
Bond, James : Birds of the West Indies, *review*, 1046
Bonding (Hydrogen), in Apatitic Calcium Phosphates (Louis Winand, Prof. M. J. Dallemagne and Prof. G. Duyckaerts), 164
Bonds, Bands and Semiconductors, *review* by Dr. B. R. Pamplin, 116
Bonds (Chemical) : The Ionic Character of (E. Mooser and W. B. Pearson), 406
Bone, Dr. D. H. : Aspects of the Conversion of Glucose to α-Ketoglutarate in *Acetobacter melanogenum*, 562
Bone (Normal), and Teeth : Fluorescence of Tetracyclines in Bone Tumours, (L. N. Owen), 500
Bone (Stressed) : Properties of (H. M. Pearson), 1217 ; (Prof. C. J. Dreyer), 1217
Bone Marrow (Mouse) : Preservation of, at —79°C. with Dimethyl Sulphoxide (M. J. Ashwood-Smith), 1204
Bone Salts : Calcium Exchange of, considered as a Measure of the Crystal Surface (L. Richelle and Prof. M. J. Dallemagne), 165
Bone Tumours, Normal Bone and Teeth : Fluorescence of Tetracyclines in (L. N. Owen), 500
Bones of some Reptiles : Influence of Large Doses of Œstrogens on the Structure of the (Dr. K. Simkiss), 1217
Bonhag, Rose S., and others : Protective Activity of Fractions of Tubercle Bacilli against Isologous Tumours in Mice, 889
Bonola, P., and others : New Herbaceous Test-Plants for Study of the Infectious Degeneration of Grape Vines, 371
Books : British Scientific and Technical 1953-57 (edited by L. J. Anthony), *review* by R. Brightman, 119
  French Scientific and Technical (1950-60), 591
  Recent Scientific and Technical, Supp. vi, April 29 ; Supp. viii, May 27 ; Supp. ix, June 24
Borrie, W. D. : At the Australian Arid Zone Technical Conference (Human Settlement in Arid Regions—Demography), 20
Booth, Dr. A. D. : Crystal Gazing, *review*, 752
Booth, Charles—Social Scientist (Prof. T. S. Simey and M. B. Simey), *review* by Prof. L. S. Hearnshaw, 379
Bor, Dr. N. L. : The Grasses of Burma, Ceylon, India and Pakistan (excluding Bambuseae), *review* by John Lewis, 659
Bordet, Prof. Jules : *Obituary* by Sir Samuel Bedson, 763
Borel, Armand : Seminar on Transformation Groups, *review* by Dr. Hanna Neumann, 571
Borisov, P. M. : Bering Straight Dam, 491
Bornemissza, Dr. G. F. : Termination of Pupal Diapause in the Cinnabar Moth and the Reproductive Capacity of the Resulting Females, 936
Borneo : A Rare Earless Monitor Lizard from (Tom Harrisson and Dr. N. S. Haile), 1213
Borneo (British) : Geology of, 768
Borneo (North) : Haemoglobin Variants in Sarawak and (Dr. F. Vella and Dr. D. Tavaria), 729
Borneo (North), (Sarawak, Brunei and the Western Part of) : The Geology of (Dr. P. Liechti, in association with Dr. F. W. Roe and Dr. N. S. Haile), 768
Borneol and *iso*Borneol : Pyrolysis of Esters of (Dr. C. A. Bunton, K. Khaleeluddin and D. Whittaker), 715
Borohydride Ion in the Lithium Borohydride Lattice (Dr. D. A. Brown), 804 ; (Dr. C. J. H. Schutte), 805
Borohydride (Lithium) Lattice : The Borohydride Ion in the (Dr. D. A. Brown), 804 ; (Dr. C. J. H. Schutte), 805
Boron : Effects of Quality of Light on Development of Roots on Dwarf Bean Hypocotyls in Presence and Absence of (Dr. E. C. Humphries), 701
Boron Nitride : Highly Oriented (D. Belforti, S. Blum and B. Bovarnick), 901
Borrill, Dr. Martin : Experimental Taxonomy of Flowering Plants (The Experimental Taxonomy of *Anthoxanthum* L.—Genetic Aspects), 969
Borrill, Dr. Martin, and Jones, Keith : Hexaploid-*Dactylis*, 469
Bortesi, O. (Bacci, Prof. G., and) : Existence of Multiple Sex Genotypes in the Hermaphrodite Polychaete Worm *Ophryotrocha puerilis siberti*, 838
Borthwick, Dr. H. A. : Elected a Member of the United States National Academy of Sciences, 674
Botanical Congress : Tenth International, to be held in Edinburgh, 768
  Election of Prof. H. Godwin as president, 768
Botany (Agricultural), National Institute of : Appointment of Dr. P. S. Wellington as assistant director, 1154
  Election of Dr. G. D. H. Bell as a vice-president, and a vice-president member of the Council, 1156
Botany (Ecological) : Garth House as a Centre for (Fred N. and Brenda D. Haynes), 590
Botany (Taxonomic), at Birmingham, 1059
Botryodiplodia theobromae Par. and *Nigrospora* sp. in the Air of a Jamaican Banana Plantation (Dr. D. S. Meredith), 555
Bott, Dr. M. H. P., and others : Granite below the Northern Pennines, 899
Botterill, Dr. J. S. M. (Bloore, P. D., and) : Similarity in Behaviour between Gas Bubbles in Liquid and Fluidized Solid Systems, 250
Bourgois, François : Appointed director of the National Fishery Institute, Guayaguil, 588 ; work of, 588
Bourne, Dr. G. H. (edited by) : The Structure and Function of Muscle, Vol. I, Structure, *review* by Dr. I. A. Boyd, 46
Bourque, C., and Newman, Prof. B. G. : Awarded the Edward Busk Memorial Prize of the Royal Aeronautical Society, 863
Bovarnick, B., and others : Highly Oriented Boron Nitride, 901
Bovine Pancreatic Ribonuclease : The Active Site and Mechanism of Action of (Dorothy Findlay, D. G. Herries, Dr. A. P. Mathias, Dr. B. R. Rabin and C. A. Ross), 781
Bovine Serum Albumin : Prevention by Cysteamine of Radical Formation in, by γ-Rays (D. Libby, M. G. Ormerod, Prof. A. Charlesby and Dr. P. Alexander), 998
Bowden, Prof. K. F. : Exploring the Oceans, *review*, 202
Bowen, Prof. E. G. : Awarded a Research Grant by the Leverhulme Trust, 678
Bowers, Dr. J. F. : Appointed to a lectureship in mathematics at the University of Leeds, 219
Bowie (William) Medal for Unselfish Co-operation in Research awarded to Prof. K. E. Bullen by the American Geophysical Union, 591
Bowman, Dr. Barbara H., and King, Dr. F. J. : Effects of Glutamine and Asparagine Supplements in the Dietary Regimen of Three Phenylketonuric Patients, 417
Bowman, Edward R., and others : Demethylation in the Metabolism of (—)-Nicotine *in vivo*, 910
Boyd, Dr. I. A. : Structure and Function of Muscle, *review*, 46
Boyd, Dr. William C., and others : Correlation between Ulcerative Colitis and *Rh* Blood Groups, 1123
Boyer, Joseph M. : A Radio Wave Mechanism to account for the Known Distribution of Van Allen Belts about the Earth, 597
Boyer, Prof. Samuel H., and Watson-Williams, E. J. : The γ-Globulin, Gm^{ab}, in Nigerians, 456
Boys, C. V. : Soap Bubbles and the Forces which Mould Them, *review* by G. R. Noakes, 64
Brabazon of Tara, Lord : Elected president for 1961-62 of the Royal Institution, 492
Brachet, Prof. Jean : The Biochemistry of Development, *review* by Prof. C. H. Waddington, 475
Brachet, Prof. Jean, and Bauer, Prof. Hans : Awarded the Schleiden Medal of the Leopoldina German Academy of Science, 312
Braconnier, Prof. M. R. : At the Fourth World Fertilizer Congress (Fertilizer Production and Consumption), 1161
Bradford Institute of Technology : Course on Methods of Polymer Characterization and Analysis, 312
Bradley, Dr. J. N. : Awarded the Meldola Medal for 1960 of the Society of Maccabaeans, 865
Bradley, Dr. P. B. : Title of reader in neuropharmacology in the University of Birmingham conferred on, 135
Bradshaw, Dr. A. D. : Experimental Taxonomy of Flowering Plants (Evolution within Plant Species in relation to Soil Mineral Factors), 968
Bradshaw, Dr. L. : A Supplement to the Kober Reaction for Urinary Œstrogens, 809
Bragg, Sir Lawrence : *Obituary* of Maurice, Duc de Broglie, 860
Brahman Cattle (Hereford and), and some Breeds of Sheep maintained in Florida : Blood Potassium and Sodium of (J. R. Howes, G. K. Davis, P. E. Loggins and J. F. Hentges), 181
Brain : Changes of Quantity of Flavin in the, after Peripheral Administration of Flavins (Ikuko Nagatsu-Ishibashi, Toshiharu Nagatsu and Kunio Yagi), 728

Brain (Human) : Aminoglycolipids and Glycoproteins of—Quantitative Fractionation of Brain Glycolipids by Silicic Acid Chromatography (Dr. Samuel Bogoch and Dr. Louis A. Faillace), 150 ; Hot Methanol Extraction of Human Brain Aminoglycolipids (Dr. Samuel Bogoch, Peter C. Belval and Dorothy Winer), 152 ; Quantitative Separation and Determination of Brain Glycoproteins, Neuraminic Acid, Hexosamine and Hexoses by means of Whole Tissue Emulsion-Fractionation (Dr. Samuel Bogoch), 153
Brain (Intact) : Assay of 5-Hydroxytryptophan Decarboxylation in (A. Pletscher and K. F. Gey), 918
Brain Aminoglycolipids (Human) : Hot Methanol Extraction of (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch, Peter C. Belval and Dorothy Winer), 152
Brain Glycolipids : Quantitative Fractionation of, by Silicic Acid Chromatography (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch and Dr. Louis A. Faillace), 150
Brain Glycoproteins, Neuraminic Acid, Hexosamine and Hexoses : Quantitative Separation and Determination of, by means of Whole Tissue Emulsion-Fractionation (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch), 153
Braitenberg, Dr. V. : Functional Interpretation of Cerebellar Histology, 539
Branch Prize of the Royal Aeronautical Society awarded to Lieut. Comdr. D. J. Whitehead, 863
Branches of Trees at the Extreme Lower Forest Border : Classification and Multiplicity of Growth Layers in the (Waldo S. Glock, R. A. Studhalter and Sharlene R. Agerter), *review* by Prof. F. W. Jane, 850
Branching in Glycoprotein from Rat Urine during the Development of Cancer : Changes of Hexose/Hexosamine Ratio and Degree of (Prof. Sen-itiroh Hakomori, Hiroaki Kawauchi and Taiko Ishimoda), 265
Brand, Dr. J. C. D. : Proton Resonance, *review*, 1043
Brandberg and other Rock-Shelter Paintings of the Union of South Africa (Revel Mason), 311
Braunitzer, Dr. G., and others : The Haemoglobin Particles–Chemical and Genetic Aspects of their Structure, 480
Bray, K. N. C. : Title of senior lecturer in aeronautics and astronautics in the University of Southampton conferred on, 397
Bray, Dr. —., and Loughhead, —. : Solar Seeing (Results obtained near Sydney), 771
Breakdown Strength of Caesium Iodide (R. Taagepera, R. S. Storey and Prof, K. G. McNeill), 994
Breathnach, Dr. A. S. : Title of reader in anatomy (at St. Mary's Hospital Medical School, London) conferred on, 396
Brebner, John, and Szafran, Dr. Jacek : The 'Psychological Refractory Phase' in Ageing, 195
Brecon, Lord : Science and Industry—the Problem of Communication, 965
Breeding : Poultry (G. E. Mann), third edition (Ministry of Agriculture, Fisheries and Food, Bulletin No. 146), 394
Breeding of Improved Milking Cows through Artificial Insemination (Dr. J. Edwards and Dr. L. K. O'Connor), 759
Breeding (Plant) : European Association for Research in : Conference on Environmental Factors in the Distribution of Fruit Varieties, 16
Breeding Season : Variation in the Secondary Sex-Ratio of the Grey Seal *Halichoerus grypus* (Fab.) during the (Dr. J. C. Coulson and Grace Hickling), 281
Breeds of Sheep maintained in Florida : Blood Potassium and Sodium of Hereford and Brahman Cattle and some (J. R. Howes, G. K. Davis, P. E. Loggins and J. F. Hentges), 181
Brenner, Dr. S., and others : An Unstable Intermediate carrying Information from Genes to Ribosomes for Protein Synthesis, 576
Brereton, T. : Appointed to a lectureship in mining and minerals engineering in the University of Birmingham, 679
Breuer, Dr. H., and others : Configuration of the 6-Hydroxyl Group in Phenolic Steroids, 720
Brewer, Dr. A. W. : Weather Forecasting by Numerical Methods, 973
Brewer, P. I. : Liquid Chromatographic Separations using Rubber as the Stationary Phase, 625
Brewery Convention : European, 401
Brewing : Barley and (Dr. A. H. Cook), 401
Brian, Dr. P. W. : Elected president for 1961-62 of the Association of Applied Biologists, 679
Briggs, G. W. G. : *Obituary* by F. R. Horne, 861
Briggs, J. H. : Appointed director of electronics, research and development (civil aviation), in the Ministry of Aviation, 392 ; work of, 392
Briggs, Michael H. : Visual Pigment of Grapsoid Crabs, 784
Briggs, Winslow R. (edited by Leonard Machlis, in association with) : Annual Review of Plant Physiology, Vol. 11, *review* by Prof. Walter Stiles, 48
Brightman, R. : British Scientific and Technical Books, 1953-57, *review*, 119
Brimacombe, J. S., and others : Electron Spin Resonance Spectra of γ-irradiated Carbohydrates and α-Hydroxy Acids, 259
Brimblecombe, A. R., and Roff, C. : Distribution of *Acarapis woodi* (Rennie), 561
Brindley, Prof. G. W., and De Kimpe, C. : Attempted Low-Temperature Syntheses of Kaolin Minerals, 254
Brinton, Dr. Denis : International Review of Neurobiology, *review*, 850
Bristol College of Science and Technology : Course for the Diploma in Technology in Applied Biology, 495
Bristowe, Dr. W. S. : *Obituary* of the Rev. J. E. Hull, 487
Britain : Admission to Universities in, 401
  Broadleaved Trees of, *review* by J. L. Davidson, 48
  A Hermit Crab New to (Dr. D. B. Carlisle and N. Tregenza), 931
  Match-making Industry in, 217
  New Universities in, 1063
  Rainfall in, 1957, *review*, 201
  Rise in Population in, 766
  Scientific and Technical Man-power in, 843
  Space Research in, 588
  Water Research in, 217
  See *also under* Great Britain
Britain (Contemporary) : Growth in the British Economy, a Study of Economic Problems and Policies in (Political and Economic Planning), 199
British Agricultural History Society : Annual Conference (J. W. Y. Higgs), 681
British Biophysical Society: Symposium on Phloem Transport in Plants, 312
  Symposium on Electron Transfer in Biological Molecules, 312
  Discussion on International Organization in Biophysics, 312
British Biophysical Society and the Société de Chimie Physique : Informal Discussion on the Effects of Ionizing Radiations on Organic and Biological Solids, 219
British Borneo : Geology of, 768
British Broadcasting Corporation and the Council for Nature . Competition for amateur cine-photographers for natural history films suitable for television, 963
British Chemical Manufacturers, Association of : European Free Trade Association—Origin, Rules, Certification and Segregation of Stocks, 132
  Appointment of H. W. Vallender as deputy director, 865
British Conference on Automation and Computation : Conference on Automation—Men and Money, 219
British Cotton Industry Research Association and the British Rayon Research Association : Merging to be known as the Cotton, Silk and Man-made Fibres Research Association, 589
British Council : *British Medical Bulletin*, Vol. 17, No. 1, Hypothermia and the Effects of Cold, 141
British Economy : Growth in the—a Study of Economic Problems and Policies in Contemporary Britain (Political and Economic Planning), 199
British Economy in Transition, *review* by Prof. Brinley Thomas, 45
British Electrical Power Convention : Thirteenth (Electricity in the Prosperity and Welfare of the Nation), (Electrical Development Association), 680
British Embassy, Stockholm : Appointment of W. F. G. Drury as scientific attaché, 862
British Embassy, Tokyo : Appointment of Dr. C. R. S. Manders as scientific attaché, 862
British Food Analysis, *review* by Joyce Doughty, 477
British Funds for Oceanographic and Hydrographic Research, 216
British Gold Medal for Aeronautics of the Royal Aeronautical Society awarded to Dr. S. G. Hooker, 863
British Guiana : Archaeological Investigations in (Clifford Evans and Betty J. Meggers), *review* by Dr. G. H. S. Bushnell, 72
British Hardwoods : Guide to (Dr. W. B. R. Laidlaw), *review* by J. L. Davidson, 48
British Hat and Allied Feltmakers Research Association : Thirteenth Annual Report (1959-60), 766
British Industrial Biological Research Association : Appointment of Dr. Leon Golberg as director, 960
British Industry—Change and Development in the Twentieth Century (Dr. J. H. Dunning and C. J. Thomas), *review* by Prof. Brinley Thomas, 45
British Insecticides and Fungicides (Association of British Manufacturers of Agricultural Chemicals Conference on), 1063
British Institute of Radio Engineers : 1961 Convention (Radio Techniques and Space Research), 591
British Institute of Recorded Sound (Committee for Biological Acoustics, in collaboration with the) : To set up a Library of Recorded Animal Sounds, 395
British Insulated Callender's Cables, Ltd. : McFadzean Laboratory at the Wood Lane research centre to be opened by H.R.H. the Duke of Edinburgh, 312
British Iron and Steel Research Association : Open Days at Sheffield. 16
British Isles: The Birds of the (Dr. David Armitage Bannerman), Vol. 9, Scolopacidae (part), *review* by Sir Landsborough Thomson, 73
  Seasonal Variation of the Sea Surface Temperature in Coastal Waters of the (F. E. Lumb), 1164
British Kinematograph Society and the Television Society : Convention on Television and Film Techniques, 868
British Leather Manufacturers' Research Association : Open Days at Egham, 16, 765
  Annual Report for 1959-60, 309
British Manufacturers of Agricultural Chemicals, Association of : Conference on British Insecticides and Fungicides, 1063
British Medical Bulletin : Vol. 17, No. 1, Hypothermia and the Effects of Cold (British Council), 141
British Museum (Natural History) : A Short Guide to the Exhibition Galleries, eighth edition, 1061
British Mycological Society : Symposium on the Growth and Genetics of Higher Fungi, 399
British National Committee for Physics : Conference on Optical Instruments and Techniques, 963
British National Parks : Conservation of, 871
British Nationalized Transport Undertakings : Reorganization of, 137
British Occupational Hygiene Society : Twelfth Conference (Training in Occupational Hygiene), 1158
British Participation in Space Research, 216
British Rainfall, 1957—Report on the Distribution of Rain in Space and Time over Great Britain and Northern Ireland during the Year 1957 as recorded by about 5,000 Observers (Ninety-seventh Annual Volume) (Air Ministry : Meteorological Office), *review*, 201
British Rayon Research Association (British Cotton Industry Research Association and the) : Merging to be known as the Cotton, Silk and Man-made Fibres Research Association, 589
British Scientific and Technical Books, 1953-57 (edited by L. J. Anthony). *review* by R. Brightman, 119
British Scientists : Opinions of, of Home Office Control of Experiments on Animals (Universities Federation for Animal Welfare), 677
British Silver Medal for Aeronautics of the Royal Aeronautical Society awarded to Pierre Satre, 863
British Society of Soil Science (Clay Minerals Group of the Mineralogical Society and the) : Discussion on Weathering, 1066
British Trust for Ornithology and the Royal Society for the Protection of Birds : Report on Birds killed by Poisonous Seed Dressings, 218
British Universities : Commonwealth Students in, 308
British Zoologists, Association of : Twenty-sixth Annual Meeting (Looking Ahead—the Future of Natural Faunas), 20
British (Franco-) Pharmaceutical Commission : Ninth Congress, 493
Brittle Fracture of Steel (Dr. W. D. Biggs), *review* by Dr. A. R. Bailey, 573
Brittle Materials : Thermal Shock Behaviour of (Dr. M. L. Levin), 521
Britton, D. K. : Appointed to the new chair of agricultural economics in the University of Nottingham, 132 ; work of, 132

Broadbent, Prof. T. A. A.: The New Look in Mathematics, *review*, 67
  Pictorial Guide to the Language of Science, *review*, 68
Broadleaved Trees of Britain, *review* by J. L. Davidson, 48
Brock, Prof. J. F.: Recent Advances in Human Nutrition, with special reference to Clinical Medicine, *review* by Prof. J. Yudkin, 751
Brocklehurst, Dr. B.: Free Radical Trapping, *review*, 478
Broda, Prof. E. (Perschke, H., and): Determination of Very Small Amounts of Hydrogen Peroxide, 257
Brodrick, Alan Houghton: Man and his Ancestry, *review* by Sonia Cole, 1044
Broida, H. P. (edited by Arnold M. Bass and): Formation and Trapping of Free Radicals, *review* by Dr. B. Brocklehurst, 478
Broiler Chickens: Effect of Feeding Two Levels of Dietary Calcium on the Growth of (Dr. H. Smith and Dr. J. H. Taylor), 1200
Bromegrass Mosaic Virus, a Virus containing an Unusually Small Ribonucleic Acid (Larry E. Bockstahler and Prof. Paul Kaesberg), 192
Bromide (Lithium): Interaction of Model Peptides with Water and (Dr. J. Bello and H. R. Bello), 440
Brompton Hospital Reports: Vol. 28, 1959, *review* by Dr. Geoffrey Lapage, 476
5-Bromuracil: Effect of, on Crown Gall Tumour Induction (Dr. Jacques Lipetz and Dr. Tom Stonier), 929
Bronze Medal of the Royal Aeronautical Society awarded to L. Haworth, 863
Brookes, C. J.: Relationship between the True and Mean Anomalies, 839
Brookhaven National Laboratory (Biology Department): Symposium on Fundamental Aspects of Radiosensitivity, 312
Broom, R. F.: An Upper Limit for the Resistivity of a Superconducting Film, 992

Brotherton Library, Leeds: Annual Report for 1959-60, 310
Broughton, W. O.: Promoted to Deputy Chief Scientific Officer, and appointed director of air navigation and reconnaissance research and development, Ministry of Aviation, 587; work of, 587
Brown, A. C.: *Obituary* of Prof. B. J. Krijgsman, 1057
Brown, C. B., and others: Infra-Red Investigation of the Migration of Lithium Ions into Empty Octahedral Sites in Muscovite and Montmorillonite, 342
Brown, Dr. D. A.: The Borohydride Ion in the Lithium Borohydride Lattice, 804
Brown, Dr. G. Burniston: Sir Isaac Newton, *review*, 71
Brown, Helen Lang (edited by Prof. L. S. Penrose, with the assistance of): Recent Advances in Human Genetics, *review* by Prof. J. B. S. Haldane, 1042
Brown, Wilfred: Exploration in Management, *review* by F. J. Willett, 382
Brown, Prof. W. H., and Felauer, Ethel E.: A New Fatty Acid from Royal Jelly, 88
Browne, B. C.: Technique of Optical Observations, 1066
Browne, Prof. R. C.: Training in Occupational Hygiene (Chemistry Graduate was usually the best equipped for the work), 1159
Bruce-Chwatt, Dr. L. J.: Chemotherapy of Malaria, 971
Brunei and the Western Part of North Borneo (Sarawak,): The Geology of (Dr. P. Liechti, in association with Dr. F. W. Roe and Dr. N. S. Haile), 768
Brunel College of Technology, Acton: Course for the Diploma in Technology in Applied Biology, 495
Bruning, H. A. C. M. (Rieck, Prof. G. D., and): Thermal Diffusion of Oxygen and Nitrogen in Zirconium, 1181
Brush, Stephen G.: Origin of the Word 'Neutron', 251
Bruton, Joseph (Herman, Capt. Robert H., and): Reaction of Antimony Pentachloride with Pregnane-3α, 17α, 20α-Triol, Pregnane-3α, 17α, 20α-Triol-11-One and other Adrenal Cortical Steroids, 444
Bryant, Dr. F. J., and others: Strontium-90 in Fall-out and in Man in Australia, January 1959-June 1960, 754
Bryant and May, Ltd.: Hundredth Anniversary, 217
Bryson, Dr. Reid: Solar Variations, Climatic Change and related Geophysical Problems, 967
Bubble Formation at an Orifice in a Fluidized Bed (Dr. D. Harrison and L. S. Leung), 433
Bubbles in Water: Effect of Mass Transfer on the Velocity of Rise of (Dr. J. H. Leonard and Prof. G. Houghton), 687
Bubbles (Carbon/Dioxide), on Calcite Etch-Peaks: Retention of (Peggy M. Dunlap and J. D. Wilkinson), 524
Bubbles (Gas), in Liquid and Fluidized Solid Systems: Similarity in Behaviour between (P. D. Bloore and Dr. J. S. M. Botterill), 250
Bubbles (Soap), and the Forces which Mould Them (C. V. Boys), *review* by G. R. Noakes, 64
Bucherer (Strecker and), Hydantoin Syntheses: Alkylcyclohexanones in the (L. Munday), 1103
Budget: Scientific Development and the, 489
Buechner, Prof. H. K.: Unilateral Implantation in the Uganda Kob, 738
Buerger, Prof. Martin J.: Crystal-Structure Analysis, *review* by Dr. A. D. Booth, 752
Buetow, Dr. D. E.: Ethanol Stimulation of Oxidative Metabolism in *Euglena gracilis*, 1196
Buffalo's Milk and Cow's Milk: Comparison of the β-Lactoglobulins of (Dr. A. Sen and N. K. Sinha), 343
Buffered Aqueous Solutions: Interaction of Proteins and Nucleotides in (Prof. Joseph R. Debro and Melvin Lee), 1008
Bufo ♀ x *Rana temporaria* ♂ Hybrid Embryos: Incorporation of Tritium-labelled Thymidine in (R. Tencer), 100
Building Research Station: Open Days for the new Materials Laboratory, 963
Building Research Station, and others: Conference on the Control of Noise, 219, 1063
Bull, Gordon, and others: Choline Acetylase in the Human Placenta at Different Stages of Development, 1202
Bull Sperm (Normal): An 'Apical Body' in the Galea Capitis of the (Dr. Erik Blom and Aksel Birch-Andersen), 1127
Bullen, Prof. K. E.: Awarded the William Bowie Medal for Unselfish Co-operation in Research by the American Geophysical Union, 591
Bulman, Prof. O. M. B.: Elected a Fellow of the Imperial College of Science and Technology, London, 396
Bundles of Follicles in Adult Romney Ewes (D. F. G. Orwin), 1026
Bunton, Dr. C. A., and others: Pyrolysis of Esters of Borneol and *iso*-Borneol, 715
Bunyan, J., and others: Ubiquinone (Coenzyme Q) and the Function of Vitamin E, 318
  Ubiquinone and Tocopherol in Birds, 637
Burbidge, Prof. G. R.: Galactic Explosions as Sources of Radio Emission, 1053
Burgess, Prof. R. E.: Physics of Semiconductors, *review*, 947
Burgess, Prof. R. E., and others (edited by): Progress in Semiconductors, Vol. 5, *review* by Dr. B. R. Pamplin, 116
Burkhardt, D. (Autrum, Prof. H., and): Spectral Sensitivity of Single Visual Cells, 639
Burkitt, Miles: Rock Engravings in Northern Italy, 140
Burma, Ceylon, India and Pakistan: The Grasses of (excluding Bambuseae), (Dr. N. L. Bor), *review* by John Lewis, 659
Burness, A. T. H. (Bellett, A. J. D., and): Nature of the 'Infective Ribonucleic Acid Component' in Cells infected with Encephalomyocarditis Virus and the 'Virosome' Concept, 235
Burnett, Prof. J. H.: Appointed a member of the Scottish Committee of the Nature Conservancy, 218
  Growth and Genetics of Higher Fungi (Surveying Natural Populations of several species of Higher Basidiomycetes for their Mating Type *A* and *B* Alleles), 400
Burris, Prof. R. H.: Elected a Member of the United States National Academy of Sciences, 674
Bursa Ovarii: Transfer of Ova to the, and the 'Suspended Loop' of Tube in the Rabbit (Prof. E. S. E. Hafez and M. E. Ensminger), 557
Burton (Montague) Lecture on International Relations: Eighteenth (International Aid for Economic Development—Possibilities and Limitations), (Dr. V. K. R. V. Rao), 1041
Burton, Robert Main, and others: Effect of Iproniazid on the Antileukaemic Action of Reserpine, 723
Burwell, R. G., and others: Influence of Uraemia on the Survival of Skin Homografts, 732
Buschmann, Dr. H., and Schmid, Dr. D. O.: Transferrin-groups of Foetal Calf-Serum, 1209
Busemann, Dr. A.: Elected a member of the Engineering Sciences Section of the International Academy of Astronautics, 495
Bush (Salt): Resting Habits of *Anopheles gambiae* and *Anopheles pharoensis* in, and in Crevices in the Ground (Dr. A. Smith), 1220
Bushby, F. H., and others: An Experiment in Numerical Forecasting (Air Ministry: Meteorological Office, Scientific Paper No. 5), 973
Bushnell, Dr. G. H. S.: Archaeological Investigations in British Guiana, *review*, 72
  Cultural Sequences in North-West America, 775
Busk (Edward) Memorial Prize of the Royal Aeronautical Society awarded to C. Bourque and Prof. B. G. Newman, 863
Butcher, N. E.: Age of the Orogeny and Granites in South-West England, 253
Butler, Dr. G. M.: Growth and Genetics of Higher Fungi (Problems of the Hyphal Branching System in *Coprinus disseminatus*), 399
Butler, Prof. J. A. V.: The Proton in Chemistry, *review*, 57
Butt-Evans, J.: Appointed county advisory officer for Yorkshire (North Riding) in the National Agricultural Advisory Service, 312
Butterfly: The Monarch (Dr. F. A. Urquhart), *review* by Dr. C. B. Williams, 73
Buu-Hoï, Prof. N. P., and others: Carcinogenic Activity of Apocholic Acid, 1007
Buzzard, Dr. R. B.: Appointed research director of the National Institute of Industrial Psychology, 1060; work of, 1060

CABBAGE Clubroot Tissue: Tinsel-like Structure in Flagella of Zoospores associated with (W. L. Seaman, Prof. R. H. Larson and J. C. Walker), 186
Cacao, Mango and Pigeon Pea: Transmission of Gall-Diseases of (J. F. Archibald), 284
Cadmium: Serum Changes in the Rat following Oral Administration of (D. J. Lawford), 815
Caeruloplasmin Components (Multiple), in Human Serum: Evidence for (R. McAlister, Dr. G. M. Martin and E. P. Benditt), 927
Caesium-137 in Air, Precipitation, Drinking Water, Milk and Beef in Norway during 1959 and 1960 (T. Hvinden and A. Lillegraven), 402
Caesium Iodide: Breakdown Strength of (R. Taagepera, R. S. Storey and Prof. K. G. McNeill), 994
Cainozoic History of Western Tasmania: Comments on the (B. Scott), 677
Calandra oryzae L.: Damage to Maize in Nigeria by (G. H. Caswell), 962
Calcified Asymmetrical Abdomen: A Bathyal-abyssal Hermit Crab with a (Torben Wolff), 931
Calcite Etch-Peaks: Retention of Carbon Dioxide Bubbles on (Peggy M. Dunlap and J. D. Wilkinson), 524
Calcium (Dietary): Effect of Feeding Two Levels of, on the Growth of Broiler Chickens (Dr. H. Smith and Dr. J. H. Taylor), 1200
Calcium and Magnesium Contents of various Secretions entering the Digestive Tract of Sheep (J. E. Storry), 1197
Calcium Dioxide Bubbles on Calcite Etch-Peaks: Retention of (Peggy M. Dunlap and J. D. Wilkinson), 524
Calcium Exchange of Bone Salts considered as a Measure of the Crystal Surface (L. Richelle and Prof. M. J. Dallemagne), 165
Calcium Ions: Binding of, by the Aorta (Dr. I. Gordon Fels), 1012
Calcium Magnesiosilicate: A New (W. Gutt), 339
Calcium Oxide: Electrical Conductivity and Thermoelectric Power of (Dr. C. H. B. Mee), 1093
Calcium Phosphates (Apatitic): Hydrogen Bonding in (Louis Winand, Prof. M. J. Dallemagne and Prof. G. Duyckaerts), 164
Calcium Soap Fibres: Structure of (R. J. Bird and G. Rooney), 337
Calcium and Depolarization (Acetylcholine,): Interaction of, in the Contraction of Smooth Muscle (Dr. K. A. P. Edman and Dr. H. O. Schild), 350
Calder, Prof. Ritchie: Science in Progress, *review*, 45
Caldwell, Prof. John: Further Evidence of Polar Movement of Nutrients in Plants, 1028
Calf-Serum (Foetal): Transferrin-groups of (Dr. H. Buschmann and Dr. D. O. Schmid), 1209
Callendar, G. S.: Atmosphere Temperature Fluctuations, 15

Callender's Cables, Ltd. (British Insulated) : McFadzean Laboratory at the Wood Lane research centre to be opened by H.R.H. the Duke of Edinburgh, 312
Callinan, Thomas D. (edited by Louis J. Frisco and) : Digest of Literature on Dielectrics, Vol. 23, 1959 (United States National Academy of Sciences—National Research Council, Publication No. 799), *review* by Vera Daniel, 75
Callingham, Dr. B. A., and Mann, Dr. Monica : Replacement of Adrenaline and Noradrenaline in the Adrenal Gland of the Rat, following Depletion and Redepletion with Reserpine, 1201
Calvert, E. S., and Sparke, J. W.: Awarded the 1961 Laura Taber Barbour Air Safety Award by the Flight Safety Foundation Award, Inc., of the United States Society of Automotive Engineers, Inc., 312
Cambridge Philosophical Society : Hopkins Prize awarded to M. J. Lighthill, 769
Cambridge Rheology Club : Discussion on Some Recent Research Problems encountered in the Study of Blood as a Rheological Fluid, 1062
Camm, Sir Sydney : Honorary Fellowship of the Royal Aeronautical Society conferred on, 862
Campaign againt Malnutrition : The Place of Food Science and Technology in the (Nutrition Society Symposium on), 398
Campbell, Dr. Allan : Appointed a senior lecturer in zoology in the University of Edinburgh, 680
Canadian Animals : Wild and Free—Stories of (H. Mortimer Batten), *review* by B. J. G. Maitland, 851
Canadian Fund to Aid in Research on the Diseases of Children (Queen Elizabeth II) : Appointment of Dr. M. W. Partington as the first Queen Elizabeth II Scientist, 863
    Queen Elizabeth II Fellowships awarded to Dr. John Alexander Lowden, Dr. George Greenough Hinton and Dr. Hugh Taylor, 863
Cancer : Changes of Hexose/Hexosamine Ratio and Degree of Branching in Glycoprotein from Rat Urine during the Development of (Prof. Sen-itiroh Hakomori, Hiroaki Kawauchi and Taiko Ishimoda), 265
Cancer, International Union against : Eighth International Cancer Congress, 397
Cancer Biochemistry : Amino Acids, Proteins and—Papers presented at the Jesse P. Greenstein Memorial Symposium, Division of Biological Chemistry, American Chemical Society, 1959 (edited by Dr. John T. Edsall), *review* by Dr. F. H. Malpress, 203
Cancer Congress : Eighth International (International Union against Cancer), 397
Cancer Hospital, Royal (Institute of Cancer Research) : Title of reader in spectroscopy in the University of London conferred on Dr. Edna M. F. Rowe, 219
Cancer Research : Provision of Animals for (Laboratory Animals Centre of the Medical Research Council Symposium on), 393
Candida Berkhout (Genus) : Radiation Effect on Yeasts of the (Armin von Szilvinyi and Utta Rosenkrantz), 1212
Candida utilis : Crystallization of Purines in the Vacuole of (Prof. Allan H. Roush), 449
Cannon, J. R., and others : 'Antibiotic Effects' in Plant Communities, 189
Cannon, Peter, and Gaines, jun., George L. : Use of Krypton for Surface Area Measurements, 340
Capacity (Reproductive), of the Resulting Females : Termination of Pupal Diapause in the Cinnabar Moth and the (Dr. G. F. Bornemissza), 936
Capel, Dr. : Training in Occupational Hygiene, 1158
Capella, Dr. Pompeo : *Cyclo*-Arthenol, a Minor Constituent of Linseed Oil, 167
Capes, Mary (edited by, with the collaboration of A. T. M. Wilson) : Communication or Conflict—Conferences, their Nature, Dynamics and Planning, *review* by Prof. F. S. Dainton, 844
Capraro, Prof. V., and others : Lactic Acid Concentration in the Kidney of the Golden Hamster, *Mesocricetus auratus*, in Different Conditions of Diuresis, 178
Capriotti, Prof. Augusto : Production of Soluble Melanoid Pigments by *Streptomyces* in Gelatin and Glucose Media, 464
Capsule (Polysaccharide), in Pneumococcus : Mechanism of the Transformation of the (Dr. D. M. Kohoutová), 1171
Capture (Radiative), of Thermal Neutrons : Atlas of γ-Ray Spectra from (L. V. Groshev, V. N. Lutsenko, A. M. Demidov and V. I. Pelekhov), translated from the Russian by J. B. Sykes, *review* by Dr. E. R. Rae, 75
Caputo, Prof. A., and others : Anti-tumoral Action of New Sarcomycin Derivatives, 819
Carafoli, Prof. E. : Elected a member of the Engineering Sciences Section of the International Academy of Astronautics, 495
Carbohydrases (Intestinal), of a New-born Pig (Dr. Arne Dahlqvist), 31
Carbohydrate Chemistry, *review* by Dr. G. O. Aspinall, 750
Carbohydrates : The (S. F. Dyke), *review* by Dr. G. O. Aspinall, 750
Carbohydrates ($\dot{\gamma}$-Irradiated), and α-Hydroxy Acids : Electron Spin Resonance Spectra of (A. J. Bailey, Dr. S. A. Barker, J. S. Brimacombe, D. Pooley and D. H. Spence), 259
Carbon in Fungal Mycelium : Transport of (Stella L. Thrower and L. B. Thrower), 823
Carbon in Photosynthesis : Effect of *Iso*nicotinyl Hydrazide on the Path of (G. G. Pritchard, Prof. C. P. Whittingham and Wendy J. Griffin), 552
Carbon-14 : Effect of Erythropoietine on Incorporation of Formate labelled with, into the Nucleic Acids of Normal Rabbit Tissues *in vitro* (Dr. M. A. Perretta and Dr. R. Y. Thomson), 912
Carbon-16 : New Carbon Isotope, 587
Carbon (Vapour-deposited) : Structure of (Dr. George Colligan and Dr. Francis Galasso), 621
Carbon Boats : Crystal Growth of Gallium Arsenide using (J. R. Knight), 1001
Carbon Dioxide : Growth of *Fomes annosus* under Reduced Oxygen Pressure and the Effect of (Dr. K. Gundersen), 649
    Polymers of (P. G. Bentley), 432
Carbon Dioxide, Carbon Monoxide, Hydrogen, Nitrogen, Oxygen and Steam (Air, Argon,) : Tables of Thermodynamic and Transport Properties of (Joseph Hilsenrath, Charles W. Beckett, William S. Benedict, Lilla Fano, Harold J. Hoge, Joseph F. Masi, Ralph L. Nuttall, Yeram S. Touloukian and Harold W. Woolley), *review* by Prof. A. R. Ubbelohde, 58
Carbon Dioxide Bubbles on Calcite Etch-Peaks : Retention of (Peggy M. Dunlap and J. D. Wilkinson), 524
Carbon Isotope (New), Carbon-16, 587
Carbon Monoxide, Hydrogen, Nitrogen, Oxygen and Steam (Air, Argon, Carbon Dioxide,) : Tables of Thermodynamic and Transport Properties of (Joseph Hilsenrath, Charles W. Beckett, William S Benedict, Lilla Fano, Harold J. Hoge, Joseph F. Masi, Ralph L. Nuttall, Yeram S. Touloukian and Harold W. Woolley), *review* by Prof. A. R Ubbelohde, 58
Carbon Tetrachloride : Quinine Oxidase in Liver and Blood Plasma of Rabbits poisoned with (Dr. Gilberto G. Villela), 807
    Radiolysis of, in the Presence of Oxygen (Zd. Spurny and I. Janovsky), 624
    Reversible Nature of Liver Cell Damage due to, as demonstrated by the Use of Phenergan (Dr. K. R. Rees and Dr. W. G. Spector), 821
Carbon and Sulphur Sources in *Aspergillus* and *Neurospora* : Biotin Requirement and (P. Strigini and G. Morpurgo), 557
Carbonaceous Meteorites : Significance of, in Theories on the Origin of Life (Prof. J. D. Bernal), 129
Carbonic Anhydrase (Endometrial), caused by Progesterone : Effects of certain Androgenic Steroids on the Increase of (Dr. Kazukuni Yamashita and Ken-ichi Kurouji), 1013
Carboxypeptidase *A* : Nitrogen and Sulphur at the Active Centre of (Dr Bert L. Vallee, Dr. Robert J. P. Williams and Dr. Joseph E. Coleman), 633
Carcinogen (A New), 4-Nitroquinoline N-Oxide : Mutation in Tobacco Mosaic Virus induced by (Dr. Hideya Endo, Akiyoshi Wada, Kin-ichiro Miura, Zyun Hidaka and Chuji Hiruki), 833
Carcinogenesis (Dr. I. Hieger), *review* by Dr. M. H. Salaman, 1143
    Theories of, *review* by Dr. M. H. Salaman, 1143
Carcinogenesis by Aromatic Hydrocarbons : A Physical Theory of (Dr. J. B Birks), 232
Carcinogenesis (Radiation), at High Dose-Response Levels—a Hypothesis (Prof. Arnold E. Reif), 415
Carcinogenic Activity of Apocholic Acid (A. Lacassagne, Prof. N. P. Buu-Hoi and F. Zajdela), 1007
Carcinoma (Mammary), in Hypophysectomized Rats treated with 3-Methylcholanthrene, Œstradiol 17β, Progesterone and Growth Hormone Induction of (Dr. Stretton Young), 356
Care of Laboratory Animals : Welfare and, 677
Care (Parental), in a Rare Spider *Pellenes nigrociliatus* (L. Koch) var. *bilunulata* Simon (Dr. Izabella Mikulska), 365
Careers : Guide to (National Union of Teachers), 1961 edition, 396
Carew, Prof. D. P., and Chin, T. F. : Constituents of *Lagerstroemia Flos-reginae* Retz., 1108
Carey, Prof. S. Warren : Palaeomagnetic Evidence relevant to a Change in the Earth's Radius, 36
Caribbean : Erosion Surfaces in the, and their Significance (Prof. John D Weaver), 1186
Caries : Surface Enamel Magnesium and its Possible Relation to Incidence of (Dr. D. B. Ritchie), 456
Carlisle, Dr. D. B. (Ellis, Peggy E., and) : The Prothoracic Gland and Colour Change in Locusts, 368
Carlisle, Dr. D. B., and Pitman, W. J. : Diapause, Neurosecretion and Hormones in Copepoda, 827
Carlisle, Dr. D. B., and Tregenza, N. : A Hermit Crab New to Britain, 931
Carlsberg–Wellcome Travelling Research Fellowships for 1961-62 (Wellcome Trust), 134
Carnegie Trust for the Universities of Scotland : Fifty-ninth Annual Report (1959-60), 316
Carnegie United Kingdom Trust : Grants for Field Work in Natural History, 395
Carney, W. B., and others : α-Conarachin, 1125
Carotid Artery Occlusion : Internal (John G. Humphreys and T H. Newton), 310
Carrier, William L., and others : Gibberellin Action on Growth of Seedlings in the Absence of Photosynthesis, 1034
Carrier (Sodium) : Further Evidence for Phosphatidic Acid as the (Dr Mabel R. Hokin and Dr. Lowell E. Hokin), 1016
Carron, Maxwell K., and Lowman, jun., Paul D. : Analysis of a Supposed Clay Fulgurite from Ontario, 40
Carru, H., and others : A Transatlantic Communication Experiment via *Echo* I Satellite, 709
Carter, James M., and others : Liquid Propellant Rockets, *review* by Prof. D. B. Spalding, 66
Carter, Joan D. (Denyes, Prof. Arliss, and) : Clotting-Time of Cold-exposed and Hibernating Hamsters, 450
Cartesian Meditations, an Introduction to Phenomenology (Edmund Husserl), translated by Dorian Cairns, *review* by F. I. G. Rawlins, 295
Casein (Trypsinized) : Fractions of, giving Different Patterns of Bacterial Growth (D. A. H. Hearfield and A. W. Phillips), 266
Casey, James P. : Pulp and Paper—Chemistry and Technology, Vol I, Pulping and Bleaching, second edition, *review* by Dr. Julius Grant, 380
Casey, Dr. R. : Geological Age of the Sandringham Sands, 1100
Cassagne, –., and others : Television and Film Techniques (Recent Progress in the SECAM Frequency Modulation Colour Television System), 868
Cassie, Dr. A. B. D. : Report of the Director of Research for 1960 of the Wool Industries Research Association, 1068
Cassiopeia A (Radio Source) : Secular Variation of the Flux Density of the (D. S. Heeschen and B. L. Meredith), 705
Cast Iron and Foundry Materials : Chemical Analysis of (W. Westwood and A. Mayer), second edition, *review* by F. L. Selfe, 383
Castellani, A. A., and others : Content of Sialic Acid in Serous Glands of Equines, 914
Castration : Effect of, on Experimental Liver Lesion in *Iguana iguana* (Prof. A. Stolk), 93
Caswell, G. H. : Damage to Maize in Nigeria by *Calandra oryzae* L., 962
Cat : Hypothalamic Control of Lactogenic Function in the (Hanus J. Grosz and Alan E. Rothballer), 349
Cat's Eye : The Distribution of Light in an Image formed in the (Valerie B. Morris and F. H. C. Marriott), 176
Catalase : Denaturation of, by Freezing and Thawing (Keiji Shikama and Isao Yamazaki), 83
Catalysed Synthesis of Ammonia on Tungsten : Field-Emission Microscopic Investigation of (K. Azuma), 530
Catalysis : Third International Congress on (The Mechanism of Heterogeneous Catalysis), 963
Catalysis of Metalloporphyrin Formation—a Possible Enzyme Model for Haem Iron Incorporation (M. B. Lowe and J. N. Phillips), 262

Catalysis (Heterogeneous) : The Mechanism of (Third International Congress on Catalysis), 963
Catalytic Activity of Coloured Alkali Halides (Ian D. Gay and Prof. Kenneth E. Hayes), 256
Catecholamines in Acrania and Invertebrates : Occurrence of (Prof. U. S. von Euler), 170
Cathode Ray Tube Memory of the High Speed Electronic Computer of the U.S.S.R. Academy of Sciences (V. N. Laut and L. A. Lyubovich), translated from the Russian by Ruth Feinstein ; edited by F. A. Sowan, *review* by J. C. Cluley, 383
Cathode (Cold-) Arc Movement in a Magnetic Field : A Theory of (Dr. P. E. Secker and Dr. A. E. Guile), 428
Cattaneo, S. M., and others : Proliferative Cycle in the Growing Hair Follicle of the Mouse, 923
Cattle : Association of Detectable Antibodies produced by *Haemonchus* spp. Infections in, with Serum Globulin Fractions (J. G. Ross), 1019
Cattle (Hereford and Brahman), and some Breeds of Sheep maintained in Florida : Blood Potassium and Sodium of (J. R. Howes, G. K. Davis, P. E. Loggins and J. F. Hentges), 181
Caudal Appendage of *Priapulus caudatus* : Function of the (Prof. Ragnar Fänge and Artur Mattisson), 1216
Causes of Delinquency and the Treatment of Offenders : Studies in the, No. 3, Delinquent Generations—a Home Office Research Unit Report (Leslie T. Wilkins), 24
Causey, G. W. : Title of Sir William Collins professor of pathology (at the Institute of Basic Medical Sciences) conferred on, 396
Cavanagh, J. B., and Holland, P. : Cholinesterase in the Chicken Nervous System, 735
Cavazza, Prof. L. : At the Fourth World Fertilizer Congress (Influence of Irrigation on Mineral Fertilization), 1161
Cavenagh, Dr. W. E. : Appointed to a senior lectureship in social study in the University of Birmingham, 679
Cavendish, Henry—his Life and Scientific Work (A. J. Berry), *review* by Dr. William P. D. Wightman, 42
Cawthron Institute, Nelson, N.Z. : Annual Report for 1959-60, 309
Cecidomyidae : Chromosome Elimination in (C. Bantock), 466
C-E-I-R (U.K.), Ltd. : Prof. M. G. Kendall to join the Board of, 1060
Cell' ('Chloride-Secretory), of *Salmo salar* L. : An Electron Microscope Study of the, with reference to Plasma-Electrolyte Regulation (Dr. Lawrence T. Threadgold and Dr. Arthur Hillier Houston), 612
Cell Antigens (Chicken Red) : Incomplete Antibodies to (Dr. I. Dunsford, T. Lodge, M. McDermid and Dr. D. G. Gilmour), 544
Cell Damage (Liver), due to Carbon Tetrachloride : Reversible Nature of, as demonstrated by the Use of Phenergan (Dr. K. R. Rees and Dr. W. G. Spector), 821
Cell Metabolism and the Rate of Cell Mutation : Bivalent Metal Ions as the Coupling Factor between (Dr. G. G. Jayson), 144
Cell Mutation : Bivalent Metal Ions as the Coupling Factor between Cell Metabolism and the Rate of (Dr. G. G. Jayson), 144
Cell Nucleus : Distribution of Deoxyribonucleic Acid in the (E. Grundmann), 359
Cell Production and its Regulation : Ciba Foundation Symposium on Haemopoiesis— (edited by G. E. W. Wolstenholme and Maeve O'Connor), *review* by Dr. P. F. Harris, 479
Cell Tissue and Organ, *review* by Dr. N. M. Hancox, 47
Cell (Plant) Physiology : General, *review* by Prof. Walter Stiles, 116
Cells infected with Encephalomyocarditis Virus and the 'Virosome' Concept : Nature of the 'Infective Ribonucleic Acid Component' in (A. J. D. Bellett and A. T. H. Burness), 235
Cells in Hodgkin's Disease and Allied Disorders : Enzyme Histochemistry of the (Dr. R. F. Dorfman), 925
Cells (Animal) : Formation of the Nucleolus in (The Nucleolus), (Dr. Henry Harris), 1077
Cells (Blood) : Incorporation of Palmitic-1-^{14}C Acid into (Dr. Constantinos J. Miras, Dorothy L. Fillerup and James F. Mead), 92
Cells (Chloride-secreting), in the Gills of European Eels (Dr. Giuseppe Colombo), 101
Cells (Delayed Hypersensitive), mixed with Antigen *in vitro* : Production of Pyrogenic Substances by Extracts of (Dr. J. Johanovsky), 355
Cells (Dissociated) : Effect of Temperature on Adhesion to Glass and Histogenic Cohesion of (Prof. A. Moscona), 408
Cells (*Escherichia coli*), treated with Mitomycin *C* : Degradation of Deoxyribonucleic Acid in (H. Kersten and Prof. H. M. Rauen), 1195
Cells (Haploid and Diploid), of *Protomyces inundatus* : Nucleic Acid Content of (L. R. G. Valadon, Dr. J. G. Manners and A. Myers), 836
Cells (HeLa) : Changes in X-Ray Sensitivity of, during the Division Cycle (Dr. Toyozo Terasima and Prof. L. J. Tolmach), 1210
Cells (HeLa), *in vitro* : Activation of Ferritin Synthesis and Induction of Changes in Fine Structure in—Implications for Protein Synthesis (Prof. G. W. Richter), 413
Cells (Human), in Tissue Culture : Hormonal Induction of Alkaline Phosphatase in (Dr. Rody P. Cox and Dr. Colin M. MacLeod), 85
Cells (Living Infected) : Apparent Release of Tobacco Mosaic Virus in (Prof. J. G. Bald and R. A. Solberg), 651
Cells (Mammalian), *in vitro* : Karyological Demonstration of Hybridization of (Serge Sorieul and Prof. Boris Ephrussi), 653
Cells (Mast), of some Lower Vertebrates : Differences in Mechanism of Staining Reaction for (Dr. A. Stolk), 360
Cells (Mesodermal Tissue) : Electrophoretic Mobility of Cultured (D. H. Heard, G. V. F. Seaman and I. Simon-Reuss), 1009
Cells (Normal and Tumour) : Interaction of Enzymes with (D. H. Cormack, G. C. Easty and Dr. E. J. Ambrose), 1207
Cells (Rabbit Kidney) : Effect of Mitomycin C on the Synthesis of Infective Virus and Deoxyribonucleic Acid in Pseudorabies Virus-infected (Dr. Tamar Ben-Porat, Dr. Magdalena Reissig and Dr. Albert S. Kaplan), 33
Cells (Rat Mast), *in vitro* : Release of 5-Hydroxytryptamine from (Dr. G. T. Archer), 350
Cells (Red) : Trapping of Plasma by (Peggy Clark and B. J. Walsh), 678
Cells (Red), in Man : Transplacental Passage of (Ronald Finn, Dr. C. A. Clarke, W. T. A. Donohue, Dr. R. B. McConnell, Dr. P. M. Sheppard and D. Lehane), 922
Cells (Red Blood) : Osmotic Pressure Effect of the—Possible Physiological Significance (Dr. A. Tybjaerg Hansen), 504
Cells (Renal Collecting Tubule), of the Potassium-deficient Rat : Detection of Serum Proteins within the (Ashton B. Morrison and Kenneth D. Gardner, jun.), 96
Cells (Sarcoma 37 Ascites Tumour) : Effect of a Magnetic Field on (Indumati L. Mulay and Prof. L. N. Mulay), 1019
Cells (Single Visual) : Spectral Sensitivity of (Prof. H. Autrum and D. Burkhardt), 639
Cells (Sinus Lining), of the Spleen : Nature of the (Dr. R. F. Dorfman), 1021
Cells (Tumour) : Aggregation of Protein Particles in (A. Bolognari), 358
Cells (White Blood), from Normal and Leukaemic Human Beings : Immunological Differences of Deoxyribonucleoproteins from (Luigi Messineo), 1122
Cells and other Organisms : The Organization of (Laurence Picken), *review* by Dr. P. M. B. Walker, 845
Cellular Membranes : Mechanism of Sodium Transport in (Johan Järnefelt), 694
Cellular Organization, *review* by Dr. P. M. B. Walker, 845
Cellular Organization and Respiration (Plant Physiology, edited by Prof. F. C. Steward, Vol. IA), *review* by Prof. Walter Stiles, 116
Cellular Susceptibility to Foot-and-Mouth Disease : Phagocytic Activity in Squamous Epithelia and its Role in (Dr. H. Platt), 1075
Cellulose : Sorption of Copper by (Dr. R. I. C. Michie), 803 ; (Prof. R. D. Preston), 804
Cellulose (Diethylaminoethyl-) (DEAE) : Isolation of Haptoglobin by Chromatography on (Dr. M. Steinbuch and M. Quentin), 1121
Cellulose Pulp from Wood, *review* by Dr. Julius Grant, 380
Census, United States Bureau of the (Department of Commerce) : Funds for Research and Development in Industry, 1957—Performance and Financing, 132
Centenary of the Massachusetts Institute of Technology (Dr. James R. Killian, jun.), 948
Centre (Active), of Carboxypeptidase A : Nitrogen and Sulphur at the (Dr. Bert L. Vallee, Dr. Robert J. P. Williams and Dr. Joseph E. Coleman), 633
Centre (A Differentiation), in the Embryo of *Dacus tryoni* (Dr. D. T. Anderson), 560
Centre d'Études Nucléaires : International Seminar on Nuclear Energy, 591
Centuries : Navigation down the, 134
Ceramics : Exhibition of the Raw Materials of (P. J. Adams), 310
Cerebellar Histology : Functional Interpretation of (Dr. V. Braitenberg), 539
Cerebellum (Human Adult), in Culture : Spontaneous Potentials from Explants of (Prof. A. W. B. Cunningham), 918
Cerebral Hemisphere (Chick), (Telencephalon), in Tissue Culture : Spontaneous Potentials from Explants of (Prof. A. W. B. Cunningham), 816
Cerletti, Dr. Aurelio (Taeschler, Dr. Max, and) : Inhibition of Emotional Reactions by Phenothiazine Tranquillizers, 1014
Ceylon : Ekanite, a New Metamict Mineral from (B. W. Anderson, Dr. G. F. Claringbull, Dr. R. F. Davis and D. K. Hill), 997
Ceylon, India and Pakistan (Burma,) : The Grasses of (excluding Bambuseae), (Dr. N. L. Bor), *review* by John Lewis, 659
Chai, Dr. C. K. : Choice of Animals for Bio-Assay, 893, 894
Chain (Self-stabilizing), of SH-Enzymes and Substrates : Role of Glutathione and of a, in the Metabolic Regulation of Erythrocytes (D. Scheuch, C. Kahrig, E. Ockel, C. Wagenknecht and Prof. S. M. Rapoport), 631
α-Chains of the Minor Human Haemoglobin Components A_2 and $A_2{}^1$: Identity of the, with the α-Chains of Human Haemoglobin *A* and *F* (Prof. Titus H. J. Huisman, Dr. Bennett Horton and Tine B. Sebens), 357
α-Chains of Human Haemoglobin *A* and *F* : Identity of the α-Chains of the Minor Human Haemoglobin Components A_2 and $A_2{}^1$ with the (Prof. Titus H. J. Huisman, Dr. Bennett Horton and Tine B. Sebens), 357
Challenger Society : Joint Meeting with representatives from the Marine Laboratories (Development Commissioners' Scheme) in Dublin, 135
Chalmers, Prof. Bruce, and Quarrell, Prof. A. G. (edited by) : The Physical Examination of Metals, second edition, *review* by Dr. A. R. Bailey, 661
Chalmers Medal of the Royal Society of Tropical Medicine and Hygiene to be presented to Dr. C. E. Gordon Smith, 963
Chambers, Dr. R. G. : Appointment as reader in physics at the University of Bristol, 1156
Champion, Sir Harry, and Davis, J. H. : Ecological Problems in the Tropics (Tropical Ecological Problems), 772
Chandrasekhar, Prof. S. : Plasma Physics, *review* by Dr. W. B. Thompson, 65
Chandrasekhar, Prof. S., and Phillips, Dr. D. C. : Correction for Extinction Errors in Crystal Structure Analysis, 1164
Change in the Earth's Radius : Palaeomagnetic Evidence relevant to a (Prof. S. Warren Carey), 36 ; (Allan Cox and Richard R. Doell), 36
Change in Oncogenic Properties : Variant of Parotid Tumour (Polyoma) Virus showing a (Lloyd W. Law, Alan S. Rabson and Clyde J. Dawe), 97
Change (Climatic), and related Geophysical Problems : Solar Variations, (Section of Geological Sciences and Division of Oceanography and Meteorology of the New York Academy of Sciences, in co-operation with the American Meteorological Society Symposium on), 967
Change (Colour), in Locusts : The Prothoracic Gland and (Peggy E. Ellis and Dr. D. B. Carlisle), 368
Change (Nuclear), in Differentiation : Nuclear Materials and (Prof. Kenneth Mather), 404
Change (Technical) : The Attitudes of Steelworkers to (Dr. Oliver Banks), *review* by F. J. Willett, 382
Changes of Blood Volume : Influence of, on the Concentration of Aldosterone in Peripheral Plasma of Intact Unanaesthetized Dogs (Ejgil Bojesen and Hans Degn), 352
Changes in Density of Blood Serum after Total-Body Irradiation (Dr. Z. Dienstbier and M. Rakovič), 98
Changes in Fine Structure in HeLa Cells *in vitro* : Activation of Ferritin Synthesis and Induction of—Implications for Protein Synthesis (Prof. G. W. Richter), 413
Changes of Hexose/Hexosamine Ratio and Degree of Branching in Glycoprotein from Rat Urine during the Development of Cancer (Prof. Sen-itiroh Hakomori, Hiroaki Kawauchi and Taiko Ishimoda), 265
Changes of Quantity of Flavin in the Brain after Peripheral Administration of Flavins (Ikuko Nagatsu-Ishibashi, Toshiharu Nagatsu and Kunio Yagi), 728
Changes in the X-Ray Sensitivity of HeLa Cells during the Division Cycle (Dr. Toyozo Terasima and Prof. L. J. Tolmach), 1210
Changes (Biochemical), accompanying Impaired Respiration in Staphylococci (Prof. G. F. Gause, G. V. Kochetkova and G. B. Vladimirova), 978

Changes (β-Galactosidase), in the Developing Intestinal Tract of the Rat (Dr. Anibal Alvarez and José Sas), 826
Changes (Serum), in the Rat following Oral Administration of Cadmium (D. J. Lawford), 815
Changing Country-side : The (Sixty-sixth Annual Congress of the South-Eastern Union of Scientific Societies), 397
Chapman, J., and Montgomery, W. : Awarded Williams Prizes for 1960 of the Iron and Steel Institute, 13
Chapman, Prof. S. : Elected a member of the Basic Sciences Section of the International Academy of Astronautics, 495
Chappell, Dr. J. B., and Greville, Dr. G. D. : Effects of Oligomycin on Respiration and Swelling of Isolated Liver Mitochondria, 502
B Character on Human Erythrocytes : Production of, by Haemosensitization with Purified *Escherichia coli O* 86 Substance (Dr. Jørgen Andersen), 730
Character (The Ionic), of Chemical Bonds (E. Mooser and W. B. Pearson), 406
Characteristics (Biological), of Colicine X (Dr. J. Papavassiliou), 110
Characteristics (Swelling) : Transmission of, by Mitochondria of Regenerating Liver (Hans H. Gosch and Prof. Joseph C. Arcos), 272
Characterization (Partial), of a Growth-control Factor : Isolation and (Francis W. Sayre, Eder Hansen, Theodore J. Starr and Evangeline A. Yarwood), 1116
Characterization (Polymer), and Analysis : Methods of (Bradford Institute of Technology Course on), 312
Chari, M. S. R. : Inelastic Scattering of Conduction Electrons in Dilute Silver–Manganese Alloys at Low Temperatures, 994
Charles, L. J., and others : Erythrocyte Glucose-6-Phosphate Dehydrogenase Deficiency in West Africa, 1198
Charlesby, Prof. A., and others : Prevention by Cysteamine of Radical Formation in Bovine Serum Albumin by γ-Rays, 998
Chase, A. B. (Lefever, R. A., and) : Growth Spirals on Synthetic Magnetoplumbite Crystals, 255
Chase, Dr. Mary Agnes : Elected a Foreign Member of the Linnean Society of London, 962
Chaston, Dr. J. C. : Electrical Contacts (Practical Aspects of Very Light-Duty Electrical Contacts), 866
Chater, G. P. : Appointed director of the Rosemaund Experimental Husbandry Farm, Preston Wynne, Hereford, of the National Agricultural Advisory Service, 312
Chattaway, Dr. F. W., and others : Intracellular Free Amino-Acids of certain Dermatophytes, 87
Chaudhri, Dr. M. M. (Katti, Dr. P. K., and) : Effect of Strong Electric Fields on the Boiling Points of some Alcohols, 80
Chauvet, J., and others : A 'Natriferic' Principle other than Arginine–Vasotocin in the Frog Neurohypophysis, 828
Cheeseman, Dr. E. A. : Appointed to the chair of medical statistics in the Queen's University, Belfast, 1156
Chelsea College of Science and Technology, London : Appointment of Dr. J. A. W. Dalziel as reader in inorganic and analytical chemistry, 680
    Appointment of Dr. J. D. Donaldson as lecturer in chemistry, 680
Chemical Analysis of Cast Iron and Foundry Materials (W. Westwood and A. Mayer), second edition, *review* by F. L. Selfe, 383
Chemical Basis for the Classification of Animal Viruses (Dr. P. D. Cooper), 302
Chemical Biology : Unity and Diversity in Biochemistry, an Introduction to (Marcel Florkin), translated from the French by T. Wood, *review* by Dr. M. R. Atkinson, 479
Chemical Bonds : The Ionic Character of (E. Mooser and W. B. Pearson), 406
Chemical Engineer : Industry, Science and the (W. K. Hutchison), 588
Chemical Engineering Education and Practice : A Survey of (Prof. R. Edgeworth Johnstone), 113
Chemical Engineers, Institution of: Presidential Address—Industry, Science and the Chemical Engineer (W. K. Hutchison), 588
Chemical Fertilizers, International Centre of : Fourth World Fertilizer Congress, 1161
Chemical Industry, Society of (Corrosion Group) : Exhibition at the Science Museum, London, on Metallic Corrosion and its Prevention, 15
Chemical Industry, Society of (Oils and Fats Group) : Annual General Meeting, 135
Chemical Industry, Society of (Pesticides Group) : Symposium on Fungicides in Agriculture and Horticulture, 593
Chemical Manufacturers (British), Association of : European Free Trade Association—Origin, Rules, Certification and Segregation of Stocks, 132
    Appointment of H. W. Vallender as deputy director, 865
Chemical Plant Automation : Computing, 14
Chemical Society : Corday-Morgan Medal and Prize awarded to Dr. A. R. Battersby, 16
    Symposium on Terpene Chemistry, 18
Chemical Society (American) : Amino Acids, Proteins and Cancer Biochemistry—Papers presented at the Jesse P. Greenstein Memorial Symposium, Division of Biological Chemistry, 1959 (edited by Dr. John T. Edsall), *review* by Dr. F. H. Malpress, 203
    Dexter Award given to Prof. J. R. Partington, 680
    Austin M. Patterson Award given to Dr. G. Malcolm Dyson, 680
    Monograph Series No. 147, Organometallic Chemistry (edited by H. Zeiss), *review* by Dr. M. L. H. Green, 1143
Chemical Structure of Citrinin (Stefan Kováč, Prof. Pavel Nemec, Vladimír Betina and Jozef Balan), 1104
Chemical and Genetic Aspects of their Structure : The Haemoglobin Particles— (Dr. G. Braunitzer, Dr. N. Hilschmann, Dr. V. Rudloff, Dr. K. Hilse, Dr. B. Liebold and Dr. R. Müller), 480
Chemicals (Agricultural), Association of British Manufacturers of : Conference on British Insecticides and Fungicides, 1063
Chemie (Physik und) des 20 Jahrhunderts : Beiträge zür—Lise Meitner, Otto Hahn, Max von Laue zum 80 Geburtstag (herausgegeben von O. R. Frisch, F. A. Paneth, F. Laves und P. Rosbaud), *review* by Dr. C. A. Taylor, 118
Chemist (Technical) : Export Problems and the, 132
Chemistry : Carbohydrate, *review* by Dr. G. O. Aspinall, 750
    Inorganic (C. W. Wood and Dr. A. K. Holliday), *review* by Charles Holt, 60
    Organic (C. W. Wood and Dr. A. K. Holliday), *review* by Charles Holt 60
    Organometallic (edited by H. Zeiss), *review* by Dr. M. L. H. Green, 1143
    Physical (C. W. Wood and Dr. A. K. Holliday), *review* by Charles Holt, 60
    The Proton in (R. P. Bell), (George Fisher Baker Non-resident Lectureship in Chemistry at Cornell University), *review* by Prof. J A. V. Butler, 57
    Terpene (Chemical Society Symposium on), 18
    Triology of, *review* by Charles Holt, 60
Chemistry, Royal Institute of, and others : Symposium on The Soil—Problems raised by its Use and Misuse, 770
Chemistry (Analytical) : Advances in, *review* by Dr. D. T. Lewis, 944
    Comprehensive (edited by Prof. Cecil L. Wilson and David W. Wilson), Vol. 1B, Classical Analysis, *review* by Dr. D. T. Lewis, 294
    Treatise on (edited by I. M. Kolthoff and Philip J. Elving, assisted by Ernest B. Sandell), Part 1, Theory and Practice, Vol 1, *review* by Prof. R. Belcher, 60
    A Treatise on, *review* by Dr. D. T. Lewis, 294
Chemistry (Analytical), and Instrumentation : Advances in (edited by Charles N. Reilley), Vol. 1, *review* by Dr. D. T. Lewis, 944
Chemistry (Clinical) : Advances in (edited by Harry Sobotka and C P Stewart), Vol. 3, *review* by Dr. J. N. Davidson, 74
Chemistry (Comparative), and the Relationship of the Hamamelidaceae (E. Shaw and Prof. R. D. Gibbs), 463
Chemistry (Mathematics, Physics and) : Prizes for Papers on (Friedrich Vieweg und Sohn, Braunschweig), 16
Chemistry (Organic) : Advances in (edited by Ralph A. Raphael, Edward C. Taylor and Hans Wynberg), Vols. 1 and 2, *review* by Dr J. Idris Jones, 56
    Applications of Nuclear Magnetic Resonance Spectroscopy in (Dr. L. M. Jackman), *review* by Dr. J. C. D. Brand, 1043
    The Growth of, *review* by Dr. J. Idris Jones, 56
    Practical (Dr. Frederick George Mann and Dr. Bernard Charles Saunders), fourth edition, *review* by Dr. J. D. Loudon, 753
Chemistry (Pharmaceutical), in London, 862
Chemistry (Physical) : Elements of (Samuel Glasstone and Prof David Lewis), *review* by Dr. A. Maccoll, 477
Chemistry (Physical), at High Temperatures : Towards, *review* by Prof. A. R. Ubbelohde, 58
Chemistry (Quantum) : Summer School in (St. Antony's College, Oxford), 769
Chemistry (Radiation), of Aqueous Systems : Recent Advances in the (Prof. Gabriel Stein), 16
Chemistry and Biology of Sialic Acids and related Substances (Dr. Alfred Gottschalk), *review* by Dr. T. F. Slater, 57
Chemistry and General Science (Physics,): Film-Strips and Wall-Charts in (Educational Productions, Ltd.), 395
Chemists (Cosmetic), International Federation of Societies of : Second Congress, 397
Chemists (Official Agricultural) : Official Methods of Analysis of the Association of (edited by William Horwitz), ninth edition, *review* by H. V. Hart, 749
Chemosynthesis : Photosynthesis and (edited by Prof. F. C. Steward), (Plant Physiology, Vol. 1B), *review* by Prof. W. Stiles, 1046
Chemotherapeutic Activity (Anti-Viral), against Ectromelia Infection : Derivatives of Isatin β-Thiosemicarbazone with (Dr. D. J Bauer and Dr. P. W. Sadler), 1167
Chemotherapy of Malaria (Dr. L. J. Bruce-Chwatt), 971
Chemotherapy, Italian Society of : Symposium, 219
Chen, Dr. T. H. E. : Science and Scientists in Communist China, 222
Chern, Prof. Shiing-Shen : Elected a Member of the United States National Academy of Sciences, 674
Chester, Dr. G. V. : Appointed to a senior lectureship in mathematical physics in the University of Birmingham, 679
Chèvremont, Prof. M. : Notions de Cytologie et Histologie, réimpression, *review* by Dr. N. M. Hancox, 47
Chibnall, Prof. A. C. : Elected a Fellow of the Imperial College of Science and Technology, London, 396
Chick Cerebral Hemisphere (Telencephalon) in Tissue Culture : Spontaneous Potentials from Explants of (Prof. A. W. B. Cunningham), 816
Chick Embryo: Neuraminidase in the Chorioallantois of the (Dr. G. L. Ada and Dr. Patricia E. Lind), 1169
Chicken Nervous System : Cholinesterase in the (J. B. Cavanagh and P. Holland), 735
Chicken Red Cell Antigens : Incomplete Antibodies to (Dr. I. Dunsford, T. Lodge, M. McDermid and Dr. D. G. Gilmour), 544
Chickens : Effect of Œstradiol on the Oxygen Consumption of Arteries in (Effect of Œstrogens on Atherosclerosis), (Dr. M. R. Malinow and Dr. J. A. Moguilevsky), 422
    Genetic Basis for Graft-against-Host Immunological Reactions between Two Inbred Lines of (L. N. Payne and P. Jaffe), 373
Chickens (Broiler) : Effect of Feeding Two Levels of Dietary Calcium on the Growth of (Dr. H. Smith and Dr. J. H. Taylor), 1200
Chicks : Dissociation of Isohaemagglutinin Formation and Tolerance of Skin Grafts in (Otakar Stark, Vladimír Křen and Bohdan Frenzl), 281
Chieco-Bianchi, Dr. L., and others : Leukaemogenesis by Urethan in New-born Swiss Mice, 278
Chieffi, Dr. G., and Lupo, Dr. C. : Identification of Œstradiol-17β, Testosterone and its Precursors from *Scylliorhinus stellaris* Testes, 169
Childers, W. R. : Staining Plastids in Chlorophyll-deficient Mutant Plants, 1029
Childhood : Viral Infections of Infancy and—a Symposium of the Section on Microbiology, New York Academy of Medicine (edited by Prof. Harry M. Rose), *review* by Dr. N. R. Grist, 659
Children : Viruses in Diseases of, *review* by Dr. N. R. Grist, 659
Children, Queen Elizabeth II Canadian Fund to Aid in Research on the Diseases of : Appointment of Dr. M. W. Partington as the first Queen Elizabeth II Scientist, 863
    Queen Elizabeth II Fellowships awarded to Dr. John Alexander Lowden, Dr. George Greenough Hinton and Dr. Hugh Taylor, 863
Children (Asian School) : Eye Examinations of, 864
Chilver, Dr. A. H. : Appointed to the Chadwick chair of civil engineering in University College, London, 396, 488 ; work of, 488
Chimaeras (Mouse), developed from Fused Eggs (Dr. Andrzej K Tarkowski), 857

Chimie Physique, Société de (British Biophysical Society and the) : Informal Discussion on the Effects of Ionizing Radiations on Organic and Biological Solids, 219
Chin, N. K. (Barker, Prof. D., and) : Efferent Innervation of Mammalian Muscle-Spindles, 461
Chin, T. F. (Carew, Prof. D. P., and) : Constituents of *Lagerstroemia Flos-reginae* Retz., 1108
China (Communist) : Science and Education in, 222
Chinese : A New Haemoglobin Variant (the 'Honolulu Type') in a (Dr. Rose G. Schneider and Dr. Robert T. S. Jim), 454
Chitinase in *Limnoria* : Absence of (J. Ross Stevenson), 463
Chitinoclastic Activity in the Luminous Bacteria (R. Spencer), 938
Chloride (Manganous) : Prevention of Manganese Deficiency in Oat by soaking the Grain in Solutions of (Donald S. H. Drennan, Alex M. M. Berrie and Gordon A. Armstrong), 824
Chloride (Sodium) : Response of Thymus to Increase of Intake of (Dr. M. Pospíšil), 89
  Variation with Temperature of the Photoelastic Constants of (Dr. K. V. Krishna Rao and V. G. Krishna Murty), 429
Chloride (Sodium) Whiskers (Dr. Gy. Turchányi and Dr. I. Tarján), 79
Chloride-Secreting Cells in the Gills of European Eels (Dr. Giuseppe Colombo), 101
'Chloride-Secretory Cell' of *Salmo salar* L. : An Electron Microscope Study of the, with reference to Plasma-Electrolyte Regulation (Dr. Lawrence T. Threadgold and Dr. Arthur Hillier Houston), 612
Chlorophyll-deficient Mutant Plants : Staining Plastids in (W. R. Childers), 1029
Chloroplasts : Coprecipitation of Mitochondria and (Rachel M. Leech and Dr. R. J. Ellis), 790
Chlorpromazine : An Effect of, on Rat Mitochondrial Membranes (Prof. M. A. Spirtes and P. S. Guth), 274
Chlorpromazine and Lysergic Acid Diethylamide : Effects of, on the Rate of Habituation of the Arousal Response (Dr. B. J. Key), 275
Choice of Animals for Bio-Assay (Dr. J. D. Biggers, Dr. Anne McLaren and Dr. Donald Michie), 891 ; (Dr. C. K. Chai), 893, 894 ; (Dr. Anne McLaren and Dr. Donald Michie), 894
Cholesterol Content (Blood) : Influence of various Dietary Fats on the (F. S. P. Van Buchem, J. J. Speelman, A. A. Idema, A. T. Valkema and H. J. Thomasson), 310
Cholesterol Metabolism : Function of the Foetal Thyroid of the Rabbit with regard to, studied by Foetal Thyroidectomy (J. G. Bearn, H. B. Koerselman and T. R. E. Pilkington), 822
Cholesterol-fed Rabbits : Effect of Essential Oils on Atherosclerosis of (Dr. S. Benkö, A. Macher, F. Szarvas and T. Tiboldi), 731
Cholidocholithiasis : Ultrasonic Detection of (Marjorie J. Hill and Ian McColl), 627
Choline *in vitro* : Biosynthesis of, by Rat Liver (F. R. Dalal, J. M. Noronha and Dr. A. Sreenivasan), 267
Choline Acetylase in the Human Placenta at Different Stages of Development (Gordon Bull, Dr. Catherine Hebb and Dobrila Ratković), 1202
Cholinergic Activity of Hyoscyamine (Prof. A. Teitel), 814
Cholinesterase in the Chicken Nervous System (J. B. Cavanagh and P. Holland), 735
Chopoorian, Dr. J. A., and others : Complex Hydrides of Platinum, 528
Chorioallantois of the Chick Embryo : Neuraminidase in the (Dr. G. L. Ada and Dr. Patricia E. Lind), 1169
Choudhury, Dr. J. K. : Ecological Problems in the Tropics (Distribution of Perennial Plants), 772
Christian, C. S., and Slatyer, R. O. : Australian Arid Zone Technical Conference, 19
Christian Responsibility : The Population Explosion and (Dr. Richard M. Fagley), *review* by the Very Rev. W. R. Matthews, 41
Christoffel, Dr. D. A. : Total Magnetic Field Measurements between New Zealand and Antarctica, 776
Chromaffin Granules (Adrenal) : Incorporation of Phosphorus-32 into Adenosine Triphosphate of (W. H. Prusoff, Dr. H. Blaschko, Dr. Margery G. Ord and Dr. L. A. Stocken), 354
Chromate (Barium) : Some Features of the Precipitation of, by an Extra-slow Technique (Tadeusz Adamski), 524
Chromatic Discrimination in Animals and Man : Fundamental Mechanisms of the—Proceedings of an International Symposium on the (Paris, 1958), sponsored by the International Council of Scientific Unions—Mechanisms of Colour Discrimination (edited by Yves Galifret), *review* by Prof. R. W. Ditchburn, 201
Chromatographic Analysis (Gas) : Precision and Accuracy in (R. S. Evans and P. G. W. Scott), 710
Chromatographic Paper : Detection of Small Quantities of 3,4-Benzpyrene directly from (Dr. B. A. Nešković and V. Soškić), 1199
Chromatographic Separations (Liquid), using Rubber as the Stationary Phase (P. I. Brewer), 625
Chromatography : Gas (S. J. Hawkes), 867
Chromatography on Diethylaminoethyl-Cellulose (DEAE) : Isolation of Haptoglobin by (Dr. M. Steinbuch and M. Quentin), 1121
Chromatography (Gas) : Detection of Trace Quantities of Acenaphthene by (Prof. W. G. H. Edwards, J. G. Clarke and A. G. Williamson), 531
  An Organo-clay Complex for the Separation of Isomeric Dichlorobenzenes using (C. T. Cowan and J. M. Hartwell), 712
Chromatography (Gas–Liquid) : Prediction of Retention Data in, from Molecular Formulae (M. B. Evans and J. F. Smith), 905
Chromatography (Gas–Liquid), of Sterol Methyl Ethers (R. B. Clayton), 1071
Chromatography (Paper) : Growth Substances separated from the Root of Water Hyacinth by (Prof. S. M. Sircar and Arati Ray), 1213
Chromatography (Paper), of Hexosamines and N-Acetylhexosamines (Dr. R. Heyworth, H. R. Perkins and P. G. Walker), 261
Chromatography (Paper), of Natural Saponins (Dr. B. Pasich), 830
Chromatography (Partition) : Biological Activity of some Humic Fractions isolated by means of (Prof. A. Paszewski, J. Trojanowski and A. Lobarzewska), 277
Chromatography (Silicic Acid) : Quantitative Fractionation of Brain Glycolipids by (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch and Dr. Louis A. Faillace), 150
Chromatography and Ionophoresis on Ion-Exchange Paper : A New Technique of—Application to the Separation of Barbiturate, Salicylate and Acetophenetidin (Harold V. Street and Dr. S. K. Niyogi), 537
  A New Technique of—Application to Separation of Barbiturate, Salicylate, Acetophenetidin and *p*-Acetylaminophenol (Harold V. Street and Dr. S. K. Niyogi), 718
  A New Technique of—Application to Separation of Compounds of Toxicological Interest—Separation of a Mixture of Promazine, Quinine, Sulphacetamide and Acetophenetidin (Harold V. Street and Dr. S. K. Niyogi), 1199
Chromium Ions in Ruby : Spin-Lattice Relaxation of Pairs of (J. C. Gill), 619
Chromium (III)–Oxyanion Systems (G. M. Lukaszewski and J. P. Redfern), 805
Chromobacterium violaceum : Accumulation of Indole Compounds in Cultures of (Prof. William A. Corpe), 190
Chromosome Elimination in Cecidomyidae (C. Bantock), 466
Chromosome Fragments and Mutation of the Incompatibility Gene (Prof. D. Lewis), 990
Chromosomes of the Wild Mushroom (D. T. Hughes), 285
Chromosomes (Sex-), in the Male of *Drosophila melanogaster* : Non-disjunction of the (P. J. Kelsall), 1035
Chromospheric Disk Surges : Trajectories of (J. M. Malville and Dr. G. E. Moreton), 995
Chronic High and Low Salt Intakes : Effect of, on Adrenocortical Function (Dr. Lewis K. Dahl, Lawrence Silver, Sanford Spraragen and Malcolm Smilay), 348
Churchill College, Cambridge : Appointment of Prof. A. Schlüter and Prof. G. Fodor to overseas fellowships at, 963
Chvapil, M. (Kobrle, V., and) : Isolation of Peptides containing Hydroxyproline from Animal Tissues, 909
Chymotrypsin : Inhibition of, with Di*iso*propyl Phosphorofluoridate (A. J. J. Oms), 533
CIBA Fellowship Trust : Awards, 489
Ciba Foundation : Symposium on Haemopoiesis—Cell Production and its Regulation (edited by G. E. W. Wolstenholme and Maeve O'Connor), *review* by Dr. P. F. Harris, 479
  Report for 1960, 590
C.I.B.A. (A.R.L.), Ltd.: Technical Notes No. 218, 'Araldite' in Museum Work, 394
Cilia and Flagella : Structural Asymmetry in (I. R. Gibbons), 1128
Cinnabar Moth : Termination of Pupal Diapause in the, and the Reproductive Capacity of the Resulting Females (Dr. G. F. Bornemissza), 936
Circulating Platelets in Mice subjected to Simultaneous X-Ray and Ultraviolet Irradiation (I. Cserháti, F. Krizsa and K. Rák), 544
Circulation in the Upper Atmosphere : Winds and (Royal Meteorological Society Symposium on), 591
Cirque Glaciers (Norwegian) : Investigations on (edited by W. V. Lewis), *review* by Dr. C. A. M. King, 662
Cirrhotic Liver (Normal and) : Flow of Portal and Hepatic Blood in (Dr. T. Nakamura, S. Nakamura and T. Kaneko), 812
Citral, Linalyl Acetate, Linalol and Terpinyl Acetate as Attractants of Larvae (Food Selection by Silkworm Larvae, *Bombyx mori*), (Yasuji Hamamura and Ken-ichi Naito), 879
Citri, Dr. Nathan, and Strejan, Gill : Antibodies blocking Neutralization of Penicillinase by the Homologous Antiserum, 1010
Citrinin : Chemical Structure of (Stefan Kováč, Prof. Pavel Nemec, Vladimir Betina and Jozef Balan), 1104
Citrulline in Plants : Biosynthesis of (Dr. G. Reuter), 447
Citrus Fruit : Control of Red Scale in (B. H. Martin and Dr. R. F. Black), 133
Citrus Plants : Biochemical Indications as a means of Distinguishing between Iron and Manganese Deficiency Symptoms in (A. Bar-Akiva), 647
City Museum, Sheffield : Annual Reports for 1958-60, 961
Civil Engineering at Swansea, 215
Civil Engineering at University College, London, 488
Civil Engineers, Institution of, the Institution of Mechanical Engineers, and the Institution of Electrical Engineers : Graham Clark Lecture 1961, Resources, Human and Material, of the Commonwealth (H.R.H. the Duke of Edinburgh), 673
Civil Servants (Professional), Institution of : Annual Report for 1960, 309
Clapham, Prof. A. R. : Appointed chairman of the Committee for England of the Nature Conservancy, 218
Clarence, Prof. N. D., and O'Brien, Dr. P. A. : Dispersions of Multiple-Stroke Whistlers, 1096
Claridge, G. G. : Seal Tracks in the Taylor Dry Valley, 559
Claridge, R. F. C. : Awarded a CIBA fellowship in radio-chemistry, 489
Claringbull, Dr. G. F., and others : Ekanite, a New Metamict Mineral from Ceylon, 997
Clark, Dr. Arnold M. (Grosch, Prof. Daniel S., and) : Nitrogen Protection of Fecundity and Fertility in Female *Habrobracon* treated with X-Rays, 546
Clark (Graham) Lecture of the Institutions of the Civil, Mechanical and Electrical Engineers (H.R.H. the Duke of Edinburgh), 673
Clark, Peggy, and Walsh, B. J. : Trapping of Plasma by Red Cells, 678
Clarke, Dr. C. A., and others : Transplacental Passage of Red Cells in Man, 922
Clarke, C. H. : Genetic Studies with *Klebsiella pneumoniae*, 194
Clarke, Dr. E. G. C. : Title of reader in chemistry (at the Royal Veterinary College) conferred on, 963
Clarke, J. G., and others : Detection of Trace Quantities of Acenaphthene by Gas Chromatography, 531
Clarke, Jean M., and Smith, J. Maynard : Independence of Temperature of the Rate of Ageing in *Drosophila subobscura*, 1027
Classical Mechanics : L. Euler, The Principle of Relativity and the Fundamentals of (D. Speiser), 757
Classification of Animal Viruses : A Chemical Basis for the (Dr. P. D. Cooper), 302
Classification and Multiplicity of Growth Layers in the Branches of Trees at the Extreme Lower Forest Border (Waldo S. Glock, R. A. Studhalter and Sharlene R. Agerter), *review* by Prof. F. W. Jane, 850
Clay (London) : *Nothofagus* Pollen in the (Ma Khin Sein), 1030
Clay Fulgurite (Supposed), from Ontario : Analysis of a (Maxwell K. Carron and Paul D. Lowman, jun.), 40
Clay Minerals : Clays and—Proceedings of the Seventh National Conference on Clays and Clay Minerals, Washington, 1958 (edited by Ada Swineford), *review* by Dr. D. M. C. MacEwan, 850
Clays : Congelifraction of (I. C. McDowall), 134
  Interpretation of the Upper Plastic Limit of (Prof. B. P. Warkentin), 287
Clays and Clay Minerals—Proceedings of the Seventh National Conference on Clays and Clay Minerals, Washington, 1958 (edited by Ada Swineford), *review* by Dr. D. M. C. MacEwen, 850

Clayton, R. B. : Gas–Liquid Chromatography of Sterol Methyl Ethers, 1071
Cleaned Iron Objects : Protection of (K. J. Barton), 15
Cleavage Fracture Initiation in Notched Impact Tests of Mild Steel (J. W. Davies and A. A. Wells), 432
Clegg, Dr. E. J. : Effect of 9α-Fluoro-11β-Hydroxy-17-methyltestosterone ('Ultandren') on the Testis of the Immature Rat, 542
Clifton, Charles E. (edited by, in association with Sidney Raffel and Mortimer P. Starr) : Annual Review of Microbiology, Vol. 14, *review* by Dr. B. A. Newton, 662
Climatic Change and related Geophysical Problems : Solar Variations, (Section of Geological Sciences and Division of Oceanography and Meteorology of the New York Academy of Sciences, in co-operation with the American Meteorological Society Symposium on), 967
Clinical Biochemists, Association of : Symposium on Acid-base Balance, 493
Clinical Chemistry : Advances in (edited by Harry Sobotka and C. P. Stewart), Vol. 3, *review* by Dr. J. N. Davidson, 74
Clinical Medicine : Recent Advances in Human Nutrition, with special reference to (Prof. J. F. Brock), *review* by Prof. J. Yudkin, 751
Clitheroe, Lord : Appointed a vice-chairman of Tube Investments, Ltd., 493
Clock (Fourteenth Century Astronomical) : Exhibition of a (Science Museum, London), 589
Closed Circuit Television in the Medical School (C. E. Engel), 1159
Closely Related Gamma-Myeloma Proteins and Normal Mouse Gamma-Globulin : An Investigation of, by Partial Enzymic Degradation and Starch-Gel Electrophoresis (Dr. Brigitte A. Askonas and Dr. J. L. Fahey), 980
Clot Dissolution (Plasma), by Urea Derivatives (Prof. Kurt N. von Kaulla and Robert L. Smith), 449
Clotting-Time of Cold-exposed and Hibernating Hamsters (Prof. Arliss Denyes and Joan D. Carter), 450
Cloud, jun., Dr. P. E. : Elected a Member of the United States National Academy of Sciences, 674
Cloud-size Water Droplets : Precipitation of Sub-Micron Dust in Still Air by (Dr. M. M. Bhadani and N. G. T. Ludlow), 974
Clowes, R. C. : Colicine Factors as Fertility Factors in Bacteria—*Escherichia coli K*-12, 988
Clubroot Tissue (Cabbage) : Tinsel-like Structure in Flagella of Zoospores associated with (W. L. Seaman, Prof. R. H. Larson and J. C. Walker), 186
Cluley, J. C. : The Cathode Ray Tube Memory of the High Speed Electronic Computer of the U.S.S.R. Academy of Sciences, *review*, 383
Clutterbuck, A. J., and Beardmore, Dr. J. A. : Variation in the Behaviour of Different Genotypes of *Drosophila* towards Odoriferous Vegetable Oils, 1135
Coal Research in C.S.I.R.O. : Nos. 1-11 (Australian Commonwealth Scientific and Industrial Research Organization), 14
Coal Seams in Angola : Termites and, 767
Coarse Fish in Rivers : Movement of (B. Stott), 737
Coast (South-East) of Scotland : *Elminius modestus* on the (Dr. D. Hemingway Jones), 103
Coast and Geodetic Survey (United States) : Technical Bulletin No. 12, Use of Artificial Satellites for Navigation and Oceanographic Surveys (Paul D. Thomas), 134
Coastal Waters of the British Isles : Seasonal Variation of the Sea Surface Temperature in (F. E. Lumb), 1164
Coates, R. V., and Crewe, J. M. : Solid Solutions in the System Ammonium Nitrate–Potassium Nitrate, 1190
Coating Effects, and their Interaction with Serum Albumin : Age and Molecular Weight of Dextrans—their (Dr. Eric Ponder and Dr. Ruth V. Ponder), 277
Coatings (Surface) : Physics in (1961 Biennial Conference of the Oil and Colour Chemists' Association), 591
Coats (Peter) Scholarship (Textile Institute), 218
Cochran, Doris M. : Type Specimens of Reptiles and Amphibians in the United States National Museum (United States National Museum, Bulletin No. 220), 863
Cockayne, Dr. B. : Appointed lecturer in the Department of Physical Metallurgy in the University of Birmingham, 135
Cockchafer : Use of an Artificial Spermatophore in the Study of Activation of Spermatozoa and Development of Spermatophores in the (Dr. V. Landa), 935
Cobalt Complexes (Polynuclear) : Structure of (Prof. Cyrill Brosset and Nils-Gösta Vannerberg), 714
Cobra Venom and a Detergent : Reversible Block of Axonal Conduction by Curare after Treatment with (Dr. Philip Rosenberg and Dr. Seymour Ehrenpreis), 728
Cockcroft, Sir John : Appointed chancellor of the Australian National University, Canberra, 680
Cockroach Nerve : Nucleotides and other Phosphorus Compounds of (J. P. Heslop and J. W. Ray), 1192
Codd, J. : Resonance Absorption in Nuclear Reactors, *review*, 1046
Coding Ratio for the Ribonucleic Acid Viruses (C. R. Woese), 697
Codling Moth, *Cydia pomonella* (L.) : Numerical Regulation of Populations of the (P. W. Geier), 561
Coefficients (Activity-based Diffusion), for Liquid Solutions (F. A. L. Dullien and Prof. L. W. Shemilt), 526
Coenzyme *A*-dependent Decarboxylation (Adenosine Triphosphate- and), of Oxalate by Extracts of Peas (John Giovanelli and Noel F. Tobin), 1006
Coenzyme *Q* : Reduction of, by Succinic Acid Dehydrogenase (Prof. Józef Heller, Dr. Ludmila Szarkowska and Czeslawa Petryszyn), 539
Coenzyme *Q* (Ubiquinone) and the Function of Vitamin E (Dr. J. Green, A. T. Diplock, J. Bunyan, Dr. E. E. Edwin and Dr. D. McHale), 318
Coenzymes (Pyridine Nucleotide) : Assay of, and associated Dehydrogenases with Phenazine Methosulphate (Dr. P. J. C. Smith), 84
Coesite as an Inclusion in G.E.C. Synthetic Diamonds (Dr. H. Judith Milledge), 1181
Cognitive Systems : A Basic Notion in the Theory of (Dr. M. C. Goodall), 840
Cohen, Doris (Jones, Robert T., and) : High Speed Wing Theory, *review*, 118
Cohen, Dr. D. E.: Appointed to a lectureship in pure mathematics in the University of Birmingham, 679
Cohen, E., and others : Agglutination of Sensitized Alligator Erythrocytes by Rheumatoid Factor(s), 552
Cohen, H. M. (Roy, Prof. Rustum, and) : Effects of High Pressure on Glass—a Possible Piezometer for the 100-Kilobar Region, 798
Cohen, Prof. John, and Cooper, Peter : Patterns of Preference in Equiprobable Situations, 231
Cohen, M. : Appointed to a lectureship in applied mathematics in the Queen's University, Belfast, 679
Cohen, Richard L., and others : A New Preparation of Gastrin—Preliminary Characterizations, 448
Cohesion (Histogenic), of Dissociated Cells : Effect of Temperature on Adhesion to Glass and (Prof. A. Moscona), 408
Coic, Prof. Y. : At the Fourth World Fertilizer Congress (Adaptation of Fertilizers by Cultivated Plants), 1161
Cold : Hypothermia and the Effects of (*British Medical Bulletin*, Vol. 17, No. 1), 141
Cold-Cathode Arc Movement in a Magnetic Field : A Theory of (Dr. P. E. Secker and Dr. A. E. Guile), 428
Cold-exposed and Hibernating Hamsters : Clotting-Time of (Prof. Arliss Denyes and Joan D. Carter), 450
Cole, David L., and others (Prof. L. S. Cressman, in collaboration with) : Cultural Sequences at the Dalles, Oregon—a Contribution to Pacific Northwest Prehistory (Transactions of the American Philosophical Society, New Series, Vol. 50, Part 10), 775
Cole, J. F. I., and others : Shock-excited Dark Discharge, 37
Cole, Sonia : Man and his Ancestry, *review*, 1044
Coleman, Dr. Joseph E., and others : Nitrogen and Sulphur at the Active Centre of Carboxypeptidase *A*, 633
Coleoptile (Wheat), *Triticum vulgare* L. : A Sequential Growth Response to Gibberellic Acid, Kinetin and Indolyl-3-Acetic Acid in the (Dr. S. T. C. Wright), 699
Colicine *X* : Biological Characteristics of (Dr. J. Papavassiliou), 110
Colicine Factors as Fertility Factors in Bacteria—*Salmonella typhimurium* Strain *LT*2 (H. Ozeki and Sheila Howarth), 986 ; *Escherichia coli K*-12 (R. C. Clowes), 988
Colitis (Ulcerative), and *Rh* Blood Groups : Correlation between (Dr. William C. Boyd, Dr. Mary Heisler and Prof. Egon Orowan), 1123
Collagen : Structure of (Prof. G. N. Ramachandran and V. Sasisekharan), 1004
College of Advanced Technology, Birmingham : Establishment by Joseph Lucas, Ltd., of the Joseph Lucas research fellowship in production engineering, 962
College of Aeronautics, Cranfield : Appointment of E. R. Norster and J. H. Dunmore to lectureships in aircraft propulsion, 218
  Appointment of H. B. Gatland to a lectureship in electrical engineering, 218
  Appointment of D. Hodgetts and G. H. Tidbury to lectureships in automobile engineering, 218
  Appointment of Dr. G. T. Csanady to a Senior Research Fellowship in the Department of Aerodynamics, 218
  Appointment of Dr. W. D. G. Bennett to a Senior Research Fellowship in the Department of Materials, 218
  Appointment of D. Hyde to a Research Fellowship in the Department of Flight, 218
  Appointment of A. Kaye to a Research Fellowship in the Department of Materials, 218
College (Staff), for Further Education : Appointment of W. J. Richards as first director, 308
Colleges (Technical) : Applied Biology in, 495
  Research Reactors for Universities and, 960
Colliding Solids : Impact—the Theory and Physical Behaviour of (Prof. Werner Goldsmith), *review* by Dr. R. P. N. Jones, 947
Colligan, Dr. George, and Galasso, Dr. Francis : Structure of Vapour-deposited Carbon, 621
Collin, Prof. J., and Nagels, M. : Ionization Potential and Molecular Complex of Benzothiazol with Iodine, 82
Collins, J. C. (general editor) : Radioactive Wastes, *review* by K. D. B. Johnson, 75
Collins, William E., and others : Effects of Mental Activity on Vestibular Nystagmus and the Electroencephalogram, 194
Collinson, H. : Training in Occupational Hygiene (Problem of the Small Employer with a Back-street Factory), 1158
Collis-George, Prof. N., and Sands, Jocelyn E. : Moisture Conditions for Testing Germination, 367
Colombian Tunebo Indians : Absence of Abnormal Haemoglobins in (Tullio Arends), 93
Colombo, Dr. Giuseppe : Chloride-secreting Cells in the Gills of European Eels, 101
Colonial Agricultural, Animal Health and Forestry Research, Committee for : Fifteenth Annual Report (Colonial Office), 21
Colonial Development Corporation : Financial Position of the, 489
Colonial Economic Research Committee : Thirteenth Annual Report (Colonial Office), 21
Colonial Fisheries Advisory Committee : Annual Report (Colonial Office), 21
Colonial Medical Research Council : Fifteenth Annual Report (Colonial Office), 21
Colonial Office : Colonial Research 1959-60, 21
Colonial Pesticides Research Committee : Thirteenth Annual Report (Colonial Office), 21
Colonial Research, 1959-60 (Colonial Office) 21
Colonial Road Research Committee : Fifth Annual Report (Colonial Office), 21
Colonial Social Science Research Council : Sixteenth Annual Report (Colonial Office), 21
Colonization (Fungal), of a Developing Salt Marsh (Dr. G. J. F. Pugh), 1032
Colonized Mosquitoes : Cyclical Feeding-Activity in (Dr. J. D. Gillett), 881
Colour Change in Locusts : The Prothoracic Gland and (Peggy E. Ellis and Dr. D. B. Carlisle), 368
Colour Discrimination : Mechanisms of—Proceedings of an International Symposium on the Fundamental Mechanisms of the Chromatic Discrimination in Animals and Man, Paris, 1958, (sponsored by the International Council of Scientific Unions), (edited by Yves Galifret), *review* by Prof. R. W. Ditchburn, 201
Colour Vision, *review* by Prof. R. W. Ditchburn, 201
Coloured Alkali Halides : Catalytic Activity of (Ian D. Gay and Prof. Kenneth E. Hayes), 256
Colter, Dr. J. S., and Ellem, Dr. K. A. O. : Antigenicity of Deoxyribonucleic Acids from Mouse Liver and from the Ehrlich Ascites Tumour, 550

Colvin, J. Ross, and others : Formation of Helical Microfibrils from a Steroid Acid Complex, 779
Coma (Hepatic) : Urocanicaciduria associated with (Dr. William M. McIsaac and Irvine H. Page), 347
Comets and the Formation of Biochemical Compounds on the Primitive Earth (Prof. J. Oró), 389
Comitato Nazionale per l'Energia Nucleare : Sixth Nuclear Congress, 219
  Symposium on the Thorium–Uranium Cycle, 219
  Symposium on Nuclear Applications in Agriculture, 219
  Symposium on Autoradiographic Techniques in Medical Science, 219
Commerce (Industry and), National Advisory Council on Education for : Organization of Sandwich Courses, 590
Common, Dr. R. : Appointed to a lectureship in geography in the Queen's University, Belfast, 679
Commons, House of : Adjournment Debate on the Employment of Librarians in the United Kingdom, 133
  Debate on the Nuclear Power Programme, 199
  Adjournment Debate on the United Kingdom's contribution to the Malaria Eradication Campaign, 490
  Adjournment Debates on Afforestation in the National Parks, 871
  Second reading of the Department of Technical Co-operation Bill, 1039
Commonwealth : Resources, Human and Material, of the (H.R.H. the Duke of Edinburgh), 673
Commonwealth Development : The Engineer in (Prof. L. Dudley Stamp), 673
Commonwealth Fund : Appointments to Harkness Fellowships, 308
Commonwealth Scientific and Industrial Research Organization (Australian) : Coal Research in C.S.I.R.O., Nos. 1-11, 14
  Rural Research in C.S.I.R.O., No. 23, Control of Red Scale in Citrus Fruit (B. H. Martin and Dr. R. F. Black), 133
  Rural Research in C.S.I.R.O., No. 34, 491
  Appointment of H. J. Frith as officer-in-charge of the Wildlife Survey Section, 676
Commonwealth Students in British Universities, 308
Commonwealth Technical Training Week, 765
Communication : Science and Industry—the Problem of (Department of Scientific and Industrial Research Conference on), 965
Communication (Interstellar and Interplanetary), by Optical Masers (Dr. R. N. Schwartz and Prof. C. H. Townes), 205
Communication Experiment : A Transatlantic, via *Echo* I Satellite (Wm. C. Jakes, jun.), 709 ; (H. Carru, R. Gendrin and M. Reyssat), 709
Communication or Conflict : Conferences—their Nature, Dynamics and Planning (edited by Mary Capes, with the collaboration of A. T. M. Wilson), *review* by Prof. F. S. Dainton, 844
Communist China : Science and Education in, 222
Communities (Plant) : 'Antibiotic Effects' in (J. R. Cannon, N. H. Corbett, K. P. Haydock, J. G. Tracey and L. J. Webb), 189
Community (Marine Sessile) : Inhibition of the Development of a (Dr. Ivan Goodbody), 282
Comparative Chemistry and the Relationship of the Hamamelidaceae (E. Shaw and Prof. R. D. Gibbs), 463
Comparative Endocrinology : General and, Vol. I, No. I, 1061
Comparative Zoology, Harvard Museum of : Appointment of Prof. Ernst Mayr as director, 308
Comparison of an Attenuated and Virulent Louping Ill Strain (M. Grešíková, P. Albrecht and E. Ernek), 508
Comparison of Helium and Argon in Ionization Detectors (W. A. Wiseman), 1187 ; (R. Berry), 1188
Comparison of the β-Lactoglobulins of Buffalo's Milk and Cow's Milk (Dr. A. Sen and N. K. Sinha), 343
Comparison with Satellite 1958 $\delta 1$: Observations of Satellite 1960$\zeta 1$, and a (C. R. Faulkner), 520
Competition (Essay) : 1961 Waverley Gold Medal (*Research*), 395
Complement-fixing Blood Group Antibodies with special reference to the Nature of Anti-Le^a (Dr. F. Stratton), 240
Complementarity : Foundations of Quantum Theory and (Prof. L. Rosenfeld), 384
Complete *n*-Point Graph (H. P. Goodman), 840
Complex (Molecular), of Benzothiazol with Iodine : Ionization Potential and (Prof. J. Collin and M. Nagels), 82
Complex (An Organo-clay), for the Separation of Isomeric Dichlorobenzenes using Gas Chromatography (C. T. Cowan and J. M. Hartwell), 712
Complex (Steroid Acid) : Formation of Helical Microfibrils from a (Dr. N. Ramanathan, A. L. Currie and J. Ross Colvin), 779
Complex Hydrides of Platinum (Dr. J. A. Chopoorian, Dr. J. Lewis and Prof. R. S. Nyholm), 528
Complex Symbiosis *in vitro* : Multiplication of Hansen's Bacillus in (Dr. R. Devignat), 832
Complex Systems : Enumeration of Components in, by Fluorescence Spectrophotometry (Dr. G. Weber), 27
Complexes (Polynuclear Cobalt) : Structure of (Prof. Cyrill Brosset and Nils-Gösta Vannerberg), 714
Complexes (Synaptinemal), (Cores), in Primary Spermatocytes of Mouse under Elevated Temperature (Dr. B. R. Nebel and E. M. Hackett), 467
Component of the Foetal Blood in several Mammalian Species : Fructose as a (Prof. A. St. G. Huggett and Dr. D. A. Nixon), 1209
Component' ('Infective Ribonucleic Acid) : Nature of the, in Cells infected with Encephalomyocarditis Virus and the 'Virosome' Concept (A. J. D. Bellett and A. T. H. Burness), 235
Components : Electronics, Instruments and (Institution of Electronics Sixteenth Annual Exhibition and Convention), 865
Components in Complex Systems : Enumeration of, by Fluorescence Spectrophotometry (Dr. G. Weber), 27
Components A_2 and A_2' (Minor Human Haemoglobin) : Identity of the α-Chains of the, with the α-Chains of Human Haemoglobin *A* and *F* (Prof. Titus H. J. Huisman, Dr. Bennett Horton and Tine B. Sebens), 357
Components (Multiple Caeruloplasmin), in Human Serum : Evidence for (R. McAlister, Dr. G. M. Martin and E. P. Benditt), 927
Compositae : Bignoniaceae to (Bignonias to Sunflowers), (Roxana Stinchfield Ferris), (Illustrated Flora of the United States—Washington, Oregon and California, Vol. 4), *review* by G. P. DeWolf, 49
Composition of Foods (Dr. R. A. McCance and Dr. E. M. Widdowson), *review* by Joyce Doughty, 477
Composition of Ruminant Depot Fat : Effect of Duodenal Administration of Highly Unsaturated Fatty Acids on (Bridget M. Ogilvie, Prof. G. L. McClymont and Dr. F. B. Shorland), 725
Compound (New Superconducting), of Niobium and Tin, Nb_3Sn (Bell Telephone Laboratories), 134
Compound Lipids : Fractionation of, by Dialysation in an Organic Solvent against an Organic Solvent (Prof. Senitiroh Hakomori and Koh-kiti Takeda), 265
Compounds : Effects of *Tris*(*p*-Aminophenyl)-Carbonium Salts and related, on Experimental Schistosomiasis and Paragonimiasis (E. F. Elslager, F. W. Short, D. F. Worth, J. E. Meisenhelder, H. Najarian and P. E. Thompson), 628
  Non-Benzenoid Aromatic (edited by David Ginsburg), *review* by B. A. Ellis, 662
  Organosilicon (Dr. C. Eaborn), *review* by Dr. J. S. Anderson, 59
Compounds of Toxicological Interest—Separation of a Mixture of Promazine, Quinine, Sulphacetamide and Acetophenetidin : A New Technique of Chromatography and Ionophoresis on Ion-exchange Paper—Application to Separation of (Harold V. Street and Dr. S. K. Niyogi), 1199
Compounds (Biochemical), on the Primitive Earth : Comets and the Formation of (Prof. J. Oró), 389
Compounds (Digitalis) : Reaction of, with Antimony Pentachloride (Capt. Robert H. Herman), 268
Compounds (Foreign) : Metabolic Pathways of (Biochemical Society Colloquium on), 219
'Compounds' (Graphite): A Sealed-edge Theory of (Prof. J. G. Hooley), 529
Compounds (Indole), in Cultures of *Chromobacterium violaceum* : Accumulation of (Prof. William A. Corpe), 190
Compounds (Inorganic + Organic and Inorganic) (excepting Metallic Derivatives) : Systems with (Prof. Jean Timmermans), (The Physico-chemical Constants of Binary Systems in Concentrated Solutions, Vol. 4), *review* by Dr. E. F. G. Herington, 661
Compounds (Organic) : An Introduction to Electronic Theory of (H. L. Heys), *review* by Dr. R. I. Reed, 296
Compounds (Organophosphorus) : Doubling of the Proton Magnetic Resonances of certain (T. H. Siddall, C. A. Prohaska and W. E. Shuler), 903
Compounds (Phosphorus), of Cockroach Nerve : Nucleotides and other (J. P. Heslop and J. W. Ray), 192
Comprehensive Analytical Chemistry (edited by Prof. Cecil L. Wilson and David W. Wilson), Vol. 1*B*, Classical Analysis, *review* by Dr. D. T. Lewis, 294
Computation, British Conference on Automation and : Conference on Automation—Men and Money, 219
Computer : Ferranti *Argus*, 14
Computer (High Speed Electronic), of the U.S.S.R. Academy of Sciences : The Cathode Ray Tube Memory of the (V. N. Laut and L. A. Lyubovich), translated from the Russian by Ruth Feinstein ; edited by F. A. Sowan, *review* by J. C. Cluley, 383
Computing Chemical Plant Automation, 14
Computing Machinery, Association for : *Journal*, January 1961 issue, 864
Computing Methods and the Phase Problem in X-Ray Crystal Analysis—Report of a Conference held at Glasgow, 1960 (edited by Ray Pepinsky, J. M. Robertson and J. C. Speakman), *review* by Dr. A. D. Booth, 752
Comroe, jun., Prof. J. H. : Elected a Member of the United States National Academy of Sciences, 674
α-Conarachin (J. M. Dechary, K. F. Talluto, W. J. Evans, W. B. Carney and A. M. Altschul), 1125
Concentrated Solutions : The Physico-chemical Constants of Binary Systems in (Prof. Jean Timmermans), Vol. 4, Systems with Inorganic + Organic or Inorganic Compounds (excepting Metallic Derivatives), *review* by Dr. E. F. G. Herington, 661
Concentration of Aldosterone in Peripheral Plasma of Intact Unanaesthetized Dogs : Influence of Changes of Blood Volume on the (Ejgil Bojesen and Hans Degn), 352
Concentration of Atmospheric Radon and Wind Direction (Dr. F. Barreira), 1092
Concentration of Free Radicals in Melanins from *Allium cepa* : Effect of Temperature on the (M. L. Edwards, Dr. G. A. Kerkut, Dr. K. A. Munday and K. Leach), 1005
Concentration (Lactic Acid), in the Kidney of the Golden Hamster, *Mesocricetus auratus*, in Different Conditions of Diuresis (Prof. V. Capraro, G. Valzelli and C. De Agostini), 178
Concentration (Oxygen), and Mechanical Factors : Influence of, on Differentiation of Connective Tissues *in vitro* (Dr. C. Andrew L. Bassett and Ingeborg Herrmann), 460
Concentration (Trace Element), in *Crassostrea virginica* : Salinity Response of (James B. Rucker and Prof. James W. Valentine), 1099
Concept (Unified), of Photosynthesis : Photoproduction of Hydrogen, Photofixation of Nitrogen and a (Prof. Daniel I. Arnon, Dr. M. Losada, Dr. M. Nozaki and Dr. K. Tagawa), 601
Concept ('Virosome') : Nature of the 'Infective Ribonucleic Acid Component' in Cells infected with Encephalomyocarditis Virus and the (A. J. D. Bellett and A. T. H. Burness), 235
Conditioning : A Neuronal Model for (Dr. G. W. Mainwood), 177
Conditions : Sensitivity of Haemoglobin to Oxidation in various (Dr. W. K. Metcalf), 543
Conditions (Different), of Diuresis : Lactic Acid Concentration in the Kidney of the Golden Hamster, *Mesocricetus auratus*, in (Prof. V. Capraro, G. Valzelli and C. De Agostini), 178
Conditions (Hypothetically Primitive) : Polypeptide Formation from Asparagine under (J. Kovács and H. Nagy (Kovács)), 531
Conditions (Moisture), for Testing Germination (Prof. N. Collis-George and Jocelyn E. Sands), 367
Conditions (Physical), of Soil (Dr. F. Haworth), 221
Conditions (Primitive Earth) : Amino-acid Synthesis from Hydrogen Cyanide under possible (Prof. J. Oró and S. S. Kamat), 442
Conditions (Soil Physical), affecting Plant Growth (National Vegetable Research Station Association Talks and Demonstrations on), 221
Conditions (Stress) : Intracellular Distribution of Ubiquinone in Rat Liver under certain (Dr. A. S. Aiyar and Dr. A. Sreenivasan), 344
Conduction (Axonal), by Curare : Reversible Block of, after Treatment with Cobra Venom and a Detergent (Dr. Philip Rosenberg and Dr. Seymour Ehrenpreis), 728

Conduction Electrons in Dilute Silver–Manganese Alloys at Low Temperatures : Inelastic Scattering of (M. S. R. Chari), 994
Conductivity (Electrical), and Thermoelectric Power of Calcium Oxide (Dr. C. H. B. Mee), 1093
Conferences : The Age of, *review* by Prof. F. S. Dainton, 844
Configuration of the 6-Hydroxyl Group in Phenolic Steroids (Dr. H. Breuer, R. Knuppen and Gerta Pangels), 720
Confining a Plasma in Steady Electric and Magnetic Fields (K. A. George), 334
Conflict : Communication or—Conferences, their Nature, Dynamics and Planning (edited by Mary Capes, with the collaboration of A. T. M. Wilson), *review* by Prof. F. S. Dainton, 844
Congelifraction of Clays (I. C. McDowall), 134
Congenital Abnormalities in Mouse and Man : Effects of Maternal Age on the Incidence of (Dr. W. F. Bodmer), 1134
Congenital Anomalies, Japan Association for Study of : Initial Meeting, 395
Coniferous Plantations : Damage by *Rhizinia undulata* in, 685
Conifers : Group Dying of (J. S. Murray and C. W. T. Young), (Forestry Commission, Forest Record No. 46), 685
Connective Tissues *in vitro* : Influence of Oxygen Concentration and Mechanical Factors on Differentiation of (Dr. C. Andrew L. Bassett and Ingeborg Herrmann), 460
Connell, Sir Charles : Appointed a member of the Scottish Committee of the Nature Conservancy, 218
Connor, Dr. David G., and Kass, Dr. Edward H. : Effect of Artificial Fever in Increasing Susceptibility to Bacterial Endotoxin, 453
Conquest of Space, 567
Conquest of Space—Moon Probes and Artificial Satellites, their Impact on Human Destiny (Albert Ducrocq), 567
Conrad, Dr. R. : To act as consultant in applied psychology to the General Post Office, 865
Consciousness during Curarization : Photomotor Reflex as an Indicator of (Dr. Phyllis G. Croft), 726
Conservation of Askham Bog (Nature Conservancy and the Yorkshire Naturalists' Trust), 1155
Conservation of British National Parks, 871
Conservation of Water, 1062
Conservation of Wild Life, 960
Consiglio Nazionale delle Ricerche, with the co-operation of the Rassegna Internationale Elettronica e Nucleare : Symposium on Solar Seeing, 771
Constants for Binary Systems, *review* by Dr. E. F. G. Herington, 661
Constants (Photoelastic), of Sodium Chloride : Variation with Temperature of the (Dr. K. V. Krishna Rao and V. G. Krishna Murty), 429
Constants (The Physico-chemical), of Binary Systems in Concentrated Solutions (Prof. Jean Timmermans), Vol. 4, Systems with Inorganic + Organic or Inorganic Compounds (excepting Metallic Derivatives), *review* by Dr. E. F. G. Herington, 661
Constituent (Minor), of Linseed Oil : *Cyclo*-Arthenol, a (Dr. Pompeo Capella), 167
Constituents of *Lagerstroemia Flos-reginae* Retz. (Prof. D. P. Carew and T. F. Chin), 1108
Construction Électrique, Syndicat Général de la, and others : International Exhibition on Measurement Control Regulation and Automation, 397
Consulting Scientists, Association of : Election of Officers, 395
Consumption (Oxygen) : Seasonal Acclimatization of, to Temperature in a Tropical Poikilotherm, the Earthworm, *Megascolex mauritii* (K. Saroja), 930
Consumption (Oxygen), of Arteries in Chickens : Effect of Œstradiol on the (Effect of Œstrogens on Atherosclerosis), (Dr. M. R. Malinow and Dr. J. A. Moguilevsky), 422
Consumption (Oxygen), in the Mammalian Kidney : Sodium Transport and (Dr. J. Hess Thaysen, Dr. N. A. Lassen and Dr. O. Munck), 919
Contacts : Electrical (Institute of Physics and the Physical Society, in collaboration with the Institution of Electrical Engineers, Symposium on), 866
Contamination (Bacterial), in Tissue Culture : Pseudomonadaceae as a Source of (Dr. M. Likar), 1025
Contemporary Britain : Growth in the British Economy, a Study of Economic Problems and Policies in (Political and Economic Planning), 199
Continent and Ocean Basin Evolution by Spreading of the Sea Floor (Robert S. Dietz), 854
Continents : Origin of Ocean Basins and (Dr. J. J. Gilvarry), 1048
Continuity of Nucleolar Material in Mitosis : Evidence for the (The Nucleolus), (Dr. P. G. Martin), 1078
Continuous Determination of Traces of Nitric Oxide (Dr. C. Bokhoven and P. H. Tommassen), 435
Continuous γ-Radiation : Haemagglutinin Production in Pre-immunized Mice exposed to (J. P. M. Bensted), 99
Contraction of Smooth Muscle : Interaction of Acetylcholine, Calcium and Depolarization in the (Dr. K. A. P. Edman and Dr. H. O. Schild), 350
Contraction of Smooth Muscles in Non-Ionic Solutions (Roselyn L. Kolodny and Prof. W. G. Van der Kloot), 786
Control of Afforestation of Open Land in National Parks : The Case for (Standing Committee on National Parks of the Councils for the Preservation of Rural England and Wales and the Joint Action Group for the Protection of Dartmoor and Exmoor), 496
Control of Noise (National Physical Laboratory, in collaboration with the National Engineering Laboratory and the Building Research Station Conference on), 219, 1063
Control of Red Scale in Citrus Fruit (B. H. Martin and Dr. R. F. Black), 133
Control of the Responsiveness of the Blowfly to Water (Prof. David R. Evans), 1132
Control of Self-heating and Gas Emission in Nitrate-containing Fertilizers (K. S. Barclay, J. M. Crewe and K. F. J. Thatcher), 1189
Control (Automatic) : Mathematics of (Hatfield College of Technology Summer School on), 865, 1063
Control (Biological), of *Fusarium* in Soil : The Mycolytic Phenomenon and (R. Mitchell and Prof. M. Alexander), 109
Control (Growth-) Factor : Isolation and Partial Characterization of a (Francis W. Sayre, Eder Hansen, Theodore J. Starr and Evangeline A. Yarwood), 1116
Control (Home Office), of Experiments on Animals : Opinions of British Scientists of (Universities Federation for Animal Welfare), 677
Control (Hypothalamic), of Lactogenic Function in the Cat (Hanus J. Grosz and Alan E. Rothballer), 349
Control (Industrial Process) : Analytical Instrumentation of (Elliott Brothers (London), Ltd., Private Symposium and Exhibition on), 865
Control (Measurement), Regulation and Automation : International Exhibition on (MESUCORA Association, in conjunction with the Fédération des Industries Mécaniques et Transformatrices des Métaux, the Syndicat Général de la Construction Électrique, and the Fédération des Industries Électroniques), 397
Control (Thermostatic), during Electrophoretic Experiments : Assurance of (Dr. R. J. Wieme), 806
Control Engineering (Prof. Gordon J. Murphy), *review* by Dr. E. M. Deeley, 849
Control Systems (Non-Linear) : Analytical Techniques for (Prof. John C. West), *review* by Dr. E. M. Deeley, 947
Controlled Thermonuclear Reactions, *review* by Sir Basil Schonland, 750
Controlled Thermonuclear Reactions (Samuel Glasstone and Ralph H. Lovberg), *review* by Sir Basil Schonland, 750
Controlled Use of Adsorbents in Enzyme Purification (Dr. I. T. Oliver), 810
Conversion of Glucose to α-Ketoglutarate in *Acetobacter melanogenum* : Aspects of the (Dr. D. H. Bone), 562
Convulsions (Electroshock), of the Rat : Sex and Strain Differences in (D. E. Woolley, P. S. Timiras, M. R. Rosenzweig, D. Krech and E. L. Bennett), 515
Cook, Dr. A. H. : Barley and Brewing, 401
  Technique of Optical Observations, 1065
Cook, Dr. W. H. : Proteins of the Hen's Egg Yolk, 1173
Cooke, Dr. G. W. : The Soil—Problems raised by its Use and Misuse (Some Chemical Aspects of Soil Fertility and Crop Production), 770
Cooke, Dr. R. G. : Abstract Set Theory, *review*, 1047
Cooper, Peter (Cohen, Prof. John, and) : Patterns of Preference in Equiprobable Situations, 231
Cooper, Dr. P. D. : A Chemical Basis for the Classification of Animal Viruses, 302
Co-operation in the Expansion of Higher Education, 941
Co-operation between University and Industry in Manchester, 767
Co-operation (International), Netherlands University Foundation for : Summer School in Science (Fundamental Problems in Statistical Mechanics), 769
Co-operation (Technical) : A New Department for, 13
Co-ordination of Research and Development of Sources of Energy, 1060
Co-ordination (Tetrahedral) : Spectrum of Vanadium in the Tri-positive Oxidation State (V^{3+}) in (Dr. D. M. Gruen and R. Gut), 713
Copepoda : Diapause, Neurosecretion and Hormones in (Dr. D. B. Carlisle and W. J. Pitman), 827
Copper : Effect of a Thin Oxide Film on the Reaction of Iodine Vapour with (R. A. J. Shelton, S. Blairs and D. Margrave), 1183
  Sorption of, by Cellulose (Dr. R. I. C. Michie), 803 ; (Prof. R. D. Preston), 804
Copper-Levels in Mammalian Plasmas : Paraphenylenediamine Oxidase Activity and (P. J. McCosker), 887
Copper and Silver Dithiocarbamates : Electron Spin Resonance Line-Widths in Solutions of (Roland Asa, Rune Pettersson and Tore Vänngård), 258
Coppi, Germano, and others : Presence of Sialic Acid in a Granuloma Pouch, 913
Coprecipitation of Mitochondria and Chloroplasts (Rachel M. Leech and Dr. R. J. Ellis), 790
Corbett, N. H., and others : 'Antibiotic Effects' in Plant Communities, 189
Corby, G. A., and others : An Experiment in Numerical Forecasting (Air Ministry : Meteorological Office, Scientific Paper No. 5), 973
Corday-Morgan Medal and Prize of the Chemical Society awarded to Dr. A. R. Battersby, 16
Cores (Synaptinemal Complexes), in Primary Spermatocytes of Mouse under Elevated Temperature (Dr. B. R. Nebel and E. M. Hackett), 467
Corixidae (Homoptera Heteroptera) : The Function of the Paleal Pegs of (Dr. Edward J. Popham), 742
Corlett, Prof. E. N. : Appointed to a lectureship in engineering production in the University of Birmingham, 679
Cormack, D. H., and others : Interaction of Enzymes with Normal and Tumour Cells, 1207
Cornell University : George Fisher Baker Non-resident Lectureship in Chemistry—The Proton in Chemistry (R. P. Bell), *review* by Prof. J. A. V. Butler, 57
Cornford, J. P. : Appointed to a Harkness Fellowship (sociology) of the Commonwealth Fund, 308
Corpe, Prof. William A. : Accumulation of Indole Compounds in Cultures of *Chromobacterium violaceum*, 190
Corran, Dr. J. W. : The Place of Food Science and Technology in the Campaign against Malnutrition (Factors Affecting Development of Food Science and Technology and Food Resources in Pakistan), 398
Correction for Extinction Errors in Crystal Structure Analysis (Prof. S. Chandrasekhar and Dr. D. C. Phillips), 1164
Correlation between Ulcerative Colitis and *Rh* Blood Groups (Dr. William C. Boyd, Dr. Mary Heisler and Prof. Egon Orowan), 1123
Correns, Prof. C. W. : Weathering (Decomposition of Mineral Powders by Aqueous Solutions), 1066
Corrosion (Ferrous) : Localization of, by Azide (P. Hersch), 163
Corrosion (Metallic) : First International Congress on, 15
Corrosion (Metallic), and its Prevention (Exhibition on, at the Science Museum, London), 15
Corrosion Fracture (Stress) : Physical Metallurgy of (edited by Thor N. Rhodin), (Metallurgical Society Conferences, Vol. 4), *review* by Prof. F. C. Thompson, 383
Cortical Steroids (Adrenal) : Reaction of Antimony Pentachloride with Pregnane-3α, 17α, 20α-Triol, Pregnane-3α, 17α, 20α-Triol-11-One and other (Capt. Robert H. Herman and Joseph Bruton), 444
Cortisone : Inhibition by, of the Synthesis and Action of Interferon (Dr. Edwin D. Kilbourne, K. Marilyn Smart and Barbara Ann Pokorny), 650
Cosmetic Chemists, International Federation of Societies of : Second Congress, 397
Cosmic Noise Measurements from 1960 ηI at 3·8 Mc./s. (A. R. Molozzi, C. A. Franklin and J. P. I. Tyas), 616
Cosmic Ray Ages of the Treysa and Sikhote–Alin Meteorites (Prof. David E. Fisher), 225
Cosmic-Ray Observations of December 4, 1957 (Dr. B. G. Wilson), 615
Cosmic Rays : Origin of (Dr. J. N. Tandon), 246

Cosmology : Radio Astronomy and (Prof. Martin Ryle), 852
Cosslett, Dr. V. E. : Electron Microscopy, *review*, 68
  Applications of Interference Microscopy, 315
Cotswolds : Mammoths in the (L. Richardson and Dr. K. S. Sandford), 342
Cotton, Jack : Grant of £250,000 to the Zoological Society of London, to help the rebuilding programme, 590
Cotton Industry Development Council (Amendment No. 4) Order 1961, 1154
Cotton Industry Research Association (British), and the British Rayon Research Association : Merging to be known as the Cotton, Silk and Man-made Fibres Research Association, 589
Cotton, Silk and Man-made Fibres Research : Funds for, 1154
Cotton, Silk and Man-made Fibres Research Association : Merging of the British Cotton Industry Research Association and the British Rayon Research Association to be known as the, 589
Cotton Stems : Effect of Ringing, on Content of Reducing Sugars and Insoluble Nitrogen and on Degree of Infection with *Xanthomonas malvacearum* (E.F.S.) Dowson (K. A. Sabet and H. M. Hassan), 934
Couderc, Paul : The Wider Universe, *review* by G. R. Noakes, 64
Coulson, Prof. C. A. : Atoms and Electrons, *review*, 1142
Coulson, Dr. J. C., and Hickling, Grace : Variation in the Secondary Sex-Ratio of the Grey Seal *Halichoerus grypus* (Fab.) during the Breeding Season, 281
Council for Nature : *Intelligence Unit Bulletin*, No. 13, Report by the British Trust for Ornithology and the Royal Society for the Protection of Birds on Birds killed by Poisonous Seed Dressings, 218
  Grants from the Carnegie United Kingdom Trust for Field Work in Natural History, 395
Council for Nature (B.B.C. and the) : Competition for amateur cine-photographers for natural history films suitable for television, 963
Countries (Overseas) : Technical Assistance to, 1039
Country-side : The Changing (Sixty-sixth Annual Congress of the South-Eastern Union of Scientific Societies), 397
Couper, Dr. A. : Appointed to a senior lectureship in inorganic and physical chemistry in the University of Bristol, 396
Couple (Resisting) : Effect of a, on the Rotational Motion of a Rigid Body (Prof. A. K. Weaver), 335
Coupling Factor between Cell Metabolism and the Rate of Cell Mutation : Bivalent Metal Ions as the (Dr. G. G. Hayson), 144
Course on Methods of Polymer Characterization and Analysis (Bradford Institute of Technology), 312
Course in Tropical Hygiene for Laymen (Ross Institute of Tropical Hygiene, London School of Hygiene and Tropical Medicine), 397
Course (Graduate), on Electrical Machines (University of Birmingham), 768
Course (Postgraduate), in Nuclear Technology (Chemical), (Imperial College of Science and Technology, London), 16
Courses : Postgraduate, 1961-62, at the Imperial College of Science and Technology, London, 396
  Summer and Autumn (Field Studies Council), 864
Courses (Postgraduate), in Public Health Engineering (Imperial College of Science and Technology and the London School of Hygiene and Tropical Medicine), 971
Courses (Sandwich) : Organization of (National Advisory Council on Education for Industry and Commerce), 590
Cow : A Possible Explanation for the Failure of Non-Surgical Ovum Transfers in the (Movement of the Ovum in the Reproductive Tract), (M. J. K. Harper, J. P. Bennett and L. E. A. Rowson), 789
Cow's Milk : Comparison of the β-Lactoglobulins of Buffalo's Milk and (Dr. A. Sen and N. K. Sinha), 343
Cowan, C. T., and Hartwell, J. M. : An Organo-clay Complex for the Separation of Isomeric Dichlorobenzenes using Gas Chromatography, 712
Cowen, Robert C. : Frontiers of the Sea—the Story of Oceanographic Exploration, *review* by Prof. K. F. Bowden, 202
Cows (Improved Milking) : The Breeding of, through Artificial Insemination (Dr. J. Edwards and Dr. L. K. O'Connor), 759
Cox, Allan, and Doell, Richard R. : Palaeomagnetic Evidence relevant to a Change in the Earth's Radius, 36
Cox, Prof. A. H. : *Obituary* by Prof. W. D. Evans, 215
Cox, Sir Harold Roxbee : Appointed chairman of the Council for Scientific and Industrial Research, 397
Cox, K. G., and others : Karroo Igneous Activity and Tectonics in south-east Southern Rhodesia, 40
Cox, P. T. : Elected a Member of the Geological Society of London, 492
Cox, Dr. Rody P., and MacLeod, Dr. Colin M. : Hormonal Induction of Alkaline Phosphatase in Human Cells in Tissue Culture, 85
Crab (A Bathyal-abyssal Hermit), with a Calcified Asymmetrical Abdomen (Torben Wolff), 931
Crab (A Hermit), New to Britain (Dr. D. B. Carlisle and N. Tregenza), 931
Crab (Horseshoe) : Effect of Temperature on the Retinal Slow Potential of the (Dr. R. Kikuchi, K. Naito and S. Minagawa), 1011
Crabs (Grapsoid) : Visual Pigment of (Michael H. Briggs), 784
Craft of Technical Writing (Dr. Daniel Marder), *review* by A. L. Bacharach, 847
Cragg, Prof. J. B. : Appointed director of the Nature Conservancy's Merlewood Research Station, Grange-over-Sands, 488 ; work of, 488
Craggs, Dr. J. W. : Elastic Shells, *review*, 379
Craig, M. (Barrowman, J., and) : Haemoglobins of Foetal *C57BL*/6 Mice, 818
Cram, Prof. D. J. : Elected a Member of the United States National Academy of Sciences, 674
Cramb, Gordon : Excavations at the Holley Shelter near Wartburg, Natal, 961
Crampton, George H., and others : Effects of Mental Activity on Vestibular Nystagmus and the Electroencephalogram, 194
Crassostrea virginica : Salinity Response of Trace Element Concentration in (James B. Rucker and Prof. James W. Valentine), 1099
Craufurd, R. Q., and others : Estimation of Percentage Natural Cross-Pollination—Experiments on Rice, 1084
Crayfish : Repetitive Hyperpolarizing Response of the Nerve Fibre of (T. Tomita, T. Saimi and N. Toida), 271
Creep of Metals under Simple Shear (Prof. E. N. da C. Andrade and K. H. Jolliffe), 431
Cremer, Dr. Hans Dietrich : Appointed chief of the Applied Nutrition Branch of the United Nations Food and Agriculture Organization, 865
'Crep' Unit : Twilight and the (Dr. Erik Tetens Nielsen), 878
Cressman, Prof. L. S., in collaboration with David L. Cole, Wilbur A. Davis, Thomas M. Newman and Daniel J. Scheans : Cultural Sequences at the Dalles, Oregon—a Contribution to Pacific Northwest Prehistory (Transactions of the American Philosophical Society, New Series, Vol. 50, Part 10), 775
Crevices in the Ground : Resting Habits of *Anopheles gambiae* and *Anopheles pharoensis* in Salt Bush and in (Dr. A. Smith), 1220
Crewe, J. M. (Coates, R. V., and) : Solid Solutions in the System Ammonium Nitrate–Potassium Nitrate, 1190
Crewe, J. M., and others : Control of Self-heating and Gas Emission in Nitrate-containing Fertilizers, 1189
Crisley, F. D. (Gainor, Prof. C., and) : Proteolytic Activity of Crude Stem Extracts from Normal and Tumour Tissues of Plants, 1031
Crisp, Dr. D. J., and Boaden, P. J. S. : Hypogean Faunas, *review*, 50
Critical Flicker Frequency : Prediction of the Effect of Light-Time Fraction on the—an Insight from Fourier Analysis (K. Gibbins and Dr. C. I. Howarth), 330
Crocco, Prof. L. : Elected a member of the Engineering Sciences Section of the International Academy of Astronautics, 495
Croft, Dr. Phyllis G. : Photomotor Reflex as an Indicator of Consciousness during Curarization, 726
Crompton, E. : The Soil—Problems raised by its Use and Misuse (Soil Formation), 770
Cronheim, G. E. (Windsor, E., and) : Gastro-Intestinal Absorption of Heparin and Synthetic Heparinoids, 263
Cronkite, E. P. (Tonna, Dr. E. A., and) : Use of Tritiated Thymidine for the Study of the Origin of the Osteoclast, 459
Crook, A. W. : Elastohydrodynamic Lubrication of Rollers, 1182
Crookall, J. O. (Parker, R. P., and) : Seasonal Variation and Age of Radioactive Fall-out, 574
Crop : The Grass (Dr. William Davies), second edition, *review* by Prof. Ian Moore, 751
Cropley, R. : Diseases caused by Plant Viruses in Crops (Identification and Symptoms of Viruses isolated from Cherry Trees with Rasp Leaf and Leaf Roll Diseases), 221
Crops : Diseases caused by Plant Viruses in (Association of Applied Biologists Paper-reading Meeting on), 220
Crops (Agricultural), for the Wet Humid Tropics : National Forests of (Antony Santiago), 1070
Crosby, N. T., and Stainsby, Dr. G. : Thermo-Reversible Denaturation of Eucollagen in Solution, 80
Cross-Linking of High Polymers by γ-Irradiation : The Importance of Hydroxyl Radicals as Intermediates in the (Yoshitada Tomoda and Minoru Tsuda), 905
Cross-Pollination : Estimation of Percentage Natural—Experiments on Rice (E. H. Roberts, R. Q. Craufurd and F. Le Cochec), 1084
Crossing Tests : Determining Mating Type in *Neurospora* without (Prof. H. Branch Howe, jun.), 1036
Crossland, Dr. James : Appointed reader in pharmacology at the University of Nottingham, 1156
Crow, Prof. J. F. : Elected a Member of the United States National Academy of Sciences, 674
Crowcroft, Dr. Peter : Looking Ahead—the Future of Natural Faunas (Changes in the Status of Australian Mammals), 21
Crown Gall Tumour Induction : Effect of 5-Bromuracil on (Dr. Jacques Lipetz and Dr. Tom Stonier), 929
Crude Stem Extracts from Normal and Tumour Tissues of Plants : Proteolytic Activity of (Prof. C. Gainor and F. D. Crisley), 1031
Crundwell, K. : Training in Occupational Hygiene (Attempt to Catalogue the Facilities which at present exist for Testing Factory Air), 1159
Crustacea (Interstitial), in Southern England : *Bathynella* and other (G. M. Spooner), 104
Crustaceans : Terrestrial, *review* by Dr. E. M. Sheppard, 382
Cryo-tolerance of Mitochondria : Effect of Dimethyl Sulphoxide on the (Prof. D. Greiff and M. Myers), 1202
Crystal Analysis (X-Ray) : Computing Methods and the Phase Problem in—Report of a Conference held at Glasgow, 1960 (edited by Ray Pepinsky, J. M. Robertson and J. C. Speakman), *review* by Dr. A. D. Booth, 752
Crystal Gazing, *review* by Dr. A. D. Booth, 752
Crystal Growth of Gallium Arsenide using Carbon Boats (J. R. Knight), 1001
Crystal-Structure Analysis (Prof. Martin J. Buerger), *review* by Dr. A. D. Booth, 752
  An Apparent Paradox in (Prof. G. N. Ramachandran and R. Srinivasan), 159
  Correction for Extinction Errors in (Prof. S. Chandrasekhar and Dr. D. C. Phillips), 1164
Crystal Surface : Calcium Exchange of Bone Salts considered as a Measure of the (L. Richelle and Prof. M. J. Dallemagne), 165
Crystalline Sulphur : Spiral Formation on Natural (Sayeda H. Emara), 254
Crystallization of Purines in the Vacuole of *Candida utilis* (Prof. Allan H. Roush), 449
Crystallography, International Union of : Symposium on Electron and Neutron Diffraction, 679
  Symposium in commemoration of the 50th anniversary of the discovery by Prof. Max von Laue of the Diffraction of X-Rays by Crystals, 679
  Sixth General Assembly and International Congress, 679
Crystals : Activated Natural (Dr. Giovanna Mayr), 229
  Diffraction of X-Rays by (International Union of Crystallography Symposium in commemoration of the 50th anniversary of the discovery by Prof. Max von Laue of the), 679
Crystals (Gallium Phosphide) : Electroluminescence of (Frank G. Ullman), 161
Crystals (Ice) : Spiral Etch-Pits of (J. Muguruma), 37
Crystals (Single), of Polyethylene : Some Electron Microscopic Observations on (R. Westrik and A. M. Kiel), 162
Crystals (Synthetic Magnetoplumbite) : Growth Spirals on (R. A. Lefever and A. B. Chase), 255
Csanady, Dr. G. T. : Appointed to a Senior Research Fellowship in the Department of Aerodynamics at the College of Aeronautics, Cranfield, 218
Cserháti, I., and others : Circulating Platelets in Mice subjected to Simultaneous X-Ray and Ultra-violet Irradiation, 544
Csukás, I., and others : Transmission of Phosphorus-32 Incorporated by Parents into Descendants of *Drosophila melanogaster*, 469
Cudlipp, P. : Science and Industry—the Problem of Communication, 966

Culex pipiens Series in New Caledonia and the New Hebrides : Members of the (Prof. Marshall Laird), 1221
Culicoides adersi Ingram and Macfie, 1923, a Presumed Vector of *Hepatocystis* (=*Plasmodium*) *kochi* (Laveran, 1899), (Prof. P. C. C. Garnham, R. B. Heisch, D. M. Minter, J. D. Phipps and Michael Ikata), 739
Cullimore, D. R., and Woodbine, Dr. M. : A Superior Fat-synthesizing Single-Spore Strain of *Lipomyces*, 1022
Cullimore, Dr. M. S. G. : Appointed to a senior lectureship in civil engineering in the University of Bristol, 396
Cultrera, Prof. Rolando (Ferrari, Giovanni, and) : Photochemical Synthesis of Amino-Acids and a New Transamination Process by Transfer of Free Amino-Radicals, 326
Cultural Sequences at the Dalles, Oregon —a Contribution to Pacific Northwest Prehistory (Prof. L. S. Cressman, in collaboration with David L. Cole, Wilbur A. Davis, Thomas M. Newman and Daniel J. Scheans), (Transactions of the American Philosophical Society, New Series, Vol. 50, Part 10), 775
Cultural Sequences in Hokkaido, Japan (Lieut.-Col. H. A. MacCord), 864
Cultural Sequences in North-West America (Dr. G. H. S. Bushnell), 775
Culture : Fish, *review* by Dr. C. F. Hickling, 51
  Spontaneous Potentials from Explants of Human Adult Cerebellum in (Prof. A. W. B. Cunningham), 918
Culture Collection (American Type) : Grant of 865,000 dollars from the United States National Science Foundation, towards the construction of a new building to house its collection of micro-organisms, 766
Culture (Tissue) : Hormonal Induction of Alkaline Phosphatase in Human Cells in (Dr. Rody P. Cox and Dr. Colin M. MacLeod), 85
  Pseudomonadaceae as a Source of Bacterial Contamination in (Dr. M. Likar), 1025
  Spontaneous Potentials from Explants of Chick Cerebral Hemisphere (Telencephalon) in (Prof. A. W. B. Cunningham), 816
Cultured Mesodermal Tissue Cells : Electrophoretic Mobility of (D. H. Heard, G. V. F. Seaman and I. Simon-Reuss), 1009
Cultures of *Chromobacterium violaceum* : Accumulation of Indole Compounds in (Prof. William A. Corpe), 190
Cultures (Virus-infected Tissue) : Use of a 'Mixed Haemadsorption' Method in (Dr. Astrid Fagraeus and Dr. Åke Espmark), 370
Culver, R. V., and others : Oxidation of Galena to Lead Sulphate, 78
Cummins, W. A. : Some Aspects of Sedimentation in Orogenic Belts, 140
Cunliffe, Dr. A. : Appointed to a senior lectureship in physics at the University of Hull, 1156
Cunningham, Prof. A. W. B. : Spontaneous Potentials from Explants of Chick Cerebral Hemisphere (Telencephalon) in Tissue Culture, 816
  Spontaneous Potentials from Explants of Human Adult Cerebellum in Culture, 918
Cunningham, Dr. G. J. : Title of Sir William Collins professor of pathology (at the Institute of Basic Medical Sciences) conferred on, 396
Curare : Reversible Block of Axonal Conduction by, after Treatment with Cobra Venom and a Detergent (Dr. Philip Rosenberg and Dr. Seymour Ehrenpreis), 728
Curarization : Photomotor Reflex as an Indicator of Consciousness during (Dr. Phyllis G. Croft), 726
Curran, Desmond : Appointed to the University of London chair of psychiatry at St. George's Hospital Medical School, 219
Curran, Dr. S. C. : The Technological University, 128
Current : The Benguela (T. John Hart and Ronald I. Currie), 1069
Current Problems in Animal Behaviour (edited by Dr. W. H. Thorpe and Prof. O. L. Zangwill), *review* by Dr. N. Tinbergen, 570
Current Projects on the Economic and Social Implications of Scientific Research and Development, 1960 (United States National Science Foundation), 863
Current Rectification (Leakage), in the Squid Giant Axon (Dr. William J. Adelman and Dr. Robert E. Taylor), 883
Currie, A. L., and others: Formation of Helical Microfibrils from a Steroid Acid Complex, 779
Currie, Ronald I. (Hart, T. John, and) : The Benguela Current (Discovery Reports, Vol. 31), 1069
Curry D. : Elected a Member of the Geological Society of London, 492
Curves (Light), of Meteors : Anomalies in the, resulting from Fragmentation (Dr. R. Ananthakrishnan), 896
Cuss I : Experimental Drilling Ship (United States Project Mohole), 393
Cuthbert, Dr. J. (Barber, M., and) : Methane Oxidation Initiated by Electrical Discharge, 1001
Cuthbertson, Prof. J. W., and others (edited by Dr. Ernest S. Hedges, with the collaboration of) : Tin and its Alloys, *review* by Prof. F. C. Thompson, 753
Cuthbertson, Dr. W. F. J. : The Place of Food Science and Technology in the Campaign against Malnutrition (The Commercial Development of 'Amama', a Protein-rich Supplement in Nigeria), 398
Cuticular Sheath in Normal and Guard Keratin Fibres : Different Permeability of (R. Z. de la Burde), 420
Cyanamid Co. (American) : Lederle Medical Student Research Fellowships for 1961, 134
  Medical Faculty Awards, 768
Cyanide (Ferri- or Ferro-), for the Study of Haemoproteins : Precautions in the Use of (Prof. D. Keilin), 717
Cyanide (Hydrogen) : Amino-acid Synthesis from, under Possible Primitive Earth Conditions (Prof. J. Oró and S. S. Kamat), 442
Cycle : The Thorium–Uranium (Comitato Nazionale per l'Energia Nucleare Symposium on), 219
Cycle (A Diurnal), for Holotrich Protozoa of the Rumen (D. B. Purser), 831
Cycle (Division) : Changes in X-Ray Sensitivity of HeLa Cells during the (Dr. Toyozo Terasima and Prof. L. J. Tolmach), 1210
Cycle (Proliferative), in the Growing Hair Follicle of the Mouse (S. M. Cattaneo, H. Quastler and F. G. Sherman), 923
Cycle (Sexual) : Hyaluronic Acid in the Uterine Wall of the Guinea Pig during the (I. N. Likar, L. J. Likar and Dr. H. E. Taylor), 1118
Cyclical Feeding-Activity in Colonized Mosquitoes (Dr. J. D. Gillett), 881
Cyclo-Arthenol, a Minor Constituent of Linseed Oil (Dr. Pompeo Capella), 167
Cyclo-Propene Acids in some Plants of the Order Malvales : Occurrence of (F. S. Shenstone and J. R. Vickery), 168
Cyclotron : Radioactivation Analysis of Oxygen in Silicon by Irradiation with α-Particles in a (T. Nozaki, S. Tanaka, M. Furukawa and K. Saito), 39
Cydia pomonella (L.), (Codling Moth) : Numerical Regulation of Populations of the (P. W. Geier), 561
Cyprinodont *Lebistes reticulatus* Peters : Adaptive Euryhalinity in the (Dr. T. Mohsen and M. Emerit), 932
Cysteamine: Prevention by, of Radical Formation in Bovine Serum Albumin by γ-Rays (D. Libby, M. G. Ormerod, Prof. A. Charlesby and Dr. P. Alexander), 998
Cytochrome of *Pasteurella tularensis* (M. Mizuhara and Dr. M. Yamanaka), 1024
Cytochrome-*c* : Reactions of, with Methyl Linoleate Hydroperoxide (Dr. A. Banks, E. Eddie and J. G. M. Smith), 908
Cytologie et Histologie : Notions de (Prof. M. Chèvremont), réimpression, *review* by Dr. N. M. Hancox, 47
Cytolysis (Immune) : A General Method for the Quantitation of (Dr. Harold S. Goodman), 269
Czarnomska, A., and others : Mechanism of Antigen Transformation of Transplantable Rat Tumour, 458

DA-TZAO, DIN, and Kladnitzkaya, E. N. : New Elementary Particle, 591
Dacquisto, Major M. P., and Blackburn, Capt. E. W. : Protective Effect of Orally Administered *S*,β-Aminoethylisothiuronium.Br.HBr against X-Radiation Death in Mice, 270
Dactylis : Hexaploid (Dr. Martin Borrill and Keith Jones), 469
Dacus tryoni : A Differentiation Centre in the Embryo of (Dr. D. T. Anderson), 560
Daglish, Eric Fitch : Name this Insect, revised edition, *review* by Harold Oldroyd, 1047
Dahl, Dr. Lewis K., and others : Effect of Chronic High and Low Salt Intakes on Adrenocortical Function, 348
Dahlqvist, Dr. Arne : Intestinal Carbohydrases of a New-born Pig, 31
Dainton, Prof. F. S. : The Age of Conferences, *review*, 844
Dakshinamurti, C., and others : Evaluation of Effective Rainfall and Irrigation from Ground-Water Measurements, 1100
Dalal, F. R., and others : Biosynthesis of Choline *in vitro* by Rat Liver, 267
Dale, Sir Henry : A. V. Hill, *review*, 41
Dale (Henry) Professorship of the Royal Society, 1153
Dales, Dr. R. Phillips : A Bilatriene Pigment in the Green Terebellid Polychaete *Eupolymnia heterobranchia* (Johnson), 168
Dalgarno, Dr. A. : Appointed to the chair of quantum mechanics in the Queen's University, Belfast, 1156
Dallemagne, Prof. M. J. (Richelle, L., and) : Calcium Exchange of Bone Salts considered as a Measure of the Crystal Surface, 165
Dallemagne, Prof. M. J., and others : Hydrogen Bonding in Apatitic Calcium Phosphates, 164
Dalles, Oregon : Cultural Sequences at the—a Contribution to Pacific Northwest Prehistory (Prof. L. S. Cressman, in collaboration with David L. Cole, Wilbur A. Davis, Thomas M. Newman and Daniel J. Scheans), (Transactions of the American Philosophical Society, New Series, Vol. 50, Part 10), 775
Dalos, Dr. B. : Increase of Aldolase Activity in Blood Serum following Irradiation, 817
Dalziel, Dr. J. A. W. : Appointed reader in inorganic and analytical chemistry at the Chelsea College of Science and Technology, 680
Dam : Bering Strait (P. M. Borisov), 491 ; (D. A. Drogaitzev), 491
Damage to Maize in Nigeria by *Calandra oryzae* L. (G. H. Caswell), 962
Damage by *Rhizinia undulata* in Coniferous Plantations, 685
Damage (Liver Cell), due to Carbon Tetrachloride : Reversible Nature of, as demonstrated by the Use of Phenergan (Dr. K. R. Rees and Dr. W. G. Spector), 821
Damped Free Oscillations of a Gyroscopic System (R. Parks and L. Maunder), 710
Dániel, F. Á., and others : Transmission of Phosphorus-32 incorporated by Parents into Descendants of *Drosophila melanogaster*, 469
Daniel, Vera : Digest of Literature on Dielectrics, *review*, 75
Dannatt, Prof. C. W. : *Obituary* by Dr. M. S. Fisher, 763
Dark Discharge : Shock-excited (A. S. V. McKenzie, J. F. I. Cole and Dr. L. Jacob), 37
Darken, Dr. L. S. : Elected a Member of the United States National Academy of Sciences, 674
Darlington, jun., Philip J. : Awarded the Daniel Giraud Elliot Medal of the United States National Academy of Sciences, 674
Dartmoor and Exmoor, Joint Action Group for Protection of (Standing Committee on National Parks of the Councils for the Preservation of Rural England and Wales and the) : The Case for Control of Afforestation of Open Land in National Parks, 496
Dartmoor and Shap Granites : Potassium–Argon Ages of the, using the Total Volume and Isotopic Dilution Techniques of Argon Measurement (M. H. Dodson, J. A. Miller and D. York), 800
Das, Dr. S. M., and Saxena, D. B. : Ecological Problems in the Tropics (Fish Ecology), 772
Data on Research and Development : Reviews of, No. 24, Funds for Research and Development by Industry in the United States (United States National Science Foundation), 14
Data (Retention) : Prediction of, in Gas–Liquid Chromatography from Molecular Formulae (M. B. Evans and J. F. Smith), 905
Davídek, Jiří : Polarographic Determination of Vanillin, 1003
Davidson, Prof. C. F. : Mineraly, Vol. I, *review*, 1047
Davidson, Dr. G., and Jackson, Dr. C. Elizabeth : Insecticide Resistance in Mosquitoes, 364
Davidson, J. L. : Broadleaved Trees of Britain, *review*, 48
Davidson, Dr. J. N. : Advances in Clinical Chemistry, *review*, 74
Davies, B. J. : Television and Film Techniques (A Rapid-Processing Machine for 16-mm. Film), 868
Davies, C. N. : Training in Occupational Hygiene, 1158
Davies, Dr. D. W. : The Relation between Theoretical and Experimental Diamagnetic Susceptibilities for Aromatic Hydrocarbons, 1102
Davies, Emrys : Awarded the Sir Robert Hadfield Medal for 1961 of the Iron and Steel Institute, 13
Davies, J. W., and Wells, A. A. : Cleavage Fracture Initiation in Notched Impact Tests of Mild Steel, 432
Davies, K. (Knecht, R. W., and) : Solar Flare Effects in the *F* Region of the Ionosphere, 797
Davies, Dr. K. A.: Elected a Member of the Geological Society of London, 492
Davies, Dr. O. : Science in the Development of Ghana (Geological and Archaeological Evidence for the late Quaternary Climatic Sequence in West Africa), 1064

Davies, Dr. William : The Grass Crop, second edition, *review* by Prof. Ian Moore, 751
Davis, E. Jack, and De Ropp, Dr. R. S. : Metabolic Origin of Urinary Methylamine in the Rat, 636
Davis, G. K., and others : Blood Potassium and Sodium of Hereford and Brahman Cattle and some Breeds of Sheep maintained in Florida, 181
Davis, J. H. (Champion, Sir Harry, and) : Ecological Problems in the Tropics (Tropical Ecological Problems), 772
Davis, Dr. R. J., and others : Ekanite, a New Metamict Mineral from Ceylon, 997
Davis, Wilbur A., and others (Prof. L. S. Cressman, in collaboration with) : Cultural Sequences at the Dalles, Oregon—a Contribution to Pacific Northwest Prehistory (Transactions of the American Philosophical Society, New Series, Vol. 50, Part 10), 775
Davison, Prof. B. : *Obituary* by Prof. W. H. Watson, 306
Dawe, Clyde J., and others : Variant of Parotid Tumour (Polyoma) Virus showing a Change in Oncogenic Properties, 97
Dawes, Dr. Ben : Juvenile Stages of *Fasciola hepatica* in the Liver of the Mouse, 646
Day, J. H. : The Benguela Current, 1069
Day, Dr. P. R. : Growth and Genetics of Higher Fungi (Genetical Analysis of the *A* Complex in *Coprinus lagopus*), 400
Day, Dr. T. D. : Appointed director of the Tobacco Manufacturers' Standing Committee Research Unit, Harrogate, 1063
Day-release Students in England and Wales, 393
DDT-Resistant House-Flies (Normal and) : Toxicity of 2-(2-Halogen-4-Chlorophenyl)-2-(4-Chlorophenyl)-1,1,1-Trichloroethanes to (Douglas J. Hennessy, Joseph Fratantoni, James Hartigan, Herbert H. Moorefield and M. H. J. Weiden), 341
De Agostini, C., and others : Lactic Acid Concentration in the Kidney of the Golden Hamster, *Mesocricetus auratus*, in Different Conditions of Diuresis, 178
de Benedictis, Dr. G., and others : Leukaemogenesis by Urethan in New-born Swiss Mice, 278
de Broglie, Maurice, Duc : *Obituary* by Sir Lawrence Bragg, 860
de Bruyne, Dr. N. A. : Some Recent Research Problems encountered in the Study of Blood as a Rheological Fluid, 1062
De Kimpe, C. (Brindley, Prof. G. W., and) : Attempted Low-Temperature Syntheses of Kaolin Minerals, 254
de Long, Richard : Use of Agar Diffusion and Fluorescent Antibody, 1126
DeOme, Dr. Kenneth B., and others : Protective Activity of Fractions of Tubercle Bacilli against Isologous Tumours in Mice, 889
de Raaf, Dr. J. F. M. : Some Aspects of Sedimentation in Orogenic Belts, 139
De Ropp, Dr. Robert S. : Man against Aging, *review* by Prof. P. L. Krohn, 1144
De Ropp, Dr. Robert S. (Davis, E. Jack, and) : Metabolic Origin of Urinary Methylamine in the Rat, 636
de Rothschild (James A.) Expedition to Hazor : Hazor II—an Account of the Second Season of Excavations, 1956 (Yigael Yadin, Yohanan Aharoni, Ruth Amiran, Trude Dothan, Immanuel Dunayevsky and Jean Perrot), *review* by Peter J. Parr, 381
de Seidl, Dinah Sharon, and Gaede, Karl : Activation of Hurain by Bivalent Iron, 1112
de Sitter, Lamoraal Ulbo : Elected an Honorary Member in the Section of Science of the Royal Irish Academy, 492
de Turville, C. M. : Terrestrial Accretion from the Solar Wind, 156
DeWolf, G. P. : The Flora of the Pacific States, *review*, 49
de la Burde, R. Z. : Different Permeability of Cuticular Sheath in Normal and Guard Keratin Fibres, 420
Dean, Prof. H. R. : *Obituary* by Dr. E. T. C. Spooner, 305
Dean, Prof. John A. : Flame Photometry, *review* by H. L. Bolton, 66
Dearden, W. H. : Appointed to a senior lectureship in metallurgy in the University of Bristol, 396
Death (X-Radiation), in Mice : Protective Effect of Orally Administered S,β-Aminoethylisothiuronium.Br.HBr against (Major M. P. Dacquisto and Capt. E. W. Blackburn), 270
Deboutteville, Claude Delamare : Biologie des Eaux Souterraines, Littorales et Continentales, *review* by Dr. D. J. Crisp and P. J. S. Boaden, 50
Debro, Prof. Joseph R., and Lee, Melvin : Interaction of Proteins and Nucleotides in Buffered Aqueous Solutions, 1008
Decarboxylated Amino-Acid Derivatives : Inhibition of Proteolytic Enzymes by—Effect of Toluenesulphonyl(Tosyl)agmatine (4-Toluenesulphonamidobutylguanidine) on Thrombin and Trypsin (Dr. L. Lorand and Dr. N. G. Rule), 722
Decarboxylation of Oxalate (Adenosine Triphosphate- and Coenzyme A-dependent), by Extracts of Peas (John Giovanelli and Noel F. Tobin), 1006
Decarboxylation (5-Hydroxytryptophan), in Intact Brain : Assay of (A. Pletscher and K. F. Gey), 918
Dechary, J. M., and others : α-Conarachin, 1125
Dedichen, J., and others : Influence of a Liver Fraction on the Phagocytic Activity of the Reticulo-Endothelial System in Mice, 279
Deeley, Dr. E. M. : Servomechanisms, *review*, 849
  Analytical Techniques for Non-Linear Control Systems, *review*, 947
Deepest Recorded Fishes (Torben Wolff), 283
Deevey, Dr. E. S. : Solar Variations, Climatic Change and related Geophysical Problems, 967
Defares, J. G., and Sneddon, I. N. : An Introduction to the Mathematics of Medicine and Biology, *review* by J. F. Scott, 945
Defect (Primary Metabolic), supervening on Vitamin B_{12}-Deficiency in the Sheep—Résumé of Experimental Findings which led to the Present Investigations (Dr. Hedley R. Marston), 1085 ; Demonstration, *in vivo*, of the Site of the Metabolic Defect (Shirley H. Allen, Dr. Hedley R. Marston and Richard M. Smith), 1087 ; Localization, *in vitro*, of the Metabolic Defect, and Separation of the Vitamin B_{12}-containing Methyl Malonyl Co-isomerase (Dr. Hedley R. Marston and Richard M. Smith), 1088 ; Lack of Influence of Vitamin B_{12}-Deficiency on the Sheep's Capacity to Metabolize Glutamate (Shirley H. Allen and Dr. Hedley R. Marston), 1091
Defects in Porphyrin Metabolism : Study of, by means of Isotopes (Prof. C. Rimington), 870
Deficiency (Erythrocyte Glucose-6-Phosphate Dehydrogenase), in New Guinea and New Britain (Dr. Chev Kidson), 1120
Deficiency (Erythrocyte Glucose-6-Phosphate Dehydrogenase), in West Africa (Dr. A. C. Allison, L. J. Charles and I. A. McGregor), 1198
Deficiency (Heritable Respiratory), in *Saccharomyces* : Induction of, by Pantothenate Starvation (Prof. Alvin Sarachek and Gregory L. Fowler), 792
Deficiency (Manganese), in Oat : Prevention of, by soaking the Grain in Solutions of Manganous Chloride (Donald S. H. Drenna, Alex. M. M. Berrie and Gordon A. Armstrong), 824
Deficiency Symptoms (Iron and Manganese), in Citrus Plants : Biochemical Indications as a means of Distinguishing between (A. Bar-Akiva), 647
Degeneration (Infectious), of Grape Vines : New Herbaceous Test-Plants for Study of the (E. Baldacci, A. Amici, P. Bonola, E. Betto, G. Fogliani and E. Rafatti), 371
Degn, Hans (Bojesen, Ejgil, and) : Influence of Changes of Blood Volume on the Concentration of Aldosterone in Peripheral Plasma of Intact Unanaesthetized Dogs, 352
Degradation of Deoxyribonucleic Acid in *Escherichia coli* Cells treated with Mitomycin *C* (H. Kersten and Prof. H. M. Rauen), 1195
Degradation (Partial Enzymic), and Starch-Gel Electrophoresis : An Investigation of Closely Related Gamma-Myeloma Proteins and Normal Mouse Gamma-Globulin by (Dr. Brigitte A. Askonas and Dr. J. L. Fahey), 980
Degree of Branching in Glycoprotein from Rat Urine during the Development of Cancer : Changes of Hexose/Hexosamine Ratio and (Prof. Sen-itiroh Hakomori, Hiroaki Kawauchi and Taiko Ishimoda), 265
Degree of Infection with *Xanthomonas malvacearum* (E.F.S.) Dowson : Effect of Ringing Cotton Stems on Content of Reducing Sugars and Insoluble Nitrogen and on (K. A. Sabet and H. M. Hassan), 934
Dehydrogenase Systems in the Erythrocytes of some Lower Vertebrates : Histochemical Analysis of some (Prof. A. Stolk), 926
Dehydrogenase (Ammonia), Hydroxylamine Dehydrogenase, Hyponitrite Dehydrogenase and Nitrite Dehydrogenase (Kazuo Yamafuji and Yutaka Osajima), 534
Dehydrogenase (Glutamic), in Single-Gene Mutants of *Neurospora* Deficient in Amination (Dr. B. D. Sanwal and Dr. Madhu Lata), 286
Dehydrogenase (Hyponitrite), and Nitrite Dehydrogenase : Ammonia Dehydrogenase, Hydroxylamine Dehydrogenase, (Kazuo Yamafuji and Yutaka Osajima), 534
Dehydrogenase (Hydroxylamine), Hyponitrite Dehydrogenase and Nitrite Dehydrogenase : Ammonia Dehydrogenase, (Kazuo Yamafuji and Yutaka Osajima), 534
Dehydrogenase (A D-Lactic), from *Leuconostoc mesenteroides* (E. Kaufmann and Dr. S. Dikstein), 346
Dehydrogenase (Nitrite) : Ammonia Dehydrogenase, Hydroxylamine Dehydrogenase, Hyponitrite Dehydrogenase and (Kazuo Yamafuji and Yutaka Osajima), 534
Dehydrogenase (Succinic Acid) : Reduction of Coenzyme Q by (Prof. Józef Heller, Dr. Ludmila Szarkowska and Czeslawa Petryszyn), 539
Dehydrogenase Deficiency (Erythrocyte Glucose-6-Phosphate), in New Guinea and New Britain (Dr. Chev Kidson), 1120
Dehydrogenase Deficiency (Erythrocyte Glucose-6-Phosphate), in West Africa (Dr. A. C. Allison, L. J. Charles and I. A. McGregor), 1198
Dehydrogenases : Assay of Pyridine Nucleotide Coenzymes and associated, with Phenazine Methosulphate (Dr. P. J. C. Smith), 84
Delacour, Dr. J. T. : Awarded the Addison Emery Verrill Medal of the Peabody Museum, Yale University, 16
Delavarenne, S., and others : Distribution of Oxygen in a Vitrinite and its Extraction Products, 437
Delayed Hypersensitive Cells mixed with Antigen *in vitro* : Production of Pyrogenic Substances by Extracts of (Dr. J. Johanovsky), 355
Delayed Hypersensitivity : Mechanism of Increase of Endotoxin Susceptibility in Animals showing (Dr. J. Johanovsky, M. Vrána, O. Vejbora and D. Francová), 182
Delfel, Norman E. (Irvine, James E., and): Flowering Behaviour of Vanilla, 366
Delinquency (Juvenile) : Trends in (T. C. N. Gibbens), (United Nations, World Health Organization, Public Health Papers No. 5), 686
Delinquency and the Treatment of Offenders : Studies in the Causes of, No. 3, Delinquent Generations—a Home Office Research Unit Report (Leslie T. Wilkins), 24
Delinquent Generations—a Home Office Research Unit Report (Studies in the Causes of Delinquency and the Treatment of Offenders, No. 3), (Leslie T. Wilkins), 24
Delinquents : Birth of, 24
Demethylation in the Metabolism of (–)-Nicotine *in vivo* (Prof. Herbert McKennis, jun., Dr. Einosuke Wada, Edward R. Bowman and Dr. Lennox B. Turnbull), 910
Demidov, A. M., and others : Tables of γ-Ray Spectra from Radiative Capture of Thermal Neutrons (translated from the Russian by J. B. Sykes), *review* by Dr. E. R. Rae, 75
Demonstration of Nucleases on Mammalian Skin Surface and in Saline Extracts of Hair (Dr. Joseph Tabachnick and Dr. Richard Freed), 921
Demonstration (Histochemical), of Aldehydes by *p*-Phenylenediamine (Dr. V. Scarselli), 1206
Demonstration (Karyological), of Hybridization of Mammalian Cells *in vitro* (Serge Sorieul and Prof. Boris Ephrussi), 653
Denaturation of Catalase by Freezing and Thawing (Keiji Shikama and Isao Yamazaki), 83
Denaturation (Thermo-Reversible), of Eucollagen in Solution (N. T. Crosby and Dr. G. Stainsby), 80
Denervated Rat-Diaphragm Preparation : Influence of Gamma-Aminobutyric Acid on the Acetylcholine Responses of the (Dr. R. S. Watson), 724
Densities (Upper Air) : A Preliminary Model for the Variations of (Dr. H. K. Paetzold), 35
Density of Blood Serum : Changes in, after Total-Body Irradiation (Dr. Z. Dienstbier and M. Rakovič), 98
Density (Flux), of the Radio Source Cassiopeia A : Secular Variation of the (D. S. Heeschen and B. L. Meredith), 705
Density (Positive-Ion) in the Ionosphere : Measurement of, by Sounding Rocket (T. Ichimiya, K. Takayama, T. Dote, Y. Aono, K. Hirao, S. Miyazaki, T. Sugiyama and T. Muraoka), 156
Denyes, Prof. Arliss, and Carter, Joan D. : Clotting-Time of Cold-exposed and Hibernating Hamsters, 450
Deoxyribonucleic Acid : Incorporation of Thymidine into, by Extracts from Bacteria exposed to Ultra-violet Light (C. O. Doudney and Daniel Billen), 545
  Radiosensitization of *E. coli* by Purine and Pyrimidine Analogues incorporated in (Prof. Henry S. Kaplan, Dr. Kendric S. Smith and Patricia Tomlin), 796

Deoxyribonucleic Acid in the Cell Nucleus : Distribution of (E. Grundmann), 359
Deoxyribonucleic Acid in *Escherichia coli* Cells treated with Mitomycin *C* : Degradation of (H. Kersten and Prof. H. M. Rauen), 1195
Deoxyribonucleic Acid in Pseudorabies Virus-infected Rabbit Kidney Cells : Effect of Mitomycin *C* on the Synthesis of Infective Virus and (Dr. Tamar Ben-Porat, Dr. Magdalena Reissig and Dr. Albert S. Kaplan), 33
Deoxyribonucleic Acids from Mouse Liver and from the Ehrlich Ascites Tumour : Antigenicity of (Dr. J. S. Colter and Dr. K. A. O. Ellem), 550
Deoxyribonucleoproteins from White Blood Cells of Normal and Leukaemic Human Beings : Immunological Differences of (Luigi Messineo), 1122
Department (A New), for Technical Co-operation, 13
Depletion and Redepletion with Reserpine : Replacement of Adrenaline and Noradrenaline in the Adrenal Gland of the Rat, following (Dr. B. A. Callingham and Dr. Monica Mann), 1201
Depolarization (Acetylcholine, Calcium and) : Interaction of, in the Contraction of Smooth Muscle (Dr. K. A. P. Edman and Dr. H. O. Schild), 350
Depot Fat (Ruminant) : Effect of Duodenal Administration of Highly Unsaturated Fatty Acids on Composition of (Bridget M. Ogilvie, Prof. G. L. McClymont and Dr. F. B. Shorland), 725
Depth of Transplanting : The Effect of, on Tillering and Seed Production in Wheat (Dr. R. Halwagy), 513
Derivatives of Isatin *β*-Thiosemicarbazone with Anti-Viral Chemotherapeutic Activity against Ectromelia Infection (Dr. D. J. Bauer and Dr. P. W. Sadler), 1167
Derivatives (Azulene), as Plant Growth Regulators (Prof. Robert M. Muir and Corwin Hansch), 741
Derivatives (Decarboxylated Amino-Acid) : Inhibition of Proteolytic Enzymes by—Effect of Toluenesulphonyl(Tosyl)agmatine (4-Toluenesulphonamidobutylguanidine) on Thrombin and Trypsin (Dr. L. Lorand and Dr. N. G. Rule), 722
Derivatives (New Sarcomycin) : Antitumoral Action of (Prof. A. Caputo, B. Giovanella and R. Giuliano), 819
Derivatives (Urea) : Plasma Clot Dissolution by (Prof. Kurt N. von Kaulla and Robert L. Smith), 449
Dermatophytes : Intracellular Free Amino-Acids of certain (Dr. F. W. Chattaway, C. Toothill and A. J. E. Barlow), 87
Descendants of *Drosophila melanogaster* : Transmission of Phosphorus-32 Incorporated by Parents into (B. Faludi, I. Csukás, K. Széplaky and F. Á. Dániel), 469
Destiny (Human) : The Conquest of Space—Moon Probes and Artificial Satellites, their Impact on (Albert Ducrocq), 567
Destruction of Linoleate Hydroperoxide by Soya Extracts (Dr. J. A. Blain and T. Barr), 538
Detectable Antibodies produced by *Haemonchus* spp. Infections in Cattle : Association of, with Serum Globulin Fractions (J. G. Ross), 1019
Detection of C-Reactive Protein by Fluorescent Antibody Techniques (Dr. Robert Goldwasser and Dr. Rachmiel Rozansky), 1020
Detection of Serum Proteins within the Renal Collecting Tubule Cells of the Potassium-deficient Rat (Ashton B. Morrison and Kenneth D. Gardner, jun.), 96
Detection of Small Quantities of 3,4-Benzpyrene directly from Chromatographic Paper (Dr. B. A. Nešković and V. Šoškić), 1199
Detection of Trace Quantities of Acenaphthene by Gas Chromatography (Prof. W. G. H. Edwards, J. G. Clarke and A. G. Williamson), 531
Detection (Ultrasonic), of Cholidocholithiasis (Marjorie J. Hill and Ian McColl), 627
Detection and Isolation of *Azotobacter vinelandii* Lipman : Rhamnose for (Vagn Jensen), 832
Detectors (Ionization) : Comparison of Helium and Argon in (W. A. Wiseman), 1187 ; (R. Berry), 1188
Detergent : Reversible Block of Axonal Conduction by Curare after Treatment with Cobra Venom and a (Dr. Philip Rosenberg and Dr. Seymour Ehrenpreis), 728
Determinant of r'_e-r''_e in the Bands of the Lanthamum Oxide (LaO) (B→X) System (N. Sreedhara Murthy), 430
Determination of the Age of a Basic Igneous Intrusion by the Potassium-Argon Method (Dr. Ian McDougall), 1184
Determination of Brain Glycoproteins, Neuraminic Acid, Hexosamine and Hexoses by means of Whole Tissue Emulsion-Fractionation : Quantitative Separation and (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch), 153
Determination of Enzyme Activity by a Linear Measurement (Andrew G. Tsuk and Prof. Gerald Oster), 721
Determination of the Mechnical and Technological Properties of Metals (B. M. Gliner), translated from the Russian, second edition, *review* by James G. Tweeddale, 573
Determination of Physiological Rhythms of Unrestrained Animals by Radio Telemetry (Warren O. Essler and Prof. G. Edgar Folk, jun.), 90
Determination of Uranium as Pyrophosphate (J. S. Wright, T. J. Hayes and J. A. Ryan), 1188
Determination of Very Small Amounts of Hydrogen Peroxide (H. Perschke and Prof. E. Broda), 257
Determination of the Volume and Weight of Living Animals (Prof. C. P. Gnanamuthu), 826
Determination (Continuous), of Traces of Nitric Oxide (Dr. C. Bokhoven and P. H. Tommassen), 435
Determination (A New), of the Solar Parallax by means of Radar Echoes from Venus (Dr. J. H. Thomson, J. E. B. Ponsonby, G. N. Taylor and R. S. Roger), 519
Determination (Polarographic), of Vanillin (Jiří Davídek), 1003
Determination (Spectrophotometric), of the Electron Affinities of some Diatomic Molecules (J. Jortner and U. Sokolov), 1003
Determining Mating Type in *Neurospora* without Crossing Tests (Prof. H. Branch Howe, jun.), 1036
Determining the Vertical Distribution of Ozone : A Twilight Method of (A. B. Pittock), 426
Detonation: Apparent Intermediate Supervelocity of (Dr. C. H. Johansson), 709
Detonation in Gaseous Mixtures : Use of Flash Photolysis to Initiate (J. Wadsworth), 623
Deulofeu, Dr. V. : An International Andean Year, 966
Deutsche Akademie der Naturforscher Leopoldina : Schleiden Medal awarded to Prof. Jean Brachet and Prof. Hans Bauer, 312
Deutsche Gesellschaft für Polarforschung : Meeting on New Results in Polar Exploration, 493
  Symposium on Scientific Problems of Exploring Greenland, 493
Developing Intestinal Tract of the Rat : *β*-Galactosidase Changes in the (Dr. Anibal Alvarez and José Sas), 826
Developing Salt Marsh : Fungal Colonization of a (Dr. G. J. F. Pugh), 1032
Development : The Biochemistry of (Prof. Jean Brachet), *review* by Prof. C. H. Waddington, 475
  Choline Acetylase in the Human Placenta at Different Stages of (Gordon Bull, Dr. Catherine Hebb and Dobrila Ratković), 1202
  The Processes of, *review* by Prof. C. H. Waddington, 475
Development of Cancer : Changes of Hexose/Hexosamine Ratio and Degree of Branching in Glycoprotein from Rat Urine during the (Prof. Sen-itiroh Hakomori, Hiroaki Kawauchi and Taiko Ishimoda), 265
Development of Eggs from a Hermaphroditic Sea Urchin (D. S. Fry), 185
Development of Ghana : Science in the (Ghana Science Association Conference on), 1064
Development in Industry : Research and, 199
Development in Industry, 1957 : Funds for Research and—Performance and Financing (Department of Commerce, United States Bureau of the Census), 132
Development of the Islets of Langerhans in Man (Patricia M. Robb), 1018
Development of a Marine Sessile Community : Inhibition of the (Dr. Ivan Goodbody), 282
Development of Roots on Dwarf Bean Hypocotyls in Presence and Absence of Boron : Effects of Quality of Light on (Dr. E. C. Humphries), 701
Development of Spermatophores in the Cockchafer : Use of an Artificial Spermatophore in the Study of Activation of Spermatozoa and (Dr. V. Landa), 935
Development(Commonwealth): The Engineer in (Prof. L. Dudley Stamp), 673
Development (Economic) : International Aid for—Possibilities and Limitations (Dr. V. K. R. V. Rao), 1041
Development (Economic and Social) : Problems of, *review* by Prof. T. S. Simey, 1142
Development (Mycorrhiza), in *Pinus* : Soil pH and (Dr. B. N. Richards), 105
Development (Overseas) : Technical Assistance from the United Kingdom for (White Paper on), 1039
Development (Research and) : Reviews of Data on, No. 24, Funds for Research and Development by Industry in the United States (United States National Science Foundation), 14
Development (Research and), by Industry in the United States : Funds for (United States National Science Foundation, Reviews of Data on Research and Development, No. 24), 14
Development (Research and), of Sources of Energy : Co-ordination of, 1060
Development (Research and), Advisory Council on : Terms of reference, 1060
Development (Scientific), and the Budget, 489
Development (Scientific and Technical), in Pakistan, 1139
Development (Scientific Research and) : Current Projects on the Economic and Social Implications of, 1960 (United States National Science Foundation), 863
Development (Soil Profile) : Glaciation as related to (Welsh Soils Discussion Group Meeting on), 219
Development (Technological), in Poland, 14
Development Corporation (Colonial) : Financial Position of the, 489
Development Requirements (Research and), of the Shipbuilding and Marine Engineering Industries (Department of Scientific and Industrial Research), 200
Developmental Biology (Human), Abstracts of (Excerpta Medica Foundation), Vol. 1, No. 1, 133
Devi, Dr. Anima, and others : Incorporation of Amino-Acids into Protein and Ribonucleic Acid of the Lens of the Rat—Effect of Heavy Metals, 1193
Deviations from the Steady-State in Ion Transfer through Perm-selective Membranes (Chaim Forgacs), 339
Devignat, Dr. R. : Multiplication of Hansen's Bacillus in Complex Symbiosis *in vitro*, 832
Devon Naturalists' Trust : Formation of the, 395
  Gift from H. G. Hurrell of Lady's Wood, 1155
Dexamethasone : Effect of, on the Phagocytic Activity of the Reticulo-Endothelial System (Prof. T. Nicol and C. Druce), 91
Dexter Award of the American Chemical Society awarded to Prof. J. R. Partington, 680
Dextrans : Age and Molecular Weight of—their Coating Effects, and their Interaction with Serum Albumin (Dr. Eric Ponder and Dr. Ruth V. Ponder), 277
Dhar, Prof. N. R. : Ecological Problems in the Tropics (Value of Nitrogen and Phosphorus in Indian Soils), 772
  The Fourth World Fertilizer Congress, 1161
Diabetic Rat (Normal and Alloxan) : Incorporation of Ethanol-1-^{14}C into Fatty Acids in the (Dr. Marion E. Smith), 273
Dialysation in an Organic Solvent against an Organic Solvent : Fractionation of Compound Lipids by (Prof. Sen-itiroh Hakomori and Koh-kiti Takeda), 265
Diamagnetic Susceptibilities (Theoretical and Experimental), for Aromatic Hydrocarbons : The Relation between (Dr. D. W. Davies), 1102
Diament, M. L., and others : Role of the Mucous Membrane in the Peristaltic Reflex in the Isolated Ileum of the Guinea Pig, 1205
Diamond (Synthetic] : Notable Growth Spiral on (Prof. S. Tolansky), 992
Diamonds (G.E.C. Synthetic) : Coesite as an Inclusion in (Dr. H. Judith Milledge), 1181
Diapause in *Acheta* : Termination of, by Urea (T. W. Hogan), 367
Diapause (Pupal), in the Cinnabar Moth : Termination of, and the Reproductive Capacity of the Resulting Females (Dr. G. F. Bornemissza), 936
Diapause, Neurosecretion and Hormones in Copepoda (Dr. D. B. Carlisle and W. J. Pitman), 827
Diaphragm (Rat-) Preparation : Influence of Gamma-Aminobutyric Acid on the Acetylcholine Responses of the Denervated (Dr. R. S. Watson), 724
Dias da Silva, W., and others : Purification of the Toxic Fractions from *Ascaris lumbricoides* and their Effect on the Guinea Pig, 813
Diatomic Molecules : Spectrophotometric Determination of the Electron Affinities of some (J. Jortner and U. Sokolov), 1003

Dichlorobenzenes (Isomeric) : An Organo-clay Complex for the Separation of, using Gas Chromatography (C. T. Cowan and J. M. Hartwell), 712
Dickerson, Dr. R. E., and others : The Amino-Acid Sequence of Sperm Whale Myoglobin—A Partial Determination by X-Ray Methods, and its Correlation with Chemical Data, 666
Dickinson, R. P. : Awarded the R. P. Alston Medal of the Royal Aeronautical Society, 863
Dickson, D. E. (Barker, W. G., and) : Early Flower Initiation in the Banana, 1131
Dictionaries (Scientific and Technical) : Bibliography of Interlingual (Unesco), fourth edition, 1061
Dictionary : AGARD Aeronautical Multilingual (edited by G. H. Frénot and A. H. Holloway), *review* by Dr. D. Küchemann, 851
Dieldrin : Resistance to, in *Anopheles* in Trinidad (T. A. Omardeen), 559
Dielectrics : Digest of Literature on, Vol. 23, 1959 (edited by Louis J. Frisco and Thomas D. Callinan), *review* by Vera Daniel, 75
Dienstbier, Dr. Z., and Rakovič, M. : Changes in Density of Blood Serum after Total-Body Irradiation, 98
Dienoestrol and Stilboestrol Diphosphate : Effect of Tri-*p*-anisylethylene, (Phagocytic Activity of the Reticulo-Endothelial System), (Prof. T. Nicol, Dr. D. L. J. Bilbey and C. G. Druce), 419
Dietary Calcium : Effect of Feeding Two Levels of, on the Growth of Broiler Chickens (Dr. H. Smith and Dr. J. H. Taylor), 1200
Dietary Fats : Influence of various, on the Blood Cholesterol Content (F. S. P. Van Buchem, J. J. Speelman, A. A. Idema, A. T. Valkema and H. J. Thomasson), 310
Dietary Regimen of Three Phenylketonuric Patients : Effect of Glutamine and Asparagine Supplements in the (Dr. Barbara H. Bowman and Dr. F. J. King), 417
Diethylamide (Lysergic Acid) : Effects of Chlorpromazine and, on the Rate of Habituation of the Arousal Response (Dr. B. J. Key), 275
Diethylaminoethyl-Cellulose (DEAE) : Isolation of Haptoglobin by Chromatography on (Dr. M. Steinbuch and M. Quentin), 1121
Dietz, Robert S. : Continent and Ocean Basin Evolution by Spreading of the Sea Floor, 854
Difference between the Modes of Action of Substrate and Hormonal Inducers of Rat Liver Tryptophan Pyrrolase (Dr. Olga Greengard and Prof. Philip Feigelson), 446
Difference (Potential), in the Intestinal Epithelium of the Turtle : Origin of the (Michelle Baillien and E. Schoffeniels), 1107
Difference (Species), between *Rattus norvegicus* and *Rattus rattus* : Paracrystalline Haemoglobin as a (Dr. Z. Vokàč), 641
Differences in Mechanism of Staining Reaction for Mast Cells of some Lower Vertebrates (Dr. A. Stolk), 360
Differences (Immunological), of Deoxyribonucleoproteins from White Blood Cells of Normal and Leukaemic Human Beings (Luigi Messineo), 1122
Differences (Sex and Strain), in Electroshock Convulsions of the Rat (D. E. Woolley, P. S. Timiras, M. R. Rosenzweig, D. Krech and E. L. Bennett), 515
Different Conditions of Diuresis : Lactic Acid Concentration in the Kidney of the Golden Hamster, *Mesocricetus auratus*, in (Prof. V. Capraro, G. Valzelli and C. De Agostini), 178
Different Genotypes of *Drosophila* : Variation in the Behaviour of, towards Odoriferous Vegetable Oils (A. J. Clutterbuck and Dr. J. A. Beardmore), 1135
Different Patterns of Bacterial Growth : Fractions of Trypsinized Casein giving (D. A. H. Hearfield and A. W. Phillips), 266
Different Permeability of Cuticular Sheath in Normal and Guard Keratin Fibres (R. Z. de la Burde), 420
Different Stages of Development : Choline Acetylase in the Human Placenta at (Gordon Bull, Dr. Catherine Hebb and Dobrila Ratkovič), 1202
Differentiating Saprophytic Mycobacteria from other Mycobacteria : Formamidase in Mycobacteria and its Use in (Dr. Hideo Nagayama, Dr. Kiyoshi Konno and Prof. Sutemi Oka), 1219
Differentiation : Nuclear Materials and Nuclear Change in (Prof. Kenneth Mather), 404
Differentiation of Connective Tissues *in vitro* : Influence of Oxygen Concentration and Mechanical Factors on (Dr. C. Andrew L. Bassett and Ingeborg Herrmann), 460
Differentiation (Sexual), in *Allomyces* : Nucleic Acids and (Dr. G. Turian), 825
Differentiation Centre in the Embryo of *Dacus tryoni* (Dr. D. T. Anderson), 560
Diffraction : Electron and Neutron (International Union of Crystallography Symposium on), 679
Diffraction through a Lattice: Observation in the Year 1648 of (Jiří Marek), 1092
Diffraction of X-Rays by Crystals (International Union of Crystallography Symposium in commemoration of the 50th anniversary of the discovery by Prof. Max von Laue of the), 679
Diffraction Photographs : X-Ray, *review* by Dr. M. R. Truter, 69
Diffraction Photographs (X-Ray) : The Interpretation of (Dr. N. F. M. Henry, Prof. H. Lipson and Dr. W. A. Wooster), second edition, *review* by Dr. M. R. Truter, 69
Diffusible Fruiting Factor : Association of a Steroid and a Pigment with a, in *Myxococcus virescens* (J. Jennings), 190
Diffusion (Agar), and Fluorescent Antibody : Use of (Richard de Long), 1126
Diffusion (Liquid) : Informal Meeting at the Royal College of Science and Technology, Glasgow (under the auspices of the Faraday Society) to mark the centenary of the publication by Thomas Graham of his paper on, 312
Diffusion (Medium-scale), in the Atmosphere (Royal Meteorological Society Symposium on), 591
Diffusion (Small-Scale Turbulent), in the Atmosphere (F. Gifford), 248
Diffusion (Thermal), of Oxygen and Nitrogen in Zirconium (Prof. G. D. Rieck and H. A. C. M. Bruning), 1181
Diffusion Coefficients (Activity-based), for Liquid Solutions (F. A. L. Dullien and Prof. L. W. Shemilt), 526
Digest of Literature on Dielectrics, Vol. 23, 1959 (edited by Louis J. Frisco and Thomas D. Callinan), *review* by Vera Daniel, 75
Digestive Tract of Sheep : Calcium and Magnesium Contents of various Secretions entering the (J. E. Storry), 1197
Digitalis Compounds : Reaction of, with Antimony Pentachloride (Capt. Robert H. Herman), 268
Digitalis Toxicity (Acute), in Dogs : Œstrogen Protection against (Edward H. Grinnell, J. Raymond Johnson, James R. Rhone, Albert Tillotson, Jim Noffsinger and Dr. Max N. Huffman), 1117
Diisopropyl Phosphorofluoridate : Inhibition of Chymotrypsin with (A. J. J. Ooms), 533
Dikstein, Dr. S. (Kaufmann, E., and) : A D-Lactic Dehydrogenase from *Leuconostoc mesenteroides*, 346
Dilemma (The Ethical), of Science and other Writings (Prof. A. V. Hill), *review* by Sir Henry Dale, 41
Dilute Silver–Manganese Alloys at Low Temperatures : Inelastic Scattering of Conduction Electrons in (M. S. R. Chari), 994
Dilution Techniques (Isotopic), of Argon Measurement : Potassium–Argon Ages of the Dartmoor and Shap Granites using the Total Volume and (M. H. Dodson, J. A. Miller and D. York), 800
Dimer (Pyrene) : Lifetime of the (Dr. C. A. Parker and C. G. Hatchard), 165 ; (Dr. B. Stevens and E. Hutton), 166
Dimerization (Reductive), of Naphthalene by Sodium–Ethylamine (Leslie Reggel, Heinz W. Sternberg and Irving Wender), 81
Dimethyl Sulphoxide : Effect of, on the Cryo-tolerance of Mitochondria (Prof. D. Greiff and M. Myers), 1202
  Preservation of Mouse Bone Marrow at —79°C. with (M. J. Ashwood-Smith), 1204
4-Dimethylaminoazobenzene injected with Homogenized Tumour mixed with Freund Adjuvant : Growth of Tumours in Rats fed with (Prof. Nikša Allegretti), 1207
18,19-Dinortestosterone as Œstrone Antagonists : Œstrogen Antagonisms —19-Norprogesterone and (Richard A. Edgren), 353
Dinucleotide (Histamine) : Enzymatic Formation of Histamine Ribotide from (Dr. Saburo Muraoka, Mie Inoue and Prof. Hidemasa Yamasaki), 532
Dionne, L. A. (Graham, K. M., and) : Hybrids between *Solanum bulbocastanum* and *Solanum cardiophyllum*, 744
Dioxide (Carbon) : Growth of *Fomes annosus* under Reduced Oxygen Pressure and the Effect of (Dr. K. Gundersen), 649
  Polymers of (P. G. Bentley), 432
Dioxide (Carbon), Carbon Monoxide, Hydrogen, Nitrogen, Oxygen and Steam (Air, Argon,) : Tables of Thermodynamic and Transport Properties of (Joseph Hilsenrath, Charles W. Beckett, William S. Benedict, Lilla Fano, Harold J. Hoge, Joseph F. Masi, Ralph L. Nuttall, Yeram S. Touloukian and Harold W. Woolley), *review* by Prof. A. R. Ubbelohde, 58
Dioxide (Carbon) Bubbles on Calcite Etch-Peaks : Retention of (Peggy M. Dunlap and J. D. Wilkinson), 524
Diphosphate (Stilboestrol) : Effect of Tri-*p*-anisylethylene, Dienoestrol and (Phagocytic Activity of the Reticulo-Endothelial System), (Prof. T. Nicol, Dr. D. L. J. Bilbey and C. G. Druce), 419
Diphosphopyridine Nucleotide : Enzymatic Reduction of, with Urea (Hirohisa Omura and Yutaka Osajima), 345
Diplock, A. T., and others : Ubiquinone (Coenzyme Q) and the Function of Vitamin E, 318
  Ubiquinone and Tocopherol in Birds, 637
Diploid Cells (Haploid and), of *Protomyces inundatus* : Nucleic Acid Content of (L. R. G. Valadon, Dr. J. G. Manners and A. Myers), 836
Diploids (*Aspergillus niger*) : Mitotic Haploidization by Treatment of, with *para*-Fluorophenylalanine (Pol Lhoas), 744
Diploids (Unstable), of *Penicillium chrysogenum* : Action of Mycophenolic Acid on (Dr. A. Ballio and Dr. G. Sermonti), 108
Diploma in Technology in Applied Biology (Bristol College of Science and Technology and the Brunel College of Technology Courses for the), 495
Direction (Wind) : Concentration of Atmospheric Radon and (Dr. F. Barreira), 1092
Dicharge (Dark) : Shock-excited (A. S. V. McKenzie, J. F. I. Cole and Dr. L. Jacob), 37
Discharge (Electrical) : Methane Oxidation initiated by (M. Barber and Dr. J. Cuthbert), 1001
Discharge (Hydrogen) : Arc Initiation on Heated Metals by a (J. T. Maskrey, R. A. Dugdale and R. C. McVickers), 997
Discontinuities : Gasdynamic (Wallace D. Hayes), *review*, 118
Discovery of Reflexes (Prof. E. G. T. Liddell), *review* by Sir John Eccles, 43
Discovery Reports : Vol. 30, Studies on *Physalia physalis* (L.), Part 1, Natural History and Morphology ; Part 2, Behaviour and Histology (A. K. Totton and G. O. Mackie), 23
  Vol. 31, The Benguela Current (T. John Hart and Ronald I. Currie), 1069
Discrimination between α-Tracks and γ-Background in Ilford Nuclear Emulsions (K. Van Camp, M. Dorikens and L. Dorikens-Vanpraet), 38
Discrimination (Chromatic), in Animals and Man : Fundamental Mechanisms of the—Proceedings of an International Symposium on the (Paris, 1958), sponsored by the International Council of Scientific Unions—Mechanisms of Colour Discrimination (edited by Yves Galifret), *review* by Prof. R. W. Ditchburn, 201
Discrimination (Colour) : Mechanisms of—Proceedings of an International Symposium on the Fundamental Mechanisms of the Chromatic Discrimination in Animals and Man, Paris, 1958, (sponsored by the International Council of Scientific Unions), (edited by Yves Galifret), *review* by Prof. R. W. Ditchburn, 201
Disease (Foot-and-Mouth) : Phagocytic Activity in Squamous Epithelia and its Role in Cellular Susceptibility to (Dr. H. Platt), 1075
Disease (Hodgkin's), and Allied Disorders : Enzyme Histochemistry of the Cells in (Dr. R. F. Dorfman), 925
Disease (Laboratory Animal) : Problems of (International Committee on Laboratory Animals Symposium on), 677
Disease (New), of Sugar Cane : Striate Mosaic—a (C. G. Hughes), 366
Disease (Newcastle), Para-influenza 1 and Mumps Viruses : Haemagglutinating Sub-Units released from, by Treatment with Ether (F. Sokol, D. Blaškovič and O. Krizanová-Laučíková), 834
Disease (Plant) Handbook (Dr. Cynthia Westcott), second edition, *review* by D. E. Green, 660
Disease Transmission by Ticks : Some Aspects of (Zoological Society of London Symposium on), 682
Diseases caused by Plant Viruses in Crops (Association of Applied Biologists Paper-reading Meeting on), 220
Diseases of Children : Viruses in, *review* by Dr. N. R. Grist, 659

Diseases of Children, Queen Elizabeth II Canadian Fund to Aid in Research on the : Appointment of Dr. M. W. Partington as the first Queen Elizabeth II Scientist, 863
  Queen Elizabeth II Fellowships awarded to Dr. John Alexander Lowden, Dr. George Greenough Hinton and Dr. Hugh Taylor, 863
Diseases of Porphyrin Metabolism : Use of Tracers in the Study of (Biology Division of the French Atomic Energy Commission Colloquium on), 870
Diseases (Gall-) of Cacao, Mango and Pigeon Pea : Transmission of (J. F. Archibald), 284
Disorders : Enzyme Histochemistry of the Cells in Hodgkin's Disease and allied (Dr. R. F. Dorfman), 925
Dispersions of Multiple-Stroke Whistlers (Prof. N. D. Clarence and Dr. P. A. O'Brien), 1096
Display (Sucker), of *Octopus* (Andrew Packard), 736
Dissociated Cells : Effect of Temperature on Adhesion to Glass and Histogenic Cohesion of (Prof. A. Moscona), 408
Dissociation of Isohaemagglutinin Formation and Tolerance of Skin Grafts in Chicks (Otakar Stark, Vladimír Křen and Bohdan Frenzl), 281
Dissolution (Plasma Clot), by Urea Derivatives (Prof. Kurt N. von Kaulla and Robert L. Smith), 449
Distance : Perception of, in Animal Echo-Location (L. Kay), 361 ; (J. D. Pye), 362 ; (Jan Nordmark), 363
Distances (Internuclear), of Methyl and Methylene Radicals (George Glockler), 1002
Distinguishing between Iron and Manganese Deficiency Symptoms in Citrus Plants : Biochemical Indications as a means of (A. Bar-Akiva), 647
Disintegrated Spermatozoa from the Epididymis (Dr. Timothy D. Glover), 185
Distribution of *Acarapis woodi* (Renjie), (A. R. Brimblecombe and C. Roff), 561
Distribution of Antigenic Groupings on Mouse Gamma-Globulin Molecules (Dr. Brigitte A. Askonas and Dr. J. H. Humphrey), 1177
Distribution of Deoxyribonucleic Acid in the Cell Nucleus (E. Grundmann), 359
Distribution of Fruit Varieties : Environmental Factors in the (European Association for Research on Plant Breeding Conference on), 16
Distribution of Light in an Image formed in the Cat's Eye (Valerie B. Morris and F. H. C. Marriott), 176
Distribution of Oxygen in a Vitrinite and its Extraction Products (A. Halleux, S. Delavarenne and H. Tschamler), 437
Distribution (Intracellular), of Ubiquinone in Rat Liver under certain Stress Conditions (Dr. A. S. Aiyar and Dr. A. Sreenivasan), 344
Distribution (Known), of Van Allen Belts about the Earth : A Radio Wave Mechanism to account for the (Joseph M. Boyer), 597
Distribution (Vertical), of Ozone : A Twilight Method of Determining the (A. B. Pittock), 426
Ditchburn, Prof. R. W. : Colour Vision, *review*, 201
Dithiocarbamates (Copper and Silver) : Electron Spin Resonance Line-Widths in Solutions of (Roland Aasa, Rune Pettersson and Tore Vänngård), 258
Diuresis : Lactic Acid Concentration in the Kidney of the Golden Hamster, *Mesocricetus auratus*, in Different Conditions of (Prof. V. Capraro, G. Valzelli and C. De Agostini), 178
Diuresis in the Rat : Acute Effect of Three Antibiotics on (R. J. Girerd and C. L. Rassaert), 536
Diurnal Cycle for Holotrich Protozoa of the Rumen (D. B. Purser), 831
Diurnal Temperature Rhythms in Man : Reversal of (G. W. G. Sharp), 146
Diversity in Biochemistry : Unity and—an Introduction to Chemical Biology (Marcel Florkin), translated from the French by T. Wood, *review* by Dr. M. R. Atkinson, 479
Diversity of Theological Speculations, *review* by the Very Rev. Dr. W. R. Matthews, 943
Division Cycle : Changes in X-Ray Sensitivity of HeLa Cells during the (Dr. Toyozo Terasima and Prof. L. J. Tolmach), 1210
Djerassi, Prof. C. : Elected a Member of the United States National Academy of Sciences, 674
Dmochowski, Leon, and others : Intracellular Structures in Tumours induced by Polyoma, 610
Dnieper : Singing Sand from the (G. G. Velikii), 678
Dodson, M. H., and Moorbath, S. : Isotopic Ages of the Weardale Granite, 900
Dodson, M. H., and others : Potassium–Argon Ages of the Dartmoor and Shap Granites using the Total Volume and Isotopic Dilution Techniques of Argon Measurement, 800
Doell, Richard R. (Cox, Allan, and) : Palaeomagnetic Evidence relevant to a Change in the Earth's Radius, 36
Doering, Prof. W. Von Eggers : Elected a Member of the United States National Academy of Sciences, 674
Dogs : Haloperidide (*R* 3201), a Highly Potent and Selective Anti-emetic Agent in (Dr. P. A. J. Janssen and C. Niemegeers), 911
  Œstrogen Protection against Acute Digitalis Toxicity in (Edward H. Grinnell, J. Raymond Johnson, James R. Rhone, Albert Tillotson, Jim Noffsinger and Dr. Max N. Huffman), 1117
Dogs (Intact Unanaesthetized) : Influence of Changes of Blood Volume on the Concentration of Aldosterone in Peripheral Plasma of (Ejgil Bojesen and Hans Degn), 352
Dolff, Dr. Arthur H. : Appointed assistant chief of the Research Branch of the Radiological Health Division of the United Nations Food and Agriculture Organization, 865
Donaldson, Dr. J. D. : Appointed lecturer in chemistry at the Chelsea College of Science and Technology, 680
Donn, Dr. William L. : Solar Variations, Climatic Change and related Geophysical Problems (Ewing–Donn Theory of the Ocean Control of Quaternary Climate), 967
Donohoe, W. T. A., and others : Transplacental Passage of Red Cells in Man, 922
Dorf, Dr. R. C. : Appointed a lecturer in electrical engineering at the University of Edinburgh, 135
Dorfman, Dr. R. F. : Enzyme Histochemistry of the Cells in Hodgkin's Disease and Allied Disorders, 925
  Nature of the Sinus Lining Cells of the Spleen, 1021
Dorikens, M., and others : Discrimination between α-Tracks and γ-Background in Ilford Nuclear Emulsions, 38
Dorikens-Vanpraet, L., and others : Discrimination between α-Tracks and γ-Background in Ilford Nuclear Emulsions, 38
Dormancy (γ-Ray-induced), of Potato Tubers : Reversal of, by Gibberellic Acid (Dr. P. B. Mathur), 547
Dorset : Lower Purbeck Beds of Swindon Facies in (Ian M. West), 526
Dose-Response Levels (High) : Radiation Carcinogenesis at—a Hypothesis (Prof. Arnold E. Reif), 415
Doses (Large), of Œstrogens : Influence of, on the Structure of the Bones of some Reptiles (Dr. K. Simkiss), 1217
Dote, T., and others : Measurement of Positive-Ion Density in the Ionosphere by Sounding Rocket, 156
Dothan, Trude, and others : Hazor II—an Account of the Second Season of Excavations, 1956 (James A. de Rothschild Expedition at Hazor), *review* by Peter J. Parr, 381
Doubling of the Proton Magnetic Resonances of certain Organophosphorus Compounds (T. H. Siddall, C. A. Prohaska and W. E. Shuler), 903
Doudney, C. O., and Billen, Daniel : Incorporation of Thymidine into Deoxyribonucleic Acid by Extracts from Bacteria exposed to Ultraviolet Light, 545
Doughty, Joyce : British Food Analysis, *review*, 477
Doulton, J. F. H. : Life-History of the Green-veined Orchid, *Orchis morio*, 767
Dowdeswell, W. H. : Scolt Head Island, *review*, 73
Dralkin, A. G. : Soviet Expedition to the South Pole in 1959, 677
Dransfield, J. W. : Appointed senior lecturer in veterinary anatomy at the University of Liverpool, 963
Draper (Henry) Medal of the United States National Academy of Sciences awarded to Dr. Martin Schwarzschild, 307, 674
Drazin, Dr. P. G. : Wave Motion of Oceans and Atmospheres, *review*, 1044
Drennan, Donald, S. H., and others : Prevention of Manganese Deficiency in Oat by soaking the Grain in Solutions of Manganous Chloride, 824
Dresner, Lawrence : Resonance Absorption in Nuclear Reactors, *review* by J. Codd, 1046
Dressings (Poisonous Seed) : Birds killed by (British Trust for Ornithology and the Royal Society for the Protection of Birds), 218
Dreyer, Prof. C. J. : Properties of Stressed Bone, 1217
Drift (Thermistor) : Thermal Shock and its Effect on (J. H. Swartz and R. Raspet), 875
Drift Velocity (Random), of the Irregularities in the Ionosphere : Variation in Height of Anisotropy and (Dr. B. Ramachandra Rao and K. V. V. Ramana), 706
Drilling Ship (Experimental), *Cuss* 1 (United States Project Mohole), 393
Drinking Water, Milk and Beef (Air, Precipitation,) : Caesium-137 in Norway during 1959 and 1960 (T. Hvinden and A. Lillegraven), 402
Drogaitzev, D. A. : Bering Strait Dam, 491
Dronamraju, K. R. : Frequencies of Hairy Pinnae among Indian and Sinhalese Peoples, 653
Droplets (Cloud-size Water) : Precipitation of Sub-Micron Dust in Still Air by (Dr. M. M. Bhadani and N. G. T. Ludlow), 974
Drosophila : Practical Heredity with (Dr. Gordon Haskell), *review* by T. H. Hawkins, 573
  Variation in the Behaviour of Different Genotypes of, towards Odoriferous Vegetable Oils (A. J. Clutterbuck and Dr. J. A. Beardmore), 1135
Drosophila melanogaster : Non-disjunction of the Sex-Chromosomes in the Male of (P. J. Kelsall), 1035
  Transmission of Phosphorus-32 incorporated by Parents into Descendants of (B. Faludi, I. Csukás, K. Széplaky and F. Á. Dániel), 469
Drosophila subobscura : Independence of Temperature of the Rate of Ageing in (Jean M. Clarke and J. Maynard Smith), 1027
Drosophila Populations : Analysis of Irradiated, for Meiotic Drive (Prof. E. Novitski and G. D. Hanks), 989
Druce, C. G. (Nicol, Prof. T., and) : Effect of Dexamethasone on the Phagocytic Activity of the Reticulo-Endothelial System, 91
Druce, C. G., and others : Effect of Haemophagin on the Phagocytic Activity of the Reticulo-Endothelial System, 92
  Phagocytic Activity of the Reticulo-Endothelial System—Effect of *B.C.G.*, 418
  Phagocytic Activity of the Reticulo-Endothelial System—Effect of Tri-*p*-anisylethylene, Dienoestrol and Stilboestrol Diphosphate, 419
Drugs : Addiction-producing (United Nations, World Health Organization, Technical Report No. 211, Eleventh Report of the Expert Committee on), 775
  Analysis of Agricultural Materials, Foods and, *review* by H. V. Hart, 749
Drury, W. F. G. : Appointed scientific attaché to the British Embassy. Stockholm, 862 ; work of, 862
Dry Valley (Taylor) : Seal Tracks in the (G. G. Claridge), 559
Drysdale, Dr. C. V. : *Obituary* by Dr. A. B. Wood, 214
du Bois, Dr. Cora (edited by) : Lowie's Selected Papers in Anthropology, *review* by T. K. Penniman, 851
Dual Neurohumoral Role of Acetylcholine : A Proposed—Its Functions at the Pre- and Post-Synaptic Sites (George B. Koelle), 208
Dubovsky, B. V. : The Valley of I.G.Y., 677
  Lazarev's Trough, 677
Ducks and Geese (Ministry of Agriculture, Fisheries and Food, Bulletin No. 70), fourth edition, 394
Ducrocq, Albert : The Conquest of Space—Moon Probes and Artificial Satellites, their Impact on Human Destiny, 567
Dugdale, R. A., and others : Arc Initiation on Heated Metals by a Hydrogen Discharge, 997
Dulbecco, Prof. R. : Elected a Member of the United States National Academy of Sciences, 674
Dullien, F. A. L., and Shemilt, Prof. L. W. : Activity-based Diffusion Coefficients for Liquid Solutions, 526
Dunayevsky, Immanuel, and others : Hazor II—an Account of the Second Season of Excavations, 1956 (James A. de Rothschild Expedition at Hazor), *review* by Peter J. Parr, 381
Dunham, Prof. K. C., and others : Granite beneath the Northern Pennines, 899
Dunlap, Peggy M., and Wilkinson, J. D. : Retention of Carbon Dioxide Bubbles on Calcite Etch-Peaks, 524
Dunmore, J. H. : Appointed to a lectureship in aircraft propulsion at the College of Aeronautics, Cranfield, 218
Dunn, Dr. A. M. : Awarded a Fellowship by the Leverhulme Trust, 678
Dunn, Gordon E., and Miller, Banner I. : Atlantic Hurricanes, *review* by Dr. F. H. Ludlam, 52
Dunning, Dr. J. H., and Thomas, C. J. : British Industry—Change and Development in the Twentieth Century, *review* by Prof. Brinley Thomas, 45

Dunsford, Dr. I., and others : Incomplete Antibodies to Chicken Red Cell Antigens, 544
Duodenal Administration of Highly Unsaturated Fatty Acids : Effect of, on Composition of Ruminant Depot Fat (Bridget M. Ogilvie, Prof. G. L. McClymont and Dr. F. B. Shorland), 725
Dupré, Mlle. : Solar Seeing (Photographs on Nuclear Emulsions with a Lallemand Electronic Camera), 772
Duquesne, Maurice : Matter and Antimatter, *review* by G. R. Noakes, 64
Dust (Sub-Micron), in Still Air : Precipitation of, by Cloud-size Water Droplets (Dr. M. M. Bhadani and N. G. T. Ludlow), 974
Dust Allergen (House) : Preparation and Properties of Purified (Dr. L. Berrens and E. Young), 536
Dusty Gases : Viscosity of (Dr. Wayne T. Sproull), 976
Dutton, Dr. J. : Proceedings of the Fourth International Conference on Ionization Phenomena in Gases, *review*, 573
Dux, Prof. K., and others : Mechanism of Antigen Transformation of Transplantable Rat Tumour, 458
Duyckaerts, Prof. G., and others : Hydrogen Bonding in Apatitic Calcium Phosphates, 164
Duysens, Dr. L. N. M., and others : Two Photochemical Systems in Photosynthesis, 510
Dwarf Bean Hypocotyls : Effects of Quality of Light on Development of Roots on, in Presence and Absence of Boron (Dr. E. C. Humphries), 701
Dwyer, L. J., and others : Strontium-90 in Fall-out and in Man in Australia, January 1959-June 1960, 754
Dyke, S. F. : The Carbohydrates, *review* by Dr. G. O. Aspinall, 750
Dyke Systems (Radial) : Impulse Loading of Rock Targets to produce Fracture Patterns similar to Naturally Occurring (Carl F. Austin), 227
Dying (Group), of Conifers (J. S. Murray and C. W. T. Young), (Forestry Commission, Forest Record No. 46), 685
Dynamic Modulus and Dynamic Yield Stress for 'Perspex' : Estimation of (John Roberts), 799
Dynamic Yield Stress for 'Perspex' : Estimation of Dynamic Modulus and (John Roberts), 799
Dynamics and Energetics of Swimming in Water-Beetles (Dr. Werner Nachtigall), 224
Dyson, Dr. G. Malcolm : Awarded the Austin M. Patterson Award of the American Chemical Society, 680
Dystrophy (Muscular) : Longevity in Mice with a Genetically determined (Dr. James R. Miller, A. J. Wood and Prof. William C. Gibson), 552

E_s LAYER of the Ionosphere : Irregularities in the (G. F. Fooks), 707
Eaborn, Dr. C. : Organosilicon Compounds, *review* by Dr. J. S. Anderson, 59
Eardley, Armand J., and others : Science in Progress, Eleventh Series (edited by Hugh Taylor), *review* by Prof. Ritchie Calder, 45
Earless Monitor Lizard from Borneo : A Rare (Tom Harrisson and Dr. N. S. Haile), 1213
Earliest Times to the Eighteen-Eighties : A History of Platinum from the (Donald McDonald), *review* by Prof. F. C. Thompson, 61
Early Flower Initiation in the Banana (W. G. Barker and D. E. Dickson), 1131
Earth : How Old is the (Dr. Patrick M. Hurley), *review* by G. R. Noakes, 64
  Palaeomagnetism and the Ancient Radii of the (Prof. L. Egyed), 1097
  A Radio Wave Mechanism to account for the Known Distribution of Van Allen Belts about the (Joseph M. Boyer), 597
Earth (Alkaline), and other Ions : The Possibility of Obtaining E.M.F. directly from Acid-Base Reactions—Electrodes of the Third Kind reversible to (W. H. Beck), 712
Earth (Planet) : Beyond the (Konstantin Tsiolkovsky), translated from the Russian by Kenneth Syers, *review* by G. R. Noakes, 204
Earth (Primitive) : Comets and the Formation of Biochemical Compounds on the (Prof. J. Oró), 389
Earth Conditions (Primitive) : Amino-acid Synthesis from Hydrogen Cyanide under possible (Prof. J. Oró and S. S. Kamat), 442
Earth History, *review* by Dr. V. A. Eyles, 53
Earth Satellite, 1961μ : The First Manned, 307
Earth Satellites (Artificial) : Minimum Range to (K. Toman), 333, *errata*, 865
Earth's Gravitational Field : Odd Harmonics of the (R. R. Newton, H. S. Hopfield and R. C. Kline), 617
Earth's Radius : Palaeomagnetic Evidence relevant to a Change in the (Prof. S. Warren Carey), 36 ; (Allan Cox and Richard R. Doell), 36
Earthquake : The Agadir (E. Tillotson), 138
Earthworm, *Megascolex mauritii* : Seasonal Acclimatization of Oxygen Consumption to Temperature in a Tropical Poikilotherm, the (K. Saroja), 930
East African Institute for Medical Research : Report for 1959-60, 864
Eastwood, Dr. E. : Appointed director of research responsible to the managing director for the research policy of Marconi's Wireless Telegraph Co., Ltd., 680
  Awarded the Wakefield Gold Medal of the Royal Aeronautical Society, 863
Easty, G. C., and others : Interaction of Enzymes with Normal and Tumour Cells, 1207
Eaux Souterraines, Littorales et Continentales : Biologie des (Claude Delamare Deboutteville), *review* by Dr. D. J. Crisp and P. J. S. Boaden, 50
Eccles, Sir John : Homage to Sherrington, *review*, 43
Echanges Internationaux, Fondation Européenne pour les : Grant of £3,750 from the Gulbenkian Foundation, to enable postgraduate science students to study in Portugal, 218
Echo I Satellite : A Transatlantic Communication Experiment via (Wm. C. Jakes, jun.), 709 ; (H. Carru, R. Gendrin and M. Reyssat), 709
Echo-Location (Animal) : Perception of Distance in (L. Kay), 361 ; (J. D. Pye), 362 ; (Jan Nordmark), 363
Echoes of Bats and Man (Prof. Donald R. Griffin), *review* by G. R. Noakes, 64
Echoes (Radar), from Venus : A New Determination of the Solar Parallax by means of (Dr. J. H. Thomson, J. E. B. Ponsonby, G. N. Taylor and R. S. Roger), 519
Eckart, Carl : Hydrodynamics of Oceans and Atmospheres, *review* by Dr. P. G. Drazin, 1044
Ecological Botany : Garth House as a Centre for (Fred N. and Brenda D. Haynes), 590
Ecological Problems in the Tropics (National Academy of Sciences of India Symposium on), 772
Ecology of Soil Fungi—an International Symposium (edited by D. Parkinson and J. S. Waid), *review* by Dr. P. H. Gregory, 51
Economic Problems and Policies in Contemporary Britain : Growth in the British Economy, a Study of (Political and Economic Planning), 199
Economic Development : International Aid for—Possibilities and Limitations (Dr. V. K. R. V. Rao), 1041
Economic Growth : Jamaica, 1830-1930—a Study in (Gisela Eisner), *review* by Prof. T. S. Simey, 1142
Economic and Social Development : Problems of, *review* by Prof. T. S. Simey, 1142
Economic and Social Implications of Scientific Research and Development (1960) : Current Projects on the (United States National Science Foundation), 863
Economics (Agricultural), at Nottingham, 132
Economy (British) : Growth in the—a Study of Economic Problems and Policies in Contemporary Britain (Political and Economic Planning), 199
Economy (The British), in Transition, *review* by Prof. Brinley Thomas, 45
Ectromelia Infection : Derivatives of Isatin β-Thiosemicarbazone with Anti-Viral Chemotherapeutic Activity against (Dr. D. J. Bauer and Dr. P. W. Sadler), 1167
Eddie, E., and others : Reactions of Cytochrome-c with Methyl Linoleate Hydroperoxide, 908
Eddington—Philosopher or Prophet ?, *review* by Dr. C. W. Kilmister, 42
Eddington, A. S. : The Philosophy of Science of (John W. Yolton), *review* by Dr. C. W. Kilmister, 42
Edgren, Richard A. : Œstrogen Antagonisms—19-Norprogesterone and 18,19-Dinortestosterone as Œstrone Antagonists, 353
Edinburgh, H.R.H. the Duke of : To open the McFadzean Laboratory at the Wood Lane research centre of British Insulated Callender's Cables, Ltd., 312
  Resources, Human and Material, of the Commonwealth (Graham Clark Lecture of the Institutions of the Civil, Mechanical and Electrical Engineers), 673
Edman, Dr. K. A. P., and Schild, Dr. H. O. : Interaction of Acetylcholine, Calcium and Depolarization in the Contraction of Smooth Muscle, 350
Edmundson, A. B., and Hirs, C. H. W. : The Amino-Acid Sequence of Sperm Whale Myoglobin—Chemical Studies, 663
Edsall, Dr. John T. (edited by) : Amino Acids, Proteins and Cancer Biochemistry—Papers presented at the Jesse P. Greenstein Memorial Symposium, Division of Biological Chemistry, American Chemical Society, 1959, *review* by Dr. F. H. Malpress, 203
Education : Parents' Views on (Political and Economic Planning, Broadsheet No. 448), 497
Education in Communist China : Science and, 222
Education for Industry and Commerce, National Advisory Council on : Organization of Sandwich Courses, 590
Education of a Physicist : Magnets—the (Prof. Francis Bitter), *review* by G. R. Noakes, 64
Education, Ministry of : Selected Statistics relating to Local Education Authorities in England and Wales, Educational Year 1958-1959, 393
Education, Ministry of (Central Advisory Council for Education—Wales) : Technical Education in Wales, 774
Education (Engineering), 1952-1955 : Report on Evaluation of (American Society for Engineering Education), 113
Education (Engineering), American Society for : Report on Evaluation of Engineering Education, 1952-1955, 113
  Election of Officers, 679
Education (Further), Staff College for : Appointment of W. J. Richards as first director, 308
Education (Higher) : Co-operation in the Expansion of, 941
Education (Medical), Association for the Study of (Medical Committee of the Scientific Film Association in collaboration with the) : Symposium on the Applications of Television in Medical Research and Teaching, 1159
Education (Modern) : The Importance of Field Studies in (Paul F. Holmes), 590
Education (Research and), in Physics : International School for, established at the University of Uppsala (sponsored by the International Atomic Energy Agency, Unesco, and the Central Committee for Swedish Technical Assistance), 311
Education (Technical), in Wales (Ministry of Education, Central Advisory Council for Education—Wales), 774
Education (Technological) : A Timely Revolution in, 113
Education Authorities (Local), in England and Wales : Selected Statistics relating to—Educational Year 1958-1959 (Ministry of Education), 393
Education Department (Scottish) : Awards to Students, 217
Education and Practice (Chemical Engineering) : A Survey of (Prof. R. Edgeworth Johnstone), 113
Educational Productions, Ltd. : Film-Strips and Wall-Charts in Physics, Chemistry and General Science, 395
Educational Statistics for England and Wales, 393
Edwards, Prof. E. E. : Retirement from the chair of zoology in the University College of Ghana, 216
  Appointed director of a new Entomological and Parasitological Research Unit under the National Research Council established by the Ghana Government, 216
Edwards, Dr. J., and O'Connor, Dr. L. K. : The Breeding of Improved Milking Cows through Artificial Insemination, 759
Edwards, M. L., and others : Effect of Temperature on the Concentration of Free Radicals in Melanins from *Allium cepa*, 1005
Edwards, Prof. W. G. H., and others : Detection of Trace Quantities of Acenaphthene by Gas Chromatography, 531
Edwin, Dr. E. E., and others : Ubiquinone (Coenzyme Q) and the Function of Vitamin E, 318
  Ubiquinone and Tocopherol in Birds, 637
Eels (European) : Chloride-secreting Cells in the Gills of (Dr. Giuseppe Colombo), 101
Effect of Allyl*iso*propylacetamide on Liver Metabolism (Prof. C. H. Gray, Margaret Kelly and V. Moses), 1014
Effect of Artificial Fever in Increasing Susceptibility to Bacterial Endotoxin (Dr. David G. Connor and Dr. Edward H. Kass), 453

Effect of *B.C.G.* (Phagocytic Activity of the Reticulo-Endothelial System), (Prof. T. Nicol, P. McKelvie and C. G. Druce), 418
Effect on Biological Nitrogen Fixation of Nitrogen Gas treated with Ultraviolet Radiation (B. Zacharias and C. -G. Hedén), 817
Effect of 5-Bromuracil on Crown Gall Tumour Induction (Dr. Jacques Lipetz and Dr. Tom Stonier), 929
Effect of Carbon Dioxide : Growth of *Fomes annosus* under Reduced Oxygen Pressure and the (Dr. K. Gundersen), 649
Effect of Castration on Experimental Liver Lesion in *Iguana iguana* (Prof. A. Stolk), 93
Effect of Chlorpromazine on Rat Mitochondrial Membranes (Prof. M. A. Spirtes and P. S. Guth), 274
Effect of Chronic High and Low Salt Intakes on Adrenocortical Function (Dr. Lewis K. Dahl, Lawrence Silver, Sanford Spraragen and Malcolm Smilay), 348
Effect of Depth of Transplanting on Tillering and Seed Production in Wheat (Dr. R. Halwagy), 513
Effect of Dexamethasone on the Phagocytic Activity of the Reticulo-Endothelial System (Prof. T. Nicol and C. Druce), 91
Effect of Dimethyl Sulphoxide on the Cryo-tolerance of Mitochondria (Prof. D. Greiff and M. Myers), 1202
Effect of Duodenal Administration of Highly Unsaturated Fatty Acids on Composition of Ruminant Depot Fat (Bridget M. Ogilvie, Prof. G. L. McClymont and Dr. F. B. Shorland), 725
Effect of Erythropoietine on Incorporation of Formate labelled with Carbon-14 into the Nucleic Acids of Normal Rabbit Tissues *in vitro* (Dr. M. A. Perretta and Dr. R. Y. Thomson), 912
Effect of Essential Oils on Atherosclerosis of Cholesterol-fed Rabbits (Dr. S. Benkö, A. Macher, F. Szarvas and T. Tiboldi), 731
Effect of Feeding Two Levels of Dietary Calcium on the Growth of Broiler Chickens (Dr. H. Smith and Dr. J. H. Taylor), 1200
Effect of 9α-Fluoro-11β-hydroxy-17-methyltestosterone ('Ultandren') on the Testis of the Immature Rat (Dr. E. J. Clegg), 542
Effect of Glucose on Acetate Metabolism in Sheep (I. G. Jarrett and O. H. Filsell), 1114
Effect on the Guinea Pig : Purification of the Toxic Fractions from *Ascaris lumbricoides* and their (G. Gazzinelli, M. M. Guia, A. G. A. Neves, J. Pudles, W. T. Beraldo and W. Dias da Silva), 813
Effect of Haemophagin on the Phagocytic Activity of the Reticulo-Endothelial System (Prof. T. Nicol, P. McKelvie and C. Druce), 92
Effect of Heavy Metals : Incorporation of Amino-Acids into Protein and Ribonucleic Acid of the Lens of the Rat—(Dr. Anima Devi, Dr. Sidney Lerman and Dr. Nirmal K. Sarkar), 1193
Effect of Incubated Arteries on Œstradiol-containing Media (Effect of Œstrogens on Atherosclerosis), (Dr. M. R. Malinow and Dr. J. A. Moguilevsky), 423
Effect of Induced Awn Mutations on Yield in Wheat (D. Jagathesan, C. Bhatia and M. S. Swaminathan), 468
Effect of Iproniazid on the Antileukaemic Action of Reserpine (Richard A. Salvador, Stewart R. Humphreys, Robert Main Burton and Abraham Goldin, 723
Effect of *Iso*nicotinyl Hydrazide on the Path of Carbon in Photosynthesis (G. G. Pritchard, Prof. C. P. Whittingham and Wendy J. Griffin), 553
Effect of Light-Time Fraction on the Critical Flicker Frequency : Prediction of the—an Insight from Fourier Analysis (K. Gibbins and Dr. C. I. Howarth), 330
Effect of a Magnetic Field on Sarcoma 37 Ascites Tumour Cells (Indumati L. Mulay and Prof. L. N. Mulay), 1019
Effect of Mass Transfer on the Velocity of Rise of Bubbles in Water (Dr. J. H. Leonard and Prof. G. Houghton), 687
Effect of Mitomycin *C* on the Synthesis of Infective Virus and Deoxyribonucleic Acid in Pseudorabies Virus-infected Rabbit Kidney Cells (Dr. Tamar Ben-Porat, Dr. Magdalena Reissig and Dr. Albert S. Kaplan), 33
Effect of Œstradiol on the Oxygen Consumption of Arteries in Chickens (Effect of Œstrogens on Atherosclerosis), (Dr. M. R. Malinow and Dr. J. A. Moguilevsky), 422
Effect of Œstrogens on Atherosclerosis (Dr. M. R. Malinow and Dr. J. A. Moguilevsky)—Effect of Œstradiol on the Oxygen Consumption of Arteries in Chickens, 422 ; Effect of Incubated Arteries on Œstradiol-containing Media, 423 ; Modification of Aortic Aerobic Metabolism in Rats by Gonadectomy, 424
Effect of a Resisting Couple on the Rotational Motion of a Rigid Body (Prof. A. K. Weaver), 335
Effect of Ringing Cotton Stems on Content of Reducing Sugars and Insoluble Nitrogen and on Degree of Infection with *Xanthomonas malvacearum* (E.F.S.) Dowson (K. A. Sabet and H. M. Hassan), 934
Effect of Splenectomy on the Resistance of Rats to Histamine Stress (Arthur M. Sackler, A. Stanley Weltman and Peter Jurtshuk, jun.), 274
Effect of *Staphylococci* on Leucocyte Pyridine Nucleotides (Dr. M. N. Swartz, P. H. Black and J. Mersells), 516
Effect of Strong Electric Fields on the Boiling Points of some Alcohols (Dr. P. K. Katti and Dr. M. M. Chaudhri), 80
Effect of Temperature on Adhesion to Glass and Histogenic Cohesion of Dissociated Cells (Prof. A. Moscona), 408
Effect of Temperature on *Apis indica* Workers (J. B. Free and Yvette Spencer-Booth), 933
Effect of Temperature on the Concentration of Free Radicals in Melanins from *Allium cepa* (M. L. Edwards, Dr. G. A. Kerkut, Dr. K. A. Munday and K. Leach), 1005
Effect of Temperature on the Retinal Slow Potential of the Horseshoe Crab (Dr. R. Kikuchi, K. Naito and S. Minagawa), 1011
Effect on Thermistor Drift : Thermal Shock and its (J. H. Swartz and R. Raspet), 875
Effect of a Thin Oxide Film on the Reaction of Iodine Vapour with Copper (R. A. J. Shelton, S. Blairs and D. Margrave), 1183
Effect of Toluenesulphonyl(Tosyl)agmatine (4-Toluenesulphonamidobutylguanidine) on Thrombin and Trypsin : Inhibition of Proteolytic Enzymes by Decarboxylated Amino-Acid Derivatives— (Dr. L. Lorand and Dr. N. G. Rule), 722
Effect of Tri-*p*-anisylchloroethylene, Dienoestrol and Stilboestrol Diphosphate (Phagocytic Activity of the Reticulo-Endothelial System), (Prof. T. Nicol, Dr. D. L. J. Bilbey and C. G. Druce), 419
Effect of Water-soluble Polymers on Nitrate Reductase Activity (H. R. Schreiner and A. P. Rinfret), 1110
Effect (Acute), of Three Antibiotics on Diuresis in the Rat (R. J. Girerd and C. L. Rassaert), 536
Effect (Bohr), in the Haemoglobins of Marine Mammals (Austen Riggs), 94
Effect (Osmotic Pressure), of the Red Blood Cells—Possible Physiological Significance (Dr. A. Tybjaerg Hansen), 504
Effect (The Pasteur), in a Respiration-deficient Mutant of Baker's Yeast (A. Kotyk), 811
Effect (Protective), of Orally Administered S,β-Aminoethylisothiuronium.-Br.HBr against X-Radiation Death in Mice (Major M. P. Dacquisto and Capt. E. W. Blackburn), 270
Effect (Radiation), on Yeasts of the Genus *Candida* Berkhout (Armin von Szilvinyi and Utta Rosenkrantz), 1212
Effective Rainfall and Irrigation : Evaluation of, from Ground-Water Measurements (C. Dakshinamurti, P. N. Saxena and E. G K. Rao), 1100
Effective (A New, Highly), but Non-Toxic Antibacterial Substance (Dr. David Haler and Dr. A. Aebi), 734
Effector Organs : Physiology of, *review* by Prof. O. Lowenstein, 1045
Effects of certain Androgenic Steroids on the Increase of Endometrial Carbonic Anhydrase caused by Progesterone (Dr. Kazukuni Yamashita and Ken-ichi Kurouji), 1013
Effects of Chlorpromazine and Lysergic Acid Diethylamide on the Rate of Habituation of the Arousal Response (Dr. B. J. Key), 275
Effects of Cold : Hypothermia and the (*British Medical Bulletin*, Vol. 17, No. 1), 141
Effects of Glutamine and Asparagine Supplements in the Dietary Regimen of Three Phenylketonuric Patients (Dr. Barbara H. Bowman and Dr. F. J. King), 417
Effects of High Pressure on Glass—a Possible Piezometer for the 100-Kilobar Region (Prof. Rustum Roy and H. M. Cohen), 798
Effects of Ionizing Radiations on Organic and Biological Solids (British Biophysical Society and the Société de Chimie Physique Informal Discussion on), 219
Effects of Ionizing Radiations on Rice Plants (Maung Mya Thaung), 242
Effects of Maternal Age on the Incidence of Congenital Abnormalities in Mouse and Man (Dr. W. F. Bodmer), 1134
Effects of Mental Activity on Vestibular Nystagmus and the Electroencephalogram (William E. Collins, George H. Crampton and Jerome B. Posner), 194
Effects of Oligomycin on Respiration and Swelling of Isolated Liver Mitochondria (Dr. J. B. Chappell and Dr. G. D. Greville), 502
Effects of Quality of Light on Development of Roots on Dwarf Bean Hypocotyls in Presence and Absence of Boron (Dr. E. C. Humphries), 701
Effects of Speciation on Serum Proteins in the Genus *Macaca* with Special Reference to the Polymorphic State of Transferrin (Dr. Morris Goodman and Emily Poulik), 171
Effects of *Tris*(*p*-Aminophenyl)-Carbonium Salts and related Compounds on Experimental Schistosomiasis and Paragonimiasis (E. F. Elslager, F. W. Short, D. F. Worth, J. E. Meisenhelder, H. Najarian and P. E. Thompson), 628
Effects' ('Antibiotic), in Plant Communities (J. R. Cannon, N. H. Corbett, K. P. Haydock, J. G. Tracey and L. J. Webb), 189
Effects (Coating), and their Interaction with Serum Albumin : Age and Molecular Weight of Dextrans—their (Dr. Eric Ponder and Dr. Ruth V. Ponder), 277
Effects (Fungicidal), in Field Trials : Measurement of (R. W. Rayner), 328
Effects (Geochemical), of Weathering (Dr. Wilma W. Smith), 1066
Effects (Respiratory), of Phosphorylation (Prof. H. Lundegårdh), 983
Effects (Solar Flare), in the *F* Region of the Ionosphere (R. W. Knecht and K. Davies), 797
Effects (Teratogenic), of Hypervitaminosis-A : Influence of Uterine Position on the Response of the Mouse Embryo to the (Dr. D. H. M. Woollam and Dr. J. W. Millen), 184
Efferent Innervation of Mammalian Muscle-Spindles (Prof. D. Barker and N. K. Chin), 461
Egashira, Takeshi (Nakamura, Kazuo, and) : Genetically Mixed Perithecia in *Neurospora*, 1129
Egg Yolk (Hen's) : Proteins of the (Dr. W. H. Cook), 1173 ; (Dr. O. A. Schjeide and Dr. M. R. Urist), 1175
Eggs from a Hermaphroditic Sea Urchin : Development of (D. S. Fry), 185
Eggs (Fused) : Mouse Chimaeras developed from (Dr. Andrzej K. Tarkowski), 857
Eggs (Turkey) : Rous Sarcoma Virus associated with Parthenogenesis in (Marlow W. Olsen), 191
Egyed, Prof. L. : Palaeomagnetism and the Ancient Radii of the Earth, 1097
Ehrenfest, Paul : Collected Scientific Papers (edited by Martin J. Klein), *review* by Prof. J. Hamilton, 115
  The Works of, *review* by Prof. J. Hamilton, 115
Ehrenpreis, Dr. Seymour (Rosenberg, Dr. Philip, and) : Reversible Block of Axonal Conduction by Curare after Treatment with Cobra Venom and a Detergent, 728
Ehricke, K. A. : Elected a member of the Engineering Sciences Section of the International Academy of Astronautics, 495
Ehrlich Ascites Tumour : Antigenicity of Deoxyribonucleic Acids from Mouse Liver and from the (Dr. J. S. Colter and Dr. K. A. O. Ellem), 550
Eighteen-Eighties : A History of Platinum from the Earliest Times to the (Donald McDonald), *review* by Prof. F. C. Thompson, 61
Eiseley, Dr. Loren : The Firmament of Time, *review* by the Very Rev. Dr. W. R. Matthews, 943
Eisner, Gisela : Jamaica, 1830-1930—a Study in Economic Growth, *review* by Prof. T. S. Simey, 1142
Ekanite, a New Metamict Mineral from Ceylon (B. W. Anderson, Dr. G. F. Claringbull, Dr. R. J. Davis and D. K. Hill), 997
Elastic Shells, *review* by Dr. J. W. Craggs, 379
Elastic Shells (Thin) : Proceedings of the International Union of Theoretical and Applied Mechanics Symposium on the Theory of, Delft, 1959 (edited by W. T. Koiter), *review* by Dr. J. W. Craggs, 379
Elastic System : Oscillatory Flow in a Fluid-filled (Wing-Comdr. J. E Malcolm), 88
Elasticity : Theoretical (Carl E. Pearson), *review* by Prof. J. F. Baker, 383
Elastohydrodynamic Lubrication of Rollers (A. W. Crook), 1182
Electric Fields (Strong) : Effect of, on the Boiling Points of some Alcohols (Dr. P. K. Katti and Dr. M. M. Chaudhri), 80
Electric and Magnetic Fields (Steady) : Confining a Plasma in (K. A. George), 334

Electrical Conductivity and Thermoelectric Power of Calcium Oxide (Dr. C. H. B. Mee), 1093
Electrical Contacts (Institute of Physics and the Physical Society, in collaboration with the Institution of Electrical Engineers, Symposium on), 866
Electrical Development Association : Thirteenth British Electrical Power Convention (Electricity in the Prosperity and Welfare of the Nation), 680
Electrical Discharge : Methane Oxidation initiated by (M. Barber and Dr. J. Cuthbert), 1001
Electrical Engineers, Institution of, the Institution of Civil Engineers and the Institution of Mechanical Engineers : Graham Clark Lecture 1961, Resources, Human and Material, of the Commonwealth (H.R.H. the Duke of Edinburgh), 673
Electrical Engineers, Institution of (Institute of Physics and the Physical Society, in collaboration with the) : Symposium on Electrical Contacts, 866
Electrical Excitability of Isolated Frog Skin (A. Finkelstein), 1119
Electrical Machines (University of Birmingham Graduate Course on), 768
Electrical Power Convention (British) : Thirteenth (Electricity in the Prosperity and Welfare of the Nation), (Electrical Development Association), 680
Electrical Research Association : Opening of the new Creep Laboratories, 1156
Electrical Techniques in Medicine and Biology : Fourteenth Annual Conference on (Joint meeting of the fourth International Conference on Medical Electronics with the), 397
Electrically Stressed Metallic Surfaces in Vacuum : Phenomena occurring at (R. Hawley and Dr. C. A. Walley), 252
Electricity : Generation of, without the Use of Rotating Machinery (Dr. K. H. Spring), 297
Electricity in the Prosperity and Welfare of the Nation (Thirteenth British Electrical Power Convention of the Electrical Development Association), 680
Electricity and Magnetism : Principles of (Y. Rocard), translated by G. F. Herrenden, *review* by Dr. E. Stanley, 76
Electrodes of the Third Kind reversible to Alkaline Earth and other Ions : The Possibility of Obtaining E.M.F. directly from Acid-Base Reactions — (W. H. Beck), 712
Electroencephalogram : Effects of Mental Activity on Vestibular Nystagmus and the (William E. Collins, George H. Crampton and Jerome B. Posner), 194
Electroluminescence of Gallium Phosphide Crystals (Frank G. Ullman), 161
Electrolyte (Plasma-) Regulation : An Electron Microscope Study of the 'Chloride-Secretory Cell' of *Salmo salar* L., with reference to (Dr. Lawrence T. Threadgold and Dr. Arthur Hillier Houston), 612
E.M.F. directly from Acid-Base Reactions : The Possibility of obtaining—Electrodes of the Third Kind reversible to Alkaline Earth and other Ions (W. H. Beck), 712
Electron Affinities of some Diatomic Molecules : Spectrophotometric Determination of the (J. Jortner and U. Sokolov), 1003
Electron Microscope : Verification of the Gastropod Golgi Cycle with an (Prof. Leonard G. Worley and Betty Hershenov), 828
Electron Microscope and its Applications : Physics of the (Electron Microscopy Group of the Institute of Physics and the Physical Society Annual Conference), 591
Electron Microscope Study of the 'Chloride-Secretory Cell' of *Salmo salar* L., with reference to Plasma-Electrolyte Regulation (Dr. Lawrence T. Threadgold and Dr. Arthur Hillier Houston), 612
Electron Microscopic Observations on Single Crystals of Polyethylene : Some (R. Westrik and A. M. Kiel), 162
Electron Microscopy, *review* by Dr. V. E. Cosslett, 68
Electron Microscopy of Mossy Fibre Endings in Ammon's Horn (Dr. L. H. Hamlyn), 645
Electron Scattering Tables : High-Energy (Robert Herman and Prof. Robert Hofstadter), *review* by D. F. Jackson, 204
Electron Spin Resonance Line-Widths in Solutions of Copper and Silver Dithiocarbamates (Roland Aasa, Rune Pettersson and Tore Vänngård), 258
Electron Spin Resonance Spectra of γ-irradiated Carbohydrates and α-Hydroxy Acids (A. J. Bailey, Dr. S. A. Barker, J. S. Brimacombe, D. Pooley and D. H. Spence), 259
Electron Transfer in Biological Molecules (British Biophysical Society Symposium on), 312
Electron and Neutron Diffraction (International Union of Crystallography Symposium on), 679
Elektronenmikroskopie : Vierter Internationaler Kongress für (Berlin, 1958), Band I, Physikalisch-Technischer Teil (herausgegeben von G. Möllenstedt, H. Niehrs und E. Ruska) ; Band 2, Biologisch Medizinischer Teil (herausgegeben von W. Bargmann, D. Peters und C. Wolpers), *review* by Dr. V. E. Cosslett, 68
Electronic Computer (High Speed), of the U.S.S.R. Academy of Sciences : The Cathode Ray Tube Memory of the (V. N. Laut and L. A. Lyubovich), translated from the Russian by Ruth Feinstein ; edited by F. A. Sowan, *review* by J. C. Cluley, 383
Electronic Theory of Organic Compounds : An Introduction to (H. L. Heys), *review* by Dr. R. I. Reed, 296
Electronics : Nuclear (International Atomic Energy Agency International Conference on), 493
Electronics, Institution of : Sixteenth Annual Electronics, Instruments and Components Exhibition and Convention, 865
Electronics (Medical) : 1961 Conference on, 397
Electronics, Instruments and Components (Institution of Electronics Sixteenth Annual Exhibition and Convention), 865
Electrons : Atoms and, *review* by Prof. C. A. Coulson, 1142
Electrons (Conduction), in Dilute Silver–Manganese Alloys at Low Temperatures : Inelastic Scattering of (M. S. R. Chari), 994
Electrophoresis (Starch-Gel) : An Investigation of Closely Related Gamma-Myeloma Proteins and Normal Mouse Gamma-Globulin by Partial Enzymic Degradation and (Dr. Brigitte A. Askonas and Dr. J. L. Fahey), 980
Electrophoresis (Starch-Gel), of Anterior Pituitary Hormones (K. A. Ferguson and A. L. C. Wallace), 629
Electrophoretic Experiments : Assurance of Thermostatic Control during (Dr. R. J. Wieme), 806
Electrophoretic Mobility of Cultured Mesodermal Tissue Cells (D. H. Heard, G. V. F. Seaman and I. Simon-Reuss), 1009
Electroshock Convulsions of the Rat : Sex and Strain Differences in (D. E. Woolley, P. S. Timiras, M. R. Rosenzweig, D. Krech and E. L. Bennett), 515
Element 103, Lawrencium, 392
Element (Trace) Concentration in *Crassostrea virginica* : Salinity Response of (James B. Rucker and Prof. James W. Valentine), 1099
Elementary Particle : A New (Din Da-Tzao and E. N. Kladnitzkaya), 591
Elements of Physical Chemistry (Samuel Glasstone and Prof. David Lewis), *review* by Dr. A. Maccoll, 477
Elettronica e Nucleare, Rassegna Internazionale (Consiglio Nazionale delle Ricerche, with the co-operation of the) : Symposium on Solar Seeing, 771
Elevated Temperature : Synaptinemal Complexes (Cores) in Primary Spermatocytes of Mouse under (Dr. B. R. Nebel and E. M. Hackett), 467
Elimination (Chromosome), in Cecidomyidae (C. Bantock), 466
Elimination (Experimental), of *Trypanosoma melophagium* Flu from its Hosts the Sheep and the Ked, *Melophagus ovinus* (L.), (W. A. Nelson), 739
Ellem, Dr. K. A. O. (Colter, Dr. J. S., and) : Antigenicity of Deoxyribonucleic Acids from Mouse Liver and from the Ehrlich Ascites Tumour, 550
Elliot (Daniel Giraud) Medal of the United States National Academy of Sciences awarded to Philip J. Darlington, jun., 674
Elliott, Prof. John F., and Gleiser, Molly : Thermochemistry for Steel-making, Vol. I, *review* by Prof. A. R. Ubbelohde, 58
Elliott, Prof. T. R. : *Obituary* by Sir Harold Himsworth, 486
Elliott Brothers (London), Ltd. : Private Symposium and Exhibition on Analytical Instrumentation of Industrial Process Control, 865
Ellis, B. A. : Non-Benzenoid Aromatic Compounds, *review*, 662
Ellis, Dr. J. R. : Experimental Taxonomy of Flowering Plants (*Fragaria–Potentilla* Intergeneric Hybridization and Evolution in *Fragaria*), 969
Ellis, Peggy E., and Carlisle, Dr. D. B. : The Prothoracic Gland and Colour Change in Locusts, 368
Ellis, Dr. R. J. (Leech, Rachel M., and) : Coprecipitation of Mitochondria and Chloroplasts, 790
Ellwood, Prof. E. C., and others (edited by Dr. Ernest S. Hedges, with the collaboration of) : Tin and its Alloys, *review* by Prof. F. C. Thompson, 753
Elminius modestus on the South-East Coast of Scotland (Dr. D. Hemingway Jones), 103
Elslager, E. F., and others : Effects of *Tris*(*p*-Aminophenyl)-Carbonium Salts and related Compounds on Experimental Schistosomiasis and Paragonimiasis, 628
Eltanin : United States Antarctic Research Ship, 765
Eltringham, Dr. S. K. : Wood-boring Activity of *Limnoria* (Isopoda) in relation to Oxygen Tension, 512
Elving, Philip J. (edited by I. M. Kolthoff and, assisted by Ernest B. Sandell) : Treatise on Analytical Chemistry, Part I, Theory and Practice, Vol. I, *review* by Prof. R. Belcher, 60
Emara, Sayeda H. : Spiral Formation on Natural Crystalline Sulphur, 254
Embassy (British), Stockholm: Appointment of W. F. G. Drury as scientific attaché, 862
Embassy (British), Tokyo : Appointment of Dr. C. R. S. Manders as scientific attaché, 862
Embedding Process : The Physics of Sectioning and the (Electron Microscopy Group of the Institute of Physics and the Physical Society Symposium on), 591
Embryo of *Dacus tryoni* : A Differentiation Centre in the (Dr. D. T. Anderson), 560
Embryo (Chick): Neuraminidase in the Chorioallantois of the (Dr. G. L. Ada and Dr. Patricia E. Lind), 1169
Embryo (Mouse) : Influence of Uterine Position of the Response of the, to the Teratogenic Effects of Hypervitaminosis-A (Dr. D. H. M. Woollam and Dr. J. W. Millen), 184
Embryos (*Bufo* ♀ x *Rana temporaria* ♂ Hybrid) : Incorporation of Tritium-labelled Thymidine in (R. Tencer), 100
Emerit, M. (Mohsen, Dr. T., and) : Adaptive Euryhalinity in the Cyprinodont *Lebistes reticulatus* Peters, 932
Emetic (Anti-) Agent, in Dogs : Haloperidide (*R* 3201), a Highly Potent and Selective (Dr. P. A. J. Janssen and C. Niemegeers), 911
E.M.I. Electronics, Ltd. : Symposium on Photomultiplier Tube Applications, 769
Emission (Field-) Microscopic Investigation of Catalysed Synthesis of Ammonia on Tungsten (K. Azuma), 530
Emission (Gas), in Nitrate-containing Fertilizers : Control of Self-heating and (K. S. Barclay, J. M. Crewe and K. F. J. Thatcher), 1189
Emission (Night-Sky Molecular Nitrogen) : Enhancement of, in Polar Cap Absorption Events (B. P. Sandford), 245
Emission (Radio) : Galactic Explosions as Sources of (Prof. G. R. Burbidge), 1053
Emotional Reactions : Inhibition of, by Phenothiazine Tranquillizers (Dr. Max Taeschler and Dr. Aurelio Cerletti), 1014
Employment of Librarians in the United Kingdom, 133
Employment of Scientists in Government Services, 309
Empty Octahedral Sites in Muscovite and Montmorillonite : Infra-Red Investigation of the Migration of Lithium Ions into (Prof. Joe L. White, G. W. Bailey, C. B. Brown and J. L. Alrichs), 342
Emulsion-Fractionation (Whole Tissue) : Quantitative Separation and Determination of Brain Glycoproteins, Neuraminic Acid, Hexosamine and Hexoses by means of (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch), 153
Emulsions (Ilford Nuclear) : Discrimination between α-Tracks and γ-Background in (K. Van Camp, M. Dorikens and L. Dorikens-Vanpraet), 38
Enamel Magnesium (Surface), and its Possible Relation to Incidence of Caries (Dr. D. B. Ritchie), 456
Encephalomyocarditis Virus and the 'Virosome' Concept : Nature of the 'Infective Ribonucleic Acid Component' in Cells infected with (A. J. D. Bellett and A. T. H. Burness), 235
Encyclopaedia : The Space—a Guide to Astronomy and Space Research, second edition, *review* by R. H. Merson, 76
Enderby, J. E. : Appointed a lecturer in physics at the University of Sheffield, 396
Endings (Mossy Fibre), in Ammon's Horn : Electron Microscopy of (Dr. L. H. Hamlyn), 645

- Endo, Dr. Hideya, and others : Mutation in Tobacco Mosaic Virus induced by a New Carcinogen, 4-Nitroquinoline N-Oxide, 833
- *Endocrinology : General and Comparative*, Vol. 1, No. 1, 1061
- Endometrial Carbonic Anhydrase caused by Progesterone : Effects of certain Androgenic Steroids on the Increase of (Dr. Kazukuni Yamashita and Ken-ichi Kurouji), 1013
- Endotoxin (Bacterial) : Effect of Artificial Fever in Increasing Susceptibility to (Dr. David G. Connor and Dr. Edward H. Kass), 453
  - Increased Sensitivity to, of F_1 Hybrid Mice undergoing Graft-versus-Host Reaction (Dr. J. G. Howard), 1122
- Endotoxin Hypersensitivity (Local), and its relation to the Shwartzman Phenomenon (Dr. Tibor G. Kováts), 177
- Endotoxin Susceptibility : Mechanism of Increase of, in Animals showing Delayed Hypersensitivity (Dr. J. Johanovsky, M. Vrána, O. Vejbora and D. Francová), 182
- Energetics of Swimming in Water-Beetles : Dynamics and (Dr. Werner Nachtigall), 224
- l'Energia Nucleare, Comitato Nazionale per : Sixth Nuclear Congress, 219
  - Symposium on the Thorium–Uranium Cycle, 219
  - Symposium on Nuclear Applications in Agriculture, 219
  - Symposium on Autoradiographic Techniques in Medical Science, 219
- Energy : Co-ordination of Research and Development of Sources of, 1060
  - New Sources of (United Nations Conference on), 1156
- Energy (Average), lost by Very Soft X-Rays per Ion Pair in Air : Absolute Measurement of (Prof. B. Rajewsky and Dr. D. Lang), 249
- Energy (High-) Electron Scattering Tables (Robert Herman and Prof. Robert Hofstadter), *review* by D. F. Jackson, 204
- Engel, C. E. : Closed Circuit Television in the Medical School, 1159
- Engineer in Commonwealth Development (Prof. L. Dudley Stamp), 673
- Engineer (Chemical) : Industry, Science and the (W. K. Hutchison), 588
- Engineering : Control (Prof. Gordon J. Murphy), *review* by Dr. E. M. Deeley, 849
  - Timber (University of Southampton and the Timber Development Association Joint Conference on), 769
- Engineering (Chemical) Education and Practice : A Survey of (Prof. R. Edgeworth Johnstone), 113
- Engineering (Civil), at Swansea, 215
- Engineering (Civil), at University College, London, 488
- Engineering (Industrial), at Toronto, 131
- Engineering (Marine) Industries (Shipbuilding and) : Research and Development Requirements of the (Department of Scientific and Industrial Research), 200
- Engineering (Mechanical), at Sydney, 12
- Engineering (Public Health) : Postgraduate Courses in (Imperial College of Science and Technology and the London School of Hygiene and Tropical Medicine), 971
- Engineering Education, 1952-1955 : Report on Evaluation of (American Society for Engineering Education), 113
- Engineering Education, American Society for : Report on Evaluation of Engineering Education, 1952-1955, 113
  - Election of Officers, 679
- Engineering Inspection, Institution of, and the Society of Non-Destructive Examination : Joint Conference at Oxford, 769
- Engineering and Safety : Technology, (edited by R. Hurst, R. N. Lyon and C. M. Nicholls), Vol. 2 (Progress in Nuclear Energy, Series 4), *review* by D. English, 204
- Engineers : A Mathematical Tool-Kit for (H. A. Webb and Dr. D. G. Ashwell), second edition, *review* by Prof. J. Greig, 76
- Engineers (Automotive), Inc., United States Society of (Flight Safety Foundation Award, Inc., of the) : Laura Taber Barbour Air Safety Award for 1961 awarded to E. S. Calvert and J. W. Sparke, 312
- Engineers (Chemical), Institution of : Presidential Address, Industry, Science and the Chemical Engineer (W. K. Hutchison), 588
- Engineers (Civil), Institution of, the Institution of Mechanical Engineers and the Institution of Electrical Engineers : Graham Clark Lecture 1961, Resources, Human and Material, of the Commonwealth (H.R.H. the Duke of Edinburgh), 673
- Engineers (Electrical), Institution of, the Institution of Civil Engineers and the Institution of Mechanical Engineers : Graham Clark Lecture 1961, Resources, Human and Material, of the Commonwealth, (H.R.H. the Duke of Edinburgh), 673
- Engineers (Electrical), Institution of (Institute of Physics and the Physical Society, in collaboration with the) : Symposium on Electrical Contacts, 866
- Engineers (Mechanical), Institution of, the Institution of Civil Engineers and the Institution of Electrical Engineers : Graham Clark Lecture 1961, Resources, Human and Material, of the Commonwealth (H.R.H. the Duke of Edinburgh), 673
- Engineers (Radio), British Institute of : 1961 Convention (Radio Techniques and Space Research), 591
- Engineers (Radio), Institute of (organized by the) : 1961 Conference on Medical Electronics, 397
- England (South-West): Age of the Orogeny and Granites in (N. E. Butcher), 253
- England (Southern) : *Bathynella* and other Interstitial Crustacea in (G. M. Spooner), 104
- England and Wales : Day-release Students in, 393
  - Educational Statistics for, 393
  - Hospital In-Patients in, 1192
  - Selected Statistics relating to Local Education Authorities in—Educational Year 1958-1959 (Ministry of Education), 393
  - Statistical Review of, for the Year 1959—Part 2, Tables, Population (Registrar General), 1061
- England (Rural), and Wales, Standing Committee on National Parks of the Councils for the Preservation of, and the Joint Action Group for the Protection of Dartmoor and Exmoor : The Case for Control of Afforestation of Open Land in National Parks, 496
- English, D. : Technology, Engineering and Safety, *review*, 204
- Engravings (Rock), in Northern Italy (Miles Burkitt), 110
- Enhancement of Intraperitoneal Staphylococcal Virulence for Mice with Different Bile Salts (Dr. S. Stanley Schneierson, Daniel Amsterdam and Ely Perlman), 829
- Enhancement of Night-Sky Molecular Nitrogen Emission in Polar Cap Absorption Events (B. P. Sandford), 245
- Enochs, N. Jean, and others : Gibberellin Action on Growth of Seedlings in the Absence of Photosynthesis, 1034
- Enquiry (Scientific) : Louis Pasteur, a Master of (Jacques Nicolle), *review* by T. H. Hawkins, 848
- Ensminger, M. E. (Hafez, Prof. E. S. E., and) : Transfer of Ova to the Bursa Ovarii and the 'Suspended Loop' of Tube in the Rabbit, 557
- Entomology : Annual Review of (edited by Edward A. Steinhaus and Ray F. Smith), Vol. 6, *review* by Harold Oldroyd, 945
  - Radioisotopes and Radiation in (International Atomic Energy Agency Symposium on), 15
  - Recent Advances in, *review* by Harold Oldroyd, 945
- Enumeration of Components in Complex Systems by Fluorescence Spectrophotometry (Dr. G. Weber), 27
- Environmental Factors in the Distribution of Fruit Varieties (European Association for Research on Plant Breeding Conference on), 16
- Environments (Hot) : Physiological Responses to (compiled by Dr. R. K. Macpherson), 1163
- Enzymatic Formation of Histamine Ribotide from Histamine Dinucleotide (Dr. Saburo Muraoka, Mie Inoue and Prof. Hidemasa Yamasaki), 532
- Enzymatic Reduction of Diphosphopyridine Nucleotide with Urea (Hirohisa Omura and Yutaka Osajima), 345
- Enzyme Action (Hydrolytic) : Molecular Mechanisms for (Richard M. Krupka and Keith J. Laidler), 916
- Enzyme Activity : Determination of, by a Linear Measurement (Andrew G. Tsuk and Prof. Gerald Oster), 721
- Enzyme Histochemistry of the Cells in Hodgkin's Disease and Allied Disorders (Dr. R. F. Dorfman), 925
- Enzyme Model for Haem Iron Incorporation : Catalysis of Metalloporphyrin Formation—a Possible (M. B. Lowe and J. N. Phillips), 262
- Enzyme Purification : Controlled Use of Adsorbents in (Dr. I. T. Oliver), 810
- Enzymes : Interaction of, with Normal and Tumour Cells (D. H. Cormack, G. C. Easty and Dr. E. J. Ambrose), 1207
- Enzymes (Proteolytic) : Action of, on the Human Erythrocyte Surface (Dr. G. Uhlenbruck), 181
  - Inhibition of, by Decarboxylated Amino-Acid Derivatives—Effect of Toluenesulphonyl(Tosyl)agmatine (4-Toluenesulphonamidobutylguanidine) on Thrombin and Trypsin (Dr. L. Lorand and Dr. N. G. Rule), 722
- SH-Enzymes and Substrates : Role of Glutathione and of a Self-stabilizing Chain of, in the Metabolic Regulation of Erythrocytes (D. Scheuch, C. Kahrig, E. Ockel, C. Wagenknecht and Prof. S. M. Rapoport), 631
- Enzymic Degradation (Partial), and Starch-Gel Electrophoresis : An Investigation of Closely Related Gamma-Myeloma Proteins and Normal Mouse Gamma-Globulin by (Dr. Brigitte A. Askonas and Dr. J. L. Fahey), 980
- Ephrussi, Prof. Boris (Sorieul, Serge, and) : Karyological Demonstration of Hybridization of Mammalian Cells *in vitro*, 653
- Epididymis : Disintegrated Spermatozoa from the (Dr. Timothy D. Glover), 185
- Epithelia (Squamous) : Phagocytic Activity in, and its Role in Cellular Susceptibility to Foot-and-Mouth Disease (Dr. H. Platt), 1075
- Epithelium (Intestinal) : Active Transport of Foreign Pyrimidines across the (Dr. Lewis S. Schanker and Dr. John J. Jeffrey), 727
- Epithelium (Intestinal), of the Turtle : Origin of the Potential Difference in the (Michelle Baillien and E. Schoffeniels), 1107
- Equines : Content of Sialic Acid in Serous Glands of (G. Aureli, G. Ferri and A. A. Castellani), 914
- Equiprobable Situations : Patterns of Preference in (Prof. John Cohen and Peter Cooper), 231
- Eradication of Malaria, 873
- Erber, Prof. Thomas : Velocity of Light in a Magnetic Field, 25
- Erdös, Prof. Ervin G., and Boggs, Lois E. : Hydrolysis of Paraoxon in Mammalian Blood, 716
- Erdtman, Prof. H. C. H. : Terpene Chemistry (Distribution of Terpenes among the various orders of the Coniferae), 19
- Erfolgsorgane : Physiologie der (Prof. W. von Buddenbrock), (Vergleichende Physiologie, Band 5), *review* by Prof. O. Lowenstein, 1045
- Ergodic Theory : Lectures on (Prof. Paul R. Halmos), *review* by Dr. I. E. Farquhar, 947
  - The Present State of (Dr. I. E. Farquhar), 17
- Ernek, E., and others : Comparison of an Attenuated and Virulent Louping Ill Strain, 508
- Erosion Surfaces in the Caribbean and their Significance (Prof. John D. Weaver), 1186
- Erosion Surfaces in Western Tasmania (B. Scott), 677
- Errera, Maurice, and Forssberg, Arne (edited by) : Mechanisms in Radiobiology, Vol. 2, Multicellular Organisms, *review* by Dr. O. A. Trowell, 72
- Error (A Potential Source of), in the Hexobarbitone Sleeping-Time Test in Mice (Dr. P. W. Ramwell and I. H. Lester), 640
- Errors (Extinction), in Crystal Structure Analysis : Correction for (Prof. S. Chandrasekhar and Dr. D. C. Phillips), 1164
- Erythrocyte : Acetylcholinesterase and the Life-span of the (J. Metz, N. J. van Rensburg, K. Stevens and D. Hart), 1208
- Erythrocyte Glucose-6-Phosphate Dehydrogenase Deficiency in New Guinea and New Britain (Dr. Chev Kidson), 1120
- Erythrocyte Glucose-6-Phosphate Dehydrogenase Deficiency in West Africa (Dr. A. C. Allison, L. J. Charles and I. A. McGregor), 1198
- Erythrocyte Surface (Human) : Action of Proteolytic Enzymes on the (Dr. G. Uhlenbruck), 181
- Erythrocytes : Role of Glutathione and of a Self-stabilizing Chain of SH-Enzymes and Substrates in the Metabolic Regulation of (D. Scheuch, C. Kahrig, E. Ockel, C. Wagenknecht and Prof. S. M. Rapoport), 631
- Erythrocytes of some Lower Vertebrates : Histochemical Analysis of some Dehydrogenase Systems in the (Prof. A. Stolk), 926
- Erythrocytes (Human) : Production of *B* Character on, by Haemosensitization with Purified *Escherichia coli O* 86 Substance (Dr. Jørgen Andersen), 730
- Erythrocytes (Lysed) : Precipitation Reaction between Serum and (Dr. J. F. Wilson and D. M. Jobling), 550
- Erythrocytes (Sensitized Alligator) : Agglutination of, by Rheumatoid Factor(s), (E. Cohen, A. Nisonoff, P. Hermes, B. M. Norcross and L. M. Lockie), 552
- Erythropoiesis : Impairment of, by Irradiation (Dr. C. W. Gurney and Nancy Wackman), 1017

Erythropoietic Hormone (Plasma) : Stathmokinetic (Mitosis-inhibiting) Method for estimating (Dr. Hillas Smith), 640
Erythropoietine : Effect of, on Incorporation of Formate labelled with Carbon-14 into the Nucleic Acids of Normal Rabbit Tissues *in vitro* (Dr. M. A. Perretta and Dr. R. Y. Thomson), 912
Escherichia coli : Radiosensitization of, by Purine and Pyrimidine Analogues incorporated in Deoxyribonucleic Acid (Prof. Henry S. Kaplan, Dr. Kendric C. Smith and Patricia Tomlin), 796
  Unstable Ribonucleic Acid revealed by Pulse Labelling of (Dr. Francois Gros, Dr. H. Hiatt, Dr. Walter Gilbert, Dr. C. G. Kurland, R. W. Risebrough and Dr. J. D. Watson), 581
Escherichia coli K-12 (Colicine Factors as Fertility Factors in Bacteria), (R. C. Clowes), 988
Escherichia coli Cells treated with Mitomycin *C* : Degradation of Deoxyribonucleic Acid in (H. Kersten and Prof. H. M. Rauen), 1195
Escherichia coli O 86 Substance : Production of *B* Character on Human Erythrocytes by Haemosensitization with Purified (Dr. Jørgen Andersen), 730
l'Espace : *l'Homme* et, No. 1, 1061
Espmark, Dr. Åke (Fagraeus, Dr. Astrid, and) : Use of a 'Mixed Haemadsorption' Method in Virus-infected Tissue Cultures, 370
Essay Competition : 1961 Waverley Gold Medal (*Research*), 395
Essential Oils : Effect of, on Atherosclerosis of Cholesterol-fed Rabbits (Dr. S. Benkö, A. Macher, F. Szarvas and T. Tiboldi), 731
Essler, Warren O., and Folk, Jun., Prof. G. Edgar : Determination of Physiological Rhythms of Unrestrained Animals by Radio Telemetry, 90
Esterase Activity (Non-specific), in Histiocytes (Syun Hosoda and Sadao Takase), 927
Esterases (Gastric), of Pigs (R. A. Evans and Dr. D. A. Stansfield), 1110
Esters of Borneol and *iso*Borneol : Pyrolysis of (Dr. C. A. Bunton, K. Khaleeluddin and D. Whittaker), 715
Esters (N-Acetylhexosamine ^{35}S-Sulphate) : *In vivo* Metabolism of (Dr. A. G. Lloyd), 914
Estimate of the Aromaticity of the Organic Matter of a Podzol Soil (Dr. J. R. Wright and Dr. M. Schnitzer), 703
Estimating Plasma Erythropoietic Hormone : Stathmokinetic (Mitosis-inhibiting) Method for (Dr. Hillas Smith), 640
Estimation of Dynamic Modulus and Dynamic Yield Stress for 'Perspex' (John Roberts), 799
Estimation of Percentage Natural Cross-Pollination—Experiments on Rice (E. H. Roberts, R. Q. Craufurd and F. Le Cochec), 1084
Estimation (Quantitative), of Amino Acids (Biochemical Society Colloquium on), 1063
Ethanol Stimulation of Oxidative Metabolism in *Euglena gracilis* (Dr. D. E. Buetow), 1196
Etch-Peaks (Calcite) : Retention of Carbon Dioxide Bubbles on (Peggy M. Dunlap and J. D. Wilkinson), 524
Etch-Pits (Spiral), of Ice Crystals (J. Muguruma), 37
Ethanol-1-^{14}C : Incorporation of, into Fatty Acids in the Normal and Alloxan Diabetic Rat (Dr. Marion E. Smith), 273
Ether : Haemagglutinating Sub-Units released from Newcastle Disease, Para-influenza 1 and Mumps Viruses by Treatment with (F. Sokol, D. Blaškovič and O. Krizanová-Laućíková), 834
Ethers (Sterol Methyl) : Gas–Liquid Chromatography of (R. B. Clayton), 1071
Ethical Dilemma of Science and other Writings (Prof. A. V. Hill), *review* by Sir Henry Dale, 41
Eucollagen in Solution : Thermo-Reversible Denaturation of (N. T. Crosby and Dr. G. Stainsby), 80
Euglena gracilis : Ethanol Stimulation of Oxidative Metabolism in (Dr. D. E. Buetow), 1196
Euler, L. : The Principle of Relativity and the Fundamentals of Classical Mechanics (D. Speiser), 757
Eupolymnia heterobranchia (Johnson) : A Bilatriene Pigment in the Green Terebellid Polychaete (Dr. R. Phillips Dales), 168
Euratom : Appointment of G. H. Greenhalgh as nuclear energy attaché to the United Kingdom Delegation to the European Communities, 1060
Euratom (United Kingdom—) Technical Collaboration, 1154
European Association for Research on Plant Breeding : Conference on Environmental Factors in the Distribution of Fruit Varieties, 16
European Brewery Convention, 401
European Economic Co-operation, Organization for (European Nuclear Energy Agency) : International Seminars on Nuclear Energy, 591
European Economic Co-operation, Organization for (Office for Scientific and Technical Personnel) : Forecasting Man-power Needs for the Age of Science, 941
European Eels : Chloride-secreting Cells in the Gills of (Dr. Giuseppe Colombo), 101
European Free Trade Association—Origin, Rules, Certification and Segregation of Stocks (Association of British Chemical Manufacturers), 132
European Nuclear Energy Agency of the Organization for European Economic Co-operation : International Seminars on Nuclear Energy, 591
Europeans in Ghana before Independence : White Man, a Study of the Attitudes of Africans to (Dr. Gustav Jahoda), *review* by Dr. Margaret Read, 946
Européenne (Fondation), pour les Echanges Internationaux : Grant of £3,750 from the Gulbenkian Foundation, to enable postgraduate science students to study in Portugal, 218
Euryhalinity (Adaptive), in the Cyprinodont *Lebistes reticulatus* Peters (Dr. T. Mohsen and M. Emerit), 932
Evaluation of Effective Rainfall and Irrigation from Ground-Water Measurements (C. Dakshinamurti, P. N. Saxena and E. G. K. Rao), 1100
Evaluation of Engineering Education, 1952-1955 : Report on (American Society for Engineering Education), 113
Evans, Clifford, and Meggers, Betty J. : Archaeological Investigations in British Guiana, *review* by Dr. G. H. S. Bushnell, 72
Evans, Prof. David R. : Control of the Responsiveness of the Blowfly to Water, 1132
Evans, M. B. : Gas Chromatography (Relation between the Retention Volumes of Unsymmetrical Compounds and Cognate Symmetrical Ones), 867
Evans, M. B., and Smith, J. F. : Prediction of Retention Data in Gas–Liquid Chromatography from Molecular Formulae, 905
Evans, R. A., and Stansfield, Dr. D. A. : Gastric Esterases of Pigs, 1110
Evans, R. S., and Scott, P. G. W. : Precision and Accuracy in Gas Chromatographic Analysis, 710
Evans, Prof. W. D. : *Obituary* of Prof. A. H. Cox, 215
Evans, Dr. W. H. : Appointed a senior lecturer in physics at the University of Liverpool, 963
Evans, W. J., and others : α-Conarachin, 1125
Evans, W. R., and others : Origin of β-Amino*iso*butyric Acid in Iris, 809
Evenchik, Z., and others : *Leptospira*-agglutinating Factors in Turtle Sera, 95
Evered, Douglas S. (Kit, Boris, and) : Rocket Propellant Handbook, *review* by Prof. D. B. Spalding, 66
Everett, J. E. : Appointed to a Harkness Fellowship (geophysics) of the Commonwealth Fund, 308
Evidence for the Continuity of Nucleolar Material in Mitosis (The Nucleolus), (Dr. P. G. Martin), 1078
Evidence for Multiple Caeruloplasmin Components in Human Serum (R. McAlister, Dr. G. M. Martin and E. P. Benditt), 927
Evidence of Secretion of an Aldosterone-stimulating Substance by the Kidney (Dr. William F. Ganong and Dr. Patrick J. Mulrow), 1115
Evidence (Further), for Phosphatidic Acid as the Sodium Carrier (Dr. Mabel R. Hokin and Dr. Lowell E. Hokin), 1016
Evidence (Further), of Polar Movement of Nutrients in Plants (Prof. John Caldwell), 1028
Evidence (Negative), against Passage of Whole Plant Virus Particles through Gut Wall in Aphid Vectors (Prof. Frej Ossiannilsson), 1222
Evidence (Palaeomagnetic), relevant to a Change in the Earth's Radius (Prof. S. Warren Carey), 36 ; (Allan Cox and Richard R. Doell), 36
Evolution : The Ascent of Life—a Philosophical Study of the Theory of (Prof. T. A. Goudge), *review* by P. G. Fothergill, 1042
Evolution of Haemoglobin : Haemoglobin F, its Significance in the Genetics and (Dr. Wolf W. Zuelzer and Abner R. Robinson), 237
Evolution of Overdominance—Natural Selection and Heterozygote Advantage (Dr. P. A. Parsons and Dr. W. F. Bodmer), 7
Evolution (Continent and Ocean Basin), by Spreading of the Sea Floor (Robert S. Dietz), 854
Evolution and Philosophy, *review* by P. G. Fothergill, 1042
Ewers, Wm. H. : A New Intermediate Host of Schistosome Trematodes from New South Wales, 283
Ewes (Adult Romney) : Bundles of Follicles in (D. F. G. Orwin), 1026
Examination (Non-Destructive), Society of (Institution of Engineering Inspection and the) : Joint Conference at Oxford, 769
Examination (The Physical), of Metals (edited by Prof. Bruce Chalmers and Prof. A. G. Quarrell), second edition, *review* by Dr. A. R. Bailey, 661
Examinations (Eye), of Asian School Children, 864
Excerpta Medica Foundation : *Abstracts of Human Developmental Biology*, Vol. 1, No. 1, 133
Exchange (Calcium) of Bone Salts considered as a Measure of the Crystal Surface (L. Richelle and Prof. M. J. Dallemagne), 165
Excitability (Electrical), of Isolated Frog Skin (A. Finkelstein), 1119
Excretion (Bile Pigment), in Amphibia (Roger Lester and Prof. Rudi Schmid), 452
Excretion (Imidazole Acrylic Acid), in Kwashiorkor (Dr. R. C. Whitehead and Dr. H. R. V. Arnstein), 1105
Exhibition : Annual (Société Francaise de Physique), 397
Exhibition on Analytical Instrumentation of Industrial Process Control (Elliott Brothers (London), Ltd.), 865
Exhibition of a Fourteenth Century Astronomical Clock (Science Museum, London), 589
Exhibition on Metallic Corrosion and its Prevention (Science Museum. London), 15
Exhibition of the Raw Materials of Ceramics (P. J. Adams), 310
Exhibition and Convention : Sixteenth Annual Electronics, Instruments and Components (Institution of Electronics), 865
Exhibition (International), on Measurement Control, Regulation and Automation (MESUCORA Association, in conjunction with the Fédération des Industries Mécaniques et Transformatrices des Métaux, the Syndicat Général de la Construction Électrique, and the Fédération des Industries Électroniques), 397
Exhibition Galleries : A Short Guide to the (British Museum (Natural History)), eighth edition, 1061
Existence of Multiple Sex Genotypes in the Hermaphrodite Polychaete Worm *Ophryotrocha puerilis siberti* (Prof. B. Bacci and O. Bortesi), 838
Exmoor (Dartmoor and), Joint Action Group for Protection of (Standing Committee on National Parks of the Councils for the Preservation of Rural England and Wales and the) : The Case for Control of Afforestation of Open Land in National Parks, 496
Expanding Population : The, *review* by the Very Rev. W. R. Matthews, 41
Expansion of Higher Education : Co-operation in the, 941
Experience (Illusory) : The Neurophysiological Aspects of Hallucinations and (Dr. W. Grey Walter), 394
Experiment : A Transatlantic Communication, via *Echo* 1 Satellite (Wm. C. Jakes, jun.), 709 ; (H. Carru, R. Gendrin and M. Reyssat), 709
Experiment in Numerical Forecasting : An (E. Knighting, G. A. Corby, F. H. Bushby and C. E. Wallington), (Air Ministry : Meteorological Office, Scientific Paper No. 5), 973
Experimental Diamagnetic Susceptibilities (Theoretical and), for Aromatic Hydrocarbons : The Relation between (Dr. D. W. Davies), 1102
Experimental Drilling Ship, *Cuss* 1 (United States Project Mohole), 393
Experimental Elimination of *Trypanosoma melophagium* Flu from its Hosts the Sheep and the Ked, *Melophagus ovinus* (L.), (W. A. Nelson), 739
Experimental Hybridization of *Aedes* (*Stegomyia*) *aegypti* (L.) with *A.* (*S.*) *simpsoni* (Theobald), (G. A. H. McClelland), 369
Experimental Liver Lesion in *Iguana iguana* : Effect of Castration on (Prof. A. Stolk), 93
Experimental Radiation Thyroiditis : Absence of Thyroid Auto-Antibody in (Dr. Geoffrey Taylor and G. Sclare), 183
Experimental Oxidation of Haemoglobin—its relation to Growth-rate in Rats (Dr. W. K. Metcalf), 543
Experimental Schistosomiasis and Paragonimiasis : Effects of *Tris*(*p*-Aminophenyl)-Carbonium Salts and related Compounds on (E. F. Elslager, F. W. Short, D. F. Worth, J. E. Meisenfelder, H. Najarian and P. E. Thompson), 628
Experimental Taxonomy of Flowering Plants (Linnean Society of London Symposium on), 968
Experimental Tests (Some Preliminary), of a Novel Method of Radiating at Very Low Frequencies (R. N. Gould), 332
Experimentally Produced Selenium Poisoning in various Animals (Hiroshi Tsuzuki, Kazuhoshi Osawa and Takashi Hosoya), 310

Experiments on Animals : Opinions of British Scientists of Home Office Control of (Universities Federation for Animal Welfare), 677
  United States Senate Bill, S3570, for the Control of, 677
Experiments on Rice : Estimation of Percentage Natural Cross-Pollination — (E. H. Roberts, R. Q. Craufurd and F. Le Cochec), 1084
Experiments (Electrophoretic) : Assurance of Thermostatic Control during (Dr. R. J. Wieme), 806
Explanation (A Possible), for the Failure of Non-Surgical Ovum Transfers in the Cow (Movement of the Ovum in the Reproductive Tract), (M. J. K. Harper, J. P. Bennett and L. E. A. Rowson), 789
Explants of Chick Cerebral Hemisphere (Telencephalon) in Tissue Culture : Spontaneous Potentials from (Prof. A. W. B. Cunningham), 816
Explants of Human Adult Cerebellum in Culture: Spontaneous Potentials from (Prof. A. W. B. Cunningham), 918
Exploration in Management (Wilfred Brown), *review* by F. J. Willett, 382
Exploration (Polar) : New Results in (Deutsche Gesellschaft für Polarforschung Meeting on), 493
Exploration and Introduction : Plant (Food and Agriculture Organization of the United Nations Technical Meeting on), 397
Exploring Greenland : Scientific Problems of (Deutsche Gesellschaft für Polarforschung Symposium on), 493
Exploring the Oceans, *review* by Prof. K. F. Bowden, 202
Explosion (First Sahara Atomic) : Measurements of Air Radioactivity in Italy and their relation to the (L. Argiero, Dr. S. Manfredini and Dr. G. Palmas), 618
Explosion (The Population), and Christian Responsibility (Dr. Richard M. Fagley), *review* by the Very Rev. W. R. Matthews, 41
Explosions (Galactic), as Sources of Radio Emission (Prof. G. R. Burbridge), 1053
Export Problems and the Technical Chemist, 132
Expression of Genetic Information : Mechanisms of (Wendell M. Stanley, jun., and Prof. Robert M. Bock), 299
Expression in Mice : Two Linked Genes showing a Similar Timing of (Kenneth Paigen and Werner K. Noell), 148
Extinction Errors in Crystal Structure Analysis : Correction for (Prof. S. Chandrasekhar and Dr. D. C. Phillips), 1164
Extra-Slow Technique : Some Features of the Precipitation of Barium Chromate by an (Tadeusz Adamski), 524
Extra-Terrestrial Radio Transmissions (Leland I. Anderson), 374
Extraction of Nucleic Acid-free Lipopolysaccharides from Gram-negative Bacteria (G. J. O'Neill and Prof. J. P. Todd), 344
Extraction Products : Distribution of Oxygen in a Vitrinite and its (A. Halleux, S. Delavarenne and H. Tschamler), 437
Extraction (Hot Methanol), of Human Brain Aminoglycolipids (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch, Peter C. Belval and Dorothy Winer), 152
Extracts from Bacteria exposed to Ultra-violet Light : Incorporation of Thymidine into Deoxyribonucleic Acid by (C. O. Doudney and Daniel Billen), 545
Extracts of Delayed Hypersensitive Cells mixed with Antigen *in vitro* : Production of Pyrogenic Substances by (Dr. J. Johanovsky), 355
Extracts of Peas : Adenosine Triphosphate and Coenzyme *A*-dependent Decarboxylation of Oxalate by (John Giovanelli and Noel F. Tobin), 1006
Extracts (Crude Stem), from Normal and Tumour Tissues of Plants : Proteolytic Activity of (Prof. C. Gainor and F. D. Crisley), 1031
Extracts (Saline), of Hair : Demonstration of Nucleases on Mammalian Skin Surface and in (Dr. Joseph Tabachnick and Dr. Richard Freed), 921
Extracts (Soya) : Destruction of Linoleate Hydroperoxide by (Dr. J. A. Blain and T. Barr), 538
Eye Examinations of Asian School Children, 864
Eye (Cat's) : The Distribution of Light in an Image formed in the (Valerie B. Morris and F. H. C. Marriott), 176
Eyles, Joan M. : Carl Ludwig Giesecke (1761-1833), 213
  Dr. W. H. Fitton, F.R.S., 585
Eyles, Dr. V. A. : Earth History, *review*, 53

F REGION of the Ionosphere : Solar Flare Effects in the (R. W. Knecht and R. Davies), 797
Facies (Swindon), in Dorset : Lower Purbeck Beds of (Ian M. West), 526
Facilities (Scientific and Technological), which Manchester University and the Manchester College of Science and Technology can offer to Industry : An Account of some of the (Manchester Joint Research Council), 767
Factor associated with 'Visking' Tubing capable of Antagonizing Insulin (M. Deloris Lilley and Dr. J. Vallance-Owen), 1196
Factor (Coupling), between Cell Metabolism and the Rate of Cell Mutation : Bivalent Metal Ions as the (Dr. G. G. Jayson), 144
Factor (Diffusible Fruiting) : Association of a Steroid and a Pigment with a, in *Myxococcus virescens* (J. Jennings), 190
Factor (The *Gm*^{a}), in Japanese (Dr. M. Yokoyama and Dr. N. Ueno), 455
Factor (Growth-control) : Isolation and Partial Characterization of a (Francis W. Sayre, Eder Hansen, Theodore J. Starr and Evangeline A. Yarwood), 1116
Factor(s) (Rheumatoid) : Agglutination of Sensitized Alligator Erythrocytes by (E. Cohen, A. Nisonoff, P. Hermes, B. M. Norcross and L. M. Lockie), 552
Factors (Biting) : *β*-Sitosterol as one of the (Food Selection by Silkworm Larvae, *Bombyx mori*), (Yasuji Hamamura, Keizo Hayashiya and Kenichi Naito), 880
Factors (Colicine), as Fertility Factors in Bacteria—*Salmonella typhimurium* Strain *LT*2 (H. Ozeki and Sheila Howarth), 986 ; *Escherichia coli K*-12 (R. C. Clowes), 988
Factors (Environmental), in the Distribution of Fruit Varieties (European Association for Research on Plant Breeding Conference on), 16
Factors (Fertility), in Bacteria : Colicine Factors as—*Salmonella typhimurium* Strain *LT*2 (H. Ozeki and Sheila Howarth), 986 ; *Escherichia coli K*-12 (R. C. Clowes), 988
Factors (*Leptospira*-agglutinating), in Turtle Sera (Prof. J. van der Hoeden, Esther Szenberg and Z. Evenchik), 95
Factors (Mechanical) : Influence of Oxygen Concentration and, on Differentiation of Connective Tissues *in vitro* (Dr. C. Andrew L. Bassett and Ingeborg Herrmann), 460
Factory : Instruments in the (Dr. J. Thomson), 961
Facts about Industrial Growth, *review* by Sir Roy Harrod, 660
Fagley, Dr. Richard M. : The Population Explosion and Christian Responsibility, *review* by the Very Rev. W. R. Matthews, 41
Fagraeus, Dr. Astrid, and Espmark, Dr. Åke : Use of a 'Mixed Haemadsorption' Method in Virus-Infected Tissue Cultures, 370
Fahey, Dr. J. L. (Askonas, Dr. Brigitte A., and) : An Investigation of Closely Related Gamma-Myeloma Proteins and Normal Mouse Gamma-Globulin by Partial Enzymic Degradation and Starch-Gel Electrophoresis, 980
Failace, Dr. Louis A. (Bogoch, Dr. Samuel, and) : Aminoglycolipids and Glycoproteins of Human Brain—Quantitative Fractionation of Brain Glycolipids by Silicic Acid Chromatography, 150
Failure of Non-Surgical Ovum Transfers in the Cow : A Possible Explanation for the (Movement of the Ovum in the Reproductive Tract), (M. J. K. Harper, J. P. Bennett and L. E. A. Rowson), 789
Fairbridge, Dr. Rhodes W. : Solar Variations, Climatic Change and related Geophysical Problems, 967
Fairweather, Dr. A. : Electrical Contacts (Properties of the Mechanical Deformation of Contact Electrodes at Closure), 866
Fall-out and in Man : Strontium-90 in, in Australia, January 1959-June 1960 (Dr. F. J. Bryant, L. J. Dwyer, D. J. Stevens, Prof. E. W. Titterton and J. R. Moroney), 754
Fall-out (Radioactive) : Seasonal Variation and Age of (R. P. Parker and J. O. Crookall), 574
Faludi, B., and others : Transmission of Phosphorus-32 incorporated by Parents into Descendants of *Drosophila melanogaster*, 469
Fänge, Prof. Ragnar, and Mattisson, Artur : Function of the Caudal Appendage of *Priapulus caudatus*, 1216
Fano, Lilla, and others : Tables of Thermodynamic and Transport Properties of Air, Argon, Carbon Dioxide, Carbon Monoxide, Hydrogen, Nitrogen, Oxygen and Steam, *review* by Prof. A. R. Ubbelohde, 58
Far Infra-Red Radiation from Shock Waves : Observation of (M. F. Kimmitt, A. C. Prior and P. G. Smith), 599
Faraday Society : Marlow Medal awarded to Prof. John Stanley Griffith, 493
Faraday Society (under the auspices of the) : Informal Meeting at the Royal College of Science and Technology, Glasgow, to mark the centenary of the publication by Thomas Graham of his paper on Liquid Diffusion, 312
Farquhar, Dr. I. E. : The Present State of Ergodic Theory, 17
  Lectures on Ergodic Theory, *review*, 947
Farrington, Prof. B. : Technology, Science and Art—Common Ground (Science and the Classics), 397
Fasciola hepatica : Juvenile Stages of, in the Liver of the Mouse (Dr. Ben Dawes), 646
Fast Neutron Handbook, *review* by J. H. Montague, 944
Fast Neutron Physics (edited by J. B. Marion and J. L. Fowler), Part I, Techniques, *review* by J. H. Montague, 944
Fat (Ruminant Depot) : Effect of Duodenal Administration of Highly Unsaturated Fatty Acids on Composition of (Bridget M. Ogilvie, Prof. G. L. McClymont and Dr. F. B. Shorland), 725
Fat-synthesizing Single-Spore Strain of *Lipomyces* : A Superior (D. R. Cullimore and Dr. M. Woodbine), 1022
Fats (Animal and Vegetable), in Nutrition : The Relative Values of (Scottish Branch of the Nutrition Society Symposium on), 135
Fats (Dietary) : Influence of various, on the Blood Cholesterol Content (F. S. P. Van Buchem, J. J. Speelman, A. A. Idema, A. T. Valkema and H. J. Thomasson), 310
Fatty Acid (A New), from Royal Jelly (Prof. W. H. Brown and Ethel E. Felauer), 88
Fatty Acids in the Normal and Alloxan Diabetic Rat : Incorporation of Ethanol-1-^{14}C into (Dr. Marion E. Smith), 273
Fatty Acids (Highly Unsaturated) : Effect of Duodenal Administration of, on Composition of Ruminant Depot Fat (Bridget M. Ogilvie, Prof. G. L. McClymont and Dr. F. B. Shorland), 725
Fatty Acids (*n*-Odd-Numbered Monoethylenic), in the Liver Oil of the New Zealand School Shark (*Galeorhinus australis* MacLeay) : Occurrence of (Isobel M. Morice and Dr. F. B. Shorland), 443
Fatty Acids and Monoglycerides : Micellar Solubilization of, by Bile Salt Solutions (Dr. Alan F. Hofmann), 1106
Faulkner, C. R. : Observations of Satellite 1960ζ1, and a Comparison with Satellite 1958δ1, 520
Faunas : Hypogean, *review* by Dr. D. J. Crisp and P. J. S. Boaden, 50
Faunas (Natural) : Looking Ahead—the Future of (Association of British Zoologists Meeting on), 20
Faust, Dr. R. C. : Applications of Interference Microscopy (Study of Optically Heterogeneous Specimens with special reference to Textile Fibres), 316
Favism and Thalassaemia in Sardinia and their Relationship to Malaria (M. Siniscalco, L. Bernini, B. Latte and A. G. Motulsky), 1179
Fawcett, Dr. C. H. : Fungicides in Agriculture and Horticulture (Research on Systemic Fungicides), 594
Feather Lipids (Dr. A. Bolliger and D. Varga), 1125
Features of the Precipitation of Barium Chromate by an Extra-slow Technique : Some (Tadeusz Adamski), 524
Fecundity and Fertility in Female *Habrobracon* treated with X-Rays : Nitrogen Protection of (Prof. Daniel S. Grosch and Dr. Arnold M. Clark), 546
Federal Funds for Science in 1959-61 (United States National Science Foundation), 217
Fédération des Industries Électroniques, and others : International Exhibition on Measurement Control, Regulation and Automation, 397
Fédération des Industries Mécaniques et Transformatrices des Métaux, and others : International Exhibition on Measurement Control, Regulation and Automation, 397
Federation (International), of Societies of Cosmetic Chemists : Second Congress, 397
Feeding-Activity (Cyclical), in Colonized Mosquitoes (Dr. J. D. Gillett), 881
Feeding Two Levels of Dietary Calcium : Effect of, on the Growth of Broiler Chickens (Dr. H. Smith and Dr. J. H. Taylor), 1200
Feigelson, Prof. Philip (Greengard, Dr. Olga, and) : A Difference between the Modes of Action of Substrate and Hormonal Inducers of Rat Liver Tryptophan Pyrrolase, 446
Feigl, Prof. Fritz : Spot Tests in Organic Analysis, sixth English edition (translated by Prof. Ralph E. Oesper), *review* by Dr. D. T. Lewis, 479

Felauer, Ethel E. (Brown, Prof. W. H., and) : A New Fatty Acid from Royal Jelly, 88
Fellowships : Beit Memorial, 768
  CIBA Fellowship Trust Awards, 489
  Leverhulme Trust Fund Awards, 678
Fellowships for 1961 : André Mayer (Food and Agriculture Organization of the United Nations), 135
  Lederle Medical Student Research (American Cyanamid Co.), 134
Fellowships for 1961-62 : Carlsberg–Wellcome Travelling Research (Wellcome Trust), 134
Fellowships (Harkness), of the Commonwealth Fund : Appointments to, 308
Fellowships (Queen Elizabeth II) awarded to Dr. John Alexander Lowden, Dr. George Greenough Hinton and Dr. Hugh Taylor by the Queen Elizabeth II Canadian Fund to Aid in Research on the Diseases of Children, 863
Fels, Dr. I. Gordon : Binding of Calcium Ions by the Aorta, 1012
Female *Habrobracon* treated with X-Rays : Nitrogen Protection of Fecundity and Fertility in (Prof. Daniel S. Grosch and Dr. Arnold M. Clark), 546
Females : Termination of Pupal Diapause in the Cinnabar Moth and the Reproductive Capacity of the Resulting (Dr. G. F. Bornemissza), 936
Ferguson, K. A., and Wallace, A. L. C. : Starch-gel Electrophoresis of Anterior Pituitary Hormones, 629
  Prolactin Activity of Human Growth Hormone, 632
Ferranti *Argus* Computer, 14
Ferrari, Giovanni, and Cultrera, Prof. Rolando : Photochemical Synthesis of Amino-Acids and a New Transamination Process by Transfer of Free Amino-Radicals, 326
Ferri, Prof. A. : Elected a member of the Engineering Sciences Section of the International Academy of Astronautics, 495
Ferri, G., and others : Content of Sialic Acid in Serous Glands of Equines, 914
α-Ferric Oxide : Giant Grain Growth in (R. F. G. Gardner and D. W. Tanner), 1166
Ferricyanide Ions : Rate of Oxidation of Ferrohaemoglobin by (Norman Sutin), 438
Ferri- or Ferro-Cyanide for the Study of Haemoproteins : Precautions in the Use of (Prof. D. Keilin), 717
Ferris, Roxana Stinchfield : Bignoniaceae to Compositae (Bignonias to Sunflowers), (Illustrated Flora of the Pacific States—Washington, Oregon and California, Vol. 4), *review* by G. P. DeWolf, 49
Ferris, Roxana Stinchfield (Abrams, Leroy, and) : Illustrated Flora of the Pacific States—Washington, Oregon and California, Vol. 4, Bignoniaceae to Compositae (Bignonias to Sunflowers), (Roxana Stinchfield Ferris), *review* by G. P. DeWolf, 49
Ferritin Synthesis : Activation of, and Induction of Changes in Fine Structure in HeLa Cells *in vitro*—Implications for Protein Synthesis (Prof. G. W. Richter), 413
Ferro-Cyanide (Ferri- or), for the Study of Haemoproteins : Precautions in the Use of (Prof. D. Keilin), 717
Ferrohaemoglobin : Rate of Oxidation of, by Ferricyanide Ions (Norman Sutin), 438
Ferro-Silicon Alloy at Room Temperature : Formation of Silicon Nitride Whiskers on a (E. Johnson, Prof. K. Grjotheim and C. Krohn), 523
Ferrous Corrosion : Localization of, by Azide (P. Hersch), 163
Ferrous Sulphate Solutions : Flash Photolysis of (Dr. J. H. Baxendale and A. L. Mansell), 622
Fertility : Recovery of, after Protracted Steroid-induced Sterility in Mice (Prof. Alexander Lipschutz and Rigoberto Iglesias), 174
Fertility in Female *Habrobracon* treated with X-Rays : Nitrogen Protection of Fecundity and (Prof. Daniel S. Grosch and Dr. Arnold M. Clark), 546
Fertility Factors in Bacteria: Colicine Factors as—*Salmonella typhimurium* Strain *LT*2 (H. Ozeki and Sheila Howarth), 986; *Escherichia coli K*-12 (R. C. Clowes), 988
Fertilizer Congress : The Fourth World (Prof. N. R. Dhar), 1161
Fertilizers (Chemical), International Centre of : Fourth World Fertilizer Congress, 1161
Fertilizers (Nitrate-containing) : Control of Self-heating and Gas Emission in (K. S. Barclay, J. M. Crewe and K. F. J. Thatcher), 1189
Fever (Artificial) : Effect of, in Increasing Susceptibility to Bacterial Endotoxin (Dr. David G. Connor and Dr. Edward H. Kass), 453
Few-Nucleon Problem : Nuclear Forces and the—Proceedings of the International Conference held at University College, London, 1959 (edited by T. C. Griffith and E. A. Power), *review* by Dr. R. J. N. Phillips, 63
Few Nucleons : A, *review* by Dr. R. J. N. Phillips, 63
Fewson, Dr. C. A., and Nicholas, Dr. D. J. D. : Utilization of Nitrate by Micro-organisms, 2
Fibre (Giant Nerve) : Replacement of the Protoplasm of a, with Artificial Solutions (P. F. Baker, Prof. A. L. Hodgkin and Dr. T. I. Shaw), 885
Fibre (Nerve), of Crayfish : Repetitive Hyperpolarizing Response of the (T. Tomita, T. Saimi and N. Toida), 271
Fibre Endings (Mossy), in Ammon's Horn : Electron Microscopy of (Dr. L. H. Hamlyn), 645
Fibre Membrane (Striated Muscle) : Nature of Sarcolemma, the (Prof. F. Lörincz and Dr. G. Biró), 317
Fibres (Calcium Soap) : Structure of (R. J. Bird and G. Rooney), 337
Fibres (Normal and Guard Keratin) : Different Permeability of Cuticular Sheath in (R. Z. de la Burde), 420
Fibres (Wool) : Influence of Atmospheric Oxidation on Supercontraction of, reduced with Thioglycollic Acid (O. A. Swanepoel), 626
Field-Emission Microscopic Investigation of Catalysed Synthesis of Ammonia on Tungsten (K. Azuma), 530
Field Studies in Modern Education : The Importance of (Paul F. Holmes), 590
Field Studies Association (Scottish) : Annual Report for 1960, 590
Field Studies Council : Summer and Autumn Courses, 864
Field Trials : Measurement of Fungicidal Effects in (R. W. Rayner), 328
Field Work in Natural History : Grants for (Carnegie United Kingdom Trust), 395
Fillerup, Dorothy L., and others : Incorporation of Palmitic-1-^{14}C Acid into Blood Cells, 92
Film (Superconducting) : An Upper Limit for the Resistivity of a (R. F. Broom), 992
Film (Thin Oxide) : Effect of a, on the Reaction of Iodine Vapour with Copper (R. A. J. Shelton, S. Blairs and D. Margrave), 1183
Film Association, Scientific (Medical Committee), in collaboration with the Association for the Study of Medical Education : Symposium on the Applications of Television in Medical Research and Teaching, 1159
Film-Strips and Wall-Charts in Physics, Chemistry and General Science (Educational Productions, Ltd.), 395
Film Techniques : Television and (British Kinematograph Society and the Television Society Convention on), 868
Filsell, O. H. (Jarrett, I. G., and) : An Effect of Glucose on Acetate Metabolism in Sheep, 1114
Filter Paper : Radiometric Precipitation in—a Rapid Method of Microanalysis (M. Thackray), 434
Filtration of Phytoplankton by the Octocoral *Alcyonium digitatum* L. (Dr. H. M. Roushdy and Dr. Vagn Kr. Hansen), 649
Findlay, Dorothy, and others : The Active Site and Mechanism of Action of Bovine Pancreatic Ribonuclease, 781
Findlay, Stephen : Immortal Longings, *review* by the Very Rev. Dr. W. R. Matthews, 943
Fine Structure in HeLa Cells *in vitro* : Activation of Ferritin Synthesis and Induction of Changes in—Implications for Protein Synthesis (Prof. G. W. Richter), 413
Fine Structure of Living Matter : Carl Nägeli and the (Dr. J. S. Wilkie), 1145
Fine Structure of the Neuromuscular Junction in Patients with Myasthenia Gravis : Abnormalities in the (Dr. S. I. Zacks, W. C. Bauer and J. M. Blumberg), 280
Fink, Prof. P. T. : Appointed to the chair of mechanical engineering in the University of Sydney, 12, work of, 12
Finkelstein, A. : Electrical Excitability of Isolated Frog Skin, 1119
Finland, Geophysical Society of : Special Medal with the inscription 'The Finnish Pioneer of Aerology', to commemorate the seventieth birthday of Prof. Vilho Väisälä, 1059
Finn, Ronald, and others : Transplacental Passage of Red Cells in Man, 922
'Finnish Pioneer of Aerology' : Special Medal with the inscription, struck by the Geophysical Society of Finland to commemorate the seventieth birthday of Prof. Vilho Väisälä, 1059
Fiore-Donati, Dr. L., and others : Leukaemogenesis by Urethan in New-born Swiss Mice, 278
Firmament of Time (Dr. Loren Eiseley), *review* by the Very Rev. Dr. W. R. Matthews, 943
First American Manned Ballistic Rocket Flight, 587
First Manned Earth Satellite, 1961μ, 307
First Sahara Atomic Explosion : Measurements of Air Radioactivity in Italy and their relation to the (L. Argiero, Dr. S. Manfredini and Dr. G. Palmas), 618
Fish (Coarse), in Rivers : Movement of (B. Stott), 737
Fish Culture, *review* by Dr. C. F. Hickling, 51
Fisher, Prof. David E. : Cosmic Ray Ages of the Treysa and Sikhote–Alin Meteorites, 225
  Origin of Stone and Iron Meteorites, 244
Fisher, Dr. M. S. : *Obituary* of Prof. C. W. Dannatt, 763
Fishery Institute (National), Guayaguil : Appointment of François Bourgois as director, 588
Fishery Research : Postgraduate Training Grants for (Ministry of Agriculture, Fisheries and Food and the Department of Agriculture and Fisheries for Scotland), 679
Fishes : The Deepest Recorded (Torben Wolff), 283
Fitch, F. J. : Origin of Ignimbrites, 995
Fitton, Dr. W. H. (Joan M. Eyles), 585
Fixation of Nitrogen in *Myrica* Root Nodules : Molybdenum and the (Dr. G. Bond and Dr. E. J. Hewitt), 1033
Fixation (Biological Nitrogen) : Effect on, of Nitrogen Gas treated with Ultra-violet Radiation (B. Zacharias and C. -G. Hedén), 817
Flagella : Structural Asymmetry in Cilia and (I. R. Gibbons), 1128
Flagella of Zoospores associated with Cabbage Clubroot Tissue : Tinsel-like Structure in (W. L. Seaman, Prof. R. H. Larson and J. C. Walker), 186
Flame Ionization Triode : An A.C. Modulated (J. Middlehurst and B. Kennett), 142
Flame Photometry (Prof. John A. Dean), *review* by H. L. Bolton, 66
Flare Effects (Solar), in the *F* Region of the Ionosphere (R. W. Knecht and K. Davies), 797
Flash Photolysis : Use of, to Initiate Detonation in Gaseous Mixtures (J. Wadsworth), 623
Flash Photolysis of Ferrous Sulphate Solutions (Dr. J. H. Baxendale and A. L. Mansell), 622
Flavin in the Brain : Changes of Quantity of, after Peripheral Administration of Flavins (Ikuko Nagatsu-Ishibashi, Toshiharu Nagatsu and Kunio Yagi), 728
Flavin Mononucleotide : A New Photo-Reaction between some Furocoumarins and (Luigi Musajo and Giovanni Rodighiero), 1109
Flavins : Changes of Quantity of Flavin in the Brain after Peripheral Administration of (Ikuko Nagatsu-Ishibashi, Toshiharu Nagatsu and Kunio Yagi), 728
Flavour ('Sunlight'), of Beer (Y. Obata, M. Koshika and H. Tanaka), 635
Fleck, D. G. : Serological Tests for Toxoplasmosis, 1018
Fleming, Dr. M. G. : Appointed to the University of London chair of mineral technology in the Imperial College of Science and Technology, 963, 1153 ; work of, 1153
Fletcher, Prof. T. Lloyd, and others : A New Preparation of Gastrin—Preliminary Characterization, 448
Flicker Frequency (Critical) : Prediction of the Effect of Light-Time Fraction on the—an Insight from Fourier Analysis (K. Gibbins and Dr. C. I. Howarth), 330
Flies : Mite Orientation and Survival on (Bernard Greenberg), 107
Flies (House-) (Normal and to DDT-Resistant): Toxicity of 2-(2-Halogen-4-Chlorophenyl)-2-(4-Chlorophenyl)-1,1,1-Trichloroethanes to (Douglas J. Hennessy, Joseph Fratantoni, James Hartigan, Herbert H. Moorefield and M. H. J. Weiden), 341
Flight (Space), and Re-Entry Trajectories (International Academy of Astronautics of the International Astronautical Federation Symposium on), 312
Flight Safety Foundation Award, Inc. of the United States Society of Automotive Engineers, Inc. : Laura Taber Barbour Air Safety Award for 1961 awarded to E. S. Calvert and J. W. Sparke, 312

Flinn, Dr. D. : Appointed a senior lecturer in geology at the University of Liverpool, 963
Flint, Dr. R. F. : Solar Variations, Climatic Change and related Geophysical Problems, 967
Floor of the North Atlantic Ocean : Lavas from an Abyssal Hill on the (D. H. Matthews), 158
Flora of the Rugby District, First Supplement (D. E. Allen), (Rugby School Natural History Society), 492
Flora (Illustrated), of the Pacific States—Washington, Oregon and California (Leroy Abrams and Roxana Stinchfield Ferris), Vol. 4, Bignoniaceae to Compositae (Bignonias to Sunflowers), (Roxana Stinchfield Ferris), *review* by G. P. DeWolf, 49
Florence, A. L. : Appointed a lecturer in engineering at the University of Edinburgh, 680
Florescu, Dr. N. A. : Standard Unit of Pressure in Vacuum Physics, 522
Florida : Blood Potassium and Sodium of Hereford and Brahman Cattle and some Breeds of Sheep maintained in (J. R. Howes, G. K. Davis, P. E. Loggins and J. F. Hentges), 181
Florida State Museum : Director's Report for 1959-60, 133
Florkin, M. : Unity and Diversity in Biochemistry, an Introduction to Chemical Biology (translated from the French by T. Wood), *review* by Dr. M. R. Atkinson, 479
Florkin, M. (edited by) : Aspects of the Origin of Life, *review* by N. W. Pirie, 295
Flour and Gluten (Wheat Starch,) : New Products from (B. H. Thewlis), 260
Flow of Portal and Hepatic Blood in Normal and Cirrhotic Liver (Dr. T. Nakamura, S. Nakamura and T. Kaneko), 812
Flow of Visco-Elastic Liquids from Tubes (J. Harris), 993
Flow (Oscillatory), in a Fluid-filled Elastic System (Wing-Comdr. J. E. Malcolm), 88
Flow (Poiseuille) : Axial Migration of Particles in (H. L. Goldsmith and S. G. Mason), 1095
Flow (Turbulent) : Meteorology, Oceanography and (The Scientific Papers of Sir Geoffrey Ingram Taylor, edited by Dr. G. K. Batchelor, Vol. 2), *review* by Prof. P. A. Sheppard, 62
Flower Initiation in the Banana : Early (W. G. Barker and D. E. Dickson), 1131
Flower Initiation in *Trifolium repens* L.—a Short-Long-Day Plant (Roderick G. Thomas), 1130
Flowering Behaviour of Vanilla (James E. Irvine and Norman E. Delfel), 366
Flowering Plants : Experimental Taxonomy of (Linnean Society of London Symposium on), 968
Fluctuations : Atmosphere Temperature (G. S. Callendar), 15
Fluid (Amniotic) : Absorption of, in the Gut of Foetal Sheep (G. H. Wright and Dr. D. A. Nixon), 816
Fluid (Rheological) : Some Recent Research Problems encountered in the Study of Blood as a (Cambridge Rheology Club Discussion on), 1062
Fluid (Synovial) : The Stainable Mucin of Joint Tissues and (Dr. B. F. Martin and N. E. Shaw), 835
Fluid Mechanics : The Advance of, *review* by Prof. P. A. Sheppard, 62
Fluid-filled Elastic System : Oscillatory Flow in a (Wing-Comdr. J. E. Malcolm), 88
Fluidized Bed : Bubble Formation at an Orifice in a (Dr. D. Harrison and L. S. Leung), 433
Fluidized Solid Systems (Liquid and) : Similarity in Behaviour between Gas Bubbles in (P. D. Bloore and Dr. J. S. M. Botterill), 250
Fluorescence of Tetracyclines in Bone Tumours, Normal Bone and Teeth (L. N. Owen), 500
Fluorescence Spectrophotometry : Enumeration of Components in Complex Systems by (Dr. G. Weber), 27
Fluorescent Antibody : Use of Agar Diffusion and (Richard de Long), 1126
Fluorescent Antibody Techniques : Detection of C-Reactive Protein by (Dr. Robert Goldwasser and Dr. Rachmiel Rozansky), 1020
Fluoride (Aluminium)–Silica System (AlF_3–SiO_2) : Mullite Formation in the (Béla Löcsei), 907
Fluorophenylalanine (*Para*-) : Mitotic Haploidization by Treatment of *Aspergillus niger* Diploids with (Pol Lhoas), 744
'Flux' : The Use of the Term (S. C. Ghose and J. C. Young), 621
Flux (Neutron) : The Unit of (I. S. McGill, D. C. Menzies and M. R. Price), 162
Flux Density of the Radio Source Cassiopeia A : Secular Variation of the (D. S. Heeschen and B. L. Meredith), 705
9α-Fluoro-11β-hydroxy-17-methyltestosterone ('Ultrandren'): Effect of, on the Testis of the Immature Rat (Dr. E. J. Clegg), 542
Fly (Blow-) : Control of the Responsiveness of the, to Water (Prof. David R. Evans), 1132
Fodor, Prof. G. : Appointed to an overseas fellowship at Churchill College, Cambridge, 963
Foetal Blood in several Mammalian Species : Fructose as a Component of the (Prof. A. St. G. Huggett and Dr. D. A. Nixon), 1209
Foetal Calf-Serum : Transferrin-groups of (Dr. H. Buschmann and Dr. D. O. Schmid), 1209
Foetal *C57BL*/6 Mice : Haemoglobins of (J. Barrowman and M. Craig), 818
Foetal Sheep : Absorption of Amniotic Fluid in the Gut of (G. H. Wright and Dr. D. A. Nixon), 816
Foetal Thyroid of the Rabbit : Function of the, with regard to Cholesterol Metabolism studied by Foetal Thyroidectomy (J. G. Bearn, H. B. Koerselman and T. R. E. Pilkington), 822
Foetal Thyroidectomy : Function of the Foetal Thyroid of the Rabbit with regard to Cholesterol Metabolism studied by (J. G. Bearn, H. B. Koerselman and T. R. E. Pilkington), 822
Foggle, Dr. A. : Some Aspects of Disease Transmission by Ticks, 683
  Science in the Development of Ghana (Conservation of Natural Resources in Ghana), 1064
Fogliani, G., and others : New Herbaceous Test-Plants for Study of the Infectious Degeneration of Grape Vines, 371
Folinic Acid Requirement of Strains of the Genus *Pediococcus* (Ellen I. Garvie and Margaret E. Gregory), 563
Folk, jun., Prof. G. Edgar (Essler, Warren O., and) : Determination of Physiological Rhythms of Unrestrained Animals by Radio Telemetry, 90
Folk Museum (Ulster) : Site for the, 1155
Follicle (Growing Hair), of the Mouse : Proliferative Cycle in the (S. M. Cattaneo, H. Quastler and F. G. Sherman), 923
Follicles in Adult Romney Ewes : Bundles of (D. F. G. Orwin), 1026
Fomes annosus : Growth of, under Reduced Oxygen Pressure and the Effect of Carbon Dioxide (Dr. K. Gundersen), 649
Fonctions Sphériques de Legendre et Fonctions Sphéroidales (Dr. Louis Robin), Tome 3, *review*, 118
Fonctions Sphéroidales : Fonctions Sphériques de Legendre et (Dr. Louis Robin), Tome 3, *review*, 118
Fondation Européenne pour les Echanges Internationaux : Grant of £3,750 from the Gulbenkian Foundation, to enable postgraduate science students to study in Portugal, 218
Food Analysis : British, *review* by Joyce Doughty, 477
Food and Agriculture Organization (United Nations) : André Mayer Fellowships for 1961, 135
  Technical Meeting on Plant Exploration and Introduction, 397
  Appointment of Dr. Hans Dietrich Cremer as chief of the Applied Nutrition Branch, 865
  Appointment of Dr. Arthur H. Dolff as assistant chief of the Research Branch of the Radiological Health Division, 865
Food Science and Technology : The Place of, in the Campaign against Malnutrition (Nutrition Society Symposium on), 398
Food Selection by Silkworm Larvae, *Bombyx mori*—Citral, Linalyl Acetate, Linalol and Terpinyl Acetate as Attractants of Larvae (Yasuji Hamamura and Ken-ichi Naito), 879 ; β-Sitosterol as one of the Biting Factors (Yasuji Hamamura, Keizo Hayashiya and Ken-ichi Naito), 880
Foods : The Composition of (Dr. R. A. McCance and Dr. E. M. Widdowson), *review* by Joyce Doughty, 477
Foods and Drugs (Agricultural Materials,) : Analysis of, *review* by H. V. Hart, 749
Fooks, G. F. : Irregularities in the E_s Layer of the Ionosphere, 707
Foot-and-Mouth Disease : Phagocytic Activity in Squamous Epithelia and its Role in Cellular Susceptibility to (Dr. H. Platt), 1075
Forces which Mould Them : Soap Bubbles and the (C. V. Boys), *review* by G. R. Noakes, 64
Ford Foundation : Further grant of 95,000 dollars to the Zoological Society of London, to support a programme of research in animal reproduction, 311
  Grant of 550,000 dollars to the Zoological Society of London, to endow research fellowships in animal breeding, 590
  Grant of £157,143 to the University of Birmingham, to support a long-term programme of research in the Department of Anatomy into the reproductive physiology of monkeys, 679
Forecasting Man-power Needs for the Age of Science (Organization for European Economic Co-operation), 941
Forecasting (Numerical) : An Experiment in (E. Knighting, G. A. Corby, F. H. Bushby and C. E. Wallington), (Air Ministry : Meteorological Office, Scientific Paper No. 5), 973
Forecasting (Weather), for Aeronautics (Joseph J. George), *review*, 846
Forecasting (Weather), by Numerical Methods (Dr. A. W. Brewer), 973
Foreign Compounds : Metabolic Pathways of (Biochemical Society Colloquium on), 219
Foreign Pyrimidines : Active Transport of, across the Intestinal Epithelium (Dr. Lewis S. Schanker and Dr. John J. Jeffrey), 727
Forest Border : Classification and Multiplicity of Growth Layers in the Branches of Trees at the Extreme Lower (Waldo S. Block, R. A. Studhalter and Sharlene R. Agerter), *review* by Prof. F. W. Jane, 850
Forestry Commission : Bulletin No. 32, Afforestation of Upland Heaths (J. W. L. Zehetmayr), 136
  Forest Record No. 46, Group Dying of Conifers (J. S. Murray and C. W. T. Young), 685
Forests (National), of Agricultural Crops for the Wet Humid Tropics (Antony Santiago), 1070
Forests (Open), in Tropical Africa (Scientific Council for Africa South of the Sahara, Publication No. 52), 141
Forgacs, Chaim : Deviations from the Steady-State in Ion Transfer through Perm-selective Membranes, 339
Form in Art and Nature, *review* by Prof. T. A. Stephenson, 44
Formamidase in Mycobacteria and its Use in Differentiating Saprophytic Mycobacteria from other Mycobacteria (Dr. Hideo Nagayama, Dr. Kiyoshi Konno and Prof. Sutemi Oka), 1219
Formate labelled with Carbon-14: Effect of Erythropoietine on Incorporation of, into the Nucleic Acids of Normal Rabbit Tissues *in vitro* (Dr. M. A. Perretta and Dr. R. Y. Thomson), 912
Formation of Biochemical Compounds on the Primitive Earth : Comets and the (Prof. J. Oró), 389
Formation of Helical Microfibrils from a Steroid Acid Complex (Dr. N. Ramanathan, A. L. Currie and J. Ross Colvin), 779
Formation of the Nucleolus in Animal Cells (The Nucleolus), (Dr. Henry Harris), 1077
Formation of an Ommatin Pigment from Tyrosine by Ultra-violet Irradiation (Maria Benigna Johnson), 924
Formation of Silicon Nitride Whiskers on a Ferro-Silicon Alloy at Room Temperature (E. Johnson, Prof. K. Grjotheim and C. Krohn), 523
Formation (Antibody) : Partial Inhibition of, by means of Anti-Ribonucleoprotein Serum (Prof. B. D. Jankovič, Dr. K. Isakovič and J. Horvat), 1218
Formation (Bubble), at an Orifice in a Fluidized Bed (Dr. D. Harrison and L. S. Leung), 433
Formation (Enzymatic), of Histamine Ribotide from Histamine Dinucleotide (Dr. Saburo Muraoka, Mie Inoue and Prof. Hidemasa Yamasaki), 532
Formation (*In vivo*), of Normorphine in the Rat as a Metabolite of Tritium Nuclear-labelled Morphine (Anand L. Misra, S. J. Mule and Prof. L. A. Woods), 82
Formation (Isohaemagglutinin) : Dissociation of, and Tolerance of Skin Grafts in Chicks (Otakar Stark, Vladimír Křen and Bohdan Frenzl), 281
Formation (Metalloporphyrin) : Catalysis of—a Possible Enzyme Model for Haem Iron Incorporation (M. B. Lowe and J. N. Phillips), 262
Formation (Mullite), in the Aluminium Fluoride–Silica System (AlF_3–SiO_2), (Béla Lòcsei), 907
Formation (Polypeptide), from Asparagine under Hypothetically Primitive Conditions (J. Kovács and H. Nagy (Kovács)), 531
Formation (Radical), in Bovine Serum Albumin : Prevention by Cysteamine of, by γ-Rays (D. Libby, M. G. Ormerod, Prof. A. Charlesby and Dr. P. Alexander), 998
Formation (Slime-wall), in the *Salmonellae* (Dr. E. S. Anderson), 284
Formation (Spiral), on Natural Crystalline Sulphur (Sayeda H. Emara), 254

Formation and Trapping of Free Radicals (edited by Arnold M. Bass and H. P. Broida), *review* by Dr. B. Brocklehurst, 478
Formations (Plant) : A French Lexicon of, *review* by N. Y. Sandwith, 478
Formations Végétales et Paysages Ruraux (G. Plaisance), *review* by N. Y. Sandwith, 478
Formulae (Molecular) : Prediction of Retention Data in Gas–Liquid Chromatography from (M. B. Evans and J. F. Smith), 905
Forssberg, Arne (edited by Maurice Errera and) : Mechanisms in Radiobiology, Vol. 2, Multicellular Organisms, *review* by Dr. O. A. Trowell, 72
Forsyth, J. : Science in the Development of Ghana (Grain Storage Problems in Ghana), 1064
Fortuin, Dr. S. G. : Training in Occupational Hygiene, 1159
Fothergill, P. G. : Evolution and Philosophy, *review*, 1042
Foundations : Axiomatics and, *review* by F. I. G. Rawlins, 570
Foundations of Mathematics, a Study in the Philosophy of Science (Prof. Evert W. Beth), *review* by F. I. G. Rawlins, 570
Foundations of Quantum Theory and Complementarity (Prof. L. Rosenfeld), 384
Foundry Materials : Chemical Analysis of Cast Iron and (W. Westwood and A. Mayer), second edition, *review* by F. L. Selfe, 383
Fourier Analysis : Prediction of the Effect of Light-Time Fraction on the Critical Flicker Frequency—an Insight from (K. Gibbins and Dr. C. I. Howarth), 330
Fourier Transform Technique (Two-Dimensional), for Analysing Random Structures (Dr. Douglas M. C. MacEwan and H. H. Sutherland), 431
Fourteenth Century Astronomical Clock : Exhibition of a (Science Museum, London), 589
Fowler, Gregory L. (Sarachek, Prof. Alvin, and) : Induction of Heritable Respiratory Deficiency in *Saccharomyces* by Pantothenate Starvation, 792
Fowler, J. L. (edited by J. B. Marion and) : Fast Neutron Physics, Part I, Techniques, *review* by J. H. Montague, 944
Fowls (Young) : Adrenocorticotrophin and the Sugar-Level in Plasma in (Dr. D. J. Bell), 913
Fraction (Light-Time) : Prediction of the Effect of, on the Critical Flicker Frequency—an Insight from Fourier Analysis (K. Gibbins and Dr. C. I. Howarth), 330
Fraction (Liver) : Influence of a, on the Phagocytic Activity of the Reticulo-Endothelial System in Mice (Prof. B. N. Halpern, C. Stiffel and J. Dedichen), 279
Fractionation of Compound Lipids by Dialysation in an Organic Solvent against an Organic Solvent (Prof. Sen-itiroh Hakomori and Koh-kiti Takeda), 265
Fractionation of the Motor Unit during Repetitive Response to Prostigmine (Dr. Simeon Locke), 452
Fractionation (Quantitative), of Brain Glycolipids by Silicic Acid Chromatography (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch and Dr. Louis A. Faillace), 150
Fractionation (Whole Tissue Emulsion-) : Quantitative Separation and Determination of Brain Glycoproteins, Neuraminic Acid, Hexosamine and Hexoses by means of (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch), 153
Fractions of Trypsinized Casein giving Different Patterns of Bacterial Growth (D. A. H. Hearfield and A. W. Phillips), 266
Fractions of Tubercle Bacilli : Protective Activity of, against Isologous Tumours in Mice (Dr. David W. Weiss, Rose S. Bonhag and Dr. Kenneth B. DeOme), 889
Fractions (Humic), isolated by means of Partition Chromatography : Biological Activity of some (Prof. A. Paszewski, J. Trojanowski and A. Lobarzewska), 277
Fractions (Serum Globulin) : Association of Detectable Antibodies produced by *Haemonchus* spp. Infections in Cattle, with (J. G. Ross), 1019
Fractions (Toxic), from *Ascaris lumbricoides* : Purification of the, and their Effect on the Guinea Pig (G. Gazzinelli, M. M. Guia, A. G. A. Neves, J. Pudles, W. T. Beraldo and W. Dias da Silva), 813
Fracture (The Brittle), of Steel (Dr. W. D. Biggs), *review* by Dr. A. R. Bailey, 573
Fracture (Stress Corrosion) : Physical Metallurgy of (edited by Thor N. Rhodin), (Metallurgical Society Conferences, Vol. 4), *review* by Prof. F. C. Thompson, 383
Fracture Initiation (Cleavage), in Notched Impact Tests of Mild Steel (J. W. Davies and A. A. Wells), 432
Fracture Patterns similar to Naturally Occurring Radial Dyke Systems : Impulse Loading of Rock Targets to produce (Carl F. Austin), 227
Fraenkel, Prof. Abraham : Abstract Set Theory, second edition, *review* by Dr. R. G. Cooke, 1047
Fragmentation : Anomalies in the Light Curves of Meteors resulting from (Dr. R. Ananthakrishnan), 896
Fragments (Chromosome), and Mutation of the Incompatibility Gene (Prof. D. Lewis), 990
Franco-British. Pharmaceutical Commission : Ninth Congress, 493
Francová, D., and others : Mechanism of Increase of Endotoxin Susceptibility in Animals showing Delayed Hypersensitivity, 182
Franklin, C. A., and others : Cosmic Noise Measurements from 1960 η1 at 3·8 Mc./s., 616
Frankul, W. : The Place of Food Science and Technology in the Campaign against Malnutrition (Problems and some Solutions), 398
Fraser, Dr. Allan : Animal Husbandry Heresies, *review* by Sir John Hammond, 47
Fraser, Dr. K. B. : Elected a Fellow of the Royal Society of Edinburgh, *erratum*, 135
Fratantoni, Joseph, and others : Toxicity of 2-(2-Halogen-4-Chlorophenyl)-2-(4-Chlorophenyl)-1,1,1-Trichloroethanes to Normal and to DDT-Resistant House-Flies, 341
Free, J. B., and Spencer-Booth, Yvette : Effect of Temperature on *Apis indica* Workers, 933
Free : Wild and—Stories of Canadian Animals (H. Mortimer Batten), *review* by B. J. G. Maitland, 851
Free Amino-Acids (Intracellular), of certain Dermatophytes (Dr. F. W. Chattaway, C. Toothill and A. J. E. Barlow), 87
Free Amino-Radicals : Photochemical Synthesis of Amino-Acids and a New Transamination Process by Transfer of (Giovanni Ferrari and Prof. Rolando Cultrera), 326
Free Oscillations (Damped), of a Gyroscopic System (R. Parks and L. Maunder), 710
Free Radical Trapping, *review* by Dr. B. Brocklehurst, 478
Free Radicals : Formation and Trapping of (edited by Arnold M. Bass and H. P. Broida), *review* by Dr. H. Brocklehurst, 478
Free Radicals in Aromatic Substitution, *review* by Dr. J. Idris Jones, 294
Free Radicals in Melanins from *Allium cepa* : Effect of Temperature on the Concentration of (M. L. Edwards, Dr. G. A. Kerkut, Dr. K. A. Munday and K. Leach), 1005
Free Trade Association (European)—Origin, Rules, Certification and Segregation of Stocks (Association of British Chemical Manufacturers), 132
Freed, Dr. Richard (Tabachnick, Dr. Joseph, and) : Demonstration of Nucleases on Mammalian Skin Surface and in Saline Extracts of Hair, 921
Freedom of the Individual : Security Measures and, 132
Freedom (Academic), in South Africa, 747
Freeman, Dr. Joan M. : Reviews of Nuclear Physics, *review*, 62
Freezing and Thawing : Denaturation of Catalase by (Keiji Shikama and Isao Yamazaki), 83
French, Dexter : Action Pattern of β-Amylase, 445
French Atomic Energy Commission (Biology Division) : Colloquium on the Use of Tracers in the Study of Diseases of Porphyrin Metabolism, 870
French Lexicon of Plant Formations, *review* by N. Y. Sandwith, 478
French Scientific and Technical Books (1950-60), 591
Frénot, G. H., and Holloway, A. H. (edited by) : AGARD Aeronatical Multilingual Dictionary, *review* by Dr. D. Küchemann, 851
Frenzl, Bohdan, and others : Dissociation of Isohaemagglutinin Formation and Tolerance of Skin Grafts in Chicks, 281
Frequencies of Hairy Pinnae among Indian and Sinhalese Peoples (K. R. Dronamraju), 653
Frequencies (Very Low) : Some Preliminary Experimental Tests of a Novel Method of Radiating at (R. N. Gould), 332
Frequency (Critical Flicker) : Prediction of the Effect of Light-Time Fraction on the—an Insight from Fourier Analysis (K. Gibbins and Dr. C. I. Howarth), 330
Freshwater Biological Association : Annual General Meeting, 963
Freshwater Biology : Technical Applications of, *review* by Dr. H. B. N. Hynes, 1043
Freund Adjuvant : Growth of Tumours in Rats fed with 4-Dimethylaminoazobenzene injected with Homogenized Tumour mixed with (Prof. Nikša Allegretti), 1207
Friedman, Dr. H. : Elected a member of the Basic Sciences Section of the International Academy of Astronautics, 495
Frisch, Prof. O. R. (edited by) : Progress in Nuclear Physics, Vol. 8, *review* by Dr. Joan M. Freeman, 62
Frisch, Prof. O. R., und andere (herausgegeben von) : Beiträge zür Physik und Chemie des 20 Jahrhunderts—Lise Meitner, Otto Hahn und Max von Laue zum 80 Geburtstag, *review* by Dr. C. A. Taylor, 118
Frischwasser- und Abwasser-Biologie : Handbuch der (Prof. Hans Liebmann), Band 2, *review* by Dr. H. B. N. Hynes, 1043
Frisco, Louis J., and Callinan, Thomas D. (edited by) : Digest of Literature on Dielectrics, Vol. 23, 1959 (United States National Academy of Sciences—National Research Council, Publication No. 799), *review* by Vera Daniel, 75
Frith, H. J. : Appointed officer-in-charge of the Wildlife Survey Section of the Australian Commonwealth Scientific and Industrial Research Organization, 676 ; work of, 676
Fritz, Dr. Sigmund : Solar Variations, Climatic Change and related Geophysical Problems, 967
Frog Muscle (Sodium-rich) : Stimulation of Active Transport of Sodium from, by Insulin and Lactate (Roderick P. Kernan), 347
Frog Neurohypophysis : A 'Natriferic' Principle other than Arginine–Vasotocin in the (F. Morel, J. Maetz, R. Acher, J. Chauvet and M. T. Lenci), 828
Frog Skin (Isolated) : Electrical Excitability of (A. Finkelstein), 1119
Fronds of the Giant Kelp, *Macrocystis pyrifera* : Life-span of the (Dr. W. J. North), 1214
Frontiers of the Sea—the Story of Oceanographic Exploration (Robert C. Cowen), *review* by Prof. K. F. Bowden, 202
Frozen Solutions : Photochemical Reactions in (Prof. Shih Yi Wang), 690
Fructose as a Component of the Foetal Blood in several Mammalian Species (Prof. A. St. G. Huggett and Dr. D. A. Nixon), 1209
Fruit (Citrus) : Control of Red Scale in (B. H. Martin and Dr. R. F. Black), 133
Fruit Varieties : Environmental Factors in the Distribution of (European Association for Research on Plant Breeding Conference on), 16
Fruiting Factor (Diffusible): Association of a Steroid and a Pigment with a, in *Myxococcus virescens* (J. Jennings), 190
Fruits (Apple) : Sorbitol Metabolism in (Prof. A. R. N. Gorrod), 190
Fry, D. S. : Development of Eggs from a Hermaphroditic Sea Urchin, 185
Fryer, R. I., and others : Pigments of *Phoma terrestris* Hansen and their Biosynthesis, 441
Fuchs, L. : Abelian Groups, *review* by Dr. Hanna Neumann, 571
Fuel, Institute of : Conference on Waste Heat Recovery, 591
Fuel Technology (Metallurgy and), at Cardiff, 12
Fukuda, Shigeo, and Tsuzuki, Kiyoshi : Interspecific Induction of Transformation of Bacteria with respect to Phage-susceptibility, 937
Fulgurite (Supposed Clay), from Ontario : Analysis of a (Maxwell K. Carron and Paul D. Lowman, jun.), 40
Fullam, Ernest F., and others : Nanometeorites, 897
Function of the Caudal Appendage of *Priapulus caudatus* (Prof. Ragnar Fänge and Artur Mattisson), 1216
Function of the Foetal Thyroid of the Rabbit with regard to Cholesterol Metabolism studied by Foetal Thyroidectomy (J. G. Bearn, H. B. Koerselman and T. R. E. Pilkington), 822
Function of Limb Tremor (C. B. Gibbs), 540
Function of Muscle : The Structure and (edited by Dr. G. H. Bourne), Vol. I, Structure, *review* by Dr. I. A. Boyd, 46
Function of Paleal Pegs of Corixidae (Hemiptera Heteroptera), (Dr. Edward J. Popham), 742
Function of the Skeleton to Transmit 'Pulsactor' Signals : Korotkov's Sounds—a (Wing-Comdr. John E. Malcolm), 1114
Function of Vitamin E : Ubiquinone (Coenzyme Q) and the (Dr. J. Green, A. T. Diplock, J. Bunyan, Dr. E. E. Edwin and Dr. D. McHale), 318
Function (Adrenocortical) : Effect of Chronic High and Low Salt Intakes on (Dr. Lewis K. Dahl, Lawrence Silver, Sanford Spraragen and Malcolm Smilay), 348

Function (Lactogenic), in the Cat : .Hypothalamic Control of (Hanus J. Grosz and Alan E. Rothballer), 349
Functional Interpretation of Cerebellar Histology (Dr. V. Braitenberg), 539
Functions at the Pre- and Post-Synaptic Sites : A Proposed Dual Neurohumoral Role of Acetylcholine—its (George B. Koelle), 208
Fund to promote and assist Scientific and Medical Research (Life Offices' Association for Australasia), 135
Fundamental Aspects of Radiosensitivity (Biology Department of Brookhaven National Laboratory Symposium on), 312
Fundamental Mechanisms of the Chromatic Discrimination in Animals and Man : Proceedings of an International Symposium on the (Paris, 1958), sponsored by the International Council of Scientific Unions—Mechanisms of Colour Discrimination (edited by Yves Galifret), *review* by Prof. R. W. Ditchburn, 201
Fundamental Principles of Powder Metallurgy (Dr. W. D. Jones), *review* by J. H. Rendall, 572
Fundamental Problems in Statistical Mechanics (Netherlands University Foundation for International Co-operation Summer School in Science), 769
Fundamental Research : Support for, 473
Fundamentals of Classical Mechanics : L. Euler, The Principle of Relativity and the (D. Speiser), 757
Funds for Cotton, Silk and Man-made Fibres Research, 1154
Funds for Research and Development in Industry, 1957—Performance and Financing (Department of Commerce, United States Bureau of the Census), 132
Funds for Research and Development by Industry in the United States (United States National Science Foundation, Reviews of Data on Research and Development, No. 24), 14
Funds (British), for Oceanographic and Hydrographic Research, 216
Funds (Federal), for Science in 1959-61 (United States National Science Foundation), 217
Fungal Colonization of a Developing Salt Marsh (Dr. G. J. F. Pugh), 1032
Fungal Mycelium : Transport of Carbon in (Stella L. Thrower and L. B. Thrower), 823
Fungi : Illustrations of, *review* by Dr. David Park, 52
Fungi (Higher) : Growth and Genetics of (British Mycological Society Symposium on), 399
Fungi (Soil) : The Ecology of—an International Symposium (edited by D. Parkinson and J. S. Waid), *review* by Dr. P. H. Gregory, 51
Fungicidal Effects in Field Trials : Measurement of (R. W. Rayner), 328
Fungicides : British Insecticides and (Association of British Manufacturers of Agricultural Chemicals Conference on), 1063
Fungicides in Agriculture and Horticulture (Pesticides Group of the Society of Chemical Industry Symposium on), 593
Funnell, B. M. : Appointed to a Harkness Fellowship (oceanic geology) of the Commonwealth Fund, 308
Furocoumarins and Flavin Mononucleotide : A New Photo-Reaction between some (Luigi Musajo and Giovanni Rodighiero), 1109
Further Education, Staff College for : Appointment of W. J. Richards as first director, 308
Further Triumph for Science, 568
Furukawa, M., and others : Radioactivation Analysis of Oxygen in Silicon by Irradiation with α-Particles in a Cyclotron, 39
Fusarium in Soil : The Mycolytic Phenomenon and Biological Control of (R. Mitchell and Prof. M. Alexander), 109
Fused Eggs : Mouse Chimaeras developed from (Dr. Andrzej K. Tarkowski), 857
Fusion : Nuclear (edited by Prof. William P. Allis), *review* by Sir Basil Schonland, 750
Future of Natural Faunas : Looking Ahead—the (Association of British Zoologists Meeting on), 20

GADD, Prof. C. J. : Retirement from the chair of Ancient Semitic languages and civilizations at the School of Oriental and African Studies, University of London, 676 ; work of, 676
Gadolinium Selenide : Anomalous Thermoelectric Properties of (R. C. Vickery and H. M. Muir), 336
Gaede, Karl (de Seidl, Dinah Sharon, and) : Activation of Hurain by Bivalent Iron, 1112
Gaiardoni, P., and others : Increased Toxicity of Serotonin in Adrenalectomized Animals, 540
Gaines, jun., George L. (Cannon, Peter, and) : Use of Krypton for Surface Area Measurements, 340
Gainor, Prof. C., and Crisley, F. D. : Proteolytic Activity of Crude Stem Extracts from Normal and Tumour Tissues of Plants, 1031
Galactic Explosions as Sources of Radio Emission (Prof. G. R. Burbidge), 1053
β-Galactosidase Changes in the Developing Intestinal Tract of the Rat (Dr. Anibal Alvarez and José Sas), 826
Galasso, Dr. Francis (Colligan, Dr. George, and) : Structure of Vapour-deposited Carbon, 621
Galea Capitis of the Normal Bull Sperm : An 'Apical Body' in the (Dr. Erik Blom and Aksel Birch-Andersen), 1127
Galena : Oxidation of, to Lead Sulphate (R. V. Culver, N. B. Gray and Prof. E. C. R. Spooner), 78
Galeorhinus australis MacLeay (New Zealand School Shark) : Occurrence of *n*-Odd-Numbered Monoethylenic Fatty Acids in the Liver Oil of the (Isobel M. Morice and Dr. F. B. Shorland), 443
Galifret, Yves (edited by) : Mechanisms of Colour Discrimination—Proceedings of an International Symposium on the Fundamental Mechanisms of the Chromatic Discrimination in Animals and Man, Paris, 1958 (sponsored by the International Council of Scientific Unions), *review* by Prof. R. W. Ditchburn, 201
Gall-Diseases of Cacao, Mango and Pigeon Pea : Transmission of (J. F. Archibald), 284
Gallium Arsenide : Behaviour of Magnesium Impurity in (J. R. Knight), 999
  Crystal Growth of, using Carbon Boats (J. R. Knight), 1001
Gallium Phosphide Crystals : Electroluminescence of (Frank G. Ullman), 161
Gambling, Dr. W. A. : Title of senior lecturer in electronics in the University of Southampton conferred on, 397
γ-Aminobutyric Acid : Influence of, on the Acetylcholine Responses of the Denervated Rat-Diaphragm Preparation (Dr. R. S. Watson), 724
γ-Background : Discrimination between α-Tracks and, in Ilford Nuclear Emulsions (K. Van Camp, M. Dorikens and L. Dorikens-Vanpraet), 38
γ-Globulin, *Gm^{ab}*, in Nigerians (Prof. Samuel H. Boyer and E. J. Watson-Williams), 456
γ-Globulin (Normal Mouse) : An Investigation of Closely Related γ-Myeloma Proteins and, by Partial Enzymic Degradation and Starch-Gel Electrophoresis (Dr. Brigitte A. Askonas and Dr. J. L. Fahey), 980
γ-Globulin Molecules (Mouse) : The Distribution of Antigenic Groupings on (Dr. Brigitte A. Askonas and Dr. J. H. Humphrey), 1177
γ-Irradiated Carbohydrates and α-Hydroxy Acids : Electron Spin Resonance Spectra of (A. J. Bailey, Dr. S. A. Barker, J. S. Brimacombe, D. Pooley and D. H. Spence), 259
γ-Irradiation : The Importance of Hydroxyl Radicals as Intermediates in the Cross-linking of High Polymers by (Yoshitada Tomoda and Minoru Tsuda), 905
γ-Myeloma Proteins : An Investigation of Closely Related, and Normal Mouse γ-Globulin by Partial Enzymic Degradation and Starch-Gel Electrophoresis (Dr. Brigitte A. Askonas and Dr. J. L. Fahey), 980
γ-Radiation (Continuous) : Haemagglutinin Production in Pre-immunized Mice exposed to (J. P. M. Bensted), 99
γ-Ray Spectra from Radiative Capture of Thermal Neutrons : Atlas of (L. V. Groshev, V. N. Lutsenko, A. M. Demidov and V. I. Pelekhov), translated from the Russian by J. B. Sykes, *review* by Dr. E. R. Rae, 75
γ-Ray-induced Dormancy of Potato Tubers : Reversal of, by Gibberellic Acid (Dr. P. B. Mathur), 547
γ-Rays : Prevention by Cysteamine of Radical Formation in Bovine Serum Albumin by (D. Libby, M. G. Ormerod, Prof. A. Charlesby and Dr. P. Alexander), 998
Ganong, Dr. William F., and Mulrow, Dr. Patrick J. : Evidence of Secretion of an Aldosterone-stimulating Substance by the Kidney, 1115
Garattini, Prof. S., and others : Increased Toxicity of Serotonin in Adrenalectomized Animals, 540
Gardner, Dr. Dugald : Appointed senior lecturer in pathology in the University of Edinburgh, 135
Gardner, jun., Kenneth D. (Morrison, Ashton B., and) : Detection of Serum Proteins within the Renal Collecting Tubule Cells of the Potassium-deficient Rat, 96
Gardner, R. F. G., and Tanner, D. W. : Giant Grain Growth in Alpha Ferric Oxide, 1166
Garnham, Prof. P. C. C. : Some Aspects of Disease Transmission by Ticks, 683
Garnham, Prof. P. C. C., and others : *Culicoides adersi* Ingram and Macfie, 1923, a Presumed Vector of *Hepatocystis* (=*Plasmodium*) *kochi* (Laveran, 1899), 739
Garrett, Dr. S. D. : The Soil—Problems raised by its Use and Misuse (Farming Patterns and Soil-borne Diseases of Crops), 770
Garrod, Prof. L. P. : Retirement from the professorship of bacteriology at St. Bartholomew's Hospital Medical School, London, 131 ; work of, 131
Garrod, Prof. L. P., and others : Hospital Infection, *review* by Kathleen M. Hawkins, 119
Garth House as a Centre for Ecological Botany (Fred N. and Brenda D. Haynes), 590
Garvie, Ellen I., and Gregory, Margaret E. : Folinic Acid Requirement of Strains of the Genus *Pediococcus*, 563
Gas (Nitrogen), treated with Ultra-violet Radiation : Effect on Biological Nitrogen Fixation of (B. Zacharias and C. -G. Hedén), 817
Gas Bubbles in Liquid and Fluidized Solid Systems : Similarity in Behaviour between (P. D. Bloore and Dr. J. S. M. Botterill), 250
Gas Chromatographic Analysis : Precision and Accuracy in (R. S. Evans and P. G. W. Scott), 710
Gas Chromatography (S. J. Hawkes), 867
  Detection of Trace Quantities of Acenaphthene by (Prof. W. G. H. Edwards, J. G. Clarke and A. G. Williamson), 531
  An Organo-clay Complex for the Separation of Isomeric Dichlorobenzenes using (C. T. Cowan and J. M. Hartwell), 712
Gas Chromatography Discussion Group : Third Annual General Meeting, 867
Gas Emission in Nitrate-containing Fertilizers : Control of Self-heating and (K. S. Barclay, J. M. Crewe and K. F. J. Thatcher), 1189
Gas–Liquid Chromatography : Prediction of Retention Data in, from Molecular Formulae (M. B. Evans and J. F. Smith), 905
Gas–Liquid Chromatography of Sterol Methyl Ethers (R. B. Clayton), 1071
Gasdynamic Discontinuities (Wallace D. Hayes), *review*, 118
Gaseous Mixtures : Use of Flash Photolysis to initiate Detonation in (J. Wadsworth), 623
Gases : Ionization Phenomena in—Proceedings of the Fourth International Conference on (Uppsala, 1959), (edited by N. Robert Nilsson), *review* by Dr. J. Dutton, 573
  Ionization Phenomena in (Plasma and Discharge Physics Group of the Association of the German Physical Societies International Conference on), 591
Gases (Dusty) : Viscosity of (Dr. Wayne T. Sproull), 976
Gassiot Committee of the Royal Society and Meteorological Research (Dr. D. C. Martin), 212
Gastric Esterases of Pigs (R. A. Evans and Dr. D. A. Stansfield), 1110
Gastrin : A New Preparation of—Preliminary Characterizations (Prof. L. Lloyd Fletcher, Walter R. Anderson, Clifford L. Pitts, Richard L. Cohen and Henry N. Harkins), 448
Gastro-Intestinal Absorption of Heparin and Synthetic Heparinoids (E. Windsor and G. E. Cronheim), 263
Gastropod Golgi Cycle : Verification of the, with an Electron Microscope (Prof. Leonard G. Worley and Betty Hershenov), 828
Gates, J. W. : Microscopic Studies of Reflecting Surfaces, *review*, 117
Gatland, H. B. : Appointed to a lectureship in electrical engineering at the College of Aeronautics, Cranfield, 218
Gause, Prof. G. F., and others : Biochemical Changes accompanying Impaired Respiration in Staphylococci, 978
Gay, Ian D., and Hayes, Prof. Kenneth E. : Catalytic Activity of Coloured Alkali Halides, 256
Gayner, Dr. F. C. : Fungicides in Agriculture and Horticulture (Fungicide Usage in World Agriculture), 593
Gazing : Crystal, *review* by Dr. A. D. Booth, 752
Gazzinelli, G., and others : Purification of the Toxic Fractions from *Ascaris lumbricoides* and their Effect on the Guinea Pig, 813

Geese : Ducks and (Ministry of Agriculture, Fisheries and Food, Bulletin No. 70), fourth edition, 394
Geier, P. W. : Numerical Regulation of Populations of the Codling Moth, *Cydia pomonella* (L.), 561
Geiger-Müller Counter (A Needle Probe), for the Study of the Passage of the Ovum in the Reproductive Tract (Movement of the Ovum in the Reproductive Tract), (J. P. Bennett), 788
Geitler, Prof. Dr. Lothar: Schizophyzeen (Handbuch der Pflanzenanatomie, Band 6, Teil 1), zweite Auflage, *review*, 73
Gel (Starch-) Electrophoresis : An Investigation of Closely Related Gamma-Myeloma Proteins and Normal Mouse Gamma-Globulin by Partial Enzymic Degradation and (Dr. Brigitte A. Askonas and Dr. J. L. Fahey), 980
Gel (Starch-) Electrophoresis of Anterior Pituitary Hormones (K. A. Ferguson and A. L. C. Wallace), 629
Gelatin and Glucose Media : Production of Soluble Melanoid Pigments by *Streptomyces* in (Prof. Augusto Capriotti), 464
Gendrin, R., and others : A Transatlantic Communication Experiment via *Echo* I Satellite, 709
Gene (Incompatibility) : Chromosome Fragments and Mutation of the (Prof. D. Lewis), 990
Gene Action in the X-Chromosome of the Mouse (*Mus musculus* L.), (Mary F. Lyon), 372
Gene (Single-) Mutants of *Neurospora* Deficient in Amination : Glutamic Dehydrogenase in (Dr. B. D. Sanwal and Dr. Madhu Lata), 286
General Electric Co. Ltd., Wembley : Appointment of L. A. Thomas as chief physicist at the Hirst Research Centre, 963
G.E.C. Synthetic Diamonds : Coesite as an Inclusion in (Dr. H. Judith Milledge), 1181
General Method for the Quantitation of Immune Cytolysis (Dr. Harold S. Goodman), 269
General Microbiology, Society for : Election of Officers, 591
General Post Office : Appointment of Dr. R. Conrad as consultant in applied psychology, 865
General Register Office (Ministry of Health and the) : Report on Hospital In-Patient Enquiry for the Two Years 1956-1957, 1162
General Science (Physics, Chemistry and) : Film-Strips and Wall-Charts in (Educational Productions, Ltd.), 395
General and Comparative Endocrinology, Vol. 1, No. 1, 1061
Generation of Electricity without the Use of Rotating Machinery (Dr. K. H. Spring), 297
Generations : Delinquent—a Home Office Research Unit Report (Studies in the Causes of Delinquency and the Treatment of Offenders, No. 3), (Leslie T. Wilkins), 24
Genes to Ribosomes : An Unstable Intermediate carrying Information from, for Protein Synthesis (Dr. S. Brenner, Dr. F. Jacob and Dr. M. Meselson), 576
Genes (Two Linked), showing a Similar Timing of Expression in Mice (Kenneth Paigen and Werner K. Noell), 148
Genetic Aspects (Chemical and), of their Structure : The Haemoglobin Particles— (Dr. G. Braunitzer, Dr. N. Hilschmann, Dr. V. Rudloff, Dr. K. Hilse, Dr. B. Liebold and Dr. R. Müller), 480
Genetic Basis for Graft-against-Host Immunological Reactions between Two Inbred Lines of Chickens (L. N. Payne and P. Jaffe), 373
Genetic Information : Mechanisms of Expression of (Wendell M. Stanley, jun., and Prof. Robert M. Bock), 299
Genetic Studies with *Klebsiella pneumoniae* (C. H. Clarke), 194
Genetically Determined Muscular Dystrophy : Longevity in Mice with a (Dr. James R. Miller, A. J. Wood and Prof. William C. Gibson), 552
Genetically mixed Perithecia in *Neurospora* (Kazuo Nakamura and Takeshi Egashira), 1129
Genetics : Behavior (Center for Advanced Study in the Behavioral Sciences Conference on), 1156
  Human, *review* by Prof. J. B. S. Haldane, 1042
Genetics of Higher Fungi : Growth and (British Mycological Society Symposium on), 399
Genetics (Human) : Recent Advances in (edited by Prof. L. S. Penrose, with the assistance of Helen Lang Brown), *review* by Prof. J. B. S. Haldane, 1042
Genetics and Evolution of Haemoglobin : Haemoglobin F, its Significance in the (Dr. Wolf W. Zuelzer and Abner R. Robinson), 237
Genotypes (Different), of *Drosophila* : Variation in the Behaviour of, towards Odoriferous Vegetable Oils (J. A. Clutterbuck and Dr. J. A. Beardmore), 1135
Genotypes (Multiple Sex), in the Hermaphrodite Polychaete Worm *Ophryotrocha puerilis siberti* : Existence of (Prof. G. Bacci and O. Bortesi), 838
Geochemical Effects of Weathering (Dr. Wilma W. Smith), 1066
Geochronology : Nuclear (Yadernaya Geokhronologiya), (Dr. I. E. Starik), 1062
Geochronology of Rock Systems : Proceedings of the Conference on the (edited by Prof. J. L. Kulp), 1062
Geodesy : Satellites and (Dr. A. P. Willmore), 1065
Geographical Society (Royal) : Lady Dorothy Mills Award for women, 311
  Research Series No. 4, Investigations on Norwegian Cirque Glaciers (edited by W. V. Lewis), *review* by Dr. C. A. M. King, 662
Geokhronologiya : Yadernaya (Nuclear Geochronology), (Dr. I. E. Starik), 1062
Geologic Interpretation and Mapping : Aerial Photographs in (Dr. Richard G. Ray), 1155
Geological Age of the Sandringham Sands (Dr. R. Casey), 1100
Geological Sciences, International Union of : Formation of an, 132
  Election of Officers, 132, 219
Geological Society of London : Symposium on Some Aspects of Sedimentation in Orogenic Belts, 139
  Election of Officers, 492, *errata*, 591
Geological Survey (United States) : Professional Paper No. 373, Aerial Photographs in Geologic Interpretation and Mapping (Dr. Richard G. Ray), 1155
Géologie Stratigraphique (Prof. Maurice Gignoux), cinquième édition, *review* by Prof. S. Simpson, 202
Geology : Historical, *review* by Prof. S. Simpson, 202
Geology of British Borneo, 768
Geology of Sarawak, Brunei and the Western Part of North Borneo (Dr. P. Liechti, in association with Dr. F. W. Roe and Dr. N. S. Haile), 768
Geomagnetic Field Lines : Motion of (C. J. Loughnan), 427
Geometry and Physics : The Axiomatic Method, with special reference to—Proceedings of an International Symposium held at the University of California, Berkeley, 1958 (edited by Prof. Leon Henkin, Prof. Patrick Suppes and Prof. Alfred Tarski), *review* by F. I. G. Rawlins, 570
Geophysical Methods, *review* by M. J. Keen, 55
Geophysical Problems : Solar Variations, Climatic Change and related (Section of Geological Sciences and Division of Oceanography and Meteorology of the New York Academy of Sciences, in co-operation with the American Meteorological Society Symposium on), 967
Geophysical Research in the Meteorological Office, 676
Geophysical Society of Finland : Special Medal with the inscription 'The Finnish Pioneer of Aerology', to commemorate the seventieth birthday of Prof. Vilho Väisälä, 1059
Geophysical Union (American) : Election of Officers, 312
  William Bowie Medal for Unselfish Co-operation in Research awarded to Prof. K. E. Bullen, 591
Geophysical Year (International) : Information Bulletin I.G.Y., No. 8 (Academy of Sciences of the U.S.S.R.), 493
  Bibliography of Publications relating to the I.G.Y. (Academy of Sciences of the U.S.S.R.), 493
  Work in the Antarctic during the, 677
Geophysics : Methods and Techniques in (edited by Prof. S. K. Runcorn), Vol. 1, *review* by M. J. Keen, 55
George, Joseph E. : Weather Forecasting for Aeronautics, *review*, 846
George, K. A. : Confining a Plasma in Steady Electric and Magnetic Fields, 334
Gerbillus pyramidum : Metabolism of (Paul F. Robinson and Roy V. Henrickson), 637
German Academy of Science, Berlin : The 2-Metre Universal Reflecting Telescope of the (Dr. Rudolf Jobst), 301
German Physical Societies, Association of (Plasma and Discharge Physics Group) : Fifth International Conference on Ionization Phenomena in Gases, 591
Germination : Moisture Conditions for Testing (Prof. N. Collis-George and Jocelyn E. Sands), 367
Gerstenberg (Arnold) Studentship for 1962 (University of Cambridge), 396
Gessner, Peter K., and others : Pharmacological Action of some Methoxy-Indolealkylamines, 179
Gey, K. F. (Pletscher, A., and) : Assay of 5-Hydroxytryptophan Decarboxylation in Intact Brain, 918
Ghana : Science in the Development of (Ghana Science Association Conference on), 1063
Ghana before Independence : White Man, a Study of the Attitudes of Africans to Europeans in (Dr. Gustav Jahoda), *review* by Dr. Margaret Read, 946
Ghana Science Association : Conference on Science in the Development of Ghana, 1064
  Presidential Address (R. P. Baffuor), 1064
Ghose, S. C., and Young, J. C. : The Use of the Term 'Flux', 621
Giant Axon (Squid) : Leakage Current Rectification in the (Dr. William J. Adelman and Dr. Robert E. Taylor), 883
Giant Grain Growth in Alpha Ferric Oxide (R. F. G. Gardner and D. W. Tanner), 1166
Giant Kelp, *Macrocystis pyrifera* : Life-span of the Fronds of the (Dr. W. J. North), 1214
Giant Nerve Fibre : Replacement of the Protoplasm of a, with Artificial Solutions (P. F. Baker, Prof. A. L. Hodgkin and Dr. T. I. Shaw), 885
Gibbens, T. C. N. : Trends in Juvenile Delinquency (United Nations, World Health Organization, Public Health Papers No. 5), 686
Gibberellic Acid : Reversal of γ-Ray-induced Dormancy of Potato Tubers by (Dr. P. B. Mathur), 547
Gibberellic Acid, Kinetin and Indolyl-3-Acetic Acid : A Sequential Growth Response to, in the Wheat Coleoptile (*Triticum vulgare* L.), (Dr. S. T. C. Wright), 699
Gibberellin Action on Growth of Seedlings in the Absence of Photosynthesis (Alan H. Haber, William L. Carrier and N. Jean Enochs), 1034
Gibbins, K., and Howarth, Dr. C. I. : Prediction of the Effect of Light-Time Fraction on the Critical Flicker Frequency—an Insight from Fourier Analysis, 330
Gibbons, I. R. : Structural Asymmetry in Cilia and Flagella, 1128
Gibbs, C. B. : Function of Limb Tremor, 540
Gibbs, Prof. R. D. (Shaw, E., and) : Comparative Chemistry and the Relationship of the Hamamelidaceae, 463
Gibson, Dr. Alan F., and others (edited by) : Progress in Semiconductors, Vol. 5, *review* by Dr. B. R. Pamplin, 116
Gibson, Prof. William C., and others : Longevity in Mice with a Genetically determined Muscular Dystrophy, 552
  A Reading Machine for the Blind, 874
Giesecke, Carl Ludwig (1761-1833), (Joan M. Eyles), 213
Gifford, F. : Small-Scale Turbulent Diffusion in the Atmosphere, 248
Gignoux, Prof. Maurice : Géologie Stratigraphique, cinquième édition, *review* by Prof. S. Simpson, 202
Gilbert, Dr. Walter, and others : Unstable Nuclear Acid revealed by Pulse Labelling of *Escherichia coli*, 581
Gill, J. C. : Spin-Lattice Relaxation of Pairs of Chromium Ions in Ruby, 619
Gill, Prof. W. D. : Some Aspects of Sedimentation in Orogenic Belts (The Himalayas), 139 ; (A Carboniferous Basin in Ireland), 139
Gillett, Dr. J. D. : Cyclical Feeding-Activity in Colonized Mosquitoes, 881
Gills of European Eels : Chloride-secreting Cells in the (Dr. Giuseppe Colombo), 101
Gilmour, Darcy : The Biochemistry of Insects, *review* by Prof. V. B. Wigglesworth, 1041
Gilmour, Dr. D. G., and others : Incomplete Antibodies to Chicken Red Cell Antigens, 544
Gilson, Dr. J. C. : Training in Occupational Hygiene, 1158
Gilvarry, Dr. J. J. : Origin of Ocean Basins and Continents, 1048
Gimingham, Dr. C. H. : Elected a Fellow of the Royal Society of Edinburgh, 135
Ginsburg, David (edited by) : Non-Benzenoid Aromatic Compounds, *review* by B. A. Ellis, 662
Giovanella, B., and others : Anti-tumoral Action of New Sarcomycin Derivatives, 819
Giovanelli, John, and Tobin, Noel F. : Adenosine Triphosphate- and Coenzyme *A*-dependent Decarboxylation of Oxalate by Extracts of Peas, 1006
Giovanelli, Dr. R. G. : Solar Seeing, 771

Girerd, R. J., and Rassaert, C. L. : Acute Effect of Three Antibiotics on Diuresis in the Rat, 536
Gitlin, Prof. David, and Merler, Ezio : Similarity of Peptides in Two Antigen-combining Fragments released from a Rabbit Antibody by Papain, 634
Giuliano, R., and others : Anti-tumoral Action of New Sarcomycin Derivatives, 819
Glaciation as related to Soil Profile Development (Welsh Soils Discussion Group Meeting on), 219
Glaciers (Norwegian Cirque) : Investigations on (edited by W. V. Lewis), *review* by Dr. C. A. M. King, 662
Gland (Adrenal), of the Rat : Replacement of Adrenaline and Noradrenaline in the, following Depletion and Redepletion with Reserpine (Dr. B. A. Callingham and Dr. Monica Mann), 1201
Gland (Pituitary), of the Pig : Arginine and 'Neurosecretory' Material in the (Dr. A. Howe), 175
Gland (The Prothoracic), and Colour Change in Locusts (Peggy E. Ellis and Dr. D. B. Carlisle), 368
Glands (Serous), of Equines : Content of Sialic Acid in (G. Aureli, G. Ferri and A. A. Castellani), 914
Glass : Effect of Temperature on Adhesion to, and Histogenic Cohesion of Dissociated Cells (Prof. A. Moscona), 408
  Effects of High Pressure on—a Possible Piezometer for the 100-Kilobar Region (Prof. Rustum Roy and H. M. Cohen), 798
Glasstone, Samuel, and Lewis, Prof. David : Elements of Physical Chemistry, *review* by Dr. A. Maccoll, 477
Glasstone, Samuel, and Lovberg, Ralph H. : Controlled Thermonuclear Reactions, *review* by Sir Basil Schonland, 750
Gleiser, Molly (Elliott, Prof. John F., and) : Thermochemistry for Steelmaking, Vol. I, *review* by Prof. A. R. Ubbelohde, 58
Glenn, Dr. W. E. : Television and Film Techniques (A Thermoplastic Recorder for Television and Similar Signals), 869
Glentworth, Dr. R. : Weathering, 1077
Gliner, B. M. : Determination of the Mechanical and Technological Properties of Metals (translated from the Russian), second edition, *review* by James G. Tweeddale, 573
Globulin Fractions (Serum) : Association of Detectable Antibodies produced by *Haemonchus* spp. Infections in Cattle, with (J. G. Ross), 1019
γ-Globulin, Gm^{ab}, in Nigerians (Prof. Samuel H. Boyer and E. J. Watson-Williams, 456
γ-Globulin (Normal Mouse) : An Investigation of Closely Related γ-Myeloma Proteins and, by Partial Enzymic Degradation and Starch-Gel Electrophoresis (Dr. Brigitte A. Askonas and Dr. J. L. Fahey), 980
γ-Globulin Molecules (Mouse) : The Distribution of Antigenic Groupings on (Dr. Brigitte A. Askonas and Dr. J. H. Humphrey), 1177
Glock, Waldo S., and others : Classification and Multiplicity of Growth Layers in the Branches of Trees at the Extreme Lower Forest Border, *review* by Prof. F. W. Jane, 850
Glockler, George : Internuclear Distances of Methyl and Methylene Radicals, 1002
Glover, Dr. Timothy D. : Disintegrated Spermatozoa from the Epididymis, 185
Glucose : Aspects of the Conversion of, to α-Ketoglutarate in *Acetobacter melanogenum* (Dr. D. H. Bone), 562
  An Effect of, on Acetate Metabolism in Sheep (I. G. Jarrett and O. H. Filsell), 1114
Glucose Media (Gelatin and) : Production of Soluble Melanoid Pigments by *Streptomyces* in (Prof. Augusto Capriotti), 464
Glutamic Dehydrogenase in Single-Gene Mutants of *Neurospora* Deficient in Amination (Dr. B. D. Sanwal and Dr. Madhu Lata), 286
Glucose-6-Phosphate Dehydrogenase Deficiency (Erythrocyte), in New Guinea and New Britain (Dr. Chev Kidson), 1120
Glucose-6-Phosphate Dehydrogenase Deficiency (Erythrocyte), in West Africa (Dr. A. C. Allison, L. J. Charles and I. A. McGregor), 1198
Glutamine Synthetase Activity ?: Is *Mycobacterium phlei* Glutamotransferase endowed with (Y. S. Halpern and Prof. Nathan Grossowicz), 812
Glutamine and Asparagine Supplements : Effects of, in the Dietary Regimen of Three Phenylketonuric Patients (Dr. Barbara H. Bowman and Dr. F. J. King), 417
Glutamotransferase (*Mycobacterium phlei*) : Is, endowed with Glutamine Synthetase Activity ? (Y. S. Halpern and Prof. Nathan Grossowicz), 812
Glutathione : Role of, and of a Self-stabilizing Chain of SH-Enzymes and Substrates in the Metabolic Regulation of Erythrocytes (D. Scheuch, C. Kahrig, E. Ockel, C. Wagenknecht and Prof. S. M. Rapoport), 631
Gluten (Wheat Starch, Flour and) : New Products from (B. H. Thewlis), 260
Glycogen of *Mactra* (Prof. Dwain D. Hagerman), 462
Glycogen and Starch : Recent Advances in the Biochemistry of (Dr. W. J. Whelan), 954
Glycolipids (Brain) : Quantitative Fractionation of, by Silicic Acid Chromatography (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch and Dr. Louis A. Faillace), 150
Glycoprotein from Rat Urine during the Development of Cancer : Changes of Hexose/Hexosamine Ratio and Degree of Branching in (Prof. Sen-itiroh Hakomori, Hiroaki Kawauchi and Taiko Ishimoda), 265
Glycoprotein (α_1-Acid) : Polymorphism of (K. Schmid and J. P. Binette), 630
Glycoproteins of Human Brain : Aminoglycolipids and—Quantitative Fractionation of Brain Glycolipids by Silicic Acid Chromatography (Dr. Samuel Bogoch and Dr. Louis A. Faillace), 150 ; Hot Methanol Extraction of Human Brain Aminoglycolipids (Dr. Samuel Bogoch, Peter C. Belval and Dorothy Winer), 152 ; Quantitative Separation and Determination of Brain Glycoproteins, Neuraminic Acid, Hexosamine and Hexoses by means of Whole Tissue Emulsion-Fractionation (Dr. Samuel Bogoch), 153
Glycoproteins (Brain), Neuraminic Acid, Hexosamine and Hexoses: Quantitative Separation and Determination of, by means of Whole Tissue Emulsion-Fractionation (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch), 153
Glynn, Dr. I. M. : Ion Transport, an Unorthodox View, *review*, 848
Gm^{a} Factor in Japanese (Dr. M. Yokoyama and Dr. N. Ueno), 455
Gm^{ab} (The γ-Globulin), in Nigerians (Prof. Samuel H. Boyer and E. J. Watson-Williams), 456
Gnanamuthu, Prof. C. P. : Determination of the Volume and Weight of Living Animals, 826
Goat : Polypnoea evoked by Heating the Udder of the (J. L. Linzell and J. Bligh), 173
Godwin, Prof. H. : Elected president of the Tenth International Botanical Congress, 768
Goedkoop, Prof. J. A. : Appointed managing director for research at the Reactor Centrum Nederland, 135
Golberg, Dr. Leon : Appointed director of the British Industrial Biological Research Association, 960 ; work of, 960
Gold Medals of the Linnean Society of London presented to Edmund William Mason and Dr. Frederick Stratten Russell, 962
Goldberg, Prof. L. : Elected a member of the Basic Sciences Section of the International Academy of Astronautics, 495
Golden Hamster, *Mesocricetus auratus* : Lactic Acid Concentration in the Kidney of the, in Different Conditions of Diuresis (Prof. V. Capraro, G. Valzelli and C. De Agostini), 178
Goldin, Abraham, and others : Effect of Iproniazid on the Antileukaemic Action of Reserpine, 723
Goldsmith, H. L., and Mason, S. G. : Axial Migration of Particles in Poiseuille Flow, 1095
Goldsmith, Prof. Werner : Impact–the Theory and Physical Behaviour of Colliding Solids, *review* by Dr. R. P. N. Jones, 947
Goldstaub, Dr. S. : Applications of Interference Microscopy (Crystal Growth), 316
Goldwasser, Dr. Robert, and Rozansky, Dr. Rachmiel : Detection of C-Reactive Protein by Fluorescent Antibody Techniques, 1020
Golgi Cycle (Gastropod) : Verification of the, with an Electron Microscope (Prof. Leonard G. Worley and Betty Hershenov), 828
Gonadectomy : Modification of Aortic Aerobic Metabolism in Rats by (Effect of Œstrogens on Atherosclerosis), (Dr. M. R. Malinow and Dr. J. A. Moguilevsky), 424
Goodall, Dr. M. C. : A Basic Notion in the Theory of Cognitive Systems, 840
Goodbody, Dr. Ivan : Inhibition of the Development of a Marine Sessile Community, 282
Goodman, H. P. : The Complete *n*-Point Graph, 840
Goodman, Dr. Harold S. : A General Method for the Quantitation of Immune Cytolysis, 269
Goodman, Dr. Morris, and Poulik, Emily : Effects of Speciation on Serum Proteins in the Genus *Macaca* with Special Reference to the Polymorphic State of Transferrin, 171
Goodwin, Prof. T. W. : Recent Advances in Biochemistry, fourth edition, *review* by Prof. D. C. Harrison, 569
Gordon, Dr. Albert S. : Elected president of the International Society for Research on the Reticulo-endothelial System, 679
Gordon, Dr. W. S. : Some Aspects of Disease Transmission by Ticks, 682
Gordon Research Conferences 1961, 396
Gorrod, Prof. A. R. N. : Sorbitol Metabolism in Apple Fruits, 190
Gosch, Hans H., and Arcos, Prof. Joseph C. : Transmission of Swelling Characteristics by Mitochondria of Regenerating Liver, 272
Gottschalk, Dr. Alfred : The Chemistry and Biology of Sialic Acids and related Substances, *review* by Dr. T. F. Slater, 57
Goudge, Prof. T. A. : The Ascent of Life—a Philosophical Study of the Theory of Evolution, *review* by P. G. Fothergill, 1042
Goudie, G. O. : Appointed a lecturer in engineering at the University of Edinburgh, 680
Gould, R. N. : Some Preliminary Experimental Tests of a Novel Method of Radiating at Very Low Frequencies, 332
Government of Bombay : Annual Report of the Haffkine Institute for the Year 1959, 1162
Government of Pakistan (Ministry of Industries) : Report of the Scientific Commission of Pakistan, 1139
Government Services : Employment of Scientists in, 309
Gowers, D. S., and Miller, R. E. : Use of Transparent Adhesive Tape in the Preparation of Microsections, 424
Graddon, Dr. D. F., and Watton, Dr. E. C. : Trimerization of Nickel-(II) Acetylacetonate in Solution, 906
Graduate Course on Electrical Machines (University of Birmingham), 768
Graeffe, G., and others : Mercury-206, a New Natural Radionuclide, 427
Graft-against-Host Immunological Reactions between Two Inbred Lines of Chickens : Genetic Basis for (L. N. Payne and P. Jaffe), 373
Graft-versus-Host Reaction : Increased Sensitivity to Bacterial Endotoxin of F_1 Hybrid Mice undergoing (Dr. J. G. Howard), 1122
Grafts (Skin), in Chicks : Dissociation of Isohaemagglutinin Formation and Tolerance of (Otakar Stark, Vladimir Křen and Bohdan Frenzl), 281
Graham, K. M., and Dionne, L. A. : Hybrids between *Solanum bulbocastanum* and *Solanum cardiophyllum*, 744
Graham, Thomas : Informal Meeting at the Royal College of Science and Technology, Glasgow (under the auspices of the Faraday Society) to mark the centenary of the publication of his paper on Liquid Diffusion, 312
Grain in Solutions of Manganous Chloride : Prevention of Manganese Deficiency in Oat by soaking the (Donald S. H. Drennan, Alex. M. M. Berrie and Gordon A. Armstrong), 824
Grain Growth (Giant), in Alpha Ferric Oxide (R. F. G. Gardner and D. W. Tanner), 1166
'Grain-orientated' Silicon–Iron Sheet : Anomalous Magnetostriction of the (Yûki Shirakawa and Ken'ichi Numakura), 523
Gram-negative Bacteria : Extraction of Nucleic Acid-free Lipopolysaccharides from (G. J. O'Neill and Prof. J. P. Todd), 344
Gramicidin *S* and other Polypeptides : Proposed Molecular Models of (Dr. Donald T. Warner), 120
Gramineae (Dr. C. R. Metcalfe), (Anatomy of the Monocotyledons, Vol. I), *review* by Prof. T. G. Tutin, *erratum*, 16
Grammar Schools : Physics in, 377
Grandpierre, Dr. R. : Elected a member of the Life Sciences Section of the International Academy of Astronautics, 495
Granite below the Northern Pennines (Prof. K. C. Dunham, Dr. M. H. P. Bott, Dr. G. A. L. Johnson and B. L. Hodge), 899
Granite (Weardale): Isotopic Ages of the (M. H. Dodson and S. Moorbath), 900
Granites in South-West England : Age of the Orogeny and (N. E. Butcher). 253
Granites (Dartmoor and Shap) : Potassium–Argon Ages of the, using the Total Volume and Isotopic Dilution Techniques of Argon Measurement (M. H. Dodson, J. A. Miller and D. York), 800
Grant, Dr. Julius : Cellulose Pulp from Wood, *review*, 380
Grants : Research (Leverhulme Trust Fund Awards), 678
  Training (Plastics Industry Education Fund), 963
Grants for Field Work in Natural History (Carnegie United Kingdom Trust), 395

Grants (Postgraduate Training), for Fishery Research (Ministry of Agriculture, Fisheries and Food and the Department of Agriculture and Fisheries for Scotland), 679
Granules (Adrenal Chromaffin) : Incorporation of Phosphorus-32 into Adenosine Triphosphate of (W. H. Prusoff, Dr. H. Blaschko, Dr. Margery G. Ord and Dr. L. A. Stocken), 354
Granuloma Pouch : Presence of Sialic Acid in a (Lorenzo Bolognani, Germano Coppi, Ferdinando Della Berta and Prof. Vittorio Zambotti), 913
Grape Vines : New Herbaceous Test Plants for Study of the Infectious Degeneration of (E. Baldacci, A. Amici, P. Bonola, E. Betto, G. Fogliani and E. Refatti), 371
Graph : The Complete *n*-Point (H. P. Goodman), 840
Graphite 'Compounds' : A Sealed-edge Theory of (Prof. J. G. Hooley), 529
Grapsoid Crabs : Visual Pigment of (Michael H. Briggs), 784
Grass Crop : The (Dr. William Davies), second edition, *review* by Prof. Ian Moore, 751
Grass (Brome-) Mosaic Virus, a Virus containing an Unusually Small Ribonucleic Acid (Larry E. Bockstahler and Prof. Paul Kaesberg), 192
Grassam, Dr. N. S. : Title of senior lecturer in mechanical engineering in the University of Southampton conferred on, 397
Grasses : An Anatomy of, *review* by Prof. T. G. Tutin, *erratum*, 16
Grasses of Burma, Ceylon, India and Pakistan (excluding Bambuseae), (Dr. N. L. Bor), *review* by John Lewis, 659
Grasses (Oriental) : A Survey of, *review* by John Lewis, 659
Grassland Philosophy, *review* by Prof. Ian Moore, 751
Gravitational Field (Earth's) : Odd Harmonics of the (R. R. Newton, H. S. Hopfield and R. C. Kline), 617
Gravitational Field Analogue : The Parametric Line—a Photon (O. Nourse), 522
Gray, Prof. C. H., and others : Effect of Allyl*iso*propylacetamide on Liver Metabolism, 1014
Gray, Dr. E. G. : Appointed to the University of London readership in cytology at University College, 396
Gray, N. B., and others : Oxidation of Galena to Lead Sulphate, 78
Graybiel, Dr. A. : Elected a member of the Life Sciences Section of the International Academy of Astronautics, 495
Green, D. E. : Plant Pathology, *review*, 660
Green, Dr. J., and others : Ubiquinone (Coenzyme Q) and the Function of Vitamin E, 318
  Ubiquinone and Tocopherol in Birds, 637
Green, Dr. M. L. H. : Organometallic Chemistry, *review*, 1143
Green Plants : Separation of Two Light Reactions in Noncyclic Photo-Phosphorylation of (Dr. M. Losada, Dr. F. R. Whatley and Prof. Daniel I. Arnon), 606, *erratum*, 1063
Green Terebellid Polychaete *Eupolymnia heterobranchia* (Johnson) : A Bilatriene Pigment in the (Dr. R. Phillips Dales), 168
Green-veined Orchid, *Orchis morio* : Life-history of the (J. F. H. Doulton), 767
Greenbaum, Dr. A. L. (Leal, R. S., and) : Incorporation of Phosphorylcholine labelled with Phosphorus-32 into the Liver Phospholipids of Rats treated with Growth Hormone, 548
Greenberg, Bernard : Mite Orientation and Survival on Flies, 107
Greene, Dr. H. : Weathering, 1066
Greengard, Dr. Olga, and Feigelson, Prof. Philip : A Difference between the Modes of Action of Substrate and Hormonal Inducers of Rat Liver Tryptophan Pyrrolase, 446
Greenhalgh, G. H. : Appointed nuclear energy attaché to the United Kingdom Delegation to the European Communities (Euratom), 1060 ; work of, 1060
Greenland : Scientific Problems of Exploring (Deutsche Gesellschaft für Polarforschung Symposium on), 493
Greenman, J. V. : Appointed to a Harkness Fellowship (theoretical physics and applied mathematics) of the Commonwealth Fund, 308
Greenstein (Jesse P.) Memorial Symposium, Division of Biological Chemistry, American Chemical Society, 1959 : Papers presented at the—Amino Acids, Proteins and Cancer Biochemistry (edited by Dr. John T. Edsall), *review* by Dr. F. H. Malpress, 203
Greenwood, Dr. J. A. : Electrical Contacts (Influence of Dust on Contacts), 867
Greenwood, J. E. G. W. : Weathering (Weathering of Rocks in Hot Climates), 1077
Greenwood, P. H. : Looking Ahead—the Future of Natural Faunas (Freshwater Fauna of Tropical Africa), 21
Gregg, Alan : Request from Dr. Wilder Penfield for material relating to the life of, 219
Gregory, Margaret E. (Garvie, Ellen I. and) : Folinic Acid Requirement of Strains of the Genus *Pediococcus*, 563
Gregory, Dr. P. H. : Ecology of Soil Fungi, *review*, 51
Greiff, Prof. D., and Myers, M. : Effect of Dimethyl Sulphoxide on the Cryo-tolerance of Mitochondria, 1202
Greig, Prof. J. : A Mathematical Tool-Kit for Engineers, *review*, 76
Grešíková, M., and others : Comparison of an Attenuated and Virulent Louping Ill Strain, 508
Greville, Dr. G. D. (Chappell, Dr. J. B., and) : Effects of Oligomycin on Respiration and Swelling of Isolated Liver Mitochondria, 502
Grey, Clifford E., and others : Intracellular Structures in Tumours induced by Polyoma, 610
Grey Seal *Halichoerus grypus* (Fab.) : Variation in the Secondary Sex-Ratio of the, during the Breeding Season (Dr. J. C. Coulson and Grace Hickling), 281
Griffin, Prof. Donald R. : Echoes of Bats and Man, *review* by G. R. Noakes, 64
Griffin, Wendy J., and others : Effect of *Iso*nicotinyl Hydrazide on the Path of Carbon in Photosynthesis, 553
Griffith, Prof. John Stanley : Awarded the Marlow Medal of the Faraday Society, 493
Griffith, T. C., and Power, E. A. (edited by) : Nuclear Forces and the Few-Nucleon Problem—Proceedings of the International Conference held at University College, London, 1959, *review* by Dr. R. J. N. Phillips, 63
Grimshaw, —. (read by) : Television and Film Techniques (Technical Requirements of Systems and Film for Colour Television), (paper by —. Veal and —. Richey), 869
Grinnell, Edward H., and others : Œstrogen Protection against Acute Digitalis Toxicity in Dogs, 1117
Grinter, Dr. R. : Awarded a CIBA fellowship (renewal) in physical organic chemistry, 489
Griseofulvin : Treatment of Ringworm by, 223
Grist, Dr. N. R. : Viruses in Diseases of Children, *review*, 659
Grjotheim, Prof. K., and others : Formation of Silicon Nitride Whiskers on a Ferro-Silicon Alloy at Room Temperature, 523
Gros, Dr. Francois, and others : Unstable Ribonucleic Acid revealed by Pulse Labelling of *Escherichia coli*, 581
Grosch, Prof. Daniel S., and Clark, Dr. Arnold M. : Nitrogen Protection of Fecundity and Fertility in Female *Habrobracon* treated with X-Rays, 546
Groshev, L. V., and others : Atlas of γ-Ray Spectra from Radiative Capture of Thermal Neutrons (translated from the Russian by J. B. Sykes), *review* by Dr. E. R. Rae, 75
Grossowicz, Prof. Nathan (Halpern, Y. S., and) : Is *Mycobacterium phlei* Glutamotransferase endowed with Glutamine Synthetase Activity?, 812
Grosz, Hanus J., and Rothballer, Alan B. : Hypothalamic Control of Lactogenic Function in the Cat, 349
Ground : Resting Habits of *Anopheles gambiae* and *Anopheles pharoensis* in Salt Bush and in Crevices in the (Dr. A. Smith), 1220
Ground-Water Measurements : Evaluation of Effective Rainfall and Irrigation from (C. Dakshinamurti, P. N. Saxena and E. G. K. Rao), 1100
Group Dying of Conifers (J. S. Murray and C. W. T. Young), (Forestry Commission, Forest Record No. 46), 685
Groupings (Antigenic), on Mouse Gamma-Globulin Molecules : The Distribution of (Dr. Brigitte A. Askonas and Dr. J. H. Humphrey), 1177
Groups, Pure and Applied, *review* by Dr. Hanna Neumann, 571
Groups : Abelian (L. Fuchs), *review* by Dr. Hanna Neumann, 571
  The Theory of (A. G. Kurosh), translated from the Russian and edited by K. A. Hirsch, second English edition, *review* by Dr. Hanna Neumann, 571
Groups (Transformation) : Seminar on (Armand Borel), *review* by Dr. Hanna Neumann, 571
Groves, Dr. G. V. : Technique of Optical Observations, 1066
Growing Hair Follicle of the Mouse : Proliferative Cycle in the (S. M. Cattaneo, H. Quastler and F. G. Sherman), 923
Growth in the British Economy, a Study of Economic Problems and Policies in Contemporary Britain (Political and Economic Planning), 199
Growth of Broiler Chickens : Effect of Feeding Two Levels of Dietary Calcium on the (Dr. H. Smith and Dr. J. H. Taylor) 1200
Growth of *Fomes annosus* under Reduced Oxygen Pressure and the Effect of Carbon Dioxide (Dr. K. Gundersen), 649
Growth of Organic Chemistry, *review* by Dr. J. Idris Jones, 56
Growth of Seedlings in the Absence of Photosynthesis : Gibberellin Action on (Alan H. Haber, William L. Carrier and N. Jean Enochs), 1034
Growth of Tumours in Rats fed with 4-Dimethylaminoazobenzene injected with Homogenized Tumour mixed with Freund Adjuvant (Prof. Nikša Allegretti), 1207
Growth and Genetics of Higher Fungi (British Mycological Society Symposium on), 399
Growth (Bacterial) : Fractions of Trypsinized Casein giving Different Patterns of (D. A. H. Hearfield and A. W. Phillips), 266
Growth (Crystal), of Gallium Arsenide using Carbon Boats (J. R. Knight), 1001
Growth (Economic) : Jamaica, 1830-1930—a Study in (Gisela Eisner), *review* by Prof. T. S. Simey, 1142
Growth (Giant Grain), in Alpha Ferric Oxide (R. F. G. Gardner and D. W. Tanner), 1166
Growth (Industrial) : Facts about, *review* by Sir Roy Harrod, 660
  Patterns of, 1938-58 (Statistical Office of the United Nations, Department of Economics and Social Affairs), *review* by Sir Roy Harrod, 660
Growth (Plant) : Soil Physical Conditions affecting (National Vegetable Research Station Association Talks and Demonstrations on), 221
Growth (Wool), in Sheep : Photoperiodicity of Seasonal Rhythm of (L. R. Morris), 102
Growth-control Factor : Isolation and Partial Characterization of a (Francis W. Sayre, Eder Hansen, Theodore J. Starr and Evangeline A. Yarwood), 1116
Growth Hormone : Induction of Mammary Carcinoma in Hypophysectomized Rats treated with 3-Methylcholanthrene, Œstradiol 17β, Progesterone and (Dr. Stretton Young), 356
  Incorporation of Phosphoryl-choline labelled with Phosphorus-32 into the Liver Phospholipids of Rats treated with (R. S. Leal and Dr. A. L. Greenbaum), 548
Growth Hormone (Human) : Prolactin Activity of (K. A. Ferguson and A. L. C. Wallace), 632
Growth Hormone (Sheep) : Preparation of (A. L. C. Wallace), 535
Growth Layers in the Branches of Trees at the Extreme Lower Forest Border : Classification and Multiplicity of (Waldo S. Glock, R. A. Studhalter and Sharlene R. Agerter), *review* by Prof. F. W. Jane, 850
Growth-Rate in Rats : Experimental Oxidation of Haemoglobin—its relation to (Dr. W. K. Metcalf), 543
Growth Regulators (Plant) : Azulene Derivatives as (Prof. Robert M. Muir and Corwin Hansch), 741
Growth Response (A Sequential), to Gibberellic Acid, Kinetin and Indolyl-3-Acetic Acid in the Wheat Coleoptile (*Triticum vulgare* L.), (Dr. S. T. C. Wright), 699
Growth Spiral (A Notable), on Synthetic Diamond (Prof. S. Tolansky), 992
Growth Spirals on Synthetic Magneto-plumbite Crystals (R. A. Lefever and A. B. Chase), 255
Growth Substances separated from the Root of Water Hyacinth by Paper Chromatography (Prof. S. M. Sircar and Arati Ray), 1213
Gruen, Dr. D. M., and Gut, R. : Spectrum of Vanadium in the Tri-positive Oxidation State (V^{3+}) in Tetrahedral Co-ordination, 713
Grundmann, E. : Distribution of Deoxyribonucleic Acid in the Cell Nucleus, 359
Guard Keratin Fibres (Normal and) : Different Permeability of Cuticular Sheath in (R. Z. de la Burde), 420
Guia, M. M., and others : Purification of the Toxic Fractions from *Ascaris lumbricoides* and their Effect on the Guinea Pig, 813
Guiana (British) : Archaeological Investigations in (Clifford Evans and Betty J. Meggers), *review* by Dr. G. H. S. Bushnell, 72
Guide to Astronomy and Space Research : The Space Encyclopaedia—a, second edition, *review* by R. H. Merson, 76
Guide to British Hardwoods (Dr. W. B. R. Laidlaw), *review* by J. L. Davidson, 48
Guide to Careers (National Union of Teachers), 1961 edition, 396

Guide (Pictorial), to the Language of Science, *review* by Prof. T. A. A. Broadbent, 68
Guide (A Short), to the Exhibition Galleries (British Museum (Natural History)), eighth edition, 1061
Guile, Dr. A. E. : Appointed senior lecturer in the Department of Electrical Engineering, University of Leeds, 963
Guile, Dr. A. E. (Secker, Dr. P. E., and) : A Theory of Cold-Cathode Arc Movement in a Magnetic Field, 428
Guinea Pig : Purification of the Toxic Fractions from *Ascaris lumbricoides* and their Effect on the (G. Gazzinelli, M. M. Guia, A. G. A. Neves, J. Pudles, W. T. Beraldo and W. Dias da Silva), 813
    Role of the Mucous Membrane in the Peristaltic Reflex in the Isolated Ileum of the (M. L. Diament, Dr. H. W. Kosterlitz and J. McKenzie), 1205
Guinea Pig during the Sexual Cycle : Hyaluronic Acid in the Uterine Wall of the (I. N. Likar, L. J. Likar and Dr. H. E. Taylor), 1118
Gulbenkian Foundation, Lisbon : Grants during the second half of 1960, 218
Gundersen, Dr. K. : Growth of *Fomes annosus* under Reduced Oxygen Pressure and the Effect of Carbon Dioxide, 649
Gurney, Dr. C. W., and Wackman, Nancy : Impairment of Erythropoiesis by Irradiation, 1017
Gut, R. (Gruen, Dr. D. M., and) : Spectrum of Vanadium in the Tri-positive Oxidation State (V^{3+}) in Tetrahedral Co-ordination, 713
Gut of Foetal Sheep : Absorption of Amniotic Fluid in the (G. H. Wright and Dr. D. A. Nixon), 816
Gut Wall in Aphid Vectors : Negative Evidence against Passage of Whole Plant Virus Particles through (Prof. Frej Ossiannilsson), 1222
Guth, P. S. (Spirtes, Prof. M. A., and) : An Effect of Chlorpromazine on Rat Mitochondrial Membranes, 274
Gutt, W. : A New Calcium Magnesiosilicate, 339
Gyroscopic System : Damped Free Oscillations of a (R. Parks and L. Maunder), 710

HABER, Alan H., and others : Gibberellin Action on Growth of Seedlings in the Absence of Photosynthesis, 1034
Haber, Prof. Francis C. : The Age of the World—Moses to Darwin, *review* by Dr. V. A. Eyles, 53
Habits (Resting), of *Anopheles gambiae* and *Anopheles pharoensis* in Salt Bush and in Crevices in the Ground (Dr. A. Smith), 1220
Habituation of the Arousal Response : Effects of Chlorpromazine and Lysergic Acid Diethylamide on the Rate of (Dr. B. J. Key), 275
Habrobracon (Female), treated with X-Rays : Nitrogen Protection of Fecundity and Fertility in (Prof. Daniel S. Grosch and Dr. Arnold M. Clark), 546
Hackett, E. M. (Nebel, Dr. B. R., and) : Synaptinemal Complexes (Cores) in Primary Spermatocytes of Mouse under Elevated Temperature, 467
Haddow, Prof. Alexander : Elected a member of the Advisory Board of the Beit Memorial Fellowships Trust, 768
Hadfield (Sir Robert) Medal for 1961 of the Iron and Steel Institute awarded to Emrys Davies, 13
Haem Iron Incorporation : Catalysis of Metalloporphyrin Formation—a Possible Enzyme Model for (M. B. Lowe and J. N. Phillips), 262
Haemagglutinating Sub-Units released from Newcastle Disease, Parainfluenza 1 and Mumps Viruses by Treatment with Ether (F. Sokol, D. Blaškovič and O. Krizanová-Laučíková), 834
Haemagglutinin Production in Pre-immunized Mice exposed to Continuous γ-Radiation (J. P. M. Bensted), 99
Haematite : 'Memory' of Initial Remanent Magnetization and Number of Repeating of Heat Treatments in Low-Temperature Behaviour of (Prof. T. Nagata, M. Yama-ai and S. Akimoto), 620
Haemoglobin : Experimental Oxidation of—its relation to Growth-rate in Rats (Dr. W. K. Metcalf), 543
    Haemoglobin F, its Significance in the Genetics and Evolution of (Dr. Wolf W. Zuelzer and Abner R. Robinson), 237
    Sensitivity of, to Oxidation in various Conditions (Dr. W. K. Metcalf), 543
Haemoglobin (Ferro-) : Rate of Oxidation of, by Ferricyanide Ions (Norman Sutin), 438
Haemoglobin (Paracrystalline), as a Species Difference between *Rattus norvegicus* and *Rattus rattus* (Dr. Z. Vokáč), 641
Haemoglobin *A* and *F* (Human) : Identity of the α-Chains of the Minor Human Haemoglobin Components A_2 and A_2' with the α-Chains of (Prof. Titus H. J. Huisman, Dr. Bennett Horton and Tine B. Sebens), 357
Haemoglobin A_2 (Human)—Chemistry, Genetics and Evolution (Prof. V. M. Ingram and Dr. A. O. W. Stretton), 1079
Haemoglobin F, its Significance in the Genetics and Evolution of Haemoglobin (Dr. Wolf W. Zuelzer and Abner R. Robinson), 237
Haemoglobin Components A_2 and A_2' (Minor Human) : Identity of the α-Chains of the, with the α-Chains of Human Haemoglobin *A* and *F* (Prof. Titus H. J. Huisman, Dr. Bennett Horton and Tine B. Sebens), 357
Haemoglobin Particles—Chemical and Genetic Aspects of their Structure (Dr. G. Braunitzer, Dr. N. Hilschmann, Dr. V. Rudloff, Dr. K. Hilse, Dr. B. Liebold and Dr. R. Müller), 480
Haemoglobin Variant (A New), the 'Honolulu Type', in a Chinese (Dr. Rose G. Schneider and Dr. Robert T. S. Jim), 454
Haemoglobin Variants in Sarawak and North Borneo (Dr. F. Vella and Dr. D. Tavaria), 729
Haemoglobins of Foetal *C57BL/6* Mice (J. Barrowman and M. Craig), 818
Haemoglobins of Marine Mammals : Bohr Effect in the (Austen Riggs), 94
Haemoglobins (Abnormal) : Absence of, in Colombian Tunebo Indians (Tullio Arends), 93
Haemonchus spp. Infections in Cattle : Association of Detectable Antibodies produced by, with Serum Globulin Fractions (J. G. Ross), 1019
Haemophagin : Effect of, on the Phagocytic Activity of the Reticulo-Endothelial System (Prof. T. Nicol, P. McKelvie and C. Druce), 92
Haemopoiesis—Cell Production and its Regulation : Ciba Foundation Symposium on (edited by G. E. W. Wolstenholme and Maeve O'Connor), *review* by Dr. P. F. Harris, 479
Haemoproteins : Precautions in the Use of Ferri- or Ferro-cyanide for the Study of (Prof. D. Keilin), 717
Haemosensitization with Purified *Escherichia coli O* 86 Substance : Production of B Character on Human Erythrocytes by (Dr. Jorgen Andersen), 730
Hafez, Prof. E. S. E., and Ensminger, M. E. : Transfer of Ova to the Bursa Ovarii and the 'Suspended Loop' of Tube in the Rabbit, 557
Haffkine Institute : Annual Report for the Year 1959, 1162
Hafner, R. : Awarded the Silver Medal of the Royal Aeronautical Society, 863
Hafnian Zircons (Dr. O. von Knorring and G. Hornung), 1098
Hagerman, Prof. Dwain D. : Glycogen of *Mactra*, 462
Haggett, P. : Awarded a Fellowship by the Leverhulme Trust, 678
Hahn, Otto, und Max von Laue (Lise Meitner,) zum 80 Geburtstag : Beiträge zür Physik und Chemie des 20 Jahrhunderts (herausgegeben von O. R. Frisch, F. A. Paneth, F. Laves und P. Rosbaud), *review* by Dr. C. A. Taylor, 118
Haile, Dr. N. S. (Dr. P. Liechti, in association with Dr. F. W. Roe and) : The Geology of Sarawak, Brunei and the Western Part of North Borneo, 768
Haile, Dr. N. S. (Harrisson, Tom, and) : A Rare Earless Monitor Lizard from Borneo, 1213
Hair : Demonstration of Nucleases on Mammalian Skin Surface and in Saline Extracts of (Dr. Joseph Tabachnick and Dr. Richard Freed), 921
Hair Follicle (Growing), of the Mouse : Proliferative Cycle in the (S. M. Cattaneo, H. Quastler and F. G. Sherman), 923
Hairy Pinnae : Frequencies of, among Indian and Sinhalese Peoples (K. R. Dronamraju), 653
Hakomori, Prof. Sen-itiroh, and Takeda, Koh-kiti : Fractionation of Compound Lipids by Dialysation in an Organic Solvent against an Organic Solvent, 265
Hakomori, Prof. Sen-itiroh, and others : Changes of Hexose/Hexosamine Ratio and Degree of Branching in Glycoprotein from Rat Urine during the Development of Cancer, 265
Halasz, Dr. I. : Gas Chromatography (Quantitative Analysis of Hydrocarbons with Capillary Columns and Flame Ionization Detectors), 867
Haldane, Prof. J. B. S. : Awarded the Kimber Genetics Medal of the United States National Academy of Sciences, 674
    Human Genetics, *review*, 1042
Haldane, T. G. N. : Elected a Fellow of the Imperial College of Science and Technology, London, 396
Halder, Dr. K. K. : The Place of Food Science and Technology in the Campaign against Malnutrition (Problems and some Solutions), 398
Haler, Dr. David, and Aebi, Dr. A. : A New, Highly Effective but Non-Toxic Antibacterial Substance, 734
Hales, F. W. : Science in the Development of Ghana (A Seismic Investigation of the Depth of Bedrock under the Volta River at Tefle), 1064
Halichoerus grypus (Fab.), (Grey Seal): Variation in the Secondary Sex-Ratio of the, during the Breeding Season (Dr. J. C. Coulson and Grace Hickling), 281
Halides (Coloured Alkali) : Catalytic Activity of (Ian D. Gay and Prof. Kenneth E. Hayes), 256
Hall, W. S. : Appointed a Research Fellow in mathematics at the University of Southampton, 397
Halleux, A., and others : Distribution of Oxygen in a Vitrinite and its Extraction Products, 437
Halling, J. : Appointed senior lecturer in mechanical engineering at the University of Liverpool, 963
Hallowell, Prof. A. I. : Elected a Member of the New York National Academy of Sciences, 674
Hallucinations and Illusory Experience : The Neurophysiological Aspects of (Dr. W. Grey Walter), 394
Halmos, Prof. Paul R. : Lectures on Ergodic Theory, *review* by Dr. I. E. Farquhar, 947
2-(2-Halogen-4-Chlorophenyl)-2-(4-Chlorophenyl)-1,1,1-Trichloroethanes: Toxicity of, to Normal and to DDT-Resistant House-Flies (Douglas J. Hennessy, Joseph Fratantoni, James Hartigan, Herbert H. Moorefield and M. H. J. Weiden), 341
Haloperidide (R 3201), a Highly Potent and Selective Anti-emetic in Dogs (Dr. P. A. J. Janssen and C. Niemegeers), 911
Halpern, Prof. B. N., and others : Influence of a Liver Fraction on the Phagocytic Activity of the Reticulo-Endothelial System in Mice, 279
Halpern, Y. S., and Grossowicz, Prof. Nathan : Is *Mycobacterium phlei* Glutamotransferase endowed with Glutamine Synthetase Activity?, 812
Halwagy, Dr. R. : The Effect of Depth of Transplanting on Tillering and Seed Production in Wheat, 513
Hamamelidaceae : Comparative Chemistry and the Relationship of the (E. Shaw and Prof. R. D. Gibbs), 463
Hamamura, Yasuji, and Naito, Ken-ichi : Food Selection by Silkworm Larvae, *Bombyx mori*—Citral, Linalyl Acetate, Linalol and Terpinyl Acetate as Attractants of Larvae, 879
Hamamura, Yasuji, and others : Food Selection by Silkworm Larvae, *Bombyx mori*—β-Sitosterol as one of the Biting Factors, 880
Hamer, N. K., and Orgel, Dr. L. E.: Structure and Spectra of $[(\text{Phenanthroline})_2\text{Fe}(\text{CNMe})_2]^{2+}$ and $[(\text{Phenanthroline})_2\text{Fe}(\text{CN})_2\text{H}_2]^{2+}$, 439
Hamilton, Prof. J. : The Works of Paul Ehrenfest, *review*, 115
Hamilton, Dr. W. D. : Awarded a CIBA fellowship (renewal) in nuclear physics, 489
Hamlin, M. J. : Appointed lecturer in the Department of Civil Engineering in the University of Birmingham, 135
Hamlyn, Dr. L. H. : Electron Microscopy of Mossy Fibre Endings in Ammon's Horn, 645
Hammond, E. Cuyler, and others : Science in Progress, Eleventh Series (edited by Hugh Taylor), *review* by Prof. Ritchie Calder, 45
Hammond, Sir John : Animal Husbandry, *review*, 47
Hamster (Golden), *Mesocricetus auratus* : Lactic Acid Concentration in the Kidney of the, in Different Conditions of Diuresis (Prof. V. Capraro, G. Valzelli and C. De Agostini), 178
Hamsters (Cold-exposed and Hibernating) : Clotting-Time of (Prof. Arliss Denyes and Joan D. Carter), 450
Hancox, Dr. N. M. : Cell Tissue and Organ, *review*, 47
Handbook : Fast Neutron, *review* by J. H. Montague, 944
Handbook of Aviation Meteorology (Air Ministry : Meteorological Office), *review*, 846
Handbuch der Frischwasser- und Abwasser-Biologie (Prof. Hans Liebmann), Band 2, *review* by Dr. H. B. N. Hynes, 1043

Hanks, G. D. (Novitski, Prof. E., and) : Analysis of Irradiated *Drosophila* Populations for Meiotic Drive, 989
Hannell, Dr. F. G. : Appointed to a senior lectureship in geography in the University of Bristol, 396
Hansch, Corwin (Muir, Prof. Robert M., and) : Azulene Derivatives as Plant Growth Regulators, 741
Hansen, Dr. A. Tybjaerg : Osmotic Pressure Effect of the Red Blood Cells —Possible Physiological Significance, 504
Hansen, Eder, and others : Isolation and Partial Characterization of a Growth-control Factor, 1116
Hansen, Dr. Vagn Kr. (Roushdy, Dr. H. M., and) : Filtration of Phytoplankton by the Octocoral *Alcyonium digitatum* L., 649
Hansen's Bacillus in Complex Symbiosis *in vitro* : Multiplication of (Dr. R. Devignat), 832
Haploid and Diploid Cells of *Protomyces inundatus* : Nucleic Acid Content of (L. R. G. Valadon, Dr. J. G. Manners and A. Myers), 836
Haploidization (Mitotic), by Treatment of *Aspergillus niger* Diploids with *para*-Fluorophenylalanine (Pol Lhoas), 744
Haptoglobin : Isolation of, by Chromatography on Diethylaminoethyl-Cellulose (DEAE), (Dr. M. Steinbuch and M. Quentin), 1121
Harberd, D. J. : Appointed lecturer in the Agricultural Section of the Department of Agriculture, University of Leeds, 963
Hardwoods (British) : Guide to (Dr. W. B. R. Laidlaw), *review* by J. L. Davidson, 48
Harkins, Henry N., and others : A New Preparation of Gastrin—Preliminary Characterizations, 448
Harkness Fellowships of the Commonwealth Fund : Appointments to, 308
Harman, Dr. J. W. : Elected a Member of the Royal Irish Academy, 492
Harmonics (Odd), of the Earth's Gravitational Field (R. R. Newton, H. S. Hopfield and R. C. Kline), 617
Harper, M. J. K., and others : Movement of the Ovum in the Reproductive Tract—A Possible Explanation for the Failure of Non-Surgical Ovum Transfers in the Cow, 789
Harris, Dr. E. J. : Transport and Accumulation in Biological Systems, second edition, *review* by Dr. I. M. Glynn, 848
Harris, Dr. Henry: The Nucleolus—Formation of the Nucleolus in Animal Cells, 1077
Harris, J. : Flow of Visco-Elastic Liquids from Tubes, 993
Harris, Dr. P. F. : Ciba Foundation Symposium on Haemopoiesis, *review*, 479
Harris, Prof. T. M. : Elected president for 1961-62 of the Linnean Society of London, 962
Harrison, Dr. B. D., and Winslow, Dr. R. D. : Diseases caused by Plant Viruses in Crops (Arabis Mosaic Virus), 220
Harrison, Dr. D., and Leung, L. S. : Bubble Formation at an Orifice in a Fluidized Bed, 433
Harrison, Prof. D. C. : More Recent Advances in Biochemistry, *review*, 569
Harrison, G. A. (edited by D. F. Roberts and) : Natural Selection in Human Populations (Symposia of the Society for the Study of Human Biology, Vol. 2), *review* by Kenneth A. R. Kennedy, 72
Harrison, J. M. : Elected president of the International Union of Geological Sciences, 132
Harrisson, Tom, and Haile, Dr. N. S. : A Rare Earless Monitor Lizard from Borneo, 1213
Harrod, Sir Roy : Facts about Industrial Growth, *review*, 660
Hart, D., and others : Acetylcholinesterase and the Life-span of the Erythrocyte, 1208
Hart, H. V.: Analysis of Agricultural Materials, Foods and Drugs, *review*, 749
Hart, T. John, and Currie, Ronald I. : The Benguela Current (Discovery Reports, Vol. 31), 1069
Hartigan, James, and others : Toxicity of 2-(2-Halogen-4-Chlorophenyl)-2-(4-Chlorophenyl)-1,1,1-Trichloroethanes to Normal and to DDT-Resistant House-Flies, 341
Hartshorne, Dr. N. H. : Banded Spherulites of Hippuric Acid, 1191
Hartwell, J. M. (Cowan, C. T., and) : An Organo-clay Complex for the Separation of Isomeric Dichlorobenzenes using Gas Chromatography, 712
Harvard Museum of Comparative Zoology : Appointment of Prof. Ernst Mayr as director, 308
Haskell, Dr. Gordon : Practical Heredity with *Drosophila*, *review* by T. H. Hawkins, 573
Hassan, H. M. (Sabet, K. A., and) : Effect of Ringing Cotton Stems on Content of Reducing Sugars and Insoluble Nitrogen and on Degree of Infection with *Xanthomonas malvacearum* (E.F.S.). Dowson, 934
Hat and Allied Feltmakers Research Association (British) : Thirteenth Annual Report (1959-60), 766
Hatchard, C. G. (Parker, Dr. C. A. and) : Lifetime of the Pyrene Dimer, 165
Hatfield College of Technology : Series of lectures on Technology, Science and Art—Common Ground, 397
    Summer School on Mathematics of Automatic Control, 865, 1063
Haughton, J. P. : Elected a Member of the Royal Irish Academy, 492
Hawker-Siddeley Aviation, Ltd. : Donation of £28,700 (over a period of seven years) to the University of Southampton centenary appeal, for a readership and a lectureship in the Department of Aeronautics and Astronautics, 397
Hawkes, Dr. J. G. : Appointed to a chair of taxonomic botany in the University of Birmingham, 679, 1059 ; work of, 1059
Hawkes, S. J. : Gas Chromatography, 867
Hawkins, Gerald S., and others : Science in Progress, Eleventh Series (edited by Hugh Taylor), *review* by Prof. Ritchie Calder, 45
Hawkins, Kathleen M. : Hospital Infection, *review*, 119
Hawkins, T. H. : Practical Heredity with *Drosophila*, *review*, 573
    Louis Pasteur, *review*, 848
Hawley, R., and Walley, Dr. C. A. : Phenomena occurring at Electrically Stressed Metallic Surfaces in Vacuum, 252
Haworth, Dr. F. : Physical Conditions of Soil, 221
Haworth, L. : Awarded the Bronze Medal of the Royal Aeronautical Society, 863
Hayashiya, Keizo, and others : Food Selection by Silkworm Larvae, *Bombyx mori*—β-Sitosterol as one of the Biting Factors, 880
Haydock, K. P., and others : 'Antibiotic Effects' in Plant Communities, 189
Hayes, Prof. Kenneth E. (Gay, Ian D., and) : Catalytic Activity of Coloured Alkali Halides, 256
Hayes, T. J., and others : Determination of Uranium as Pyrophosphate, 1188
Hayes, Thomas L. (edited by Cornelius A. Tobias and John H. Lawrence, assisted by) : Advances in Biological and Medical Physics, Vol. 7, *review* by Dr. N. M. Blackett, 74
Hayes, Wallace D. : Gasdynamic Discontinuities, *review*, 118
Haynes, B. : Qualitative Organic Analysis, *review* by Dr. J. D. Loudon, 753
Haynes, Fred N. and Brenda D. : Garth House as a Centre for Ecological Botany, 590
Hayreh, S. S. : Elected to a Beit Memorial Junior Fellowship, 768
Hazor II—an Account of the Second Season of Excavations, 1956 (Yigael Yadin, Yohanan Aharoni, Ruth Amiran, Trude Dothan, Immanuel Dunayevsky and Jean Perrot), (James A. de Rothschild Expedition to Hazor), *review* by Peter J. Parr, 381
HeLa Cells : Changes in X-Ray Sensitivity of, during the Division Cycle (Dr. Toyozo Terasima and Prof. L. J. Tolmach), 1210
HeLa Cells *in vitro* : Activation of Ferritin Synthesis and Induction of Changes in Fine Structure in—Implications for Protein Synthesis (Prof. G. W. Richter), 413
Health, Ministry of, and General Register Office : Report on Hospital In-Patient Enquiry for the Two Years 1956-1957, 1162
Health (Public) Nursing : Aspects of (United Nations, World Health Organization, Public Health Papers No. 4), 490
Health Physics (Radiation Protection) : Summer School in (Imperial College of Science and Technology, London), 680
Heard, D. H., and others : Electrophoretic Mobility of Cultured Mesodermal Tissue Cells, 1009
Hearfield, D. A. H., and Phillips, A. W. : Fractions of Trypsinized Casein giving Different Patterns of Bacterial Growth, 266
Hearnshaw, Prof. L. S. : Prelude to Sociology, *review*, 379
Heat Transfer (University of Colorado International Conference on), 1156
Heat Treatments : 'Memory' of Initial Remanent Magnetization and Number of Repeating of, in Low-Temperature Behaviour of Haematite (Prof. T. Nagata, M. Yama-ai and S. Akimoto), 620
Heat (Waste) Recovery (Institute of Fuel Conference on), 591
Heated Metals : Arc Initiation on, by a Hydrogen Discharge (J. T. Maskrey, R. A. Dugdale and R. C. McVickers), 997
Heath, J. : Awarded a Research Grant by the Leverhulme Trust, 678
Heaths (Upland) : Afforestation of (J. W. L. Zehetmayr), 136
Heating the Scrotum of the Ram : Polypnoea evoked by (Dr. G. M. H. Waites), 172
Heating the Udder of the Goat : Polypnoea evoked by (J. L. Linzell and J. Bligh), 173
Heating (Self-) and Gas Emission in Nitrate-containing Fertilizers : Control of (K. S. Barclay, J. M. Crewe and K. F. J. Thatcher), 1189
Heavy Metals : Incorporation of Amino-Acids into Protein and Ribonucleic Acid of the Lens of the Rat—Effect of (Dr. Anima Devi, Dr. Sidney Lerman and Dr. Nirmal K. Sarkar), 1193
Hebb, Dr. Catherine, and others : Choline Acetylase in the Human Placenta at Different Stages of Development, 1202
Heckmann, Prof. Otto H. L. : Awarded the James Craig Watson Medal of the United States National Academy of Sciences, 489, 674 ; work of, 489
Hedén, C.-G. (Zacharias, B., and) : Effect of Biological Nitrogen Fixation of Nitrogen Gas treated with Ultra-violet Radiation, 817
Hedges, Dr. Ernest S. (edited by, with the collaboration of Prof. J. W. Cuthbertson, Prof. E. C. Ellwood, Dr. W. E. Hoare and W. R. Lewis) : Tin and its Alloys, *review* by Prof. F. C. Thompson, 753
Heeschen, D. S., and Meredith, B. L. : Secular Variation of the Flux Density of the Radio Source Cassiopeia A, 705
Height of Anisotropy : Variation in, and Random Drift Velocity of the Irregularities in the Ionosphere (Dr. B. Ramachandra Rao and K. V. V. Ramana), 706
Heisch, R. B., and others : *Culicoides adersi* Ingram and Macfie, 1923, a Presumed Vector of *Hepatocystis* (=*Plasmodium*) *kochi* (Laveran, 1899), 739
Heisler, Dr. Mary, and others : Correlation between Ulcerative Colitis and *Rh* Blood Groups, 1123
Helical Microfibrils from a Steroid Acid Complex : Formation of (Dr. N. Ramanathan, A. L. Currie and J. Ross Colvin), 779
Helium and Argon in Ionization Detectors : Comparison of (W. A. Wiseman), 1187 ; (R. Berry), 1188
Heller, Prof. Józef, and others : Reduction of Coenzyme Q by Succinic Acid Dehydrogenase, 539
Hemenway, Curtis L., and others : Nanometeorites, 897
Hen's Egg Yolk : Proteins of the (Dr. W. H. Cook), 1173 ; (Dr. O. A. Schjeide and Dr. M. R. Urist), 1175
Henderson, J. G. : Appointed to a senior lectureship in electrical engineering in the University of Birmingham, 679
Henkin, Prof. Leon, and others (edited by) : The Axiomatic Method, with special reference to Geometry and Physics—Proceedings of an International Symposium held at the University of California, Berkeley, 1958, *review* by F. I. G. Rawlins, 570
Henn, T. R. : Science in Writing, *review* by Ruxton Villet, 71
    Technology, Science and Art—Common Ground (Poetry and Science), 397
Hennessy, Douglas J., and others : Toxicity of 2-(2-Halogen-4-Chlorophenyl)-2-(4-Chlorophenyl)-1,1,1-Trichloroethanes to Normal and to DDT-Resistant House-Flies, 341
Henrickson, Roy V. (Robinson, Paul F., and) : Metabolism of *Gerbillus pyramidum*, 637
Henriot, Prof. E. : *Obituary* by Dr. L. Marton, 861
Henry, Dr. N. F. M., and others : The Interpretation of X-Ray Diffraction Photographs, second edition, *review* by Dr. M. R. Truter, 69
Hentges, J. F., and others : Blood Potassium and Sodium of Hereford and Brahman Cattle and some Breeds of Sheep maintained in Florida, 181
Heparin and Synthetic Heparinoids : Gastro-Intestinal Absorption of (E. Windsor and G. E. Cronheim), 263
Heparinoids (Synthetic) : Gastro-Intestinal Absorption of Heparin and (E. Windsor and G. E. Cronheim), 263
Hepatic Blood (Portal and), in Normal and Cirrhotic Liver : Flow of (Dr. T. Nakamura, S. Nakamura and T. Kaneko), 812
Hepatic Coma : Urocanicaciduria associated with (Dr. William M. McIsaac and Irvine H. Page), 347
Hepatitis (Infective) : The Liver in (Dr. W. G. C. Bearcroft), 549
Hepatocystis (=*Plasmodium*) *kochi* (Laveran, 1899) : *Culicoides adersi* Ingram and Macfie, 1923, a Presumed Vector of (Prof. P. C. C. Garnham, R. B. Heisch, D. M. Minter, J. D. Phipps and Michael Ikata), 739
Hepatoma Tissue (Transplantable) : Magnetic Susceptibility of Normal Liver and (Frank E. Senftle and Arthur Thorpe), 410

Herbaceous Test-Plants (New), for Study of the Infectious Degeneration of Grape Vines (E. Baldacci, A. Amici, P. Bonola, E. Betto, G. Fogliani and E. Refatti), 371
Heredity (Practical), with *Drosophila* (Dr. Gordon Haskell), *review* by T. H. Hawkins, 573
Hereford and Brahman Cattle and some Breeds of Sheep maintained in Florida : Blood Potassium and Sodium of (J. R. Howes, G. K. Davis, P. E. Loggins and J. F. Hentges), 181
Heresies : Animal Husbandry (Dr. Allan Fraser), *review* by Sir John Hammond, 47
Herington, Dr. E. F. G. : Constants for Binary Systems, *review*, 661
Heritable Respiratory Deficiency in *Saccharomyces* : Induction of, by Pantothenate Starvation (Prof. Alvin Sarachek and Gregory L. Fowler), 792
Herman, Robert, and Hofstadter, Prof. Robert : High-Energy Electron Scattering Tables, *review* by D. F. Jackson, 204
Herman, Capt. Robert H. : Reaction of Digitalis Compounds with Antimony Pentachloride, 268
Herman, Capt. Robert H., and Bruton, Joseph : Reaction of Antimony Pentachloride with Pregnane-3α, 17α, 20α-Triol, Pregnane-3α, 17α, 20α-Triol-11-One and other Adrenal Cortical Steroids, 444
Hermaphrodite Polychaete Worm *Ophryotrocha puerilis siberti* : Existence of Multiple Sex Genotypes in the (Prof. G. Bacci and O. Bortesi), 838
Hermaphroditic Sea Urchin : Development of Eggs from a (D. S. Fry), 185
Hermes, P., and others : Agglutination of Sensitized Alligator Erythrocytes by Rheumatoid Factor(s), 552
Hermit Crab New to Britain (Dr. D. B. Carlisle and N. Tregenza), 931
Hermit Crab (A Bathyal-abyssal), with a Calcified Asymmetrical Abdomen (Torben Wolff), 931
Herout, V., und andere : Die Terpene, Teil I, Sesquiterpene, *review* by Dr. E. G. Kellett, 849
Herries, D. G., and others : The Active Site and Mechanism of Action of Bovine Pancreatic Ribonuclease, 781
Herrmann, Ingeborg (Bassett, Dr. C. Andrew L., and) : Influence of Oxygen Concentration and Mechanical Factors on Differentiation of Connective Tissues *in vitro*, 460
Hersch, P. : Localization of Ferrous Corrosion by Azide, 163
Hershenov, Betty (Worley, Prof. Leonard G., and) : Verification of the Gastropod Golgi Cycle with an Electron Microscope, 828
Hertfordshire : Avian Schistosomes in (Dr. D. L. H. Robinson), 827
Heslop, J. P., and Ray, J. W.: Nucleotides and other Phosphorus Compounds of Cockroach Nerve, 1192
Heterogeneous Catalysis : The Mechanism of (Third International Congress on Catalysis), 963
Heteroglycan from *Toxoplasma gondii* (P. G. Pande, R. R. Shukla and P. C. Sekariah), 644
Heterometry (Prof. Mordecai Bobtelsky), *review* by Dr. D. T. Lewis, 380
Heterozygote Advantage : The Evolution of Overdominance—Natural Selection and (Dr. P. A. Parsons and Dr. W. F. Bodmer), 7
Heusser, Dr. Calvin : Solar Variations, Climate Change and related Geophysical Problems (Approximate Contemporaneity of Late- and Post-Glacial Events in the Rockies and the Southern Andes), 967
Hewitt, Dr. E. J. (Bond, Dr. G., and) : Molybdenum and the Fixation of Nitrogen in *Myrica* Root Nodules, 1033
n-Hexane (Liquid) : Photoemission into (Dr. D. W. Swan), 903
Hexaploid *Dactylis* (Dr. Martin Borrill and Keith Jones), 469
Hexobarbitone Sleeping-Time Test in Mice : A Potential Source of Error in the (Dr. P. W. Ramwell and I. H. Lester), 640
Hexosamine and Hexoses (Brain Glycoproteins, Neuraminic Acid,) : Quantitative Separation and Determination of, by means of Whole Tissue Emulsion-Fractionation (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch), 153
Hexosamines and N-Acetylhexosamines : Paper Chromatography of (Dr. R. Heyworth, H. R. Perkins and P. G. Walker), 261
Hexose/Hexosamine Ratio : Changes of, and Degree of Branching in Glycoprotein from Rat Urine during the Development of Cancer (Prof. Sen-itiroh Hakomori, Hiroaki Kawauchi and Taiko Ishimoda), 265
Hexoses (Brain Glycoproteins, Neuraminic Acid, Hexosamine and) : Quantitative Separation and Determination of, by means of Whole Tissue Emulsion-Fractionation (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch), 153
Hey, Dr. J. S. : The Radio Telescope Interferometer at the Royal Radar Establishment, 1150
Heymann, Dr. F. F. : Title of reader in physics (at University College, London) conferred on, 396
Heys, H. L. : An Introduction to Electronic Theory of Organic Compounds, *review* by Dr. R. I. Reed, 296
Heyworth, Dr. R., and others : Paper Chromatography of Hexosamines and N-Acetylhexosamines, 261
Hiatt, Dr. H., and others : Unstable Ribonucleic Acid revealed by Pulse Labelling of *Escherichia coli*, 581
Hibernating Hamsters (Cold-exposed and) : Clotting-Time of (Prof. Arliss Denyes and Joan D. Carter), 450
Hickish, Dr. D. : Training in Occupational Hygiene (Ten Years Experience in providing an Occupational Hygiene Service for the 200 Member Firms of the Slough Industrial Health Service), 1158
Hickling, Dr. C. F. : Fish Culture, *review*, 51
Hickling, Grace (Coulson, Dr. J. C., and) : Variation in the Secondary Sex-Ratio of the Grey Seal *Halichoerus grypus* (Fab.) during the Breeding Season, 281
Hidaka, Zyun, and others : Mutation in Tobacco Mosaic Virus induced by a New Carcinogen, 4-Nitroquinoline N-Oxide, 833
Hide, Dr. R. : Origin of Jupiter's Great Red Spot, 895
Hieger, Dr. I. : Carcinogenesis, *review* by Dr. M. H. Salaman, 1143
Higgons, D. J. : Fungicides in Agriculture and Horticulture (Field Trials and Ultimate Commercial Application of 2,6-Dichloro-4-nitroaniline), 594
Higgs, J. W. Y. : The British Agricultural History Society, 681
High Dose-Response Levels : Radiation Carcinogenesis at—a Hypothesis (Prof. Arnold E. Reif), 415
High-Energy Electron Scattering Tables (Robert Herman and Prof. Robert Hofstadter), *review* by D. F. Jackson, 204
High Polymers : The Importance of Hydroxyl Radicals as Intermediates in the Cross-linking of, by γ-Irradiation (Yoshitada Tomoda and Minoru Tsuda), 905
High Pressure : Effects of, on Glass—a Possible Piezometer for the 100-Kilobar Region (Prof. Rustum Roy and H. M. Cohen), 798
High Speed Electronic Computer of the U.S.S.R. Academy of Sciences : The Cathode Ray Tube Memory of the (V. N. Laut and L. A. Lyubovich), translated from the Russian by Ruth Feinstein ; edited by F. A. Sowan, *review* by J. C. Cluley, 383
High Speed Wing Theory (Robert T. Jones and Doris Cohen), *review*, 118
High Temperatures : Physicochemical Measurements at (edited by Dr. J. O'M. Bockris, Dr. J. L. White and Dr. J. D. Mackenzie), *review* by Prof. A. R. Ubbelohde, 58
  Towards Physical Chemistry at, *review* by Prof. A. R. Ubbelohde, 58
High Voltages : X-Ray Protection at (National Committee on Radiation Protection and Measurements of the United States National Bureau of Standards, Report No. 26), 589
High and Low Salt Intakes (Chronic) : Effect of, on Adrenocortical Function (Dr. Lewis K. Dahl, Lawrence Silver, Sanford Spraragen and Malcolm Smilay), 348
Higher Approximations in Aerodynamic Theory (M. J. Lighthill), *review*, 118
Higher Education : Co-operation in the Expansion of, 941
Higher Fungi : Growth and Genetics of (British Mycological Society Symposium on), 399
Highly Effective (A New,), but Non-Toxic Antibacterial Substance (Dr. David Haler and Dr. A. Aebi), 734
Highly Oriented Boron Nitride (D. Belforti, S. Blum and B. Bovarnick), 901
Highly Potent and Selective Anti-emetic Agent in Dogs : Haloperidide (*R* 3201), a (Dr. P. A. J. Janssen and C. Niemegeers), 911
Highly Unsaturated Fatty Acids : Effect of Duodenal Administration of, on Composition of Ruminant Depot Fat (Bridget M. Ogilvie, Prof. G. L. McClymont and Dr. F. B. Shorland), 725
Hilger and Watts, Ltd. : Wray (Optical Works), Ltd., now associated with, 769
Hill, Prof. A. Bradford : Retirement from the chair of medical statistics in the London School of Hygiene and Tropical Medicine, 764 ; work of, 764
Hill, A. V., *review* by Sir Henry Dale, 41
Hill, Prof. A. V. : The Ethical Dilemma of Science and other Writings, *review* by Sir Henry Dale, 41
Hill, C. R., and Jaworowski, Dr. Z. S. : Lead-210 in some Human and Animal Tissues, 353
Hill, D. K., and others : Ekanite, a New Metamict Mineral from Ceylon, 997
Hill, Marjorie J., and McColl, Ian : Ultrasonic Detection of Choledocholithiasis, 627
Hill, Terrell L. : An Introduction to Statistical Thermodynamics, *review* by Dr. H. Steeple, 119
Hill, Dr. W. C. Osman : *Obituary* of W. E. Lawrence, 1058
Hill (Abyssal), on the Floor of the North Atlantic Ocean : Lavas from an (D. H. Matthews), 158
Hillaby, John : Future of Natural Faunas, 20
Hilschmann, Dr. N., and others : The Haemoglobin Particles—Chemical and Genetic Aspects of their Structure, 480
Hilse, Dr. K., and others : The Haemoglobin Particles—Chemical and Genetic Aspects of their Structure, 480
Hilsenrath, Joseph, and others : Tables of Thermodynamic and Transport Properties of Air, Argon, Carbon Dioxide, Carbon Monoxide, Hydrogen, Nitrogen, Oxygen and Steam, *review* by Prof. A. R. Ubbelohde, 58
Himsworth, Sir Harold : *Obituary* of Prof. T. R. Elliott, 486
Hindu University (Banaras) : Appointment of Dr. S. P. Ray-Chaudhuri to the chair of zoology, 765
Hinton, Dr. George Greenough : Awarded a Queen Elizabeth II Fellowship by the Queen Elizabeth II Canadian Fund to Aid in Research on the Diseases of Children, 863
Hippuric Acid : Banded Spherulites of (Dr. N. H. Hartshorne), 1191
Hirao, K., and others : Measurement of Positive-Ion Density in the Ionosphere by Sounding Rocket, 156
Hirs, C. H. W. (Edmundson, A. B., and) : The Amino-Acid Sequence of Sperm Whale Myoglobin—Chemical Studies, 663
Hiruki, Chuji, and others : Mutation in Tobacco Mosaic Virus induced by a New Carcinogen, 4-Nitroquinoline N-Oxide, 833
Histamine Dinucleotide : Enzymatic Formation of Histamine Ribotide from (Dr. Saburo Muraoka, Mie Inoue and Prof. Hidemasa Yamasaki), 532
Histamine Ribotide : Enzymatic Formation of, from Histamine Dinucleotide (Dr. Saburo Muraoka, Mie Inoue and Prof. Hidemasa Yamasaki), 532
Histamine Stress : Effect of Splenectomy on the Resistance of Rats to (Arthur M. Sackler, A. Stanley Weltman and Peter Jurtshuk, jun.), 274
Histiocytes : Non-specific Esterase Activity in (Syun Hosoda and Sadao Takase), 927
Histochemical Analysis of some Dehydrogenase Systems in the Erythrocytes of some Lower Vertebrates (Prof. A. Stolk), 926
Histochemical Demonstration of Aldehydes by *p*-Phenylenediamine (Dr. V. Scarselli), 1206
Histochemistry (Enzyme), of the Cells in Hodgkin's Disease and Allied Disorders (Dr. R. F. Dorfman), 925
Histogenic Cohesion of Dissociated Cells : Effect of Temperature on Adhesion to Glass and (Prof. A. Moscona), 408
Histologie : Notions de Cytologie et (Prof. M. Chèvremont), réimpression, *review* by Dr. N. M. Hancox, 47
Histology (Cerebellar) : Functional Interpretation of (Dr. V. Braitenberg), 539
Historical Geology, *review* by Prof. S. Simpson, 202
History : Earth, *review* by Dr. V. A. Eyles, 53
  North Atlantic Biota and their (NATO Advanced Study Institutes Programme Symposium on), 769
History of Platinum from the Earliest Times to the Eighteen-Eighties (Donald McDonald), *review* by Prof. F. C. Thompson, 61
History of Science—New Annual Review of Literature, Research and Teaching in the History of Science, 677
History (Cainozoid), of Western Tasmania : Comments on the (B. Scott), 677
Hoare, Dr. W. E., and others (edited by Dr. Ernest S. Hedges, with the collaboration of) : Tin and its Alloys, *review* by Prof. F. C. Thompson, 753
Hodge, B. L., and others : Granite below the Northern Pennines, 899
Hodgetts, D. : Appointed to a lectureship in automobile engineering at the College of Aeronautics, Cranfield, 218

Hofmann, Dr. Alan F. : Micellar Solubilization of Fatty Acids and Monoglycerides by Bile Salt Solutions, 1106
Hofstadter, Prof. Robert (Herman, Robert, and) : High-Energy Electron Scattering Tables, *review* by D. F. Jackson, 204
Hodgkin, Prof. A. L., and others : Replacement of the Protoplasm of a Giant Nerve Fibre with Artificial Solutions, 885
Hodgkin's Disease and Allied Disorders : Enzyme Histochemistry of the Cells in (Dr. R. F. Dorfman), 925
Hogan, T. W. : Termination of Diapause in *Acheta* by Urea, 367
Hogben, Lancelot : Mathematics in the Making, *review* by Prof. T. A. A. Broadbent, 68
Hoge, Harold J., and others : Tables of Thermodynamics and Transport Properties of Air, Argon, Carbon Dioxide, Carbon Monoxide, Hydrogen, Nitrogen, Oxygen and Steam, *review* by Prof. A. R. Ubbelohde, 58
Hokin, Dr. Lowell E. (Hokin, Dr. Mabel R., and) : Further Evidence for Phosphatidic Acid as the Sodium Carrier, 1016
Hokin, Dr. Mabel R., and Hokin, Dr. Lowell E. : Further Evidence for Phosphatidic Acid as the Sodium Carrier, 1016
Hokkaido, Japan : Cultural Sequences in (Lieut.-Col. H. A. MacCord), 864
Holland, P. (Cavanagh, J. B., and) : Cholinesterase in the Chicken Nervous System, 735
Holliday, Dr. A. K. (Wood, C. W., and) : Inorganic Chemistry, *review* by Charles Holt, 60
  Organic Chemistry, *review* by Charles Holt, 60
  Physical Chemistry, *review* by Charles Holt, 60
Hollings, M. : Diseases caused by Plant Viruses in Crops (Some Celery Viruses), 220
Hollingworth, Prof. S. E. : Some Aspects of Sedimentation in Orogenic Belts, 139
  Elected president of the Geological Society of London, 492
Hollis, J. M. : Appointed to a Harkness Fellowship (philosophy) of the Commonwealth Fund, 308
Holloway, A. H. (edited by G. H. Frénot and) : AGARD Aeronautical Multilingual Dictionary, *review* by Dr. D. Küchemann, 851
Holmes, Dr. J. R. : Appointed to a senior lectureship in veterinary medicine in the University of Bristol, 396
Holmes, Peter : At the Annual Conference of the British Agricultural History Society (Farming Regions of Devon), 681
Holmes, Paul F. : The Importance of Field Studies in Modern Education, 590
Holotrich Protozoa of the Rumen : A Diurnal Cycle for (D. B. Purser), 831
Hölscher, J. G. A. : Gas Chromatography (Quantitative Analysis of Hydrocarbons with Capillary Columns and Flame Ionization Detectors), 867
Holstein, Dr. H. : Appointed a lecturer in mathematics at the University of Southampton, 397
Holt, Charles : Triology of Chemistry, *review*, 60
Holtedahl, Prof. Olaf : Elected a Foreign Member of the Royal Society, 488, 959 ; work of, 959
Holzbauer-Sharman, Margarethe M. A. : Elected to a Fourth-year Beit Memorial Fellowship, 768
Homage to Sherrington, *review* by Sir John Eccles, 43
Home Office : Delinquent Generations—a Home Office Research Unit Report (Studies in the Causes of Delinquency and the Treatment of Offenders, No. 3), (Leslie T. Wilkins), 24
Home Office Control of Experiments on Animals : Opinions of British Scientists of (Universities Federation for Animal Welfare), 677
l'Homme et l'Espace, No. 1, 1061
Homogenized Tumour mixed with Freund Adjuvant : Growth of Tumours in Rats fed with 4-Dimethylaminoazobenzene injected with (Prof. Nikša Allegretti), 1207
Homografts (Skin) : Influence of Uraemia on the Survival of (F. G. Smiddy, R. G. Burwell and F. M. Parsons), 732
Homologous Antiserum : Antibodies blocking Neutralization of Penicillinase by the (Dr. Nathan Citri and Gill Strejan), 1010
Homolytic Aromatic Substitution (Dr. G. H. Williams), *review* by Dr. J. Idris Jones, 294
'Honolulu Type' : A New Haemoglobin Variant, the, in a Chinese (Dr. Rose G. Schneider and Dr. Robert T. S. Jim), 454
Honours List : The Queen's Birthday, 1059
Hooker, Dr. S. G. : Awarded the British Gold Medal for Aeronautics of the Royal Aeronautical Society, 863
Hooley, Prof. J. G. : A Sealed-edge Theory of Graphite 'Compounds', 529
Hopfield, H. S., and others : Odd Harmonics of the Earth's Gravitational Field, 617
Hopkins, Dr. M. R. : Electrical Contacts (Properties of Metals at High Temperatures), 866
  Science and Industry—the Problem of Communication, 965
Hopkins Prize of the Cambridge Philosophical Society awarded to M. J. Lighthill, 769
Horák, M., und andere : Die Terpene, Teil I, Sesquiterpene, *review* by Dr. E. G. Kellett, 849
Horecker, Prof. B. L. : Elected a Member of the United States National Academy of Sciences, 674
Horizon : 108-216 Mc./s. Radio Signals from Satellites below the (L. J. Anderson), 708
Hormonal Inducers (Substrate and), of Rat Liver Tryptophanpyrrolase : A Difference between the Modes of Action of (Dr. Olga Greengard and Prof. Philip Feigelson), 446
Hormonal Induction of Alkaline Phosphatase in Human Cells in Tissue Culture (Dr. Rody P. Cox and Dr. Colin M. MacLeod), 85
Hormone (Growth) : Incorporation of Phosphoryl-choline labelled with Phosphorus-32 into the Liver Phospholipids of Rats treated with (R. S. Leal and Dr. A. L. Greenbaum), 548
  Induction of Mammary Carcinoma in Hypophysectomized Rats treated with 3-Methylcholanthrene, Œstradiol 17β, Progesterone and (Dr. Stretton Young), 356
Hormone (Human Growth) : Prolactin Activity of (K. A. Ferguson and A. L. C. Wallace), 632
Hormone (Plasma Erythropoietic) : Stathmokinetic (Mitosis-inhibiting) Method for estimating (Dr. Hillas Smith), 640
Hormone (Sheep Growth) : Preparation of (A. L. C. Wallace), 535
Hormones in Copepoda : Diapause, Neurosecretion and (Dr. D. B. Carlisle and W. J. Pitman), 827
Hormones (Anterior Pituitary) : Starch-gel Electrophoresis of (K. A. Ferguson and A. L. C. Wallace), 629
Horne, F. R. : *Obituary* of G. W. G. Briggs, 861
Hornung, G. (von Knorring, Dr. O., and) : Hafnian Zircons, 1098
Horseshoe Crab : Effect of Temperature on the Retinal Slow Potential of the (Dr. R. Kikuchi, K. Naito and S. Minagawa), 1011
Horticulture : Fungicides in Agriculture and (Pesticides Group of the Society of Chemical Industry Symposium on), 591
Horton, Dr. Bennett, and others : Identity of the α-Chains of the Minor Human Haemoglobin Components A_2 and A_2' with the α-Chains of Human Haemoglobin *A* and *F*, 357
Horvat, J., and others : Partial Inhibition of Antibody Formation by means of Anti-Ribonucleoprotein Serum, 1218
Horwitz, William (edited by) : Official Methods of Analysis of the Association of Official Agricultural Chemists, ninth edition, *review* by H. V. Hart, 749
Hoskins, Dr. W. G. : At the Annual Conference of the British Agricultural History Society (Types of Farmhouse on Dartmoor), 681
Hosoda, Syun, and Takase, Sadao : Non-specific Esterase Activity in Histiocytes, 927
Hosoya, Takashi, and others : Experimentally Produced Selenium Poisoning in various Animals, 310
Hospital In-Patient Enquiry for the Two Years 1956-1957 : Report on (Ministry of Health and General Register Office), 1162
Hospital Infection (Prof. R. E. O. Williams, Dr. R. Blowers, Prof. L. P. Garrod and Dr. R. A. Shooter), *review* by Kathleen M. Hawkins, 119
Host (A New Intermediate), of Schistosome Trematodes from New South Wales (Wm. H. Ewers), 283
Hot Environments : Physiological Responses to (compiled by Dr. R. K. Macpherson), 1163
Hot Methanol Extraction of Human Brain Aminoglycolipids (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch, Peter C. Belval and Dorothy Winer), 152
Hotchkiss, Prof. R. D. : Elected a Member of the United States National Academy of Sciences, 674
Houghton, Prof. G. (Leonard, Dr. J. H., and) : Effect of Mass Transfer on the Velocity of Rise of Bubbles in Water, 687
House of Commons : Adjournment Debate on the Employment of Librarians in the United Kingdom, 133
  Debate on the Nuclear Power Programme, 199
  Adjournment Debate on the United Kingdom's contribution to the Malaria Eradication Campaign, 490
  Adjournment Debates on Afforestation in the National Parks, 871
  Second reading of the Department of Technical Co-operation Bill, 1039
House of Lords : Debate on Afforestation in the National Parks, 872
  Second reading of the Rating and Valuation Bill, 1154
House Dust Allergen : Preparation and Properties of Purified (Dr. L. Berrens and E. Young), 536
House-Flies (Normal and to DDT-Resistant) : Toxicity of 2-(2-Halogen-4-Chlorophenyl)-2-(4-Chlorophenyl)-1,1,1-Trichloroethanes to (Douglas J. Hennessy, Joseph Fratantoni, James Hartigan, Herbert H. Moorefield and M. H. J. Weiden), 341
House-Mouse : Pulmonary Tumours, Group VII and Sex in the (Dr. J. A. H. Tatchell), 837
Houston, Dr. Arthur Hillier (Threadgold, Dr. Lawrence T., and) : An Electron Microscope Study of the 'Chloride-Secretory Cell' of *Salmo salar* L., with reference to Plasma-Electrolyte Regulation, 612
How Old is the Earth ? (Dr. Patrick M. Hurley), *review* by G. R. Noakes, 64
Howard, Dr. J. G. : Increased Sensitivity to Bacterial Endotoxin of F_1 Hybrid Mice undergoing Graft-versus-Host Reaction, 1122
Howarth, Dr. C. I. (Gibbins, K., and) : Prediction of the Effect of Light-Time Fraction on the Critical Flicker Frequency—an Insight from Fourier Analysis, 330
Howarth, Sheila (Ozeki, H., and) : Colicine Factors as Fertility Factors in Bacteria—*Salmonella typhimurium* Strain *LT*2, 986
Howe, Dr. A. : Arginine and 'Neurosecretory' Material in the Pituitary Gland of the Pig, 175
Howe, jun., Prof. H. Branch: Determining Mating Type in *Neurospora* without Crossing Tests, 1036
Howes, J. R., and others : Blood Potassium and Sodium of Hereford and Brahman Cattle and some Breeds of Sheep maintained in Florida, 181
Howick, Lord : Appointed a member of the Nature Conservancy, 218
Hsu, Dr. Tao-Ching : Appointed a lecturer in engineering at the University of Edinburgh, 680
Huet, Prof. Marcel : Traité de Pisciculture, troisième édition, *review* by Dr. C. F. Hickling, 51
Huffman, Dr. Max N., and others : Œstrogen Protection against Acute Digitalis Toxicity in Dogs, 1117
Huggett, Prof. A. St. G., and Nixon, Dr. D. A. : Fructose as a Component of the Foetal Blood in several Mammalian Species, 1209
Huggett, Clayton, and others : Solid Propellant Rockets, *review* by Prof. D. B. Spalding, 66
Hughes, C. G. : Striate Mosaic—a New Disease of Sugar Cane, 366
Hughes, Dr. Donald J. : The Neutron Story, *review* by G. R. Noakes, 64
Hughes, D. T. : Chromosomes of the Wild Mushroom, 285
Huisman, Prof. Titus H. J., and others : Identity of the α-Chains of the Minor Human Haemoglobin Components A_2 and A_2' with the α-Chains of Human Haemoglobin *A* and *F*, 357
Hull, Dr. D. : Appointed senior lecturer in metallurgy at the University of Liverpool, 963
Hull Rev. J. E. : *Obituary* by Dr. W. S. Bristowe, 487
Human Adult Cerebellum in Culture : Spontaneous Potentials from Explants of (Pro. A. W. B. Cunningham), 918
Human Beings (Normal and Leukaemic) : Immunological Differences of Deoxyribonucleoproteins from White Blood Cells of (Luigi Messineo), 1122
Human Biology, Society for the Study of : Symposium on Natural Selection in Human Populations (edited by D. F. Roberts and G. A. Harrison), *review* by Kenneth A. R. Kennedy, 72
Human Brain : Aminoglycolipids and Glycoproteins of—Quantitative Fractionation of Brain Glycolipids by Silicic Acid Chromatography (Dr. Samuel Bogoch and Dr. Louis A. Faillace), 150 ; Hot Methanol Extraction of Human Brain Aminoglycolipids (Dr. Samuel Bogoch, Peter C. Belval and Dorothy Winer), 152 ; Quantitative Separation and Determination of Brain Glycoproteins, Neuraminic Acid, Hexosamine and Hexoses by means of Whole Tissue Emulsion-Fractionation (Dr. Samuel Bogoch), 153

- Human Brain Aminoglycolipids : Hot Methanol Extraction of (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch, Peter C. Belval and Dorothy Winer), 152
- Human Cells in Tissue Culture : Hormonal Induction of Alkaline Phosphatase in (Dr. Rody P. Cox and Dr. Colin M. MacLeod), 85
- Human Destiny : The Conquest of Space—Moon Probes and Artificial Satellites, their Impact on (Albert Ducrocq), 567
- *Human Developmental Biology, Abstracts of* (Excerpta Medica Foundation), Vol. I, No. I, 133
- Human Erythrocyte Surface : Action of Proteolytic Enzymes on the (Dr. G. Uhlenbruck), 181
- Human Erythrocytes : Production of B Character on, by Haemosensitization with Purified *Escherichia coli O* 86 Substance (Dr. Jørgen Andersen), 730
- Human Genetics, *review* by Prof. J. B. S. Haldane, 1042
  - Recent Advances in (edited by Prof. L. S. Penrose, with the assistance of Helen Lang Brown), *review* by Prof. J. B. S. Haldane, 1042
- Human Growth Hormone : Prolactin Activity of (K. A. Ferguson and A. L. C. Wallace), 632
- Human Haemoglobin *A* and *F* : Identity of the α-Chains of the Minor Human Haemoglobin Components A_2 and A_2' with the α-Chains of (Prof. Titus H. J. Huisman, Dr. Bennett Horton and Tine B. Sebens), 357
- Human Haemoglobin A_2—Chemistry, Genetics and Evolution (Prof. V. M. Ingram and Dr. A. O. W. Stretton), 1079
- Human Haemoglobin Components A_2 and A_2' (Minor) : Identity of the α-Chains of the, with the α-Chains of Human Haemoglobin *A* and *F* (Prof. Titus H. J. Huisman, Dr. Bennett Horton and Tine B. Sebens), 357
- Human Nutrition, *review* by Prof. J. Yudkin, 751
  - Recent Advances in, with special reference to Clinical Medicine (Prof. J. F. Brock), *review* by Prof. J. Yudkin, 751
- Human Pathology: Zymograms in (I. Oort and R. G. J. Willighagen), 642
- Human Placenta : Choline Acetylase in the, at Different Stages of Development (Gordon Bull, Dr. Catherine Hebb and Dobrila Ratković), 1202
- Human Populations : Natural Selection in (Symposia of the Society for the Study of Human Biology, Vol. 2), edited by D. F. Roberts and G. A. Harrison), *review* by Kenneth A. R. Kennedy, 72
- Human Serum : Evidence for Multiple Caeruloplasmin Components in (R. McAlister, Dr. G. M. Martin and E. P. Benditt), 927
- Human Vocal Muscle : Spiral Nerve-endings (Proprioceptots) in the (G. Rudolph), 726
- Human and Animal Mycology, International Society for : *Sabouraudia*, Vol. I, No. I, 15
- Human and Animal Tissues : Lead-210 in some (C. R. Hill and Dr. Z. S. Jaworowski), 353
- Humic Fractions isolated by means of Partition Chromatography : Biological Activity of some (Prof. A. Paszewski, J. Trojanowski and A. Lobarzewska), 277
- Humid Tropics (Wet) : National Forests of Agricultural Crops for the (Antony Santiago), 1070
- Humphrey, Dr. J. H. (Askonas, Dr. Brigitte A., and) : The Distribution of Antigenic Groupings on Mouse Gamma-Globulin Molecules, 1177
- Humphreys, John G., and Newton, T. H. : Internal Carotid Artery Occlusion, 310
- Humphreys, Stewart R., and others : Effect of Iproniazid on the Antileukaemic Action of Reserpine, 723
- Humphries, Dr. E. C. : Effects of Quality of Light on Development of Roots on Dwarf Bean Hypocotyls in Presence and Absence of Boron, 701
- Hurain : Activation of, by Bivalent Iron (Dinah Sharon de Seidl and Karl Gaede), 1112
- Hurcomb, Lord : Appointed chairman of the Nature Conservancy, 218
- Hurley, Dr. Patrick M. : How Old is the Earth ?, *review* by G. R. Noakes, 64
- Hurrell, H. G. : Gift to the Devon Naturalists' Trust of Lady's Wood, 1155
- Hurricanes, *review* by Dr. F. H. Ludlam, 52
  - Atlantic (Gordon E. Dunn and Banner I. Miller), *review* by Dr. F. H. Ludlam, 52
- Hurst, R., and others (edited by) : Technology, Engineering and Safety, Vol. 2 (Progress in Nuclear Energy, Series 4), *review* by D. English, 204
- Husbandry : Animal, *review* by Sir John Hammond, 47
  - Sheep (Government of Northern Ireland, Ministry of Agriculture, Leaflet No. 47), 962
- Husbandry (Animal) Heresies (Dr. Allan Fraser), *review* by Sir John Hammond, 47
- Husserl, Edmund : Cartesian Meditations, an Introduction to Phenomenology (translated by Dorion Cairns), *review* by F. I. G. Rawlins, 295
- Hutchison, W. K. : Industry, Science and the Chemical Engineer (Presidential Address to the Institution of Chemical Engineers), 588
- Hutton, E. (Stevens, Dr. B., and) : Lifetime of the Pyrene Dimer, 166
- Huxley, Sir Julian : Looking Ahead—the Future of Natural Faunas (The Fauna of East Africa), 20
- Hvinden, T., and Lillegraven, A. : Caesium-137 in Air, Precipitation, Drinking Water, Milk and Beef in Norway during 1959 and 1960, 402
- Hyacinth (Water) : Growth Substances separated from the Root of, by Paper Chromatography (Prof. S. M. Sircar and Arati Ray), 1213
- Hyaluronic Acid in the Uterine Wall of the Guinea Pig during the Sexual Cycle (I. N. Likar, L. J. Likar and Dr. H. E. Taylor), 1118
- Hybrid Embryos (*Bufo* ♀ x *Rana temporaria* ♂) : Incorporation of Tritium-labelled Thymidine in (R. Tencer), 100
- Hybrid Mice (F_1), undergoing Graft-versus-Host Reaction : Increased Sensitivity to Bacterial Endotoxin of (Dr. J. G. Howard), 1122
- Hybridization of Mammalian Cells *in vitro* : Karyological Demonstration of (Serge Sorieul and Prof. Boris Ephrussi), 653
- Hybridization (Experimental), of *Aedes* (*Stegomyia*) *aegypti* (L.) with *A.* (*S.*) *simpsoni* (Theobald), (G. A. H. McClelland), 369
- Hybrids between *Solanum bulbocastanum* and *Solanum cardiophyllum* (K. M. Graham and L. A. Dionne), 744
- Hydantoin Syntheses : Alkylcyclohexanones in the Strecker and Bucherer (L. Munday), 1103
- Hyde, D. : Appointed to a Research Fellowship in the Department of Flight at the College of Aeronautics, Cranfield, 218
- Hydrazide (Isonicotinyl) : Effect of, on the Path of Carbon in Photosynthesis (G. G. Pritchard, Prof. C. P. Whittingham and Wendy J. Griffin), 553
- Hydrides (Complex), of Platinum (Dr. J. A. Chopoorian, Dr. J. Lewis and Prof. R. S. Nyholm), 528
- Hydrocarbons (Aromatic) : A Physical Theory of Carcinogenesis by (Dr. J. B. Birks), 232
  - The Relation between Theoretical and Experimental Diamagnetic Susceptibilities for (Dr. D. W. Davies), 1102
- Hydrodynamics of Oceans and Atmospheres (Carl Eckart), *review* by Dr. P. G. Drazin, 1044
- Hydrogen : Photoproduction of, Photofixation of Nitrogen and a Unified Concept of Photosynthesis (Prof. Daniel I. Arnon, Dr. M. Losada, Dr. M. Nozaki and Dr. K. Tagawa), 601
- Hydrogen, Nitrogen, Oxygen and Steam (Air, Argon, Carbon Dioxide, Carbon Monoxide,) : Tables of Thermodynamic and Transport Properties of (Joseph Hilsenrath, Charles W. Beckett, William S Benedict, Lilla Fano, Harold J. Hoge, Joseph F. Masi, Ralph L. Nuttall, Yeram S. Touloukian and Harold W. Woolley), *review* by Prof. A. R. Ubbelohde), 58
- Hydrogen Bonding in Apatitic Calcium Phosphates (Louis Winand, Prof. M. J. Dallemagne and Prof. G. Duyckaerts), 164
- Hydrogen Cyanide : Amino-acid Synthesis from, under Possible Primitive Earth Conditions (Prof. J. Oró and S. S. Kamat), 442
- Hydrogen Discharge : Arc Initiation on Heated Metals by a (J. T. Maskrey, R. A. Dugdale and R. C. McVickers), 997
- Hydrogen Peroxide : Determination of Very Small Amounts of (H. Perschke and Prof. E. Broda), 257
- Hydrogenic Plasmas : Rates of Recombination in (Dr. R. W. P. McWhirter), 902
- Hydrographic Research (Oceanographic and) : British Funds for, 216
- Hydrological Research (Department of Scientific and Industrial Research Committee on), 490
- Hydrolysis of Paraoxon in Mammalian Blood (Prof. Ervin G. Erdös and Lois E. Boggs), 716
- Hydrolytic Enzyme Action : Molecular Mechanisms for (Richard M. Krupka and Keith J. Laidler), 916
- Hydroperoxide (Linoleate) : Destruction of, by Soya Extracts (Dr. J. A. Blain and T. Barr), 538
- Hydroperoxide (Methyl Linoleate) : Reactions of Cytochrome-c with (Dr. A. Banks, E. Eddie and J. G. M. Smith), 908
- α-Hydroxy Acids : Electron Spin Resonance Spectra of γ-Irradiated Carbohydrates and (A. J. Bailey, Dr. S. A. Barker, J. S. Brimacombe, D. Pooley and D. H. Spence), 259
- 20β-Hydroxy-pregn-4-ene-3-one in Luteal Tissue from Pregnant Whales : Identification of (John Kristoffersen, Torleiv Lunaas and Weiert Velle), 1009
- 16α-Hydroxyl Group : Introduction of the, into Œstrogens by Streptomycetes (Dr. D. A. Kita, J. L. Sardinas and G. M. Shull), 627
- 6-Hydroxyl Group in Phenolic Steroids : Configuration of the (Dr. H. Breuer, R. Knuppen and Gerta Pangels), 720
- Hydroxyl Radicals as Intermediates in the Cross-linking of High Polymers by γ-Irradiation : The Importance of (Yoshitada Tomoda and Minoru Tsuda), 905
- Hydroxylamine Dehydrogenase, Hyponitrite Dehydrogenase and Nitrite Dehydrogenase : Ammonia Dehydrogenase, (Kazuo Yamafuji and Yutaka Osajima), 534
- Hydroxyproline : Isolation of Peptides containing, from Animal Tissues (V. Kobrle and M. Chvapil), 909
- 5-Hydroxytryptamine : Release of, from Rat Mast Cells *in vitro* (Dr. G. T. Archer), 350
- 5-Hydroxytryptophan Decarboxylation in Intact Brain : Assay of (A. Pletscher and K. F. Gey), 918
- Hygiene (Occupational) : Training in (British Occupational Hygiene Society Conference on), 1158
- Hygiene (Tropical), for Laymen (Ross Institute of Tropical Hygiene, London School of Hygiene and Tropical Medicine Course in), 397
- Hygiene (Tropical), Ross Institute of (London School of Hygiene and Tropical Medicine) : Course in Tropical Hygiene for Laymen, 397
- Hygiene (Tropical Medicine and), Royal Society of : Annual General Meeting, 963
  - Chalmers Medal to be presented to Dr. C. E. Gordon Smith, 963
- Hygiene and Tropical Medicine, London School of : Appointment of Dr. Peter Armitage to the University of London chair of medical statistics, 680, 764
  - Retirement of Prof. A. Bradford Hill from the chair of medical statistics, 764
- Hygiene and Tropical Medicine, London School of (Ross Institute of Tropical Hygiene) : Course in Tropical Hygiene for Laymen, 397
- Hygiene and Tropical Medicine, London School of (Imperial College of Science and Technology and the) : Postgraduate Courses in Public Health Engineering, 971
- Hyman, Dr. Libbie H. : Elected a Member of the United States National Academy of Sciences, 674
- Hynes, Dr. H. B. N. : Technical Applications of Freshwater Biology, *review*, 1043
- Hyoscyamine : Cholinergic Activity of (Prof. A. Teitel), 814
- Hyperon Stars (G. S. Saakyan), 961
- Hyperpolarizing Response (Repetitive), of the Nerve Fibre of Crayfish (T. Tomita, T. Saimi and N. Toida), 271
- Hypersensitive Cells (Delayed), mixed with Antigen *in vitro* : Production of Pyrogenic Substances by Extracts of (Dr. J. Johanovsky), 355
- Hypersensitivity : Alloxan and (Dr. George E. Thompson), 822
- Hypersensitivity (Delayed) : Mechanism of Increase of Endotoxin Susceptibility in Animals showing (Dr. J. Johanovsky, M. Vrána, O. Vejbora and D. Francová), 182
- Hypersensitivity (Local Endotoxin), and its relation to the Shwartzman Phenomenon (Dr. Tibor G. Kováts), 177
- Hypersonic Wind-Tunnel : Stagnation Temperature Measurements in a, using the Sodium Line Reversal Method (J. L. Stollery), 778
- Hypervitaminosis-A : Influence of Uterine Position on the Response of the Mouse Embryo to the Teratogenic Effects of (Dr. D. H. M. Woollam and Dr. J. W. Millen), 184
- Hypocotyls (Dwarf Bean) : Effects of Quality of Light on Development of Roots on, in Presence and Absence of Boron (Dr. E. C. Humphries), 701
- Hypogean Faunas, *review* by Dr. D. J. Crisp and P. J. S. Boaden, 50
- Hyponitrite Dehydrogenase and Nitrite Dehydrogenase : Ammonia Dehydrogenase, Hydroxylamine Dehydrogenase, (Kazuo Yamafuji and Yutaka Osajima), 534

Hypophysectomized Rats treated with 3-Methylcholanthrene, Œstradiol 17β, Progesterone and Growth Hormone : Induction of Mammary Carcinoma in (Dr. Stretton Young), 356
Hypothalamic Control of Lactogenic Function in the Cat (Hanus J. Grosz and Alan E. Rothballer), 349
Hypothermia and the Effects of Cold (*British Medical Bulletin*, Vol. 17, No. 1,) 141
Hypothetically Primitive Conditions : Polypeptide Formation from Asparagine under (J. Kovács and H. Nagy (Kovcás)), 531

ICE (Arctic) : Artificial Melting of the (I. S. Peschansky), 492
Ice Crystals : Spiral Etch-Pits of (J. Muguruma), 37
Ichimiya, T., and others : Measurement of Positive-Ion Density in the Ionosphere by Sounding Rocket, 156
Iconographia Mycologica (O. Verona and T. Benedek), (*Mycopathologia et Mycologia Applicata*, Vols. 11, 12 and 13), *review* by Dr. David Park, 52
Idema, A. A., and others : Influence of various Dietary Fats on the Blood Cholesterol Content, 310
Identification of 20β-Hydroxy-pregn-4-ene-3-one in Luteal Tissue from Pregnant Whales (John Kristoffersen, Torleiv Lunaas and Weiert Velle), 1009
Identification of Œstradiol 17β, Testosterone and its Precursors from *Scylliorhinus stellaris* Testes (Dr. G. Chieffi and Dr. C. Lupo), 169
Identification of Sugars in the Manna of Northern Iraq (Prof. Zakaria I. Sabry and Nicola A. Atallah), 915
Identification (Possible), of Atmospheric Waves associated with Ionospheric Storms (M. D. Wright), 898
Identity of the α-Chains of the Minor Human Haemoglobin Components A_2 and A_2' with the α-Chains of Human Haemoglobin A and F (Prof. Titus H. J. Huisman, Dr. Bennett Horton and Tine B. Sebens), 357
Iglesias, Rigoberto (Lipschutz, Prof. Alexander, and) : Recovery of Fertility after Protracted Steroid-induced Sterility in Mice, 174
Igneous Activity and Tectonics (Karroo), in south-east Southern Rhodesia (K. G. Cox, J. R. Vail, L. J. Monkman and R. L. Johnson), 40 ; (D. N. Wood), 802
Igneous Intrusion (Basic) : Determination of the Age of a, by the Potassium-Argon Method (Dr. Ian McDougall), 1184
Ignimbrites : Origin of (F. J. Fitch), 995
Iguana iguana : Effect of Castration on Experimental Liver Lesion in (Prof. A. Stolk), 93
Ikata, Michael, and others : *Culicoides adersi* Ingram and Macfie, 1923, a Presumed Vector of *Hepatocystis* (=*Plasmodium*) *kochi* (Laveran, 1899), 739
Ileum (Isolated), of the Guinea Pig : Role of the Mucous Membrane in the Peristaltic Reflex in the (M. L. Diament, Dr. H. W. Kosterlitz and J. McKenzie), 1205
Ilford Nuclear Emulsions : Discrimination between α-Tracks and γ-Background in (K. Van Camp, M. Dorikens and L. Dorikens-Vanpraet), 38
Illusory Experience : The Neurophysiological Aspects of Hallucinations and (Dr. W. Grey Walter), 394
Illustrations of Fungi, *review* by Dr. David Park, 52
Image formed in the Cat's Eye : The Distribution of Light in an (Valerie B. Morris and F. H. C. Marriott), 176
Imidazole Acrylic Acid Excretion in Kwaskiorkor (Dr. R. G. Whitehead and Dr. H. R. V. Arnstein), 1105
Immature Rat : Effect of 9α-Fluoro-11β-hydroxy-17-methyltestosterone ('Ultandren') on the Testis of the (Dr. E. J. Clegg), 542
Immortal Longings (Stephen Findlay), *review* by the Very Rev. Dr. W. R. Matthews, 943
Immune Cytolysis : A General Method for the Quantitation of (Dr. Harold S. Goodman), 269
Immunizing Antigen from Rabbit-Pox and Vaccinia Viruses (G. Appleyard), 465
Immunological Differences of Deoxyribonucleoprotein from White Blood Cells of Normal and Leukaemic Human Beings (Luigi Messineo), 1122
Immunological Reactions (Graft-against-Host), between Two Inbred Lines of Chickens : Genetic Basis for (L. N. Payne and P. Jaffe), 373
Impact—the Theory and Physical Behaviour of Colliding Solids (Prof. Werner Goldsmith), *review* by Dr. R. P. N. Jones, 947
Impact on Human Destiny : The Conquest of Space—Moon Probes and Artificial Satellites, their (Albert Ducrocq), 567
Impact Tests (Notched), of Mild Steel : Cleavage Fracture Initiation in (J. W. Davies and A. A. Wells), 432
Impaired Respiration in Staphylococci : Biochemical Changes accompanying (Prof. G. F. Gause, G. V. Kochetkova and G. B. Vladimirova), 978
Impairment of Erythropoiesis by Irradiation (Dr. C. W. Gurney and Nancy Wackman), 1017
Imperial College of Science and Technology, London : Appointment of Prof. D. M. Newitt as senior Research Fellow, 396
  Appointment of Prof. P. M. S. Blackett as pro-rector, 396
  Appointment of Prof. A. R. Ubbelohde as head of the Department of Chemical Engineering and Chemical Technology, 396
  Election of Prof. O. M. B. Bulman, Prof. A. C. Chibnall, T. G. N. Haldane, Dr. D. T. A. Townend and Dr. J. H. Watson as Fellows, 396
  Postgraduate Courses, 1961-62, 396
  Summer School in Health Physics (Radiation Protection), 680
  Appointment of Dr. M. G. Fleming to the University of London chair of mineral technology, 963
  Appointment of Dr. R. F. Strickland-Constable to the University of London readership in chemical engineering, 963
  Appointment of Dr. M. G. Fleming to the new chair of mineral technology, 1153
Imperial College of Science and Technology and the London School of Hygiene and Tropical Medicine : Postgraduate Courses in Public Health Engineering, 971
Implantation (Unilateral), in the Uganda Kob (Prof. H. K. Buechner), 738
Implications for Protein Synthesis : Activation of Ferritin Synthesis and Induction of Changes in Fine Structure in HeLa Cells *in vitro*—(Prof. G. W. Richter), 413
Implications (Economic and Social), of Scientific Research and Development : Current Projects on the, 1960 (United States National Science Foundation), 863
Importance of Field Studies in Modern Education (Paul F. Holmes), 590
Importance of Hydroxyl Radicals as Intermediates in the Cross-linking of High Polymers by γ-Irradiation (Yoshitada Tomoda and Minoru Tsuda), 905
Improved Milking Cows : The Breeding of, through Artificial Insemination (Dr. J. Edwards and Dr. L. K. O'Connor), 759
Impulse Loading of Rock Targets to produce Fracture Patterns similar to Naturally Occurring Radial Dyke Systems (Carl F. Austin), 227
Impurity (Magnesium), in Gallium Arsenide : Behaviour of (J. R. Knight), 999
In-Patient (Hospital) Enquiry for the Two Years 1956-1957 : Report on (Ministry of Health and General Register Office), 1162
Inbred Lines of Chickens : Genetic Basis for Graft-against-Host Immunological Reactions between Two (L. N. Payne and P. Jaffe), 373
Incidence of Caries : Surface Enamel Magnesium and its Possible Relation to (Dr. D. B. Ritchie), 456
Incidence of Congenital Abnormalities in Mouse and Man : Effects of Maternal Age on the (Dr. W. F. Bodmer), 1134
Inclusion in G.E.C. Synthetic Diamonds : Coesite as an (Dr. H. Judith Milledge), 1181
Incompatibility Gene : Chromosome Fragments and Mutation of the (Prof. D. Lewis), 990
Incomplete Antibodies to Chicken Red Cell Antigens (Dr. I. Dunsford, T. Lodge, M. McDermid and Dr. D. G. Gilmour), 544
Incorporation of Amino-Acids into Protein and Ribonucleic Acid of the Lens of the Rat—Effect of Heavy Metals (Dr. Anima Devi, Dr. Sidney Lerman and Dr. Nirmal K. Sarkar), 1193
Incorporation of Ethanol-1-^{14}C into Fatty Acids in the Normal and Alloxan Diabetic Rat (Dr. Marion E. Smith), 273
Incorporation of Formate labelled with Carbon-14 into the Nucleic Acids of Normal Rabbit Tissues *in vitro* : Effect of Erythropoietine on (Dr. M. A. Perretta and Dr. R. Y. Thomson), 912
Incorporation of Palmitic-1-^{14}C Acid into Blood Cells (Dr. Constantinos J. Mias, Dorothy L. Fillerup and James F. Mead), 92
Incorporation of Phosphorus-32 into Adenosine Triphosphate of Adrenal Chromaffin Granules (W. H. Prusoff, Dr. H. Blaschko, Dr. Margery G. Ord and Dr. L. A. Stocken), 354
Incorporation of Phosphoryl-choline labelled with Phosphorus-32 into the Liver Phospholipids of Rats treated with Growth Hormone (R. S. Leal and Dr. A. L. Greenbaum), 548
Incorporation of Thymidine into Deoxyribonucleic Acid by Extracts from Bacteria exposed to Ultra-violet Light (C. O. Doudney and Daniel Billen), 545
Incorporation of Tritium-labelled Thymidine in *Bufo* ♀ × *Rana tempovaria* ♂ Hybrid Embryos (R. Tencer), 100
Increase of Aldolase Activity in Blood Serum following Irradiation (Dr. B. Dalos), 817
Increase of Endometrial Carbonic Anhydrase caused by Progesterone : Effects of certain Androgenic Steroids on the (Dr. Kazukuni Yamashita and Ken-ichi Kurouji), 1013
Increase of Endotoxin Susceptibility in Animals showing Delayed Hypersensitivity : Mechanism of (Dr. J. Johanovsky, M. Vrána, O. Vejbora and D. Francová), 182
Increase of Intake of Sodium Chloride : Response of Thymus to (Dr. M. Pospíšil), 89
Increased Sensitivity to Bacterial Endotoxin of F_1 Hybrid Mice undergoing Graft-versus-Host Reaction (Dr. J. G. Howard), 1122
Increased Toxicity of Serotonin in Adrenalectomized Animals (Prof. S. Garattini, P. Gaiardoni, A. Mortari and V. Palma), 540
Increasing the Beam Output from a Synchrocyclotron : A Proposal for (F. M. Russell), 335
Increasing Susceptibility to Bacterial Endotoxin : Effect of Artificial Fever in (Dr. David G. Connor and Dr. Edward H. Kass), 453
Incubated Arteries : Effect of, on Œstradiol-containing Media (Effect of Œstrogens on Atherosclerosis), (Dr. M. R. Malinow and Dr. J. A. Moguilevsky), 423
Independence of Temperature of the Rate of Ageing in *Drosophila subobscura* (Jean M. Clarke and J. Maynard Smith), 1027
India : Rabies in, 678
India and Pakistan (Burma, Ceylon,) : The Grasses of (excluding Bambuseae), (Dr. N. L. Bor), *review* by John Lewis, 659
Indian Council of Agricultural Research : First Rafi Ahmed Kidwai Memorial Prize awarded to Dr. B. P. Pal, 312
Indian Institute of Science : History of the, 970
Indian and Sinhalese Peoples : Frequencies of Hairy Pinnae among (K. R. Dronamraju), 653
Indians (Colombian Tunebo) : Absence of Abnormal Haemoglobins in (Tullio Arends), 93
Indications (Biochemical), as a means of Distinguishing between Iron and Manganese Deficiency Symptoms in Citrus Plants (A. Bar-Akiva), 647
Indicator of Consciousness during Curarization : Photomotor Reflex as an (Dr. Phyllis G. Croft), 726
Indies (West) : Birds of the (James Bond), *review*, 1046
Indigestion : Measuring, 596, 963
Individual : Security Measures and Freedom of the, 132
Indole Compounds in Cultures of *Chromobacterium violaceum* : Accumulation of (Prof. William A. Corpe), 190
Indolyl-3-Acetic Acid (Gibberellic Acid, Kinetin and) : A Sequential Growth Response to, in the Wheat Coleoptile (*Triticum vulgare* L.), (Dr. S. T. C. Wright), 699
Induced Awn Mutations : Effect of, on Yield in Wheat (D. Jagathesan, C. Bhatia and M. S. Swaminathan), 468
Inducers (Substrate and Hormonal), of Rat Liver Tryptophan Pyrrolase : A Difference between the Modes of Action of (Dr. Olga Greengard and Prof. Philip Feigelson), 446
Induction of Changes in Fine Structure in HeLa Cells *in vitro* : Activation of Ferritin Synthesis and—Implications for Protein Synthesis (Prof. G. W. Richter), 413
Induction of Heritable Respiratory Deficiency in *Saccharomyces* by Pantothenate Starvation (Prof. Alvin Sarachek and Gregory L. Fowler), 792
Induction of Mammary Carcinoma in Hypophysectomized Rats treated with 3-Methylcholanthrene, Œstradiol-17β, Progesterone and Growth Hormone (Dr. Stretton Young), 356
Induction (Crown Gall Tumour) : Effect of 5-Bromuracil on (Dr. Jacques Lipetz and Dr. Tom Stonier), 929

Induction (Hormonal), of Alkaline Phosphatase in Human Cells in Tissue Culture (Dr. Rody P. Cox and Dr. Colin M. MacLeod), 85
Induction (Interspecific), of Transformation of Bacteria with respect to Phage-susceptibility (Shigeo Fukuda and Kiyoshi Tsuzuki), 937
Industrial Biological Research Association (British) : Appointment of Dr. Leon Golberg as director, 960
Industrial Engineering at Toronto, 131
Industrial Growth : Facts about, *review* by Sir Roy Harrod, 660
  Patterns of, 1938-58 (Statistical Office of the United Nations, Department of Economics and Social Affairs), *review* by Sir Roy Harrod, 660
Industrial Process Control : Analytical Instrumentation of (Elliott Brothers (London), Ltd., Private Symposium and Exhibition on), 865
Industrial Psychology, National Institute of : Appointment of Dr. R. B. Buzzard as research director, 1060
Industries (Shipbuilding and Marine Engineering) : Research and Development Requirements of the (Department of Scientific and Industrial Research), 200
Industries Électroniques, Fédération des, and others : International Exhibition on Measurement Control, Regulation and Automation, 397
Industries Mécaniques et Transformatrices des Métaux, Fédération des, and others : International Exhibition on Measurement Control, Regulation and Automation, 397
Industry : An Account of some of the Scientific and Technological Facilities which Manchester University and the Manchester College of Science and Technology can offer to (Manchester Joint Research Council), 767
  British—Change and Development in the Twentieth Century (Dr. J. H. Dunning and C. J. Thomas), *review* by Prof. Brinley Thomas, 45
  Funds for Research and Development in, 1957—Performance and Financing (Department of Commerce, United States Bureau of the Census), 132
  Instrumentation in, 961
  Research and Development in, 199
  Science and—the Problem of Communication (Department of Scientific and Industrial Research Conference on), 965
Industry in Manchester : Co-operation between University and, 767
Industry in the United States : Funds for Research and Development by (United States National Science Foundation, Reviews of Data on Research and Development, No. 24), 14
Industry and Commerce, National Advisory Council on Education for : Organization of Sandwich Courses, 590
Industry, Science and the Chemical Engineer (W. K. Hutchison), 588
Industry (Local) : Sources of Scientific and Technical Information available to (Manchester Joint Research Council), 767
Industry (Match-making), in Britain, 217
Industry (Science and), Birmingham Museum of : Rebuilding of the, 491
Inelastic Scattering of Conduction Electrons in Dilute Silver–Manganese Alloys at Low Temperatures (M. S. R. Chari), 994
Infancy : Significance of the Presence of Lewis Substances in Serum during (Dr. Sylvia D. Lawler and Ruth Marshall), 1020
Infancy and Childhood : Viral Infections of—a Symposium of the Section on Microbiology, New York Academy of Medicine (edited by Prof. Harry M. Rose), *review* by Dr. N. R. Grist, 659
Infected Cells (Living) : Apparent Release of Tobacco Mosaic Virus in (Prof. J. G. Bald and R. A. Solberg), 651
Infection : Hospital (Prof. R. E. O. Williams, Dr. R. Blowers, Prof. L. P. Garrod and Dr. R. A. Shooter), *review* by Kathleen M. Hawkins, 119
Infection with *Xanthomonas malvacearum* (E.F.S.) Dowson : Effect of Ringing Cotton Stems on Content of Reducing Sugars and Insoluble Nitrogen and on Degree of (K. A. Sabet and H. M. Hassan), 934
Infection (Ectromelia) : Derivatives of Isatin β-thiosemicarbazone with Anti-Viral Chemotherapeutic Activity against (Dr. D. J. Bauer and Dr. P. W. Sadler), 1167
Infections (*Haemonchus* spp.), in Cattle : Association of Detectable Antibodies produced by, with Serum Globulin Fractions (J. G. Ross), 1019
Infections (Viral), of Infancy and Childhood—a Symposium of the Section on Microbiology, New York Academy of Medicine (edited by Prof. Harry M. Rose), *review* by Dr. N. R. Grist, 659
Infectious Degeneration of Grape Vines : New Herbaceous Test-Plants for Study of the (E. Baldacci, A. Amici, P. Bonola, E. Betto, G. Fogliani and E. Refatti), 371
Infective Hepatitis : The Liver in (Dr. W. G. C. Bearcroft), 549
'Infective Ribonucleic Acid Component' : Nature of the, in Cells infected with Encephalomyocarditis Virus and the 'Virosome' Concept (A. J. D. Bellett and A. T. H. Burness), 235
Infective Virus and Deoxyribonucleic Acid in Pseudorabies Virus-infected Rabbit Kidney Cells : Effect of Mitomycin C on the Synthesis of (Dr. Tamar Ben-Porat, Dr. Magdalena Reissig and Dr. Albert S. Kaplan), 33
Influence of Atmospheric Oxidation on Supercontraction of Wool Fibres reduced with Thioglycollic Acid (O. A. Swanepoel), 626
Influence of Changes of Blood Volume on the Concentration of Aldosterone in Peripheral Plasma of Intact Unanaesthetized Dogs (Ejgil Bojesen and Hans Degn), 352
Influence of various Dietary Fats on the Blood Cholesterol Content (F. S. P. Van Buchem, J. J. Speelman, A. A. Idema, A. T. Valkema and H. J. Thomasson), 310
Influence of Gamma-Aminobutyric Acid on the Acetylcholine Responses of the Denervated Rat-Diaphragm Preparation (Dr. R. S. Watson), 724
Influence of Large Doses of Œstrogens on the Structure of the Bones of some Reptiles (Dr. K. Simkiss), 1217
Influence of a Liver Fraction on the Phagocytic Activity of the Reticulo-Endothelial System in Mice (Prof. B. N. Halpern, C. Stiffel and J. Dedichen), 279
Influence of Oxygen Concentration and Mechanical Factors on Differentiation of Connective Tissues *in vitro* (Dr. C. Andrew L. Bassett and Ingeborg Herrmann), 460
Influence of Uraemia on the Survival of Skin Homografts (F. G. Smiddy, R. G. Burwell and F. M. Parsons), 732
Influence of Uterine Position on the Response of the Mouse Embryo to the Teratogenic Effects of Hypervitaminosis-A (Dr. D. H. M. Woollam and Dr. J. W. Millen), 184
Influenza : An Annotated Bibliography of (American Institute of Biological Sciences), Vol. 1, No. 1, 863
Influenza (Para-) 1 and Mumps Viruses (Newcastle Disease,) : Haemagglutinating Sub-Units released from, by Treatment with Ether (F. Sokol, D. Blaškovič and O. Krizanová-Laučíková), 834
Information from Genes to Ribosomes for Protein Synthesis : An Unstable Intermediate carrying (Dr. S. Brenner, Dr. F. Jacon and Dr. M. Meselson), 576
Information (Genetic) : Mechanisms of Expression of (Wendell M. Stanley, jun., and Prof. Robert M. Bock), 299
Information (Scientific and Technical), available to Local Industry : Sources of (Manchester Joint Research Council), 767
Information Bulletin I.G.Y., No. 8 (Academy of Sciences of the U.S.S.R.), 493
Infra-Red Investigation of the Migration of Lithium Ions into Empty Octahedral Sites in Muscovite and Montmorillonite (Prof. Joe L. White, G. W. Bailey, C. B. Brown and J. L. Alrichs), 342
Infra-Red Radiation (Far), from Shock Waves : Observation of (M. F. Kimmitt, A. C. Prior and P. G. Smith), 599
Inghram, Prof. M. G. : Elected a Member of the United States National Academy of Sciences, 674
Ingram, Prof. V. M., and Stretton, Dr. A. O. W. : Human Haemoglobin A_2—Chemistry, Genetics and Evolution, 1079
Inhibition of Chymotrypsin with Diisopropyl Phosphorofluoridate (A. J. J. Ooms), 533
Inhibition by Cortisone of the Synthesis and Action of Interferon (Dr. Edwin D. Kilbourne, K. Marilyn Smart and Barbara Ann Pokorny), 650
Inhibition of the Development of a Marine Sessile Community (Dr. Ivan Goodbody), 282
Inhibition of Emotional Reactions by Phenothiazine Tranquillizers (Dr. Max Taeschler and Dr. Aurelio Cerletti), 1014
Inhibition of Proteolytic Enzymes by Decarboxylated Amino-Acid Derivatives—Effect of Toluenesulphonyl(Tosyl)agmatine (4-Toluenesulphonamidobutylguanidine) on Thrombin and Trypsin (Dr. L. Lorand and Dr. N. G. Rule), 722
Inhibition (Partial), of Antibody Formation by means of Anti-Ribonucleoprotein Serum (Prof. B. D. Jankovič, Dr. K. Isakovič and J. Horvat), 1218
Initial Remanent Magnetization and Number of Repeating of Heat Treatments : 'Memory' of, in Low-Temperature Behaviour of Haematite (Prof. T. Nagata, M. Yama-ai and S. Akimoto), 620
Initiation (Arc), on Heat Metals by a Hydrogen Discharge (J. T. Maskrey, R. A. Dugdale and R. C. McVickers), 997
Initiation (Cleavage Fracture), in Notched Impact Tests of Mild Steel (J. W. Davies and A. A. Wells), 432
Initiation (Flower), in the Banana : Early (W. G. Barker and D. E. Dickson), 1131
Initiation (Flower), in *Trifolium repens* L.—a Short-Long-Day Plant (Roderick G. Thomas), 1130
Inlier (Teesdale) : Skiddaw Slates proved in the (Dr. G. A. L. Johnson), 996
Innervation (Efferent), of Mammalian Muscle-Spindles (Prof. D. Barker and N. K. Chin), 461
Inorganic Chemistry (C. W. Wood and Dr. A. K. Holliday), *review* by Charles Holt, 60
Inorganic Compounds (Inorganic + Organic or) (excepting Metallic Derivatives) : Systems with (Prof. Jean Timmermans), (The Physico-chemical Constants of Binary Systems in Concentrated Solutions, Vol. 4), *review* by Dr. E. F. G. Herington, 661
Inorganic Phosphate in some Micro-organisms : Absence of Phosphatase Repression by (Mau-Huai Kuo and Prof. Harold J. Blumenthal), 29
Inorganic+Organic or Inorganic Compounds (excepting Metallic Derivatives) : Systems with (Prof. Jean Timmermans), (The Physico-chemical Constants of Binary Systems in Concentrated Solutions, Vol. 4), *review* by Dr. E. F. G. Herington, 661
Inoue, Mie, and others : Enzymatic Formation of Histamine Ribotide from Histamine Dinucleotide, 532
Insect : Name this (Eric Fitch Daglish), revised edition, *review* by Harold Oldroyd, 1047
Insect (Thysanuran) : Atypical Spermiogenesis of *Thermobia domestica*, a (R. S. Mathur), 743 ; (Dr. S. R. Bawa), 743
Insect Amoebocytes : Multiplication *in vitro* of a Nuclear Polyhedrosis Virus in (M. E. Martignoni and R. J. Scallion), 1133
Insect Biochemistry, *review* by Prof. V. B. Wigglesworth, 1041
Insecticide Resistance in Mosquitoes (Dr. G. Davidson and Dr. C. Elizabeth Jackson), 364
Insecticides and Fungicides : British (Association of British Manufacturers of Agricultural Chemicals Conference on), 1063
Insects : The Biochemistry of (Darcy Gilmour), *review* by Prof. V. B. Wigglesworth, 1041
Insemination (Artificial) : The Breeding of Improved Milking Cows through (Dr. J. Edwards and Dr. L. K. O'Connor), 759
Insight from Fourier Analysis : Prediction of the Effect of Light-Time Fraction on the Critical Flicker Frequency—an (K. Gibbins and Dr. C. I. Howarth), 330
Insoluble Nitrogen : Effect of Ringing Cotton Stems on Content of Reducing Sugars and, and on Degree of Infection with *Xanthomonas malvacearum* (E.F.S.) Dowson (K. A. Sabet and H. M. Hassan), 934
Inspection (Engineering), Institution of, and the Society of Non-Destructive Examination : Joint Conference at Oxford, 769
Institut de Paléontologie Humaine : Mémoire 31, Le Grande Roche de Naquane (M. Anati), 140
Institutions (Scientific) : Valuation and Rating of, 309
Institutions (Scientific), and Scientists in Latin America (Unesco), Vol. 4, Part 5, 769
Instrumentation : Advances in Analytical Chemistry and (edited by Charles N. Reilley), Vol. 1, *review* by Dr. D. T. Lewis, 944
Instrumentation in Industry, 961
Instrumentation (Analytical), of Industrial Process Control (Elliott Brothers (London), Ltd., Private Symposium and Exhibition on, 865
Instruments in the Factory (Dr. J. Thomson), 961
Instruments and Components : Electronics, (Institution of Electronics Sixteenth Annual Exhibition and Convention), 865
Instruments and Techniques : Optical (British National Committee for Physics Conference on), 963
Insulated Callender's Cables, Ltd. (British) : McFadzean Laboratory at the Wood Lane research centre to be opened by H.R.H. the Duke of Edinburgh, 312

Insulin : A Factor associated with 'Visking' Tubing capable of Antagonizing (M. Deloris Lilley and Dr. J. Vallance-Owen), 1196
  Trace-labelling of, with Iodine (Dr. Ellis Samols and H. S. Williams), 1211
Insulin and Lactate : Stimulation of Active Transport of Sodium from Sodium-rich Frog Muscle by (Roderick P. Kernan), 347
Intact Brain : Assay of 5-Hydroxytryptophan Decarboxylation in (A. Pletscher and K. F. Gey), 918
Intact Unanaesthetized Dogs : Influence of Changes of Blood Volume on the Concentration of Aldosterone in Peripheral Plasma of (Ejgil Bojesen and Hans Degn), 352
Intake of Sodium Chloride : Response of Thymus to Increase of (Dr. M. Pospíšil), 89
Intakes (Chronic High and Low Salt) : Effect of, on Adrenocortical Function (Dr. Lewis K. Dahl, Lawrence Silver, Sanford Spraragen and Malcolm Smilay), 348
Intelligence, its Evolution and Forms (Prof. Gaston Viaud), *review* by G. R. Noakes, 64
Intelligence Unit Bulletin, No. 13, Report by the British Trust for Ornithology and the Royal Society for the Protection of Birds on Birds killed by Poisonous Seed Dressings (Council for Nature), 218
Intensity Aspects as Determinant of r'_e-r''_e in the Bands of the Lanthanum Oxide (LaO) ($B \rightarrow X$) System (N. Sreedhara Murthy), 430
Interaction of Acetylcholine, Calcium and Depolarization in the Contraction of Smooth Muscle (Dr. K. A. P. Edman and Dr. H. O. Schild), 350
Interaction of Enzymes with Normal and Tumour Cells (D. H. Cormack, G. C. Easty and Dr. E. J. Ambrose), 1207
Interaction of Model Peptides with Water and Lithium Bromide (Dr. J. Bello and H. R. Bello), 440
Interaction of Proteins and Nucleotides in Buffered Aqueous Solutions (Prof. Joseph R. Debro and Melvin Lee), 1008
Interaction with Serum Albumin : Age and Molecular Weight of Dextrans—their Coating Effects, and their (Dr. Eric Ponder and Dr. Ruth V. Ponder), 277
Interference Microscopy : Applications of (Royal Microscopical Society Symposium on), 315
Interferometer (Radio Telescope), at the Royal Radar Establishment (Dr. J. S. Hey), 1150
Interferon : Inhibition by Cortisone of the Synthesis and Action of (Dr. Edwin D. Kilbourne, K. Marilyn Smart and Barbara Ann Pokorny), 650
Interior Ballistics of Rocket Motors, *review* by Prof. D. B. Spalding, 66
Interlingual Scientific and Technical Dictionaries : Bibliography of (Unesco), fourth edition, 1061
Intermediate (An Unstable), carrying Information from Genes to Ribosomes for Protein Synthesis (Dr. S. Brenner, Dr. F. Jacob and Dr. M. Meselson), 576
Intermediate Host (A New), of Schistosome Trematodes from New South Wales (Wm. H. Ewers), 283
Intermediate Supervelocity (Apparent), of Detonation (Dr. C. H. Johansson), 709
Intermediates in the Cross-linking of High Polymers by γ-Irradiation : The Importance of Hydroxyl Radicals as (Yoshitada Tomoda and Minoru Tsuda), 905
Internal Carotid Artery Occlusion (John G. Humphreys and T. H. Newton), 310
International Academy of Astronautics of the International Astronautical Federation : Symposium on Space Flight and Re-entry Trajectories, 312
  Election of new Members, 495
International Aid for Economic Development—Possibilities and Limitations (Dr. V. K. R. V. Rao), 1041
International Andean Year (Unesco Discussion on the Planning of an), 966
International Astronautical Federation (International Academy of Astronautics of the) : Symposium on Space Flight and Re-entry Trajectories, 312
International Atomic Energy Agency : Symposium on Radioisotopes and Radiation in Entomology, 15
  Appointment of Dr. P. L. Balligand as deputy director general in charge of the Department of Technical Operations, 131
  International Conference on Nuclear Electronics, 493
International Atomic Energy Agency, and others (sponsored by the) : Establishment at the University of Uppsala of an International School for Research and Education in Physics, 311
International Botanical Congress : Tenth, to be held in Edinburgh, 768
  Election of Prof. H. Godwin as president, 768
International Cancer Congress : Eighth (International Union against Cancer), 397
International Centre of Chemical Fertilizers : Fourth World Fertilizer Congress, 1161
International Committee on Laboratory Animals : *Bulletin*, March 1961, 677
  Symposium on the Problems of Laboratory Animal Disease, 677
  Proceedings of the Symposium on Living Animal Material for Biological Research, 677
International Conference : Rutherford Jubilee (International Union of Pure and Applied Physics, the Royal Society, the Institute of Physics and the Physical Society and the University of Manchester), 679
International Conference on Heat Transfer (University of Colorado), 1156
International Conference on Ionization Phenomena in Gases (Plasma and Discharge Physics Group of the Association of the German Physical Societies), 591
International Conference on Ionization Phenomena in Gases : Proceedings of the Fourth (Uppsala, 1959), (edited by N. Robert Nilsson), *review* by Dr. J. Dutton, 573
International Conference on Medical Electronics : Fourth (Joint meeting with the fourteenth Annual Conference on Electrical Techniques in Medicine and Biology), 397
International Conference on Nuclear Electronics (International Atomic Energy Agency), 493
International Conference on Nuclear Forces and the Few-Nucleon Problem (University College, London, 1959) : Proceedings of the (edited by T. C. Griffith and E. A. Power), *review* by Dr. R. J. N. Phillips, 63
International Congress on Catalysis : Third (The Mechanism of Heterogeneous Catalysis), 963
International Congress on Metallic Corrosion : First, 15
International Congress on Polarography : Proceedings of the Second (Cambridge, 1959), (edited by Ian S. Longmuir), *review* by Dr. D. T. Lewis, 476
International Co-operation, Netherlands University Foundation for : Summer School in Science (Fundamental Problems in Statistical Mechanics), 769
International Council of Scientific Unions (sponsored by the) : Mechanisms of Colour Discrimination—Proceedings of an International Symposium on the Fundamental Mechanisms of the Chromatic Discrimination in Animals and Man, Paris, 1958, (edited by Yves Galifret), *review* by Prof. R. W. Ditchburn, 201
International Council of Scientific Unions (Special Committee on Antarctic Research) : Register of Scientists wishing to work in Antarctica, 311
International Exhibition on Measurement Control, Regulation and Automation (MESUCORA Association, in conjunction with the Fédération des Industries Mécaniques et Transformatrices des Métaux, the Syndicat Général de la Construction Électrique, and the Fédération des Industries Électroniques), 397
International Federation of Societies of Cosmetic Chemists : Second Congress, 397
International Geophysical Year : Information Bulletin I.G.Y., No. 8 (Academy of Sciences of the U.S.S.R.), 493
  Bibliography of Publications relating to the I.G.Y. (Academy of Sciences of the U.S.S.R.), 493
  Work in the Antarctic during the, 677
International Meteorological Organization Prize for 1961 awarded to Prof. K. R. Ramanathan, 1154
International Mineral Processing Congress—Proceedings of a Congress arranged by the Institution of Mining and Metallurgy (London, 1960), *review* by Dr. E. J. Pryor, 70
International Nematology Symposium : Sixth (State Agricultural College, University of Ghent), 963
International Organization in Biophysics (British Biophysical Society Discussion on), 312
International Review of Neurobiology (edited by Carl C. Pfeiffer and John R. Smythies), Vol. 2, *review* by Dr. Denis Brinton, 850
International School for Research and Education in Physics established at the University of Uppsala (sponsored by the International Atomic Energy Agency, Unesco, and the Central Committee for Swedish Technical Assistance), 311
International Seminars on Nuclear Energy (European Nuclear Energy Agency of the Organization for European Economic Co-operation), 591
International Society for Human and Animal Mycology : *Sabouraudia*, Vol. 1, No. 1, 15
International Society for Research on the Reticulo-endothelial System : Election of Officers, 679
International Symposium on the Axiomatic Method, with special reference to Geometry and Physics (University of California, Berkeley, 1958), (edited by Prof. Leon Henkin, Prof. Patrick Suppes and Prof. Alfred Tarski), *review* by F. I. G. Rawlins, 570
International Symposium on the Fundamental Mechanisms of the Chromatic Discrimination in Animals and Man, Paris, 1958 (sponsored by the International Council of Scientific Unions) : Mechanisms of Colour Discrimination—Proceedings of an (edited by Yves Galifret), *review* by Prof. R. W. Ditchburn, 201
International Symposium on Phytopharmacy and Phytiatry : Third (State Agricultural University, Ghent), 493
International Union against Cancer : Eighth International Cancer Congress, 397
International Union of Crystallography : Symposium on Electron and Neutron Diffraction, 679
  Symposium in commemoration of the 50th anniversary of the discovery by Prof. Max von Laue of the Diffraction of X-Rays by Crystals, 679
  Sixth General Assembly and International Congress, 679
International Union of Geological Sciences : Formation of an, 132
  Election of Officers, 132, 219
International Union of Pure and Applied Physics, and others : Rutherford Jubilee International Conference, 679
International Union of Theoretical and Applied Mechanics : Proceedings of the Symposium on the Theory of Thin Elastic Shells, Delft, 1959 (edited by W. T. Koiter), *review* by Dr. J. W. Craggs, 379
Internationaler Kongress für Elektronenmikroskopie : Vierter (Berlin, 1958), Band 1, Physikalisch-Technischer Teil (herausgegeben von G. Möllenstedt, H. Niejrs und E. Ruska) ; Band 2, Biologisch-Medizinischer Teil (herausgegeben von W. Bargmann, D. Peters und C. Wolpers), *review* by Dr. V. E. Cosslett, 68
Internuclear Distances of Methyl and Methylene Radicals (George Glockler), 1002
Interplanetary Communication by Optical Masers : Interstellar and (Dr. R. N. Schwartz and Prof. C. H. Townes), 205
Interpretation of the Upper Plastic Limit of Clays (Prof. B. P. Warkentin), 287
Interpretation of X-Ray Diffraction Photographs (Dr. N. F. M. Henry, Prof. H. Lipson and Dr. W. A. Wooster), second edition, *review* by Dr. M. R. Truter, 69
Interpretation (Functional), of Cerebellar Histology (Dr. V. Braitenberg), 539
Interpretation (Geologic), and Mapping : Aerial Photographs in (Dr. Richard G. Ray), 1155
Interspecific Induction of Transformation of Bacteria with respect to Phage-susceptibility (Shigeo Fukuda and Kiyoshi Tsuzuki), 937
Interstellar and Interplanetary Communication by Optical Masers (Dr. R. N. Schwartz and Prof. C. H. Townes), 205
Interstitial Crustacea in Southern England : *Bathynella* and other (G. M. Spooner), 104
Intestinal Carbohydrases of a New-born Pig (Dr. Arne Dahlqvist), 31
Intestinal Epithelium : Active Transport of Foreign Pyrimidines across the (Dr. Lewis S. Schanker and Dr. John J. Jeffrey), 727
Intestinal Epithelium of the Turtle : Origin of the Potential Difference in the (Michelle Baillien and E. Schoffeniels), 1107
Intestinal Tract of the Rat : β-Galactosidase Changes in the Developing (Dr. Anibal Alvarez and José Sas), 826
Intestine : Bacteria of the (Society for Applied Bacteriology Symposium on), 397

- Intracellular Distribution of Ubiquinone in Rat Liver under certain Stress Conditions (Dr. A. S. Aiyar and Dr. A. Sreenivasan), 344
- Intracellular Free Amino-Acids of certain Dermatophytes (Dr. F. W. Chattaway, C. Toothill and A. J. E. Barlow), 87
- Intracellular Structures in Tumours induced by Polyoma (Leon Dmochowski, Clifford E. Grey, Elizabeth Bereczky and Julian Blicharski), 610
- Intraperitoneal Staphyloccal Virulence for Mice : Enhancement of, with Different Bile Salts (Dr. S. Stanley Schneierson, Daniel Amsterdam and Ely Perlman), 829
- Introduction : Plant Exploration and (Food and Agriculture Organization of the United Nations Technical Meeting on), 397
- Introduction to Chemical Biology : Unity and Diversity in Biochemistry, an (Marcel Florkin), translated from the French by T. Wood, *review* by Dr. M. R. Atkinson, 479
- Introduction to Electronic Theory of Organic Compounds (H. L. Heys), *review* by Dr. R. I. Reed, 296
- Introduction of the 16α-Hydroxyl Group into Œstrogens by Streptomycetes (Dr. D. A. Kita, J. L. Sardinas and G. M. Shull), 627
- Introduction to the Mathematics of Medicine and Biology (J. G. Defares and I. N. Sneddon), *review* by J. F. Scott, 945
- Introduction to Phenomenology : Cartesian Meditations, an (Edmund Husserl), translated by Dorion Cairns, *review* by F. I. G. Rawlins, 295
- Introduction to Statistical Thermodynamics (Terrell L. Hill), *review* by Dr. H. Steeple, 119
- Intrusion (Basic Igneous) : Determination of the Age of a, by the Potassium–Argon Method (Dr. Ian McDougall), 1184
- Invertebrates : Occurrence of Catecholamines in Acrania and (Prof. U. S. von Euler), 170
- Investigation of Closely Related Gamma-Myeloma Proteins and Normal Mouse Gamma-Globulin by Partial Enzymic Degradation and Starch-Gel Electrophoresis (Dr. Brigitte A. Askonas and Dr. J. L. Fahey), 980
- Investigation (Field-Emission Microscopic), of Catalysed Synthesis of Ammonia on Tungsten (K. Azuma), 530
- Investigation (Infra-Red), of the Migration of Lithium Ions into Empty Octahedral Sites in Muscovite and Montmorillonite (Prof. Joe L. White, G. W. Bailey, C. B. Brown and J. L. Alrichs), 342
- Investigations on Norwegian Cirque Glaciers (edited by W. V. Lewis), *review* by Dr. C. A. M. King, 662
- Investigations (Archaeological), in British Guiana (Clifford Evans and Betty J. Meggers), *review* by Dr. G. H. S. Bushnell, 72
- Iodide (Caesium) : Breakdown Strength of (R. Taagepera, R. S. Storey and Prof. K. G. McNeill), 994
- Iodine : Ionization Potential and Molecular Complex of Benzothiazol with (Prof. J. Collin and M. Nagels), 82
  - Trace-labelling of Insulin with (Dr. Ellis Samols and H. S. Williams), 1211
- Iodine Vapour with Copper : Effect of a Thin Oxide Film on the Reaction of (R. A. J. Shelton, S. Blairs and D. Margrave), 1183
- Ioffe, A. F. : Physics of Semiconductors, *review* by Prof. R. E. Burgess, 947
- Ion (The Borohydride), in the Lithium Borohydride Lattice (Dr. D. A. Brown), 804 ; (Dr. C. J. H. Schutte), 805
- Ion-Exchange Paper : A New Technique of Chromatography and Ionophoresis on—Application to the Separation of Barbiturate, Salicylate and Acetophenetidin (Harold V. Street and Dr. S. K. Niyogi)f 537
  - A New Technique of Chromatography and Ionophoresis on—Application to Separation of Barbiturate, Salicylate, Acetophenetidin and *p*-Acetylaminophenol (Harold V. Street and Dr. S. K. Niyogi), 718
  - A New Technique of Chromatography and Ionophoresis on—Application to Separation of Compounds of Toxicological Interest—Separation of a Mixture of Promazine, Quinine, Sulphacetamide and Acetophenetidin (Harold V. Street and Dr. S. K. Niyogi), 1199
- Ion Pair in Air : Absolute Measurement of Average Energy lost by Very Soft X-Rays per (Prof. B. Rajewsky and Dr. D. Lang), 249
- Ion Transfer through Perm-selective Membranes : Deviations from the Steady-State in (Chaim Forgacs), 339
- Ion Transport, an Unorthodox View, *review* by Dr. I. M. Glynn, 848
- Ion (Positive-) Density in the Ionosphere : Measurement of, by Sounding Rocket (T. Ichimiya, K. Takayama, T. Dote, Y. Aono, K. Hirao, S. Miyazaki, T. Sugiyama and T. Muraoka), 156
- Ionic Character of Chemical Bonds (E. Mooser and W. B. Pearson), 406
- Ionic (Non-) Solutions : Contraction of Smooth Muscles in (Roselyn L. Kolodny and Prof. W. G. Van der Kloot), 786
- Ionization Detectors : Comparison of Helium and Argon in (W. A. Wiseman), 1187 ; (R. Berry), 1188
- Ionization Phenomena in Gases (Plasma and Discharge Physics Group of the Association of the German Physical Societies International Conference on), 591
  - Proceedings of the Fourth International Conference on (Uppsala, 1959), (edited by N. Robert Nilsson), *review* by Dr. J. Dutton, 573
- Ionization Potential and Molecular Complex of Benzothiazol with Iodine (Prof. J. Collin and M. Nagels), 82
- Ionization (Flame) Triode : An A.C. Modulated (J. Middlehurst and B. Kennett), 142
- Ionizing Radiations : Effects of, on Organic and Biological Solids (British Biophysical Society and the Socitéé de Chimie Physique Informal Discussion on), 219
  - Effects of, on Rice Plants (Maung Mya Thaung), 242
- Ionophoresis (Chromatography and), on Ion-Exchange Paper : A New Technique of—Application to the Separation of Barbiturate, Salicylate and Acetophenetidin (Harold V. Street and Dr. S. K. Niyogi), 537
  - A New Technique of—Application to Separation of Barbiturate, Salicylate, Acetophenetidin and *p*-Acetylaminophenol (Harold V. Street and Dr. S. K. Niyogi), 718
  - A New Technique of—Application to Separation of Compounds of Toxicological Interest—Separation of a Mixture of Promazine, Quinine, Sulphacetamide and Acetophenetidin (Harold V. Street and Dr. S. K. Niyogi), 1199
- Ionosphere : Irregularities in the E_s Layer of the (G. F. Fooks), 707
  - Measurement of Positive-Ion Density in the, by Sounding Rocket (T. Ichimiya, K. Takayama, T. Dote, Y. Aono, K. Hirao, S. Miyazaki, T. Sugiyama and T. Muraoka), 156
  - Solar Flare Effects in the *F* Region of the (R. W. Knecht and K. Davies), 797
  - Variation in Height of Anisotropy and Random Drift Velocity of the Irregularities in the (Dr. B. Ramachandra Rao and K. V. V. Ramana), 706
- Ionospheric Storms : Possible Identification of Atmospheric Waves associated with (M. D. Wright), 898
- Ions : The Possibility of Obtaining E.M.F. directly from Acid-Base Reactions —Electrodes of the Third Kind reversible to Alkaline Earth and other (W. H. Beck), 712
- Ions (Bivalent Metal), as the Coupling Factor between Cell Metabolism and the Rate of Cell Mutation (Dr. G. G. Hayson), 144
- Ions (Calcium) : Binding of, by the Aorta (Dr. I. Gordon Fels), 1012
- Ions (Chromium), in Ruby : Spin-Lattice Relaxation of Pairs of (J. C. Gill), 619
- Ions (Ferricyanide) : Rate of Oxidation of Ferrohaemoglobin by (Norman Sutin), 438
- Ions (Lithium), (Migration of), into Empty Octahedral Sites in Muscovite and Montmorillonite : Infra-Red Investigation of the (Prof. Joe L. White, G. W. Bailey, C. B. Brown and J. L. Alrichs), 342
- Iproniazid : Effect of, on the Antileukaemic Action of Reserpine (Richard A. Salvador, Stewart R. Humphreys, Robert Main Burton and Abraham Goldin), 723
- Iraq (Northern) : Identification of Sugars in the Manna of (Prof. Zakaria I. Sabry and Nicola A. Atallah), 915
- Ireland (Northern) : Sheep Husbandry in, 962
- Iris : Origin of β-Amino*iso*butyric Acid in (W. R. Evans, Chi Shiun Tsai and Prof. Bernard Axelrod), 809
- *Iris tingitana* (var. Wedgewood) : Isolation of Beta-Alanine from (Clayton J. Morris, John F. Thompson, Sam Asen and Filadelfo Irreverre), 718
- Irish Academy (Royal) : Election of Officers, Honorary Members and Members, 492
- Iron Meteorites (Stone and) : Origin of (Prof. David E. Fisher), 244
- Iron Objects (Cleaned) : Protection of (K. J. Barton), 15
- Iron (Bivalent) : Activation of Hurain by (Dinah Sharon de Seidl and Karl Gaede), 1112
- Iron (Cast), and Foundry Materials : Chemical Analysis of (W. Westwood and A. Mayer), second edition, *review* by F. L. Selfe, 383
- Iron (Haem) Incorporation : Catalysis of Metalloporphyrin Formation—a Possible Enzyme Model for (M. B. Lowe and J. N. Phillips), 262
- Iron (Silicon–) Sheet : Anomalous Magnetostriction of the 'Grain-orientated' (Yûki Shirakawa and Ken'ichi Numakura), 523
- Iron and Manganese Deficiency Symptoms in Citrus Plants : Biochemical Indications as a means of Distinguishing between (A. Bar-Akiva), 647
- Iron and Steel Institute : Bessemer Gold Medal for 1961 awarded to William Barr, 13
  - Sir Robert Hadfield Medal for 1961 awarded to Emrys Davies, 13
  - Williams Prizes for 1960 awarded to T. McHugh and F. A. Kirk, and to J. Chapman and W. Montgomery, 13
  - Permanent Joint Consultative Committee of the Institute of Metals, the Institution of Metallurgists and the, 134
- Iron and Steel Research Association (British) : Open Days at Sheffield, 16
- Irradiated *Drosophila* Populations : Analysis of, for Meiotic Drive (Prof. E. Novitski and G. D. Hanks), 989
- γ-Irradiated Carbohydrates and α-Hydroxy Acids : Electron Spin Resonance Spectra of (A. J. Bailey, Dr. S. A. Barker, J. S. Brimacombe, D. Pooley and D. H. Spence), 259
- Irradiation : Impairment of Erythropoiesis by (Dr. C. W. Gurney and Nancy Wackman), 1017
  - Increase of Aldolase Activity in Blood Serum following (Dr. B. Dalos), 817
- Irradiation with α-Particles in a Cyclotron : Radioactivation Analysis of Oxygen in Silicon by (T. Nozaki, S. Tanaka, M. Furukawa and K. Saito), 39
- γ-Irradiation : The Importance of Hydroxyl Radicals as Intermediates in the Cross-linking of High Polymers by (Yoshitada Tomoda and Minoru Tsuda), 905
- Irradiation (Simultaneous X-Ray and Ultra-violet) : Circulating Platelets in Mice subjected to (I. Cserháti, F. Krizsa and K. Rák), 544
- Irradiation (Total-Body) : Changes in Density of Blood Serum after (Dr. Z. Dienstbier and M. Rakovič), 98
- Irradiation (Ultra-violet) : Formation of an Ommatin Pigment from Tyrosine by (Maria Benigna Johnson), 924
- Irregularities in the E_s Layer of the Ionosphere (G. F. Fooks), 707
- Irregularities in the Ionosphere : Variation in Height of Anisotropy and Random Drift Velocity of the (Dr. B. Ramachandra Rao and K. V. V. Ramana), 706
- Irreverre, Filadelfo, and others : Isolation of Beta-Alanine from *Iris tingitana* (var. Wedgewood), 718
- Irrigation : Evaluation of Effective Rainfall and, from Ground-Water Measurements (C. Dakshinamurti, P. N. Saxena and E. G. K. Rao), 1100
- Irvine, James E., and Delfel, Norman E. : Flowering Behaviour of Vanilla, 366
- Irvine, Dr. K. J. : Appointed metallurgical research manager of the United Steel Companies, Ltd., 591
- Isaacs, Dr. A. : Appointed head of the Division of Bacteriology and Virus Research at the National Institute for Medical Research, 1153 ; work of, 1153
- Isakovič, Dr. K., and others : Partial Inhibition of Antibody Formation by means of Anti-Ribonucleoprotein Serum, 1218
- Isatin β-Thiosemicarbazone : Derivatives of, with Anti-Viral Chemotherapeutic Activity against Ectromelia Infection (Dr. D. J. Bauer and Dr. P. W. Sadler), 1167
- Ishimoda, Taiko, and others : Changes of Hexose/Hexosamine Ratio and Degree of Branching in Glycoprotein from Rat Urine during the Development of Cancer, 265
- Island : Scolt Head (edited by Prof. J. A. Steers), revised edition, *review* by W. H. Dowdeswell, 73
- Islets of Langerhans in Man : Development of the (Patricia M. Robb), 1018
- *Iso*Borneol : Pyrolysis of Esters of Borneol and (Dr. C. A. Bunton, K. Khaleeluddin and D. Whittaker), 715
- Isohaemagglutinin Formation : Dissociation of, and Tolerance of Skin Grafts in Chicks (Otakar Stark, Vladimír Křen and Bohdan Frenzl), 281
- Isola, A., and others : Mercury-206, a New Natural Radionuclide, 427
- Isolated Frog Skin : Electrical Excitability of (A. Finkelstein), 1119
- Isolated Ileum of the Guinea Pig : Role of Mucous Membrane in the Peristaltic Reflex in the (M. L. Diament, Dr. H. W. Kosterlitz and J. McKenzie), 1205

Isolated Liver Mitochondria: Effects of Oligomycin on Respiration and Swelling of (Dr. J. B. Chappell and Dr. G. D. Greville), 502
Isolation of *Azotobacter vinelandii* Lipman : Rhamnose for Detection and (Vagn Jensen), 832
Isolation of Beta-Alanine from *Iris tingitana* (var. Wedgewood), (Clayton J. Morris, John F. Thompson, Sam Asen and Filadelfo Irreverre), 718
Isolation of Haptoglobin by Chromatography on Diethylaminoethyl-Cellulose (DEAE), (Dr. M. Steinbuch and M. Quentin), 1121
Isolation of Malignolipin from Malignant Tumours (-. Kosaki and co-workers), 677
Isolation of Peptides containing Hydroxyproline from Animal Tissues (V. Kobrle and M. Chvapil), 909
Isolation of the Toxic Principle in *Acacia georginae* (P. B. Oelrichs and T. McEwan), 808
Isolation and Partial Characterization of a Growth-control Factor (Francis W. Sayre, Eder Hansen, Theodore J. Starr and Evangeline A. Yarwood), 1116
Isologous Tumours in Mice : Protective Activity of Fractions of Tubercle Bacilli against (Dr. David W. Weiss, Rose S. Bonhag and Dr. Kenneth B. DeOme), 889
Isomeric Dichlorobenzenes: An Organo-clay Complex for the Separation of, using Gas Chromatography (C. T. Cowan and J. M. Hartwell), 712
Isonicotinyl Hydrazide : Effect of, on the Path of Carbon in Photosynthesis (G. G. Pritchard, Prof. C. P. Whittingham and Wendy J. Griffin), 553
Isopodes Terrestres (Prof. Albert Vandel), Première Partie, *review* by Dr. E. M. Sheppard, 382
Isotope (New Carbon), Carbon-16, 587
Isotopes : Study of Defects in Porphyrin Metabolism by means of (Prof. C. Rimington), 870
Isotopic Ages of the Weardale Granite (M. H. Dodson and S. Moorbath), 900
Isotopic Dilution Techniques of Argon Measurement : Potassium–Argon Ages of the Dartmoor and Shap Granites using the Total Volume and (M. H. Dodson, J. A. Miller and D. York), 800
Israel : Archaeology in, *review* by Peter J. Parr, 381
Italian Society of Chemotherapy : Symposium, 219
Italy : Measurements of Air Radioactivity in, and their relation to the First Sahara Atomic Explosion (L. Argiero, Dr. S. Manfredini and Dr. G. Palmas), 618
Italy (Northern) : Rock Engravings in (Miles Burkitt), 140
Itzhaki, Dr. Ruth F. : Elected to a Beit Memorial Junior Fellowship, 768
Iyer, Dr. H. M. : Appointed to a Gassiot research fellowship in the Meteorological Office, 676

JACKMAN, Dr. L. M. : Terpene Chemistry (Structure Determination and Synthesis of Carotenoids and their Biological Precursors), 18
  Applications of Nuclear Magnetic Resonance Spectroscopy in Organic Chemistry, *review* by Dr. J. C. D. Brand, 1043
Jacks, G. V. : The Soil—Problems raised by its Use and Misuse (Climate and Erosion), 770
Jackson, Dr. C. Elizabeth (Davidson, Dr. G., and) : Insecticide Resistance in Mosquitoes, 364
Jackson, Dr. C. J. : Appointed chairman of the Water Pollution Research Board, 135
Jackson, D. F. : High-Energy Electron Scattering Tables, *review*, 204
Jacob, Dr. F., and others : An Unstable Intermediate carrying Information from Genes to Ribosomes for Protein Synthesis, 576
Jacob, Dr. L., and others : Shock-excited Dark Discharge, 37
Jaffe, P. (Payne, L. N., and) : Genetic Basis for Graft-against-Host Immunological Reactions between Two Inbred Lines of Chickens, 373
Jagathesan, D., and others : Effect of Induced Awn Mutations on Yield in Wheat, 468
Jahoda, Dr. Gustav: White Man, a Study of the Attitudes of Africans to Europeans in Ghana before Independence, *review* by Dr. Margaret Read, 946
Jain, Sri S. K. : Ecological Problems in the Tropics (Arid Zones), 772 ; (Sal Leaf Litter), 773
Jakes, jun., Wm. C. : A Transatlantic Communication Experiment via *Echo* I Satellite, 709
Jakobson, Roman : Elected an Honorary Member in the Section of Polite Literature and Antiquities of the Royal Irish Academy, 492
Jamaica, 1830-1930—a Study in Economic Growth (Gisela Eisner), *review* by Prof. T. S. Simey, 1142
Jamaican Banana Plantation : *Botryodiplodia theobromae* Pat. and *Nigrospora* sp. in the Air of a (Dr. D. S. Meredith), 555
Jane, Prof. F. W. : Classification and Multiplicity of Growth Layers in the Branches of Trees at the Extreme Lower Forest Border, *review*, 850
Jankovič, Prof. B. D., and others : Partial Inhibition of Antibody Formation by means of Anti-Ribonucleoprotein Serum, 1218
Janovsky, I. (Spurny, Zd., and) : Radiolysis of Carbon Tetrachloride in the Presence of Oxygen, 624
Jansky, Jr., C. M., and others : Science in Progress, Eleventh Series (edited by Hugh Taylor), *review* by Prof. Ritchie Calder, 45
Janssen, Dr. M. J. : Fungicides in Agriculture and Horticulture (Theoretical Bases for Fungicides—Physical Measurements and Biological Behaviour), 593
Janssen, Dr. P. A. J., and Niemegeers, C.: Haloperidide (*R.* 3201), a Highly Potent and Selective Anti-emetic Agent in Dogs, 911
Japan : Cultural Sequences in Hokkaido (Lieut.-Col. H. A. MacCord), 864
Japan Association for Study of Congenital Anomalies : Initial Meeting, 395
Japanese : The Gm^a Factor in (Dr. M. Yokoyama and Dr. N. Ueno), 455
Järnefelt, Johan : Mechanism of Sodium Transport in Cellular Membranes, 694
Jarosch, H., and others : Terrestrial Spectroscopy, 498
Jarrett, I. G., and Filsell, O. H. : An Effect of Glucose on Acetate Metabolism in Sheep, 1114
Jaworowski, Dr. Z. S. (Hill, C. R., and) : Lead-210 in some Human and Animal Tissues, 353
Jayson, Dr. G. G. : Bivalent Metal Ions as the Coupling Factor between Cell Metabolism and the Rate of Cell Mutation, 144
Jeffrey, Dr. John J. (Schanker, Dr. Lewis S., and) : Active Transport of Foreign Pyrimidines across the Intestinal Epithelium, 727
Jeffreys, Sir Harold : Elected an Honorary Member in the Section of Science of the Royal Irish Academy, 492
Jeger, Prof. O.: Terpene Chemistry (Structures of a Series of Oxidation Products of the Diterpenes Manool and Sclareol), 19
Jelly (Royal) : A New Fatty Acid from (Prof. W. H. Brown and Ethel E. Felauer), 88
Jenkins, W. J. (Marsh, W. L., and) : A Possible Specificity of Albumin Auto-Antibodies, 180
Jennings, J. : Association of a Steroid and a Pigment with a Diffusible Fruiting Factor in *Myxococcus virescens*, 190
Jensen, Vagn : Rhamnose for Detection and Isolation of *Azotobacter vinelandii* Lipman, 832
Jenssen, D. (Radok, Dr. Uwe, and) : Numerical Retracing of Atmospheric Events, 247
Jepson, Dr. W. F. : Fungicides in Agriculture and Horticulture (Orchard Use against Scab Diseases and the Possible Mode of Action of *n*-Dodecylguanidine Acetate), 594
Jessup, R. F. : Awarded a Research Grant by the Leverhulme Trust, 678
Jeynes, Dr. M. H. : Appointed to a lectureship in bacteriology in the University of Birmingham, 679
Jim, Dr. Robert T. S. (Schneider, Dr. Rose G., and) : A New Haemoglobin Variant (the 'Honolulu Type') in a Chinese, 454
Jobling, D. M. (Wilson, Dr. J. F., and) : Precipitation Reaction between Serum and Lysed Erythrocytes, 550
Jobst, Dr. Rudolf : The 2-Metre Universal Reflecting Telescope of the German Academy of Science, Berlin, 301
Joffé, Academician A. F. : *Obituary* by Academician N. N. Semenov and Academician V. N. Kondratiev, 761
Johanovsky, Dr. J. : Production of Pyrogenic Substances by Extracts of Delayed Hypersensitive Cells mixed with Antigen *in vitro*, 355
Johanovsky, Dr. J., and others : Mechanism of Increase of Endotoxin Susceptibility in Animals showing Delayed Hypersensitivity, 182
Johansson, Dr. C. H. : Apparent Intermediate Supervelocity of Detonation, 709
Johnson, Prof. A. W. : Terpene Chemistry, 18
Johnson, Dr. C. G. : Appointed head of the Entomology Department, Rothamsted Experimental Station, 493
Johnson, Prof. D. C. : Appointed to a chair of mechanics in the University of Cambridge, 488 ; work of, 488
Johnson, E., and others : Formation of Silicon Nitride Whiskers on a Ferro-Silicon Alloy at Room Temperature, 523
Johnson, Dr. G. A. L. : Skiddaw Slates proved in the Teesdale Inlier, 996
Johnson, Dr. G. A. L., and others : Granite below the Northern Pennines, 899
Johnson, J. Raymond, and others : Œstrogen Protection against Acute Digitalis Toxicity in Dogs, 1117
Johnson, K. D. B. : Radioactive Wastes, *review*, 75
Johnson, Prof. L. P. V., and others : *Obituary* of Dr. J. Unrau, 1057
Johnson, Maria Benigna : Formation of an Ommatin Pigment from Tyrosine by Ultra-violet Irradiation, 924
Johnson, Dr. P. : Appointed to a Research Fellowship in the Department of Medical Biochemistry and Pharmacology in the University of Birmingham, 679
  Some Recent Research Problems encountered in the Study of Blood as a Rheological Fluid, 1062
Johnson, R. L., and others : Karroo Igneous Activity and Tectonics in south-east Southern Rhodesia, 40
Johnstone, Prof. R. Edgeworth : A Survey of Chemical Engineering Education and Practice, 113
Joint Research Council (Manchester) : An Account of some of the Scientific and Technological Facilities which Manchester University and the Manchester College of Science and Technology can offer to Industry, 767
  Sources of Scientific and Technical Information available to Local Industry, 767
Joint Tissues and Synovial Fluid : The Stainable Mucin of (Dr. B. F. Martin and N. E. Shaw), 835
Jolliffe, K. H. (Andrade, Prof. E. N. da C., and) : Creep of Metals under Simple Shear, 431
Jones, Dr. A. S. : Appointed to a senior lectureship in chemistry in the University of Birmingham, 679
Jones, C. E. Roland : Gas Chromatography (Technical Details in the Examination of Pyrolysis Products), 867
Jones, Dr. C. H. : Electrical Contacts (Radioactive Tracer Techniques for the Measurement of Metal Transfer), 866
Jones, Dr. D. Hemingway : *Elminius modestus* on the South-East Coast of Scotland, 103
Jones, D. H. P. : Appointed to a Harkness Fellowship (astronomy) of the Commonwealth Fund, 308
Jones, E. L. : Appointed a livestock husbandry officer for Wales in the National Agricultural Advisory Service, 312
Jones, Prof. E. R. H. : Terpene Chemistry, 18
Jones, Prof. F. Llewellyn : Electrical Contacts (The Physics of Electrical Contact Phenomena), 866
Jones, G. I. : The Wildbooters, *review*, 71
Jones, Dr. J. Idris : The Growth of Organic Chemistry, *review*, 56
  Free Radicals in Aromatic Substitution, *review*, 294
Jones, Dr. K. : Experimental Taxonomy of Flowering Plants (The Experimental Taxonomy of *Anthoxanthum* L.—Cytological Aspects), 969
Jones, Keith (Borrill, Dr. Martin, and) : Hexaploid *Dactylis*, 469
Jones, Air Marshal Sir Owen : Elected president of the Royal Aeronautical Society, 862
Jones, Prof. Royston : Science in the Development of Ghana (The Correlation of Field, Laboratory and Analytical Studies of Engineering Structures), 1075
Jones, Dr. R. H. : Appointed to a lectureship in civil engineering in the University of Birmingham, 679
Jones, Dr. R. P. N. : Impact, *review*, 947
Jones, Robert T., and Cohen, Doris : High Speed Wing Theory, *review*, 118
Jones, Dr. W. D. : Fundamental Principles of Powder Metallurgy, *review* by J. H. Rendall, 572
Jones, Prof. W. R. D. : Retirement from the chair of metallurgy and fuel technology in the University College of South Wales and Monmouthshire, Cardiff, 12 ; work of, 12
Jordan, H. D. : The West African Rice Research Station, 773
Jortner, J., and Sokolov, U. : Spectrophotometric Determination of the Electron Affinities of some Diatomic Molecules, 1003
Journal of the Association for Computing Machinery, January 1961 issue, 864

Journal of Atherosclerosis Research, 767
Journal of the Royal Society of Western Australia : Vol. 43, Part 4, 767
Joy, R. : Appointed to a Research Fellowship in the Department of Medical Biochemistry and Pharmacology in the University of Birmingham, 679
Jupiter's Great Red Spot : Origin of (Dr. R. Hide), 895
Jurtshuk, jun., Peter, and others : Effect of Splenectomy on the Resistance of Rats to Histamine Stress, 274
Juvenile Delinquency : Trends in (T. C. N. Gibbens), (United Nations, World Health Organization, Public Health Papers No. 5), 686
Juvenile Stages of *Fasciola hepatica* in the Liver of the Mouse (Dr. Ben Dawes), 646

KAESBERG, Prof. Paul (Bockstahler, Larry E., and) : Bromegrass Mosaic Virus, a Virus containing an Unusually Small Ribonucleic Acid, 192
Kahrig, C., and others : Role of Glutathione and of a Self-stabilizing Chain of SH-Enzymes and Substrates in the Metabolic Regulation of Erythrocytes, 631
Kamat, S. S. (Oró, Prof. J., and) : Amino-acid Synthesis from Hydrogen Cyanide under Possible Primitive Earth Conditions, 442
Kamp, B. M., and others : Two Photochemical Systems in Photosynthesis, 510
Kaneko, T., and others : Flow of Portal and Hepatic Blood in Normal and Cirrhotic Liver, 812
Kantrowitz, Prof. A. R. : Elected a member of the Engineering Sciences Section of the International Academy of Astronautics, 495
Kaolin Minerals : Attempted Low-Temperature Syntheses of (Prof. G. W. Brindley and C. De Kimpe), 254
Kaplan, Dr. Albert S., and others: Effect of Mitomycin *C* on the Synthesis of Infective Virus and Deoxyribonucleic Acid in Pseudorabies Virus-infected Rabbit Kidney Cells, 33
Kaplan, Prof. Henry S., and others : Radiosensitization of *E. coli* by Purine and Pyrimidine Analogues incorporated in Deoxyribonucleic Acid, 796
Karlstrom, Dr. T. N. V. : Solar Variations, Climatic Change and related Geophysical Problems (Glacial History of Alaska), 967
Karras, M., and others : Mercury-206, a New Natural Radionuclide, 427
Karroo Igneous Activity and Tectonics in south-east Southern Rhodesia (K. G. Cox, J. R. Vail, L. J. Monkman and R. L. Johnson) 40 ; (D. N. Wood), 802
Karyological Demonstration of Hybridization of Mammalian Cells *in vitro* (Serge Sorieul and Prof. Boris Ephrussi), 653
Kass, Dr. Edward H. (Connor, Dr. David G., and) : Effect of Artificial Fever in Increasing Susceptibility to Bacterial Endotoxin, 453
Katti, Dr. P. K., and Chaudhri, Dr. M. M. : Effect of Strong Electric Fields on the Boiling Points of some Alcohols, 80
Kaufmann, E., and Dikstein, Dr. S.: A D-Lactic Dehydrogenase from *Leuconostoc mesenteroides*, 346
Kaufman, M. : Awarded a Research Grant by the Leverhulme Trust, 678
Kauranen, P., and others : Mercury-206, a New Natural Radionuclide, 427
Kawauchi, Hiroaki, and others : Changes of Hexose/Hexosamine Ratio and Degree of Branching in Glycoprotein from Rat Urine during the Development of Cancer, 265
Kay, Prof. J. M. : Appointed to the Board of Tube Investments, Ltd., as director of research and development, 493
Kay, L. : Perception of Distance in Animal Echo-Location, 361
Kaye, A. : Appointed to a Research Fellowship in the Department of Materials at the College of Aeronautics, Cranfield, 218
Ked, *Melophagus ovinus* (L.) : Experimental Elimination of *Trypanosoma melophagium* Flu from its Hosts the Sheep and the (W. A. Nelson), 739
Keele Foundation Year Course, 865
Keen, M. J. : Geophysical Methods, *review*, 55
Keilin, Prof. D. : Precautions in the Use of Ferri- or Ferro-cyanide for the Study of Haemoproteins, 717
Keldysh, Academician N. : Elected president of the U.S.S.R. Academy of Sciences, 959 ; work of, 959
Kellett, Dr. E. G. : Terpene Properties and Structures, *review*, 849
Kelly, Margaret, and others : Effect of Allyl*iso*propylacetamide on Liver Metabolism, 1014
Kelp (Giant), *Macrocystis pyrifera* : Life-span of the Fronds of the (Dr. W. J. North), 1214
Kelsall, P. J. : Non-disjunction of the Sex-Chromosomes in the Male of *Drosophila melanogaster*, 1035
Kendall, Prof. M. G. : To join the Board of C-E-I-R (U.K.), Ltd., 1060 ; work of, 1060
Kendrew, Dr. J. C. (Watson, Dr. H. C., and) : The Amino-Acid Sequence of Sperm Whale Myoglobin—Comparison between the Amino-Acid Sequences of Sperm Whale Myoglobin and of Human Haemoglobin, 670
Kendrew, Dr. J. C., and others : The Amino-Acid Sequence of Sperm Whale Myoglobin—A Partial Determination by X-Ray Methods, and its Correlation with Chemical Data, 666
Kennedy, Kenneth A. R. : Natural Selection in Human Populations, *review*, 72
Kennett, B. (Middlehurst, J., and) : An A.C. Modulated Flame Ionization Triode, 142
Keratin Fibres (Normal and Guard) : Different Permeability of Cuticular Sheath in (R. Z. de la Burde), 420
Kerkut, Dr. G. A., and others : Effect of Temperature on the Concentration of Free Radicals in Melanins from *Allium cepa*, 1005
Kern, Fritz : The Wildbooters, *review* by G. I. Jones, 71
Kernan, Roderick P. : Stimulation of Active Transport of Sodium from Sodium-rich Frog Muscle by Insulin and Lactate, 347
Kersten, H., and Rauen, Prof. H. M. : Degradation of Deoxyribonucleic Acid in *Escherichia coli* Cells treated with Mitomycin *C*, 1195
Kessner, Dr. David M., and Thomas, E. Donnall : Renal Proliferation in the Unilaterally Nephrectomized Rat, 175
α-Ketoglutarate in *Acetobacter melanogenum* : Aspects of the Conversion of Glucose to (Dr. D. H. Bone), 562
Key, Dr. B. J. : Effects of Chlorpromazine and Lysergic Acid Diethylamide on the Rate of Habituation of the Arousal Response, 275
Khaleeluddin, K., and others : Pyrolysis of Esters of Borneol and *iso*Borneol, 715
Kidney : Evidence of Secretion of an Aldosterone-stimulating Substance by the (Dr. William F. Ganong and Dr. Patrick J. Mulrow), 1115
Kidney of the Golden Hamster, *Mesocricetus auratus* : Lactic Acid Concentration in the, in Different Conditions of Diuresis (Prof. V. Capraro, G. Valzelli and C. De Agostini), 178
Kidney (Mammalian) : Sodium Transport and Oxygen Consumption in the (Dr. J. Hess Thaysen, Dr. N. A. Lassen and Dr. O. Munck), 919
Kidney Cells (Rabbit): Effect of Mitomycin *C* on the Synthesis of Infective Virus and Deoxyribonucleic Acid in Pseudorabies Virus-infected (Dr. Tamar Ben-Porat, Dr. Magdalena Reissig and Dr. Albert S. Kaplan), 33
Kidson, Dr. Chev : Erythrocyte Glucose-6-Phosphate Dehydrogenase Deficiency in New Guinea and New Britain, 1120
Kidwai (Rafi Ahmed) Memorial Prize of the Indian Council of Agricultural Research awarded to Dr. B. P. Pal, 312
Kiel, A. M. (Westrik, R., and) : Some Electron Microscopic Observations on Single Crystals of Polyethylene, 162
Kiepenheuer, Prof. K. O. : Solar Seeing (Seeing Conditions at a number of sites in Europe), 771
Kikuchi, Dr. R., and others : Effect of Temperature on the Retinal Slow Potential of the Horseshoe Crab, 1011
Kilbourne, Dr. Edwin D., and others : Inhibition by Cortisone of the Synthesis and Action of Interferon, 650
Killian, jun., Dr. James R. : Centenary of the Massachusetts Institute of Technology, 948
Kilmister, Dr. C. W. : Eddington—Philosopher or Prophet?, *review*, 42
100-Kilobar Region : Effects of High Pressure on Glass—a Possible Piezometer for the (Prof. Rustum Roy and H. M. Cohen), 798
Kimber Genetics Medal of the United States National Academy of Sciences awarded to Prof. J. B. S. Haldane, 674
Kimberley (West) Region of Western Australia : Rock Paintings in the (P. E. Playford), 767
Kimmitt, M. F., and others : Observation of Far Infra-Red Radiation from Shock Waves, 599
Kinematograph Society (British), and the Television Society : Convention on Television and Film Techniques, 868
Kinetin and Indolyl-3-Acetic Acid (Gibberellic Acid,) : A Sequential Growth Response to, in the Wheat Coleoptile (*Triticum vulgare* L.), (Dr. S. T. C. Wright), 699
King, Dr. C. A. M.: Investigations on Norwegian Cirque Glaciers, *review*, 662
King, Dr. F. J. (Bowman, Dr. Barbara H., and) : Effects of Glutamine and Asparagine Supplements in the Dietary Regimen of Three Phenylketonuric Patients, 417
King, J. O. L. : Appointed reader in animal husbandry at the University of Liverpool, 963
Kirby, Dr. A. H. M. : Fungicides in Agriculture and Horticulture (Current Usage and Recent Developments—Soft and Stone Fruit), 593
Kirk, F. A. (McHugh, T., and) : Awarded Williams Prizes for 1960 of the Iron and Steel Institute, 13
Kit, Boris, and Evered, Douglas S. : Rocket Propellant Handbook, *review* by Prof. D. B. Spalding, 66
Kistiakowsky, Dr. G. B. : Elected a member of Council of the United States National Academy of Sciences, 674
Kita, Dr. D. A., and others : Introduction of the 16α-Hydroxyl Group into Œstrogens by Streptomycetes, 627
Kite, L. V.: Phase-Velocity of Ultra-sound in Primary Aliphatic Amines, 1183
Kladnitzkaya, E. N. (Da-Tzao, Din, and) : A New Elementary Particle, 591
Klebsiella pneumoniae : Genetic Studies with (C. H. Clarke), 194
Klein, Martin J. (edited by) : Collected Scientific Papers (Paul Ehrenfest), *review* by Prof. J. Hamilton, 115
Kline, R. C., and others : Odd Harmonics of the Earth's Gravitational Field, 617
Knecht, R. W., and Davies, K. : Solar Flare Effects in the *F* Region of the Ionosphere, 797
Knight, J. R. : Behaviour of Magnesium Impurity in Gallium Arsenide, 999
Crystal Growth of Gallium Arsenide using Carbon Boats, 1001
Knighting, E., and others : An Experiment in Numerical Forecasting (Air Ministry : Meteorological Office, Scientific Paper No. 5), 973
Knill, Dr. J. L. : Some Aspects of Sedimentation in Orogenic Belts (Establishing Original Attitudes of Deformed Sedimentary Structures), 140
Knowles, Dr. A. : Proceedings of the Institute of Petroleum Hydrocarbon Research Group Conference on Molecular Spectroscopy, *review*, 76
Knowles, Sir Francis : Appointed to a senior lectureship in anatomy in the University of Birmingham, 679
Known Distribution of Van Allen Belts about the Earth : A Radio Wave Mechanism to account for the (Joseph M. Boyer), 597
Knuppen, R., and others : Configuration of the 6-Hydroxyl Group in Phenolic Steroids, 720
Kob (Uganda) : Unilateral Implantation in the (Prof. H. K. Buechner), 738
Kober Reaction for Urinary Œstrogens : A Supplement to the (Dr. L. Bradshaw), 809
Kobrle, V., and Chvapil, M. : Isolation of Peptides containing Hydroxyproline from Animal Tissues, 909
Koch, Dr. A. : Science in the Development of Ghana (Tuberculosis in Ghana), 1065
Kochetkova, G. V., and others : Biochemical Changes accompanying Impaired Respiration in Staphylococci, 978
Koelle, George B. : A Proposed Dual Neurohumoral Role of Acetylcholine—its Functions at the Pre- and Post-Synaptic Sites, 208
Koerselman, H. B., and others : Function of the Foetal Thyroid of the Rabbit with regard to Cholesterol Metabolism studied by Foetal Thyroidectomy, 822
Kohoutová, Dr. D. M. : Mechanism of the Transformation of the Polysaccharide Capsule in Pneumococcus, 1171
Koiter, W. T. (edited by) : Proceedings of the International Union of Theoretical and Applied Mechanics Symposium on the Theory of Thin Elastic Shells (Delft, 1959), *review* by Dr. J. W. Craggs, 379
Kok, Dr. D'A. : Some Recent Research Problems encountered in the Study of Blood as a Rheological Fluid, 1062
Köksal, Dr. O. : The Place of Food Science and Technology in the Campaign against Malnutrition (Problems and some Solutions), 398
Kolodny, Roselyn L., and Van der Kloot, Prof. W. G. : Contraction of Smooth Muscles in Non-Ionic Solutions, 786
Kolthoff, I. M., and Elving, Philip J. (edited by, assisted by Ernest B. Sandell) : Treatise on Analytical Chemistry, Part I, Theory and Practice, Vol. I, *review* by Prof. R. Belcher, 60

Kondratiev, Academician V. N. (Semenov, Academician N. N., and) : *Obituary* of Academician A. F. Joffé, 761
Konno, Dr. Kiyoshi, and others : Formamidase in Mycobacteria and its Use in Differentiating Saprophytic Mycobacteria from other Mycobacteria, 1219
Kopal, Prof. Zdenek : The Moon, *review* by Patrick Moore, 753
Koretkov's Sounds—a Function of the Skeleton to Transmit 'Pulsactor' Signals (Wing-Comdr. John E. Malcolm), 1114
Korff, Serge A., and others : Science in Progress, Eleventh Series (edited by Hugh Taylor), *review* by Prof. Ritchie Calder, 45
Kosaki, —, and co-workers : Isolation of Malignolipin from Malignant Tumours, 678
Koshika, M., and others : 'Sunlight' Flavour of Beer, 635
Koshtoyants, Prof. K. : *Obituary* by the Rt. Hon. Lord Adrian, 958
Koster, Rev. Dr. J. R. : Science in the Development of Ghana (Radio Research in Ghana), 1064
Kosterlitz, Dr. H. W., and others : Role of the Mucous Membrane in the Peristaltic Reflex in the Isolated Ileum of the Guinea Pig, 1205
Kotyk, A. : The Pasteur Effect in a Respiration-deficient Mutant of Baker's Yeast, 811
Kováč, Stefan, and others : Chemical Structure of Citrinin, 1104
Kovács, J., and Nagy (Kovács), H. : Polypeptide Formation from Asparagine under Hypothetically Primitive Conditions, 531
Kovalenko (Jessie Stevenson) Medal of the United States National Academy of Sciences awarded to Dr. K. F. Meyer, 674
Kovats, Dr. : Gas Chromatography (Quantitative Analysis of Hydrocarbons with Capillary Columns and Flame Ionization Detectors), 867
Kováts, Dr. Tibor G. : Local Endotoxin Hypersensitivity and its relation to the Shwartzman Phenomenon, 177
Krech, D., and others : Sex and Strain Differences in Electroshock Convulsions of the Rat, 515
Křen, Vladimir, and others : Dissociation of Isohaemagglutinin Formation and Tolerance of Skin Grafts in Chicks, 281
Krijgsman, Prof. B. J. : *Obituary* by A. C. Brown, 1057
Krishna Murty, V. G. (Krishna Rao, Dr. K. V., and) : Variation with Temperature of the Photoelastic Constants of Sodium Chloride, 429
Krishna Rao, Dr. K. V., and Krishna Murty, V. G. : Variation with Temperature of the Photoelastic Constants of Sodium Chloride, 429
Kristoffersen, John, and others : Identification of 20β-Hydroxy-pregn-4-ene-3-one in Luteal Tissue from Pregnant Whales, 1009
Krizanová-Laučíková, O., and others : Haemagglutinating Sub-Units released from Newcastle Disease, Para-influenza 1 and Mumps Viruses by Treatment with Ether, 834
Krisza, F., and others : Circulating Platelets in Mice subjected to Simultaneous X-Ray and Ultra-violet Irradiation, 544
Kröger, Dr. F. A., and others (edited by) : Progress in Semiconductors, Vol. 5, *review* by Dr. B. R. Pamplin, 116
Krohn, C., and others : Formation of Silicon Nitride Whiskers on a Ferro-Silicon Alloy at Room Temperature, 423
Krohn, Prof. P. L. : The Problems of Ageing, *review*, 1144
Krupka, Richard M., and Laidler, Keith J. : Molecular Mechanisms for Hydrolytic Enzyme Action, 916
Krypton : Use of, for Surface Area Measurements (Peter Cannon and George L. Gaines, jun.), 340
Ksiazkiewicz, Prof. M. : Some Aspects of Sedimentation in Orogenic Belts (The Polish Carpathians), 139
Kubaschewski, Dr. O. : Electrical Contacts (Mechanism of Formation of Oxide Films on Metals), 866
Küchemann, Dr. D. : AGARD Aeronautical Multilingual Dictionary, *review*, 851
Kulp, Prof. J. L. (edited by) : Proceedings of the Conference on the Geochronology of Rock Systems (Annals of the New York Academy of Sciences, Vol. 91, Article 2), 1062
Kunst und Naturform (herausgegeben von Prof. Georg Schmidt und Prof. Robert Schenk), *review* by Prof. T. A. Stephenson, 44
Kuo, Mau-Huai, and Blumenthal, Prof. Harold J. : Absence of Phosphatase Repression by Inorganic Phosphate in some Micro-organisms, 29
Kurland, Dr. C. G., and others: Unstable Ribonucleic Acid revealed by Pulse Labelling of *Escherichia coli*, 581
Kurosh, A. G. : The Theory of Groups (translated from the Russian and edited by K. A. Hirsch), second English edition, *review* by Dr. Hanna Neumann, 571
Kurouji, Ken-ichi (Yamashita, Dr. Kazukuni, and) : Effects of certain Androgenic Steroids on the Increase of Endometrial Carbonic Anhydrase caused by Progesterone, 1013
Kurylowicz, Jerzy : Elected an Honorary Member in the Section of Polite Literature and Antiquities of the Royal Irish Academy, 492
Kwashiorkor : Imidazole Acrylic Acid Excretion in (Dr. R. G. Whitehead and Dr. H. R. V. Arnstein), 1105
Kwei, E. A. : Science in the Development of Ghana (Outboard-Motor as a Prime Mover in the Development of Fisheries in Ghana), 1065

LABELLING (Pulse), of *Escherichia coli* : Unstable Ribonucleic Acid revealed by (Dr. Francois Gros, Dr. H. Hiatt, Dr. Walter Gilbert, Dr. C. G. Kurland, R. W. Risebrough and Dr. J. D. Watson), 581
Labelling (Trace-), of Insulin with Iodine (Dr. Ellis Samols and H. S. Williams), 1211
Laboratory Animal Disease : Problems of (International Committee on Laboratory Animals Symposium on), 677
Laboratory Animals : Welfare and Care of, 677
Laboratory Animals, International Committee on : *Bulletin*, March 1961, 677
  Symposium on the Problems of Laboratory Animal Disease, 677
  Proceedings of the Symposium on Living Animal Material for Biological Research, 677
Laboratory Animals Centre (Medical Research Council) : Symposium on the Provision of Animals for Cancer Research, 393
Labour and National Service, Ministry of : Unsealed Radioactive Substances Regulations, 766
Lacassagne, A., and others : Carcinogenic Activity of Apocholic Acid, 1007
Lactate : Stimulation of Active Transport of Sodium from Sodium-rich Frog Muscle by Insulin and (Roderick P. Kernan), 347
Lactic Acid Concentration in the Kidney of the Golden Hamster, *Mesocricetus auratus*, in Different Conditions of Diuresis (Prof. V. Capraro, G. Valzelli and C. De Agostini), 178
D-Lactic Dehydrogenase from *Leuconostoc mesenteroides* (E. Kaufmann and Dr. S. Dikstein), 346
Lactogenic Function in the Cat : Hypothalamic Control of (Hanus J. Grosz and Alan E. Rothballer), 349
β-Lactoglobulins of Buffalo's Milk and Cow's Milk : Comparison of the (Dr. A. Sen and N. K. Sinha), 343
Lacy, Dr. Dennis : Appointed to the readership in zoology and comparative anatomy at St. Bartholomew's Hospital Medical College, London, 680
'Lag-Phase' in Salt Uptake of Storage Tissue (R. F. M. Van Steveninck), 1072
Lagerstroemia Flos-reginae Retz. : Constituents of (Prof. D. P. Carew and T. F. Chin), 1108
Laidlaw, Dr. W. B. R. : Guide to British Hardwoods, *review* by J. L. Davidson, 48
Laidler, Keith J. (Krupka, Richard M., and) : Molecular Mechanisms for Hydrolytic Enzyme Action, 916
Laird, Prof. Marshall : Members of the *Culex pipiens* Series in New Caledonia and the New Hebrides, 1221
Lakshminarayanan, K. (Puri, Dr. G. S., and) : Ecological Problems in the Tropics (Tropical Soils), 772
Lamb, H. H. : Solar Variations, Climatic Change and related Geophysical Problems, 967
Land (Open), in National Parks : The Case for Control of Afforestation of (Standing Committee on National Parks of the Councils for the Preservation of Rural England and Wales and the Joint Action Group for the Protection of Dartmoor and Exmoor), 496
Land Arthropods : 'Preferred Temperatures' of (David S. Madge), 106
Landa, Dr. V. : Use of an Artificial Spermatophore in the Study of Activation of Spermatozoa and Development of Spermatophores in the Cockchafer, 935
Landsberg, Dr. Helmut E. : Solar Variations, Climatic Change and related Geophysical Problems, 967
Lane, Prof. R. E. : Training in Occupational Hygiene (Current Course in the University of Manchester for Industrial Medical Officers), 1159
Lang, Dr. D. (Rajewsky, Prof. B., and) : Absolute Measurement of Average Energy lost by Very Soft X-Rays per Ion Pair in Air, 249
Langerhans in Man : Development of the Islets of (Patricia M. Robb), 1018
Language of Science : Pictorial Guide to the, *review* by Prof. T. A. A. Broadbent, 68
Lanthanum Oxide (LaO)($B \rightarrow X$) System : Intensity Aspects as Determinants of $r'_e - r''_e$ in the Bands of (N. Sreedhara Murthy), 430
Lapage, Dr. G. : The Veterinary Annual 1960, *review*, 296
  Medicine of the Thorax, *review*, 476
Lardy, Henry A. (edited by) : Biochemical Preparations, Vol. 7, *review* by Dr. F. H. Malpress, 118
Large Doses of Œstrogens : Influence of, on the Structure of the Bones of some Reptiles (Dr. K. Simkiss), 1217
Larson, Prof. R. H., and others : Tinsel-type Structure in Flagella of Zoospores associated with Cabbage Clubroot Tissue, 186
Larvae : Citral, Linalyl Acetate, Linalol and Terpinyl Acetate as Attractants of (Food Selection by Silkworm Larvae, *Bombyx mori*), (Yasuji Hamamura and Ken-ichi Naito), 879
Larvae (Silkworm), *Bombyx mori* : Food Selection by—Citral, Linalyl Acetate, Linalol and Terpinyl Acetate as Attractants of Larvae (Yasuji Hamamura and Ken-ichi Naito), 879 ; β-Sitosterol as one of the Biting Factors (Yasuji Hamamura, Keizo Hayashiya and Ken-ichi Naito), 880
Lassen, Dr. N. A., and others : Sodium Transport and Oxygen Consumption in the Mammalian Kidney, 919
Lata, Dr. Madhu (Sanwal, Dr. B. D., and) : Glutamic Dehydrogenase in Single-Gene Mutants of *Neurospora* Deficient in Amination, 286
Latin America : Scientific Institutions and Scientists in (Unesco), Vol. 4, Part 5, 769
Latte, B., and others : Favism and Thalassaemia in Sardinia and their Relationship to Malaria, 1179
Lattice : Observation in the Year 1648 of Diffraction through a (Jiří Marek), 1092
Lattice (Lithium Borohydride) : The Borohydride Ion in the (Dr. D. A. Brown), 804 ; (Dr. C. J. H. Schutte), 805
Lattice (Spin-) Relaxation of Pairs of Chromium Ions in Ruby (J. C. Gill), 619
Laut, V. N., and Lyubovich, L. A. : The Cathode Ray Tube Memory of the High Speed Electronic Computer of the U.S.S.R. Academy of Sciences (translated from the Russian by Ruth Feinstein ; edited by F. A. Sowan), *review* by J. C. Cluley, 383
Lavas from an Abyssal Hill on the Floor of the North Atlantic Ocean (D. H. Matthews), 158
Laverty, Dr. R. : Elected to a Beit Memorial Junior Fellowship, 768
Laves, F., und andere (herausgegeben von) : Beiträge zür Physik und Chemie des 20 Jahrhunderts—Lise Meitner, Otto Hahn, Max von Laue zum 80.Geburtstag, *review* by Dr. C. A. Taylor, 118
Law, Lloyd W., and others : Variant of Parotid Tumour (Polyoma) Virus showing a Change in Oncogenic Properties, 97
Law (Mass Action) : Schulze–Hardy Rule and (Prof. Mirko Mirnik), 689
Lawford, D. J. : Serum Changes in the Rat following Oral Administration of Cadmium, 815
Lawler, Dr. Sylvia D., and Marshall, Ruth : Significance of the Presence of Lewis Substances in Serum during Infancy, 1020
Lawrence, John H. (edited by Cornelius A. Tobias and, assisted by Thomas L. Hayes) : Advances in Biological and Medical Physics, Vol. 7, *review* by Dr. N. M. Blackett, 74
Lawrence, W. E. : *Obituary* by Dr. W. C. Osman Hill, 1058
Lawrencium (Element 103), 392
Lawson, Dr. Alexander : Title of professor of organic chemistry (at the Royal Free Hospital School of Medicine) conferred on, 963
Laymen : Tropical Hygiene for (Ross Institute of Tropical Hygiene, London School of Hygiene and Tropical Medicine Course in), 397
Lazarev, G. E., and Ushakov, S. A. : Study of the Ice Sheet and of the Earth's Crust in the Antarctic Continent, 677
Le Cochec, F., and others : Estimation of Percentage Natural Cross-Pollination—Experiments on Rice, 1084
Leach, K., and others : Effect of Temperature on the Concentration of Free Radicals in Melanins from *Allium cepa*, 1005
Lead-210 in some Human and Animal Tissues (C. R. Hill and Dr. Z. S. Jaworowski), 353

Lead Sulphate : Oxidation of Galena to (R. V. Culver, N. B. Gray and Prof. E. C. R. Spooner), 78
Leakage Current Rectification in the Squid Giant Axon (Dr. William J. Adelman and Dr. Robert E. Taylor), 883
Leal, R. S., and Greenbaum, Dr. A. L. : Incorporation of Phosphorylcholine labelled with Phosphorus-32 into the Liver Phospholipids of Rats treated with Growth Hormone, 548
Leather Manufacturers' Research Association (British) : Open Days at Egham, 16, 765
  Annual Report for 1959-60, 309
Lebistes reticulatus Peters (Cyprinodont) : Adaptive Euryhalinity in the (Dr. T. Mohsen and M. Emerit), 932
Leck, Dr. J. H. : Appointed reader in electronic engineering at the University of Liverpool, 963
Lectures on Ergodic Theory (Prof. Paul R. Halmos), *review* by Dr. I. E. Farquhar, 947
Lederer, Edgar : Elected an Honorary Member in the Section of Science of the Royal Irish Academy, 492
Lederle Medical Faculty Awards (American Cyanamid Co.), 768
Lederle Medical Student Research Fellowships for 1961 (American Cyanamid Co.), 134
Lee, A. J. : Sea Surface Temperature in Coastal Waters of the British Isles, 1164
Lee, Melvin (Debro, Prof. Joseph R., and) : Interaction of Proteins and Nucleotides in Buffered Aqueous Solutions, 1008
Leech, Rachel M., and Ellis, Dr. R. J. : Coprecipitation of Mitochondria and Chloroplasts, 790
Lefever, R. A., and Chase, A. B. : Growth Spirals on Synthetic Magnetoplumbite Crystals, 255
Lefschetz, Prof. Solomon : Elected a Foreign Member of the Royal Society, 488
Legendre : Fonctions Sphériques de, et Fonctions Sphéroidales (Dr. Louis Robin), Tome 3, *review*, 118
Lehane, D., and others : Transplacental Passage of Red Cells in Man, 922
Lehmann, Dr. J. : Appointed I.C.I. Research Fellow in the Department of Chemistry in the University of Birmingham, 679
Lemon, H. : The Wool Industries Research Association—New Laboratories for Worsted Processing, 313
Lenci, M. T., and others : A 'Natriferic' Principle other than Arginine–Vasotocin in the Frog Neurohypophysis, 828
Lens of the Rat : Incorporation of Amino-Acids into Protein and Ribonucleic Acid of the—Effect of Heavy Metals (Dr. Anima Devi, Dr. Sidney Lerman and Dr. Nirmal K. Sarkar), 1193
Leonard, Dr. J. H., and Houghton, Prof. G. : Effect of Mass Transfer on the Velocity of Rise of Bubbles in Water, 687
Leopoldina German Academy of Science : Schleiden Medal awarded to Prof. Jean Brachet and Prof. Hans Bauer, 312
Leptospira-agglutinating Factors in Turtle Sera (Prof. J. van der Hoeden, Esther Szenberg and Z. Evenchik), 95
Lerman, Dr. Sidney, and others : Incorporation of Amino-Acids into Protein and Ribonucleic Acid of the Lens of the Rat—Effect of Heavy Metals, 1193
Lesion (Experimental Liver), in *Iguana iguana* : Effect of Castration on (Prof. A. Stolk), 93
Lester, I. H. (Ramwell, Dr. P. W., and) : A Potential Source of Error in the Hexobarbitone Sleeping-Time Test in Mice, 640
Lester, Roger, and Schmid, Prof. Rudi : Bile Pigment Excretion in Amphibia, 452
Leucocyte Pyridine Nucleotides : Effect of *Staphylocci* on (Dr. M. N. Swartz, P. H. Black and J. Merselis), 516
Leuconostoc mesenteroides : A D-Lactic Dehydrogenase from (E. Kaufmann and Dr. S. Dikstein), 346
Leukaemic Human Beings (Normal and) : Immunological Differences of Deoxyribonucleoproteins from White Blood Cells of (Luigi Messineo), 1122
Leukaemogenesis by Urethan in New-born Swiss Mice (Dr. L. Fiore-Donati, Dr. L. Chieco-Bianchi, Dr. G. de Benedictis and Dr. G. Maiorano), 278
Leung, L. S. (Harrison, Dr. D., and) : Bubble Formation at an Orifice in a Fluidized Bed, 433
Leverhulme Trust Fund : Award of Fellowships and Research Grants, 678
Levin, Dr. M. L. : Thermal Shock Behaviour of Brittle Materials, 521
Lewis, Prof. D. : Growth and Genetics of Higher Fungi, 399
  Chromosome Fragments and Mutation of the Incompatibility Gene, 990
Lewis, Prof. David (Glasstone, Samuel, and) : Elements of Physical Chemistry, *review* by Dr. A. Maccoll, 477
Lewis, Dr. D. T. : Solubilities, *review*, 74
  A Treatise on Analytical Chemistry, *review*, 294
  Heterometry, *review*, 380
  Polarography, *review*, 476
  Spot Tests in Organic Analysis, *review*, 479
  Advances in Analytical Chemistry, *review*, 944
Lewis, F. M. (Meals, R. N., and) : Silicones, *review* by Dr. J. S. Anderson, 59
Lewis, Dr. J. : Title of reader in chemistry (at University College, London) conferred on, 396
Lewis, Dr. J., and others : Complex Hydrides of Platinum, 528
Lewis, John : A Survey of Oriental Grasses, *review*, 659
Lewis, Dr. O. J. : Appointed to the University of London readership in anatomy at St. Bartholomew's Hospital Medical College, London, 963
Lewis, Dr. P. R. : Some Recent Research Problems encountered in the Study of Blood as a Rheological Fluid, 1062
Lewis, W. R., and others (edited by Dr. Ernest S. Hedges, with the collaboration of) : Tin and its Alloys, *review* by Prof. F. C. Thompson, 753
Lewis, W. Vaughan : Appointed a member of the Committee for Wales of the Nature Conservancy, 218
Lewis, W. V. (edited by) : Investigations on Norwegian Cirque Glaciers, *review* by Dr. C. A. M. King, 662
Lewis Substances in Serum during Infancy : Significance of the Presence of (Dr. Sylvia D. Lawler and Ruth Marshall), 1020
Lexicon (A French), of Plant Formations, *review* by N. Y. Sandwith, 478
Lhoas, Pol : Mitotic Haploidization by Treatment of *Aspergillus niger* Diploids with *para*-Fluorophenylalanine, 744
Libby, D., and others : Prevention by Cysteamine of Radical Formation in Bovine Serum Albumin by γ-Rays, 998
Librarians in the United Kingdom : Employment of, 133
Library of Recorded Animal Sounds (To be set up by the Committee for Biological Acoustics, in collaboration with the British Institute of Recorded Sound), 395
Library (National Lending), for Science and Technology : Appointment of Dr. D. J. Urquhart as first director, 215
Liddell, Prof. E. G. T. : The Discovery of Reflexes, *review* by Sir John Eccles, 43
Liebmann, Prof. Hans : Handbuch der Frischwasser- und Abwasser-Biologie, Band 2, *review* by Dr. H. B. N. Hynes, 1043
Liebold, Dr. B., and others : The Haemoglobin Particles—Chemical and Genetic Aspects of their Structure, 480
Liechti, Dr. P., in association with Dr. F. W. Roe and Dr. N. S. Haile : The Geology of Sarawak, Brunei and the Western Part of North Borneo, 768
Life : The Ascent of—a Philosophical Study of the Theory of Evolution (Prof. T. A. Goudge), *review* by P. G. Fothergill, 1042
  Aspects of the Origin of (edited by M. Florkin), *review* by N. W. Pirie, 295
  Significance of Carbonaceous Meteorites in Theories on the Origin of (Prof. J. D. Bernal), 129
Life (Wild) : Conservation of, 960
Life-History of the Green-veined Orchid, *Orchis morio* (J. F. H. Doulton), 767
Life Offices' Association for Australasia : Fund to promote and assist Scientific and Medical Research, 135
Life-span of the Erythrocyte : Acetylcholinesterase and the (J. Metz, N. J. van Rensburg, K. Stevens and D. Hart), 1208
Life-span of the Fronds of the Giant Kelp, *Macrocystis pyrifera* (Dr. W. J. North), 1214
Lifetime of the Pyrene Dimer (Dr. C. A. Parker and C. G. Hatchard), 165 ; (Dr. B. Stevens and E. Hutton), 166
Lifschutz, Dr. I. M. : Awarded the Simon Memorial Prize by the United Kingdom Committee of the Low Temperature Group of the Institute of Physics and the Physical Society, 1156
Light : The Distribution of, in an Image formed in the Cat's Eye (Valerie B. Morris and F. H. C. Marriott), 176
  Effects of Quality of, on Development of Roots on Dwarf Bean Hypocotyls in Presence and Absence of Boron (Dr. E. C. Humphries), 701
  Velocity of, in a Magnetic Field (Prof. Thomas Erber), 25
Light emitted from a Moving Source : Velocity of (Dr. W. G. V. Rosser), 249
Light (Ultra-violet) : Incorporation of Thymidine into Deoxyribonucleic Acid by Extracts from Bacteria exposed to (C. O. Doudney and Daniel Billen), 545
Light Curves of Meteors : Anomalies in the, resulting from Fragmentation (Dr. R. Ananthakrishnan), 896
Light Reactions (Two), in Noncyclic Photo-Phosphorylation of Green Plants : Separation of (Dr. M. Losada, Dr. F. R. Whatley and Prof Daniel I. Arnon), 606, *erratum*, 1063
Light-Time Fraction : Prediction of the Effect of, on the Critical Flicker Frequency—an Insight from Fourier Analysis (K. Gibbins and Dr. C. I. Howarth), 330
Lighthill, M. J. : Higher Approximations in Aerodynamic Theory, *review*, 118
  Elected a member of the Engineering Sciences Section of the International Academy of Astronautics, 495
  Awarded the Hopkins Prize of the Cambridge Philosophical Society, 769
Likar, I. N., and others : Hyaluronic Acid in the Uterine Wall of the Guinea Pig during the Sexual Cycle, 1118
Likar, L. J., and others : Hyaluronic Acid in the Uterine Wall of the Guinea Pig during the Sexual Cycle, 1118
Likar, Dr. M. : Pseudomonadaceae as a Source of Bacterial Contamination in Tissue Culture, 1025
Lillegraven, A. (Hvinden, T., and) : Caesium-137 in Air, Precipitation, Drinking Water, Milk and Beef in Norway during 1959 and 1960, 402
Lilley, M. Deloris, and Vallance-Owen, Dr. J. : A Factor associated with 'Visking' Tubing capable of Antagonizing Insulin, 1196
Limb Tremor : Function of (C. B. Gibbs), 540
Limit (An Upper), for the Resistivity of a Superconducting Film (R. F. Broom), 992
Limit (Upper Plastic), of Clays : Interpretation of the (Prof. B. P. Warkentin), 287
Limnoria : Absence of Chitinase in (J. Ross Stevenson), 463
Limnoria (Isopoda) : Wood-boring Activity of, in relation to Oxygen Tension (Dr. S. K. Eltringham), 512
Linalol and Terpinyl Acetate (Citral, Linalyl Acetate,) as Attractants of Larvae (Food Selection by Silkworm Larvae, *Bombyx mori*), (Yasuji Hamamura and Ken-ichi Naito), 879
Linalyl Acetate, Linalol and Terpinyl Acetate (Citral,), as Attractants of Larvae (Food Selection by Silkworm Larvae, *Bombyx mori*), (Yasuji Hamamura and Ken-ichi Naito), 879
Lind, Dr. Patricia E., (Ada, Dr. G. L. and) : Neuraminidase in the Chorioallantois of the Chick Embryo, 1169
Line-Widths (Electron Spin Resonance), in Solutions of Copper and Silver Dithiocarbamates (Roland Aasa, Rune Pettersson and Tore Vänngård), 258
Linear Measurement : Determination of Enzyme Activity by a (Andrew G. Tsuk and Prof. Gerald Oster), 721
Lining Cells (Sinus), of the Spleen : Nature of the (Dr. R. F. Dorfman), 1021
Linked Genes (Two), showing a Similar Timing of Expression in Mice (Kenneth Paigen and Werner K. Noell), 148
Linnean Society of London : Election of Officers for 1961-62, 962
  Linnean Gold Medals presented to Edmund William Mason and Dr. Frederick Stratten Russell, 962
  Election of Dr. Mary Agnes Chase and Dr. Franz Petrak as Foreign Members, 962
  Symposium on the Experimental Taxonomy of Flowering Plants, 968
Linnell, Prof. W. H. : Retirement from the chair of pharmaceutical chemistry in the School of Pharmacy, University of London, 862 ; work of, 862
Linoleate Hydroperoxide : Destruction of, by Spya Extracts (Dr. J. A. Blain and T. Barr), 538
Linoleate Hydroperoxide (Methyl) : Reactions of Cytochrome-c with (Dr. A. Banks, E. Eddie and J. G. M. Smith), 908
Linseed Oil : *Cyclo*-Arthenol, a Minor Constituent of (Dr. Pompeo Capella), 167
Linton, Prof. D. L. : Appointed a member of the Committee for England of the Nature Conservancy, 218
Linzell, J. L., and Bligh, J. : Polypnoea evoked by Heating the Udder of the Goat, 173

Lipetz, Dr. Jacques, and Stonier, Dr. Tom : Effect of 5-Bromuracil on Crown Gall Tumour Induction, 929
Lipids : Feather (Dr. A. Bolliger and D. Varga), 1125
Lipids (Compound) : Fractionation of, by Dialysation in an Organic Solvent against an Organic Solvent (Prof. Sen-itiroh Hakomori and Koh-kiti Takeda), 265
Lipids (Surface), of Plants : Taxonomic Significance of (S. Jean Purdy and Dr. E. V. Truter), 554
Lipomyces : A Superior Fat-synthesizing Single-Spore Strain of (D. R. Cullimore and Dr. M. Woodbine,) 1022
Lipopolysaccharides (Nucleic Acid-free), from Gram-negative Bacteria : Extraction of (G. J. O'Neill and Prof. J. P. Todd), 344
Lipschutz, Prof. Alexander, and Iglesias, Rigoberto : Recovery of Fertility after Protracted-Steroid-induced Sterility in Mice, 174
Lipscomb, jun., Prof. W. N. : Elected a Member of the United States National Academy of Sciences, 674
Lipson, Prof. H., and others : The Interpretation of X-Ray Diffraction Photographs, second edition, *review* by Dr. M. R. Truter, 69
Liquid Chromatographic Separations using Rubber as the Stationary Phase (P. I. Brewer), 625
Liquid Diffusion : Informal Meeting at the Royal College of Science and Technology, Glasgow (under the auspices of the Faraday Society) to mark the centenary of the publication by Thomas Graham of his paper on, 312
Liquid *n*-Hexane : Photoemission into (Dr. D. W. Swan), 903
Liquid Propellant Rockets (David Altman, James M. Carter, S. S. Penner and Dr. Martin Summerfield), *review* by Prof. D. B. Spalding, 66
Liquid Solutions : Activity-based Diffusion Coefficients for (F. A. L. Dullien and Prof. L. W. Shemilt), 526
Liquid (Gas–) Chromatography of Sterol Methyl Ethers (R. B. Clayton), 1071
Liquid and Fluidized Solid Systems : Similarity in Behaviour between Gas Bubbles in (P. D. Bloore and Dr. J. S. M. Botterill), 250
Liquids (Visco-Elastic) : Flow of, from Tubes (J. Harris), 993
Lister, R. M., and Murant, Dr. A. F. : Diseases caused by Plant Viruses in Crops (Seed-transmission of Arabis Mosaic, Raspberry Ringspot and Tomato Black Ring Viruses), 220
Lissitzky, Serge (Miranda, Francois, and) : Scorpamins, the Toxic Proteins of Scorpion Venoms, 443
Literary Presentation of Science, *review* by A. L. Bacharach, 847
Literature on Dielectrics : Digest of, Vol. 23, 1959 (edited by Louis J. Frisco and Thomas D. Callinan), *review* by Vera Daniel, 75
Lithium Borohydride Lattice : The Borohydride Ion in the (Dr. D. A. Brown), 804 ; (Dr. C. J. H. Schutte), 805
Lithium Bromide : Interaction of Model Peptides with Water and (Dr. J. Bello and H. R. Bello), 440
Lithium Ions (Migration of), into Empty Octahedral Sites in Muscovite and Montmorillonite : Infra-Red Investigation of the (Prof. Joe L. White, G. W. Bailey, C. B. Brown and J. L. Alrichs), 342
Little Research Institute (Arthur D.) : Annual Report for 1960, 1068
Littler, Dr. J. S. : Awarded a CIBA fellowship in chemistry, 489
Liver in Infective Hepatitis (Dr. W. G. C. Bearcroft), 549
Liver of the Mouse : Juvenile Stages of *Fasciola hepatica* in the (Dr. Ben Dawes), 646
Liver (Mouse), and from the Ehrlich Ascites Tumour : Antigenicity of Deoxyribonucleic Acids from (Dr. J. S. Colter and Dr. K. A. O. Ellem), 550
Liver (Normal), and Transplantable Hepatoma Tissue : Magnetic Susceptibility of (Frank E. Senftle and Arthur Thorpe), 410
Liver (Normal and Cirrhotic) : Flow of Portal and Hepatic Blood in (Dr. T. Nakamura, S. Nakamura and T. Kaneko), 812
Liver (Rat) : Biosynthesis of Choline *in vitro* by (F. R. Dalal, J. M. Noronha and Dr. A. Sreenivasan), 267
  Intracellular Distribution of Ubiquinone in, under certain Stress Conditions (Dr. A. S. Aiyar and Dr. A. Sreenivasan), 344
Liver (Rat) Tryptophan Pyrrolase : A Difference between the Modes of Action of Substrate and Hormonal Inducers of (Dr. Olga Greengard and Prof. Philip Feigelson), 446
Liver (Regenerating) : Transmission of Swelling Characteristics by Mitochondria of (Hans H. Gosch and Prof. Joseph C. Arcos), 272
Liver Cell Damage due to Carbon Tetrachloride : Reversible Nature of, as demonstrated by the Use of Phenergan (Dr. K. R. Rees and Dr. W. G. Spector), 821
Liver Fraction : Influence of a, on the Phagocytic Activity of the Reticulo-Endothelial System in Mice (Prof. B. N. Halpern, C. Stiffel and J. Dedichen), 279
Liver Lesion (Experimental), in *Iguana iguana* : Effect of Castration on (Prof. A. Stolk), 93
Liver Metabolism : Effect of Allyl*iso*propylacetamide on (Prof. C. H. Gray, Margaret Kelly and V. Moses), 1014
Liver Mitochondria (Isolated): Effects of Oligomycin on Respiration and Swelling of (Dr. J. B. Chappell and Dr. G. D. Greville), 502
Liver Oil of the New Zealand School Shark (*Galeorhinus australis* MacLeay) : Occurrence of *n*-Odd-Numbered Monoethylenic Fatty Acids in the (Isobel M. Morice and Dr. F. B. Shorland), 443
Liver Phospholipids of Rats treated with Growth Hormone : Incorporation of Phosphoryl-choline labelled with Phosphorus-32 into the (R. S. Leal and Dr. A. L. Greenbaum), 548
Liver and Blood Plasma of Rabbits poisoned with Carbon Tetrachloride : Quinine Oxidase in (Dr. Gilberto G. Villela), 807
Living Animal Material for Biological Research (Proceedings of the International Committee on Laboratory Animals Symposium on), 677
Living Animals : Determination of the Volume and Weight of (Prof. C. P. Gnanamuthu), 826
Living Infected Cells : Apparent Release of Tobacco Mosaic Virus in (Prof. J. G. Bald and R. A. Solberg), 651
Living Matter : Carl Nägeli and the Fine Structure of (Dr. J. S. Wilkie), 1145
Livres Français de Sciences at Techniques : Catalogue Collectif des (1950-60), 591
Lizard from Borneo : A Rare Earless Monitor (Tom Harrisson and Dr. N. S. Haile), 1213
Lloyd, Dr. A. G. : *In vivo* Metabolism of N-Acetylhexosamine ^{35}S-Sulphate Esters, 914
Lloyd, Dr. H. K. M. : Appointed to the chair of metallurgy and fuel technology in the University College of South Wales and Monmouthshire, Cardiff, 12 ; work of, 12
Loading (Impulse), of Rock Targets to produce Fracture Patterns similar to Naturally Occurring Radial Dyke Systems (Carl F. Austin), 227
Lobarzewska, A., and others : Biological Activity of some Humic Fractions isolated by means of Partition Chromatography, 277
Local Educational Authorities in England and Wales : Selected Statistics relating to—Educational Year 1958-1959 (Ministry of Education), 393
Local Endotoxin Hypersensitivity and its relation to the Shwartzman Phenomenon (Dr. Tibor G. Kováts), 177
Local Industry : Sources of Scientific and Technical Information available to (Manchester Joint Research Council), 767
Localization of Ferrous Corrosion by Azide (P. Hersch), 163
Location (Animal Echo-) : Perception of Distance in (L. Kay), 361 ; (J. D. Pye), 362 ; (Jan Nordmark), 363
Locke, Dr. Simeon : Fractionation of the Motor Unit during Repetitive Response to Prostigmine, 452
Lockhart, Major S. F. Macdonald : Appointed a member of the Scottish Committee of the Nature Conservancy, 218
Lockie, L. M., and others : Agglutination of Sensitized Alligator Erythrocytes by Rheumatoid Factor(s), 552
Locquin, Marcel : Applications of Interference Microscopy (Microscopes are needed to magnify the very small 'Memories' used in Machines for Automatic Documentation and Translation), 316
Löcsei, Béla : Mullite Formation in the Aluminium Fluoride–Silicon System (AlF_3–SiO_2), 907
Locusts : The Prothoracic Gland and Colour Change in (Peggy E. Ellis and Dr. D. B. Carlisle), 368
Lodge, Dr. R. M. : Science and Industry—the Problem of Communication, 966
Lodge, T., and others : Incomplete Antibodies to Chicken Red Cell Antigens, 544
Loggins, P. E., and others : Blood Potassium and Sodium of Hereford and Brahman Cattle and some Breeds of Sheep maintained in Florida, 181
Lomonaco, Prof. T. : Elected a member of the Life Sciences Section of the International Academy of Astronautics, 495
London : Postgraduate Courses in, 396
London Clay : *Nothofagus* Pollen in the (Ma Khin Sein), 1030
London Hospital Medical College : Symposium on the Applications of Television in Medical Research and Teaching (organized by the Medical Committee of the Scientific Film Association in collaboration with the Association for the Study of Medical Education), 1159
London School of Hygiene and Tropical Medicine : Appointment of Dr. Peter Armitage to the University of London chair of medical statistics, 680, 764
  Retirement of Prof. A. Bradford Hill from the chair of medical statistics, 764
London School of Hygiene and Tropical Medicine (Ross Institute of Tropical Hygiene) : Course in Tropical Hygiene for Laymen, 397
London School of Hygiene and Tropical Medicine (Imperial College of Science and Technology and the) : Postgraduate Courses in Public Health Engineering, 971
Long, Dr. C. : Appointed to the University of London readership in biochemistry at the Institute of Basic Medical Sciences, 219
Longevity in Mice with a Genetically determined Muscular Dystrophy (Dr. James R. Miller, A. J. Wood and Prof. William C. Gibson), 552
Longings : Immortal (Stephen Findlay), *review* by the Very Rev. Dr. W. R. Matthews, 943
Longmire, G., and others (edited by) : Plasma Physics and Thermonuclear Research, Vol. 1, *review* by Sir Basil Schonland, 750
Longmuir, Ian S. (edited by) : Advances in Polarography—Proceedings of the Second International Congress held at Cambridge, 1959, *review* by Dr. D. T. Lewis, 476
Lonsdale, Dame Kathleen : Technology, Science and Art—Common Ground (Science and Ethics), 397
Look (The New), in Mathematics, *review* by Prof. T. A. A. Broadbent, 67
Lorand, Dr. L., and Rule, Dr. N. G. : Inhibition of Proteolytic Enzymes by Decarboxylated Amino-Acid Derivatives—Effect of Toluenesulphonyl(Tosyl)agmatine (4-Toluenesulphonamidobutylguanidine) on Thrombin and Trypsin, 722
Lords, House of : Debate on Afforestation in the National Parks, 872
  Second reading of the Rating and Valuation Bill, 1154
Lörincz, Prof. F., and Biró, Dr. G. : Nature of Sarcolemma, the Striated Muscle Fibre Membrane, 317
Losada, Dr. M., and others : Photoproduction of Hydrogen, Photofixation of Nitrogen and a Unified Concept of Photosynthesis, 601
  Separation of Two Light Reactions in Noncyclic Photo-Phosphorylation of Green Plants, 606, *erratum*, 1063
Loudon, Dr. J. D. : Practical Organic Chemistry, *review*, 753
  Qualitative Organic Analysis, *review*, 753
Loughhead, –. (Bray, Dr. –., and) : Solar Seeing (Results obtained near Sydney), 771
Loughnan, C. J. : Motion of Geomagnetic Field Lines, 427
Louping Ill Strain : Comparison of an Attenuated and Virulent (M. Grešíková, P. Albrecht and E. Ernek), 508
Lovberg, Ralph H. (Glasstone, Samuel, and) : Controlled Thermonuclear Reactions, *review* by Sir Basil Schonland, 750
Lovell, Prof. R. : Elected president of the Society for General Microbiology, 591
Low Frequencies (Very) : Some Preliminary Experimental Tests of a Novel Method of Radiating at (R. N. Gould), 332
Low Salt Intakes (Chronic High and) : Effect of, on Adrenocortical Function (Dr. Lewis K. Dahl, Lawrence Silver, Sanford Spraragen and Malcolm Smilay), 348
Low-Temperature Behaviour of Haematite : 'Memory' of Initial Remanent Magnetization and Number of Repeating of Heat Treatments in (Prof. T. Nagata, M. Yama-ai and S. Akinoto), 620
Low-Temperature Syntheses (Attempted), of Kaolin Minerals (Prof. G. W. Brindley and C. De Kimpe), 254
Low Temperatures : Inelastic Scattering of Conduction Electrons in Dilute Silver–Manganese Alloys at (M. S. R. Chari), 994
Lowden, Dr. John Alexander : Awarded a Queen Elizabeth II Fellowship by the Queen Elizabeth II Canadian Fund to Aid in Research on the Diseases of Children, 863
Lowe, M. B., and Phillips, J. N. : Catalysis of Metalloporphyrin Formation—a Possible Enzyme Model for Haem Iron Incorporation, 262
Lowenstein, Prof. O. : Physiology of Effector Organs, *review*, 1045
Lower Purbeck Beds of Swindon Facies in Dorset (Ian M. West), 526

Lower Vertebrates : Differences in Mechanism of Staining Reaction for Mast Cells of some (Prof. A. Stolk), 360
  Histochemical Analysis of some Dehydrogenase Systems in the Erythrocytes of some (Prof. A. Stolk), 926
Lowie's Selected Papers in Anthropology (edited by Dr. Cora du Bois), *review* by T. K. Penniman, 851
Lowman, jun., Paul D. (Carron, Maxwell K., and) : Analysis of a Supposed Clay Fulgurite from Ontario, 40
Lubrication (Elastohydrodynamic), of Rollers (A. W. Crook), 1182
Lucas, Ltd., Joseph : Establishment of the Joseph Lucas research fellowship in production engineering at the College of Advanced Technology, Birmingham, 962
Ludlam, Dr. F. H. : Hurricanes, *review*, 52
Ludlow, N. G. T. (Bhadani, Dr. M. M., and) : Precipitation of Sub-Micron Dust in Still Air by Cloud-size Water Droplets, 974
Lukaszewski, G. M., and Redfern, J. P.: Chromium (III)–Oxyanion Systems, 805
Lumb, F. E. : Seasonal Variation of the Sea Surface Temperature in Coastal Waters of the British Isles (Air Ministry : Meteorological Office, Scientific Paper No. 6), 1164
Luminous Bacteria : Chitinoclastic Activity in the (R. Spencer), 938
Lunaas, Torleiv, and others : Identification of 20β-Hydroxy-pregn-4-ene-3-one in Luteal Tissue from Pregnant Whales, 1009
Lundegårdh, Prof. H. : Respiratory Effects of Phosphorylation, 983
Lupo, Dr. C. (Chieffi, Dr. G., and) : Identification of Œstradiol 17β, Testosterone and its Precursors from *Scylliorhinus stellaris* Testes, 169
Luteal Tissue from Pregnant Whales : Identification of 20β-Hydroxy-pregn-4-ene-3-one in (John Kristoffersen, Torleiv Lunaas and Weiert Velle), 1009
Lutsenko, V. N., and others : Atlas of γ-Ray Spectra from Radiative Capture of Thermal Neutrons (translated from the Russian by J. B. Sykes), *review* by Dr. E. R. Rae, 75
Lynn, Dr. J. W. : Appointed senior lecturer in electric power engineering at the University of Liverpool, 963
Lyon, Mary F. : Gene Action in the X-Chromosome of the Mouse (*Mus musculus* L.), 372
Lyon, R. N., and others (edited by) : Technology, Engineering and Safety, Vol. 2 (Progress in Nuclear Energy, Series 4), *review* by D. English, 204
Lysed Erythrocytes : Precipitation Reaction between Serum and (Dr. J. F. Wilson and D. M. Jobling), 550
Lysergic Acid Diethylamide : Effects of Chlorpromazine and, on the Rate of Habituation of the Arousal Response (Dr. B. J. Key), 275
Lyubovich, L. A. (Laut, V. N., and) : The Cathode Ray Tube Memory of the High Speed Electronic Computer of the U.S.S.R. Academy of Sciences (translated from the Russian by Ruth Feinstein ; edited by F. A. Sowan), *review* by J. C. Cluley, 383
Lyyjynen, A., and others : Mercury-206, a New Natural Radionuclide, 427

MABBUTT, J. A. : At the Australian Arid Zone Technical Conference (Physical Characteristics of the Australian Arid Zone—Geomorphology), 19
Macaca (Genus) : Effects of Speciation on Serum Proteins in the, with Special Reference to the Polymorphic State of Transferrin (Dr. Morris Goodman and Emily Poulik), 171
McAlister, R., and others : Evidence for Multiple Caeruloplasmin Components in Human Serum, 927
Maccabaeans, Society of: Meldola Medal for 1960 awarded to Dr. J. N. Bradley, 865
McCallien, Prof. W. J. : Science in the Development of Ghana (Seas and Oceans), 1065
McCance, Dr. R. A., and Widdowson, Dr. E. M. : The Composition of Foods (Medical Research Council, Special Report Series No. 297), *review* by Joyce Doughty, 477
McClare, C. W. F. : Elected to a Beit Memorial Junior Fellowship, 768
McClelland, G. A. H. : Experimental Hybridization of *Aedes* (*Stegomyia*) *aegypti* (L.) with A. (S.) *simpsoni* (Theobald), 369
McClymont, Prof. G. L., and others : Effect of Duodenal Administration of Highly Unsaturated Fatty Acids on Composition of Ruminant Depot Fat, 725
Maccoll, Dr. A. : Elements of Physical Chemistry, *review*, 477
McColl, Ian (Hill, Marjorie J., and) : Ultrasonic Detection of Choledocholithiasis, 627
McCollum, Prof. Elmer Verner : Elected a Foreign Member of the Royal Society, 488, 959 ; work of, 959
McConnell, Dr. R. B., and others : Transplacental Passage of Red Cells in Man, 922
MacCord, Lieut.-Col. H. A. : Cultural Sequences in Hokkaido, Japan (*Proceedings* of the United States National Museum, No. 3443), 864
McCosker, P. J. : Paraphenylenediamine Oxidase Activity and Copper-Levels in Mammalian Plasmas, 887
McDermid, M., and others : Incomplete Antibodies to Chicken Red Cell Antigens, 544
McDonald, Donald : A History of Platinum from the Earliest Times to the Eighteen-Eighties, *review* by Prof. F. C. Thompson, 61
McDougall, Dr. Ian : Determination of the Age of a Basic Igneous Intrusion by the Potassium–Argon Method, 1184
McDowall, I. C. : Congelifraction of Clays, 134
MacEwan, Dr. Douglas M. C. : Clays and Clay Minerals, *review*, 850
MacEwan, Dr. Douglas M. C., and Sutherland, H. H. : Two-Dimensional Fourier Transform Technique for Analysing Random Structures, 431
McEwan, T. (Oelrichs, P. B., and) : Isolation of the Toxic Principle in *Acacia georginae*, 808
McFadzean Laboratory of British Insulated Callender's Cables, Ltd., to be opened by H.R.H. the Duke of Edinburgh, 312
Macfarlane, W. V. : At the Australian Arid Zone Technical Conference (Principles and Problems of Plant and Animal Production and Husbandry—Animal Production), 19 ; (Human Settlement in Arid Regions—Human Function), 20
McGill, I. S., and others : The Unit of Neutron Flux, 162
McGregor, I. A., and others : Erythrocyte Glucose-6-Phosphate Dehydrogenase Deficiency in West Africa, 1198
McHale, Dr. D., and others : Ubiquinone (Coenzyme Q) and the Function of Vitamin E, 318
Macher, A., and others : Effect of Essential Oils on Atherosclerosis of Cholesterol-fed Rabbits, 731
Machine (A Reading), for the Blind (M. P. Beddoes, E. Belyea and Prof. William C. Gibson), 874
Machinery (Computing), Association for : *Journal*, January 1961 issue, 864
Machinery (Rotating) : Generation of Electricity without the Use of (Dr. K. H. Spring), 297
Machines : Electrical (University of Birmingham Graduate Course on), 768
Machlis, Leonard (edited by, in association with Winslow R. Briggs) : Annual Review of Plant Physiology, Vol. 11, *review* by Prof. Walter Stiles, 48
McHugh, T., and Kirk, F. A. : Awarded Williams Prizes for 1960 of the Iron and Steel Institute, 13
McIntosh, Dr. A. H. : Fungicides in Agriculture and Horticulture (Theoretical Bases for Fungicides), (read by Dr. C. Potter), 593
McIsaac, Dr. William M., and others : Pharmacological Action of some Methoxyindolealkylamines, 179
McIsaac, Dr. William M., and Page, Irvine H. : Urocanicacidurea associated with Hepatic Coma, 347
McKelvie, P., and others : Effect of Haemophagin on the Phagocytic Activity of the Reticulo-Endothelial System, 92
  Phagocytic Activity of the Reticulo-Endothelial System—Effect of *B.C.G.*, 418
McKennis, jun., Prof. Herbert, and others : Demethylation in the Metabolism of (–)-Nicotine *in vivo*, 910
McKenzie, A. S. V., and others : Shock-excited Dark Discharge, 37
McKenzie, J., and others : Role of the Mucous Membrane in the Peristaltic Reflex in the Isolated Ileum of the Guinea Pig, 1205
Mackenzie, Dr. J. D., and others (edited by) : Physicochemical Measurements at High Temperatures, *review* by Prof. A. R. Ubbelohde, 58
Mackie, G. O. (Totton, A. K., and) : Studies on *Physalia physalis* (L.), Part 1, Natural History and Morphology ; Part 2, Behaviour and Histology (Discovery Reports, Vol. 30), 23
McLaren, Dr. Anne, and others : Choice of Animals for Bio-Assay, 891
McLaren, Dr. Anne, and Michie, Dr. Donald : Choice of Animals for Bio-Assay, 894
MacLeod, Dr. Colin M. (Cox, Dr. Rody P., and) : Hormonal Induction of Alkaline Phosphatase in Human Cells in Tissue Culture, 85
MacLeod, Dr. J. : Some Aspects of Disease Transmission by Ticks, 682
MacLeod Dr. R. (Markham, Dr. R., and) : Diseases caused by Plant Viruses in Crops (A Persistent Aphid-transmitted Virus Disease of Tobacco), 220
MacNalty, Sir Arthur : *Obituary* of Sir William Savage, 674
McNeill, Prof. K. G., and others : Breakdown Strength of Caesium Iodide, 994
Macpherson, Dr. R. K. : At the Australian Arid Zone Technical Conference (Human Settlement in Arid Regions—Human Organization), 20
Macpherson, Dr. R. K. (compiled by) : Physiological Responses to Hot Environments (Medical Research Council, Report Series No. 298), 1163
Macrocystis pyrifera (Giant Kelp) : Life-span of the Fronds of the (Dr. W. J. North), 1214
Mactra : Glycogen of (Prof. Dwain D. Hagerman), 462
McVickers, R. C., and others : Arc Initiation on Heated Metals by a Hydrogen Discharge, 997
McWhirter, Dr. R. W. P.: Rates of Recombination in Hydrogenic Plasmas, 902
Madge, David S. : 'Preferred Temperatures' of Land Arthropods, 106
Maetz, J., and others : A 'Natriferic' Principle other than Arginine-Vasotocin in the Frog Neurohypophysis, 828
Magnesiosilicate (Calcium) : A New (W. Gutt), 339
Magnesium (Surface Enamel), and its Possible Relation to Incidence of Caries (Dr. D. B. Ritchie), 456
Magnesium Contents (Calcium and), of various Secretions entering the Digestive Tract of Sheep (J. E. Storry), 1197
Magnesium Impurity in Gallium Arsenide : Behaviour of (J. R. Knight), 999
Magnetic Field : Effect of a, on Sarcoma 37 Ascites Tumour Cells (Indumati L. Mulay and Prof. L. N. Mulay), 1019
  A Theory of Cold-Cathode Arc Movement in a (Dr. P. E. Secker and Dr. A. E. Guile), 428
  Velocity of Light in a (Prof. Thomas Erber), 25
Magnetic Field Measurements between New Zealand and Antarctica : Total (Dr. D. A. Christoffel), 776
Magnetic Fields (Steady Electric and) : Confining a Plasma in (K. A. George), 334
Magnetic Fields (Strong) : Use of Super-conductors for producing, 134
Magnetic Resonance Spectroscopy (Nuclear), in Organic Chemistry : Applications of (Dr. L. M. Jackman), *review* by Dr. J. C. D. Brand, 1043
Magnetic Resonances (Proton), of certain Organophosphorus Compounds : Doubling of the (T. H. Siddall, C. A. Prohaska and W. E. Shuler), 903
Magnetic Susceptibility of Normal Liver and Transplantable Hepatoma Tissue (Frank E. Senftle and Arthur Thorpe), 410
Magnetism : Principles of Electricity and (Y. Rocard), translated by G. F. Herrenden, *review* by Dr. E. Stanley, 76
Magnetization (Initial Remanent), and Number of Repeating of Heat Treatments : 'Memory' of, in Low-Temperature Behaviour of Haematite (Prof. T. Nagata, M. Yama-ai and S. Akimoto), 620
Magnetoplumbite Crystals (Synthetic) : Growth Spirals on (R. A. Lefever and A. B. Chase), 255
Magnetostriction (Anomalous), of the 'Grain-orientated' Silicon–Iron Sheet (Yûki Shirakawa and Ken'ichi Numakura), 523
Magnets—the Education of a Physicist (Prof. Francis Bitter), *review* by G. R. Noakes, 64
Mainwood, Dr. G. W. : A Neuronal Model for Conditioning, 177
Maiorano, Dr. G., and others : Leukaemogenesis by Urethan in New-born Swiss Mice, 278
Maitland, B. J. G. : The Observer's Book of Trees, *review*, 850
  Wild and Free, *review*, 851
Maize in Nigeria : Damage to, by *Calandra oryzae* L. (G. H. Caswell), 962
Making : Mathematics in the (Lancelot Hogben), *review* by Prof. T. A. A. Broadbent, 68
Malaria : Chemotherapy of (Dr. L. J. Bruce-Chwatt), 971
  Eradication of, 873
  Favism and Thalassaemia in Sardinia and their Relationship to (M. Siniscalco, L. Bernini, B. Latte and A. G. Motulsky), 1179
  Simian, 686

Malaria Eradication Campaign : United Kingdom's contribution to the (House of Commons Adjournment Debate on), 490
Malcolm, Wing-Comdr. John E. : Oscillatory Flow in a Fluid-filled Elastic System, 88
  Korotkov's Sounds—a Function of the Skeleton to Transmit 'Pulsactor' Signals, 1114
Male of *Drosophila melanogaster* : Non-disjunction of the Sex-Chromosomes in the (P. J. Kelsall), 1035
Malecki, Dr. I. : Fifteen Years of Technology in Poland, 14
Malignant Tumours : Isolation of Malignolipin from (–. Kosaki and co-workers), 677
Malignolipin : Isolation of, from Malignant Tumours (–. Kosaki and co-workers), 677
Malinow, Dr. M. R., and Mogulievsky, Dr. J. A. : Effect of Œstrogens on Atherosclerosis—Effect of Œstradiol on the Oxygen Consumption of Arteries in Chickens, 422 ; Effect of Incubated Arteries on Œstradiol-containing Media, 423 ; Modification of Aortic Aerobic Metabolism in Rats by Gonadectomy, 424
Malnutrition : The Place of Food Science and Technology in the Campaign against (Nutrition Society Symposium on), 398
Malone, Dr. Thomas F. : Elected president of the American Geophysical Union, 312
Malpress, Dr. F. H. : Biochemical Preparations, *review*, 118
  The Jesse P. Greenstein Memorial Symposium, *review*, 203
Malvales (Order) : Occurrence of *Cyclo*-Propene Acids in some Plants of the (F. S. Shenstone and J. R. Vickery), 168
Malville, J. M., and Moreton, Dr. G. E. : Trajectories of Chromospheric Disk Surges, 995
Mammalian Blood : Hydrolysis of Paraoxon in (Prof. Ervin G. Erdös and Lois E. Boggs), 716
Mammalian Cells *in vitro* : Karyological Demonstration of Hybridization of (Serge Sorieul and Prof. Boris Ephrussi), 653
Mammalian Kidney : Sodium Transport and Oxygen Consumption in the (Dr. J. Hess Thaysen, Dr. N. A. Lassen and Dr. O. Munck), 919
Mammalian Muscle-Spindles : Efferent Innervation of (Prof. D. Barker and N. K. Chin), 461
Mammalian Plasmas : Paraphenylenediamine Oxidase Activity and Copper-Levels in (P. J. McCosker), 887
Mammalian Skin Surface and in Saline Extracts of Hair : Demonstration of Nucleases on (Dr. Joseph Tabachnick and Dr. Richard Freed), 921
Mammalian Species : Fructose as a Component of the Foetal Blood in several (Prof. A. St. G. Huggett and Dr. D. A. Nixon), 1209
Mammals (Marine) : Bohr Effect in the Haemoglobins of (Austen Riggs), 94
Mammary Carcinoma in Hypophysectomized Rats treated with 3-Methylcholanthrene, Œstradiol 17β, Progesterone and Growth Hormone : Induction of (Dr. Stretton Young), 356
Mammary Tissue (Rat) : Some Properties of (M. W. Smith), 541
Mammoths in the Cotswolds (L. Richardson and Dr. K. S. Sandford), 342
Man : Development of the Islets of Langerhans in (Patricia M. Robb), 1018
  Echoes of Bats and (Prof. Donald R. Griffin), *review* by G. R. Noakes, 64
  Effects of Maternal Age on the Incidence of Congenital Abnormalities in Mouse and (Dr. W. F. Bodmer), 1134
  Fundamental Mechanisms of the Chromatic Discrimination in Animals and—Proceedings of an International Symposium on the (Paris, 1958), sponsored by the International Council of Scientific Unions—Mechanisms of Colour Discrimination (edited by Yves Galifret), *review* by Prof. R. W. Ditchburn, 201
  Reversal of Diurnal Temperature Rhythms in (G. W. G. Sharp), 146
  Strontium-90 in Fall-out and in, in Australia, January 1959-June 1960 (Dr. F. J. Bryant, L. J. Dwyer, D. J. Stevens, Prof. E. W. Titterton and J. R. Moroney), 754
  Transplacental Passage of Red Cells in (Ronald Finn, Dr. C. A. Clarke, W. T. A. Donohue, Dr. R. B. McConnell, Dr. P. M. Sheppard and D. Lehane), 922
  White—a Study of the Attitudes of Africans to Europeans in Ghana before Independence (Dr. Gustav Jahoda), *review* by Dr. Margaret Read, 946
Man against Aging (Dr. Robert S. de Ropp), *review* by Prof. P. L. Krohn, 1144
Man and his Ancestry (Alan Houghton Brodrick), *review* by Sonia Cole, 1044
Man and the Soil (Dr. Kenneth Mellanby), 770
Man-made Fibres (Cotton, Silk and), Research Association : Merging of the British Cotton Industry Research Association and the British Rayon Research Association to be known as the, 589
Man-made Fibres Research (Cotton, Silk and) : Funds for, 1154
Man-power (Scientific and Technical), in Britain, 843
Man-power Needs for the Age of Science : Forecasting (Organization for European Economic Co-operation), 941
Man-of-War : The Portuguese (Dr. W. J. Rees), 23
Management : The Anatomy of, *review* by F. J. Willett, 382
  Exploration in (Wilfred Brown), *review* by F. J. Willett, 382
Manchester Joint Research Council : An Account of some of the Scientific and Technological Facilities which Manchester University and the Manchester College of Science and Technology can offer to Industry, 767
  Sources of Scientific and Technical Information available to Local Industry, 767
Manchester Museum : Annual Report for 1959-60, 491
Manders, Dr. C. R. S. : Appointed scientific attaché to the British Embassy, Tokyo, 862 ; work of, 862
Mandl, Dr. Anita M. : Reproduction in Animals, *review*, 1045
Manfredini, Dr. S., and others : Measurements of Air Radioactivity in Italy and their relation to the First Sahara Atomic Explosion, 618
Manganese Deficiency in Oat : Prevention of, by soaking the Grain in Solutions of Manganous Chloride (Donald S. H. Drennan, Alex. M. M. Berrie and Gordon A. Armstrong), 824
Manganese Deficiency Symptoms (Iron and), in Citrus Plants : Biochemical Indications as a means of Distinguishing between (A. Bar-Akiva), 647
Manganese (Silver–) Alloys at Low Temperatures : Inelastic Scattering of Conduction Electrons in Dilute (M. S. R. Chari), 994
Manganous Chloride : Prevention of Manganese Deficiency in Oat by soaking the Grain in Solutions of (Donald S. H. Drennan, Alex. M. M. Berrie and Gordon A. Armstrong), 824
Mango and Pigeon Pea (Cacao,): Transmission of Gall.-Diseases of (J. F. Archibald), 284
Mani, Dr. J. V. S. : Appointed I.C.I. Research Fellow in the Department of Fuel Technology and Chemical Engineering in the University of Sheffield, 396
Manley, Prof. Gordon : Solar Variations, Climatic Change and related Geophysical Problems, 967
Mann, Dr. Frederick George, and Saunders, Dr. Bernard Charles : Practical Organic Chemistry, fourth edition, *review* by Dr. J. D. Loudon, 753
Mann, G. E. : Poultry Breeding, third edition (Ministry of Agriculture, Fisheries and Food, Bulletin No. 146), 394
Mann, Dr. Monica (Callingham, Dr. B. A., and) : Replacement of Adrenaline and Noradrenaline in the Adrenal Gland of the Rat, following Depletion and Redepletion with Reserpine, 1201
Manna of Northern Iraq : Identification of Sugars in the (Prof. Zakaria I. Sabry and Nicola A. Atallah), 915
Manned Ballistic Rocket Flight : First American, 587
Manned Earth Satellite, 1961μ : The First, 307
Manners, Dr. J. G., and others : Nucleic Acid Content of Haploid and Diploid Cells of *Protomyces inundatus*, 836
Mansell, A. L. (Baxendale, Dr. J. H., and) : Flash Photolysis of Ferrous Sulphate Solutions, 622
Manton, Prof. Irene : Experimental Taxonomy of Flowering Plants, 969
Mapping : Aerial Photographs in Geologic Interpretation and (Dr. Richard G. Ray), 1155
Marconi's Wireless Telegraph Co., Ltd. : Appointment of Dr. E. Eastwood as director of research, responsible to the managing director for the Company's research policy, 680
Marder, Dr. Daniel : The Craft of Technical Writing, *review* by A. L. Bacharach, 847
Marek, Jiří : Observation in the Year 1648 of Diffraction through a Lattice, 1092
Margaria, Prof. R. : Elected a member of the Life Sciences Section of the International Academy of Astronautics, 495
Margerison, Dr. T. : Science and Industry—the Problem of Communication, 966
Margrave, D., and others : Effect of a Thin Oxide Film on the Reaction of Iodine Vapour with Copper, 1183
Marine Engineering Industries (Shipbuilding and) : Research and Development Requirements of the (Department of Scientific and Industrial Research), 200
Marine Laboratories (Development Commissioners' Scheme) : Joint Meeting in Dublin of the Challenger Society with representatives from the, 135
Marine Mammals : Bohr Effect in the Haemoglobins of (Austen Riggs), 94
Marine Sessile Community : Inhibition of the Development of a (Dr. Ivan Goodbody), 282
Marion, J. B., and Fowler, J. L. (edited by) : Fast Neutron Physics, Part I, Techniques, *review* by J. H. Montague, 944
Mark, Dr. H. F. : Elected a Member of the United States National Academy of Sciences, 674
Markham, Dr. R., and MacLeod, Dr. R. : Diseases caused by Plant Viruses in Crops (A Persistent Aphid-transmitted Virus Disease of Tobacco), 220
Marlow Medal of the Faraday Society awarded to Prof. John Stanley Griffith, 493
Marriott, F. H. C. (Morris, Valerie B., and) : The Distribution of Light in an Image formed in the Cat's Eye, 176
Marrow (Mouse Bone) : Preservation of, at —79°C. with Dimethyl Sulphoxide (M. J. Ashwood-Smith), 1204
Marsh, W. L., and Jenkins, W. J. : A Possible Specificity of Albumin Auto-Antibodies, 180
Marsh (Salt) : Fungal Colonization of a Developing (Dr. G. J. F. Pugh), 1032
Marshall, Charles A. : Appointed honorary secretary of the Television Society, 769
Marshall, Ruth (Lawler, Dr. Sylvia D., and) : Significance of the Presence of Lewis Substances in Serum during Infancy, 1020
Marshall's Physiology of Reproduction, third edition, Vol. I, Part 2 (edited by Prof. A. S. Parkes), *review* by Dr. Anita M. Mandl, 1045
Marston, Dr. Hedley R. : Primary Metabolic Defect supervening on Vitamin B_{12}-Deficiency in the Sheep—Résumé of Experimental Findings which led to the Present Investigations, 1085
Marston, Dr. Hedley R., and others : Primary Metabolic Defect supervening on Vitamin B_{12}-Deficiency in the Sheep—Demonstration, *in vivo*, of the Site of the Metabolic Defect, 1087
Marston, Dr. Hedley R., and Smith, Richard M. : Primary Metabolic Defect supervening on Vitamin B_{12}—Deficiency in the Sheep—Localization, *in vitro*, of the Metabolic Defect, and Separation of the Vitamin B_{12}-containing Methyl Malonyl Co-isomerase, 1088
Marston, Dr. Hedley R. (Allen, Shirley H., and) : Primary Metabolic Defect supervening on Vitamin B_{12}-Deficiency in the Sheep—Lack of Influence of Vitamin B_{12}-Deficiency on the Sheep's Capacity to Metabolize Glutamate, 1091
Martignoni, M. E., and Scallion, R. J. : Multiplication *in vitro* of a Nuclear Polyhedrosis Virus in Insect Amoebocytes, 1133
Martin, Dr. B. F., and Shaw, N. E. : The Stainable Mucin of Joint Tissues and Synovial Fluid, 835
Martin, B. H., and Black, Dr. R. F. : Control of Red Scale in Citrus Fruit, 133
Martin, Dr. D. C. : The Gassiot Committee of the Royal Society and Meteorological Research, 212
Martin, Dr. G. M., and others : Evidence for Multiple Caeruloplasmin Components in Human Serum, 927
Martin, Dr. P. G. : The Nucleolus—Evidence for the Continuity of Nucleolar Material in Mitosis, 1078
Marton, Dr. L. : *Obituary* of Prof. E. Henriot, 861
Masers (Optical) : Interstellar and Interplanetary Communication by (Dr. R. N. Schwartz and Prof. C. H. Townes), 205
Masi, Joseph F., and others : Tables of Thermodynamic and Transport Properties of Air, Argon, Carbon Dioxide, Carbon Monoxide, Hydrogen, Nitrogen, Oxygen and Steam, *review* by Prof. A. R. Ubbelohde, 58
Maskrey, J. T., and others : Arc Initiation on Heated Metals by a Hydrogen Discharge, 997
Mason, Edmund William : Presented with a Gold Medal of the Linnean Society of London, 962
Mason, Revel : The Brandberg and other Rock-Shelter Paintings of the Union of South Africa, 311
  The Earliest Tool-makers in South Africa, 961

Mason, S. G. (Goldsmith, H. L., and) : Axial Migration of Particles in Poiseuille Flow, 1095
Mass Action Law : Schulze–Hardy Rule and (Prof. Mirko Mirnik), 689
Mass Transfer : Effect of, on the Velocity of Rise of Bubbles in Water (Dr. J. H. Leonard and Prof. G. Houghton), 687
Massachusetts Institute of Technology : Centenary of the (Dr. James R. Killian, jun.), 948
Massachusetts Institute of Technology (Staff of Millstone Radar Observatory) : The Scale of the Solar System, 592
Massee, Dr. A. M. : Appointed a member of the Committee for England of the Nature Conservancy, 218
Mast Cells of some Lower Vertebrates : Differences in Mechanism of Staining Reaction for (Dr. A. Stolk), 360
Mast Cells (Rat), *in vitro* : Release of 5-Hydroxytryptamine from (Dr. G. T. Archer), 350
Master of Scientific Enquiry : Louis Pasteur, a (Jacques Nicolle), *review* by T. H. Hawkins, 848
Match-making Industry in Britain, 217
Material (Living Animal), for Biological Research (Proceedings of the International Committee on Laboratory Animals Symposium on), 677
Material ('Neurosecretory'), in the Pituitary Gland of the Pig : Arginine and (Dr. A. Howe), 175
Material (Nucleolar), in Mitosis : Evidence for the Continuity of (The Nucleolus), (Dr. P. G. Martin), 1078
Materials (Agricultural), Foods and Drugs : Analysis of, *review* by H. V. Hart, 749
Materials (Brittle) : Thermal Shock Behaviour of (Dr. M. L. Levin), 521
Materials (Foundry) : Chemical Analysis of Cast Iron and (W. Westwood and A. Mayer), second edition, *review* by F. L. Selfe, 383
Materials (New and Useful), from Silicon : Unnatural Products— (Prof. Eugene G. Rochow), (Thirty-fourth Annual Priestley Lectures), *review* by Dr. J. S. Anderson, 59
Materials (Nuclear), and Nuclear Change in Differentiation (Prof. Kenneth Mather), 404
Materials (Raw), of Ceramics : Exhibition of the (P. J. Adams), 310
Maternal Age : Effects of, on the Incidence of Congenital Abnormalities in Mouse and Man (Dr. W. F. Bodmer), 1134
Mathematical Tool-Kit for Engineers (H. A. Webb and Dr. D. G. Ashwell), second edition, *review* by Prof. J. Greig, 76
Mathematics : The Foundations of—a Study in the Philosophy of Science (Prof. Every W. Beth), *review* by F. I. G. Rawlins, 570
  The New Look in, *review* by Prof. T. A. A. Broadbent, 67
Mathematics of Automatic Control (Hatfield College of Technology Summer School on), 865, 1063
Mathematics for the Biologist, *review* by J. F. Scott, 945
Mathematics in the Making (Lancelot Hogben), *review* by Prof. T. A. A. Broadbent, 68
Mathematics of Medicine and Biology : An Introduction to the (J. G. Defares and I. N. Sneddon), *review* by J. F. Scott, 945
Mathematics, Physics and Chemistry : Prizes for papers on (Friedrich Vieweg und Sohn, Braunschweig), 16
Mathématiques Générale—Algébre, Analyse (Prof. Charles Pisot et Prof. Marc Zamansky), *review* by Prof. T. A. A. Broadbent, 67
Mather, Prof. Kenneth : Nuclear Materials and Nuclear Change in Differentiation, 404
Mathias, Dr. A. P., and others : The Active Site and Mechanism of Action of Bovine Pancreatic Ribonuclease, 781
Mathur, Dr. P. B. : Reversal of γ-Ray-induced Dormancy of Potato Tubers by Gibberellic Acid, 547
Mathur, R. S. : Atypical Spermiogenesis in *Thermobia domestica*, a Thysanuran Insect, 743
Mating Type in *Neurospora* : Determining, without Crossing Tests (Prof. H. Branch Howe, jun.), 1036
Matsumoto, Prof. G. : Electrical Contacts (Recent Contact Research in Japan), 867
Matter (Living): Carl Nägeli and the Fine Structure of (Dr. J. S. Wilkie), 1145
Matter (Organic), of a Podzol Soil : An Estimate of the Aromaticity of the (Dr. J. R. Wright and Dr. M. Schnitzer), 703
Matter and Antimatter (Maurice Duquesne), *review* by G. R. Noakes, 64
Matthews, D. H. : Lavas from an Abyssal Hill on the Floor of the North Atlantic Ocean, 158
Matthews, Dr. L. Harrison : Looking Ahead—the Future of Natural Faunas (The Cetacea, the Pinnipedia and the Sirenia), 21
Matthews, Very Rev. Dr. W. R. : The Expanding Population, *review*, 41
  A Diversity of Theological Speculations, *review*, 943
Mattisson, Artur (Fänge, Prof. Ragnar, and) : Function of the Caudal Appendage of *Priapulus caudatus*, 1216
Maunder, C. R. F. : Appointed a lecturer in mathematics at the University of Southampton, 397
Maunder, L. (Parks, R., and) : Damped Free Oscillations of a Gyroscopic System, 710
Maurice, Duc de Broglie : *Obituary* by Sir Lawrence Bragg, 860
Maurice, Dr. R. D. A. : Television and Film Techniques, 868
Mawson Institute of Antarctic Research (Prof. A. R. Alderman), 1157
Mayer, A. (Westwood, W., and) : Chemical Analysis of Cast Iron and Foundry Materials, second edition, *review* by F. L. Selfe, 383
Mayer (André) Fellowships for 1961 (Food and Agriculture Organization of the United Nations), 135
Mayr, Prof. Ernst : Appointed director of the Harvard Museum of Comparative Zoology, 308
Mayr, Dr. Giovanna : Activated Natural Crystals, 229
Mead, James F., and others : Incorporation of Palmitic-1-^{14}C Acid into Blood Cells, 92
Meals, R. N., and Lewis, F. M. : Silicones, *review* by Dr. J. S. Anderson, 59
Mean Anomalies (True and) : Relationship between the (C. J. Brookes), 839
Measure of the Crystal Surface : Calcium Exchange of Bone Salts considered as a (L. Richelle and Prof. M. J. Dallemagne), 165
Measurement of Fungicidal Effects in Field Trials (R. W. Rayner), 328
Measurement of Positive-Ion Density in the Ionosphere by Sounding Rocket (T. Ichimiya, K. Takayama, T. Dote, Y. Aono, K. Hirao, S. Miyazaki, T. Sugiyama and T. Muraoka), 156
Measurement Control, Regulation and Automation : International Exhibition on (MESUCORA Association, in conjunction with the Fédération des Industries Mécaniques et Transformatrices des Métaux, the Syndicat Général de la Construction Électrique, and the Fédération des Industries Électroniqies), 397
Measurement (Absolute), of Average Energy lost by Very Soft X-Rays per Ion Pair in Air (Prof. B. Rajewsky and Dr. D. Lang), 249
Measurement (Argon) : Potassium–Argon Ages of the Dartmoor and Shap Granites using the Total Volume and Isotopic Dilution Techniques of (M. H. Dodson, J. A. Miller and D. York), 800
Measurement (Linear) : Determination of Enzyme Activity by a (Andrew G. Tsuk and Prof. Gerald Oster), 721
Measurements of Air Radioactivity in Italy and their relation to the First Sahara Atomic Explosion (L. Argiero, Dr. S. Manfredini and Dr. G. Palmas), 618
Measurements (Cosmic Noise), from 1960 η1 at 3·8 Mc./s. (A. R. Molozzi, C. A. Franklin and J. P. I. Tyas), 616
Measurements (Ground-Water) : Evaluation of Effective Rainfall and Irrigation from (C. Dakshinamurti, P. N. Saxena and E. G. K. Rao), 1100
Measurements (National Committee on Radiation Protection and), of the United States National Bureau of Standards : Report No. 26, X-Ray Protection at High Voltages, 589
Measurements (Physicochemical), at High Temperatures (edited by Dr. J. O'M. Bockris, Dr. J. L. White and Dr. J. D. Mackenzie), *review* by Prof. A. R. Ubbelohde, 58
Measurements (Stagnation Temperature), in a Hypersonic Wind-Tunnel using the Sodium Line Reversal Method (J. L. Stollery), 778
Measurements (Surface Area) : Use of Krypton for (Peter Cannon and George L. Gaines, jun.), 340
Measurements (Total Magnetic Field), between New Zealand and Antarctica (Dr. D. A. Christoffel), 776
Measures (Security), and Freedom of the Individual, 132
Measuring Indigestion, 596, 963
Mechanical Engineering at Sydney, 12
Mechanical Engineers, Institution of, the Institution of Civil Engineers, and the Institution of Electrical Engineers : Graham Clark Lecture 1961, Resources, Human and Material, of the Commonwealth (H.R.H. the Duke of Edinburgh), 673
Mechanical Factors : Influence of Oxygen Concentration and, on Differentiation of Connective Tissues *in vitro* (Dr. C. Andrew L. Bassett and Ingeborg Herrmann), 460
Mechanical and Technological Properties of Metals : Determination of the (B. M. Gliner), translated from the Russian, second edition, *review* by James G. Tweeddale, 573
Mechanics (Chair of), at Cambridge, 488
Mechanics (Classical) : L. Euler, The Principle of Relativity and the Fundamentals of (D. Speiser), 757
Mechanics (Fluid) : The Advance of, *review* by Prof. P. A. Sheppard, 62
Mechanics (Statistical): Fundamental Problems in (Netherlands University Foundation for International Co-operation Summer School in Science), 769
Mechanics (Theoretical and Applied), International Union of : Proceedings of the Symposium on the Theory of Thin Elastic Shells, Delft, 1959 (edited by W. T. Koiter), *review* by Dr. J. W. Craggs, 379
Mechanism of Action of Bovine Pancreatic Ribonuclease : The Active Site and (Dorothy Findlay, D. G. Herries, Dr. A. P. Mathias, Dr. B. R. Rabin and C. A. Ross), 781
Mechanism of Antigen Transformation of Transplantable Rat Tumour (Prof. K. Dux, A. Ryzewska and A. Czarnomska), 458
Mechanism of Heterogeneous Catalysis (Third International Congress on Catalysis), 963
Mechanism of Increase of Endotoxin Susceptibility in Animals showing Delayed Hypersensitivity (Dr. J. Johanovsky, M. Vrána, O. Vejbora and D. Francová), 182
Mechanism of Sodium Transport in Cellular Membranes (Johan Järnefelt), 694
Mechanism of Staining Reaction for Mast Cells of some Lower Vertebrates : Differences in (Dr. A. Stolk), 360
Mechanism of the Transformation of the Polysaccharide Capsule in Pneumococcus (Dr. D. M. Kohoutová), 1171
Mechanism (A Radio Wave), to account for the Known Distribution of Van Allen Belts about the Earth (Joseph M. Boyer), 597
Mechanisms of Colour Discrimination—Proceedings of an International Symposium on the Fundamental Mechanisms of the Chromatic Discrimination in Animals and Man, Paris, 1958 (sponsored by the International Council of Scientific Unions), (edited by Yves Galifret), *review* by Prof. R. W. Ditchburn, 201
Mechanisms of Expression of Genetic Information (Wendell M. Stanley, jun., and Prof. Robert M. Bock), 299
Mechanisms in Radiobiology (edited by Maurice Errera and Arne Forssberg), Vol. 2, Multicellular Organisms, *review* by Dr. O. A. Trowell, 72
Mechanisms (Fundamental), of the Chromatic Discrimination in Animals and Man : Proceedings of an International Symposium on the (Paris, 1958), sponsored by the International Council of Scientific Unions—Mechanisms of Colour Discrimination (edited by Yves Galifret), *review* by Prof. R. W. Ditchburn, 201
Mechanisms (Molecular), for Hydrolytic Enzyme Action (Richard M. Krupka and Keith J. Laidler), 916
Media (Gelatin and Glucose) : Production of Soluble Melanoid Pigments by *Streptomyces* in (Prof. Augusto Capriotti), 464
Media (Œstradiol-containing) : Effect of Incubated Arteries on (Effect of Œstrogens on Atherosclerosis), (Dr. M. R. Malinow and Dr. J. A. Moguilevsky), 423
Medical Education, Association for the Study of (Medical Committee of the Scientific Film Association in collaboration with the) : Symposium on the Applications of Television in Medical Research and Teaching, 1159
Medical Electronics : 1961 Conference on, 397
Medical Faculty Awards : Lederle (American Cyanamid Co.), 768
Medical Physics (Biological and) : Advances in (edited by Cornelius A. Tobias and John H. Lawrence, assisted by Thomas L. Hayes), Vol. 7, *review* by Dr. N. M. Blackett, 74
Medical Research, East African Institute for : Report for 1959-60, 864
Medical Research, National Institute for : Retirement of Sir Christopher Andrewes as head of the Division of Bacteriology and Virus Research, 1153
  Appointment of Dr. A. Isaacs as head of the Division of Bacteriology and Virus Research, 1153
Medical Research Council : Special Report Series No. 297, The Composition of Foods (Dr. R. A. McCance and Dr. E. M. Widdowson), third edition of Special Report No. 235, *review* by Joyce Doughty, 477
  Special Report Series No. 298, Physiological Responses to Hot Environments (compiled by Dr. R. K. Macpherson), 1163

Medical Research Council (Laboratory Animals Centre) : Symposium on the Provision of Animals for Cancer Research, 393
Medical Research (Scientific and) : Fund to promote and assist (Life Offices' Association for Australasia), 135
Medical Research and Teaching : Applications of Television in (Medical Committee of the Scientific Film Association in collaboration with the Association for the Study of Medical Education Symposium on), 1159
Medical School : Closed Circuit Television in the (C. E. Engel), 1159
Medical Science : Autoradiographic Techniques in (Comitato Nazionale per l'Energia Nucleare Symposium on), 219
Medical Sciences (Basic), Institute of (Royal College of Surgeons of England) : Title of Sir William Collins professor of anatomy conferred on G. W. Causey, 396
    Title of Sir William Collins professor of pathology conferred on Dr. G. J. Cunningham, 396
Medical Statistics at the London School of Hygiene and Tropical Medicine, 764
Medical Student Research Fellowships for 1961 : Lederle (American Cyanamid Co.), 134
Medicine of the Thorax, *review* by Dr. Geoffrey Lapage, 476
Medicine, New York Academy of (Section on Microbiology) : Symposium on Viral Infections of Infancy and Childhood (edited by Prof. Harry M. Rose), *review* by Dr. N. R. Grist, 659
Medicine (Clinical) : Recent Advances in Human Nutrition, with special reference to (Prof. J. F. Brock), *review* by Prof. J. Yudkin, 751
Medicine (Tropical), London School of Hygiene and : Appointment of Dr. Peter Armitage to the University of London chair of medical statistics, 680, 764
    Retirement of Prof. A. Bradford Hill from the chair of medical statistics, 764
Medicine (Tropical), London School of Hygiene and (Imperial College of Science and Technology and the) : Postgraduate Courses in Public Health Engineering, 971
Medicine (Tropical), London School of Hygiene and (Ross Institute of Tropical Hygiene) : Course in Tropical Hygiene for Laymen, 397
Medicine (Tropical), and Hygiene, Royal Society of : Annual General Meeting, 963
    Chalmers Medal to be presented to Dr. C. E. Gordon Smith, 963
Medicine and Biology : Fourteenth Annual Conference on Electrical Techniques in (Joint meeting of the fourth International Conference on Medical Electronics with the), 397
    An Introduction to the Mathematics of (J. G. Defares and I. N. Sneddon), *review* by J. F. Scott, 945
Meditation (Cartesian), an Introduction to Phenomenology (Edmund Husserl), translated by Dorion Cairns, *review* by F. I. G. Rawlins, 295
Medium-scale Diffusion in the Atmosphere (Royal Meteorological Society Symposium on), 591
Mee, Dr. C. H. B. : Electrical Conductivity and Thermoelectric Power of Calcium Oxide, 1093
Megascolex mauritii (Earthworm) : Seasonal Acclimatization of Oxygen Consumption to Temperature in a Tropical Poikilotherm, the (K. Saroja), 930
Meggers, Betty J. (Evans, Clifford, and) : Archaeological Investigations in British Guiana, *review* by Dr. G. H. S. Bushnell, 72
Mehrotra, Dr. R. S. : Ecological Problems in the Tropics (*Aspergilli*), 773
Meiotic Drive : Analysis of Irradiated *Drosophila* Populations for (Prof. E. Novitski and G. D. Hanks), 989
Meisenhelder, J. E., and others : Effects of *Tris*(*p*-Aminophenyl)-Carbonium Salts and related Compounds on Experimental Schistosomiasis and Paragonimiasis, 628
Meissner, C. Robert (edited by) : Vacuum Technology Transactions—Proceedings of the Sixth National Symposium, also Cumulative Author and Subject Indexes of 1954-59 Symposia (American Vacuum Society, Inc.), *review*, 296
Meitner, Lise ; Otto Hahn und Max von Laue zum 80 Geburtstag : Beiträge zür Physik und Chemie des 20 Jahrhunderts— (herausgegeben von O. R. Frisch, F. A. Paneth, F. Laves und P. Rosbaud), *review* by Dr. C. A. Taylor, 118
Melanins from *Allium cepa* : Effect of Temperature on the Concentration of Free Radicals in (M. L. Edwards, Dr. G. A. Kerkut, Dr. K. A. Munday and K. Leach), 1005
Melanoid Pigments (Soluble) : Production of, by *Streptomyces* in Gelatin and Glucose Media (Prof. Augusto Capriotti), 464
Meldola Medal for 1960 of the Society of Maccabaeans awarded to Dr. J. N. Bradley, 865
Mellanby, Dr. Kenneth : Appointed director of the Nature Conservancy's new Monks' Wood Experimental Station, Huntingdon, 488; work of, 488
    Man and the Soil, 770
    The Soil—Problems raised by its Use and Misuse (The Interaction of Agricultural Practice and the Soil Fauna), 770
Melophagus ovinus (L.), (Ked) : Experimental Elimination of *Trypanosoma melophagium* Flu from its Hosts the Sheep and the (W. A. Nelson), 739
Melting (Artificial), of the Arctic Ice (I. S. Peschansky), 492
Members of the *Culex pipiens* Series in New Caledonia and the New Hebrides (Prof. Marshall Laird), 1221
Membrane (Mucous), in the Peristaltic Reflex in the Isolated Ileum of the Guinea Pig : Role of the (M. L. Diament, Dr. H. W. Kosterlitz and J. McKenzie), 1205
Membrane (Striated Muscle Fibre) : Nature of Sarcolemma, the (Prof. F. Lörincz and Dr. G. Biró), 317
Membrane Systems in Micro-organisms : Method for Revealing the (R. J. North), 1215
Membranes (Cellular) : Mechanism of Sodium Transport in (Johan Järnefelt), 694
Membranes (Perm-selective) : Deviations from the Steady-State in Ion Transfer through (Chaim Forgacs), 339
Membranes (Rat Mitochondrial) : An Effect of Chlorpromazine on (Prof. M. A. Spirtes and P. S. Guth), 274
'Memory' of Initial Remanent Magnetization and Number of Repeating of Heat Treatments in Low-Temperature Behaviour of Haematite (Prof. T. Nagata, M. Yama-ai and S. Akimoto), 620
Memory (The Cathode Ray Tube), of the High Speed Electronic Computer of the U.S.S.R. Academy of Sciences (V. N. Laut and L. A. Lyubovich), translated from the Russian by Ruth Feinstein ; edited by F. A. Sowan, *review* by J. C. Cluley, 383
Mensah-Dapaa, W. S. : Science in the Development of Ghana (Traditional Healing Methods in Ghana), 1064
Mental Activity : Effects of, on Vestibular Nystagmus and the Electroencephalogram (William E. Collins, George H. Crampton and Jerome B. Posner), 194
Menzel, Prof. Donald H. : Solar Seeing (Precautions taken at the National Observatory, Kitt Peak, to avoid Internal Seeing Problems), 771
    Solar Variations, Climatic Change and related Geophysical Problems, 967
Menzies, D. C., and others : The Unit of Neutron Flux, 162
Mer, Prof. Gideon : *Obituary* by Dr. Meir Yoeli, 675
Mercury-206, a New Natural Radionuclide (Prof. M. Nurmia, P. Kauranen, M. Karras, A. Siivola, A. Isola, G. Graeffe and A. Lyyjynen), 427
Meredith, B. L. (Heeschen, D. S., and) : Secular Variation of the Flux Density of the Radio Source Cassiopeia A, 705
Meredith, Dr. D. S. : *Botryodiplodia theobromae* Pat. and *Nigrospora* sp. in the Air of a Jamaican Banana Plantation, 555
Merler, Ezio (Gitlin, Prof. David, and) : Similarity of Peptides in Two Antigen-combining Fragments released from a Rabbit Antibody by Papain, 634
Merselis, J., and others : Effect of *Staphylocci* on Leucocyte Pyridine Nucleotides, 516
Merson, R. H. : The Space Encyclopaedia, *review*, 76
Meselson, Dr. M., and others : An Unstable Intermediate carrying Information from Genes to Ribosomes for Protein Synthesis, 576
Mesocricetus auratus (Golden Hamster) : Lactic Acid Concentration in the Kidney of the, in Different Conditions of Diuresis (Prof. V. Capraro, G. Valzelli and C. De Agostini), 178
Mesodermal Tissue Cells : Electrophoretic Mobility of Cultured (D. H. Heard, G. V. F. Seaman and I. Simon-Reuss), 1009
Messineo, Luigi : Immunological Differences of Deoxyribonucleoproteins from White Blood Cells of Normal and Leukaemic Human Beings, 1122
MESUCORA Association, and others : International Exhibition on Measurement Control, Regulation and Automation, 397
Metabolic Defect (Primary), supervening on Vitamin B$_{12}$-Deficiency in the Sheep—Résumé of Experimental Findings which led to the Present Investigations (Dr. Hedley R. Marston), 1085 ; Demonstration, *in vivo*, of the Site of the Metabolic Defect (Shirley H. Allen, Dr. Hedley R. Marston and Richard M. Smith), 1087 ; Localization, *in vitro*, of the Metabolic Defect, and Separation of the Vitamin B$_{12}$-containing Methyl Malonyl Co-isomerase (Dr. Hedley R. Marston and Richard M. Smith), 1088 ; Lack of Influence of Vitamin B$_{12}$-Deficiency on the Sheep's Capacity to Metabolize Glutamate (Shirley H. Allen and Dr. Hedley R. Marston), 1091
Metabolic Origin of Urinary Methylamine in the Rat (E. Jack Davis and Dr. R. S. De Ropp), 636
Metabolic Pathways of Foreign Compounds (Biochemical Society Colloquium on), 219
Metabolic Regulation of Erythrocytes : Role of Glutathione and of a Self-stabilizing Chain of SH-Enzymes and Substrates in the (D. Scheuch, C. Kahrig, E. Ockel, C. Wagenknecht and Prof. S. M. Rapoport), 631
Metabolism of *Gerbillus pyramidum* (Paul F. Robinson and Roy V. Henrickson), 637
Metabolism of (–)-Nicotine *in vivo* : Demethylation in the (Prof. Herbert McKennis, jun., Dr. Einosuke Wada, Edward R. Bowman and Dr. Lennox B. Turnbull), 910
Metabolism (Acetate), in Sheep : An Effect of Glucose on (I. G. Jarrett and O. H. Filsell), 1114
Metabolism (Aortic Aerobic), in Rats : Modification of, by Gonadectomy (Effect of Œstrogens on Atherosclerosis), (Dr. M. R. Malinow and Dr. J. A. Moguilevsky), 424
Metabolism (Cell), and the Rate of Cell Mutation : Bivalent Metal Ions as the Coupling Factor between (Dr. G. G. Jayson), 144
Metabolism (Cholesterol) : Function of the Foetal Thyroid of the Rabbit with regard to, studied by Foetal Thyroidectomy (J. G. Bearn, H. B. Koerselman and T. R. E. Pilkington), 822
Metabolism (*In vivo*), of N-Acetylhexosamine ^{35}S-Sulphate Esters (Dr. A. G. Lloyd), 914
Metabolism (Liver) : Effect of Allyl*iso*propylacetamide on (Prof. C. H. Gray, Margaret Kelly and V. Moses), 1014
Metabolism (Oxidative), in *Euglena gracilis* : Ethanol Stimulation of (Dr. D. E. Buetow), 1196
Metabolism (Porphyrin) : Study of Defects in, by means of Isotopes (Prof. C. Rimington), 870
    Use of Tracers in the Study of Diseases of (Biology Division of the French Atomic Energy Commission Colloquium on), 870
Metabolism (Sorbitol), in Apple Fruits (Prof. A. R. N. Gorrod), 190
Metabolite of Tritium Nuclear-labelled Morphine : *In vivo* Formation of Normorphine in the Rat as a (Anand L. Misra, S. J. Mule and Prof. L. A. Woods), 82
Metal Ions (Bivalent), as the Coupling Factor between Cell Metabolism and the Rate of Cell Mutation (Dr. G. G. Jayson), 144
Metallic Corrosion : First International Congress on, 15
Metallic Corrosion and its Prevention (Exhibition on, at the Science Museum, London), 15
Metallic Surfaces (Electrically Stressed), in Vacuum : Phenomena occurring at (R. Hawley and Dr. C. A. Walley), 252
Metalloporphyrin Formation : Catalysis of—a Possible Enzyme Model for Haem Iron Incorporation (M. B. Lowe and J. N. Phillips), 262
Metallurgical Society Conferences : Vol. 4, Physical Metallurgy of Stress Corrosion Fracture (edited by Thor N. Rhodin), *review* by Prof. F. C. Thompson, 383
Metallurgists, Institution of : Permanent Joint Consultative Committee of the Iron and Steel Institute, the Institute of Metals and the, 134
    Election of Officers, 962
Metallurgy : Physical Techniques in, *review* by Dr. A. R. Bailey, 661
    Powder, *review* by J. H. Rendall, 572
Metallurgy (Physical), of Stress Corrosion Fracture (edited by Thor N. Rhodin), (Metallurgical Society Conferences Vol. 4), *review* by Prof. F. C. Thompson), 383

Metallurgy (Powder) : Fundamental Principles of (Dr. W. D. Jones), *review* by J. H. Rendall, 572
Metallurgy and Fuel Technology at Cardiff, 12
Metallurgy (Mining and), Institution of : Proceedings of the International Mineral Processing Congress (London, 1960), *review* by Dr. E. J. Pryor, 70
Metals : Determination of the Mechanical and Technological Properties of (B. M. Gliner), translated from the Russian, second edition, *review* by James G. Tweeddale, 573
  The Physical Examination of (edited by Prof. Bruce Chalmers and Prof. A. G. Quarrell), second edition, *review* by Dr. A. R. Bailey, 661
Metals under Simple Shear : Creep of (Prof. E. N. da C. Andrade and K. H. Jolliffe), 431
Metals, Institute of : Permanent Joint Consultative Committee of the Iron and Steel Institute, the Institution of Metallurgists and the, 134
Metals (Heated) : Arc Initiation on, by a Hydrogen Discharge (J. T. Maskrey, R. A. Dugdale and R. C. McVickers), 997
Metals (Heavy) : Incorporation of Amino-Acids into Protein and Ribonucleic Acid of the Lens of the Rat—Effect of (Dr. Anima Devi, Dr. Sidney Lerman and Dr. Nirmal K. Sarkar), 1193
Metamict Mineral from Ceylon : Ekanite, a New (B. W. Anderson, Dr. G. F. Claringbull, Dr. R. J. Davis and D. K. Hill), 997
Metcalf, Dr. W. K. : Appointed to a senior lectureship in anatomy in the University of Bristol, 396
  Experimental Oxidation of Haemoglobin—its relation to Growth-rate in Rats, 543
  Sensitivity of Haemoglobin to Oxidation in various Conditions, 543
Metcalfe, Dr. C. R. : Anatomy of the Monocotyledons, Vol. 1, Gramineae, *review* by Prof. T. G. Tutin, *erratum*, 16
Meteorites in the U.S.S.R., 492
Meteorites (Carbonaceous) : Significance of, in Theories on the Origin of Life (Prof. J. D. Bernal), 129
Meteorites (Stone and Iron) : Origin of (Prof. David E. Fisher), 244
Meteorites (Treysa and Sikhote–Alin) : Cosmic Ray Ages of the (Prof. David E. Fisher), 225
Meteorological Day (World) : First, 676
Meteorological Office (Air Ministry) : British Rainfall, 1957—Report on the Distribution of Rain in Space and Time over Great Britain and Northern Ireland during the Year 1957 as recorded by about 5,000 Observers (Ninety-seventh Annual Volume), *review*, 201
  Appointment of Dr. Frank Stacey and Dr. H. M. Iyer to Gassiot research fellowships, 676
  Handbook of Aviation Meteorology, *review*, 846
  Scientific Paper No. 5, An Experiment in Numerical Forecasting (E. Knighting, G. A. Corby, F. H. Bushby and C. E. Wallington), 973
  Scientific Paper No. 6, Seasonal Variation of the Sea Surface Temperature in Coastal Waters of the British Isles (F. E. Lumb), 1164
Meteorological Organization (International) : Prize for 1961 awarded to Prof. K. R. Ramanathan, 1154
Meteorological Organization (World) : Establishment of a World Meteorological Day, 676
Meteorological Research : The Gassiot Committee of the Royal Society and (Dr. D. C. Martin), 212
Meteorological Society, American (Section of Geological Sciences and Division of Oceanography and Meteorology of the New York Academy of Sciences, in co-operation with the): Symposiun on Solar Variations, Climatic Change and related Geophysical Problems, 967
Meteorological Society (Royal) : Symposium on Winds and Circulation in the Upper Atmosphere, 591
  Symposium on Medium-scale Diffusion in the Atmosphere, 591
Meteorology (Aviation) : Handbook of (Air Ministry : Meteorological Office), *review*, 846
Meteorology, Oceanography and Turbulent Flow (The Scientific Papers of Sir Geoffrey Ingram Taylor, edited by Dr. G. K. Batchelor, Vol. 2), *review* by Prof. P. A. Sheppard, 62
Meteors : Anomalies in the Light Curves of, resulting from Fragmentation (Dr. R. Ananthakrishnan), 896
Methane Oxidation initiated by Electrical Discharge (M. Barber and Dr. J. Cuthbert), 1001
Methanol Extraction (Hot), of Human Brain Aminoglycolipids (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch, Peter C. Belval and Dorothy Winer), 152
Methanol Solution : Properties of Polyadenylic Acid in (R. F. Steiner), 340
Method for Revealing the Membrane Systems in Micro-organisms (R. J. North), 1215
Method (The Axiomatic), with special reference to Geometry and Physics—Proceedings of an International Symposium held at the University of California, Berkeley, 1958 (edited by Prof. Leon Henkin, Prof. Patrick Suppes and Prof. Alfred Tarski), *review* by F. I. G. Rawlins, 570
Method (A General), for the Quantitation of Immune Cytolysis (Dr. Harold S. Goodman), 269
Method ('Mixed Haemadsorption') : Use of a, in Virus-infected Tissue Cultures (Dr. Astrid Fagraeus and Dr. Åke Espmark), 370
Method (Novel), of Radiating at Very Low Frequencies : Some Preliminary Experimental Tests of a (R. N. Gould), 332
Method (Potassium–Argon) : Determination of the Age of a Basic Igneous Intrusion by the (Dr. Ian McDougall), 1184
Method (Rapid), of Micro-analysis : Radiometric Precipitation in Filter Paper—a (M. Thackray), 434
Method (Sodium Line Reversal) : Stagnation Temperature Measurements in a Hypersonic Wind-Tunnel using the (J. L. Stollery), 778
Method (Stathmokinetic (Mitosis-inhibiting)), for Estimating Plasma Erythropoietic Hormone (Dr. Hillas Smith), 640
Method (A Twilight), of Determining the Vertical Distribution of Ozone (A. B. Pittock), 426
Methods : Geophysical, *review* by M. J. Keen, 55
Methods of Polymer Characterization and Analysis (Bradford Institute of Technology Course on), 312
Methods (Computing), and the Phase Problem in X-Ray Crystal Analysis—Report of a Conference held at Glasgow, 1960 (edited by Ray Pepinsky, J. M. Robertson and J. C. Speakman), *review* by Dr. A. D. Booth, 752
Methods (Numerical) : Weather Forecasting by (Dr. A. W. Brewer), 973
Methods (Official), of Analysis of the Association of Official Agricultural Chemists (edited by William Horwitz), ninth edition, *review* by H. V. Hart, 749
Methods and Techniques in Geophysics (edited by Prof. S. K. Runcorn), Vol. 1, *review* by M. J. Keen, 55
Methosulphate (Phenazine) : Assay of Pyridine Nucleotide Coenzymes and associated Dehydrogenases with (Dr. P. J. C. Smith), 84
Methoxyindolealkylamines : Pharmacological Action of some (Peter K. Gessner, Dr. William M. McIsaac and Irvine H. Page), 179
Methyl Ethers (Sterol) : Gas–Liquid Chromatography of (R. B. Clayton), 1071
Methyl Linoleate Hydroperoxide : Reactions of Cytochrome-c with (Dr. A. Banks, E. Eddie and J. G. M. Smith), 908
Methyl and Methylene Radicals : Internuclear Distances of (George Glockler), 1002
Methylamine (Urinary), in the Rat : Metabolic Origin of (E. Jack Davis and Dr. R. S. De Ropp), 636
3-Methylcholanthrene, Œstradiol 17β, Progesterone and Growth Hormone : Induction of Mammary Carcinoma in Hypophysectomized Rats treated with (Dr. Stretton Young), 356
Methylene Radicals (Methyl and) : Internuclear Distances of (George Glockler), 1002
Metz, J., and others : Acetylcholinesterase and the Life-span of the Erythrocyte, 1208
Meyer, Dr. K. F. : Awarded the Jessie Stevenson Kovalenko Medal of the United States National Academy of Sciences, 674
Meynell, Dr. Elinor W. : A Bacteriophage for Motile Bacteria, 564
Mice : Enhancement of Intraperitoneal Staphyloccal Virulence for, with Different Bile Salts (Dr. S. Stanley Schneierson, Daniel Amsterdam and Ely Perlman), 829
  Influence of a Liver Fraction on the Phagocytic Activity of the Reticulo-Endothelial System in (Prof. B. N. Halpern, C. Stiffel and J. Dedichen), 279
  A Potential Source of Error in the Hexobarbitone Sleeping-Time Test in (Dr. P. W. Ramwell and I. H. Lester), 640
  Protective Activity of Fractions of Tubercle Bacilli against Isologous Tumours in (Dr. David W. Weiss, Rose S. Bonhag and Dr. Kenneth B. DeOme), 889
  Protective Effect of Orally Administered S,β-Aminoethylisothiuronium, Br.HBr against X-Radiation Death in (Major M. P. Dacquisto and Capt. E. W. Blackburn), 270
  Recovery of Fertility after Protracted Steroid-induced Sterility in (Prof. Alexander Lipschutz and Rigoberto Iglesias), 174
  Two Linked Genes showing a Similar Timing of Expression in (Kenneth Paigen and Werner K. Noell), 148
Mice with a Genetically determined Muscular Dystrophy: Longevity in (Dr. James R. Miller, A. J. Wood and Prof. William C. Gibson), 552
Mice subjected to Simultaneous X-Ray and Ultra-violet Irradiation : Circulating Platelets in (I. Cserháti, F. Krizsa and K. Rák), 544
Mice (Foetal *C57BL/6*) : Haemoglobins of (J. Barrowman and M. Craig), 818
Mice (F_1 Hybrid), undergoing Graft-versus-Host Reaction : Increased Sensitivity to Bacterial Endotoxin of (Dr. J. G. Howard), 1122
Mice (New-born Swiss) : Leukaemogenesis by Urethan in (Dr. L. Fiore-Donati, Dr. L. Chieco-Bianchi, Dr. G. de Benedictis and Dr. G. Maiorano), 278
Mice (Pre-immunized), exposed to Continuous γ-Radiation : Haemagglutinin Production in (J. P. M. Bensted), 99
Micellar Solubilization of Fatty Acids and Monoglycerides by Bile Salt Solutions (Dr. Alan F. Hofmann), 1106
Michie, Dr. Donald (McLaren, Dr. Anne, and) : Choice of Animals for Bio-Assay, 894
Michie, Dr. Donald, and others : Choice of Animals for Bio-Assay, 891
Michie, Dr. R. I. C. : Sorption of Copper by Cellulose, 803
Micro-analysis : Radiometric Precipitation in Filter Paper—a Rapid Method of (N. Thackray), 434
Microbiology : Annual Review of (edited by Charles E. Clifton, in association with Sidney Raffel and Mortimer P. Starr), Vol. 14, review by Dr. B. A. Newton, 662
Microbiology (Applied), and Biology at the Royal College of Science and Technology, Glasgow, 764
Microbiology (General), Society for : Election of Officers, 591
Microfibrils (Helical), from a Steroid Acid Complex : Formation of (Dr. N. Ramanathan, A. L. Currie and J. Ross Colvin), 779
Micron (Sub-) Dust in Still Air : Precipitation of, by Cloud-size Water Droplets (Dr. M. M. Bhadani and N. G. T. Ludlow), 974
Micro-organisms : Absence of Phosphatase Repression by Inorganic Phosphate in some (Mau-Huai Kuo and Prof. Harold J. Blumenthal), 29
  Method for Revealing the Membrane Systems in (R. J. North), 1215
  Polysaccharides of (Prof. M. Stacey and Dr. S. A. Barker), *review* by Prof. W. T. J. Morgan, 55
  Utilization of Nitrate by (Dr. C. A. Fewson and Dr. D. J. D. Nicholas), 2
Microscope (Electron) : Verification of the Gastropod Golgi Cycle with an (Prof. Leonard G. Worley and Betty Hershenov), 828
Microscope (Electron), and its Applications : Physics of the (Electron Microscopy Group of the Institute of Physics and the Physical Society Annual Conference), 591
Microscope (Electron) Study of the 'Chloride-Secretory Cell' of *Salmo salar* L., with reference to Plasma-Electrolyte Regulation (Dr. Lawrence T. Threadgold and Dr. Arthur Hillier Houston), 612
Microscopic Investigation (Field-Emission), of Catalysed Synthesis of Ammonia on Tungsten (K. Azuma), 530
Microscopic Studies of Reflecting Surfaces, *review* by J. W. Gates, 117
Microscopic (Electron) Observations on Single Crystals of Polyethylene : Some (R. Westrik and A. M. Kiel), 162
Microscopical Society (Royal) : Symposium on Applications of Interference Microscopy, 315
Microscopy : Electron, *review* by Dr. V. E. Cosslett, 68
Microscopy (Electron), of Mossy Fibre Endings in Ammon's Horn (Dr. L. H. Hamlyn), 645
Microscopy (Interference) : Applications of (Royal Microscopical Society Symposium on), 315
Microsections : Use of Transparent Adhesive Tape in the Preparation of (D. S. Gowers and R. E. Miller), 424
Microtopography : Surface (Prof. S. Tolansky), *review* by J. W. Gates, 117
Middlehurst, J., and Kennett, B. : An A.C. Modulated Flame Ionization Triode, 142
Midgley, Dr. J. W.: Electrical Contacts (Friction and Wear of Graphite and Non-Graphitic Carbon), 866

Migration : Orientation and (Association for the Study of Animal Behaviour Symposium on), 1063
Migration of Lithium Ions into Empty Octahedral Sites in Muscovite and Montmorillonite : Infra-Red Investigation of the (Prof. Joe L. White, G. W. Bailey, C. B. Brown and J. L. Alrichs), 342
Migration (Axial), of Particles in Poiseuille Flow (H. L. Goldsmith and S. G. Mason), 1095
Mikulska, Dr. Izabella : Parental Care in a Rare Spider *Pellenes nigrociliatus* (L. Koch) var. *bilunulata* Simon, 365
Mild Steel : Cleavage Fracture Initiation in Notched Impact Tests of (J. W. Davies and A. A. Wells), 432
Milk (Buffalo's), and Cow's Milk : Comparison of the β-Lactoglobulins of (Dr. A. Sen and N. K. Sinha), 343
Milk (Cow's) : Comparison of the β-Lactoglobulins of Buffalo's Milk and (Dr. A. Sen and N. K. Sinha), 343
Milk and Beef (Air, Precipitation, Drinking Water,) : Caesium-137 in, in Norway during 1959 and 1960 (T. Hvinden and A. Lillegraven), 402
Milking Cows (Improved) : The Breeding of, through Artificial Insemination (Dr. J. Edwards and Dr. L. K. O'Connor), 759
Milledge, Dr. H. Judith : Coesite as an Inclusion in G.E.C. Synthetic Diamonds, 1181
Millen, Dr. J. W. (Woollam, Dr. D. H. M., and) : Influence of Uterine Position on the Response of the Mouse Embryo to the Teratogenic Effects of Hypervitaminosis-A, 184
Miller, Dr. A. J. : Appointed to a lectureship in highway and traffic engineering in the University of Birmingham, 679
Miller, Banner I. (Dunn, Gordon E., and) : Atlantic Hurricanes, *review* by Dr. F. H. Ludlam, 52
Miller, J. A., and others : Potassium–Argon Ages of the Dartmoor and Shap Granites using the Total Volume and Isotopic Dilution Techniques of Argon Measurement, 800
Miller, Dr. James R., and others : Longevity in Mice with a Genetically determined Muscular Dystrophy, 552
Miller, R. E. (Gowers, D. S., and) : Use of Transparent Adhesive Tape in the Preparation of Microsections, 424
Mills (Lady Dorothy) Award for women (Royal Geographical Society), 311
Mills, J. R. : Appointed head of the Radio Department, Royal Aircraft Establishment, Farnborough, 392 ; work of, 392
Mills, Mark M., and others : Solid Propellant Rockets, *review* by Prof. D. B. Spalding, 66
Millstone Radar Observatory, Massachusetts Institute of Technology (Staff of) : The Scale of the Solar System, 592
Minagawa, S., and others : Effect of Temperature on the Retinal Slow Potential of the Horseshoe Crab, 1011
Mineral from Ceylon : Ekanite, a New Metamict (B. W. Anderson, Dr. G. F. Claringbull, Dr. R. J. Davis and D. K. Hill), 997
Mineral Processing Congress : International—Proceedings of a Congress arranged by the Institution of Mining and Metallurgy (London, 1960), *review* by Dr. E. J. Pryor, 70
Mineral Technology : Modern, *review* by Dr. E. J. Pryor, 70
Mineral Technology at the Imperial College of Science and Technology, London, 1153
Mineralogical Society (Clay Minerals Group), and the British Society of Soil Science : Discussion on Weathering, 1066
Minerals (Clay) : Clays and—Proceedings of the Seventh National Conference on Clays and Clay Minerals, Washington, 1958 (edited by Ada Swineford), *review* by Dr. D. M. C. MacEwan, 850
Minerals (Kaolin) : Attempted Low-Temperature Syntheses of (Prof. G. W. Brindley and C. De Kimpe), 254
Mineraly (Minerals, a Reference Book), Vol. I (Academy of Sciences of the U.S.S.R.), *review* by Prof. C. F. Davidson, 1047
Minimum Range to Artificial Earth Satellites (K. Toman), 333, *errata*, 865
Mining and Metallurgy, Institution of : Proceedings of the International Mineral Processing Congress (London, 1960), *review* by Dr. E. J. Pryor, 70
Minor Constituent of Linseed Oil : *Cyclo*-Arthenol, a (Dr. Pompeo Capella), 167
Minnaert, Prof. M. G. J. : Solar Seeing (Blurring, Dancing and Scintillation (or Intensity Vibration) of Stellar Images), 771
Minor Human Haemoglobin Components A_2 and A_2' : Identity of the α-Chains of the, with the α-Chains of Human Haemoglobin *A* and *F* (Prof. Titus H. J. Huisman, Dr. Bennett Horton and Tine B. Sebens), 357
Minter, D. M., and others : *Culicoides adersi* Ingram and Macfie, 1923, a Presumed Vector of *Hepatocystis* (=*Plasmodium*) *kochi* (Laveran, 1899), 739
Miranda, Francois, and Lissitzky, Serge : Scorpamins, the Toxic Proteins of Scorpion Venoms, 443
Miras, Dr. Constantinos J., and others : Incorporation of Palmitic-1-^{14}C Acid into Blood Cells, 92
Mirnik, Prof. Mirko : Schulze–Hardy Rule and Mass Action Law, 689
Misra, Anand L., and others : *In vivo* Formation of Normorphine in the Rat as a Metabolite of Tritium Nuclear-labelled Morphine, 82
Misuse (Use and) : The Soil—Problems raised by its (Institute of Biology, the Royal Institute of Chemistry, the Institute of Physics and the Physical Society Symposium on), 770
Mitchell, Prof. G. A. G. : *Obituary* of Lord Stopford, 391
Mitchell, Prof. J. S. : Provision of Animals for Cancer Research, 393
Mitchell, R., and Alexander, Prof. M. : The Mycolytic Phenomenon and Biological Control of *Fusarium* in Soil, 109
Mite Orientation and Survival on Flies (Bernard Greenberg), 107
Mitochondria : Effect of Dimethyl Sulphoxide on the Cryo-tolerance of (Prof. D. Greiff and M. Myers), 1202
Mitochondria of Regenerating Liver : Transmission of Swelling Characteristics by (Hans H. Gosch and Prof. Joseph C. Arcos), 272
Mitochondria (Isolated Liver): Effects of Oligomycin on Respiration and Swelling of (Dr. J. B. Chappell and Dr. G. D. Greville), 502
Mitochondria (Pea Root) : Oxidation of Reduced Pyridine Nucleotides and of Sulphite by (R. G. Stickland), 648
Mitochondria and Chloroplasts : Coprecipitation of (Rachel M. Leech and Dr. R. J. Ellis), 790
Mitochondrial Membranes (Rat) : An Effect of Chlorpromazine on (Prof. M. A. Spirtes and P. S. Guth), 274
Mitomycin C : Degradation of Deoxyribonucleic Acid in *Escherichia coli* Cells treated with (H. Kersten and Prof. H. M. Rauen), 1195
  Effect of, on the Synthesis of Infective Virus and Deoxyribonucleic Acid in Pseudorabies Virus-infected Rabbit Kidney Cells (Dr. Tamar Ben-Porat, Dr. Magdalena Reissig and Dr. Albert S. Kaplan), 33
Mitosis : Evidence for the Continuity of Nucleolar Material in (The Nucleolus), (Dr. P. G. Martin), 1078
Mitosis-inhibiting (Stathmokinetic) Method for Estimating Plasma Erythropoietic Hormone (Dr. Hillas Smith), 640
Mitotic Haploidization by Treatment of *Aspergillus niger* Diploids with *para*-Fluorophenylalanine (Pol Lhoas), 744
Miura, Kin-ichiro, and others : Mutation in Tobacco Mosaic Virus induced by a New Carcinogen, 4-Nitroquinoline N-Oxide, 833
'Mixed Haemadsorption' Method : Use of a, in Virus-infected Tissue Cultures (Dr. Astrid Fagraeus and Dr. Åke Espmark), 370
Mixed Perithecia (Genetically), in *Neurospora* (Kazuo Nakamura and Takeshi Egashira), 1129
Mixture of Promazine, Quinine, Sulphacetamide and Acetophenetidin : A New Technique of Chromatography and Ionophoresis on Ion-exchange Paper—Application to Separation of Compounds of Toxicological Interest—Separation of a (Harold V. Street and Dr. S. K. Niyogi), 1199
Mixtures (Gaseous) : Use of Flash Photolysis to initiate Detonation in (J. Wadsworth), 623
Miyazaki, S., and others : Measurement of Positive-Ion Density in the Ionosphere by Sounding Rocket, 156
Mizuhara, M., and Yamanaka, Dr. M. : The Cytochrome of *Pasteurella tularensis*, 1024
Mobility (Electrophoretic), of Cultured Mesodermal Tissue Cells (D. H. Heard, G. V. F. Seaman and I. Simon-Reuss), 1009
Model (Enzyme), for Haem Iron Incorporation : Catalysis of Metalloporphyrin Formation—a Possible (M. B. Lowe and J. B. Phillips), 262
Model (A Neuronal), for Conditioning (Dr. G. W. Mainwood), 177
Model (A Preliminary), for the Variations of Upper Air Densities (Dr. H. K. Paetzold), 35
Model Peptides : Interaction of, with Water and Lithium Bromide (Dr. J. Bello and H. R. Bello), 440
Models (Proposed Molecular), of Gramicidin *S* and other Polypeptides (Dr. Donald T. Warner), 120
Modern Education : The Importance of Field Studies in (Paul F. Holmes), 590
Modern Mineral Technology, *review* by Dr. E. J. Pryor, 70
Modes of Action of Substrate and Hormonal Inducers of Rat Liver Tryptophan Pyrrolase : A Difference between the (Dr. Olga Greengard and Prof. Philip Feigelson), 446
Modification of Aortic Aerobic Metabolism in Rats by Gonadectomy (Effect of Œstrogens on Atherosclerosis), (Dr. M. R. Malinow and Dr. J. A. Moguilevsky), 424
Modification of Spectrophotofluorometer for Scanning Paper Strips (Yasuhiko Taketomo), 1094
Modulated (An A.C.) Flame Ionization Triode (J. Middlehurst and B. Kennett), 142
Modulus (Dynamic), and Dynamic Yield Stress for 'Perspex' : Estimation of (John Roberts), 799
Moguilevsky, Dr. J. A. (Malinow, Dr. M. R., and) : Effect of Œstrogens on Atherosclerosis—Effect of Œstradiol on the Oxygen Consumption of Arteries in Chickens, 422 ; Effect of Incubated Arteries on Œstradiol-containing Media, 423 ; Modification of Aortic Aerobic Metabolism in Rats by Gonadectomy, 424
Mohole : United States Project, 393
Mohsen, Dr. T., and Emerit, M. : Adaptive Euryhalinity in the Cyprinodont *Lebistes reticulatus* Peters, 932
Moisture Conditions for Testing Germination (Prof. N. Collis-George and Jocelyn E. Sands), 367
Molecular Biology or Ultrastructural Biology ? (Prof. C. H. Waddington), 184, 1124 ; (the late Prof. W. T. Astbury), 1124
Molecular Complex of Benzothiazol with Iodine : Ionization Potential and (Prof. J. Collin and M. Nagels), 82
Molecular Formulae : Prediction of Retention Data in Gas–Liquid Chromatography from (M. B. Evans and J. F. Smith), 905
Molecular Mechanisms for Hydrolytic Enzyme Action (Richard M. Krupka and Keith J. Laidler), 916
Molecular Models (Proposed), of Gramicidin *S* and other Polypeptides (Dr. Donald T. Warner), 120
Molecular Nitrogen Emission (Night-Sky) : Enhancement of, in Polar Cap Absorption Events (B. P. Sandford), 245
Molecular Spectroscopy : Proceedings of the Institute of Petroleum Hydrocarbon Research Group Conference on (London, 1958), (edited by E. Thornton and Dr. H. W. Thompson), *review* by Dr. A. Knowles, 76
Molecular Vibration : Odour and (R. H. Wright), 1101
Molecular Weight of Dextrans: Age and—their Coating Effects, and their Interaction with Serum Albumin (Dr. Eric Ponder and Dr. Ruth V. Ponder), 277
Molecules (Biological) : Electron Transfer in (British Biophysical Society Symposium on), 312
Molecules (Diatomic) : Spectrophotometric Determination of the Electron Affinities of some (J. Jortner and U. Sokolov), 1003
Molecules (Mouse Gamma-Globulin) : The Distribution of Antigenic Groupings on (Dr. Brigitte A. Askonas and Dr. J. H. Humphrey), 1177
Möllenstedt, G., und andere (herausgegeben von) : Vierter Internationaler Kongress für Elektronenmikroskopie, Band I, Physikalisch-Technischer Teil, *review* by Dr. V. E. Cosslett, 68
Molozzi, A. R., and others : Cosmic Noise Measurements from 1960 η1 at 3·8 Mc./s., 616
Molybdenum and the Fixation of Nitrogen in *Myrica* Root Nodules (Dr. G. Bond and Dr. E. J. Hewitt), 1033
Momber, E. W. : Peasant Agriculture in the Tropics, 962
Monarch Butterfly : The (Dr. F. A. Urquhart), *review* by Dr. C. B. Williams, 73
Monitor Lizard from Borneo : A Rare Earless (Tom Harrisson and Dr. N. S. Haile), 1213
Monkman, L. J., and others : Karroo Igneous Activity and Tectonics in south-east Southern Rhodesia, 40
Monocotyledons : Anatomy of the (Dr. C. R. Metcalfe), Vol. I, Gramineae, *review* by Prof. T. G. Tutin, *erratum*, 16

Monoethylenic Fatty Acids (*n*-Odd-Numbered), in the Liver Oil of the New Zealand School Shark (*Galeorhinus australis* MacLeay): Occurrence of (Isobel M. Morice and Dr. F. B. Shorland), 443
Monoglycerides : Micellar Solubilization of Fatty Acids and, by Bile Salt Solutions (Dr. Alan H. Hofmann), 1106
Mononucleotide (Flavin) : A New Photo-Reaction between some Furocoumarins and (Luigi Musajo and Giovanni Rodighiero), 1109
Monoxide (Carbon), Hydrogen, Nitrogen, Oxygen and Steam (Air, Argon, Carbon Dioxide,) : Tables of Thermodynamic and Transport Properties of (Joseph Hilsenrath, Charles W. Beckett, William S. Benedict, Lilla Fano, Harold J. Hoge, Joseph F. Masi, Ralph L. Nuttall, Yeram S. Touloukian and Harold W. Woolley), *review* by Prof. A. R. Ubbelohde, 58
Montague, J. H. : Fast Neutron Handbook, *review*, 944
Montgomery, W. (Chapman, J., and) : Awarded Williams Prizes for 1960 of the Iron and Steel Institute, 13
Montmorillonite : Infra-Red Investigation of the Migration of Lithium Ions into Empty Octahedral Sites in Muscovite and (Prof. Joe L. White, G. W. Bailey, C. B. Brown and J. L. Alrichs), 342
Moon : The (Prof. Zdenek Kopal), *review* by Patrick Moore, 753
Moon Probes and Artificial Satellites, their Impact on Human Destiny : The Conquest of Space—(Albert Ducrocq), 567
Moorbath, S. (Dodson, M. H., and) : Isotopic Ages of the Weardale Granite, 900
Moore, Prof. Ian : Grassland Philosophy, *review*, 751
Moore, Patrick : The Moon, *review*, 753
Moore, R. M. : At the Australian Arid Zone Technical Conference (Principles and Problems of Plant and Animal Production and Husbandry—Utilization), 19
Moore, T. W. F. : Awarded the Usborne Memorial Prize of the Royal Aeronautical Society, 863
Moorefield, Herbert H., and others : Toxicity of 2-(2-Halogen-4-Chlorophenyl)-2-(4-Chlorophenyl)-1,1,1-Trichloroethanes to Normal and to DDT-Resistant House-Flies, 341
Mooser, E., and Pearson, W. B. : The Ionic Character of Chemical Bonds, 406
Mordike, Dr. B. L. : Awarded a CIBA fellowship (renewal) in physical metallurgy, 489
Morel, F., and others : A 'Natriferic' Principle other than Arginine–Vasotocin in the Frog Neurohypophysis, 828
Moreton, Dr. G. E. : Solar Seeing (General Correlations of Seeing with Meteorological Conditions at the Lockheed Solar Observatory), 771
Moreton, Dr. G. E. (Malville, J. M., and) : Trajectories of Chromospheric Disk Surges, 995
Morgan, Prof. W. T. J. : Polysaccharides of Micro-organisms, *review*, 55
Morice, Isobel M., and Shorland, Dr. F. B. : Occurrence of *n*-Odd-Numbered Monoethylenic Fatty Acids in the Liver Oil of the New Zealand School Shark (*Galeorhinus australis* MacLeay), 443
Moroney, J. R., and others: Strontium-90 in Fall-out and in Man in Australia, January 1959-June 1960, 754
Morphine (Tritium Nuclear-labelled): *In vivo* Formation of Normorphine in the Rat as a Metabolite of (Anand L. Misra, S. J. Mule and Prof. L. A. Woods), 82
Morpurgo, G. (Strigini, P., and) : Biotin Requirement and Carbon and Sulphur Sources in *Aspergillus* and *Neurospora*, 557
Morradian, Dr. V. G. : Electrical Contacts (Selection of Electrical Contact Materials for Light-Duty Applications), 867
Morris, Clayton J., and others : Isolation of Beta-Alanine from *Iris tingitana* (var. Wedgewood), 718
Morris, Dr. Ernest O. : Appointed to the new chair of applied microbiology and biology in the Royal College of Science and Technology, Glasgow, 764 ; work of, 764
Morris, L. R. : Photoperiodicity of Seasonal Rhythm of Wool Growth in Sheep, 102
Morris, Valerie B., and Marriott, F. H. C. : The Distribution of Light in an Image formed in the Cat's Eye, 176
Morrison, Ashton B., and Gardner, jun., Kenneth D. : Detection of Serum Proteins within the Renal Collecting Tubule Cells of the Potassium-deficient Rat, 96
Morrison, Dr. M. E. S. : Pollen Analysis in Uganda, 483
Mortari, A., and others : Increased Toxicity of Sertonin in Adrenalectomized Animals, 540
Mosaic : Striate—a New Disease of Sugar Cane (C. G. Hughes), 366
Mosaic Virus (Bromegrass), a Virus containing an Unusually Small Ribonucleic Acid (Larry E. Bockstahler and Prof. Paul Kaesberg), 192
Mosaic Virus (Tobacco) : Apparent Release of, in Living Infected Cells (Prof. J. G. Bald and R. A. Solberg), 651
  Mutation in, induced by a New Carcinogen, 4-Nitroquinoline N-Oxide (Dr. Hideya Endo, Akiyoshi Wada, Kin-ichiro Miura, Zyun Hidaka and Chuji Hiruki), 833
Moscona, Prof. A. : Effect of Temperature on Adhesion to Glass and Histogenic Cohesion of Dissociated Cells, 408
Moses, V., and others : Effect of Allyl*iso*propylacetamide on Liver Metabolism, 1014
Mosquitoes : Insecticide Resistance in (Dr. G. Davidson and Dr. C. Elizabeth Jackson), 364
Mosquitoes (Colonized) : Cyclical Feeding-Activity in (Dr. J. D. Gillett), 881
Mossy Fibre Endings in Ammon's Horn : Electron Microscopy of (Dr. L. H. Hamlyn), 645
Moth (Cinnabar) : Termination of Pupal Diapause in the, and the Reproductive Capacity of the Resulting Females (Dr. G. F. Bornemissza), 936
Moth (Codling), *Cydia pomonella* (L.) : Numerical Regulation of Populations of the (P. W. Geier), 561
Motile Bacteria : A Bacteriophage for (Dr. Elinor W. Meynell), 564
Motion of Geomagnetic Field Lines (C. J. Loughnan), 427
Motion (Rotational), of a Rigid Body : Effect of a Resisting Couple on the (Prof. A. K. Weaver), 335
Motion (Wave), of Oceans and Atmospheres, *review* by Dr. P. G. Drazin, 1044
Motor Unit : Fractionation of the, during Repetitive Response to Prostigmine (Dr. Simeon Locke), 452
Motors (Rocket) : Interior Ballistics of, *review* by Prof. D. B. Spalding, 66
Motulsky, A. G., and others : Favism and Thalassaemia in Sardinia and their Relationship to Malaria, 1179
Moule, G. R., and Whittem, J. H. : At the Australian Arid Zone Technical Conference (Principles and Problems of Plant and Animal Production and Husbandry—Animal Husbandry), 19
Mouse : Juvenile Stages of *Fasciola hepatica* in the Liver of the (Dr. Ben Dawes), 646
  Proliferative Cycle in the Growing Hair Follicle in the (S. M. Cattaneo, H. Quastler and F. G. Sherman), 923
  Synaptinemal Complexes (Cores) in Primary Spermatocytes of, under Elevated Temperature (Dr. B. R. Nebel and E. M. Hackett), 467
Mouse (*Mus musculus* L.) : Gene Action in the X-Chromosome of the (Mary F. Lyon), 372
Mouse (House-) : Pulmonary Tumours, Group VII and Sex in the (Dr. J. A. H. Tatchell), 837
Mouse Bone Marrow : Preservation of, at —79°C, with Dimethyl Sulphoxide (M. J. Ashwood-Smith), 1204
Mouse Chimaeras developed from Fused Eggs (Dr. Andrzej K. Tarkowski), 857
Mouse Embryo : Influence of Uterine Position on the Response of the, to the Teratogenic Effects of Hypervitaminosis-A (Dr. D. H. M. Woollam and Dr. J. W. Millen), 184
Mouse Gamma-Globulin Molecules : The Distribution of Antigenic Groupings on (Dr. Brigitte A. Askonas and Dr. J. H. Humphrey), 1177
Mouse Gamma-Globulin (Normal) : An Investigation of Closely Related Gamma-Myeloma Proteins and, by Partial Enzymic Degradation and Starch-Gel Electrophoresis (Dr. Brigitte A. Askonas and Dr. J. L. Fahey), 980
Mouse Liver and from the Ehrlich Ascites Tumour : Antigenicity of Deoxyribonucleic Acids from (Dr. J. S. Colter and Dr. K. A. O. Ellem), 550
Mouse and Man : Effects of Maternal Age on the Incidence of Congenital Abnormalities in (Dr. W. F. Bodmer), 1134
Movement of Coarse Fish in Rivers (B. Stott), 737
Movement of the Ovum in the Reproductive Tract—A Needle Probe Geiger-Müller Counter for the Study of the Passage of the Ovum in the Reproductive Tract (J. P. Bennett), 788 ; A Possible Explanation for the Failure of Non-Surgical Ovum Transfers in the Cow (M. J. K. Harper, J. P. Bennett and L. E. A. Rowson), 789
Movement (Cold-Cathode Arc), in a Magnetic Field : A Theory of (Dr. P. E. Secker and Dr. A. E. Guile), 428
Movement (Polar), of Nutrients in Plants : Further Evidence of (Prof John Caldwell), 1028
Moving Source : Velocity of Light emitted from a (Dr. W. G. V. Rosser), 249
Mucin (The Stainable), of Joint Tissues and Synovial Fluid (Dr. B. F. Martin and N. E. Shaw), 835
Mucous Membrane in the Peristaltic Reflex in the Isolated Ileum of the Guinea Pig : Role of the (M. L. Diament, Dr. H. W. Kosterlitz and J. McKenzie), 1205
Muguruma, J. : Spiral Etch-Pits of Ice Crystals, 37
Muir, Dr. A. : Weathering, 1067
Muir, H. M. (Vickery, R. C., and) : Anomalous Thermoelectric Properties of Gadolinium Selenide, 336
Muir, Prof. Robert M., and Hansch, Corwin : Azulene Derivatives as Plant Growth Regulators, 741
Muirhead, Dr. W. R. H. F. : Appointed a senior lecturer in physics at the University of Liverpool, 963
Mulay, Indumati L., and Mulay, Prof. L. N. : Effect of a Magnetic Field on Sarcoma 37 Ascites Tumour Cells, 1019
Mulay, Prof. L. N. (Mulay, Indumati L., and) : Effect of a Magnetic Field on Sarcoma 37 Ascites Tumour Cells, 1019
Mule, S. J., and others : *In vivo* Formation of Normorphine in the Rat as a Metabolite of Tritium Nuclear-labelled Morphine, 82
Müller, Dr. R., and others : The Haemoglobin Particles—Chemical and Genetic Aspects of their Structure, 480
Mullett, L. B. : Appointed assistant director for accelerator and applied physics in the Rutherford Laboratory of the National Institute for Research in Nuclear Science, 393
Mullin, Dr. J. W. : Title of reader in chemical engineering (at University College, London) conferred on, 396
Mullin, Dr. J. W., and Raven, K. D. : Nucleation in Agitated Solutions, 251
Mullite Formation in the Aluminium Fluoride–Silica System (AlF_3–SiO_2), (Béla Löcsei), 907
Mulrow, Dr. Patrick J. (Ganong, Dr. William F., and) : Evidence of Secretion of an Aldosterone-stimulating Substance by the Kidney, 1115
Multicellular Organisms (Mechanisms in Radiobiology, edited by Maurice Errera and Arne Forssberg, Vol. 2), *review* by Dr. O. A. Trowell, 72
Multilingual Dictionary : AGARD Aeronautical (edited by G. H. Frénot and A. H. Holloway), *review* by Dr. D. Küchemann, 851
Multiple Caeruloplasmin Components in Human Serum : Evidence for (R. McAlister, Dr. G. M. Martin and E. P. Benditt), 927
Multiple Sex Genotypes in the Hermaphrodite Polychaete Worm *Ophryotrocha puerilis siberti* : Existence of (Prof. G. Bacci and O. Bortesi), 838
Multiple-Stroke Whistlers : Dispersions of (Prof. N. D. Clarence and Dr P. A. O'Brien), 1096
Multiplication of Hansen's Bacillus in Complex Symbiosis *in vitro* (Dr. R. Devignat), 832
Multiplication *in vitro* of a Nuclear Polyhedrosis Virus in Insect Amoebocytes (M. E. Martignoni and R. J. Scallion), 1133
Multiplicity of Growth Layers in the Branches of Trees at the Extreme Lower Forest Border : Classification and (Waldo S. Glock, R. A. Studhalter and Sharlene R. Agerter), *review* by Prof. F. W. Jane, 850
Mumps Viruses (Newcastle Disease, Para-influenza 1 and) : Haemagglutinating Sub-Units released from, by Treatment with Ether (F. Sokol, D. Blaškovič and O. Krizanová-Laučíková), 834
Munck, Dr. O., and others : Sodium Transport and Oxygen Consumption in the Mammalian Kidney, 919
Munday, Dr. K. A., and others : Effect of Temperature on the Concentration of Free Radicals in Melanins from *Allium cepa*, 1005
Munday, L. : Alkylcyclohexanones in the Strecker and Bucherer Hydantoin Syntheses, 1103
Munto, Dr. P. A. G. : Some Recent Research Problems encountered in the Study of Blood as a Rheological Fluid, 1062
Murant, Dr. A. F. (Lister, R. M., and) : Diseases caused by Plant Viruses in Crops (Seed-transmission of Arabis Mosaic, Raspberry Ringspot and Tomato Black Ring Viruses), 220
Muraoka, Dr. Saburo, and others : Enzymatic Formation of Histamine Ribotide from Histamine Dinucleotide, 532

Muraoka, T., and others : Measurement of Positive-Ion Density in the Ionosphere by Sounding Rocket, 156
Muratov, M. V. : The Pontide Paradox, 864
Murphy, Prof. Gordon J. : Control Engineering, *review* by Dr. E. M. Deeley, 849
Murray, Dr. A. M. : Appointed lecturer in physics at the University of Sheffield, 1156
Murray, J. S., and Young, C. W. T. : Group Dying of Conifers (Forestry Commission, Forest Record No. 46), 685
Murthy, N. Sreedhara : Intensity Aspects as Determinant of r'_0-r''_0 in the Bands of the Lanthanum Oxide (LaO) ($B\rightarrow X$) System, 430
Mus musculus L. (Mouse) : Gene Action in the X-Chromosome of the (Mary F. Lyon), 372
Musajo, Luigi, and Rodighiero, Giovanni : A New Photo-Reaction between some Furocoumarins and Flavin Mononucleotide, 1109
Muscle : The Structure and Function of (edited by Dr. G. H. Bourne), Vol. 1, Structure, *review* by Dr. I. A. Boyd, 46
Muscle (Frog) : Stimulation of Active Transport of Sodium from Sodium-rich, by Insulin and Lactate (Roderick P. Kernan), 347
Muscle (Human Vocal) : Spiral Nerve-endings (Proprioceptors) in the (G. Rudolph), 726
Muscle (Smooth) : Interaction of Acetylcholine, Calcium and Depolarization in the Contraction of (Dr. K. A. P. Edman and Dr. H. O. Schild), 350
Muscle Fibre Membrane (Striated) : Nature of Sarcolemma, the (Prof. F. Lörincz and Dr. G. Biró), 317
Muscle-Spindles (Mammalian) : Efferent Innervation of (Prof. D. Barker and N. K. Chin), 461
Muscles (Smooth) : Contraction of, in Non-Ionic Solutions (Roselyn L. Kolodny and Prof. W. G. van der Kloot), 786
Muscovite and Montmorillonite : Infra-Red Investigation of the Migration of Lithium Ions into Empty Octahedral Sites in (Prof. Joe L. White, G. W. Bailey, C. B. Brown and J. L. Alrichs), 342
Muscular Dystrophy : Longevity in Mice with a Genetically determined (Dr. James R. Miller, A. J. Wood and Prof. William C. Gibson), 552
Museum (Australian), Sydney : *Magazine* of the, Vol. 13, No. 9, 1155
Museum (Florida State) : Director's Report for 1959-60, 133
Museum (Manchester) : Annual Report for 1959-60, 491
Museum (Raffles), Singapore : *Bulletin*, No. 26, 394
Museum (Sheffield City) : Annual Reports for 1958-60, 961
Museum (Ulster Folk) : Site for the, 1155
Museum (United States National) : Annual Report for 1960, 309
  Bulletin No. 220, Type Specimen of Reptiles and Amphibians in the United States National Museum (Doris M. Cochran), 863
  Proceedings of the, No. 3443, Cultural Sequences in Hokkaido, Japan (Lieut.-Col. H. A. MacCord), 864
Museum and Art Gallery (Queen Victoria), Launceston: *Records*, New Series No. 12, Comments on the Cainozoid History of Western Tasmania (B. Scott), 677
  Records, New Series No. 13, Erosion Surfaces in Western Tasmania (B. Scott), 677
  Annual Reports for 1958-59 and 1959-60, 677
Museum of Science and Industry (Birmingham) : Rebuilding of the, 491
Museum Work : 'Araldite' in (C.I.B.A. (A.R.L.), Ltd., Technical Notes No. 218), 394
Museums Association : Annual Conference, 219
  Monthly *Bulletin*, No. 1, 394
Mushroom (Wild) : Chromosomes of the (D. T. Hughes), 285
Mutant (Respiration-deficient), of Baker's Yeast : The Pasteur Effect in a (A. Kotyk), 811
Mutant Plants (Chlorophyll-deficient) : Staining Plastids in (W. R. Childers), 1029
Mutants (Single-Gene), of *Neurospora* Deficient in Amination : Glutamic Dehydrogenase in (Dr. B. D. Sanwal and Dr. Madhu Lata), 286
Mutation of the Incompatibility Gene : Chromosome Fragments and (Prof. D. Lewis), 990
Mutation in Tobacco Mosaic Virus induced by a New Carcinogen, 4-Nitroquinoline N-Oxide (Dr. Hideya Endo, Akiyoshi Wada, Kin-ichiro Miura, Zyun Hidaka and Chuji Hiruki), 833
Mutation (Cell) : Bivalent Metal Ions as the Coupling Factor between Cell Metabolism and the Rate of (Dr. G. G. Jayson), 144
Mutations (Induced Awn) : Effect of, on Yield in Wheat (D. Jagathesan, C. Bhatia and M. S. Swaminathan), 468
Myasthenia Gravis : Abnormalities in the Fine Structure of the Neuromuscular Junction in Patients with (Dr. S. I. Zacks, W. C. Bauer and J. M. Blumberg), 280
Mycelium (Fungal) : Transport of Carbon in (Stella L. Thrower and L. B. Thrower), 823
Mycobacteria : Formamidase in, and its Use in Differentiating Saprophytic Mycobacteria from other Mycobacteria (Dr. Hideo Nagayama, Dr. Kiyoshi Konno and Prof. Sutemi Oka), 1219
Mycobacteria (Saprophytic), from other Mycobacteria : Formamidase in Mycobacteria and its Use in Differentiating (Dr. Hideo Nagayama, Dr. Kiyoshi Konno and Prof. Sutemi Oka), 1219
Mycobacterium phlei Glutamotransferase : Is, endowed with Glutamine Synthetase Activity ? (Y. S. Halpern and Prof. Nathan Grossowicz), 812
Mycologia Applicata : Mycopathologia et, Vols. 11, 12 and 13, Iconographia Mycologica (O. Verona and T. Benedek), *review* by Dr. David Park, 52
Mycologica : Iconographia (O. Verona and T. Benedek), *Mycopathologia* et *Mycologia Applicata*, Vols. 11, 12 and 13), *review* by Dr. David Park, 52
Mycological Society (British) : Symposium on the Growth and Genetics of Higher Fungi, 399
Mycology (Human and Animal), International Society for : *Sabouraudia*, Vol. 1, No. 1, 15
Mycolytic Phenomenon and Biological Control of *Fusarium* in Soil (R. Mitchell and Prof. M. Alexander), 109
Mycopathologia et *Mycologia Applicata*, Vols. 11, 12 and 13, Iconographia Mycologica (O. Verona and T. Benedek), *review* by Dr. David Park, 52
Mycophenolic Acid : Action of, on Unstable Diploids of *Penicillium chrysogenum* (Dr. A. Ballio and Dr. G. Sermonti), 108
Mycorrhiza Development in *Pinus* : Soil pH and (Dr. B. N. Richards), 105
γ-Myeloma Proteins : An Investigation of Closely Related, and Normal Mouse-Globulin by Partial Enzymic Degradation and Starch-Gel Electrophoresis (Dr. Brigitte A. Askonas and Dr. J. L. Fahey), 980
Myers, Dr. A. : Appointed to a lectureship in physics at the University of Leeds, 219
Myers, A., and others : Nucleic Acid Content of Haploid and Diploid Cells of *Protomyces inundatus*, 836
Myers (Frederic W. H.) Memorial Lecture of the Society for Psychical Research : The Neurophysiological Aspects of Hallucinations and Illusory Experience (Dr. W. Grey Walter), 394
Myers, M. (Greiff, Prof. D., and) : Effect of Dimethyl Sulphoxide on the Cryo-tolerance of Mitochondria, 1202
Myoglobin (Sperm Whale) : The Amino-Acid Sequence of—Chemical Studies (A. B. Edmundson and C. H. W. Hirs), 663 ; A Partial Determination by X-Ray Methods and its Correlation with Chemical Data (Dr. J. C. Kendrew, Dr. H. C. Watson, Dr. R. E. Strandberg, Dr. R. E. Dickerson, Dr. D. C. Phillips and Dr. V. C. Shore), 666 ; Comparison between the Amino-Acid Sequences of Sperm Whale Myoglobin and of Human Haemoglobin (Dr. H. C. Watson and Dr. J. C. Kendrew), 670
Myrica Root Nodules : Molybdenum and the Fixation of Nitrogen in (Dr. G. Bond and Dr. E. J. Hewitt), 1033
Myrothecium Ascorbic Acid Oxidase : Substrate Specificity of the (Gordon A. White and Prof. Frederick G. Smith), 187
Myxococcus virescens : Association of a Steroid and a Pigment with a Diffusible Fruiting Factor in (J. Jennings), 190

n-POINT Graph : The Complete (H. P. Goodman), 840
Nachtigall, Dr. Werner : Dynamics and Energetics of Swimming in Water-Beetles, 224
Nagata, Prof. T., and others : 'Memory' of Initial Remanent Magnetization and Number of Repeating of Heat Treatments in Low-Temperature Behaviour of Haematite, 620
Nagatsu, Toshiharu, and others: Changes of Quantity of Flavin in the Brain after Peripheral Administration of Flavins, 728
Nagatsu-Ishibashi, Ikuko, and others : Changes of Quantity of Flavin in the Brain after Peripheral Administration of Flavins, 728
Nagayama, Dr. Hideo, and others : Formamidase in Mycobacteria and its Use in Differentiating Saprophytic Mycobacteria from other Mycobacteria, 1219
Nägeli, (Carl), and the Fine Structure of Living Matter (Dr. J. S. Wilkie), 1145
Nagels, M. (Collin, Prof. J., and) : Ionization Potential and Molecular Complex with Benzothiazol with Iodine, 82
Nagelschmidt, Dr. G. : Weathering (Decomposition of Mineral Powders by Aqueous Solutions), 1066
Nagy (Kovács), H. (Kovács, J., and) : Polypeptide Formation from Asparagine under Hypothetically Primitive Conditions, 531
Naito, Ken-ichi (Hamamura, Yasuji, and) : Food Selection by Silkworm Larvae, *Bombyx mori*—Citral, Linalyl Acetate, Linalol and Terpinyl Acetate as Attractants of Larvae, 879
Naito, Ken-ichi, and others : Food Selection by Silkworm Larvae, *Bombyx mori*—β-Sitosterol as one of the Biting Factors, 880
Naito, K., and others : Effect of Temperature on the Retinal Slow Potential of the Horsehoe Crab, 1011
Najarian, H., and others : Effects of *Tris*(*p*-Aminophenyl)-Carbonium Salts and related Compounds on Experimental Schistosomiasis and Paragonimiasis, 628
Nakamura, Kazuo, and Egashira, Takeshi : Genetically Mixed Perithecia in *Neurospora*, 1129
Nakamura, S., and others : Flow of Portal and Hepatic Blood in Normal and Cirrhotic Liver, 812
Nakamura, Dr. T., and others : Flow of Portal and Hepatic Blood in Normal and Cirrhotic Liver, 812
Name this Insect (Eric Fitch Daglish), revised edition, *review* by Harold Oldroyd, 1047
Nanometeorites (Curtis L. Hemenway, Ernest F. Fullam and Laurence Phillips), 897
Naphthalene : Reductive Dimerization of, by Sodium–Ethylamine (Leslie Reggel, Heinz W. Sternberg and Irving Wender), 81
Naquane : Le Grande Roche de (M. Anati), 140
Nation : Electricity in the Prosperity and Welfare of the (Thirteenth Electrical Power Convention of the Electrical Development Association), 680
National Academy of Sciences (United States) : Henry Draper Medal awarded to Dr. Martin Schwarzschild, 307
  James Craig Watson Medal awarded to Prof. O. H. L. Heckmann, 489
  Election of Officers, 674
  Medal Awards, 674
  Election of new Members, 674
National Academy of Sciences (United States)—National Research Council : Publication No. 799, Digest of Literature on Dielectrics, Vol. 23, 1959 (edited by Louis J. Frisco and Thomas D. Callinan), *review* by Vera Daniel, 75
  Science in Antarctica (Report by the Committee on Polar Research), Part 1, The Life Sciences in Antarctica ; Part 2, The Physical Sciences in Antarctica, 1062
National Academy of Sciences of India : Symposium on Ecological Problems in the Tropics, 772
National Advisory Council on Education for Industry and Commerce : Organization of Sandwich Courses, 590
National Agricultural Advisory Service : Appointment of J. Butt-Evans as county advisory officer for Yorkshire (North Riding), 312
  Appointment of G. P. Chater as director of the Rosemaund Experimental Husbandry Farm, Preston Wynne, Hereford, 312
  Appointment of E. L. Jones as a livestock husbandry officer for Wales, 312
National Bureau of Standards (United States) : National Committee on Radiation Protection and Measurements, Report No. 26, X-Ray Protection at High Voltages, 589
National Committee for Physics (British) : Conference on Optical Instruments and Techniques, 963
National Committee on Radiation Protection and Measurements of the United States National Bureau of Standards : Report No. 26, X-Ray Protection at High Voltages, 589
National Conference on Clays and Clay Minerals : Proceedings of the Seventh, Washington, 1958 (edited by Ada Swineford), *review* by Dr. D. M. C. MacEwan, 850

National Engineering Laboratory, and others : Conference on the Control of Noise, 219, 1063
National Fishery Institute, Guayaguil : Appointment of François Bourgois as director, 588
National Forests of Agricultural Crops for the Wet Humid Tropics (Antony Santiago), 1070
National Institute of Agricultural Botany : Appointment of Dr. P. S. Wellington as assistant director, 1154
  Election of Dr. G. D. H. Bell as a vice-president, and a vice-president member of the Council, 1156
National Institute of Industrial Psychology : Appointment of Dr. R. B. Buzzard as research director, 1060
National Institute for Medical Research : Retirement of Sir Christopher Andrewes as head of the Division of Bacteriology and Virus Research, 1153
  Appointment of Dr. A. Isaacs as head of the Division of Bacteriology and Virus Research, 1153
National Institute for Research in Nuclear Science : Appointment of L. B. Mullett as assistant director for accelerator and applied physics in the Rutherford Laboratory, 393
National Lending Library for Science and Technology : Appointment of Dr. D. J. Urquhart as first director, 215
National Museum (United States) : Annual Report for 1960, 309
  Bulletin No. 220, Type Specimens of Reptiles and Amphibians in the United States National Museum (Doris M. Cochran), 863
  Proceedings of the, No. 3443, Cultural Sequences in Hokkaido, Japan (Lieut.-Col. H. A. MacCord), 864
National Parks : The Case for Control of Afforestation of Open Land in (Standing Committee on National Parks of the Councils for the Preservation of Rural England and Wales and the Joint Action Group for the Protection of Dartmoor and Exmoor), 496
  Tree Planting in the (Prof. M. L. Anderson), 496
National Parks (British) : Conservation of, 871
National Parks Commission : Eleventh Annual Report (1959-60), 595
National Physical Laboratory, Teddington : Open Days, 493
National Physical Laboratory, and others : Conference on the Control of Noise, 219, 1063
National Research Council (United States), (National Academy of Sciences) : Publication No. 799, Digest of Literature on Dielectrics, Vol. 23, 1959 (edited by Louis J. Frisco and Thomas D. Callinan), *review* by Vera Daniel, 75
  Science in Antarctica (Report by the Committee on Polar Research), Part 1, The Life Sciences in Antarctica ; Part 2, The Physical Sciences in Antarctica, 1062
National Science Foundation (United States) : Grant to the American Institute of Biological Sciences to support the undertaking of a Biological Sciences Communication Project, 13
  Reviews of Data on Research and Development, No. 24, Funds for Research and Development by Industry in the United States, 14
  Funds for Research and Development in Industry, 1957—Performance and Financing, 132
  Federal Funds for Science in 1959-61, 217
  Tenth Annual Report (1959-60), 494
  Grant of 865,500 dollars to the American Type Culture Collection, towards the construction of a new building to house its collection of micro-organisms, 766
  Current Projects on the Economic and Social Implications of Scientific Research and Development (1960), 863
  Scientific Information Notes, February-March 1961, 961
National Union of Teachers : University Entrance—the Basic Facts, second edition, 16
  Guide to Careers, 1961 edition, 396
National University (Australian), Canberra : Appointment of Sir John Cockcroft as chancellor, 680
National Vegetable Research Station Association : Talks and Demonstrations on Soil Physical Conditions affecting Plant Growth, 221
Nationalized Transport Undertakings : Reorganization of the (Ministry of Transport), 137
NATO : AGARD Aeronautical Multilingual Dictionary (edited by G. H. Frénot and A. H. Holloway), *review* by Dr. D. Küchemann, 851
  Schedule of AGARD Meetings, 864
NATO (Advanced Study Institutes Programme) : Symposium on North Atlantic Biota and their History, 769
'Natriferic' Principle other than Arginine–Vasotocin in the Frog Neurohypophysis (F. Morel, J. Maetz, R. Acher, J. Chauvet and M. T. Lenci), 828
Natural Cross-Pollination : Estimation of Percentage—Experiments on Rice (E. H. Roberts, R. Q. Crauford and F. Le Cochec), 1084
Natural Crystalline Sulphur : Spiral Formation on (Sayeda H. Emara), 254
Natural Crystals : Activated (Dr. Giovanna Mayr), 229
Natural Faunas : Looking Ahead—the Future of (Association of British Zoologists Meeting on), 20
Natural History : Grants for Field Work in (Carnegie United Kingdom Trust), 395
Natural History Films suitable for Television : Competition for amateur cine-photographers for (B.B.C. and the Council for Nature), 963
Natural History Society (Rugby School) : The Flora of the Rugby District, First Supplement (D. E. Allen), 492
  Report for 1960, 767
Natural Radionuclide : Mercury-206, a New (Prof. M. Nurmia, P. Kauranen, M. Karras, A. Siivola, A. Isola, G. Graeffe and A. Lyyjynen), 427
Natural Saponins : Paper Chromatography of (Dr. B. Pasich), 830
Natural Selection in Human Populations (Symposia of the Society for the Study of Human Biology, Vol. 2), (edited by D. F. Roberts and G. A. Harrison), *review* by Kenneth A. R. Kennedy, 72
Natural Selection and Heterozygote Advantage : The Evolution of Overdominance—(Dr. P. A. Parsons and Dr. W. F. Bodmer), 7
Naturalists' Trust (Devon) : Formation of the, 395
  Gift from H. G. Hurrell of Lady's Wood, 1155
Naturalists' Trust (Yorkshire), (Nature Conservancy and the) : Conservation of Askham Bog, 1155
Naturally Occurring Radial Dyke Systems : Impulse Loading of Rock Targets to produce Fracture Patterns similar to (Carl F. Austin), 227
Nature : Form in Art and, *review* by Prof. T. A. Stephenson, 44
Nature of Anti-Le^a : Complement-fixing Blood Group Antibodies with special reference to the (Dr. F. Stratton), 240
Nature of the 'Infective Ribonucleic Acid Component' in Cells infected with Encephalomyocarditis Virus and the 'Virosome' Concept (A. J. D. Bellett and A. T. H. Burness), 235
Nature of Sarcolemma, the Striated Muscle Fibre Membrane (Prof. F. Lörincz and Dr. G. Biró), 317
Nature of the Sinus Lining Cells of the Spleen (Dr. R. F. Dorfman), 1021
Nature, Council for : *Intelligence Unit Bulletin*, No. 13, Report by the British Trust for Ornithology and the Royal Society for the Protection of Birds on Birds killed by Poisonous Seed Dressings, 218
  Grants from the Carnegie United Kingdom Trust for Field Work in Natural History, 395
Nature, Council for (B.B.C. and the) : Competition for amateur cine-photographers for natural history films suitable for television, 963
Nature (Reversible), of Liver Cell Damage due to Carbon Tetrachloride as demonstrated by the Use of Phenergan (Dr. K. R. Rees and Dr. W. G. Spector), 821
Nature Conservancy : Appointment of Lord Hurcomb as chairman, 218
  Appointment of Prof. A. R. Clapham as chairman of the Committee for England, 218
  Appointment of Lord Howick as a member, 218
  Appointment of Sir Charles Connell, Prof. J. H. Burnett and Major S. F. Macdonald Lockhart to the Scottish Committee, 218
  Appointment of Dr. A. M. Massee and Prof. D. L. Linton to the Committee for England, 218
  Appointment of Prof. P. F. Wareing and W. Vaughan Lewis to the Committee for Wales, 218
  Appointment of Prof. J. B. Cragg as director of the Merlewood Research Station, Grange-over-Sands, 488
  Appointment of Dr. K. Mellanby as director of the new Monks' Wood Experimental Station, Huntingdon, 488
Nature Conservancy and the Yorkshire Naturalists' Trust : Conservation of Askham Bog, 1155
Naturform : Kunst und (herausgegeben von Prof. Georg Schmidt und Prof. Robert Schenk), *review* by Prof. T. A. Stephenson, 44
Navigation down the Centuries, 134
Navigation (Sun), in Birds? (Dr. Klaus Schmidt-Koenig), 1025 ; (C. J. Pennycuick), 1026
Navigation and Oceanographic Surveys : Use of Artificial Satellites for (Paul D. Thomas), 134
Nebel, Dr. B. R., and Hackett, E. M. : Synaptinemal Complexes (Cores) in Primary Spermatocytes of Mouse under Elevated Temperature, 467
Needle Probe Geiger-Müller Counter for the Study of the Passage of the Ovum in the Reproductive Tract (Movement of the Ovum in the Reproductive Traçt), (J. P. Bennett), 788
Negative Evidence against Passage of Whole Plant Virus Particles through Gut Wall in Aphid Vectors (Prof. Frej Ossiannilsson), 1222
Nelson, W. A. : Experimental Elimination of *Trypanosoma melophagium* Flu from its Hosts the Sheep and the Ked, *Melophagus ovinus* (L.), 739
Nematology Symposium : Sixth International (State Agricultural College, University of Ghent), 963
Nemec, Prof. Pavel, and others : Chemical Structure of Citrinin, 1104
Nephrectomized Rat (Unilaterally) : Renal Proliferation in the (Dr. David M. Kessner and E. Donnall Thomas), 175
Nerve (Cockroach) : Nucleotides and other Phosphorus Compounds of (J. P. Heslop and J. W. Ray), 1192
Nerve-endings (Spiral), (Proprioceptors), in the Human Vocal Muscle (G. Rudolph), 726
Nerve Fibre of Crayfish : Repetitive Hyperpolarizing Response of the (T. Tomita, T. Saimi and N. Toida), 271
Nerve Fibre (Giant) : Replacement of the Protoplasm of a, with Artificial Solutions (P. F. Baker, Prof. A. L. Hodgkin and Dr. T. I. Shaw), 885
Nervous System (Chicken) : Cholinesterase in the (J. B. Cavanagh and P. Holland), 735
Nešković, Dr. B. A., and Soškić, V. : Detection of Small Quantities of 3,4-Benzpyrene directly from Chromatographic Paper, 1199
Nesmeyanov, Academician Aleksandr Nikolaevich : Elected a Foreign Member of the Royal Society, 488
  Retirement as president of the U.S.S.R. Academy of Sciences, 959 ; work of, 959
Netherlands University Foundation for International Co-operation : Summer School in Science (Fundamental Problems in Statistical Mechanics), 769
Neumann, Dr. Hanna : Groups, Pure and Applied, *review*, 571
Neumark, H. : Amines in Silage, 839
Neuraminic Acid, Hexosamine and Hexoses (Brain Glycoproteins,) : Quantitative Separation and Determination of, by means of Whole Tissue Emulsion-Fractionation (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch), 153
Neuraminidase in the Chorioallantois of the Chick Embryo (Dr. G. L. Ada and Dr. Patricia E. Lind), 1169
Neurath, Prof. H. : Elected a Member of the United States National Academy of Sciences, 674
Neurobiology : International Review of (edited by Carl C. Pfeiffer and John R. Smythies), Vol. 2, *review* by Dr. Denis Brinton, 850
Neurohumoral Role of Acetylcholine : A Proposed Dual—its Functions at the Pre- and Post-Synaptic Sites (George B. Koelle), 208
Neurohypophysis (Frog) : A 'Natriferic' Principle other than Arginine–Vasotocin in the (F. Morel, J. Maetz, R. Acher, J. Chauvet and M. T. Lenci), 828
Neuromuscular Junction in Patients with Myasthenia Gravis : Abnormalities in the Fine Structure of the (Dr. S. I. Zacks, W. C. Bauer and J. M. Blumberg), 280
Neuronal Model for Conditioning (Dr. G. W. Mainwood), 177
Neurophysiological Aspects of Hallucinations and Illusory Experience (Dr. W. Grey Walter), 394
Neurosecretion and Hormones in Copepoda : Diapause, (Dr. D. B. Carlisle and W. J. Pitman), 827
'Neurosecretory' Material (Arginine and), in the Pituitary Gland of the Pig (Dr. A. Howe), 175
Neurospora : Biotin Requirement and Carbon and Sulphur Sources in *Aspergillus* and (P. Strigini and G. Morpurgo), 557
  Determining Mating Type in, without Crossing Tests (Prof. H. Branch Howe, jun.), 1036
  Genetically Mixed Perithecia in (Kazuo Nakamura and Takeshi Egashira), 1129

Neurospora Deficient in Amination : Glutamic Dehydrogenase in Single Gene Mutants of (Dr. B. D. Sanwal and Dr. Madhu Lata), 286
Neutralization of Penicillinase by the Homologous Antiserum : Antibodies blocking (Dr. Nathan Citri and Gill Strejan), 1010
'Neutron' : Origin of the Word (Stephen G. Brush), 251
Neutron Diffraction : Electron and (International Union of Crystallography Symposium on), 679
Neutron Flux : The Unit of (I. S. McGill, D. C. Menzies and M. R. Price), 162
Neutron Story : The (Dr. Donald J. Hughes), *review* by G. R. Noakes, 64
Neutron (Fast) Handbook, *review* by J. H. Montague, 944
Neutron (Fast) Physics (edited by J. B. Marion and J. L. Fowler), Part I, Techniques, *review* by J. H. Montague, 944
Neutrons (Thermal) : Atlas of γ-Ray Spectra from Radiative Capture of (L. V. Groshev, V. N. Lutsenko, A. M. Demodiv and V. I. Pelekhov), translated from the Russian by J. B. Sykes, *review* by Dr. E. R. Rae, 75
Neves, A. G. A., and others : Purification of the Toxic Fractions from *Ascaris lumbricoides* and their Effect on the Guinea Pig, 813
New Britain : Erythrocyte Glucose-6-Phosphate Dehydrogenase Deficiency in New Guinea and (Dr. Chev Kidson), 1120
New Calcium Magnesiosilicate (W. Gutt), 339
New Caledonia and the New Hebrides : Members of the *Culex pipiens* Series in (Prof. Marshall Laird), 1221
New Carbon Isotope, Carbon-16, 587
New Carcinogen, 4-Nitroquinoline N-Oxide : Mutation in Tobacco Mosaic Virus induced by a (Dr. Hideya Endo, Akiyoshi Wada, Kin-ichiro Muira, Zyun Hidaka and Chuji Hiruki), 833
New Department for Technical Co-operation, 13
New Determination of the Solar Parallax by means of Radar Echoes from Venus (Dr. J. H. Thomson, J. E. B. Ponsonby, G. N. Taylor and R. S. Roger), 519
New Disease of Sugar Cane : Striate Mosaic—a (C. G. Hughes), 366
New Elementary Particle (Din Da-Tzao and E. N. Kladnitzkaya), 591
New Fatty Acid from Royal Jelly (Prof. W. H. Brown and Ethel E. Felauer), 88
New Guinea and New Britain : Erythrocyte Glucose-6-Phosphate Dehydrogenase Deficiency in (Dr. Chev Kidson), 1120
New Haemoglobin Variant (the 'Honolulu Type') in a Chinese (Dr. Rose G. Schneider and Dr. Robert T. S. Jim), 454
New Hebrides : Members of the *Culex pipiens* Series in New Caledonia and the (Prof. Marshall Laird), 1221
New Herbaceous Test-Plants for Study of the Infectious Degeneration of Grape Vines (E. Baldacci, A. Amici, P. Bonala, E. Betto, G. Fogliani and E. Refatti), 371
New, Highly Effective but Non-Toxic Antibacterial Substance (Dr. David Haler and Dr. A. Aebi), 734
New Intermediate Host of Schistosome Trematodes from New South Wales (Wm. H. Ewers), 283
New Look in Mathematics, *review* by Prof. T. A. A. Broadbent, 67
New Metamict Mineral from Ceylon : Ekanite, a (B. W. Anderson, Dr. G. F. Claringbull, Dr. R. J. Davis and D. K. Hill), 997
New Natural Radionuclide : Mercury-206, a (Prof. M. Nurmia, P. Kauranen, M. Karras, A. Siivola, A. Isola, G. Graeffe and A. Lyyjynen), 427
New Photo-Reaction between some Furocoumarins and Flavin Mononucleotide (Luigi Musajo and Giovanni Rodighiero), 1109
New Preparation of Gastrin—Preliminary Characterizations (Prof. T. Lloyd Fletcher, Walter R. Anderson, Clifford L. Pitts, Richard L. Cohen and Henry N. Harkins), 448
New Products from Wheat Starch, Flour and Gluten (B. H. Thewlis), 260
New Results in Polar Exploration (Deutsche Gesellschaft für Polarforschung Meeting on), 493
New Sarcomycin Derivatives : Anti-tumoral Action of (Prof. A. Caputo, B. Giovanella and R. Giuliano), 819
New Scientific Attachés, 862
New Sources of Energy (United Nations Conference on), 1156
New South Wales : A New Intermediate Host of Schistosome Trematodes from (Wm. H. Ewers), 283
New Species of Rotifer (H. G. S. Wright), 311
New Superconducting Compound of Niobium and Tin, Nb_3Sn (Bell Telephone Laboratories), 134
New Technique of Chromatography and Ionophoresis on Ion-Exchange Paper—Application to the Separation of Barbiturate, Salicylate and Acetophenetidin (Harold V. Street and Dr. S. K. Niyogi), 537
  Application to Separation of Barbiturate, Salicylate, Acetophenetidin and *p*-Acetylaminophenyl (Harold V. Street and Dr. S. K. Niyogi), 718
  Application to Separation of Compounds of Toxicological Interest—Separation of a Mixture of Promazine, Quinine, Sulphacetamide and Acetophenetidin (Harold V. Street and Dr. S. K. Niyogi), 1199
New Transamination Process by Transfer of Free Amino-Radicals : Photochemical Synthesis of Amino-Acids and a (Giovanni Ferrari and Prof. Rolando Cultrera), 326
New Universities in Britain, 1063
New York Academy of Medicine (Section on Microbiology) : Symposium on Viral Infections of Infancy and Childhood (edited by Prof. Harry M. Rose), *review* by Dr. N. R. Grist, 659
New York Academy of Sciences : Annals, Vol. 91, Article 2, Proceedings of the Conference on Geochronology of Rock Systems (edited by Prof. J. L. Kulp), 1062
New York Academy of Sciences (Section of Geological Sciences and the Division of Oceanography and Meteorology), in co-operation with the American Meteorological Society : Symposium on Solar Variations, Climatic Change and related Geophysical Problems, 967
New Zealand School Shark (*Galeorhinus australis* MacLeay) : Occurrence of *n*-Odd-Numbered Monoethylenic Fatty Acids in the Liver Oil of the (Isobel M. Morice and Dr. F. B. Shorland), 443
New Zealand and Antarctica : Total Magnetic Field Measurements between (Dr. D. A. Christoffel), 776
New to Britain : A Hermit Crab (Dr. D. B. Carlisle and N. Tregenza), 931
New and Useful Materials from Silicon : Unnatural Products— (Prof. Eugene G. Rochow), (Thirty-fourth Annual Priestley Lectures), *review* by Dr. J. S. Anderson, 59
New-born Pig : Intestinal Carbohydrases of a (Dr. Arne Dahlqvist), 31
New-born Swiss Mice : Leukaemogenesis by Urethan in (Dr. L. Fiore-Donati, Dr. L. Chieco-Bianchi, Dr. G. de Benedictis and Dr. G. Maiorano), 278
Newcastle Disease, Para-influenza I and Mumps Viruses : Haemagglutinating Sub-Units released from, by Treatment with Ether (F. Sokol, D. Blaškovič and O. Krizanová-Laučíková), 834
Newell, Dr. H. E. : Elected a member of the Basic Sciences Section of the International Academy of Astronautics, 495
Newell, Dr. Norman D. : Awarded the Mary Clark Thompson Medal of the United States National Academy of Sciences, 674
Newitt, Prof. D. M. : Appointed senior Research Fellow in the Imperial College of Science and Technology, London, 396
Newman, Prof. B. G. (Bourque, C., and) : Awarded the *Edward Bush* Memorial Prize of the Royal Aeronautical Society, 863
Newman, Thomas M., and others (Prof. L. S. Cressman, in collaboration with) : Cultural Sequences at the Dalles, Oregon—a Contribution to Pacific Northwest Prehistory (Transactions of the American Philosophical Society, New Series, Vol. 50, Part 10), 775
Newton, Dr. B. A. : Annual Review of Microbiology, *review*, 662
Newton, Sir Isaac (Dr. H. D. Anthony), *review* by Dr. G. Burniston Brown, 71
Newton, R. R., and others : Odd Harmonics of the Earth's Gravitational Field, 617
Newton, T. H. (Humphreys, John G., and) : Internal Carotid Artery Occlusion, 310
Niblett, Dr. D. H. : Appointed lecturer in the Department of Physics, University of Leeds, 963
Nicholas, Dr. D. J. D. (Fewson, Dr. C. A., and) : Utilization of Nitrate by Micro-organisms, 2
Nicholls, C. M., and others (edited by) : Technology, Engineering and Safety, Vol. 2 (Progress in Nuclear Energy, Series 4), *review* by D. English, 204
Nicholson, Dr. A. J. C. : Photolysis of Nitromethane, 143
Nicholson, Max : Looking Ahead—the Future of Natural Faunas, 20
Nickel-(II) Acetylacetonate in Solution : Trimerization of (Dr. D. P. Graddon and Dr. E. C. Watton), 906
Nicol, Prof. T., and Druce, C. G. : Effect of Dexamethasone on the Phagocytic Activity of the Reticulo-Endothelial System, 91
Nicol, Prof. T., and others : Effect of Haemophagin on the Phagocytic Activity of the Reticulo-Endothelial System, 92
  Phagocytic Activity of the Reticulo-Endothelial System—Effect of *B.C.G.*, 418
  Phagocytic Activity of the Reticulo-Endothelial System—Effect of Tri-*p*-anisylethylene, Dienoestrol and Stilboestrol Diphosphate, 419
Nicolai, Dr. M. F. E. : *Obituary* by Prof. R. D. Preston, 487
Nicolle, Jacques : Louis Pasteur, a Master of Scientific Enquiry, *review* by T. H. Hawkins, 848
(–)-Nicotine *in vivo* : Demethylation in the Metabolism of (Prof. Herbert McKennis, jun., Dr. Einosuke Wada, Edward R. Bowman and Dr. Lennox B. Turnbull), 910
*iso*Nicotinyl Hydrazide : Effect of, on the Path of Carbon in Photosynthesis (G. G. Pritchard, Prof. C. P. Whittingham and Wendy J. Griffin), 553
Niehrs, H., und andere (herausgegeben von) : Vierter Internationaler Kongress für Elektronenmikroskopie, Band I, Physikalisch-Technischer Teil, *review* by Dr. V. E. Cosslett, 68
Nielsen, Dr. Erik Tetens : Twilight and the 'Crep' Unit, 878
Niemegeers, C. (Janssen, Dr. P. A. J., and) : Haloperidide (*R* 3201), a Highly Potent and Selective Anti-emetic Agent in Dogs, 911
Nigeria : Damage to Maize in, by *Calandra oryzae* L. (G. H. Caswell), 962
Nigerians : The γ-Globulin, Gm^{ab}, in (Prof. Samuel H. Boyer and E. J. Watson-Williams), 456
Night Sky in May, 312 ; in June, 769 ; in July, 1156
Night-Sky Molecular Nitrogen Emission : Enhancement of, in Polar Cap Absorption Events (B. P. Sandford), 245
Nigrospora sp. : *Botryodiplodia theobromae* Pat. and, in the Air of a Jamaican Banana Plantation (Dr. D. S. Meredith), 555
Nikolic, Prof. S. : At the Fourth World Fertilizer Congress (The Soils of Yugoslavia and the Application of Fertilizers, Micro-nutrients and Organic Matter), 1161
Nilsson, N. Robert (edited by) : Proceedings of the Fourth International Conference on Ionization Phenomena in Gases (Uppsala, 1959), *review* by Dr. J. Dutton, 573
Niobium and Tin, Nb_3Sn : New Superconducting Compound of (Bell Telephone Laboratories), 134
Nisonoff, A., and others : Agglutination of Sensitized Alligator Erythrocytes by Rheumatoid Factor(s), 552
Nitrate : Utilization of, by Micro-organisms (Dr. C. A. Fewson and Dr. D. J. D. Nicholas), 2
Nitrate Reductase Activity : Effect of Water-soluble Polymers on (H. R. Schreiner and A. P. Rinfret), 1110
Nitrate-containing Fertilizers : Control of Self-heating and Gas Emission in (K. S. Barclay, J. M. Crewe and K. F. J. Thatcher), 1189
Nitrate (Ammonium)–Potassium Nitrate : Solid Solutions in the System (R. V. Coates and J. M. Crewe), 1190
Nitrate (Potassium), (Ammonium Nitrate–) : Solid Solutions in the System (R. V. Coates and J. M. Crewe), 1190
Nitric Oxide : Continuous Determination of Traces of (Dr. C. Bokhoven and P. H. Tommassen), 435
Nitride (Boron) : Highly Oriented (D. Belforti, S. Blum and B. Bovarnick), 901
Nitride (Silicon) Whiskers : Formation of, on a Ferro-Silicon Alloy at Room Temperature (E. Johnson, Prof. K. Grjotheim and C. Krohn), 523
Nitrite Dehydrogenase : Ammonia Dehydrogenase, Hydroxylamine Dehydrogenase, Hyponitrite Dehydrogenase and (Kazuo Yamafuji and Yutaka Osajima), 534
Nitrogen : Thermal Diffusion of Oxygen and, in Zirconium (Prof. G. D. Rieck and H. A. C. M. Bruning), 1181
Nitrogen in *Myrica* Root Nodules : Molybdenum and the Fixation of (Dr. G. Bond and Dr. E. J. Hewitt), 1033
Nitrogen (Insoluble) : Effect of Ringing Cotton Stems on Content of Reducing Sugars and, and on Degree of Infection with *Xanthomonas malvacearum* (E.F.S.) Dowson (K. A. Sabet and H. M. Hassan), 934
Nitrogen (Photofixation of), and a Unified Concept of Photosynthesis : Photoproduction of Hydrogen, (Prof. Daniel I. Arnon, Dr. M. Losada, Dr. M. Nozaki and Dr. K. Tagawa), 601
Nitrogen Emission (Night-Sky Molecular) : Enhancement of, in Polar Cap Absorption Events (B. P. Sandford), 245
Nitrogen Fixation (Biological) : Effect on, of Nitrogen Gas treated with Ultra-violet Radiation (B. Zacharias and C.-G. Hedén), 817
Nitrogen Gas treated with Ultra-violet Radiation : Effect of Biological Nitrogen Fixation of (B. Zacharias and C.-G. Hedén), 817

Nitrogen Protection of Fecundity and Fertility in Female *Habrobracon* treated with X-Rays (Prof. Daniel S. Grosch and Dr. Arnold M. Clark), 546
Nitrogen, Oxygen and Steam (Air, Argon, Carbon Dioxide, Carbon Monoxide, Hydrogen,) : Tables of Thermodynamic and Transport Properties of (Joseph Hilsenrath, Charles W. Bennett, William S. Benedict, Lilla Fano, Harold J. Hoge, Joseph F. Masi, Ralph L. Nuttall, Yeram S. Touloukian and Harold W. Woolley), *review* by Prof. A. R. Ubbelohde, 58
Nitrogen and Sulphur at the Active Centre of Carboxypeptidase *A* (Dr. Bert L. Vallee, Dr. Robert J. P. Williams and Dr. Joseph E. Coleman), 633
Nitromethane : Photolysis of (Dr. A. J. C. Nicholson), 143
4-Nitroquinoline N-Oxide : Mutation in Tobacco Mosaic Virus Induced by a New Carcinogen, (Dr. Hideya Endo, Akiyoshi Wada, Kin-ichiro Miura, Zyun Hidaka and Chuji Hiruki), 833
Nixon, Dr. D. A. (Huggett, Prof. A. St. G., and) : Fructose as a Component of the Foetal Blood in several Mammalian Species, 1209
Nixon, Dr. D. A. (Wright, G. H., and) : Absorption of Amniotic Fluid in the Gut of Foetal Sheep, 816
Niyogi, Dr. S. K. (Street, Harold V., and): A New Technique of Chromatography and Ionophoresis on Ion-Exchange Paper—Application to the Separation of Barbiturate, Salicylate and Acetophenetidin, 537
  A New Technique of Chromatography and Ionophoresis on Ion-exchange Paper—Application to Separation of Barbiturate, Salicylate, Acetophenetidin and *p*-Acetylaminophenol, 718
  A New Technique of Chromatography and Ionophoresis on Ion-exchange Paper—Application to Separation of Compounds of Toxicological Interest—Separation of a Mixture of Promazine, Quinine, Sulphacetamide and Acetophenetidin, 1199
Noakes, G. R. : A Panorama of Science, *review*, 64
  Beyond the Planet Earth, *review*, 204
Noakes, L. C. : At the Australian Arid Zone Technical Conference (Physical Characteristics of the Australian Arid Zone—Geology), 19
Nobel Prizes : Eleventh Meeting of holders of, 219, 1063
Nodules (*Myrica* Root) : Molybdenum and the Fixation of Nitrogen in (Dr. G. Bond and Dr. E. J. Hewitt), 1033
Noell, Werner K. (Paigen, Kenneth, and) : Two Linked Genes showing a Similar Timing of Expression in Mice, 148
Noffsinger, Jim, and others : Œstrogen Protection against Acute Digitalis Toxicity in Dogs, 1117
Noise : The Control of (National Physical Laboratory in collaboration with the National Engineering Laboratory and the Building Research Station Conference on), 219, 1063
Noise (Cosmic) Measurements from 1960η1 at 3·8 Mc./s. (A. R. Molozzi, C. A. Franklin and J. P. I. Tyas), 616
Non-Benzenoid Aromatic Compounds (edited by David Ginsburg), *review* by B. A. Ellis, 662
Non-Cyclic Photo-Phosphorylation of Green Plants : Separation of Two Light Reactions in (Dr. M. Losada, Dr. F. R. Whatley and Prof. Daniel I. Arnon), 606, *erratum*, 1063
Non-Destructive Examination, Society of (Institution of Engineering Inspection and the) : Joint Conference at Oxford, 769
Non-Disjunction of the Sex-Chromosomes in the Male of *Drosophila melanogaster* (P. J. Kelsall), 1035
Non-Ionic Solutions : Contraction of Smooth Muscles in (Roselyn L. Kolodny and Prof. W. G. van der Kloot), 786
Non-Linear Control Systems : Analytical Techniques for (Prof. John C. West), *review* by Dr. E. M. Deeley, 947
Non-Specific Esterase Activity in Histiocytes (Syun Hosoda and Sadao Takase), 927
Non-Surgical Ovum Transfers in the Cow : A Possible Explanation for the Failure of (Movement of the Ovum in the Reproductive Tract), (M. J. K. Harper, J. P. Bennett and L. E. A. Rowson), 789
Non-Toxic Antibacterial Substance : A New, Highly Effective but (Dr. David Haler and Dr. A. Aebi), 734
Noradrenaline : Replacement of Adrenaline and, in the Adrenal Gland of the Rat, following Depletion and Redepletion with Reserpine (Dr. B. A. Callingham and Dr. Monica Mann), 1201
Norcross, B. M., and others : Agglutination of Sensitized Alligator Erythrocytes by Rheumatoid Factor(s), 552
Nordmark, Jan : Perception of Distance in Animal Echo-Location, 373
Normal Bone and Teeth : Fluorescence of Tetracyclines in Bone Tumours, (L. N. Owen), 500
Normal Bull Sperm : An 'Apical Body' in the Galea Capitis of the (Dr. Erik Blom and Aksel Birch-Andersen), 1127
Normal Liver and Transplantable Hepatoma Tissue : Magnetic Susceptibility of (Frank E. Senftle and Arthur Thorpe), 410
Normal Mouse Gamma-Globulin : An Investigation of Closely Related Gamma-Myeloma Proteins and, by Partial Enzymic Degradation and Starch-Gel Electrophoresis (Dr. Brigitte A. Askonas and Dr. J. L. Fahey), 980
Normal Rabbit Tissues *in vitro* : Effect of Erythropoietine on Incorporation of Formate labelled with Carbon-14 into the Nucleic Acids of (Dr. M. A. Perretta and Dr. R. Y. Thomson), 912
Normal and Alloxan Diabetic Rat : Incorporation of Ethanol-1-^{14}C into Fatty Acids in the (Dr. Marion E. Smith), 273
Normal and Cirrhotic Liver : Flow of Portal and Hepatic Blood in (Dr. T. Nakamura, S. Nakamura and T. Kaneko), 812
Normal and to DDT-Resistant House-Flies : Toxicity of 2-(2-Halogen-5-Chlorophenyl)-2-(4-Chlorophenyl)-1,1,1-Trichloroethanes to (Douglas J. Hennessy, Joseph Fratantoni, James Hartigan, Herbert H. Moorefield and M. H. J. Weiden), 341
Normal and Guard Keratin Fibres : Different Permeability of Cuticular Sheath in (R. Z. de la Burde), 420
Normal and Leukaemic Human Beings : Immunological Differences of Deoxyribonucleoproteins from White Blood Cells of (Luigi Messineo), 1122
Normal and Tumour Cells : Interaction of Enzymes with (D. H. Cormack, G. C. Easty and Dr. E. J. Ambrose), 1207
Normal and Tumour Tissues of Plants : Proteolytic Activity of Crude Stem Extracts from (Prof. C. Gainor and F. D. Crisley), 1031
Norman, Dr. L. G.: Training in Occupational Hygiene (Present and Future Facilities in Universities), 1158
Normorphine in the Rat : *In vivo* Formation of, as a Metabolite of Tritium Nuclear-labelled Morphine (Anand L. Misra, S. J. Mule and Prof. L. A. Woods), 82
Noronha, J. M., and others : Biosynthesis of Choline *in vitro* by Rat Liver, 267
19-Norprogesterone and 18,19-Dinortestosterone as Œstrone Antagonists : Œstrogen Antagonisms— (Richard A. Edgren), 353
Norster, E. R. : Appointed to a lectureship in aircraft propulsion at the College of Aeronautics, Cranfield, 218
North, J. D. : Honorary Fellowship of the Royal Aeronautical Society conferred on, 862
North, R. J. : Method for Revealing the Membrane Systems in Micro-organisms, 1215
North, Dr. W. J. : Life-span of the Fronds of the Giant Kelp, *Macrocystis pyrifera*, 1214
North Atlantic Biota and their History (NATO Advanced Study Institutes Programme Symposium on), 769
North Atlantic Ocean : Lavas from an Abyssal Hill on the Floor of the (D. H. Matthews), 158
North Borneo : Haemoglobin Variants in Sarawak and (Dr. F. Vella and Dr. D. Tavaria), 729
North Borneo (Sarawak, Brunei and the Western Part of) : The Geology of (Dr. P. Liechti, in association with Dr. F. W. Roe and Dr. N. S. Haile), 768
North Wales : Stilpnomelane in (Dr. T. W. Bloxam and N. B. Price), 525
North-West America : Cultural Sequences in (Dr. G. H. S. Bushnell), 775
Northern Iraq : Identification of Sugars in the Manna of (Prof. Zakaria I. Sabry and Nicola A. Atallah), 915
Northern Ireland : Sheep Husbandry in, 962
Northern Italy : Rock Engravings in (Miles Burkitt), 140
Northern Pennines : Granite below the (Prof. K. C. Dunham, Dr. M. H. P. Bott, Dr. G. A. L. Johnson and B. L. Hodge), 899
Northwest Prehistory (Pacific) : Cultural Sequences at the Dalles, Oregon —a Contribution to (Prof. L. S. Cressman, in collaboration with David L. Cole, Wilbur A. Davis, Thomas M. Newman and Daniel J. Scheans), (Transactions of the American Philosophical Society, New Series, Vol. 50, Part 10), 775
Norway : Caesium-137 in Air, Precipitation, Drinking Water, Milk and Beef in, during 1959 and 1960 (T. Hvinden and A. Lillegraven), 402
Norwegian Cirque Glaciers : Investigations on (edited by W. V. Lewis), *review* by Dr. C. A. M. King, 662
Notable Growth Spiral on Synthetic Diamond (Prof. S. Tolansky), 992
Notched Impact Tests of Mild Steel : Cleavage Fracture Initiation in (J. W. Davies and A. A. Wells), 432
Nothofagus Pollen in the London Clay (Ma Khin Sein), 1030
Notion (A Basic), in the Theory of Cognitive Systems (Dr. M. C. Goodall), 840
Notions de Cytologie et Histologie (Prof. M. Chèvremont), réimpression, *review* by Dr. N. M. Hancox, 47
Nourse, O. : The Parametric Line—a Photon and Gravitational Field Analogue, 522
Novel Method of Radiating at Very Low Frequencies : Some Preliminary Experimental Tests of a (R. N. Gould), 332
Novikov, V. D. : Construction of the Scientific Base of Mirny, 677
Novitski, Prof. E., and Hanks, G. D. : Analysis of Irradiated *Drosophila* Populations for Meiotic Drive, 989
Novozhilov, V. V. : The Theory of Thin Shells (translated by P. G. Lowe ; edited by Prof. J. R. M. Radok), *review* by Dr. J. W. Craggs, 379
Nowicki, T. : Six Years Work of the Polish Academy of Sciences' Institute of Basic Technical Problems, 14
Nozaki, Dr. M., and others : Photoproduction of Hydrogen, Photofixation of Nitrogen and a Unified Concept of Photosynthesis, 601
Nozaki, T., and others : Radioactivation Analysis of Oxygen in Silicon by Irradiation with α-Particles in a Cyclotron, 39
Nucléaires, Centre d'Études : International Seminar on Nuclear Energy, 591
Nuclear Applications in Agriculture (Comitato Nazionale per l'Energia Nucleare Symposium on), 219
Nuclear Change in Differentiation : Nuclear Materials and (Prof. Kenneth Mather), 404
Nuclear Congress : Sixth (Comitato Nazionale per l'Energia Nucleare), 219
Nuclear Electronics (International Atomic Energy Agency International Conference on), 493
Nuclear Emulsions (Ilford) : Discrimination between α-Tracks and γ-Background in (K. Van Camp, M. Dorikens and L. Dorikens-Vanpraet), 38
Nuclear Energy : International Seminars on (European Nuclear Energy Agency of the Organization for European Economic Co-operation), 591
  Progress in, Series 4, Technology, Engineering and Safety, Vol. 2 (edited by R. Hurst, R. N. Lyon and C. M. Nicholls), *review* by D. English, 204
Nuclear Energy Agency (European), of the Organization for European Economic Co-operation : International Seminars on Nuclear Energy, 591
Nuclear Forces and the Few-Nucleon Problem—Proceedings of the International Conference held at University College, London, 1959 (edited by T. C. Griffith and E. A. Power), *review* by Dr. R. J. N. Phillips, 63
Nuclear Fusion (edited by Prof. William P. Allis), *review* by Sir Basil Schonland, 750
Nuclear Geochronology (Yadernaya Geokhronologiya), (Dr. I. E. Starik), 1062
Nuclear Magnetic Resonance Spectroscopy in Organic Chemistry : Applications of (Dr. L. M. Jackman), *review* by Dr. J. C. D. Brand, 1043
Nuclear Materials and Nuclear Change in Differentiation (Prof. Kenneth Mather), 404
Nuclear Physics : Progress in (edited by Prof. O. R. Frisch), Vol. 8, *review* by Dr. Joan M. Freeman, 62
  Reviews of, *review* by Dr. Joan M. Freeman, 62
Nuclear Polyhedrosis Virus in Insect Amoebocytes : Multiplication *in vitro* of a (M. E. Martignoni and R. J. Scallion), 1133
Nuclear Power Programme (House of Commons Debate on), 199
Nuclear Reactors : Resonance Absorption in (Lawrence Dresner), *review* by J. Codd, 1046
Nuclear Science : Seminars on, 591
Nuclear Science, National Institute for Research in : Appointment of L. B. Mullett as assistant director for accelerator and applied physics in the Rutherford Laboratory, 393

Nuclear Technology (Chemical), (Imperial College of Science and Technology, London, Postgraduate Course in), 16
Nuclear-labelled Morphine (Tritium) : *In vivo* Formation of Normorphine in the Rat as a Metabolite of (Anand L. Misra, S. J. Mule and Prof. L. A. Woods), 82
Nucleases on Mammalian Skin Surface and in Saline Extracts of Hair : Demonstration of (Dr. Joseph Tabachnick and Dr. Richard Freed), 921
Nucleation in Agitated Solutions (Dr. J. W. Mullin and K. D. Raven), 251
Nucleic Acid Content of Haploid and Diploid Cells of *Protomyces inundatus* (L. R. G. Valadon, Dr. J. G. Manners and A. Myers), 836
Nucleic Acid-free Lipopolysaccharides from Gram-negative Bacteria : Extraction of (G. J. O'Neill and Prof. J. P. Todd), 344
Nucleic Acids of Normal Rabbit Tissues *in vitro* : Effect of Erythropoietine on Incorporation of Formate labelled with Carbon-14 into the (Dr. M. A. Perretta and Dr. R. Y. Thomson), 912
Nucleic Acids and Sexual Differentiation in *Allomyces* (Dr. G. Turian), 825
Nucleolar Material in Mitosis : Evidence for the Continuity of (The Nucleolus), (Dr. P. G. Martin), 1078
Nucleolus : The—Formation of the Nucleolus in Animal Cells (Dr. Henry Harris), 1077 ; Evidence for the Continuity of Nucleolar Material in Mitosis (Dr. P. G. Martin), 1078
Nucleolus in Animal Cells : Formation of the (The Nucleolus), (Dr. Henry Harris), 1077
Nucleons : A Few, *review* by Dr. R. J. N. Phillips, 63
Nucleopeptides in Protein Biosynthesis : Possible Role of (P. Szafrański and M. Bagdasarian), 719
Nucleotide (Diphosphopyridine) : Enzymatic Reduction of, with Urea (Hirohisa Omura and Yutaka Osajima), 345
Nucleotide Coenzymes (Pyridine) : Assay of, and associated Dehydrogenases with Phenazine Methosulphate (Dr. R. J. C. Smith), 84
Nucleotides and other Phosphorus Compounds of Cockroach Nerve (J. P. Heslop and J. W. Ray), 1192
Nucleotides (Leucocyte Pyridine) : Effect of *Staphylococci* on (Dr. M. N. Swartz, P. H. Black and J. Merselis), 516
Nucleotides (Proteins and) : Interaction of, in Buffered Aqueous Solutions (Prof. Joseph R. Debro and Melvin Lee), 1008
Nucleotides (Reduced Pyridine) : Oxidation of, and of Sulphite by Pea Root Mitochondria (R. G. Stickland), 648
Nucleus (Cell) : Distribution of Deoxyribonucleic Acid in the (E. Grundmann), 359
Nuffield Foundation : Grant of £100,000 to the Zoological Society of London, to found an Institute of Comparative Medicine, 590
  Grant of £5,000 to the University College of North Staffordshire, to pay for an investigation into the effects of the Keele Foundation Year Course, 865
Numakura, Ken'ichi (Shirakawa, Yûki, and) : Anomalous Magnetostriction of the 'Grain-orientated' Silicon–Iron Sheet, 523
Number of Repeating of Heat Treatments : 'Memory' of Initial Remanent Magnetization and, in Low-Temperature Behaviour of Haematite (Prof. T. Nagata, M. Yama-ai and S. Akimoto), 620
Numerical Forecasting : An Experiment in (E. Knighting, G. A. Corby, F. H. Bushby and C. E. Wallington), (Air Ministry : Meteorological Office, Scientific Paper No. 5), 973
Numerical Methods : Weather Forecasting by (Dr. A. W. Brewer), 973
Numerical Regulation of Populations of the Codling Moth, *Cydia pomonella* (L.), (P. W. Geier), 561
Numerical Retracing of Atmospheric Events (Dr. Uwe Radok and D. Jenssen), 247
Nurmia, Prof. M., and others : Mercury-206, a New Natural Radionuclide, 427
Nursing (Public Health) : Aspects of (United Nations, World Health Organization, Public Health Papers No. 4), 490
Nutrients in Plants : Further Evidence of Polar Movement of (Prof. John Caldwell), 1028
Nutrition : Human, *review* by Prof. J. Yudkin, 751
  The Relative Values of Animal and Vegetable Fats in (Scottish Branch of the Nutrition Society Symposium on), 135
Nutrition (Human) : Recent Advances in, with special reference to Clinical Medicine (Prof. J. F. Brock), *review* by Prof. J. Yudkin, 751
Nutrition Society : Symposium on the Place of Food Science and Technology in the Campaign against Malnutrition, 398
Nutrition Society (Scottish Branch) : Symposium on the Relative Values of Animal and Vegetable Fats in Nutrition, 135
Nuttall, Ralph L., and others : Tables of Thermodynamic and Transport Properties of Air, Argon, Carbon Dioxide, Carbon Monoxide, Hydrogen, Nitrogen, Oxygen and Steam, *review* by Prof. A. R. Ubbelohde, 58
Nystagmus (Vestibular), and the Electroencephalogram: Effects of Mental Activity on (William E. Collins, George H. Crampton and Jerome B. Posnet), 194
Nyholm, Prof. R. S., and others : Complex Hydrides of Platinum, 528

OAT : Prevention of Manganese Deficiency in, by soaking the Grain in Solutions of Manganous Chloride (Donald S. H. Drenna, Alex M. M. Berrie and Gordon A. Armstrong), 824
Obata, Y., and others : 'Sunlight' Flavour of Beer, 635
Obeng, O., and others : Science in the Development of Ghana (Classification of Black and Grey Clays of Ghana using the New U.S. System), 1065
O'Brien, Dr. P. A. (Clarence, Prof. N. D., and) : Dispersions of Multiple-Stroke Whistlers, 1096
Observation of Far Infra-Red Radiation from Shock Waves (M. F. Kimmitt, A. C. Prior and P. G. Smith), 599
Observation in the Year 1648 of Diffraction through a Lattice (Jiři Marek), 1092
Observations of Satellite 1960ζ1, and a Comparison with Satellite 1958δ1 (C. R. Faulkner), 520
Observations (The Cosmic-Ray), of December 4, 1957 (Dr. B. G. Wilson), 615
Observations (Electron Microscopic), on Single Crystals of Polyethylene : Some (R. Westrik and A. M. Kiel), 162
Observations (Optical) : Technique of (Royal Astronomical Society Geophysical Discussion on), 1065
Observer's Book of Trees (compiled by W. J. Stokoe), revised edition, *review* by B. J. G. Maitland, 850
Obtaining E.M.F. directly from Acid-Base Reactions : The Possibility of—Electrodes of the Third Kind reversible to Alkaline Earth and other Ions (W. H. Beck), 712
Occlusion : Internal Carotid Artery (John G. Humphreys and T. H. Newton), 310
Occupational Hygiene : Training in (British Occupational Hygiene Society Conference on), 1158
Occupational Hygiene Society (British) : Twelfth Conference (Training in Occupational Hygiene), 1158
Occurrence of Catecholamines in Acrania and Invertebrates (Prof. U. S. von Euler), 170
Occurrence of *Cyclo*-Propene Acids in some Plants of the Order Malvales (F. S. Shenstone and J. R. Vickery), 168
Occurrence of *n*-Odd-Numbered Monoethylenic Fatty Acids in the Liver Oil of the New Zealand School Shark (*Galeorhinus australis* MacLeay), (Isobel M. Morice and Dr. F. B. Shorland), 443
Occurrence of an Ordered Phase in an As-Cast Titanium–Aluminium Alloy (Prof. P. Pietrokowsky), 77
Occurring (Naturally) Radial Dyke Systems : Impulse Loading of Rock Targets to produce Fracture Patterns similar to (Carl F. Austin), 227
Ocean Basin Evolution (Continent and), by Spreading of the Sea Floor (Robert S. Dietz), 854
Ocean Basins and Continents : Origin of (Dr. J. J. Gilvarry), 1048
Ocean (North Atlantic) : Lavas from an Abyssal Hill on the Floor of the (D. H. Matthews), 158
Oceanographic Surveys : Use of Artificial Satellites for Navigation and (Paul D. Thomas), 134
Oceanographic and Hydrographic Research : British Funds for, 216
Oceanography and Turbulent Flow : Meteorology, (The Scientific Papers of Sir Geoffrey Ingram Taylor, edited by Dr. G. K. Batchelor, Vol. 2), *review* by Prof. P. A. Sheppard, 62
Oceans : Exploring the, *review* by Prof. K. F. Bowden, 202
Oceans and Atmospheres : Hydrodynamics of (Carl Eckart), *review* by Dr. P. G. Drazin, 1044
  Wave Motion of, *review* by Dr. P. G. Drazin, 1044
Ockel, E., and others : Role of Glutathione and of a Self-stabilizing Chain of SH-Enzymes and Substrates in the Metabolic Regulation of Erythrocytes, 631
O'Connor, Dr. L. K. (Edwards, Dr. J., and) : The Breeding of Improved Milking Cows through Artificial Insemination, 759
O'Connor, Maeve (edited by G. E. W. Wolstenholme and) : Ciba Foundation Symposium on Haemopoiesis—Cell Production and its Regulation, *review* by Dr. P. F. Harris, 479
Octahedral Sites (Empty), in Muscovite and Montmorillonite : Infra-Red Investigation of the Migration of Lithium Ions into (Prof. Joe L. White, G. W. Bailey, C. B. Brown and J. L. Alrichs), 342
Octocoral *Alcyonium digitatum* L. : Filtration of Phytoplankton by the (Dr. H. M. Roushdy and Dr. Vagn Kr. Hansen), 649
Octopus : Sucker Display of (Andrew Packard), 736
Odd Harmonics of the Earth's Gravitational Field (R. R. Newton, H. S. Hopfield and R. C. Kline), 617
n-Odd-Numbered Monoethylenic Fatty Acids in the Liver Oil of the New Zealand School Shark (*Galeorhinus australis* MacLeay) : Occurrence of (Isobel M. Morice and Dr. F. B. Shorland), 443
Odoriferous Vegetable Oils : Variation in the Behaviour of Different Genotypes of *Drosophila* towards (J. A. Clutterbuck and Dr. J. A. Beardmore), 1135
Odour and Molecular Vibration (R. H. Wright), 1101
Oelrichs, P. B., and McEwan, T. : Isolation of the Toxic Principle in *Acacia georginae*, 808
Œstradiol : Effect of, on the Oxygen Consumption of Arteries in Chickens (Effect of Œstrogens on Atherosclerosis), (Dr. M. R. Malinow and Dr. J. A. Moguilevsky), 422
Œstradiol-containing Media : Effect of Incubated Arteries on (Effect of Œstrogens on Atherosclerosis), (Dr. M. R. Malinow and Dr. J. A. Moguilevsky), 423
Œstradiol 17*β*, Progesterone and Growth Hormone (3-Methylcholanthrene,) : Induction of Mammary Carcinoma in Hypophysectomized Rats treated with (Dr. Stretton Young), 356
Œstradiol 17*β*, Testosterone and its Precursors : Identification of, from *Scylliorhinus stellaris* Testes (Dr. G. Chieffi and Dr. C. Lupo), 169
Œstrogen Antagonisms—19-Norprogesterone and 18,19-Dinortestosterone as Œstrone Antagonists (Richard A. Edgren), 353
Œstrogen Protection against Acute Digitalis Toxicity in Dogs (Edward H. Grinnell, J. Raymond Johnson, James R. Rhone, Albert Tillotson, Jim Noffsinger and Dr. Max N. Huffman), 1117
Œstrogens : Effect of, on Atherosclerosis (Dr. M. R. Malinow and Dr. J. A. Moguilevsky)—Effect of Œstradiol on the Oxygen Consumption of Arteries in Chickens, 422 ; Effect of Incubated Arteries on Œstradiol-containing Media, 423 ; Modification of Aortic Aerobic Metabolism in Rats by Gonadectomy, 424
  Influence of Large Doses of, on the Structure of the Bones of some Reptiles (Dr. K. Simkiss), 1217
  Introduction of the 16*α*-Hydroxyl Group into, by Streptomycetes (Dr. D. A. Kita, J. L. Sardinas and G. M. Shull), 627
Œstrogens (Urinary) : A Supplement to the Kober Reaction for (Dr. L. Bradshaw), 809
Œstrone Antagonists : Œstrogen Antagonisms—19-Norprogesterone and 18,19-Dinortestosterone as (Richard A. Edgren), 353
Offenders : Studies in the Causes of Delinquency and the Treatment of, No. 3, Delinquent Generations—a Home Office Research Unit Report (Leslie T. Wilkins), 24
Official Agricultural Chemists : Official Methods of Analysis of the Association of (edited by William Horwitz), ninth edition, *review* by H. V. Hart, 749
Official Methods of Analysis of the Association of Official Agricultural Chemists (edited by William Horwitz), ninth edition, *review* by H. V. Hart, 749
Ogilvie, Bridget M., and others : Effect of Duodenal Administration of Highly Unsaturated Fatty Acids on Composition of Ruminant Depot Fat, 725

Oil (Linseed) : *Cyclo*-Arthenol, a Minor Constituent of (Dr. Pompeo Capella), 167
Oil (Liver), of the New Zealand School Shark (*Galeorhinus australis* MacLeay) : Occurrence of *n*-Odd-Numbered Monoethylenic Fatty Acids in the (Isobel M. Morice and Dr. F. B. Shorland), 443
Oil and Colour Chemists' Association : 1961 Biennial Conference (Physics in Surface Coatings), 591
Oils (Essential) : Effect of, on Atherosclerosis of Cholesterol-fed Rabbits (Dr. S. Benkö, A. Macher, F. Szarvas and T. Tiboldi), 731
Oils (Odoriferous Vegetable) : Variation in the Behaviour of Different Genotypes of *Drosophila* towards (J. A. Clutterbuck and Dr. J. A. Beardmore), 1135
Oka, Prof. Sutemi, and others : Formamidase in Mycobacteria and its Use in Differentiating Saprophytic Mycobacteria from other Mycobacteria, 1219
Old : How, is the Earth ? (Dr. Patrick M. Hurley), *review* by G. R. Noakes, 64
Olsen, Marlow W. : Rous Sarcoma Virus associated with Parthenogenesis in Turkey Eggs, 191
Oldroyd, Harold : Recent Advances in Entomology, *review*, 945
  Name this Insect, *review*, 1047
Oligomycin : Effects of, on Respiration and Swelling of Isolated Liver Mitochondria (Dr. J. B. Chappell and Dr. G. D. Greville), 502
Oliver, Dr. I. T. : Controlled Use of Adsorbents in Enzyme Purification, 810
Omardeen, T. A. : Resistance to Dieldrin in *Anopheles* in Trinidad, 559
Ommatin Pigment from Tyrosine : Formation of an, by Ultra-violet Irradiation (Maria Benigna Johnson), 924
Omura, Hirohisa, and Osajima, Yutaka : Enzymatic Reduction of Diphosphopyridine Nucleotide with Urea, 345
Oncogenic Properties : Variant of Parotid Tumour (Polyoma) Virus showing a Change in (Lloyd W. Law, Alan S. Rabson and Clyde J. Dawe), 97
O'Neill, G. J., and Todd, Prof. J. P. : Extraction of Nucleic Acid-free Lipopolysaccharides from Gram-negative Bacteria, 344
Ontario : Analysis of a Supposed Clay Fulgurite from (Maxwell K. Carron and Paul D. Lowman, jun.), 40
Ooms, A. J. J. : Inhibition of Chymotrypsin with Diisopropyl Phosphorofluoridate, 533
Oort, J., and Willighagen, R. G. J. : Zymograms in Human Pathology, 642
Open Forests in Tropical Africa (Scientific Council for Africa South of the Sahara, Publication No. 52), 141
Open Land in National Parks : The Case for Control of Afforestation of (Standing Committee on National Parks of the Councils for the Preservation of Rural England and Wales and the Joint Action Group for the Protection of Dartmoor and Exmoor), 496
Ophryotrocha puerilis siberti : Existence of Multiple Sex Genotypes in the Hermaphrodite Polychaete Worm (Prof. G. Bacci and O. Bortesi), 838
Opinions of British Scientists of Home Office Control of Experiments on Animals (Universities Federation for Animal Welfare), 677
Optical Instruments and Techniques (British National Committee for Physics Conference on), 963
Optical Masers : Interstellar and Interplanetary Communication by (Dr. R. N. Schwartz and Prof. C. H. Townes), 205
Optical Observations : Technique of (Royal Astronomical Society Geophysical Discussion on), 1065
Optical Society of America : Translations into English of the Russian journal *Optika i Spektroskopiya*, 769
Optika i Spektroskopiya : Translations into English to be issued by the Optical Society of America, 769
Oral Administration of Cadmium : Serum Changes in the Rat following (D. J. Lawford), 815
Orally Administered *S*,*β*-Aminoethylisothiuronium.Br.HBr. : Protective Effect of, against X-Radiation Death in Mice (Major M. P. Dacquisto and Capt. E. W. Blackburn), 270
Orbit Perturbations (Satellite), in Vector Form (R. R. Allan), 615
Orchid (Green-veined), *Orchis morio* : Life-History of the (J. F. H. Doulton), 767
Orchis morio (Green-veined Orchid): Life-History of the (J. F. H. Doulton), 767
Ord, Dr. Margery G., and others : Incorporation of Phosphorus-32 into Adenosine Triphosphate of Adrenal Chromaffin Granules, 354
Ordered Phase in an As-Cast Titanium–Aluminium Alloy : Occurrence of an (Prof. P. Pietrokowsky), 77
Organ : Cell Tissue and, *review* by Dr. N. M. Hancox, 47
Organic Analysis : Qualitative (B. Haynes), *review* by Dr. J. D. Loudon, 753
  Spot Tests in (Prof. Fritz Feigl), sixth English edition (translated by Prof. Ralph E. Oesper), *review* by Dr. D. T. Lewis, 479
Organic Chemistry (C. W. Wood and Dr. A. K. Holliday), *review* by Charles Holt, 60
  Advances in (edited by Ralph A. Raphael, Edward C. Taylor and Hans Wynberg), Vols. 1 and 2, *review* by Dr. J. Idris Jones, 56
  Applications of Nuclear Magnetic Resonance Spectroscopy in (Dr. L. M. Jackman), *review* by Dr. J. C. D. Brand, 1043
  The Growth of, *review* by Dr. J. Idris Jones, 56
  Practical (Dr. Frederick George Mann and Dr. Bernard Charles Saunders), fourth edition, *review* by Dr. J. D. Loudon, 753
Organic Compounds : An Introduction to Electronic Theory of (H. L. Heys), *review* by Dr. R. I. Reed, 296
Organic Matter of a Podzol Soil : An Estimate of the Aromaticity of the (Dr. J. R. Wright and Dr. M. Schnitzer), 703
Organic Solvent : Fractionation of Compound Lipids by Dialysation in an Organic Solvent against an (Prof. Sen-itiroh Hakomori and Koh-kiti Takeda), 265
Organic and Biological Solids : Effects of Ionizing Radiations on (British Biophysical Society and the Société de Chimie Physique Informal Discussion on), 219
Organisms : Multicellular (Mechanisms in Radiobiology, edited by Maurice Errera and Arne Forssberg, Vol. 2), *review* by Dr. O. A. Trowell, 72
  The Organization of Cells and other (Laurence Picken), *review* by Dr. P. M. B. Walker, 845
Organization : Cellular, *review* by Dr. P. M. B. Walker, 845
Organization of Cells and other Organisms (Laurence Picken), *review* by Dr. P. M. B. Walker, 845
Organization for European Economic Co-operation (European Nuclear Energy Agency) : International Seminars on Nuclear Energy, 591
Organization for European Economic Co-operation (Office for Scientific and Technical Personnel) : Forecasting Man-power Needs for the Age of Science, 941
Organization of Sandwich Courses (National Advisory Council on Education for Industry and Commerce), 590
Organization (Cellular), and Respiration (Plant Physiology, edited by Prof. F. C. Steward, Vol. 1A), *review* by Prof. Walter Stiles, 116
Organization (International), in Biophysics (British Biophysical Society Discussion on), 312
Organo-Clay Complex for the Separation of Isomeric Dichlorobenzenes using Gas Chromatography (C. T. Cowan and J. M. Hartwell), 712
Organometallic Chemistry (edited by H. Zeiss), *review* by Dr. M. L. H. Green, 1143
Organophosphorus Compounds : Doubling of the Proton Magnetic Resonances of certain (T. H. Siddall, C. A. Prohaska and W. E. Shuler), 903
Organosilicon Compounds (Dr. C. Eaborn), *review* by Dr. J. S. Anderson, 59
Organs (Effector) : Physiology of, *review* by Prof. O. Lowenstein, 1045
Orgel, Dr. L. E. (Hamer, N. K., and) : Structure and Spectra of $[(\text{Phenanthroline})_2\text{Fe}(\text{CNMe})_2]^{2+}$ and $[(\text{Phenanthroline})_2\text{Fe}(\text{CN})_2\text{H}^2]^{2+}$, 439
Oriental Grasses : A Survey of, *review* by John Lewis, 659
Oriental and African Studies, School of : Appointment of D. J. Wiseman to the University of London chair of Assyriology, 219, 676
  Appointment of Dr. F. G. Bailey to the University of London readership in Asian anthropology, 396
  Retirement of Prof. C. J. Gadd from the chair of Ancient Semitic languages and civilizations, 676
Orientation and Migration (Association for the Study of Animal Behaviour Symposium on), 1063
Orientation (Mite), and Survival on Flies (Bernard Greenberg), 107
Oriented (Highly), Boron Nitride (D. Belforti, S. Blum and B. Bovarnick), 901
Orifice in a Fluidized Bed : Bubble Formation at an (Dr. D. Harrison and L. S. Leung), 433
Origin of *β*-Aminoisobutyric Acid in Iris (W. R. Evans, Chi Shiun Tsai and Prof. Bernard Axelrod), 809
Origin of Cosmic Rays (Dr. J. N. Tandon), 246
Origin of Ignimbrites (F. J. Fitch), 995
Origin of Jupiter's Great Red Spot (Dr. R. Hide), 895
Origin of Life : Aspects of the (edited by M. Florkin), *review* by N. W. Pirie, 295
  Significance of Carbonaceous Meteorites in Theories on the (Prof. J. D. Bernal), 129
Origin of Ocean Basins and Continents (Dr. J. J. Gilvarry), 1048
Origin of the Osteoclast : Use of Tritiated Thymidine for the Study of the (Dr. E. A. Tonna and E. P. Cronkite), 459
Origin of the Potential Difference in the Intestinal Epithelium of the Turtle (Michelle Baillien and E. Schoffeniels), 1107
Origin of Stone and Iron Meteorites (Prof. David E. Fisher), 244
Origin of Urinary Pyrocatechol (Dr. Alfred A. Smith), 167
Origin of the Word 'Neutron' (Stephen G. Brush), 251
Origin (Metabolic), of Urinary Methylamine in the Rat (E. Jack Davis and Dr. R. S. De Ropp), 636
Orleans, L. A. : Training, Growth and Utilization of Scientific and Technical Man-power in Communist China, 222
Ormerod, M. G., and others : Prevention by Cysteamine of Radical Formation in Bovine Serum Albumin by γ-Rays, 998
Ornithology, British Trust for, and the Royal Society for the Protection of Birds : Report on Birds killed by Poisonous Seed Dressings, 218
Oró, Prof. J. : Comets and the Formation of Biochemical Compounds on the Primitive Earth, 389
Oró, Prof. J., and Kamat, S. S. : Amino-acid Synthesis from Hydrogen Cyanide under Possible Primitive Earth Conditions, 442
Orogenic Belts : Some Aspects of Sedimentation in (Geological Society Symposium on), 139
Orogeny and Granites in South-West England : Age of the (N. E. Butcher), 253
Orowan, Prof. Egon, and others : Correlation between Ulcerative Colitis and *Rh* Blood Groups, 1123
Orra ca-Tetteh, R. : The Place of Food Science and Technology in the Campaign against Malnutrition (Problems and some Solutions), 398
Orwin, D. F. G. : Bundles of Follicles in Adult Romney Ewes, 1026
Osajima, Yutaka (Omura, Hirohisa, and) : Enzymatic Reduction of Diphosphopyridine Nucleotide with Urea, 345
Osajima, Yutaka (Yamafuji, Kazuo, and) : Ammonia Dehydrogenase, Hydroxylamine Dehydrogenase, Hyponitrite Dehydrogenase and Nitrite Dehydrogenase, 534
Osawa, Kazuhoshi, and others : Experimentally Produced Selenium Poisoning in various Animals, 310
Oscillations (Damped Free), of a Gyroscopic System (R. Parks and L. Maunder), 710
Oscillatory Flow in a Fluid-filled Elastic System (Wing-Comdr. J. E. Malcolm), 88
Osmotic Pressure Effect of the Red Blood Cells—Possible Physiological Significance (Dr. A. Tybjaerg Hansen), 504
Ossiannilsson, Prof. Frej : Negative Evidence against Passage of Whole Plant Virus Particles through Gut Wall in Aphid Vectors, 1222
Osteoclast : Use of Tritiated Thymidine for the Study of the Origin of the (Dr. E. A. Tonna and E. P. Cronkite), 459
Oster, Prof. Gerald (Tsuk, Andrew G., and) : Determination of Enzyme Activity by a Linear Measurement, 721
Output (Beam), from a Synchrocyclotron : A Proposal for Increasing the (F. M. Russell), 335
Ova : Transfer of, to the Bursa Ovarii and the 'Suspended Loop' of Tube in the Rabbit (Prof. E. S. E. Hafez and M. E. Ensminger), 557
Overdominance : The Evolution of—Natural Selection and Heterozygote Advantage (Dr. P. A. Parsons and Dr. W. F. Bodmer), 7
Overseas Countries : Technical Assistance to, 1039
Overseas Development : Technical Assistance from the United Kingdom for (White Paper on), 1039
Overton, Dr. K. H. : Terpene Chemistry (Elucidation of the Stereochemistry of the Bitter Principle, Columbin), 19
Ovum in the Reproductive Tract : Movement of the—A Needle Probe Geiger-Müller Counter for the Study of the Passage of the Ovum in the Reproductive Tract (J. P. Bennett), 788 ; A Possible Explanation for the Failure of Non-Surgical Ovum Transfers in the Cow (M. J. K. Harper, J. P. Bennett and L. E. A. Rowson), 789
Ovum Transfers (Non-Surgical), in the Cow : A Possible Explanation for the Failure of (Movement of the Ovum in the Reproductive Tract), (M. J. K. Harper, J. P. Bennett and L. E. A. Rowson), 789

Owen, B. S. : Thermal Stresses, *review*, 65
Owen, L. N. : Fluorescence of Tetracyclines in Bone Tumours, Normal Bone and Teeth, 500
Oxalate : Adenosine Triphosphate- and Coenzyme A-dependent Decarboxylation of, by Extracts of Peas (John Giovanelli and Noel F. Tobin), 1006
Oxidase (*Myrothecieum* Ascorbic Acid): Substrate Specificity of the (Gordon A. White and Prof. Frederick G. Smith), 187
Oxidase (Quinine), in Liver and Blood Plasma of Rabbits poisoned with Carbon Tetrachloride (Dr. Gilberto G. Villela), 807
Oxidase Activity (Paraphenylenediamine), and Copper-Levels in Mammalian Plasmas (P. J. McCosker), 887
Oxidation in various Conditions : Sensitivity of Haemoglobin to (Dr. W. K. Metcalf), 543
Oxidation of Ferrohaemoglobin by Ferricyanide Ions : Rate of (Norman Sutin), 438
Oxidation of Galena to Lead Sulphate (R. V. Culver, N. B. Gray and Prof. E. C. R. Spooner), 78
Oxidation of Reduced Pyridine Nucleotides and of Sulphite by Pea Root Mitochondria (R. G. Stickland), 648
Oxidation (Atmospheric) : Influence of, on Supercontraction of Wool Fibres reduced with Thioglycollic Acid (O. A. Swanepoel), 626
Oxidation (Experimental), of Haemoglobin—its relation to Growth-rate in Rats (Dr. W. K. Metcalf), 543
Oxidation (Methane), initiated by Electrical Discharge (M. Barber and Dr. J. Cuthbert), 1001
Oxidation State (Tri-positive) (V^{3+}), in Tetrahedral Co-ordination : Spectrum of Vanadium in the (Dr. D. M. Gruen and R. Gut), 713
Oxidative Metabolism in *Euglena gracilis* : Ethanol Stimulation of (Dr. D. E. Buetow), 1196
Oxide (Calcium) : Electrical Conductivity and Thermoelectric Power of (Dr. C. H. B. Mee), 1093
Oxide (α-Ferric) : Giant Grain Growth in (R. F. G. Gardner and D. W. Tanner), 1166
Oxide (Nitric) : Continuous Determination of Traces of (Dr. C. Bokhoven and P. H. Tommassen), 435
Oxide Film : Effect of a Thin, on the Reaction of Iodine Vapour with Copper (R. A. J. Shelton, S. Blairs and D. Margrave), 1183
Oxyanion Systems (Chromium(III)–), (G. M. Lukaszewski and J. P. Redfern), 805
Oxygen : Radiolysis of Carbon Tetrachloride in the Presence of (Zd. Spurny and I. Janovsky), 624
Oxygen in Silicon : Radioactivation Analysis of, by Irradiation with α-Particles in a Cyclotron (T. Nozaki, S. Tanaka, M. Furukawa and K. Saito), 39
Oxygen in a Vitrinite : Distribution of, and its Extraction Products (A. Halleux, S. Delavarenne and H. Tschamler), 437
Oxygen (Terrestrial) : Solar Wind and (N. W. Pirie), 706
Oxygen Concentration and Mechanical Factors : Influence of, on Differentiation of Connective Tissues *in vitro* (Dr. C. Andrew L. Bassett and Ingeborg Herrmann), 460
Oxygen Consumption : Seasonal Acclimatization of, to Temperature in a Tropical Poikilotherm, the Earthworm, *Megascolex mauritii* (K. Saroja), 930
Oxygen Consumption of Arteries in Chickens : Effect of Œstradiol on the (Effect of Œstrogens on Atherosclerosis), (Dr. M. R. Malinow and Dr. J. A. Moguilevsky), 422
Oxygen Consumption in the Mammalian Kidney : Sodium Transport and (Dr. J. Hess Thaysen, Dr. N. A. Lassen and Dr. O. Munck), 919
Oxygen Pressure (Reduced) : Growth of *Fomes annosus* under, and the Effect of Carbon Dioxide (Dr. K. Gundersen), 649
Oxygen Tension : Wood-boring Activity of *Limnoria* (Isopoda) in relation to (Dr. S. K. Eltringham), 512
Oxygen and Nitrogen : Thermal Diffusion of, in Zirconium (Prof. G. D. Rieck and H. A. C. M. Bruning), 1181
Oxygen and Steam (Air, Argon, Carbon Dioxide, Carbon Monoxide, Hydrogen, Nitrogen,) : Tables of Thermodynamic and Transport Properties of (Joseph Hilsenrath, Charles W. Bennett, William S. Benedict, Lilla Fano, Harold J. Hoge, Joseph F. Masi, Ralph L. Nuttall, Yeram S. Touloukian and Harold W. Woolley), *review* by Prof. A. R. Ubbelohde, 58
Ozeki, H., and Howarth, Sheila : Colicine Factors as Fertility Factors in Bacteria—*Salmonella typhimurium* Strain *LT*2, 986
Ozone : A Twilight Method of Determining the Vertical Distribution of (A. B. Pittock), 426

PACIFIC Northwest Prehistory : Cultural Sequences at the Dalles, Oregon—a Contribution to (Prof. L. S. Cressman, in collaboration with David L. Cole, Wilbur A. Davis, Thomas M. Newman and Daniel J. Scheans), (Transactions of the American Philosophical Society, New Series, Vol. 50, Part 10), 775
Pacific States—Washington, Oregon and California : Illustrated Flora of the (Leroy Abrams and Roxana Stinchfield Ferris), Vol. 4, Bignoniaceae to Compositae (Bignonias to Sunflowers), (Roxana Stinchfield Ferris), *review* by G. P. DeWolf, 49
Packard, Andrew : Sucker Display of *Octopus*, 736
Packing of Spheres (Dr. J. R. Parrish), 800
Paetzold, Dr. H. K. : A Preliminary Model for the Variations of Upper Air Densities, 35
Page, Irvine H. (McIsaac, Dr. William M., and) : Urocanicacidurea associated with Hepatic Coma, 347
Page, Irvine H., and others : Pharmacological Action of some Methoxy-indolealkylamines, 179
Paigen, Kenneth, and Noell, Werner K. : Two Linked Genes showing a Similar Timing of Expression in Mice, 148
Paintings (Rock), in the West Kimberley Region of Western Australia (P. E. Playford), 767
Paintings (Rock-Shelter), of the Union of South Africa : The Brandberg and other (Revel Mason), 311
Pairs of Chromium Ions in Ruby : Spin-Lattice Relaxation of (J. C. Gill), 619
Pakistan : Report of the Scientific Commission of (Government of Pakistan, Ministry of Industries), 1139
  Scientific and Technical Development in, 1139
Pakistan, Government of (Ministry of Industries) : Report of the Scientific Commission of Pakistan, 1139
Pakistan (Burma, Ceylon, India and) : The Grasses of (excluding Bambuseae), (Dr. N. L. Bor), *review* by John Lewis, 659
Pal, Dr. B. P. : Awarded the first Rafi Ahmed Kidwai Memorial Prize of the Indian Council of Agricultural Research, 312
Palade, Prof. G. E. : Elected a Member of the United States National Academy of Sciences, 674
Palaeomagnetic Evidence relevant to a Change in the Earth's Radius (Prof. S. Warren Carey), 36 ; (Allan Cox and Richard R. Doell), 36
Palaeomagnetism and the Ancient Radii of the Earth (Prof. L. Egyed), 1097
Paleal Pegs of Corixidae (Hemiptera Heteroptera) : The Function of the (Dr. Edward J. Popham), 742
Paléontologie Humaine, Institut de : Mémoire 31, Le Grande Roche de Naquane (M. Anati), 140
Palma, V., and others : Increased Toxicity of Serotonin in Adrenalectomized Animals, 540
Palmas, Dr. G., and others : Measurements of Air Radioactivity in Italy and their relation to the First Sahara Atomic Explosion, 618
Palmitic-1-^{14}C Acid : Incorporation of, into Blood Cells (Dr. Constantinos J. Miras, Dorothy L. Fillerup and James F. Mead), 92
Pamplin, Dr. B. R. : Bonds, Bands and Semiconductors, *review*, 116
Paneth, F. A., und andere (herausgegeben von) : Beiträge zür Physik und Chemie des 20 Jahrhunderts—Lise Meitner, Otto Hahn, Max von Laue zum 80 Geburtstag, *review* by Dr. C. A. Taylor, 118
Pancreatic Ribonuclease (Bovine) : The Active Site and Mechanism of Action of (Dorothy Findlay, D. G. Herries, Dr. A. P. Mathias, Dr. B. R. Rabin and C. A. Ross), 781
Pande, P. G., and others : A Heteroglycan from *Toxoplasma gondii*, 644
Pandeya, Dr. S. C. : Ecological Problems in the Tropics (Soils of Madhya Pradesh), 772
Pangels, Gerta, and others : Configuration of the 6-Hydroxyl Group in Phenolic Steroids, 720
Panorama of Science, *review* by G. R. Noakes, 64
Pantin, Prof. C. F. A. : Experimental Taxonomy of Flowering Plants, 968
Pantothenate Starvation : Induction of Heritable Respiratory Deficiency in *Saccharomyces* by (Prof. Alvin Sarachek and Gregory L. Fowler), 792
Papain : Similarity of Peptides in Two Antigen-combining Fragments released from a Rabbit Antibody by (Prof. David Gitlin and Ezio Merler), 634
Papavassiliou, Dr. J. : Biological Characteristics of Colicine *X*, 110
Paper : Pulp and—Chemistry and Chemical Technology (James P. Casey), Vol. I, Pulping and Bleaching, second edition, *review* by Dr. Julius Grant, 380
Paper (Chromatographic) : Detection of Small Quantities of 3,4-Benzpyrene directly from (Dr. B. A. Nešković and V. Soškić), 1199
Paper (Filter) : Radiometric Precipitation in—a Rapid Method of Micro-analysis (M. Thackray), 434
Paper (Ion-Exchange) : A New Technique of Chromatography and Ionophoresis on—Application to the Separation of Barbiturate, Salicylate and Acetophenetidin (Harold V. Street and Dr. S. K. Niyogi), 537
  A New Technique of Chromatography and Ionophoresis on—Application to Separation of Barbiturate, Salicylate, Acetophenetidin and *p*-Acetylaminophenol (Harold V. Street and Dr. S. K. Niyogi), 718
  A New Technique of Chromatography and Ionophoresis on—Application to Separation of Compounds of Toxicological Interest—Separation of a Mixture of Promazine, Quinine, Sulphacetamide and Acetophenetidin (Harold V. Street and Dr. S. K. Niyogi), 1199
Paper Chromatography : Growth Substances separated from the Root of Water Hyacinth by (Prof. S. M. Sircar and Arati Ray), 1213
Paper Chromatography of Hexosamines and N-Acetylhexosamines (Dr. R. Heyworth, H. R. Perkins and P. G. Walker), 261
Paper Chromatography of Natural Saponins (Dr. B. Pasich), 830
Paper Strips : Modification of Spectrophotofluorometer for Scanning (Yasuhiko Takemoto), 1094
Papers : Collected Scientific (Paul Ehrenfest), edited by Martin J. Klein, *review* by Prof. J. Hamilton, 115
Paracrystalline Haemoglobin as a Species Difference between *Rattus norvegicus* and *Rattus rattus* (Dr. Z. Vokáč), 641
Paradox : The Pontide (M. V. Muratov), 864 ; (N. I. Rubtzov), 864
Paradox (An Apparent), in Crystal Structure Analysis (Prof. G. N. Ramachandran and R. Srinivasan), 159
Para-Fluorophenylalanine : Mitotic Haploidization by Treatment of *Aspergillus niger* Diploids with (Pol Lhoas), 744
Paragonimiasis (Experimental Schistosomiasis and) : Effects of *Tris*(*p*-Aminophenyl)-Carbonium Salts and related Compounds on (E. F. Elslager, F. W. Short, D. F. Worth, J. E. Meisenhelder, H. Najarian and P. E. Thompson), 628
Para-influenza I and Mumps Viruses (Newcastle Disease,) : Haemagglutinating Sub-Units released from, by Treatment with Ether (F. Sokol, D. Blaškovič and O. Krizanová-Laučiková), 834
Parallax (Solar) : A New Determination of the, by means of Radar Echoes from Venus (Dr. J. H. Thomson, J. E. B. Ponsonby, G. N. Taylor and R. S. Roger), 519
Parametric Line : The—a Photon and Gravitational Field Analogue (O. Nourse), 522
Paranormal Phenomena, 394
Paraoxan in Mammalian Blood : Hydrolysis of (Prof. Ervin G. Erdös and Lois E. Boggs), 716
Paraphenylenediamine Oxidase Activity and Copper-Levels in Mammalian Plasmas (P. J. McCosker), 887
Parental Care in a Rare Spider *Pellenes nigrociliatus* (L. Koch) var. *bilunulata* Simon (Dr. Izabella Mikulska), 365
Parents : Transmission of Phosphorus-32 incorporated by, into Descendants of *Drosophila melanogaster* (B. Faludi, I. Csukás, K. Széplaky and F. Á. Dániel), 469
Parents' Views on Education (Political and Economic Planning, Broadsheet No. 448), 497
Park, Dr. David : Illustrations of Fungi, *review*, 52
Parker, Dr. C. A., and Hatchard, C. G. : Lifetime of the Pyrene Dimer, 165
Parker, R. P., and Crookall, J. O. : Seasonal Variation and Age of Radioactive Fall-out, 574
Parkes, Prof. A. S. (edited by) : Marshall's Physiology of Reproduction, third edition, Vol. I, Part 2, *review* by Dr. Anita M. Mandl, 1045
Parkinson, D., and Waid, J. S. (edited by) : The Ecology of Soil Fungi—an International Symposium, *review* by Dr. P. H. Gregory, 51

Parks, R., and Maunder, L. : Damped Free Oscillations of a Gyroscopic System, 710
Parks (British National) : Conservation of, 871
Parks (National) : The Case for Control of Afforestation of Open Land in (Standing Committee on National Parks of the Councils for the Preservation of Rural England and Wales and the Joint Action Group for the Protection of Dartmoor and Exmoor), 496
  Tree Planting in the (Prof. M. L. Anderson), 496
Parks Commission (National) : Eleventh Annual Report (1959-60), 595
Parliament : Recent Scientific Inquiries in, 1157
Parliamentary Debates : House of Commons—Official Report, Standing Committee D, Rating and Valuation Bill, Ninth Sitting, 658
Parliamentary and Scientific Committee : Annual Report for 1960, 309
Parotid Tumour (Polyoma) Virus : Variant of, showing a Change in Oncogenic Properties (Lloyd W. Law, Alan S. Rabson and Clyde J. Dawe), 97
Parr, Geoffrey : Elected to honorary life fellowship of the Television Society, 769
Parr, Peter J. : Archaeology in Israel, *review*, 381
Parrish, Dr. J. R. : Packing of Spheres, 800
Parsons, F. M., and others : Influence of Uraemia on the Survival of Skin Homografts, 732
Parsons, Dr. H. W. : Appointed to a senior lectureship in mathematics at the University of Hull, 1156
Parsons, Dr. P. A., and Bodmer, Dr. W. F. : The Evolution of Overdominance—Natural Selection of Heterozygote Advantage, 7
Parthenogenesis in Turkey Eggs : Rous Sarcoma Virus associated with (Marlow W. Olsen), 191
Partial Characterization of a Growth-control Factor : Isolation and (Francis W. Sayre, Eder Hansen, Theodore J. Starr and Evangeline A. Yarwood), 1116
Partial Enzymic Degradation and Starch-Gel Electrophoresis : An Investigation of Closely Related Gamma-Myeloma Proteins and Normal Mouse Gamma-Globulin by (Dr. Brigitte A. Askonas and Dr. J. L. Fahey), 980
Partial Inhibition of Antibody Formation by means of Anti-Ribonucleoprotein Serum (Prof. B. D. Jankovič, Dr. K. Isakovič and J. Horvat), 1218
Participation (British), in Space Research, 216
Particle : A New Elementary (Din Da-Tzao and E. N. Kladnitzkaya), 591
Particles : The Haemoglobin—Chemical and Genetic Aspects of the Structure (Dr. G. Braunitzer, Dr. N. Hilschmann, Dr. V. Rudloff, Dr. K. Hilse, Dr. B. Liebold and Dr. R. Müller), 480
Particles in Poiseuille Flow : Axial Migration of (H. L. Goldsmith and S. G. Mason), 1095
α-Particles in a Cyclotron : Radioactivation Analysis of Oxygen in Silicon by Irradiation with (T. Nozaki, S. Tanaka, M. Furukawa and K. Saito), 39
Particles (Protein), in Tumour Cells : Aggregation of (A. Bolognari), 358
Particles (Whole Plant Virus) : Negative Evidence against Passage of, through Gut Wall in Aphid Vectors (Prof. Frej Ossiannilsson), 1222
Partington, Prof. J. R. : Awarded the Dexter Award of the American Chemical Society, 680
Partington, Dr. M. W. : Appointed the first Queen Elizabeth II Scientist by the Queen Elizabeth II Canadian Fund to Aid in Research on the Diseases of Children, 863
Partition Chromatography : Biological Activity of some Humic Fractions isolated by means of (Prof. A. Paszewski, J. Trojanowski and A. Lobarzewska), 277
Pasich, Dr. B. : Paper Chromatography of Natural Saponins, 830
Passage of the Ovum in the Reproductive Tract : A Needle Probe Geiger-Müller Counter for the Study of the (Movement of the Ovum in the Reproductive Tract), (J. P. Bennett), 788
Passage of Whole Plant Virus Particles through Gut Wall in Aphid Vectors : Negative Evidence against (Prof. Frej Ossiannilsson), 1222
Passage (Transplacental), of Red Cells in Man (Ronald Finn, Dr. C. A. Clarke, W. T. A. Donohue, Dr. R. B. McConnell, Dr. P. M. Sheppard and D. Lehane), 922
Pasteur, Louis—a Master of Scientific Enquiry (Jacques Nicolle), *review* by T. H. Hawkins, 848
Pasteur Effect in a Respiration-deficient Mutant of Baker's Yeast (A. Kotyk), 811
Pasteur Institute of Southern India, Coonoor : Annual Report for 1959, 678
Pasteurella tularensis : The Cytochrome of (M. Mizuhara and Dr. M. Yamanaka), 1024
Paszewski, Prof. A., and others : Biological Activity of some Humic Fractions isolated by means of Partition Chromatography, 277
Paterson, A. R. : Appointed lecturer in applied mathematics at the University of Bristol, 1156
Path of Carbon in Photosynthesis : Effect of *Iso*nicotinyl Hydrazide on the (G. G. Pritchard, Prof. C. P. Whittingham and Wendy J. Griffin), 553
Pathology : Plant, *review* by D. E. Green, 660
Pathology (Human) : Zymograms in (J. Oort and R. G. J. Willighagen), 642
Pathways (Metabolic), of Foreign Compounds (Biochemical Society Colloquium on), 219
Patients with Myasthenia Gravis : Abnormalities in the Fine Structure of the Neuromuscular Junction in (Dr. S. I. Zacks, W. C. Bauer and J. M. Blumberg), 280
Patients (Phenylketonuric) : Effect of Glutamine and Asparagine Supplements in the Dietary Regimen of Three (Dr. Barbara H. Bowman and Dr. F. J. King), 417
Patil, Dr. R. P. : Ecological Problems in the Tropics (Relationships between Habitat Conditions and Genome), 772
Pattern (Action), of β-Amylase (Dexter French), 445
Patterns of Industrial Growth, 1938-58 (Statistical Office of the United Nations, Department of Economics and Social Affairs), *review* by Sir Roy Harrod, 660
Patterns of Preference in Equiprobable Situations (Prof. John Cohen and Peter Cooper), 231
Patterns (Different), of Bacterial Growth : Fractions of Trypsinized Casein giving (D. A. H. Hearfield and A. W. Phillips), 266
Patterns (Fracture), similar to Naturally Occurring Radial Dyke Systems : Impulse Loading of Rock Targets to produce (Carl F. Austin), 227
Patterson (Austin M.) Award of the American Chemical Society awarded to Dr. G. Malcolm Dyson, 680
Pattinson, E. B. : Electrical Contacts (Quantitative Assessment of Electrode Activity due to Surface Films), 867
Payne, L. N., and Jaffe, P. : Genetic Basis for Graft-against-Host Immunological Reactions between Two Inbred Lines of Chickens, 373
Paysages Ruraux : Les Formations Végétales et (G. Plaisance), *review* by N. Y. Sandwith, 478
Pea (Pigeon) : Transmission of Gall-Diseases of Cacao, Mango and (J. F. Archibald), 284
Pea Root Mitochondria : Oxidation of Reduced Pyridine Nucleotides and of Sulphite by (R. G. Stickland), 648
Peabody Museum, Yale University : Addison Emery Verrill Medal awarded to Dr. J. T. Delacour, 16
Peaceful Uses of Atomic Energy (U.S.S.R. State Committee of the Council of Ministers for the Utilization of Atomic Energy and the United Kingdom Atomic Energy Authority Collaboration on the), 960
Pearson, Carl E. : Theoretical Elasticity, *review* by Prof. J. F. Baker, 383
Pearson, H. M. : Properties of Stressed Bone, 1217
Pearson, W. B. (Mooser, E., and) : The Ionic Character of Chemical Bonds, 406
Peas : Adenosine Triphosphate- and Coenzyme *A*-dependent Decarboxylation of Oxalate by Extracts of (John Giovanelli and Noel F. Tobin), 1006
Peasant Agriculture in the Tropics (E. W. Momber), 962
Pediococcus (Genus) : Folinic Acid Requirement of Strains of the (Ellen I. Garvie and Margaret E. Gregory), 563
Pedro, Dr. G. : Weathering (Experimental Study of the Geochemical Alteration of Acidic and Basic Igneous Rocks under varying Hydrodynamic and Physiochemical Conditions), 1066
Pegs (Paleal), of Corixidae (Hemiptera Heteroptera) : The Function of the (Dr. Edward J. Popham), 742
Pekeris, Prof. C. L., and others : Terrestrial Spectroscopy, 498
Pelekhov, V. I., and others : Atlas of γ-Ray Spectra from Radiative Capture of Thermal Neutrons (translated from the Russian by J. B. Sykes), *review* by Dr. E. R. Rae, 75
Pellenes nigrociliatus (L. Koch) var. *bilunulata* Simon (Rare Spider) : Parental Care in a (Dr. Izabella Mikulska), 365
Penfield, Dr. Wilder : Request for material relating to the life of Alan Gregg, 219
Penicillinase : Antibodies blocking Neutralization of, by the Homologous Antiserum (Dr. Nathan Citri and Gill Strejan), 1010
Penicillium chrysogenum : Action of Mycophenolic Acid on Unstable Diploids of (Dr. A. Ballio and Dr. G. Sermonti), 108
Penman, Dr. H. L. : The Soil—Problems raised by its Use and Misuse (Physical Properties of Soil), 770
Penner, S. S., and others : Liquid Propellant Rockets, *review* by Prof. D. B. Spalding, 66
Penniman, T. K. : Lowie's Selected Papers in Anthropology, *review*, 851
Pennines (Northern) : Granite below the (Prof. K. C. Dunham, Dr. M. H. P. Bott, Dr. G. A. L. Johnson and B. L. Hodge), 899
Pennsylvania State University : Thirty-fourth Annual Priestley Lectures—Unnatural Products, New and Useful Materials from Silicon (Prof. Eugene G. Rochow), *review* by Dr. J. S. Anderson, 59
Pennycuick, C. J. : Sun Navigation in Birds?, 1026
Penrose, Prof. L. S. (edited by, with the assistance of Helen Lang Brown) : Recent Advances in Human Genetics, *review* by Prof. J. B. S. Haldane, 1042
Pentachloride (Antimony) : Reaction of Digitalis Compounds with (Capt. Robert H. Herman), 268
  Reaction of, with Pregnane-3α, 17α, 20α-Triol, Pregnane-3α, 17α, 20α-Triol-11-One and other Adrenal Cortical Steroids (Capt. Robert H. Herman and Joseph Bruton), 444
Peoples (Indian and Sinhalese) : Frequencies of Hairy Pinnae among (K. R. Dronamraju), 653
Pepinsky, Ray, and others (edited by) : Computing Methods and the Phase Problem in X-Ray Crystal Analysis—Report of a Conference held at Glasgow, 1960, *review* by Dr. A. D. Booth, 752
Peptides : Similarity of, in Two Antigen-combining Fragments released from a Rabbit Antibody by Papain (Prof. David Gitlin and Ezio Merler), 634
Peptides containing Hydroxyproline : Isolation of, from Animal Tissues (V. Kobrle and M. Chvapil), 909
Peptides (Model) : Interaction of, with Water and Lithium Bromide (Dr. J. Bello and H. R. Bello), 440
Percentage Natural Cross-Pollination : Estimation of—Experiments on Rice (E. H. Roberts, R. Q. Craufurd and F. Le Cochec), 1084
Perception of Distance in Animal Echo-Location (L. Kay), 361 ; (J. D. Pye), 362 ; (Jan Nordmark), 363
Percival, Dr. I. C. : Appointed to the University of London readership in applied mechanics at Queen Mary College, London, 680
Peripheral Administration of Flavins : Changes of Quantity of Flavin in the Brain after (Ikuko Nagatsu-Ishibashi, Toshiharu Nagatsu and Kunio Yagi), 728
Peripheral Plasma of Intact Unanaesthetized Dogs : Influence of Changes of Blood Volume on the Concentration of Aldosterone in (Ejgil Bojesen and Hans Degn), 352
Peristaltic Reflex in the Isolated Ileum of the Guinea Pig : Role of the Mucous Membrane in the (M. L. Diament, Dr. H. W. Kosterlitz and J. McKenzie), 1205
Perithecia (Genetically Mixed), in *Neurospora* (Kazuo Nakamura and Takeshi Egashira), 1129
Perkins, H. R., and others : Paper Chromatography of Hexosamines and N-Acetylhexosamines, 261
Perlman, Ely, and others : Enhancement of Intraperitoneal Staphyloccal Virulence for Mice with Different Bile Salts, 829
Perm-selective Membranes : Deviations from the Steady-State in Ion Transfer through (Chaim Forgacs), 339
Permeability (Different), of Cuticular Sheath in Normal and Guard Keratin Fibres (R. Z. de la Burde), 420
Peroxide (Hydrogen) : Determination of Very Small Amounts of (H. Perschke and Prof. E. Broda), 257
Perretta, Dr. M. A., and Thomson, Dr. R. Y. : Effect of Erythropoietine on Incorporation of Formate labelled with Carbon-14 into the Nucleic Acids of Normal Rabbit Tissues *in vitro*, 912
Perrin, Dr. R. M. S. : Weathering (Quantitative Analyses of Fine Sands by X-Ray Diffraction), 1067 ; (Usefulness of Drainage-water Analysis in studying the Processes of Weathering and Soil-formation), 1067

Perrot, Jean, and others : Hazor II—an Account of the Second Season of Excavations, 1956 (James A. de Rothschild Expedition at Hazor), *review* by Peter J. Parr, 381
Perschke, H., and Broda, Prof. E. : Determination of Very Small Amounts of Hydrogen Peroxide, 257
'Perspex' : Estimation of Dynamic Modulus and Dynamic Yield Stress for (John Roberts), 799
Perturbation Theory : Small (W. R. Sears), *review*, 118
Perturbations (Satellite Orbit), in Vector Form (R. R. Allan), 615
Perutz, Dr. Max F. : 1961 Chaim Weismann Memorial Lecture, 493
  Elected an Honorary Fellow of the Weizmann Institute of Science, Rehovoth, 493
Peschansky, I. S. : Artificial Melting of the Arctic Ice, 492
Peters, D., und andere (herausgegeben von) : Vierter Internationaler Kongress für Elektronenmikroskopie, Band 2, Biologisch-Medizinischer Teil, *review* by Dr. V. E. Cosslett, 68
Petrak, Dr. Franz : Elected a Foreign Member of the Linnean Society of London, 962
Petroleum, Institute of (Hydrocarbon Research Group) : Proceedings of the Conference on Molecular Spectroscopy, London, 1958 (edited by E. Thornton and Dr. H. W. Thompson), *review* by Dr. A. Knowles, 76
Petryszyn, Czeslawa, and others: Reduction of Coenzyme *Q* by Succinic Acid Dehydrogenase, 539
Pettersson, Rune, and others : Electron Spin Resonance Line-Widths in Solutions of Copper and Silver Dithiocarbamates, 258
Pfeiffer, Carl C., and Smythies, John R. (edited by) : International Review of Neurobiology, Vol. 2, *review* by Dr. Denis Brinton, 850
Pflanzenanatomie : Handbuch der, Band 6, Teil 1, Schizophyzeen (Prof. Dr. Lothar Geitler), zweite Auflage, *review*, 73
*p*H (Soil), and Mycorrhiza Development in *Pinus* (Dr. B. N. Richards), 105
Phage-susceptibility : Interspecific Induction of Transformation of Bacteria with respect to (Shigeo Fukuda and Kiyoshi Tsuzuki), 937
Phagocytic Activity of the Reticulo-Endothelial System : Effect of Dexamethasone on the (Prof. T. Nicol and C. G. Druce), 91
  Effect of Haemophagin on the (Prof. T. Nicol, P. McKelvie and C. G. Druce), 92
  Effect of *B.C.G.* (Prof. T. Nicol, P. McKelvie and C. G. Druce), 418 ;
  Effect of Tri-*p*-anisylchloroethylene, Dienoestrol and Stilboestrol Diphosphate (Prof. T. Nicol, Dr. D. L. J. Bilbey and C. G. Druce), 419
  Influence of a Liver Fraction on the (Prof. B. N. Halpern, C. Stiffel and J. Dedichen), 279
Phagocytic Activity in Squamous Epithelia and its Role in Cellular Susceptibility to Foot-and-Mouth Disease (Dr. H. Platt), 1075
Pharmaceutical Chemistry in London, 862
Pharmaceutical Commission (Franco-British) : Ninth Congress, 493
Pharmacognosy, American Society of : Annual Meeting, 865
Pharmacological Action of some Methoxyindolealkylamines (Peter K. Gessner, Dr. William M. McIsaac and Irvine H. Page), 179
Pharmacy at the Royal College of Science and Technology, Glasgow, 764
Phase (Ordered), in an As-Cast Titanium–Aluminium Alloy : Occurrence of an (Prof. P. Pietrokowsky), 77
Phase (Stationary) : Liquid Chromatographic Separations using Rubber as the (P. I. Brewer), 625
Phase Problem in X-Ray Crystal Analysis : Computing Methods and the—Report of a Conference held at Glasgow, 1960 (edited by Ray Pepinsky, J. M. Robertson and J. C. Speakman), *review* by Dr. A. D. Booth, 752
Phase-Velocity of Ultra-sound in the Primary Aliphatic Amines (L. V. Kite), 1183
$[(\text{Phenanthroline})_2\text{Fe}(\text{CNMe})_2]^{2+}$ and $[(\text{Phenanthroline})_2\text{Fe}(\text{CN})_2\text{H}^2]^{2+}$: Structure and Spectra of (N. K. Hamer and Dr. L. E. Orgel), 439
Phenazine Methosulphate : Assay of Pyridine Nucleotide Coenzymes and associated Dehydrogenases with (Dr. P. J. C. Smith), 84
Phenergan : Reversible Nature of Liver Cell Damage due to Carbon Tetrachloride as demonstrated by the Use of (Dr. K. R. Rees and Dr. W. G. Spector), 821
Phenolic Steroids : Configuration of the 6-Hydroxyl Group in (Dr. H. Breuer, R. Knuppen and Gerta Pangels), 720
Phenomena : Paranormal, 394
Phenomena occurring at Electrically Stressed Metallic Surfaces in Vacuum (R. Hawley and Dr. C. A. Walley), 252
Phenomena (Ionization), in Gases : Proceedings of the Fourth International Conference on (Uppsala, 1959), (edited by N. Robert Nilsson), *review* by Dr. J. Dutton, 573
Phenomena (Ionization), in Gases (Plasma and Discharge Physics Group of the Association of the German Physical Societies International Conference on), 591
Phenomenology : Cartesian Meditations, an Introduction to (Edmund Husserl), translated by Dorion Cairns, *review* by F. I. G. Rawlins, 295
Phenomenon (The Mycolytic), and Biological Control of *Fusarium* in Soil (R. Mitchell and Prof. M. Alexander), 109
Phenomenon (Shwartzman) : Local Endotoxin Hypersensitivity and its relation to the (Dr. Tibor G. Kováts), 177
Phenothiazine Tranquillizers : Inhibition of Emotional Reactions by (Dr. Max Taeschler and Dr. Aurelio Cerletti), 1014
p-Phenylenediamine : Histochemical Demonstration of Aldehydes by (Dr. V. Scarselli), 1206
Phenylketonuric Patients : Effects of Glutamine and Asparagine Supplements in the Dietary Regimen of Three (Dr. Barbara H. Bowman and Dr. F. J. King), 417
Phillips, A. W. (Hearfield, D. A. H., and) : Fractions of Trypsinized Casein giving Different Patterns of Bacterial Growth, 266
Phillips, Dr. D. C. (Chandrasekhar, Prof. S., and) : Correction for Extinction Errors in Crystal Structure Analysis, 1164
Phillips, Dr. D. C., and others : The Amino-Acid Sequence of Sperm Whale Myoglobin—A Partial Determination by X-Ray Methods, and its Correlation with Chemical Data, 666
Phillips, J. N. (Lowe, M. B., and) : Catalysis of Metalloporphyrin Formation —a Possible Enzyme Model for Haem Iron Incorporation, 262
Phillips, Laurence, and others : Nanometeorites, 897
Phillips, Dr. R. J. N. : A Few Nucleons, *review*, 63
Philosophical Society (American) : Transactions, New Series, Vol. 50, Part 10, Cultural Sequences at the Dalles, Oregon—a Contribution to Pacific Northwest Prehistory (Prof. L. S. Cressman, in collaboration with David L. Cole, Wilbur A. Davis, Thomas M. Newman and Daniel J. Scheans), 775
Philosophical Society (Cambridge) : Hopkins Prize awarded to M. J. Lighthill, 769
Philosophical Study of the Theory of Evolution : The Ascent of Life—a (Prof. T. A. Goudge), *review* by P. G. Fothergill, 1042
Philosophy : Evolution and, *review* by P. G. Fothergill, 1042
  Grassland, *review* by Prof. Ian Moore, 751
Philosophy of Science : The Foundations of Mathematics—a Study in the (Prof. Evert W. Beth), *review* by F. I. G. Rawlins, 570
Philosophy of Science of A. S. Eddington (John W. Yolton), *review* by Dr. C. W. Kilmister, 42
Phipps, J. D., and others : *Culicoides adersi* Ingram and Macfie, 1923, a Presumed Vector of *Hepatocystis* (=*Plasmodium*) *kochi* (Laveran, 1899), 739
Phloem Transport in Plants (British Biophysical Society Symposium on), 312
Phoma terrestris Hansen : Pigments of, and their Biosynthesis (Prof. A. J. Birch, R. I. Fryer, P. J. Thomson and Herchel Smith), 441
Phosphatase Repression by Inorganic Phosphate in some Micro-organisms : Absence of (Mau-Hual Kuo and Prof. Harold J. Blumenthal), 29
Phosphatase (Alkaline) : Hormonal Induction of, in Human Cells in Tissue Culture (Dr. Rody P. Cox and Dr. Colin M. MacLeod), 85
Phosphate (Inorganic), in some Micro-organisms : Absence of Phosphatase Repression by (Mau-Hual Kuo and Prof. Harold J. Blumenthal), 29
Phosphates (Apatitic Calcium) : Hydrogen Bonding in (Louis Winand, Prof. M. J. Dallemagne and Prof. G. Duyckaerts), 164
Phosphatidic Acid as the Sodium Carrier : Further Evidence for (Dr. Mabel R. Hokin and Dr. Lowell E. Hokin), 1016
Phosphide (Gallium) Crystals : Electroluminescence of (Frank G. Ullman), 161
Phospholipids (Liver), of Rats treated with Growth Hormone : Incorporation of Phosphoryl-choline labelled with Phosphorus-32 into the (R. S. Leal and Dr. A. L. Greenbaum), 548
Phosphorofluoridate (Di*iso*propyl) : Inhibition of Chymotrypsin with (A. J. J. Ooms), 533
Phosphorus-32 : Incorporation of, into Adenosine Triphosphate of Adrenal Chromaffin Granules (W. H. Prusoff, Dr. H. Blaschko, Dr. Margery G. Ord and Dr. L. A. Stocken), 354
  Incorporation of Phosphoryl-choline labelled with, into the Liver Phospholipids of Rats treated with Growth Hormone (R. S. Leal and Dr. A. L. Greenbaum), 548
Phosphorus-32 incorporated by Parents : Transmission of, into Descendants of *Drosophila melanogaster* (B. Faludi, I. Csukás, K. Széplaky and F. Á. Dániel), 469
Phosphorus Compounds of Cockroach Nerve : Nucleotides and other (J. P. Heslop and J. W. Ray), 1192
Phosphoryl-choline labelled with Phosphorus-32 : Incorporation of, into the Liver Phospholipids of Rats treated with Growth Hormone (R. S. Leal and Dr. A. L. Greenbaum), 548
Phosphorylation : Respiratory Effects of (Prof. H. Lundegårdh), 983
Phosphorylation (Noncyclic Photo-), of Green Plants : Separation of Two Light Reactions in (Dr. M. Losada, Dr. F. R. Whatley and Prof. Daniel I. Arnon), 606, *erratum*, 1063
Photobiology Group : Meeting at the University of Sheffield, 1156
Photochemical Reactions in Frozen Solutions (Prof. Shih Yi Wang), 690
Photochemical Synthesis of Amino-Acids and a New Transamination Process by Transfer of Free Amino-Radicals (Giovanni Ferrari and Prof. Rolando Cultrera), 326
Photochemical Systems in Photosynthesis : Two (Dr. L. N. M. Duysens, J. Amesz and B. M. Kamp), 510
Photoelastic Constants of Sodium Chloride : Variation with Temperature of the (Dr. K. V. Krishna Rao and V. G. Krishna Murty), 429
Photoelectric Spectrometry Group : Test on Recording Ultra-violet Spectrophotometers, 394
Photoemission into Liquid *n*-Hexane (Dr. D. W. Swan), 903
Photofixation of Nitrogen and a Unified Concept of Photosynthesis : Photoproduction of Hydrogen, (Prof. Daniel I. Arnon, Dr. M. Losada, Dr. M. Nozaki and Dr. K. Tagawa), 601
Photographs : X-Ray Diffraction, *review* by Dr. M. R. Truter, 69
Photographs (Aerial), in Geologic Interpretation and Mapping (Dr. Richard G. Ray), 1155
Photographs (X-Ray Diffraction) : The Interpretation of (Dr. N. F. M. Henry, Prof. H. Lipson and Dr. W. A. Wooster), second edition, *review* by Dr. M. R. Truter, 69
Photolysis of Nitromethane (Dr. A. J. C. Nicholson), 143
Photolysis (Flash) : Use of, to initiate Detonation in Gaseous Mixtures (J. Wadsworth), 623
Photolysis (Flash), of Ferrous Sulphate Solutions (Dr. J. H. Baxendale and A. L. Mansell), 622
Photometry : Flame (Prof. John A. Dean), *review* by H. L. Bolton, 66
Photomotor Reflex as an Indicator of Consciousness during Curarization (Dr. Phyllis G. Croft), 726
Photomultiplier Tube Applications (E.M.I. Electronics, Ltd., Symposium on), 769
Photon Rocket (G. G. Zelkin), 590
Photon and Gravitational Field Analogue : The Parametric Line—a (O. Nourse), 522
Photoperiodicity of Seasonal Rhythm of Wool Growth in Sheep (L. R. Morris), 102
Photo-Phosphorylation (Noncyclic), of Green Plants : Separation of Two Light Reactions in (Dr. M. Losada, Dr. F. R. Whatley and Prof. Daniel K. Arnon), 606, *erratum*, 1063
Photoproduction of Hydrogen, Photofixation of Nitrogen and a Unified Concept of Photosynthesis (Prof. Daniel I. Arnon, Dr. M. Losada, Dr. M. Nozaki and Dr. K. Tagawa), 601
Photo-Reaction (A New), between some Fyrocoumarins and Flavin Mononucleotide (Luigi Musajo and Giovanni Rodighiero), 1109
Photosynthesis : Effect of *Iso*nicotinyl Hydrazide on the Path of Carbon in (G. G. Pritchard, Prof. C. P. Whittingham and Wendy J. Griffin), 553
  Gibberellin Action on Growth of Seedlings in the Absence of (Alan H. Haber, William L. Carrier and N. Jean Enochs), 1034
  Photoproduction of Hydrogen, Photofixation of Nitrogen and a Unified Concept of (Prof. Daniel I. Arnon, Dr. M. Losada, Dr. M. Nozaki and Dr. K. Tagawa), 601
  Two Photochemical Systems in (Dr. L. N. M. Duysens, J. Amesz and B. M. Kamp), 510
Photosynthesis and Chemosynthesis (edited by Prof. F. C. Steward), (Plant Physiology, Vol. 1B), *review* by Prof. W. Stiles, 1046

Physalia physalis (L.) : Studies on, Part I, Natural History and Morphology ; Part 2, Behaviour and Histology (A. K. Totton and G. O. Mackie), (Discovery Reports, Vol. 30), 23
Physical Anthropology of Australian Aborigines (Prof. A. A. Abbie), 972
Physical Behaviour of Colliding Solids : Impact—the Theory and (Prof. Werner Goldsmith), *review* by Dr. R. P. N. Jones, 947
Physical Chemistry (C. W. Wood and Dr. A. K. Holliday), *review* by Charles Holt, 60
  Elements of (Samuel Glasstone and Prof. David Lewis), *review* by Dr. A. Maccoll, 477
Physical Chemistry at High Temperatures : Towards, *review* by Prof. A. R. Ubbelohde, 58
Physical Conditions of Soil (Dr. F. Haworth), 221
Physical Conditions (Soil), affecting Plant Growth (National Vegetable Research Station Association Talks and Demonstrations on), 221
Physical Examination of Metals (edited by Prof. Bruce Chalmers and Prof. A. G. Quarrell), second edition, *review* by Dr. A. R. Bailey, 661
Physical Metallurgy of Stress Corrosion Fracture (edited by Thor N. Rhodin), (Metallurgical Society Conferences, Vol. 4), *review* by Prof. F. C. Thompson, 383
Physical Societies (German), Association of (Plasma and Discharge Physics Group) : Fifth International Conference on Ionization Phenomena in Gases, 591
Physical Society (Institute of Physics and the) : Conference on Thermo-electricity, 963
Physical Society (Institute of Physics and the), and others : Rutherford Jubilee International Conference, 679
  Symposium on The Soil—Problems raised by its Use and Misuse, 770
Physical Society (Institute of Physics and the), in collaboration with the Institution of Electrical Engineers : Symposium on Electrical Contacts, 866
Physical Society (Applied Spectroscopy Group and the Manchester and District Branch of the Institute of Physics and the) : Joint Meeting on Spectroscopic Studies using Time-Resolution Techniques, 312
Physical Society (Electron Microscopy Group of the Institute of Physics and the) : Annual Conference (Physics of the Electron Microscope and its Applications), 591
  Symposium on the Physics of Sectioning and the Embedding Process, 591
Physical Society (United Kingdom Committee of the Low Temperature Group of the Institute of Physics and the) : Simon Memorial Prize awarded to Dr. I. M. Lifschutz), 1156
Physical Techniques in Metallurgy, *review* by Dr. A. R. Bailey, 661
Physical Theory of Carcinogenesis by Aromatic Hydrocarbons (Dr. J. B. Birks), 232
Physicist : Magnets—the Education of a (Prof. Francis Bitter), *review* by G. R. Noakes, 64
Physico-chemical Constants of Binary Systems in Concentrated Solutions (Prof. Jean Timmermans), Vol. 4, Systems with Inorganic + Organic or Inorganic Compounds (excepting Metallic Derivatives), *review* by Dr. E. F. G. Herington, 661
Physico-chemical Measurements at High Temperatures (edited by Dr. J. O'M. Bockris, Dr. J. L. White and Dr. J. D. Mackenzie), *review* by Prof. A. R. Ubbelohde, 58
Physics at Birmingham, 587
Physics in Grammar Schools, 377
Physics at Sheffield, 960
Physics : Fast Neutron (edited by J. B. Marion and J. L. Fowler), Part I, Techniques, *review* by J. H. Montague, 944
  International School for Research and Education in, established at the University of Uppsala (sponsored by the International Atomic Energy Agency, Unesco, and the Central Committee for Swedish Technical Assistance), 311
  Plasma (Prof. S. Chandrasekhar), *review* by Dr. W. B. Thompson, 65
Physics of the Electron Microscope and its Applications (Electron Microscopy Group of the Institute of Physics and the Physical Society Annual Conference), 591
Physics of Sectioning and the Embedding Process (Electron Microscopy Group of the Institute of Physics and the Physical Society Symposium on), 591
Physics of Semiconductors (A. F. Ioffe), *review* by Prof. R. E. Burgess, 947
Physics in Surface Coatings (1961 Biennial Conference of the Oil and Colour Chemists Association), 591
Physics, British National Committee for : Conference on Optical Instruments and Techniques, 963
Physics, Institute of, and the Physical Society : Conference on Thermo-electricity, 963
Physics, Institute of, and the Physical Society, in collaboration with the Institution of Electrical Engineers : Symposium on Electrical Contacts, 866
Physics, Institute of, and the Physical Society (United Kingdom Committee of the Low Temperature Group) : Simon Memorial Prize awarded to Dr. I. M. Lifschutz, 1156
Physics, Institute of, and the Physical Society (Applied Spectroscopy Group and the Manchester and District Branch) : Joint Meeting on Spectroscopic Studies using Time-Resolution Techniques, 312
Physics, Institute of, and the Physical Society (Electron Microscopy Group) : Annual Conference (Physics of the Electron Microscope and its Applications), 591
  Symposium on the Physics of Sectioning and the Embedding Process, 591
Physics, Institute of, and the Physical Society, and others : Rutherford Jubilee International Conference, 679
  Symposium on The Soil—Problems raised by its Use and Misuse, 770
Physics (Biological and Medical) : Advances in (edited by Cornelius A. Tobias and John H. Lawrence, assisted by Thomas L. Hayes), Vol. 7, *review* by Dr. N. M. Blackett, 74
Physics (Geometry and) : The Axiomatic Method, with special reference to —Proceedings of an International Symposium held at the University of California, Berkeley, 1958 (edited by Prof. Leon Henkin, Prof. Patrick Suppes and Prof. Alfred Tarski), *review* by F. I. G. Rawlins, 570
Physics (Health), (Radiation Protection): Summer School in (Imperial College of Science and Technology, London), 680
Physics (Nuclear) : Progress in (edited by Prof. O. R. Frisch), Vol. 8, *review* by Dr. Joan M. Freeman, 62
  Reviews of, *review* by Dr. Joan M. Freeman, 62
Physics (Plasma), and Thermonuclear Research (edited by G. Longmire, James L. Tuck and Dr. W. B. Thompson), Vol. I, *review* by Sir Basil Schonland, 750
Physics (Pure and Applied), International Union of, and others : Rutherford Jubilee International Conference, 679
Physics (Theoretical), at Birkbeck College, 308
Physics (Vacuum) : Standard Unit of Pressure in (Dr. N. A. Florescu), 522 ; (P. H. Bigg), 523
Physics and Chemistry (Mathematics,) : Prizes for papers on (Friedrich Vieweg und Sohn, Braunschweig), 16
Physics, Chemistry and General Science : Film-Strips and Wall-Charts in (Educational Productions, Ltd.), 395
Physik und Chemie des 20 Jahrhunderts : Beiträge zür—Lise Meitner, Otto Hahn, Max von Laue zum 80 Geburtstag (herausgegeben von O. R. Frisch, F. A. Paneth, F. Laves und P. Rosbaud), *review* by Dr. C. A. Taylor, 118
Physiological Responses to Hot Environments (compiled by Dr. R. K. Macpherson), 1163
Physiological Rhythms of Unrestrained Animals : Determination of, by Radio Telemetry (Warren O. Essler and Prof. G. Edgar Folk, jun.), 90
Physiological Significance : Osmotic Pressure Effect of the Red Blood Cells—Possible (Dr. A. Tybjaerg Hansen), 504
Physiologie: Vergleichende (Prof. W. von Buddenbrock), Band 5, Physiologie der Erfolgsorgane, *review* by Prof. O. Lowenstein, 1045
Physiologie der Erfolgsorgane (Prof. W. von Buddenbrock), (Vergleichende Physiologie, Band 5), *review* by Prof. O. Lowenstein, 1045
Physiology : General Plant Cell, *review* by Prof. Walter Stiles, 116
  Plant (edited by Prof. F. C. Steward), Vol. I*A*, Cellular Organization and Respiration, *review* by Prof. Walter Stiles, 116 ; Vol. I*B*, Photosynthesis and Chemosynthesis, *review* by Prof. W. Stiles, 1046
Physiology of Effector Organs, *review* by Prof. O. Lowenstein, 1045
Physiology of Reproduction (Marshall's), third edition, Vol. I, Part 2 (edited by Prof. A. S. Parkes), *review* by Dr. Anita M. Mandl, 1045
Physiology (Plant) : Advances in, *review* by Prof. Walter Stiles, 48
  Annual Review of, Vol. 11 (edited by Leonard Machlis, in association with Winslow R. Briggs), *review* by Prof. Walter Stiles, 48
Physique, Société Française de : Annual Exhibition, 397
Phytiatry : Phytopharmacy and (State Agricultural University, Ghent, third International Symposium on), 493
Phytopharmacy and Phytiatry (State Agricultural University, Ghent, third International Symposium on), 493
Phytoplankton : Filtration of, by the Octocoral *Alcyonium digitatum* L. (Dr. H. M. Roushdy and Dr. Vagn Kr. Hansen), 649
Picken, Laurence : The Organization of Cells and other Organisms, *review* by Dr. P. M. B. Walker, 845
Pictorial Guide to the Language of Science, *review* by Prof. T. A. A. Broadbent, 68
Pietrokowsky, Prof. P. : Occurrence of an Ordered Phase in an As-Cast Titanium–Aluminium Alloy, 77
Piezometer for the 100-Kilobar Region : Effects of High Pressure on Glass—a Possible (Prof. Rustum Roy and H. M. Cohen), 798
Pig : Arginine and 'Neurosecretory' Material in the Pituitary Gland of the (Dr. A. Howe), 175
Pig (New-born) : Intestinal Carbohydrases of a (Dr. Arne Dahlqvist), 31
Pigeon Pea (Cacao, Mango and) : Transmission of Gall-Diseases of (J. F. Archibald), 284
Pigment with a Diffusible Fruiting Factor : Association of a Steroid and a, in *Myxococcus virescens* (J. Jennings), 190
Pigment (A Bilatriene), in the Green Terebellid Polychaete *Eupolymnia heterobranchia* (Johnson), (Dr. R. Phillips Dales), 168
Pigment (Bile) Excretion in Amphibia (Roger Lester and Prof. Rudi Schmid), 452
Pigment (Ommatin), from Tyrosine : Formation of an, by Ultra-violet Irradiation (Maria Benigna Johnson), 924
Pigment (Visual), of Grapsoid Crabs (Michael H. Briggs), 784
Pigments of *Phoma terrestris* Hansen and their Biosynthesis (Prof. A. J. Birch, R. I. Fryer, P. J. Thomson and Herchel Smith), 441
Pigments (Soluble Melanoid) : Production of, by *Streptomyces* in Gelatin and Glucose Media (Prof. Augusto Capriotti), 464
Pigs : Gastric Esterases of (R. A. Evans and Dr. D. A. Stansfield), 1110
Pilkington, T. R. E., and others : Function of the Foetal Thyroid of the Rabbit with regard to Cholesterol Metabolism studied by Foetal Thyroidectomy, 822
Pinnae (Hairy) : Frequencies of, among Indian and Sinhalese Peoples (K. R. Dronamraju), 653
Pinus : Soil *p*H and Mycorrhiza Development in (Dr. B. N. Richards), 105
Pirie, N. W. : Biopoesis, *review*, 295
  Solar Wind and Terrestrial Oxygen, 706
Pirt, Dr. S. J. : Appointed to the University of London readership in microbiology at Queen Elizabeth College, London, 680
Pisciculture : Traité de (Prof. Marcel Huet), troisième édition, *review* by Dr. C. F. Hickling, 51
Pisot, Prof. Charles, et Zamansky, Prof. Marc : Mathématiques Générales—Algèbre, Analyse, *review* by Prof. T. A. A. Broadbent, 67
Pitman, W. J. (Carlisle, Dr. D. B., and) : Diapause, Neurosecretion and Hormones in Copepoda, 827
Pittock, A. B. : A Twilight Method of Determining the Vertical Distribution of Ozone, 426
Pitts, Clifford L., and others : A New Preparation of Gastrin—Preliminary Characterizations, 448
Pituitary Gland of the Pig : Arginine and 'Neurosecretory' Material in the (Dr. A. Howe), 175
Pituitary Hormones (Anterior) : Starch-gel Electrophoresis of (K. A. Ferguson and A. L. C. Wallace), 629
Place of Food Science and Technology in the Campaign against Malnutrition (Nutrition Society Symposium on), 398
Placenta (Human) : Choline Acetylase in the, at Different Stages of Development (Gordon Bull, Dr. Catherine Hebb and Dobrila Ratković), 1202
Plaisance, G. : Les Formations Végétales et Paysages Ruraux, *review* by N. Y. Sandwith, 478
Planet Earth : Beyond the (Konstantin Tsiolkovsky), translated from the Russian by Kenneth Syers, *review* by G. R. Noakes, 204
Plant : Flower Initiation in *Trifolium repens* L.—a Short-Long-Day (Roderick G. Thomas), 1130
Plant Breeding, European Association for Research in : Conference on Environmental Factors in the Distribution of Fruit Varieties, 16

Plant Cell Physiology : General, *review* by Prof. Walter Stiles, 116
Plant Communities : 'Antibiotic Effects' in (J. R. Cannon, N. H. Corbett, K. P. Haydock, J. G. Tracey and L. J. Webb), 189
Plant Disease Handbook (Dr. Cynthia Westcott), second edition, *review* by D. E. Green, 660
Plant Exploration and Introduction (Food and Agriculture Organization of the United Nations Technical Meeting on), 397
Plant Formations : A French Lexicon of, *review* by N. Y. Sandwith, 478
Plant Growth : Soil Physical Conditions affecting (National Vegetable Research Station Association Talks and Demonstrations on), 221
Plant Growth Regulators : Azulene Derivatives as (Prof. Robert M. Muir and Corwin Hansch), 741
Plant Pathology, *review* by D. E. Green, 660
Plant Physiology (edited by Prof. F. C. Steward), Vol. 1A, Cellular Organization and Respiration, *review* by Prof. Walter Stiles, 116 ; Vol. *1B*, Photosynthesis and Chemosynthesis, review by Prof. W. Stiles, 1046
  Advances in, *review* by Prof. Walter Stiles, 48
  Annual Review of, Vol. 11 (edited by Leonard Machlis, in association with Winslow R. Briggs), *review* by Prof. Walter Stiles, 48
Plant Virus Particles (Whole) : Negative Evidence against Passage of, through Gut Wall in Aphid Vectors (Prof. Frej Ossiannilsson), 1222
Plant Viruses in Crops : Diseases caused by (Association of Applied Biologists Paper-reading Meeting on), 220
Plantation (Jamaican Banana) : *Botryodiplodia theobromae* Pat. and *Nigrospora* sp. in the Air of a (Dr. D. S. Meredith), 555
Plantations (Coniferous) : Damage by *Rhizinia undulata* in, 685
Planting (Tree), in the National Parks (Prof. M. L. Anderson), 496
Plants : The Anatomy of (Prof. P. Font Quer), *review* by G. R. Noakes, 64
  Biosynthesis of Citrulline in (Dr. G. Reuter), 447
  Further Evidence of Polar Movement of Nutrients in (Prof. John Caldwell), 1028
  Phloem Transport in (British Biophysical Society Symposium on), 312
  Proteolytic Activity of Crude Stem Extracts from Normal and Tumour Tissues of (Prof. C. Gainor and F. D. Crisley), 1031
  Taxonomic Significance of Surface Lipids of (S. Jean Purdy and Dr. E. V. Truter), 554
Plants of the Order Malvales : Occurrence of *Cyclo*-Propene Acids in some (F. S. Shenstone and J. R. Vickery), 168
Plants (Chlorophyll-deficient Mutant): Staining Plastids in (W. R. Childers), 1029
Plants (Citrus) : Biochemical Indications as a means of Distinguishing between Iron and Manganese Deficiency Symptoms in (A. Bar-Akiva), 647
Plants (Flowering) : Experimental Taxonomy of (Linnean Society of London Symposium on), 968
Plants (Green) : Separation of Two Light Reactions in Noncyclic Photo-Phosphorylation of (Dr. M. Losada, Dr. F. R. Whatley and Prof. Daniel I. Arnon), 606, *erratum*, 1063
Plants (New Herbaceous Test-), for Study of the Infectious Degeneration of Grape Vines (E. Baldacci, A. Amici, P. Bonola, E. Betto, G. Fogliani and E. Refatti), 371
Plants (Rice) : Effects of Ionizing Radiations on (Maung Mya Thaung), 242
Plaskett, Prof. H. H. : Obituary of Ethel F. Bellamy, 391
Plasma : Trapping of, by Red Cells (Peggy Clark and B. J. Walsh), 678
Plasma in Steady Electric and Magnetic Fields : Confining a (K. A. George), 334
Plasma in Young Fowls : Adrenocorticotrophin and the Sugar-Level in (Dr. D. J. Bell), 913
Plasma (Blood), of Rabbits poisoned with Carbon Tetrachloride : Quinine Oxidase in Liver and (Dr. Gilberto G. Villela), 807
Plasmas (Hydrogenic) : Rates of Recombination in (Dr. R. W. P. McWhirter), 902
Plasma (Peripheral), of Intact Unanaesthetized Dogs : Influence of Changes of Blood Volume on the Concentration of Aldosterone in (Ejgil Bojesen and Hans Degn), 352
Plasma Clot Dissolution by Urea Derivatives (Prof. Kurt N. von Kaulla and Robert L. Smith), 449
Plasma-Electrolyte Regulation : An Electron Microscope Study of the 'Chloride-Secretory Cell' of *Salmo salar* L., with reference to (Dr. Lawrence T. Threadgold and Dr. Arthur Hillier Houston), 612
Plasma Erythropoietic Hormone : Stathmokinetic (Mitosis-inhibiting) Method for estimating (Dr. Hillas Smith), 640
Plasma Physics (Prof. S. Chandrasekhar), *review* by Dr. W. B. Thompson, 65
Plasmas (Mammalian) : Paraphenylenediamine Oxidase Activity and Copper-Levels in (P. J. McCosker), 887
Plastic Limit (Upper), of Clays : Interpretation of the (Prof. B. P. Warkentin), 287
Plasma Physics and Thermonuclear Research (edited by G. Longmire, James L. Tuck and Dr. W. B. Thompson), Vol. I, *review* by Sir Basil Schonland, 750
Plastics Industry Education Fund : Training Grants, 963
Plastids in Chlorophyll-deficient Mutant Plants : Staining (W. R. Childers), 1029
Platelets (Circulating), in Mice subjected to Simultaneous X-Ray and Ultraviolet Irradiation (I. Cserháti, F. Krizsa and K. Rák), 544
Platinum : Complex Hydrides of (Dr. J. A. Chopoorian, Dr. J. Lewis and Prof. R. S. Nyholm), 528
Platinum from the Earliest Times to the Eighteen-Eighties : A History of (Donald McDonald), *review* by Prof. F. C. Thompson, 61
Platt, Prof. B. S. : The Place of Food Science and Technology in the Campaign against Malnutrition, 398
Platt, Dr. H. : Phagocytic Activity in Squamous Epithelia and its Role in Cellular Susceptibility to Foot-and-Mouth Disease, 1075
Playford, P. E. : Rock Paintings in the West Kimberley Region of Western Australia, 767
Pletscher, A., and Gey, K. F. : Assay of 5-Hydroxytryptophan Decarboxylation in Intact Brain, 918
Pliva, J., und andere : Die Terpene, Teil I, Sesquiterpene, *review* by Dr. E. G. Kellett, 849
Plunkett, Dr. B. E. : Growth and Genetics of Higher Fungi (Fruiting Bodies of *Polyporus brumalis*), 399
Pneumococcus : Mechanism of the Transformation of the Polysaccharide Capsule in (Dr. D. M. Kohoutová), 1171
Podzol Soil : An Estimate of the Aromaticity of the Organic Matter of a (Dr. J. R. Wright and Dr. M. Schnitzer), 703
Poel, Dr. L. W. : Appointed to a senior lectureship in botany in the University of Birmingham, 679
Poikilotherm (Tropical), the Earthworm, *Megascolex mauritii* : Seasonal Acclimatization of Oxygen Consumption to Temperature in a (K. Saroja), 930
Point (*n*-) Graph : The Complete (H. P. Goodman), 840
Poiseuille Flow : Axial Migration of Particles in (H. L. Goldsmith and S. G. Mason), 1095
Poisoning (Selenium), in various Animals : Experimentally Produced (Hiroshi Tsuzuki, Kazuhoshi Osawa and Takashi Hosoya), 310
Poisonous Seed Dressings : Birds killed by (British Trust for Ornithology and the Royal Society for the Protection of Birds), 218
Pokorny, Barbara Ann, and others : Inhibition by Cortisone of the Synthesis and Action of Interferon, 650
Poland : Technological Development in, 14
Polar Cap Absorption Events : Enhancement of Night-Sky Molecular Nitrogen Emission in (B. P. Sandford), 245
Polar Exploration : New Results in (Deutsche Gesellshaft für Polarforschung Meeting on), 493
Polar Movement of Nutrients in Plants : Further Evidence of (Prof. John Caldwell), 1028
Polarforschung, Deutsche Gesellschaft für : Meeting on New Results in Polar Exploration, 493
  Symposium on Scientific Problems of Exploring Greenland, 493
Polarographic Determination of Vanillin (Jiří Davídek), 1003
Polarography, *review* by Dr. D. T. Lewis, 476
  Advances in—Proceedings of the Second International Congress held at Cambridge, 1959 (edited by Ian S. Longmuir), *review* by Dr. D. T. Lewis, 476
Policies (Economic Problems and), in Contemporary Britain : Growth in the British Economy, a Study of (Political and Economic Planning), 199
Policy (Scientific), Belgian Advisory Council for : First Annual Report (1959-60), 313
Polish Academy of Sciences : *Review* of the, No. 2, 14
Political and Economic Planning : Growth in the British Economy, a Study of Economic Problems and Policies in Contemporary Britain, 199
  Broadsheet No. 448, Parents' Views on Education, 497
Pollen (*Nothofagus*), in the London Clay (Ma Khin Sein), 1030
Pollen Analysis in Uganda (Dr. M. E. S. Morrison), 483
Pollination (Cross-) : Estimation of Percentage Natural—Experiments on Rice (E. H. Roberts, R. Q. Craufurd and F. Le Cochec), 1084
Pollution (Water) Research Board : Appointment of Dr. C. J. Jackson as chairman, 135
Polonsky, —., and others : Television and Film Techniques (Recent Progress in the SECAM Frequency Modulation Colour Television System), 868
Polyadenylic Acid in Methanol Solution : Properties of (R. F. Steiner), 340
Polychaete *Eupolymnia heterobranchia* (Johnson) : A Bilatriene Pigment in the Green Terebellid (Dr. R. Phillips Dales), 168
Polychaete Worm *Ophryotrocha puerilis siberti* (Hermaphrodite) : Existence of Multiple Sex Genotypes in the (Prof. G. Bacci and O. Bortesi), 838
Polyethylene : Some Electron Microscopic Observations on Single Crystals of (R. Westrik and A. M. Kiel), 162
Polyglycerophosphate : Bacterial (Prof. F. S. Stewart), 464
Polyhedrosis Virus (Nuclear), in Insect Amoebocytes : Multiplication *in vitro* of a (M. E. Martignoni and R. J. Scallion), 1133
Polymer Characterization and Analysis : Methods of (Bradford Institute of Technology Course on), 312
Polymers of Carbon Dioxide (P. G. Bentley), 432
Polymers (High) : The Importance of Hydroxyl Radicals as Intermediates in the Cross-linking of, by γ-Irradiation (Yoshitada Tomoda and Minoru Tsuda), 905
Polymers (Water-soluble) : Effect of, on Nitrate Reductase Activity (H. R. Schreiner and A. P. Rinfret), 1110
Polymorphic State of Transferrin : Effects of Speciation on Serum Proteins in the Genus *Macaca* with Special Reference to the (Dr. Morris Goodman and Emily Poulik), 171
Polymorphism of α_1-Acid Glycoprotein (K. Schmid and J. P. Binette), 630
Polynuclear Cobalt Complexes : Structure of (Prof. Cyrill Brosset and Nils-Gösta Vannerberg), 714
Polyoma : Intracellular Structures in Tumours induced by (Leon Dmochowski, Clifford E. Grey, Elizabeth Bereczky and Julian Blicharski), 610
Polypeptide Formation from Asparagine under Hypothetically Primitive Conditions (J. Kovács and H. Nagy (Kovács)), 531
Polypeptides : Proposed Molecular Models of Gramicidin *S* and other (Dr. Donald T. Warner), 120
Polypnoea evoked by Heating the Scrotum of the Ram (Dr. G. M. H. Waites), 172
Polypnoea evoked by Heating the Udder of the Goat (J. L. Linzell and J. Bligh), 173
Polysaccharide Capsule in Pneumococcus : Mechanism of the Transformation of the (Dr. D. M. Kohoutová), 1171
Polysaccharides of Micro-organisms (Prof. M. Stacey and Dr. S. A. Barker), *review* by Prof. W. T. J. Morgan, 55
Ponder, Dr. Eric, and Ponder, Dr. Ruth V. : Age and Molecular Weight of Dextrans—their Coating Effects, and their Interaction with Serum Albumin, 277
Ponder, Dr. Ruth V. (Ponder, Dr. Eric, and) : Age and Molecular Weight of Dextrans—their Coating Effects, and their Interaction with Serum Albumin, 277
Ponsonby, J. E. B., and others : A New Determination of the Solar Parallax by means of Radar Echoes from Venus, 519
Pontide Paradox (M. V. Muratov), 864 ; (N. I. Rubtzov), 864
Pool, W. A. (edited by) : The Veterinary Annual 1960, *review* by Dr. G. Lapage, 296
Pooley, D., and others : Electron Spin Resonance Spectra of γ-Irradiated Carbohydrates and α-Hydroxy Acids, 259
Popham, Dr. Edward J. : The Function of the Paleal Pegs of Corixidae (Hemiptera Heteroptera), 742
Population : The Expanding, *review* by the Very Rev. Dr. W. R. Matthews, 41
Population in Britain : Rise in, 766
Population Explosion and Christian Responsibility (Dr. Richard M. Fagley), *review* by the Very Rev. Dr. W. R. Matthews, 41
Population Statistics in England and Wales, 1061

Populations of the Codling Moth, *Cydia pomonella* (L.) : Numerical Regulation of (P. W. Geier), 561
Populations (Human) : Natural Selection in (Symposia of the Society for the Study of Human Biology, Vol. 2), (edited by D. F. Roberts and G. A. Harrison), *review* by Kenneth A. R. Kennedy, 72
Populations (Irradiated *Drosophila*) : Analysis of, for Meiotic Drive (Prof. E. Novitski and G. D. Hanks), 989
Porphyrin Metabolism : Study of Defects in, by means of Isotopes (Prof. C. Rimington), 870
  Use of Tracers in the Study of Diseases of (Biology Division of the French Atomic Energy Commission Colloquium on), 870
Portal and Hepatic Blood in Normal and Cirrhotic Liver : Flow of (Dr. T. Nakamura, S. Nakamura and T. Kaneko), 812
Porter, Dr. Arthur : Appointed first professor of industrial engineering in the University of Toronto, 131 ; work of, 131
Porter, Dr. N. A. : Elected a Member of the Royal Irish Academy, 492
Portuguese Man-of-War (Dr. W. J. Rees), 23
Position (Uterine) : Influence of, on the Response of the Mouse Embryo to the Teratogenic Effects of Hypervitaminosis-A (Dr. D. H. M. Woollam and Dr. J. W. Millen), 184
Positive-Ion Density in the Ionosphere : Measurement of, by Sounding Rocket (T. Ichimiya, K. Takayama, T. Dote, Y. Aono, K. Hirao, S. Miyazaki, T. Sugiyama and T. Muraoka), 156
Posner, Jerome B., and others : Effects of Mental Activity on Vestibular Nystagmus and the Electroencephalogram, 194
Posnette, Dr. : Diseases caused by Plant Viruses in Crops (Importance of Cherry Leaf Roll), 221
Pospíšil, Dr. M. : Response of Thymus to Increase of Intake of Sodium Chloride, 89
Possibility of Obtaining E.M.F. directly from Acid-Base Reactions—Electrodes of the Third Kind reversible to Alkaline Earth and other Ions (W. H. Beck), 712
Possible Enzyme Model for Haem Iron Incorporation : Catalysis of Metalloporphyrin Formation—a (M. B. Lowe and J. N. Phillips), 262
Possible Explanation for the Failure of Non-Surgical Ovum Transfers in the Cow (Movement of the Ovum in the Reproductive Tract), (M. J. K. Harper, J. P. Bennett and L. E. A. Rowson), 789
Possible Identification of Atmospheric Waves associated with Ionospheric Storms (M. D. Wright), 898
Possible Physiological Significance : Osmotic Pressure Effect of the Red Blood Cells— (Dr. A. Tybjaerg Hansen), 504
Possible Piezometer for the 100-Kilobar Region : Effects of High Pressure on Glass—a (Prof. Rustum Roy and H. M. Cohen), 798
Possible Primitive Earth Conditions : Amino-acid Synthesis from Hydrogen Cyanide under (Prof. J. Oró and S. S. Kamat), 442
Possible Role of Nucleopeptides in Protein Biosynthesis (P. Szafrański and M. Bagdasarian), 719
Possible Specificity of Albumin Auto-Antibodies (W. L. Marsh and W. J. Jenkins), 180
Post Office (General) : Appointment of Dr. R. Conrad as consultant in applied psychology, 865
Post-Synaptic Sites (Pre- and) : A Proposed Dual Neurohumoral Role of Acetylcholine—its Functions at the (George B. Koelle), 208
Postgraduate Course in Nuclear Technology (Chemical), (Imperial College of Science and Technology, London), 16
Postgraduate Courses, 1961-62, at the Imperial College of Science and Technology, London, 396
Postgraduate Courses in Public Health Engineering (Imperial College of Science and Technology and the London School of Hygiene and Tropical Medicine), 971
Postgraduate Medical School of London : Title of reader in chemical pathology in the University of London conferred on Dr. I. D. P. Wootton, 219
  Title of professor of urology conferred on Ralph Shackman, 963
Postgraduate Training Grants in Fishery Research (Ministry of Agriculture, Fisheries and Food and the Department of Agriculture and Fisheries for Scotland), 679
Potassium-deficient Rat : Detection of Serum Proteins within the Renal Collecting Tubule Cells of the (Ashton B. Morrison and Kenneth D. Gardner, jun.), 96
Potassium–Argon Ages of the Dartmoor and Shap Granites using the Total Volume and Isotopic Dilution Techniques of Argon Measurement (M. H. Dodson, J. A. Miller and D. York), 800
Potassium–Argon Method : Determination of the Age of a Basic Igneous Intrusion by the (Dr. Ian McDougall), 1184
Potassium Nitrate (Ammonium Nitrate–) : Solid Solutions in the System (R. V. Coates and J. M. Crewe), 1190
Potassium and Sodium (Blood), of Hereford and Brahman Cattle and some Breeds of Sheep maintained in Florida (J. R. Howes, G. K. Davis, P. E. Loggins and J. F. Hentges), 181
Potato Tubers : Reversal of γ-Ray-induced Dormancy of, by Gibberellic Acid (Dr. P. B. Mathur), 547
Potent (Highly), and Selective Anti-emetic Agent in Dogs : Haloperidide (*R* 3201), a (Dr. P. A. J. Janssen and C. Niemegeers), 911
Potential (Ionization), and Molecular Complex of Benzothiazol with Iodine (Prof. J. Collin and M. Nagels), 82
Potential (Retinal Slow), of the Horseshoe Crab : Effect of Temperature on the (Dr. R. Kikuchi, K. Naito and S. Minagawa), 1011
Potential Difference in the Intestinal Epithelium of the Turtle : Origin of the (Michelle Baillien and E. Schoffeniels), 1107
Potential Source of Error in the Hexobarbitone Sleeping-Time Test in Mice (Dr. P. W. Ramwell and I. H. Lester), 640
Potentials (Spontaneous), from Explants of Chick Cerebral Hemisphere (Telencephalon) in Tissue Culture (Prof. A. W. B. Cunningham), 816
Potentials (Spontaneous), from Explants of Human Adult Cerebellum in Culture (Prof. A. W. B. Cunningham), 918
Potter, Dr. C. : Diseases caused by Plant Viruses in Crops, 220
Potter, Dr. C. (read by) : Fungicides in Agriculture and Horticulture (Theoretical Bases for Fungicides), (paper by Dr. A. H. McIntosh), 593
Pouch (Granuloma) : Presence of Sialic Acid in a (Lorenzo Bolognani, Germano Coppi, Ferdinando Della Berta and Prof. Vittorio Zambotti), 913
Poulik, Emily (Goodman, Dr. Morris, and) : Effects of Speciation on Serum Proteins in the Genus *Macaca* with Special Reference to the Polymorphic State of Transferrin, 171
Poultry Breeding (G. E. Mann), third edition (Ministry of Agriculture, Fisheries and Food, Bulletin No. 146), 394
Pound, Prof. R. V. : Elected a Member of the United States National Academy of Sciences, 674
Powder Metallurgy, *review* by J. H. Rendall, 572
  Fundamental Principles of (Dr. W. D. Jones), *review* by J. H. Rendall, 572
Power, E. A. (edited by T. C. Griffith and) : Nuclear Forces and the Few-Nucleon Problem—Proceedings of the International Conference held at University College, London, 1959, *review* by Dr. R. J. N. Phillips, 63
Power (Nuclear) Programme (House of Commons Debate on), 199
Power (Thermoelectric), of Calcium Oxide: Electrical Conductivity and (Dr. C. H. B. Mee), 1093
Powles, R. : At the Australian Arid Zone Technical Conference (Aspects of Water), 20
Pox (Rabbit-) and Vaccinia Viruses : An Immunizing Antigen from (G. Appleyard), 465
Practical Heredity with *Drosophila* (Dr. Gordon Haskell), *review* by T. H. Hawkins, 573
Practical Organic Chemistry (Dr. Frederick George Mann and Dr. Bernard Charles Saunders), fourth edition, *review* by Dr. J. D. Loudon, 753
Practice (Chemical Engineering Education and) : A Survey of (Prof. R. Edgeworth Johnstone), 113
Pre-immunized Mice exposed to Continuous γ-Radiation : Haemagglutinin Production in (J. P. M. Bensted), 99
Pre- and Post-Synaptic Sites : A Proposed Dual Neurohumoral Role of Acetylcholine—its Functions at the (George B. Koelle), 208
Precautions in the Use of Ferri- or Ferro-cyanide for the Study of Haemoproteins (Prof. D. Keilin), 717
Precipitation of Barium Chromate by an Extra-slow Technique : Some Features of the (Tadeusz Adamski), 524
Precipitation of Sub-Micron Dust in Still Air by Cloud-size Water Droplets (Dr. M. M. Bhadani and N. G. T. Ludlow), 974
Precipitation (Radiometric), in Filter Paper—a Rapid Method of Microanalysis (M. Thackray), 434
Precipitation Reaction between Serum and Lysed Erythrocytes (Dr. J. F. Wilson and D. M. Jobling), 550
Precipitation, Drinking Water, Milk and Beef (Air,) : Caesium-137 in, in Norway during 1959 and 1960 (T. Hvinden and A. Lillegraven), 402
Precision and Accuracy in Gas Chromatographic Analysis (R. S. Evans and P. G. W. Scott), 710
Precursors (Œstradiol 17β, Testosterone and its) : Identification of, from *Scylliorhinus stellaris* Testes (Dr. G. Chieffi and Dr. C. Lupo), 169
Prediction of the Effect of Light-Time Fraction on the Critical Flicker Frequency—an Insight from Fourier Analysis (K. Gibbins and Dr. C. I. Howarth), 330
Prediction of Retention Data in Gas–Liquid Chromatography from Molecular Formulae (M. B. Evans and J. F. Smith), 905
Preference in Equiprobable Situations : Patterns of (Prof. John Cohen and Peter Cooper), 231
'Preferred Temperatures' of Land Arthropods (David S. Madge), 106
Pregnane-3α, 17α, 20α-Triol, Pregnane-3α, 17α, 20α-Triol-11-One and other Adrenal Cortical Steroids : Reaction of Antimony Pentachloride with (Capt. Robert H. Herman and Joseph Bruton), 444
Pregnant Whales : Identification of 20β-Hydroxy-pregn-4-ene-3-one in Luteal Tissue from (John Kristoffersen, Torleiv Lunaas and Weiert Velle), 1009
Prehistory : South African, 961
Prehistory (Pacific Northwest) : Cultural Sequences at the Dalles, Oregon —a Contribution to (Prof. L. S. Cressman, in collaboration with David L. Cole, Wilbur A. Davis, Thomas M. Newman and Daniel J. Scheans), (Transactions of the American Philosophical Society, New Series, Vol. 50, Part 10), 775
Preliminary Experimental Tests of a Novel Method of Radiating at Very Low Frequencies : Some (R. N. Gould), 332
Preliminary Model for the Variations of Upper Air Densities (Dr. H. K. Paetzold), 35
Prelude to Sociology, *review* by Prof. L. S. Hearnshaw, 379
Preparation of Microsections : Use of Transparent Adhesive Tape in the (D. S. Gowers and R. E. Miller), 424
Preparation of Sheep Growth Hormone (A. L. C. Wallace), 535
Preparation (A New), of Gastrin—Preliminary Characterizations (Prof. T. Lloyd Fletcher, Walter R. Anderson, Clifford L. Pitts, Richard L. Cohen and Henry N. Harkins), 448
Preparation (Rat-Diaphragm) : Influence of Gamma-Aminobutyric Acid on the Acetylcholine Responses of the Denervated (Dr. R. S. Watson), 724
Preparation and Properties of Purified House Dust Allergen (Dr. L. Berrens and E. Young), 536
Preparations : Biochemical (edited by Henry A. Lardy), Vol. 7, *review* by Dr. F. H. Malpress, 118
Presence of Lewis Substances in Serum during Infancy : Significance of (Dr. Sylvia D. Lawler and Ruth Marshall), 1020
Presence of Sialic Acid in a Granuloma Pouch (Lorenzo Bolognani, Germano Coppi, Ferdinando Della Berta and Prof. Vittorio Zambotti), 913
Presence and Absence of Boron : Effects of Quality of Light on Development of Roots on Dwarf Bean Hypocotyls in (Dr. E. C. Humphries), 701
Present State of Ergodic Theory (Dr. I. E. Farquhar), 17
Presentation (The Literary), of Science, *review* by A. L. Bacharach, 847
Preservation of Mouse Bone Marrow at -79°C. with Dimethyl Sulphoxide (M. J. Ashwood-Smith), 1204
Preservation of Rural England and Wales, Councils for the, and the Joint Action Group for the Protection of Dartmoor and Exmoor (Standing Committee on National Parks of the) : The Case for Control of Afforestation of Open Land in National Parks, 496
Pressure in Vacuum Physics : Standard Unit of (Dr. N. A. Florescu), 522 ; (P. H. Bigg), 523
Pressure (High) : Effects of, on Glass—a Possible Piezometer for the 100-Kilobar Region (Prof. Rustum Roy and H. M. Cohen), 798
Pressure (Osmotic) Effect of the Red Blood Cells—Possible Physiological Significance (Dr. A. Tybjaerg Hansen), 504
Pressure (Reduced Oxygen) : Growth of *Fomes annosus* under, and the Effect of Carbon Dioxide (Dr. K. Gundersen), 649
Preston, Prof. R. D. : *Obituary* of Dr. M. F. E. Nicolai, 487
  Sorption of Copper by Cellulose, 804

Presumed Vector of *Hepatocystis* (=*Plasmodium*) *kochi* (Laveran, 1899) : *Culicoides adersi* Ingram and Macfie, 1923, a (Prof. P. C. C. Garnham, R. B. Heisch, D. M. Minter, J. D. Phipps and Michael Ikata), 739
Prevention : Metallic Corrosion and its (Exhibition on, at the Science Museum, London), 15
Prevention by Cysteamine of Radical Formation in Bovine Serum Albumin by γ-Rays (D. Libby, M. G. Ormerod, Prof. A. Charlesby and Dr. P. Alexander), 998
Prevention of Manganese Deficiency in Oat by soaking the Grain in Solutions of Manganous Chloride (Donald S. H. Drennan, Alex. M. M. Berrie and Gordon A. Armstrong), 824
Priapulus caudatus : Function of the Caudal Appendage of (Prof. Ragnar Fänge and Artur Mattisson), 1216
Price, M. R., and others : The Unit of Electron Flux, 162
Price, N. B. (Bloxam, Dr. T. W., and) : Stilpnomelane in North Wales, 525
Priestley, Dr. —. : Solar Seeing, 771
Priestley Lectures (Thirty-fourth Annual) : Unnatural Products—New and Useful Materials from Silicon (Prof. Eugene G. Rochow), *review* by Dr. J. S. Anderson, 59
Primary Aliphatic Amines : Phase-Velocity of Ultra-sound in the (L. V. Kite), 1183
Primary Metabolic Defect supervening on Vitamin B_{12}-Deficiency in the Sheep—Résumé of Experimental Findings which led to the Present Investigations (Dr. Hedley R. Marston), 1085 ; Demonstration, *in vivo*, of the Site of the Metabolic Defect (Shirley H. Allen, Dr. Hedley R. Marston and Richard M. Smith), 1087 ; Localization, *in vitro*, of the Metabolic Defect, and Separation of the Vitamin B_{12}-containing Methyl Malonyl Co-isomerase (Dr. Hedley R. Marston and Richard M. Smith), 1088 ; Lack of Influence of Vitamin B_{12}-Deficiency on the Sheep's Capacity to Metabolize Glutamate (Shirley H. Allen and Dr. Hedley R. Marston), 1091
Primary Spermatocytes of Mouse under Elevated Temperature : Synaptinemal Complexes (Cores) in (Dr. B. R. Nebel and E. M. Hackett), 467
Primitive Conditions (Hypothetically) : Polypeptide Formation from Asparagine under (J. Kovács and H. Nagy (Kovács)), 531
Primitive Earth : Comets and the Formation of Biochemical Compounds on the (Prof. J. Oró), 389
Primitive Earth Conditions : Amino-acid Synthesis from Hydrogen Cyanide under possible (Prof. J. Oró and S. S. Kamat), 442
Primitive Rock-Shelter Art in Australia, 767
Princeton University : Seminar on Transformation Groups (Armand Borel), *review* by Dr. Hanna Neumann, 571
Principals of the Universities of the United Kingdom (Committee of Vice-Chancellors and) : Third Report of an *ad hoc* Committee on Procedure for Admission of Students, 401
Principle of Relativity and the Fundamentals of Classical Mechanics : L. Euler, The (D. Speiser), 757
Principle (A 'Natriferic'), other than Arginine–Vasotocin in the Frog Neurohypophysis (F. Morel, J. Maetz, R. Acher, J. Chauvet and M. T. Lenci), 828
Principle (Toxic), in *Acacia georginae* : Isolation of the (P. B. Oelrichs and T. McEwan), 808
Principles of Electricity and Magnetism (Y. Rocard), translated by G. F. Herrenden, *review* by Dr. E. Stanley, 76
Principles (Fundamental), of Powder Metallurgy (Dr. W. D. Jones), *review* by J. H. Rendall, 572
Prior, A. C., and others : Observation of Far Infra-Red Radiation from Shock Waves, 599
Pritchard, G. G., and others : Effect of *Iso*nicotinyl Hydrazide on the Path of Carbon in Photosynthesis, 553
Probes (Moon), and Artificial Satellites, their Impact on Human Destiny : The Conquest of Space— (Albert Ducrocq), 567
Problem of Communication : Science and Industry—the (Department of Scientific and Industrial Research Conference on), 965
Problem (Few-Nucleon) : Nuclear Forces and the—Proceedings of the International Conference held at University College, London, 1959 (edited by T. C. Griffith and E. A. Power), *review* by Dr. R. J. N. Phillips, 63
Problem (Phase), in X-Ray Crystal Analysis : Computing Methods and the —Report of a Conference held at Glasgow, 1960 (edited by Ray Pepinsky, J. M. Robertson and J. C. Speakman), *review* by Dr. A. D Booth, 752
Problems of Ageing, *review* by Prof. P. L. Krohn, 1144
Problems of Economic and Social Development, *review* by Prof. T. S. Simey, 1142
Problems of Laboratory Animal Disease (International Committee on Laboratory Animals Symposium on), 677
Problems raised by its Use and Misuse : The Soil— (Institute of Biology, the Royal Institute of Chemistry, the Institute of Physics and the Physical Society Symposium on), 770
Problems (Current), in Animal Behaviour (edited by Dr. W. H. Thorpe and Prof. O. L. Zangwill), *review* by Dr. N. Tinbergen, 570
Problems (Ecological), in the Tropics (National Academy of Sciences of India Symposium on), 772
Problems (Economic), and Policies in Contemporary Britain : Growth in the British Economy, a Study of (Political and Economic Planning), 199
Problems (Export), and the Technical Chemist, 132
Problems (Fundamental), in Statistical Mechanics (Netherlands University Foundation for International Co-operation Summer School in Science), 769
Problems (Geophysical) : Solar Variations, Climatic Change and related (Section of Geological Sciences and Division of Oceanography and Meteorology of the New York Academy of Sciences, in co-operation with the American Meteorological Society Symposium on), 967
Problems (Research), encountered in the Study of Blood as a Rheological Fluid : Some Recent (Cambridge Rheology Club Discussion on), 1062
Problems (Scientific), of Exploring Greenland (Deutsche Gesellschaft für Polarforschung Symposium on), 493
Procedure for Admission of Students : Third Report of an *ad hoc* Committee on (Committee of Vice-Chancellors and Principals of the Universities of the United Kingdom), 401
Process (Embedding) : The Physics of Sectioning and the (Electron Microscopy Group of the Institute of Physics and the Physical Society Symposium on), 591
Process (New Transamination), by Transfer of Free Amino-Radicals : Photochemical Synthesis of Amino-Acids and a (Giovanni Ferrari and Prof. Rolando Cultrera), 326
Process Control (Industrial) : Analytical Instrumentation of (Elliott Brothers (London), Ltd., Private Symposium and Exhibition on), 865
Processes of Development, *review* by Prof. C. H. Waddington, 475
Production of *B* Character on Human Erythrocytes by Haemosensitization with Purified *Escherichia coli O* 86 Substance (Dr. Jørgen Andersen), 730
Production of Pyrogenic Substances by Extracts of Delayed Hypersensitive Cells mixed with Antigen *in vitro* (Dr. J. Johanovsky), 355
Production of Soluble Melanoid Pigments by *Streptomyces* in Gelatin and Glucose Media (Prof. Augusto Capriotti), 464
Production (Cell), and its Regulation : Ciba Foundation Symposium on Haemopoiesis— (edited by G. E. W. Wolstenholme and Maeve O'Connor), *review* by Dr. P. F. Harris, 479
Production (Haemagglutinin), in Pre-immunized Mice exposed to Continuous γ-Radiation (J. P. M. Bensted), 99
Production (Seed), in Wheat : The Effect of Depth of Transplanting on Tillering and (Dr. R. Halwagy), 513
Products : Unnatural, *review* by Dr. J. S. Anderson, 59
  Unnatural—New and Useful Materials from Silicon (Prof. Eugene G. Rochow), (Thirty-fourth Annual Priestley Lectures), *review* by Dr. J. S. Anderson, 59
Products (Extraction) : Distribution of Oxygen in a Vitrinite and its (A. Halleux, S. Delavarenne and H. Tschamler), 437
Products (New), from Wheat Starch Flour and Gluten (B. H. Thewlis), 260
Professional Civil Servants, Institution of : Annual Report for 1960, 309
Profile (Soil) Development : Glaciation as related to (Welsh Soils Discussion Group Meeting on), 219
Progesterone : Effects of certain Androgenic Steroids on the Increase of Endometrial Carbonic Anhydrase caused by (Dr. Kazukuni Yamashita and Ken-ichi Kurouji), 1013
Progesterone and Growth Hormone (3-Methyl-cholanthrene, Œstradiol 17β,) : Induction of Mammary Carcinoma in Hypophysectomized Rats treated with (Dr. Stretton Young), 356
Programme of Sounding Rockets, 1061
Progress : Science in, Eleventh Series (Armand J. Eardley, Richard J. Russell, J. Tuzo Wilson, Serge A. Korff, C. M. Jansky, Jr., Gerald S. Hawkins, Alfred C. Redfield, B. F. Skinner, Roger J. Williams, E. Cuyler Hammond, J. W. Beard, John Turkevich and A. C. Zettlemoyer), (edited by Hugh Taylor), *review* by Prof. Ritchie Calder, 45
Progress in Nuclear Energy, Series 4, Technology, Engineering and Safety, Vol. 2 (edited by R. Hurst, R. N. Lyon and C. M. Nicholls), *review* by D. English, 204
Progress in Nuclear Physics (edited by Prof. O. R. Frisch), Vol. 8, *review* by Dr. Joan M. Freeman, 62
Progress in Semiconductors, Vol. 5 (edited by Dr. Alan F. Gibson, Prof. R. E. Burgess and Dr. F. A. Kröger), *review* by Dr. B. R. Pamplin, 116
Prohaska, C. A., and others: Doubling of the Proton Magnetic Resonances of certain Organophosphorus Compounds, 903
Projects (Current), on the Economic and Social Implications of Scientific Research and Development, 1960 (United States National Science Foundation), 863
Prolactin Activity of Human Growth Hormone (K. A. Ferguson and A. L. C. Wallace), 632
Proliferation (Renal), in the Unilaterally Nephrectomized Rat (Dr. David M. Kessner and E. Donnall Thomas), 175
Proliferative Cycle in the Growing Hair Follicle of the Mouse (S. M. Cattaneo H. Quastler and F. G. Sherman), 923
Promazine, Quinine, Sulphacetamide and Acetophenetidin : A New Technique of Chromatography and Ionophoresis on Ion-exchange Paper—Application to Separation of Compounds of Toxicological Interest—Separation of a Mixture of (Harold V. Street and Dr. S. K. Niyogi), 1199
Propellant (Liquid) Rockets (David Altman, James M. Carter, S. S. Penner and Dr. Martin Summerfield), *review* by Prof. D. B. Spalding, 66
Propellant (Rocket) Handbook (Boris Kit and Douglas S. Evered), *review* by Prof. D. B. Spalding, 66
Propellant (Solid) Rocket Research—a Selection of Technical Papers based mainly on a Symposium of the American Rocket Society, held at Princeton University, 1960 (edited by Dr. Martin Summerfield), *review* by Prof. D. B. Spalding, 66
Propellant (Solid) Rockets (Clayton Huggett, C. E. Bartley and Mark M. Mills), *review* by Prof. D. B. Spalding, 66
Propene (*Cyclo*-) Acids in some Plants of the Order Malvales : Occurrence of (F. S. Shenstone and J. R. Vickery), 168
Properties of Polyadenylic Acid in Methanol Solution (R. F. Steiner), 340
Properties of Purified House Dust Allergen : Preparation and (Dr. L. Berrens and E. Young), 536
Properties of Rat Mammary Tissue : Some (M. W. Smith), 541
Properties of Stressed Bone (H. M. Pearson), 1217 ; (Prof. C. J. Dreyer), 1217
Properties (Anomalous Thermoelectric), of Gadolinium Selenide (R. C. Vickery and H. M. Muir), 336
Properties (Mechanical and Technological), of Metals : Determination of the (B. M. Gliner), translated from the Russian, second edition, *review* by James G. Tweeddale, 573
Properties (Oncogenic) : Variant of Parotid Tumour (Polyoma) Virus showing a Change in (Lloyd W. Law, Alan S. Rabson and Clyde J. Dawe), 97
Properties (Thermodynamic and Transport), of Air, Argon, Carbon Dioxide, Carbon Monoxide, Hydrogen, Nitrogen, Oxygen and Steam : Tables of (Joseph Hilsenrath, Charles W. Beckett, William S. Benedict, Lilla Fano, Harold J. Hoge, Joseph F. Masi, Ralph L. Nuttall, Yeram S. Touloukian and Harold W. Woolley), *review* by Prof. A. R. Ubbelohde, 58
Properties and Structures : Terpene, *review* by Dr. E. G. Kellett, 849
Proposal for Increasing the Beam Output from a Synchrocyclotron (F. M. Russell), 335
Proposed Dual Neurohumoral Role of Acetylcholine—its Functions at the Pre- and Post-Synaptic Sites (George B. Koelle), 208
Proposed Molecular Models of Gramicidin *S* and other Polypeptides (Dr. Donald T. Warner), 120
Proprioceptors (Spiral Nerve-endings), in the Human Vocal Muscle (G. Rudolph), 726

Prosperity and Welfare of the Nation : Electricity in the (Thirteenth British Electrical Power Convention of the Electrical Development Association), 680

Prostigmine : Fractionation of the Motor Unit during Repetitive Response to (Dr. Simeon Locke), 452

Protection of Birds, Royal Society for the (British Trust for Ornithology and the) : Report on Birds killed by Poisonous Seed Dressings, 218

Protection of Cleaned Iron Objects (K. J. Barton), 15

Protection of Dartmoor and Exmoor, Joint Action Group for (Councils for the Preservation of Rural England and Wales and the), (Standing Committee on National Parks of the) : The Case for Control of Afforestation of Open Land in National Parks, 496

Protection of Workers against Unsealed Radioactive Substances, 766

Protection (Nitrogen), of Fecundity and Fertility in Female *Habrobracon* treated with X-Rays (Prof. Daniel S. Grosch and Dr. Arnold M. Clark), 545

Protection (Œstrogen), against Acute Digitalis Toxicity in Dogs (Edward H. Grinnell, J. Raymond Johnson, James R. Rhone, Albert Tillotson, Jim Noffsinger and Dr. Max N. Huffman), 1117

Protection (Radiation) : Summer School in Health Physics— (Imperial College of Science and Technology, London), 680

Protection (Radiation), and Measurements (National Committee on), of the United States National Bureau of Standards : Report No. 26, X-Ray Protection at High Voltages, 589

Protection (X-Ray), at High Voltages (National Committee on Radiation Protection and Measurements of the United States National Bureau of Standards, Report No. 26), 589

Protective Activity of Fractions of Tubercle Bacilli against Isologous Tumours in Mice (Dr. David W. Weiss, Rose S. Bonhag and Dr. Kenneth B. DeOme), 889

Protective Effect of Orally Administered S,β-Aminoethylisothiuronium.Br. HBr against X-Radiation Death in Mice (Major M. P. Dacquisto and Capt. E. W. Blackburn), 270

Protein (C-Reactive) : Detection of, by Fluorescent Antibody Techniques (Dr. Robert Goldwasser and Dr. Rachmiel Rozansky), 1020

Protein Biosynthesis : Possible Role of Nucleopeptides in (P. Szafrański and M. Bagdasarian), 719

Protein Particles in Tumour Cells : Aggregation of (A. Bolognari), 358

Protein Structure : Terminology of (Prof. D. B. Wetlaufer), 1113

Protein Synthesis : Activation of Ferritin Synthesis and Induction of Changes in Fine Structure in HeLa Cells *in vitro*—Implications for (Prof. G. W. Richter), 413

  An Unstable Intermediate carrying Information from Genes to Ribosomes for (Dr. S. Brenner, Dr. F. Jacob and Dr. M. Meselson), 576

Protein and Ribonucleic Acid of the Lens of the Rat : Incorporation of Amino-Acids into—Effect of Heavy Metals (Dr. Anima Devi, Dr. Sidney Lerman and Dr. Nirmal K. Sarkar), 1193

Proteins of the Hen's Egg Yolk (Dr. W. H. Cook), 1173 ; (Dr. O. A. Schjeide and Dr. M. R. Urist), 1175

Proteins (Deoxyribonucleo-), from White Blood Cells of Normal and Leukaemic Human Beings : Immunological Differences of (Luigi Messineo), 1122

Proteins (Gamma-Myeloma) : An Investigation of Closely Related, and Normal Mouse Gamma-Globulin by Partial Enzymic Degradation and Starch-Gel Electrophoresis (Dr. Brigitte A. Askonas and Dr. J. L. Fahey), 980

Proteins (Serum) : Detection of, within the Renal Collecting Tubule Cells of the Potassium-deficient Rat (Ashton B. Morrison and Kenneth D. Gardner, jun.), 96

Proteins (Serum), in the Genus *Macaca* : Effects of Speciation on, with Special Reference to the Polymorphic State of Transferrin (Dr. Morris Goodman and Emily Poulik), 171

Proteins (Toxic), of Scorpion Venoms : Scorpamins, the (Francois Miranda and Serge Lissitzky), 443

Proteins and Cancer Biochemistry : Amino Acids,—Papers presented at the Jesse P. Greenstein Memorial Symposium, Division of Biological Chemistry, American Chemical Society, 1959 (edited by Dr. John T. Edsall), *review* by Dr. F. H. Malpress, 203

Proteins and Nucleotides : Interaction of, in Buffered Aqueous Solutions (Prof. Joseph R. Debro and Melvin Lee), 1008

Proteolytic Activity of Crude Stem Extracts from Normal and Tumour Tissues of Plants (Prof. C. Gainor and F. D. Crisley), 1031

Proteolytic Enzymes : Action of, on the Human Erythrocyte Surface (Dr. G. Uhlenbruck), 181

  Inhibition of, by Decarboxylated Amino-Acid Derivatives—Effect of Toluenesulphonyl(Tosyl)agmatine (4-Toluenesulphonamidobutylguanidine) on Thrombin and Trypsin (Dr. L. Lorand and Dr. N. G. Rule), 722

Prothoracic Gland and Colour Change in Locusts (Peggy E. Ellis and Dr. D. B. Carlisle), 368

Protomyces inundatus : Nucleic Acid Content of Haploid and Diploid Cells of (L. R. G. Valadon, Dr. J. G. Manners and A. Myers), 836

Proton in Chemistry (R. P. Bell), (George Fisher Baker Non-resident Lectureship in Chemistry at Cornell University), *review* by Prof. J. A. V. Butler), 57

Proton Magnetic Resonances of certain Organophosphorus Compounds : Doubling of the (T. H. Siddall, C. A. Prohaska and W. E. Shuler), 903

Proton Resonance, *review* by Dr. J. C. D. Brand, 1043

Protoplasm of a Giant Nerve Fibre : Replacement of the, with Artificial Solutions (P. F. Baker, Prof. A. L. Hodgkin and Dr. T. I. Shaw), 885

Protozoa (Holotrich), of the Rumen : A Diurnal Cycle for (D. B. Purser), 831

Protracted Steroid-induced Sterility in Mice: Recovery of Fertility after (Prof. Alexander Lipschutz and Rigoberto Iglesias), 174

Provision of Animals for Cancer Research (Laboratory Animals Centre of the Medical Research Council Symposium on), 393

Prusoff, W. H., and others : Incorporation of Phosphorus-32 into Adenosine Triphosphate of Adrenal Chromaffin Granules, 354

Pryor, Dr. E. J. : Modern Mineral Technology, *review*, 70

Pseudomonadaceae as a Source of Bacterial Contamination in Tissue Culture (Dr. M. Likar), 1025

Pseudorabies Virus-infected Rabbit Kidney Cells : Effect of Mitomycin C on the Synthesis of Infective Virus and Deoxyribonucleic Acid in (Dr. Tamar Ben-Porat, Dr. Magdalena Reissig and Dr. Albert S. Kaplan), 33

'Psychological Refractory Phase' and Ageing (John Brebner and Dr. Jacek Szafran), 195

Psychical Research, Society for : Fourteenth Frederic W. H. Myers Memorial Lecture, The Neurophysiological Aspects of Hallucinations and Illusory Experience (Dr. W. Grey Walter), 394

Psychology (Industrial), National Institute of : Appointment of Dr. R. B. Buzzard as research director, 1060

Public Health Engineering : Postgraduate Courses in (Imperial College of Science and Technology and the London School of Hygiene and Tropical Medicine), 971

Public Health Laboratory Service : Change of address, 1156

Public Health Nursing : Aspects of (United Nations, World Health Organization, Public Health Papers No. 4), 490

Publications relating to the I.G.Y. : Bibliography of (Academy of Sciences of the U.S.S.R.), 493

Puccinia polysora on *Tripsacum laxum* and *Zea mays* (P. Tuley), 284

Pudles, J., and others : Purification of the Toxic Fractions from *Ascaris lumbricoides* and their Effect on the Guinea Pig, 813

Pugh, Dr. G. J. F. : Fungal Colonization of a Developing Salt Marsh, 1032

Pulmonary Tumours, Group VII and Sex in the House-Mouse (Dr. J. A. H. Tatchell), 837

Pulp (Cellulose), from Wood, *review* by Dr. Julius Grant, 380

Pulp and Paper—Chemistry and Chemical Technology (James P. Casey), Vol. 1, Pulping and Bleaching, second edition, *review* by Dr. Julius Grant, 380

'Pulsactor' Signals : Korotkov's Sounds—a Function of the Skeleton to Transmit (Wing-Comdr. John E. Malcolm), 1114

Pulse Labelling of *Escherichia coli* : Unstable Ribonucleic Acid revealed by (Dr. Francois Gros, Dr. H. Hiatt, Dr. Walter Gilbert, Dr. C. G. Kurland, R. W. Risebrough and Dr. J. D. Watson), 581

Pupal Diapause in the Cinnabar Moth : Termination of, and the Reproductive Capacity of the Resulting Females (Dr. G. F. Bornemissza), 936

Purbeck Beds (Lower), of Swindon Facies in Dorset (Ian M. West), 526

Purchon, Prof. R. D. : Appointed to the chair of zoology in the University College of Ghana, 216 ; work of, 216

Purdy, S. Jean, and Truter, Dr. E. V. : Taxonomic Significance of Surface Lipids of Plants, 554

Pure and Applied Physics, International Union of, and others : Rutherford Jubilee International Conference, 679

Puri, Dr. G. S. : Ecological Problems in the Tropics (Need for a Co-ordinated Research Programme in Ecological Studies in the Tropics), 772

Puri, Dr. G. S., and Lakshminarayanan, K. : Ecological Problems in the Tropics (Tropical Soils), 772

Purification of the Toxic Fractions from *Ascaris lumbricoides* and their Effect on the Guinea Pig (G. Gazzinelli, M. M. Guia, A. G. A. Neves, J. Pudles, W. T. Beraldo and W. Dias da Silva), 813

Purification (Enzyme) : Controlled Use of Adsorbents in (Dr. I. T. Oliver), 810

Purified *Escherichia coli O* 86 Substance : Production of *B* Character on Human Erythrocytes by Haemosensitization with (Dr. Jorgen Andersen), 730

Purified House Dust Allergen : Preparation and Properties of (Dr. L. Berrens and E. Young), 536

Purine and Pyrimidine Analogues incorporated in Deoxyribonucleic Acid : Radiosensitization of *E. coli* by (Prof. Henry S. Kaplan, Dr. Kendric C. Smith and Patricia Tomlin), 796

Purines : Crystallization of, in the Vacuole of *Candida utilis* (Prof. Allan H. Roush), 449

Purser, D. B. : A Diurnal Cycle for Holotrich Protozoa of the Rumen, 831

Pye, J. D. : Perception of Distance in Animal Echo-Location, 362

Pyrene Dimer : Lifetime of the (Dr. C. A. Parker and C. G. Hatchard), 165 ; (Dr. B. Stevens and E. Hutton), 166

Pyridine Nucleotide Coenzymes : Assay of, and associated Dehydrogenases with Phenazine Methosulphate (Dr. P. J. C. Smith), 84

Pyridine Nucleotides (Leucocyte) : Effect of *Staphylococci* on (Dr. M. N. Swartz, P. H. Black and J. Merselis), 516

Pyridine Nucleotides (Reduced): Oxidation of, and of Sulphite by Pea Root Mitochondria (R. G. Stickland), 648

Pyrimidine Analogues (Purine and), incorporated in Deoxyribonucleic Acid : Radiosensitization of *E. coli* by (Prof. Henry S. Kaplan, Dr. Kendric C. Smith and Patricia Tomlin), 796

Pyrimidines (Foreign) : Active Transport of, across the Intestinal Epithelium (Dr. Lewis S. Schanker and Dr. John J. Jeffrey), 727

Pyrocatechol (Urinary) : Origin of (Dr. Alfred A. Smith), 167

Pyrogenic Substances : Production of, by Extracts of Delayed Hypersensitive Cells mixed with Antigen *in vitro* (Dr. J. Johanovsky), 355

Pyrolysis of Esters of Borneol and *iso*Borneol (Dr. C. A. Bunton, K. Khaleeluddin and D. Whittaker), 715

Pyrophosphate : Determination of Uranium as (J. S. Wright, T. J. Hayes and J. A. Ryan), 1183

Pyrrolase (Rat Liver Tryptophan) : A Difference between the Modes of Action of Substrate and Hormonal Inducers of (Dr. Olga Greenhard and Prof. Philip Feigelson), 446

QUALITATIVE Organic Analysis (B. Haynes), *review* by Dr. J. D. Loudon, 753

Quality of Light : Effects of, on Development of Roots on Dwarf Bean Hypocotyls in Presence and Absence of Boron (Dr. E. C. Humphries), 701

Quantitation of Immune Cytolysis : A General Method for the (Dr. Harold S. Goodman), 269

Quantitative Estimation of Amino Acids (Biochemical Society Colloquium on), 1063

Quantitative Fractionation of Brain Glycolipids by Silicic Acid Chromatography (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch and Dr. Louis A. Faillace), 150

Quantitative Separation and Determination of Brain Glycoproteins, Neuraminic Acid, Hexosamine and Hexoses by means of Whole Tissue Emulsion-Fractionation (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch), 153

Quantities (Small), of 3,4-Benzpyrene : Detection of, directly from Chromatographic Paper (Dr. B. A. Nešković and V. Soškić), 1199

Quantities (Trace), of Acenaphthene : Detection of, by Gas Chromatography (Prof. W. G. H. Edwards, J. G. Clarke and A. G. Williamson), 531

tion of Flavins (Ikuko Nagatsu-Ishibashi, Toshiharu Nagatsu and Kunio Yagi), 728
Quantum Chemistry : Summer School in (St. Antony's College, Oxford), 769
Quantum Theory of Atomic Structure (Prof. John C. Slater), *review* by Prof. C. A. Coulson, 1142
Quantum Theory and Complementarity : Foundations of (Prof. L. Rosenfeld), 384
Quarrell, Prof. A. G. (edited by Prof. Bruce Chalmers and) : The Physical Examination of Metals, second edition, *review* by Dr. A. R. Bailey, 661
Quashie, L. A. K. : Science in the Development of Ghana (The Role of Geology in the Development of Ghana), 1064
Quastler, H., and others : Proliferative Cycle in the Growing Hair Follicle of the Mouse, 923
Queen Elizabeth College, London : Appointment of Dr. S. J. Pirt to the University of London readership in microbiology, 680
  Sir John Atkins Laboratories, 684
Queen Elizabeth II Canadian Fund to Aid in Research on the Diseases of Children : Appointment of Dr. M. W. Partington as the first Queen Elizabeth II Scientist, 863
  Queen Elizabeth II Fellowships awarded to Dr. John Alexander Lowden, Dr. George Greenough Hinton and Dr. Hugh Taylor, 863
Queen Mary College, London : Appointment of Dr. I. C. Percival to the University of London readership in applied mathematics, 680
Queen Victoria Museum and Art Gallery, Launceston : *Records*, New Series No. 12, Comments on the Cainozoid History of Western Tasmania (B. Scott), 677
  Records, New Series No. 13, Erosion Surfaces in Western Tasmania (B. Scott), 677
  Annual Reports for 1958-59 and 1959-60, 677
Queen's Birthday Honours List, 1059
Queen's University, Belfast : Appointment of Adrian P. Roberts as senior lecturer in engineering mathematics, 218
  Appointment of Dr. R. Common to a lectureship in geography, 679
  Appointment of M. Cohen to a lectureship in applied mathematics, 679
  Appointment of Dr. A. Dalgarno to the chair of quantum mechanics, 1156
  Appointment of Dr. E. A. Cheeseman to the chair of medical statistics, 1156
Quentin, M. (Steinbuch, Dr. M., and) : Isolation of Haptoglobin by Chromatography on Diethylaminoethyl-Cellulose(DEAE), 1121
Quer, Prof. P. Font : The Anatomy of Plants, *review* by G. R. Noakes, 64
Quinine, Sulphacetamide and Acetophenetidin (Promazine,) : A New Technique of Chromatography and Ionophoresis on Ion-exchange Paper—Application to Separation of Compounds of Toxicological Interest—Separation of a Mixture of (Harold V. Street and Dr. S. K. Niyogi), 1199
Quinine Oxidase in Liver and Blood Plasma of Rabbits poisoned with Carbon Tetrachloride (Dr. Gilberto G. Villela), 807

RABBIT : Function of the Foetal Thyroid of the, with regard to Cholesterol Metabolism studied by Foetal Thyroidectomy (J. G. Bearn, H. B. Koerselman and T. R. E. Pilkington), 822
  Transfer of Ova to the Bursa Ovarii and the 'Suspended Loop' of Tube in the (Prof. E. S. E. Hafez and M. E. Ensminger), 557
Rabbit Antibody : Similarity of Peptides in Two Antigen-combining Fragments released from a, by Papain (Prof. David Gitlin and Ezio Merler), 634
Rabbit Kidney Cells : Effect of Mitomycin C on the Synthesis of Infective Virus and Deoxyribonucleic Acid in Pseudorabies Virus-infected (Dr. Tamar Ben-Porat, Dr. Magdalena Reissig and Dr. Albert S. Kaplan), 33
Rabbit-Pox and Vaccinia Viruses : An Immunizing Antigen from (G. Appleyard), 465
Rabbit Tissues *in vitro* (Normal): Effect of Erythropoietine on Incorporation of Formate labelled with Carbon-14 into the Nucleic Acids of (Dr. M. A. Perretta and Dr. R. Y. Thomson), 912
Rabbits poisoned with Carbon Tetrachloride : Quinine Oxidase in Liver and Blood Plasma of (Dr. Gilberto G. Villela), 807
Rabbits (Cholesterol-fed) : Effect of Essential Oils on Atherosclerosis of (Dr. S. Benkö, A. Macher, F. Szarvas and T. Tiboldi), 731
Rabies in India, 678
Rabin, Dr. B. R., and others : The Active Site and Mechanism of Action of Bovine Pancreatic Ribonuclease, 781
Rabson, Alan S., and others : Variant of Parotid Tumour (Polyoma) Virus showing a Change in Oncogenic Properties, 97
Race Relations : In Search of, *review* by Dr. Margaret Read, 946
Radar Echoes from Venus : A New Determination of the Solar Parallax by means of (Dr. J. H. Thomson, J. E. B. Ponsonby, G. N. Taylor and R. S. Roger), 519
Radar Establishment (Royal) : The Radio Telescope Interferometer at the (Dr. J. S. Hey), 1150
Radar Observatory (Millstone), Massachusetts Institute of Technology (Staff of) : The Scale of the Solar System, 592
Radial Dyke Systems : Impulse Loading of Rock Targets to produce Fracture Patterns similar to Naturally Occurring (Carl F. Austin), 227
Radiating at Very Low Frequencies : Some Preliminary Experimental Tests of a Novel Method of (R. N. Gould), 332
Radiation in Entomology : Radioisotopes and (International Atomic Energy Agency Symposium on), 15
Radiation (Far Infra-Red), from Shock Waves : Observation of (M. F. Kimmitt, A. C. Prior and P. G. Smith), 599
Radiation (Ultra-violet) : Effect of Biological Nitrogen Fixation of Nitrogen Gas treated with (B. Zacharias and C. -G. Hedén), 817
γ-Radiation (Continuous) : Haemagglutinin Production in Pre-immunized Mice exposed to (J. P. M. Bensted), 99
Radiation Carcinogenesis at High Dose-Response Levels—a Hypothesis (Prof. Arnold E. Reif), 415
Radiation Chemistry of Aqueous Systems : Recent Advances in the (Prof. Gabriel Stein), 16
Radiation Effect on Yeasts of the Genus *Candida* Berkhout (Armin von Szilvinyi and Utta Rosenkrantz), 1212
Radiation Protection : Summer School in Health Physics— (Imperial College of Science and Technology, London), 680
  United States National Bureau of Standards : Report No. 26, X-Ray Protection at High Voltages, 589
Radiation Thyroiditis (Experimental) : Absence of Thyroid Auto-Antibody in (Dr. Geoffrey Taylor and G. Sclare), 183
Radiations (Ionizing) : Effects of, on Organic and Biological Solids (British Biophysical Society and the Société de Chimie Physique Informal Discussion on), 219
  Effects of, on Rice Plants (Maung Mya Thaung), 242
Radiative Capture of Thermal Neutrons : Atlas of γ-Ray Spectra from (L. V. Groshev, V. N. Lutsenko, A. M. Demidov and V. I. Pelekhov), translated from the Russian by J. B. Sykes, *review* by Dr. E. R. Rae, 75
Radical Formation in Bovine Serum Albumin : Prevention by Cysteamine of, by γ-Rays (D. Libby, M. G. Ormerod, Prof. A. Charlesby and Dr. P. Alexander), 998
Radical (Free) Trapping, *review* by Dr. B. Brocklehurst, 478
Radicals (Free) : Formation and Trapping of (edited by Arnold M. Bass and H. P. Broida), *review* by Dr. B. Brocklehurst, 478
Radicals (Free), in Aromatic Substitution, *review* by Dr. J. Idris Jones, 294
Radicals (Free), in Melanins from *Allium cepa* : Effect of Temperature on the Concentration of (M. L. Edwards, Dr. G. A. Kerkut, Dr. K. A. Munday and K. Leach), 1005
Radicals (Free Amino-) : Photochemical Synthesis of Amino-Acids and a New Transamination Process by Transfer of (Giovanni Ferrari and Prof. Rolando Cultrera), 326
Radicals (Hydroxyl), as Intermediates in the Cross-linking of High Polymers by γ-Irradiation : The Importance of (Yoshitada Tomoda and Minoru Tsuda), 905
Radicals (Methyl and Methylene) : Internuclear Distances of (George Glockler), 1002
Radii (Ancient), of the Earth : Palaeomagnetism and the (Prof. L. Egyed), 1097
Radio Astronomy and Cosmology (Prof. Martin Ryle), 852
Radio Emission : Galactic Explosions as Sources of (Prof. G. R. Burbidge), 1053
Radio Engineers, British Institute of : 1961 Convention (Radio Techniques and Space Research), 591
Radio Engineers, Institute of (organized by the) : 1961 Conference on Medical Electronics, 397
Radio Research Station of the Department of Scientific and Industrial Research : Radio Telescope at Crowthorne, 490
Radio Signals (108-216 Mc./s.), from Satellites below the Horizon (L. J. Anderson), 708
Radio Source Cassiopeia A : Secular Variation of the Flux Density of the (D. S. Heeschen and B. L. Meredith), 705
Radio Techniques and Space Research (British Institute of Radio Engineers 1961 Convention), 591
Radio Telemetry : Determination of Physiological Rhythms of Unrestrained Animals by (Warren O. Essler and Prof. G. Edgar Folk, jun.), 90
Radio Telescope to be built at Crowthorne for the Radio Research Station of the Department of Scientific and Industrial Research, 490
Radio Telescope Interferometer at the Royal Radar Establishment (Dr. J. S. Hey), 1150
Radio Transmissions : Extra-Terrestrial (Leland I. Anderson), 374
Radio Wave Mechanism to account for the Known Distribution of Van Allen Belts about the Earth (Joseph M. Boyer), 597
Radioactivation Analysis of Oxygen in Silicon by Irradiation with α-Particles in a Cyclotron (T. Nozaki, S. Tanaka, M. Furukawa and K. Saito), 39
Radioactive Fall-out : Seasonal Variation and Age of (R. P. Parker and J. O. Crookall), 574
Radioactive Substances (Unsealed) Regulations (Ministry of Labour and National Service), 766
Radioactive Wastes (general editor, J. C. Collins), *review* by K. D. B. Johnson, 75
Radioactivity (Air), in Italy : Measurements of, and their relation to the First Sahara Atomic Explosion (L. Argiero, Dr. S. Manfredini and Dr. G. Palmas), 618
Radiobiology : Mechanisms in (edited by Maurice Errera and Arne Forssberg), Vol. 2, Multicellular Organisms, *review* by Dr. O. A. Trowell, 72
Radioisotopes and Radiation in Entomology (International Atomic Energy Agency Symposium on), 15
Radiolysis of Carbon Tetrachloride in the Presence of Oxygen (Zd. Spurny and I. Janovsky), 624
Radiometric Precipitation in Filter Paper—a Rapid Method of Microanalysis (M. Thackray), 434
Radionuclide : Mercury-206, a New Natural (Prof. M. Nurmia, P. Kauranen, M. Karras, A. Siivola, A. Isola, G. Graeffe and A. Lyyjynen), 427
Radiosensitivity : Fundamental Aspects of (Biology Department of Brookhaven National Laboratory Symposium on), 312
Radiosensitization of *E. coli* by Purine and Pyrimidine Analogues incorporated in Deoxyribonucleic Acid (Prof. Henry S. Kaplan, Dr. Kendric C. Smith and Patricia Tomlin), 794
Radius (Earth's) : Palaeomagnetic Evidence relevant to a Change in the (Prof. S. Warren Carey), 36 ; (Allan Cox and Richard R. Doell), 36
Radok, Dr. Uwe, and Jenssen, D. : Numerical Retracting of Atmospheric Events, 247
Radon (Atmospheric), and Wind Direction : Concentration of (Dr. F. Barreira), 1092
Rae, Dr. E. R. : Atlas of γ-Ray Spectra from Radiative Capture of Thermal Neutrons, *review*, 75
Raffel, Sidney, and Starr, Mortimer P. (edited by Charles E. Clifton, in association with) : Annual Review of Microbiology, Vol. 14, *review* by Dr. B. A. Newton, 662
Raffles Museum, Singapore : *Bulletin*, No. 26, 394
Railly, Dr. J. W. : Appointed to a senior lectureship in mechanical engineering in the University of Birmingham, 679
Rainfall : British, 1957—Report on the Distribution of Rain in Space and Time over Great Britain and Northern Ireland during the Year 1957 as recorded by about 5,000 Observers (Ninety-seventh Annual Volume), (Air Ministry : Meteorological Office), *review*, 201
Rainfall in Britain, 1957, *review*, 201
Rainfall (Effective), and Irrigation : Evaluation of, from Ground-Water Measurements (C. Dakshinamurti, P. N. Saxena and E. G. K. Rao), 1100
Rajewsky, Prof. B., and Lang, Dr. D. : Absolute Measurement of Average Energy lost by Very Soft X-Rays per Ion Pair in Air, 249

Rák, K., and others : Circulating Platelets in Mice subjected to Simultaneous X-Ray and Ultra-violet Irradiation, 544
Rakovič, M. (Dienstbier, Dr. Z., and) : Changes in Density of Blood Serum after Total-Body Irradiation, 98
Ram : Polypnoea evoked by Heating the Scrotum of the (Dr. G. M. H. Waites), 172
Ramachandran, Prof. G. N., and Sasisekharan, V.: Structure of Collagen, 1004
Ramachandran, Prof. G. N., and Srinivasan, R. : An Apparent Paradox in Crystal Structure Analysis, 159
Raman, Dr. S. S. : Ecological Problems in the Tropics (Grasslands), 772
Ramana, K. V. V. (Rao, Dr. B. Ramachandra, and) : Variation in Height of Anisotropy and Random Drift Velocity of the Irregularities in the Ionosphere, 706
Ramanathan, Prof. K. R. : Awarded the International Meteorological Organization Prize for 1961, 1154 ; work of, 1154
Ramanathan, Dr. N., and others : Formation of Helical Microfibrils from a Steroid Acid Complex, 779
Ramsay, Dr. J. G. : Some Aspects of Sedimentation in Orogenic Belts (Establishing the Original Attitudes of Deformed Sedimentary Structures), 140
Ramwell, Dr. P. W., and Lester, I. H. : A Potential Source of Error in the Hexobarbitone Sleeping-Time Test in Mice, 640
Rana temporaria ♂ (*Bufo* ♀ x) Hybrid Embryos : Incorporation of Tritium-labelled Thymidine in (R. Tencer), 100
Randhawa, Dr. M. S. : Ecological Problems in the Tropics, 772
Random Drift Velocity of the Irregularities in the Ionosphere : Variation in Height of Anisotropy and (Dr. B. Ramachandra Rao and K. V. V. Ramana), 706
Random Structures : Two-Dimensional Fourier Transform Technique for analysing (Dr. Douglas M. C. MacEwan and H. H. Sutherland), 431
Range (Minimum), to Artificial Earth Satellites (K. Toman), 333, *errata*, 865
Rao, Dr. B. Ramachandra, and Ramana, K. V. V. : Variation in Height of Anisotropy and Random Drift Velocity of the Irregularities in the Ionosphere, 706
Rao, E. G. K., and others : Evaluation of Effective Rainfall and Irrigation from Ground-Water Measurements, 1100
Rao, Dr. V. K. R. V. : International Aid for Economic Development—Possibilities and Limitations (Eighteenth Montague Burton Lecture on International Relations), 1041
Raper, Dr. Kenneth B. : Elected a member of Council of the United States National Academy of Sciences, 674
Raper, Prof. R. A. : Growth and Genetics of Higher Fungi (An Enquiring Look at Tetrapolar Incompatibility), 400
Raphael, Ralph A., and others (edited by) : Advances in Organic Chemistry, Vols. 1 and 2, *review* by Dr. J. Idris Jones, 56
Rapid Method of Micro-analysis : Radiometric Precipitation in Filter Paper—a (M. Thackray), 434
Rapoport, Prof. S. M., and others : Role of Glutathione and of a Self-stabilizing Chain of SH-Enzymes and Substrates in the Metabolic Regulation of Erythrocytes, 631
Rare Earless Monitor Lizard from Borneo (Tom Harrisson and Dr. N. S. Haile), 1213
Rare Spider *Pellenes nigrociliatus* (L. Koch) var. *bilunulata* Simon : Parental Care in a (Dr. Izabella Mikulska), 365
Raspet, R. (Swartz, J. H., and) : Thermal Shock and its Effect on Thermistor Drift, 875
Rassaert, C. L. (Girerd, R. J., and) : Acute Effect of Three Antibiotics on Diuresis in the Rat, 536
Rast, Dr. N. : Appointed a senior lecturer in geology at the University of Liverpool, 963
Rat : Acute Effect of Three Antibiotics on Diuresis in the (R. J. Girerd and C. L. Rassaert), 536
  In vivo Formation of Normorphine in the, as a Metabolite of Tritium Nuclear-labelled Morphine (Anand L. Misra, S. J. Mule and Prof. L. A. Woods), 82
  β-Galactosidase Changes in the Developing Intestinal Tract of the (Dr. Anibal Alvarez and José Sas), 826
  Incorporation of Amino-Acids into Protein and Ribonucleic Acid of the Lens of the—Effect of Heavy Metals (Dr. Anima Devi, Dr. Sidney Lerman and Dr. Nirmal K. Sarkar), 1193
  Metabolic Origin of Urinary Methylamine in the (E. Jack Davis and R. S. De Ropp), 636
  Replacement of Adrenaline and Noradrenaline in the Adrenal Gland of the, following Depletion and Redepletion with Reserpine (Dr. B. A. Callingham and Dr. Monica Mann), 1201
  Serum Changes in the, following Oral Administration of Cadmium (D. J. Lawford), 815
  Sex and Strain Differences in Electroshock Convulsions of the (D. E. Woolley, P. S. Timiras, M. R. Rosenzweig, D. Krech and E. L. Bennett), 515
Rat (Immature) : Effect of 9α-Fluoro-11β-hydroxy-17-methyltestosterone ('Ultandren') on the Testis of the (Dr. E. J. Clegg), 542
Rat (Normal and Alloxan Diabetic) : Incorporation of Ethanol-1-^{14}C into Fatty Acids in the (Dr. Marion E. Smith), 273
Rat (Potassium-deficient) : Detection of Serum Proteins within the Renal Collecting Tubule Cells of the (Ashton B. Morrison and Kenneth D. Gardner, jun.), 96
Rat (Unilaterally Nephrectomized) : Renal Proliferation in the (Dr. David M. Kessner and E. Donnall Thomas), 175
Rat-Diaphragm Preparation : Influence of Gamma-Aminobutyric Acid on the Acetylcholine Responses of the Denervated (Dr. R. S. Watson), 724
Rat Liver : Biosynthesis of Choline *in vitro* by (F. R. Dalal, J. M. Noronha and Dr. A. Sreenivasan), 267
  Intracellular Distribution of Ubiquinone in, under certain Stress Conditions (Dr. A. S. Aiyar and Dr. A. Sreenivasan), 344
Rat Liver Tryptophan Pyrrolase : A Difference between the Modes of Action of Substrate and Hormonal Inducers of (Dr. Olga Greengard and Prof. Philip Feigelson), 446
Rat Mammary Tissue : Some Properties of (M. W. Smith), 541
Rat Mast Cells *in vitro* : Release of 5-Hydroxytryptamine from (Dr. G. T. Archer), 350
Rat Mitochondrial Membranes : An Effect of Chlorpromazine on (Prof. M. A. Spirtes and P. S. Guth), 274
Rat Tumour (Transplantable) : Mechanism of Antigen Transformation of (Prof. K. Dux, A. Ryzewska and A. Czarnomska), 458
Rat Urine : Changes of Hexose/Hexosamine Ratio and Degree of Branching in Glycoprotein from, during the Development of Cancer (Prof. Sen-itiroh Hakomori, Hiroaki Kawauchi and Taiko Ishimoda), 265
Rate of Ageing in *Drosophila subobscura* : Independence of Temperature of the (Jean M. Clarke and J. Maynard Smith), 1027
Rate of Cell Mutation : Bivalent Metal Ions as the Coupling Factor between Cell Metabolism and the (Dr. G. G. Jayson), 144
Rate of Habituation of the Arousal Response : Effects of Chlorpromazine and Lysergic Acid Diethylamide on the (Dr. B. J. Key), 275
Rate of Oxidation of Ferrohaemoglobin by Ferricyanide Ions (Norman Sutin), 438
Rate (Growth-) in Rats : Experimental Oxidation of Haemoglobin—its relation to (Dr. W. K. Metcalf), 543
Rates of Recombination in Hydrogenic Plasmas (Dr. R. W. P. McWhirter), 902
Rating of Scientific Institutions : Valuation and, 309
Rating and Valuation Bill (Parliamentary Debates : House of Commons, Official Report, Standing Committee D), Ninth Sitting, 658 ; (Second reading in the House of Lords), 1154
Ratio (Coding), for the Ribonucleic Acid Viruses (C. R. Woese), 697
Ratio (Hexose/Hexosamine) : Changes of, and Degree of Branching in Glycoprotein from Rat Urine during the Development of Cancer (Prof. Sen-itiroh Hakomori, Hiroaki Kawauchi and Taiko Ishimoda), 265
Ratio (Secondary Sex-) of the Grey Seal *Halichoerus grypus* (Fab.) during the Breeding Season : Variation in the (Dr. J. C. Coulson and Grace Hickling), 281
Ratković, Dobrila, and others : Choline Acetylase in the Human Placenta at Different Stages of Development, 1202
Rats : Effect of Splenectomy on the Resistance of, to Histamine Stress (Arthur M. Sackler, A. Stanley Weltman and Peter Jurtshuk, jun.), 274
  Experimental Oxidation of Haemoglobin—its relation to Growth-rate in (Dr. W. K. Metcalf), 543
  Modification of Aortic Aerobic Metabolism in, by Gonadectomy (Effect of Œstrogens on Atherosclerosis), (Dr. M. R. Malinow and Dr. J. A. Moguilevsky), 424
Rats fed with 4-Dimethylaminoazobenzene injected with Homogenized Tumour mixed with Freund Adjuvant : Growth of Tumours in (Prof. Nikša Allegretti), 1207
Rats treated with Growth Hormone : Incorporation of Phosphoryl-choline labelled with Phosphorus-32 into the Liver Phospholipids of (R. S. Leal and Dr. A. L. Greenbaum), 548
Rats (Hypophysectomized), treated with 3-Methylcholanthrene, Œstradiol 17β, Progesterone and Growth Hormone : Induction of Mammary Carcinoma in (Dr. Stretton Young), 356
Rattus norvegicus and *Rattus rattus* : Paracrystalline Haemoglobin as a Species Difference between (Dr. Z. Vokáč), 641
Rattus rattus : Paracrystalline Haemoglobin as a Species Difference between *Rattus norvegicus* and (Dr. Z. Vokáč), 641
Rauen, Prof. H. M. (Kersten, H., and) : Degradation of Deoxyribonucleic Acid in *Escherichia coli* Cells treated with Mitomycin C, 1195
Raven, K. D. (Mullin, Dr. J. W., and) : Nucleation in Agitated Solutions, 251
Raven, Dr. P. H. : Experimental Taxonomy of Flowering Plants (Interspecific Hybridization as an Evolutionary Stimulus in *Œnothera*), 968
Raw, Dr. F. : Diseases caused by Plant Viruses in Crops (Arabis Mosaic Virus), 220
Raw Materials of Ceramics : Exhibition of the (P. J. Adams), 310
Rawling, J. R. : Appointed to a lectureship in mining and minerals engineering in the University of Birmingham, 679
Rawlins, F. I. G. : The Cartesian Meditations, *review*, 295
  Axiomatics and Foundations, *review*, 570
Ray, Arati (Sircar, Prof. S. M., and) : Growth Substances separated from the Root of Water Hyacinth by Paper Chromatography, 1213
Ray, J. W. (Heslop, J. P., and) : Nucleotides and other Phosphorus Compounds of Cockroach Nerve, 1192
Ray, Dr. Richard G. : Aerial Photographs in Geologic Interpretation and Mapping (United States Geological Survey, Professional Paper No. 373), 1155
Ray-Chaudhuri, Dr. S. P. : Appointed to the chair of zoology in the Banaras Hindu University, 765 ; work of, 765
Ray (Cosmic) Ages of the Treysa and Sikhote–Alin Meteorites (David E. Fisher), 225
Ray (The Cosmic-) Observations of December 4, 1957 (Dr. B. G. Wilson), 615
γ-Ray-induced Dormancy of Potato Tubers : Reversal of, by Gibberellic Acid (Dr. P. B. Mathur), 547
Rayner, R. W. : Measurement of Fungicidal Effects in Field Trials, 328
Rayon Research Association, British (British Cotton Industry Research Association and the) : Merging to be known as the Cotton, Silk and Man-made Fibres Research Association, 589
γ-Rays : Prevention by Cysteamine of Radical Formation in Bovine Serum Albumin by (D. Libby, M. G. Ormerod, Prof. A. Charlesby and Dr. P. Alexander), 998
Rays (Cosmic) : Origin of (Dr. J. N. Tandon), 246
Re-entry Trajectories : Space Flight and (International Academy of Astronautics of the International Astronautical Federation Symposium on), 312
Reaction of Antimony Pentachloride with Pregnane-3α, 17α, 20α-Triol, Pregnane-3α, 17α, 20α-Triol-11-One and other Adrenal Cortical Steroids (Capt. Robert H. Herman and Joseph Bruton), 444
Reaction of Digitalis Compounds with Antimony Pentachloride (Capt. Robert H. Herman), 268
Reaction of Iodine Vapour with Copper : Effect of a Thin Oxide Film on the (R. A. J. Shelton, S. Blairs and D. Margrave), 1183
Reaction (Graft-versus-Host) : Increased Sensitivity to Bacterial Endotoxin of F_1 Hybrid Mice undergoing (Dr. J. G. Howard), 1122
Reaction (Kober), for Urinary Œstrogens : A Supplement to the (Dr. L. Bradshaw), 809
Reaction (A New Photo-), between some Furocoumarins and Flavin Mononucleotide (Luigi Musajo and Giovanni Rodighiero), 1109
Reaction (Precipitation), between Serum and Lysed Erythrocytes (Dr. J. F. Wilson and D. M. Jobling), 550

Reaction (Staining), for Mast Cells of some Lower Vertebrates : Differences in Mechanisms of (Dr. A. Stolk), 360
Reactions : Controlled Thermonuclear, *review* by Sir Basil Schonland, 750
  Controlled Thermonuclear (Samuel Glasstone and Ralph H. Lovberg), *review* by Sir Basil Schonland, 750
Reactions of Cytochrome-c with Methyl Linoleate Hydroperoxide (Dr. A. Banks, E. Eddie and J. G. M. Smith), 908
Reactions (Acid-Base) : The Possibility of Obtaining E.M.F. directly from—Electrodes of the Third Kind reversible to Alkaline Earth and other Ions (W. H. Beck), 712
Reactions (Emotional) : Inhibition of, by Phenothiazine Tranquillizers (Dr. Max Taeschler and Dr. Aurelio Cerletti), 1014
Reactions (Graft-against-Host Immunological), between Two Inbred Lines of Chickens : Genetic Basis for (L. N. Payne and P. Jaffe), 373
Reactions (Photochemical), in Frozen Solutions (Prof. Shih Yi Wang), 690
Reactions (Two Light), in Noncyclic Photo-Phosphorylation of Green Plants : Separation of (Dr. M. Losada, Dr. F. R. Whatley and Prof. Daniel I. Arnon), 606, *erratum*, 1063
C-Reactive Protein : Detection of, by Fluorescent Antibody Techniques (Dr. Robert Goldwasser and Dr. Rachmiel Rozansky), 1020
Reactor Centrum Nederland : Appointment of Prof. J. A. Goedkoop as managing director of research, 135
Reactors (Nuclear) : Resonance Absorption in (Lawrence Dresner), *review* by J. Codd, 1046
Reactors (Research), for Universities and Technical Colleges, 960
Read, Dr. Margaret : In Search of Race Relations, *review*, 946
Reading Machine for the Blind (M. P. Beddoes, E. Belyea and Prof. William C. Gibson), 874
Read, W. H. : Fungicides in Agriculture and Horticulture (Current Usage and Recent Developments—Glasshouse Crops), 593
Recombination in Hydrogenic Plasmas : Rates of (Dr. R. W. P. McWhirter), 902
Recorded Animal Sounds : Library of (To be set up by the Committee for Biological Acoustics, in collaboration with the British Institute of Recorded Sound), 395
Recorded Fishes : The Deepest (Torben Wolff), 283
Recorded Sound, British Institute of (Committee for Biological Acoustics, in collaboration with the) : To set up a Library of Recorded Animal Sounds, 395
Recording Ultra-violet Spectrometers (Photoelectric Spectrometry Group Test on), 394
Recovery : Waste Heat (Institute of Fuel Conference on), 591
Recovery of Fertility after Protracted Steroid-induced Sterility in Mice (Prof. Alexander Lipschutz and Rigoberto Iglesias), 174
Rectification (Leakage Current), in the Squid Giant Axon (Dr. William J. Adelman and Dr. Robert E. Taylor), 883
Red Blood Cells : Osmotic Pressure Effect of the—Possible Physiological Significance (Dr. A. Tybjaerg Hansen), 504
Red Cell Antigens (Chicken) : Incomplete Antibodies to (Dr. I. Dunsford, T. Lodge, M. McDermid and Dr. D. G. Gilmour), 544
Red Cells : Trapping of Plasma by (Peggy Clark and B. J. Walsh), 678
Red Cells in Man : Transplacental Passage of (Ronald Finn, Dr. C. A. Clarke, W. T. A. Donohue, Dr. R. B. McConnell, Dr. P. M. Sheppard and D. Lehane), 922
Red Scale in Citrus Fruit : Control of (B. H. Martin and Dr. R. F. Black), 133
Redepletion with Reserpine : Replacement of Adrenaline and Noradrenaline in the Adrenal Gland of the Rat, following Depletion and (Dr. B. A. Callingham and Dr. Monica Mann), 1201
Redfern, J. P. (Lukaszewski, G. M., and) : Chromium(III)–Oxyanion Systems, 805
Redfield, Alfred C., and others: Science in Progress, Eleventh Series (edited by Hugh Taylor), *review* by Prof. Ritchie Calder, 45
Reduced Oxygen Pressure : Growth of *Fomes annosus* under, and the Effect of Carbon Dioxide (Dr. K. Gundersen), 649
Reduced Pyridine Nucleotides : Oxidation of, and of Sulphite by Pea Root Mitochondria (R. G. Stickland), 648
Reducing Sugars and Insoluble Nitrogen : Effect of Ringing Cotton Stems on Content of, and on Degree of Infection with *Xanthomonas malvacearum* (E.F.S.) Dowson (K. A. Sabet and H. M. Hassan), 934
Reductase Activity (Nitrate) : Effect of Water-soluble Polymers on (H. R. Schreiner and A. P. Rinfret), 1110
Reduction of Coenzyme *Q* by Succinic Acid Dehydrogenase (Prof. Józef Heller, Dr. Ludmila Szarkowska and Czeslawa Petryszyn), 539
Reduction (Enzymatic), of Diphosphopyridine with Urea (Hirohisa Omura and Yutaka Osajima), 345
Reductive Dimerization of Naphthalene by Sodium–Ethylamine (Leslie Reggel, Heinz W. Sternberg and Irving Wender), 81
Reed, F. H. : Electrical Contacts (Electro-deposition of Metals), 866
Reed, Dr. R. I. : An Introduction to Electronic Theory of Organic Compounds, *review*, 296
Rees, Dr. K. R., and Spector, Dr. W. G. : Reversible Nature of Liver Cell Damage due to Carbon Tetrachloride as demonstrated by the Use of Phenergan, 821
Rees, Dr. W. J. : The Portuguese Man-of-War, 23
Refatti, E., and others : New Herbaceous Test-Plants for Study of the Infectious Degeneration of Grape Vines, 371
Reflecting Surfaces : Microscopic Studies of, *review* by J. W. Gates, 117
Reflecting Telescope (The 2-Metre Universal), of the German Academy of Science, Berlin (Dr. Rudolf Jobst), 301
Reflex (Peristaltic), in the Isolated Ileum of the Guinea Pig : Role of the Mucous Membrane in the (M. L. Diament, Dr. H. W. Kosterlitz and J. McKenzie), 1205
Reflex (Photomotor), as an Indicator of Consciousness during Curarization (Dr. Phyllis G. Croft), 726
Reflexes : The Discovery of (Prof. E. G. T. Liddell), *review* by Sir John Eccles, 43
Refractory Phase' : The 'Psychological, and Ageing (John Brebner and Dr. Jacek Szafran), 195
Regenerating Liver : Transmission of Swelling Characteristics by Mitochondria of (Hans H. Gosch and Prof. Joseph C. Arcos), 272
Reggel, Leslie, and others : Reductive Dimerization of Napththalene by Sodium–Ethylamine, 81
Registrar General: *Quarterly Return* for the fourth quarter of 1960, 766
  Statistical Review of England and Wales for the Year 1959, Part 2, Tables—Population, 1061
Regulation : Ciba Foundation Symposium on Haemopoiesis—Cell Production and its (edited by G. E. W. Wolstenholme and Maeve O'Connor), *review* by Dr. P. F. Harris, 479
Regulation (Metabolic), of Erythrocytes : Role of Glutathione and of a Self-stabilizing Chain of SH-Enzymes and Substrates in the (D. Scheuch, C. Kahrig, E. Ockel, C. Wagenknecht and Prof. S. M. Rapoport), 631
Regulation (Numerical), of Populations of the Codling Moth, *Cydia pomonella* (L.), (P. W. Geier), 561
Regulation (Plasma-Electrolyte) : An Electron Microscope Study of the 'Chloride-Secretory Cell' of *Salmo salar* L., with reference to (Dr. Lawrence T. Threadgold and Dr. Arthur Hillier Houston), 612
Regulation and Automation : International Exhibition on Measurement Control, (MESUCORA Association, in conjunction with the Fédération des Industries Mécaniques et Transformatrices des Métaux, the Syndicat Général de la Construction Électrique, and the Fédération des Industries Électroniques), 397
Regulators (Plant Growth): Azulene Derivatives as (Prof. Robert M. Muir and Corwin Hansch), 741
Reif, Prof. Arnold E. : Radiation Carcinogenesis at High Dose-Response Levels—a Hypothesis, 415
Reilley, Charles N. (edited by): Advances in Analytical Chemistry and Instrumentation, Vol. 1, *review* by Dr. D. T. Lewis, 944
Reissig, Dr. Magdalena, and others : Effect of Mitomycin C on the Synthesis of Infective Virus and Deoxyribonucleic Acid in Pseudorabies Virus-infected Rabbit Kidney Cells, 33
Related (Closely) Gamma-Myeloma Proteins and Normal Mouse Gamma-Globulin : An Investigation of, by Partial Enzymic Degradation and Starch-Gel Electrophoresis (Dr. Brigitte A. Askonas and Dr. J. L. Fahey), 980
Relation between Theoretical and Experimental Diamagnetic Susceptibilities for Aromatic Hydrocarbons (Dr. D. W. Davies), 1102
Relations (Race) : In Search of, *review* by Dr. Margaret Read, 946
Relationship to Malaria : Favism and Thalassaemia in Sardinia and their (M. Siniscalco, L. Bernini, B. Latte and A. G. Motulsky), 1179
Relationship between the True and Mean Anomalies (C. J. Brookes), 839
Relative Values of Animal and Vegetable Fats in Nutrition (Scottish Branch of the Nutrition Society Symposium on), 135
Relativity and the Fundamentals of Classical Mechanics : L. Euler, The Principle of (D. Speiser), 757
Relaxation (Spin-Lattice), of Pairs of Chromium Ions in Ruby (J. C. Gill), 619
Release of 5-Hydroxytryptamine from Rat Mast Cells *in vitro* (Dr. G. T. Archer), 350
Release (Apparent), of Tobacco Mosaic Virus in Living Infected Cells (Prof. J. G. Bald and R. A. Solberg), 651
Remanent Magnetization (Initial), and Number of Repeating of Heat Treatments : 'Memory' of, in Low-Temperature Behaviour of Haematite (Prof. T. Nagata, M. Yama-ai and S. Akimoto), 620
Renal Collecting Tubule Cells of the Potassium-deficient Rat : Detection of Serum Proteins within the (Ashton B. Morrison and Kenneth D. Gardner, jun.), 96
Renal Proliferation in the Unilaterally Nephrectomized Rat (Dr. David M. Kessner and E. Donnall Thomas), 175
Rendall, J. H. : Powder Metallurgy, *review*, 572
Reorganization of the Nationalized Transport Undertakings (Ministry of Transport), 137
Repeating of Heat Treatments : 'Memory' of Initial Remanent Magnetization and Number of, in Low-Temperature Behaviour of Haematite (Prof. T. Nagata, M. Yama-ai and S. Akimoto), 620
Repetitive Hyperpolarizing Response of the Nerve Fibre of Crayfish (T. Tomita, T. Saimi and N. Toida), 271
Repetitive Response to Prostigmine : Fractionation of the Motor Unit during (Dr. Simeon Locke), 452
Replacement of Adrenaline and Noradrenaline in the Adrenal Gland of the Rat, following Depletion and Redepletion with Reserpine (Dr. B. A. Callingham and Dr. Monica Mann), 1201
Replacement of the Protoplasm of a Giant Nerve Fibre with Artificial Solutions (P. F. Baker, Prof. A. L. Hodgkin and Dr. T. I. Shaw), 885
Repression (Phosphatase), by Inorganic Phosphate in some Micro-organisms : Absence of (Mau-Huai Kuo and Prof. Harold J. Blumenthal), 29
Reproductive Capacity of the Resulting Females : Termination of Pupal Diapause in the Cinnabar Moth and the (Dr. G. F. Bornemissza), 936
Reproductive Tract : Movement of the Ovum in the—A Needle Probe Geiger-Müller Counter for the Study of the Passage of the Ovum in the Reproductive Tract (J. P. Bennett), 788 ; A Possible Explanation for the Failure of Non-Surgical Ovum Transfers in the Cow (M. J. K. Harper, J. P. Bennett and L. E. A. Rowson), 789
Reproduction : Physiology of (Marshall's), third edition, Vol. 1, Part 2 (edited by Prof. A. S. Parkes), *review* by Dr. Anita M. Mandl, 1045
Reproduction in Animals, *review* by Dr. Anita M. Mandl, 1045
Reptiles : Influence of Large Doses of Œstrogens on the Structure of the Bones of some (Dr. K. Simkiss), 1217
Reptiles and Amphibians in the United States National Museum : Type Specimens of (Doris M. Cochran), 863
Requirement (Biotin), and Carbon and Sulphur Sources in *Aspergillus* and *Neurospora* (P. Strigini and G. Morpurgo), 557
Requirements (Research and Development), of the Shipbuilding and Marine Engineering Industries (Department of Scientific and Industrial Research), 200
Research : 1961 Waverley Gold Medal Essay Competition, 395
Research : Colonial, 1959-60 (Colonial Office), 21
  Rural in C.S.I.R.O. (Australian Commonwealth Scientific and Industrial Research Organization), No. 23, Control of Red Scale in Citrus Fruit (B. H. Martin and Dr. R. F. Black), 133
  Hydrological (Department of Scientific and Industrial Research Committee on), 490
  Rural, in C.S.I.R.O. (Australian Commonwealth Scientific and Industrial Research Organization), No. 34, 491
  Solid Propellant Rocket—a Selection of Technical Papers based mainly on a Symposium of the American Rocket Society, held at Princeton University, 1960 (edited by Dr. Martin Summerfield), *review* by Prof. D. B. Spalding, 66
  Space, in Britain, 588
  Water, 766
Research (Agricultural), Indian Council of : First Rafi Ahmed Kidwai Memorial Prize awarded to Dr. B. P. Pal, 312
Research (Antarctic) : Mawson Institute of (Prof. A. R. Alderman), 1157

- *Research* (*Atherosclerosis*), *Journal of*, 767
- Research (Biological) : Living Animal Material for (Proceedings of the International Committee on Laboratory Animals Symposium on), 677
- Research (Cancer) : Provision of Animals for (Laboratory Animals Centre of the Medical Research Council Symposium on), 393
- Research (Coal), in C.S.I.R.O. : Nos. 1-11 (Australian Commonwealth Scientific and Industrial Research Organization), 14
- Research (Cotton, Silk and Man-made Fibres) : Funds for, 1154
- Research (Fishery) : Postgraduate Training Grants for (Ministry of Agriculture, Fisheries and Food and the Department of Agriculture and Fisheries for Scotland), 679
- Research (Fundamental) : Support for, 473
- Research (Geophysical), in the Meteorological Office, 676
- Research (Medical), East African Institute for : Report for 1959-60, 864
- Research (Medical), National Institute for : Retirement of Sir Christopher Andrewes as head of the Division of Bacteriology and Virus Research, 1153
  - Appointment of Dr. A. Isaacs as head of the Division of Bacteriology and Virus Research, 1153
- Research (Meteorological) : The Gassiot Committee of the Royal Society and (Dr. D. C. Martin), 212
- Research (Oceanographic and Hydrographic) : British Funds for, 216
- Research (Psychical), Society for : Fourteenth Frederic W. H. Myers Memorial Lecture, The Neurophysiological Aspects of Hallucinations and Illusory Experience (Dr. W. Grey Walter), 394
- Research (Scientific and Medical) : Fund to promote and assist (Life Offices' Association for Australasia), 135
- Research (Seaweed), Institute for : Annual Report for 1960, 970
- Research (Space) : British Participation in, 216
  - Radio Techniques and (British Institute of Radio Engineers 1961 Convention), 591
  - The Space Encyclopaedia—a Guide to Astronomy and, second edition, *review* by R. H. Merson, 76
- Research (Thermonuclear) : Plasma Physics and (edited by G. Longmire, James L. Tuck and Dr. W. B. Thompson), Vol. I, *review* by Sir Basil Schonland, 750
- Research (Water), in Britain, 217
- Research on the Diseases of Children, Queen Elizabeth II Canadian Fund to Aid in : Appointment of Dr. M. W. Partington as the first Queen Elizabeth II Scientist, 863
  - Queen Elizabeth II Fellowships awarded to Dr. John Alexander Lowden, Dr. George Greenough Hinton and Dr. Hugh Taylor, 863
- Research in Nuclear Science, National Institute for : Appointment of L. B. Mullett as assistant director for accelerator and applied physics in the Rutherford Laboratory, 393
- Research on Plant Breeding, European Association for : Conference on Environmental Factors in the Distribution of Fruit Varieties, 16
- Research on the Reticulo-Endothelial System, International Society for : Election of Officers, 679
- Research Reactors for Universities and Technical Colleges, 960
- Research Conferences 1961 : Gordon, 396
- Research Council of Alberta : Forty-first Annual Report (1960), 872
- Research Fellowships for 1961 : Lederle Medical Student (American Cyanamid Co.), 134
- Research Fellowships for 1961-62 : Carlsberg–Wellcome Travelling (Wellcome Trust), 134
- Research Grants (Leverhulme Trust Fund Awards), 678
- Research Problems (Some Recent), encountered in the Study of Blood as a Rheological Fluid (Cambridge Rheology Club Discussion on), 1062
- Research Ship *Eltanin* : United States Antarctic, 765
- Research and Development : Reviews of Data on, No. 24, Funds for Research and Development by Industry in the United States (United States National Science Foundation), 14
- Research and Development in Industry, 199
- Research and Development in Industry, 1957 : Funds for—Performance and Financing (Department of Commerce, United States Bureau of the Census), 132
- Research and Development by Industry in the United States : Funds for (United States National Science Foundation, Reviews of Data on Research and Development, No. 24), 14
- Research and Development Requirements of the Shipbuilding and Marine Engineering Industries (Department of Scientific and Industrial Research), 200
- Research and Development of Sources of Energy : Co-ordination of, 1060
- Research and Development, Advisory Council on : Terms of reference, 1060
- Research and Development (Scientific) : Current Projects on the Economic and Social Implications of, 1960 (United States National Science Foundation), 863
- Research and Education in Physics : International School for, established at the University of Uppsala (sponsored by the International Atomic Energy Agency, Unesco, and the Central Committee for Swedish Technical Assistance), 311
- Research and Teaching (Medical) : Applications of Television in (Medical Committee of the Scientific Film Association in collaboration with the Association for the Study of Medical Education Symposium on), 1159
- Reserpine : Effect of Iproniazid on the Antileukaemic Action of (Richard A. Salvador, Stewart R. Humphreys, Robert Main Burton and Abraham Goldin), 723
  - Replacement of Adrenaline and Noradrenaline in the Adrenal Gland of the Rat, following Depletion and Redepletion with (Dr. B. A. Callingham and Dr. Monica Mann), 1201
- Resistance to Dieldrin in *Anopheles* in Trinidad (T. A. Omardeen), 559
- Resistance of Rats to Histamine Stress : Effect of Splenectomy on the (Arthur M. Sackler, A. Stanley Weltman and Peter Jurtshuk, jun.) 274
- Resistance (Insecticide), in Mosquitoes (Dr. G. Davidson and Dr. C. Elizabeth Jackson), 364
- Resisting Couple : Effect of a, on the Rotational Motion of a Rigid Body (Prof. A. K. Weaver), 335
- Resistivity of a Superconducting Film : An Upper Limit for the (R. F. Broom), 992
- Resonance : Proton, *review* by Dr. J. C. D. Brand, 1043
- Resonance (Electron Spin) Line-Widths in Solutions of Copper and Silver Dithiocarbamates (Roland Aasa, Rune Pettersson and Tore Vänngård), 258
- Resonance Absorption in Nuclear Reactors (Lawrence Dresner), *review* by J. Codd, 1046
- Resonance Spectra (Electron Spin), of γ-Irradiated Carbohydrates and α-Hydroxy Acids (A. J. Bailey, Dr. S. A. Barker, J. S. Brimacombe, D. Pooley and D. H. Spence), 259
- Resonance Spectroscopy (Nuclear Magnetic), in Organic Chemistry : Applications of (Dr. L. M. Jackman), *review* by Dr. J. C. D. Brand, 1043
- Resonances (Proton Magnetic), of certain Organophosphorus Compounds : Doubling of the (T. H. Siddall, C. A. Prohaska and W. E. Shuler), 903
- Resources, Human and Material, of the Commonwealth (H.R.H. the Duke of Edinburgh), 673
- Respiration : Cellular Organization and (Plant Physiology, edited by Prof. F. C. Steward, Vol. 1*A*), *review* by Prof. Walter Stiles, 116
- Respiration (Impaired), in Staphylococci : Biochemical Changes accompanying (Prof. G. F. Gause, G. V. Kochetkova and G. B. Vladimirova, 978
- Respiration-deficient Mutant of Baker's Yeast : The Pasteur Effect in a (A. Kotyk), 811
- Respiration and Swelling of Isolated Liver Mitochondria: Effects of Oligomycin on (Dr. J. B. Chappell and Dr. G. D. Greville), 502
- Respiratory Deficiency (Heritable), in *Saccharomyces* : Induction of, by Pantothenate Starvation (Prof. Alvin Sarachek and Gregory L. Fowler), 792
- Respiratory Effects of Phosphorylation (Prof. H. Lundegårdh), 983
- Response of the Mouse Embryo to the Teratogenic Effects of Hypervitaminosis-A : Influence of Uterine Position on the (Dr. D. H. M. Woollam and Dr. J. W. Millen), 184
- Response of Thymus to Increase of Intake of Sodium Chloride (Dr. M. Pospíšil), 89
- Response (Arousal) : Effects of Chlorpromazine and Lysergic Acid Diethylamide on the Rate of Habituation of the (Dr. B. J. Key), 275
- Response (High Dose-) Levels : Radiation Carcinogenesis at—a Hypothesis (Prof. Arnold E. Reif), 415
- Response (Repetitive), to Prostigmine : Fractionation of the Motor Unit during (Dr. Simeon Locke), 452
- Response (Repetitive Hyperpolarizing), of the Nerve Fibre of Crayfish (T. Tomita, T. Saimi and N. Toida) 271
- Response (Salinity), of Trace Element Concentration in *Crassostrea virginica* (James B. Rucker and Prof. James W. Valentine), 1099
- Response (A Sequential Growth), to Gibberellic Acid, Kinetin and Indolyl-3-Acetic Acid in the Wheat Coleoptile (*Triticum vulgare* L.), (Dr. S. T. C. Wright), 699
- Responses (Acetylcholine), of the Denervated Rat-Diaphragm Preparation : Influence of Gamma-Aminobutyric Acid on the (Dr. R. S. Watson), 724
- Responses (Physiological), to Hot Environments (compiled by Dr. R. K. Macpherson), 1163
- Responsibility (Christian) : The Population Explosion and (Dr. Richard M. Fagley), *review* by the Very Rev. Dr. W. R. Matthews, 41
- Responsiveness of the Blowfly to Water : Control of the (Prof. David R. Evans), 1132
- Resting Habits of *Anopheles gambiae* and *Anopheles pharoensis* in Salt Bush and in Crevices in the Ground (Dr. A. Smith), 1220
- Results (New) in Polar Exploration (Deutsche Gesellschaft für Polarforschung Meeting on), 493
- Requirements (Folinic Acid), of Strains of the Genus *Pediococcus* (Ellen I. Garvie and Margaret E. Gregory), 563
- Retention of Carbon Dioxide Bubbles on Calcite Etch-Peaks (Peggy M. Dunlap and J. D. Wilkinson), 524
- Retention Data : Prediction of, in Gas–Liquid Chromatography from Molecular Formulae (M. B. Evans and J. F. Smith), 905
- Reticulo-Endothelial System : Effect of Dexamethasone on the Phagocytic Activity of the (Prof. T. Nicol and C. G. Druce), 91
  - Effect of Haemophagin on the Phagocytic Activity of the (Prof. T. Nicol, P. McKelvie and C. G. Druce), 92
  - Phagocytic Activity of the—Effect of *B.C.G.* (Prof. T. Nicol, P. McKelvie and C. G. Druce), 418 ; Effect of Tri-*p*-anisylchloroethylene, Dienoestrol and Stilboestrol Diphosphate (Prof. T. Nicol, Dr. D. L. J. Bilbey and C. G. Druce), 419
- Reticulo-Endothelial System in Mice : Influence of a Liver Fraction on the Phagocytic Activity of the (Prof. B. N. Halpern, C. Stiffel and J. Dedichen), 279
- Reticulo-Endothelial System, International Society for Research on the : Election of Officers, 679
- Retinal Slow Potential of the Horseshoe Crab : Effect of Temperature on the (Dr. R. Kikuchi, K. Naito and S. Minagawa), 1011
- Retracing (Numerical), of Atmospheric Events (Dr. Uwe Radok and D. Jenssen), 247
- Reuter, Dr. G. : Biosynthesis of Citrulline in Plants, 447
- Revealing the Membrane Systems in Micro-organisms : Method for (R. J. North), 1215
- Reversal of Diurnal Temperature Rhythms in Man (G. W. G. Sharp), 146
- Reversal of γ-Ray-induced Dormancy of Potato Tubers by Gibberellic Acid (Dr. P. B. Mathur), 547
- Reversal Method (Sodium Line) : Stagnation Temperature Measurements in a Hypersonic Wind-Tunnel using the (J. L. Stollery), 778
- Reversible Block of Axonal Conduction by Curare after Treatment with Cobra Venom and a Detergent (Dr. Philip Rosenberg and Dr. Seymour Ehrenpreis), 728
- Reversible Nature of Liver Cell Damage due to Carbon Tetrachloride as demonstrated by the Use of Phenergan (Dr. K. R. Rees and Dr. W. G. Spector), 821
- Reviews of Data on Research and Development : No. 24, Funds for Research and Development by Industry in the United States (United States National Science Foundation), 14
- Reviews of Nuclear Physics, *review* by Dr. Joan M. Freeman, 62
- Revolution (A Timely), in Technological Education, 113
- Reyssat, M., and others : A Transatlantic Communication Experiment via *Echo* I Satellite, 709
- Rhamnose for Detection and Isolation of *Azotobacter vinelandii* Lipman (Vagn Jensen), 832
- Rheological Fluid : Some Recent Research Problems encountered in the Study of Blood as a (Cambridge Rheology Club Discussion on), 1062
- Rheology Club (Cambridge) : Discussion on Some Recent Research Problems encountered in the Study of Blood as a Rheological Fluid, 1062
- Rheumatoid Factor(s) : Agglutination of Sensitized Alligator Erythrocytes by (E. Cohen, A. Nisonoff, P. Hermes, B. M. Norcross and L. M. Lockie), 552

Rhizinia undulata : Damage by, in Coniferous Plantations, 685
Rhodesia (South-east Southern) : Karroo Igneous Activity and Tectonics in (K. G. Cox, J. R. Vail, L. J. Monkman and R. L. Johnson), 40 ; (D. N. Wood), 802
Rhodin, Thor N. (edited by) : Physical Metallurgy of Stress Corrosion Fracture (Metallurgical Society Conferences, Vol. 4), *review* by Prof. F. C. Thompson, 383
Rhone, James R., and others : Œstrogen Protection against Acute Digitalis Toxicity in Dogs, 1117
Rhythm (Seasonal), of Wool Growth in Sheep : Photoperiodicity of (L. R. Morris), 102
Rhythms (Diurnal Temperature), in Man : Reversal of (G. W. G. Sharp), 146
Rhythms (Physiological), of Unrestrained Animals: Determination of, by Radio Telemetry (Warren O. Essler and Prof. G. Edgar Folk, jun.), 90
Ribonuclease (Bovine Pancreatic) : The Active Site and Mechanism of Action of (Dorothy Findlay, D. G. Herries, Dr. A. P. Mathias, Dr. B. R. Rabin and C. A. Ross), 781
Ribonucleic Acid : Bromegrass Mosaic Virus, a Virus containing an Unusually Small (Larry E. Bochstahler and Prof. Paul Kaesberg), 192
Ribonucleic Acid of the Lens of the Rat : Incorporation of Amino-Acids into Protein and—Effect of Heavy Metals (Dr. Anima Devi, Dr. Sidney Lerman and Dr. Nirmal K. Sarkar), 1193
Ribonucleic Acid (Unstable), revealed by Pulse Labelling of *Escherichia coli* (Dr. Francois Gros, Dr. H. Hiatt, Dr. Walter Gilbert, Dr. C. G. Kurland, R. W. Risebrough and Dr. J. D. Watson), 581
Ribonucleic Acid Component' ('Infective) : Nature of the, in Cells infected with Encephalomyocarditis Virus and the 'Virosome' Concept (A. J. D. Bellett and A. T. H. Burness), 235
Ribonucleic Acid Viruses : Coding Ratio for the (C. R. Woese), 697
Ribonucleoprotein (Anti-) Serum : Partial Inhibition of Antibody Formation by means of (Prof. B. D. Jankovič, Dr. K. Isakovič and J. Horvat), 1218
Ribosomes : An Unstable Intermediate carrying Information from Genes to, for Protein Synthesis (Dr. S. Brenner, Dr. F. Jacob and Dr. M. Meselson), 576
Ribotide (Histamine) : Enzymatic Formation of, from Histamine Dinucleotide (Dr. Saburo Muraoka, Mie Inoue and Prof. Hidemasa Yamasaki), 532
Rice : Estimation of Percentage Natural Cross-Pollination—Experiments on (E. H. Roberts, R. Q. Craufurd and F. Le Cochec), 1084
Rice Plants : Effects of Ionizing Radiations on (Maung Mya Thaung), 242
Rice Research Station : The West African (H. D. Jordan), 773
Ricerche, Consiglio Nazionale della, with the co-operation of the Rassegna Internazionale Elettronica e Nucleare : Symposium on Solar Seeing, 771
Richards, Dr. B. N. : Soil *p*H and Mycorrhiza Development in *Pinus*, 105
Richards, W. J. : Appointed first director of the new Staff College for Further Education, 308
Richardson, L., and Sandford, Dr. K. S. : Mammoths in the Cotswolds, 342
Richelle, L., and Dallemagne, Prof. M. J. : Calcium Exchange of Bone Salts considered as a Measure of the Crystal Surface, 165
Richey, –. (Veal, –., and) : Television and Film Techniques (Technical Requirements of Systems and Film for Colour Television), 869
Richter, Prof. G. W. : Activation of Ferritin Synthesis and Induction of Changes in Fine Structure in HeLa Cells *in vitro*—Implications for Protein Synthesis, 413
Riddiford, Dr. A. C. : Title of senior lecturer in chemistry in the University of Southampton conferred on, 397
Rieck, Prof. G. D., and Bruning, H. A. C. M. : Thermal Diffusion of Oxygen and Nitrogen in Zirconium, 1181
Riggs, Austen : Bohr Effect in the Haemoglobins of Marine Mammals, 94
Riggs, Prof. L. A. : Elected a Member of the United States National Academy of Sciences, 674
Rigid Body : Effect of a Resisting Couple on the Rotational Motion of a (Prof. A. K. Weaver), 335
Riley, Dr. J. P. : Appointed senior lecturer in oceanography at the University of Liverpool, 963
Rimington, Prof. C. : Study of Defects in Porphyrin Metabolism by means of Isotopes, 870
Rinfret, A. P. (Schriner, H. R., and) : Effect of Water-soluble Polymers on Nitrate Reductase Activity, 1110
Ringing Cotton Stems : Effect of, on Content of Reducing Sugars and Insoluble Nitrogen and on Degree of Infection with *Xanthomonas malvacearum* (E.F.S.) Dowson (K. A. Sabet and H. M. Hassan), 934
Ringworm : Treatment of, by Griseofulvin, 223
Rise of Bubbles in Water : Effect of Mass Transfer on the Velocity of (Dr. J. H. Leonard and Prof. G. Houghton), 687
Rise in Population in Britain, 766
Risebrough, R. W., and others : Unstable Ribonucleic Acid revealed by Pulse Labelling of *Escherichia coli*, 581
Ritchie, Dr. D. B. : Surface Enamel Magnesium and its Possible Relation to Incidence of Caries, 456
River (Tweed) Purification Board : Sixth Annual Report (1959-60), 1062
Rivers : Movement of Coarse Fish in (B. Stott), 736
Rivett, Sir David : *Obituary* by Dr. I. W. Wark, 958
Roach, S. A. : Training in Occupational Hygiene (Nine-month Course in Industrial Hygiene Engineering being planned at the London School of Hygiene and Tropical Medicine), 1159
Robb, Patricia M. : Development of the Islets of Langerhans in Man, 1018
Robb, Prof. R. C. : Gas Chromatography, 867
Roberts, Adrian P. : Appointed senior lecturer in engineering mathematics at Queen's University, Belfast, 218
Roberts, D. F., and Harrison, G. A. (edited by) : Natural Selection in Human Populations (Symposia of the Society for the Study of Human Biology, Vol. 2), *review* by Kenneth A. R. Kennedy, 72
Roberts, E. H., and others : Estimation of Percentage Natural Cross-Pollination—Experiments on Rice, 1084
Roberts, John : Estimation of Dynamic Modulus and Dynamic Yield Stress for 'Perspex', 799
Roberts, Dr. R. B. : Elected a Member of the United States National Academy of Sciences, 674
Robertson, J. M., and others (edited by) : Computing Methods and the Phase Problem in X-Ray Crystal Analysis—Report of a Conference held at Glasgow, 1960, *review* by Dr. A. D. Booth, 752
Robertson, Prof. Monteath : Terpene Chemistry (Determination of the Structure of the Complex Terpenoid Bitter Principle, Clerodin), 19
Robertson, R. H. S. : Weathering (Red Tertiary Interbasaltic Weathering), 1067 ; (Origin of English Fuller's Earths), 1067
Robertson, W. S. : Science and Industry—the Problem of Communication, 965
Robin, Dr. Louis : Fonctions Sphériques de Legendre et Fonctions Sphéroidales, Tome 3, *review*, 118
Robinson, Abner R. (Zuelzer, Dr. Wolf W., and) : Haemoglobin F, its Significance in the Genetics and Evolution of Haemoglobin, 237
Robinson, Dr. D. L. H. : Avian Schistosomes in Hertfordshire, 827
Robinson, Paul F., and Henrickson, Roy V. : Metabolism of *Gerbillus pyramidum*, 637
Rocard, Y. : Principles of Electricity and Magnetism (translated by G. F. Herrenden), *review* by Dr. E. Stanley, 76
Roche (Le Grande), de Naquane (M. Anati), 140
Rochow, Prof. Eugene G. : Unnatural Products—New and Useful Materials from Silicon (Thirty-fourth Annual Priestley Lectures), *review* by Dr. J. S. Anderson, 59
Rock Engravings in Northern Italy (Miles Burkitt), 140
Rock Paintings in the West Kimberley Region of Western Australia (P. E. Playford), 767
Rock-Shelter Art (Primitive), in Australia, 767
Rock-Shelter Paintings of the Union of South Africa : The Brandberg and other (Revel Mason), 311
Rock Systems : Proceedings of the Conference on the Geochronology of (edited by Prof. J. L. Kulp), 1062
Rock Targets : Impulse Loading of, to produce Fracture Patterns similar to Naturally Occurring Radial Dyke Systems (Carl F. Austin), 227
Rocket : Photon (G. G. Zelkin), 590
Rocket (Sounding) : Measurement of Positive-Ion Density in the Ionosphere by (T. Ichimiya, K. Takayama, T. Dote, Y. Aono, K. Hirao, S. Miyazaki, T. Sugiyama and T. Muraoka), 156
Rocket Flight : First American Manned Ballistic, 587
Rocket Motors : Interior Ballistics of, *review* by Prof. D. B. Spalding, 66
Rocket Propellant Handbook (Boris Kit and Douglas S. Evered), *review* by Prof. D. B. Spalding, 66
Rocket Research : Solid Propellant—a Selection of Technical Papers based mainly on a Symposium of the American Rocket Society, held at Princeton University, 1960 (edited by Dr. Martin Summerfield), *review* by Prof. D. B. Spalding, 66
Rocket Society (American) : Solid Propellant Rocket Research—a Selection of Technical Papers based mainly on a Symposium of the, held at Princeton University, 1960 (edited by Dr. Martin Summerfield), *review* by Prof. D. B. Spalding, 66
Rockets : Liquid Propellant (David Altman, James M. Carter, S. S. Penner and Dr. Martin Summerfield), *review* by Prof. D. B. Spalding, 66
  Solid Propellant (Clayton Huggett, C. E. Bartley and Mark M. Mills), *review* by Prof. D. B. Spalding, 66
Rockets (Sounding) : Programme of, 1061
Rodighiero, Giovanni (Musajo, Luigi, and) : A New Photo-Reaction between some Furocoumarins and Flavin Mononucleotide, 1109
Roe, Dr. Edna M. F. : Title of reader in spectroscopy in the University of London (at the Institute of Cancer Research, Royal Cancer Hospital) conferred on, 219
Roe, Dr. F. W., and Haile, Dr. N. S. (Dr. P. Liechti, in association with) : The Geology of Sarawak, Brunei and the Western Part of North Borneo, 768
Roff, C. (Brimblecombe, A. R., and) : Distribution of *Acarapis woodi* (Rennie), 561
Rogan, Dr. J. M. : Training in Occupational Hygiene (Existing Employment of Industrial Medical Officers in Large Concerns), 1158
Roger, R. S., and others : A New Determination of the Solar Parallax by means of Radar Echoes from Venus, 519
Rogosinski, H. P. : Appointed to a lectureship in pure mathematics in the University of Birmingham, 679
Roizen, J. : Television and Film Techniques (The Use of Video-Tape for Colour Television Recording), 868
Role in Cellular Susceptibility to Foot-and-Mouth Disease : Phagocytic Activity in Squamous Epithelia and its (Dr. H. Platt), 1075
Role of Glutathione and of a Self-stabilizing Chain of SH-Enzymes and Substrates in the Metabolic Regulation of Erythrocytes (D. Scheuch, C. Kahrig, E. Ockel, C. Wagenknecht and Prof. S. M. Rapoport), 631
Role of the Mucous Membrane in the Peristaltic Reflex in the Isolated Ileum of the Guinea Pig (M. L. Diament, Dr. H. W. Kosterlitz and J. McKenzie), 1205
Role (Possible), of Nucleopeptides in Protein Biosynthesis (P. Szafrański and M. Bagdasarian), 719
Role (A Proposed Dual Neurohumoral), of Acetylcholine—its Functions at the Pre- and Post-Synaptic Sites (George B. Koelle), 208
Rollers : Elastohydrodynamic Lubrication of (A. W. Crook), 1182
Romney Ewes (Adult) : Bundles of Follicles in (D. F. G. Orwin), 1026
Room Temperature : Formation of Silicon Nitride Whiskers on a Ferro-Silicon Alloy at (E. Johnson, Prof. K. Grjotheim and C. Krohn), 523
Rooney, G. (Bird, R. J., and) : Structure of Calcium Soap Fibres, 337
Root of Water Hyacinth : Growth Substances separated from the, by Paper Chromatography (Prof. S. M. Sircar and Arati Ray), 1213
Root Mitochondria (Pea) : Oxidation of Reduced Pyridine Nucleotides and of Sulphite by (R. G. Stickland), 648
Root Nodules (*Myrica*) : Molybdenum and the Fixation of Nitrogen in (Dr. G. Bond and Dr. E. J. Hewitt), 1033
Roots on Dwarf Bean Hypocotyls : Effects of Quality of Light on Development of, in Presence and Absence of Boron (Dr. E. C. Humphries), 701
Rosbaud, P., und andere (herausgegeben von) : Beiträge zür Physik und Chemie des 20 Jahrhunderts—Lise Meitner, Otto Hahn, Max von Laue zum 80 Geburtstag, *review* by Dr. C. A. Taylor, 118
Rösch, Dr. J.: Solar Seeing (At the Pic-du-Midi Good Definition holds for an hour or so after Sunrise), 771
Rose, Prof. Harry M. (edited by) : Viral Infections of Infancy and Childhood—a Symposium of the Section of Microbiology, New York Academy of Medicine, *review* by Dr. N. R. Grist, 659
Rose, S. P. R. : Elected to a Beit Memorial Junior Fellowship, 768
Rosenberg, Dr. Philip, and Ehrenpreis, Dr. Seymour : Reversible Block of Axonal Conduction by Curare after Treatment with Cobra Venom and a Detergent, 728
Rosenfeld, Prof. L. : Foundations of Quantum Theory and Complementarity, 384

Rosenkrantz, Utta (von Szilvinyi, Armin, and) : Radiation Effect on Yeasts of the Genus *Candida* Berkhout, 1212
Rosenthal, Dr. G. : Weathering (Theoretical and Practical Aspects of the Weathering of Porous Materials by Freezing), 1077
Rosenzweig, M. R., and others : Sex and Strain Differences in Electroshock Convulsions of the Rat, 515
Ross, C. A., and others : The Active Site and Mechanism of Action of Bovine Pancreatic Ribonuclease, 781
Ross, J. G. : Association of Detectable Antibodies produced by *Haemonchus* spp. Infections in Cattle, with Serum Globulin Fractions, 1019
Ross, Dr. K. F. A. : Applications of Interference Microscopy (Interference Microscopy can be used to Measure the Mass or Solid Concentration of Cell Inclusions), 315
Ross Institute of Tropical Hygiene (London School of Hygiene and Tropical Medicine) : Course in Tropical Hygiene for Laymen, 397
Rosser, Dr. W. G. V. : Velocity of Light emitted by a Moving Source, 249
Rotating Machinery : Generation of Electricity without the Use of (Dr. K. H. Spring), 297
Rotational Motion of a Rigid Body : Effect of a Resisting Couple on the (Prof. A. K. Weaver), 335
Rothamsted Experimental Station : Appointment of Dr. C. G. Johnson as head of the Entomology Department, 493
Rothballer, Alan B. (Grosz, Hanus J., and) : Hypothalamic Control of Lactogenic Function in the Cat, 349
Rotifer : New Species of (H. G. S. Wright), 311
Rous Sarcoma Virus associated with Parthenogenesis in Turkey Eggs (Marlow W. Olsen), 191
Roush, Prof. Allan H. : Crystallization of Purines in the Vacuole of *Candida utilis*, 449
Roushdy, Dr. H. M., and Hansen, Dr. Vagn Kr. : Filtration of Phytoplankton by the Octocoral *Alcyonium digitatum* L., 649
Rowe, Dr. A. T. : Some Recent Research Problems encountered in the Study of Blood as a Rheological Fluid, 1062
Rowe (N. E.) Medal of the Royal Aeronautical Society awarded to J. Wilding and to W. Bishop, 863
Rowson, L. E. A., and others : Movement of the Ovum in the Reproductive Tract—A Possible Explanation for the Failure of Non-Surgical Ovum Transfers in the Cow, 789
Roy, Prof. M. : Elected a member of the Engineering Sciences Section of the International Academy of Astronautics, 495
Roy, Prof. Rustum, and Cohen, H. M. : Effects of High Pressure on Glass—a Possible Piezometer for the 100-Kilobar Region, 798
Royal Academy of Belgium : Election of Prof. C. W. Wardlaw as an honorary foreign associate (Section of Natural Sciences), 1156
Royal Aeronautical Society : Election of Air Marshal Sir Owen Jones as president, 862
  Honorary Fellowship conferred on Sir Sydney Camm and on J. D. North, 862
  Honorary Companionship awarded to J. N. Toothill, 862
  Simms Gold Medal awarded to Prof. D. B. Spalding, 863
  George Taylor (Australia) Gold Medal awarded to A. J. Troughton, 863
  Edward Busk Memorial Prize awarded to C. Bourque and Prof. B. G. Newman, 863
  Orville Wright Prize awarded to Prof. W. H. Wittrick, 863
  Herbert Akroyd Stuart Memorial Prize awarded to J. S. Alford, 863
  Branch Prize awarded to Lieut. Comdr. D. J. Whitehead, 863
  Usborne Memorial Prize awarded to T. W. F. Moore, 863
  Silver Medal awarded to R. Hafner, 863
  Bronze Medal awarded to L. Haworth, 863
  British Gold Medal for Aeronautics awarded to Dr. S. G. Hooker, 863
  R. P. Alston Medal awarded to R. P. Dickinson, 863
  Wakefield Gold Medal awarded to Dr. E. Eastwood, 863
  British Silver Medal for Aeronautics awarded to Pierre Satre, 863
  N. E. Rowe Medal awarded to J. Wilding and to W. Bishop, 863
Royal Aircraft Establishment, Farnborough : Appointment of J. R. Mills as head of the Radio Department, 392
Royal Astronomical Society : Geophysical Discussion on Technique of Optical Observations, 1065
Royal Cancer Hospital (Institute of Cancer Research) : Title of reader in spectroscopy in the University of London conferred on Dr. Edna M. F. Roe, 219
Royal College of Science and Technology, Glasgow : Informal Meeting (under the auspices of the Faraday Society) to mark the centenary of the publication by Thomas Graham of his paper on Liquid Diffusion, 312
  Retirement of Prof. J. P. Todd from the chair of pharmacy, 764
  Appointment of Dr. John B. Stenlake to the chair of pharmacy, 764
  Appointment of Dr. Ernest O. Morris to the new chair of applied microbiology and biology, 764
Royal College of Surgeons of England : Title of Sir William Collins professor of anatomy (at the Institute of Basic Medical Sciences) conferred on G. W. Causey, 396
  Title of Sir William Collins professor of pathology (at the Institute of Basic Medical Sciences) conferred on Dr. G. J. Cunningham, 396
  Grant of £250,000 from the Wolfson Foundation, for the provision, furnishing and equipment of the Hunterian Museum, 962
Royal Free Hospital School of Medicine, London : Title of professor of organic chemistry conferred on Dr. Alexander Lawson, 963
Royal Geographical Society : Lady Dorothy Mills Award for women, 311
  Research Series No. 4, Investigations on Norwegian Cirque Glaciers (edited by W. V. Lewis), *review* by Dr. C. A. M. King, 662
Royal Institute of Chemistry, and others : Symposium on The Soil—Problems raised by its Use and Misuse, 770
Royal Institution : Election of Officers for 1961-62, 492
Royal Irish Academy : Election of Officers, Honorary Members and Members, 492
Royal Jelly : A New Fatty Acid from (Prof. W. H. Brown and Ethel E. Felauer), 88
Royal Meteorological Society : Symposium on Winds and Circulation in the Upper Atmosphere, 591
  Symposium on Medium-scale Diffusion in the Atmosphere, 591
Royal Microscopical Society : Symposium on Applications of Interference Microscopy, 315
Royal Radar Establishment : The Radio Telescope Interferometer at the (Dr. J. S. Hey), 1150
Royal Society of Edinburgh : Election of new Fellows, *errata*, 135
Royal Society of London : Year Book for 1961 (No. 65), *review*, 204
  The Gassiot Committee of the, and Meteorological Research (Dr. D. C. Martin), 212
  Grant to the Library of Recorded Animal Sounds, for equipment, 395
  Election of Foreign Members, 488
  Gift of £100,000 from the Wellcome Trustees, to establish and endow a Henry Dale professorship in medical research, 1153
Royal Society, and others : Rutherford Jubilee International Conference, 679
Royal Society for the Protection of Birds (British Trust for Ornithology and the) : Report on Birds killed by Poisonous Seed Dressings, 218
Royal Society of Tropical Medicine and Hygiene : Annual General Meeting, 963
  Chalmers Medal to be presented to Dr. C. E. Gordon Smith, 963
Royal Society of Western Australia : *Journal* of the, Vol. 43, Part 4, 767
Royal Veterinary College, London : Title of reader in veterinary physiology conferred on Dr. F. R. Bell, 396
  Title of reader in chemistry conferred on Dr. E. G. C. Clarke, 963
Rozansky, Dr. Rachmiel (Goldwasser, Dr. Robert, and) : Detection of C-Reactive Protein by Fluorescent Antibody Techniques, 1020
Rubber as the Stationary Phase : Liquid Chromatographic Separations using (P. I. Brewer), 625
Rubtzov, N. I. : The Pontide Paradox, 864
Ruby : Spin-Lattice Relaxation of Pairs of Chromium Ions in (J. C. Gill), 619
Rucker, James B., and Valentine, Prof. James W. : Salinity Response of Trace Element Concentration in *Crassostrea virginica*, 1099
Rudloff, Dr. V., and others : The Haemoglobin Particles—Chemical and Genetic Aspects of their Structure, 480
Rudolph, G. : Spiral Nerve-endings (Proprioceptors) in the Human Vocal Muscle, 726
Rugby District : The Flora of the, First Supplement (D. E. Allen), (Rugby School Natural History Society), 492
Rugby School Natural History Society : The Flora of the Rugby District, First Supplement (D. E. Allen), 492
  Report for 1960, 767
Rule, Dr. N. G. (Lorand, Dr. L., and) : Inhibition of Proteolytic Enzymes by Decarboxylated Amino-Acid Derivatives—Effect of Toluenesulphonyl(Tosyl)agmatine (4-Toluenesulphonamidobutylguanidine) on Thrombin and Trypsin, 722
Rule (Schulze–Hardy), and Mass Action Law (Prof. Mirko Mirnik), 689
Rumen : A Diurnal Cycle for Holotrich Protozoa of the (D. B. Purser), 831
Ruminant Depot Fat : Effect of Duodenal Administration of Highly Unsaturated Fatty Acids on Composition of (Bridget M. Ogilvie, Prof G. L. McClymont and Dr. F. B. Shorland), 725
Runcorn, Prof. S. K. (edited by) : Methods and Techniques in Geophysics, Vol. 1, *review* by M. J. Keen, 55
Rural England and Wales, Councils for the Preservation of, and the Joint Action Group for the Protection of Dartmoor and Exmoor (Standing Committee on National Parks of the) : The Case for Control of Afforestation of Open Land in National Parks, 496
Rural Research in C.S.I.R.O. (Australian Commonwealth Scientific and Industrial Research Organization), No. 23, Control of Red Scale in Citrus Fruit (B. H. Martin and Dr. R. F. Black), 133 ; No. 34, 491
Ruraux (Paysages) : Les Formations Végétales et (G. Plaisance), *review* by N. Y. Sandwith, 478
Ruska, E., und andere (herausgegeben von) : Vierter Internationaler Kongress für Elektronen-mikroskopie, Band I, Physikalisch-Technischer Teil, *review* by Dr. V. E. Cosslett, 68
Russell, F. M. : A Proposal for Increasing the Beam Output from a Synchro-cyclotron, 335
Russell, Dr. Frederick Stratten : Presented with a Gold Medal of the Linnean Society of London, 962
  Obituary of Prof. Thomas Alan Stephenson, 586
Russell, Sir John : The Soil—Problems raised by its Use and Misuse (Soil as Nature left it—Man's Use and Misuse), 770
Russell, Richard J., and others : Science in Progress, Eleventh Series (edited by Hugh Taylor), *review* by Prof. Ritchie Calder, 45
Rutherford Jubilee International Conference (International Union of Pure and Applied Physics, the Royal Society, the Institute of Physics and the Physical Society, and the University of Manchester), 679
Ruxton, B. P. (Berry, L., and) : Weathering (Weathering of Rocks in Hot Climates), 1077
Ryan, J. A., and others : Determination of Uranium as Pyrophosphate, 1188
Ryle, Prof. Martin : Radio Astronomy and Cosmology, 852
Ryzewska, A., and others : Mechanism of Antigen Transformation of Transplantable Rat Tumour, 458

SAAKYAN, G. S. : Hyperon Stars, 961
Sabet, K. A., and Hassan, H. M. : Effect of Ringing Cotton Stems on Content of Reducing Sugars and Insoluble Nitrogen and on Degree of Infection with *Xanthomonas malvacearum* (E.F.S.) Dowson, 934
Sabouraudia (International Society for Human and Animal Mycology), Vol. 1, No. 1, 15
Sabry, Prof. Zakaria I., and Atallah, Nicola A. : Identification of Sugars in the Manna of Northern Iraq, 915
Saccharomyces : Induction of Heritable Respiratory Deficiency in, by Pantothenate Starvation (Prof. Alvin Sarachek and Gregory L. Fowler), 792
Sackler, Arthur M., and others : Effect of Splenectomy on the Resistance of Rats to Histamine Stress, 274
Sadler, Dr. P. W. (Bauer, Dr. D. J., and) : Derivatives of Isatin β-Thiosemicarbazone with Anti-Viral Chemotherapeutic Activity against Ectromelia Infection, 1167
Safety : Technology, Engineering and (edited by R. Hurst, R. N. Lyon and C. M. Nicholls), Vol. 2 (Progress in Nuclear Energy, Series 4), *review* by D. English, 204
Sahara, Scientific Council for Africa South of the : Publication No. 52, Open Forests in Tropical Africa, 141
Sahara Atomic Explosion (First) : Measurements of Air Radioactivity in Italy and their relation to the (L. Argiero, Dr. S. Manfredini and Dr. G. Palmas), 618
Saimi, T., and others : Repetitive Hyperpolarizing Response of the Nerve Fibre of Crayfish, 271

Saito, K., and others : Radioactivation Analysis of Oxygen in Silicon by Irradiation with α-Particles in a Cyclotron, 39
Sakita, Dr. B. : Appointed to a Research Fellowship in the Department of Mathematical Physics in the University of Birmingham, 679
Salaman, Dr. M. H. : Theories of Carcinogenesis, *review*, 1143
Salicylate and Acetophenetidin (Barbiturate,) : A New Technique of Chromatography and Ionophoresis on Ion-Exchange Paper—Application to the Separation of (Harold V. Street and Dr. S. K. Niyogi), 537
Salicylate, Acetophenetidin and *p*-Acetylaminophenol (Barbiturate,) : A New Technique of Chromatography and Ionophoresis on Ion-exchange Paper—Application to Separation of (Harold V. Street and Dr. S. K. Niyogi), 718
Saline Extracts of Hair : Demonstration of Nucleases on Mammalian Skin Surface and in (Dr. Joseph Tabachnick and Dr. Richard Freed), 921
Salinity Response of Trace Element Concentration in *Crassostrea virginica* (James B. Rucker and Prof. James W. Valentine), 1099
Salmo salar L. : An Electron Microscope Study of the 'Chloride-Secretory Cell' of, with reference to Plasma-Electrolyte Regulation (Dr. Lawrence T. Threadgold and Dr. Arthur Hillier Houston), 612
Salmonella typhimurium Strain *LT*2 (Colicine Factors as Fertility Factors in Bacteria), (H. Ozeki and Sheila Howarth), 986
Salmonellae : Slime-wall Formation in the (Dr. E. S. Anderson), 284
Salt Bush : Resting Habits of *Anopheles gambiae* and *Anopheles pharoensis* in, and in Crevices in the Ground (Dr. A. Smith), 1220
Salt Intakes (Chronic High and Low) : Effect of, on Adrenocortical Function (Dr. Lewis K. Dahl, Lawrence Silver, Sanford Spraragen and Malcolm Smilay), 348
Salt Marsh : Fungal Colonization of a Developing (Dr. G. J. F. Pugh), 1032
Salt Solutions (Bile) : Micellar Solubilization of Fatty Acids and Monoglycerides by (Dr. Alan H. Hofmann), 1106
Salt Uptake of Storage Tissue : The 'Lag-Phase' in (R. F. M. Van Steveninck), 1072
Salters' Company : Election of Officers for 1961-62, 1063
Salts (Bile) : Enhancement of Intraperitoneal Staphyloccal Virulence for Mice with Different (Dr. S. Stanley Schneierson, Daniel Amsterdam and Ely Perlman), 829
Salts (Bone) : Calcium Exchange of, considered as a Measure of the Crystal Surface (L. Richelle and Prof. M. J. Dallemagne), 165
Salts (*Tris*(*p*-Aminophenyl)-Carbonium), and related Compounds : Effects of, on Experimental Schistosomiasis and Paragonimiasis (E. F. Elslager, F. W. Short, D. F. Worth, J. E. Meisenhelder, H. Najarian and P. E. Thompson), 628
Salvador, Richard A., and others : Effect of Iproniazid on the Antileukaemic Action of Reserpine, 723
Samols, Dr. Ellis, and Williams, H. S. : Trace-labelling of Insulin with Iodine, 1211
Sand (Singing), from the Dnieper (G. G. Velikii), 678
Sandell, Ernest B. (edited by I. M. Kolthoff and Philip J. Elving, assisted by) : Treatise on Analytical Chemistry, Part I, Theory and Practice, Vol. I, *review* by Prof. R. Belcher, 60
Sandford, B. P. : Enhancement of Night-Sky Molecular Nitrogen Emission in Polar Cap Absorption Events, 245
Sandford, Dr. K. S. (Richardson, L., and) : Mammoths in the Cotswolds, 342
Sandringham Sands : Geological Age of the (Dr. R. Casey), 1100
Sands, Jocelyn E. (Collis-George, Prof. N., and) : Moisture Conditions for Testing Germination, 367
Sands, W. A. : Awarded a Research Grant by the Leverhulme Trust, 678
Sands (Sandringham) : Geological Age of the (Dr. R. Casey), 1100
Sandwich Courses : Organization of (National Advisory Council on Education for Industry and Commerce), 590
Sandwith, N. Y. : A French Lexicon of Plant Formations, *review*, 478
Sansome, Prof. F. W. : Science in the Development of Ghana, 1065
Santiago, Antony : National Forests of Agricultural Crops for the Wet Humid Tropics, 1070
Sanwal, Dr. B. D., and Lata, Dr. Madhu : Glutamic Dehydrogenase in Single-Gene Mutants of *Neurospora* Deficient in Amination, 286
Saponins (Natural) : Paper Chromatography of (Dr. B. Pasich), 830
Saprophytic Mycobacteria from other Mycobacteria : Formamidase in Mycobacteria and its Use in Differentiating (Dr. Hideo Nagayama, Dr. Kiyoshi Konno and Prof. Sutemi Oka), 1219
Sarachek, Prof. Alvin, and Fowler, Gregory L. : Induction of Heritable Respiratory Deficiency in *Saccharomyces* by Pantothenate Starvation, 792
Sarawak and North Borneo : Haemoglobin Variants in (Dr. F. Vella and Dr. D. Tavaria), 729
Sarawak, Brunei and the Western Part of North Borneo : The Geology of (Dr. P. Liechti, in association with Dr. F. W. Roe and Dr. N. S. Haile), 768
Sarcolemma, the Striated Muscle Fibre Membrane : Nature of the (Prof. F. Lörincz and Dr. G. Biró), 317
Sarcoma Virus (Rous), associated with Parthenogenesis in Turkey Eggs (Marlow W. Olsen), 191
Sarcoma 37 Ascites Tumour Cells : Effect of a Magnetic Field on (Indumati L. Mulay and Prof. L. N. Mulay), 1019
Sarcomycin Derivatives (New) : Anti-tumoral Action of (Prof. A. Caputo, B. Giovanella and R. Giuliano), 819
Sardinas, J. L., and others : Introduction of the 16α-Hydroxyl Group into Œstrogens by Streptomycetes, 627
Sardinia : Favism and Thalassaemia in, and their Relationship to Malaria (M. Siniscalco, L. Bernini, B. Latte and A. G. Motulsky), 1179
Sarkar, Dr. Nirmal K., and others : Incorporation of Amino-Acids into Protein and Ribonucleic Acid of the Lens of the Rat—Effect of Heavy Metals, 1193
Saroja, K. : Seasonal Acclimatization of Oxygen Consumption to Temperature in a Tropical Poikilotherm, the Earthworm, *Megascolex mauritii*, 930
Sas, José (Alvarez, Dr. Anibal, and) : β-Galactosidase Changes in the Developing Intestinal Tract of the Rat, 826
Sasisekharan, V. (Ramachandran, Prof. G. N., and): Structure of Collagen, 1004
Satellite : Second United Kingdom *Scout*, 681
Satellite 1958δ1 : Observations of Satellite 1960ζ1, and a Comparison with (C. R. Faulkner), 520
Satellite, 1961μ : The First Manned Earth, 307
Satellite 1960 η1 : Cosmic Noise Measurements from, at 3·8 Mc./s. (A. R. Malozzi, C. A. Franklin and J. P. I. Tyas), 616
Satellite 1960 ζ1 : Observations of, and a Comparison with Satellite 1958 δ1 (C. R. Faulkner), 520
Satellite (*Echo* 1) : A Transatlantic Communication Experiment via (Wm. C. Jakes, jun.), 709 ; (H. Carru, R. Gendrin and M. Reyssat), 709
Satellite Orbit Perturbations in Vector Form (R. R. Allan), 615
Satellites below the Horizon : 108-216 Mc./s. Radio Signals from (L. J. Anderson), 708
Satellites and Geodesy (Dr. A. P. Willmore), 1065
Satellites (Artificial) : Use of, for Navigation and Oceanographic Surveys (Paul D. Thomas), 134
Satellites (Artificial), their Impact on Human Destiny : The Conquest of Space—Moon Probes and (Albert Ducrocq), 567
Satellites (Artificial Earth) : Minimum Range to (K. Toman), 333, *errata*, 865
Satre, Pierre : Awarded the British Silver Medal for Aeronautics of the Royal Aeronautical Society, 863
Saunders, Dr. Bernard Charles (Mann, Dr. Frederick George, and) : Practical Organic Chemistry, fourth edition, *review* by Dr. J. D. Loudon, 753
Sauvanet, —., and others : Television and Film Techniques (Recent Progress in the SECAM Frequency Modulation Colour Television System), 868
Savage, Sir William : *Obituary* by Sir Arthur MacNalty, 674
Saxena, D. B. (Das, Dr. S. M., and) : Ecological Problems in the Tropics (Fish Ecology), 772
Saxena, P. N., and others : Evaluation of Effective Rainfall and Irrigation from Ground-Water Measurements, 1100
Sayre, Francis W., and others : Isolation and Partial Characterization of a Growth-control Factor, 1116
Scale of the Solar System (Staff of Millstone Radar Observatory, Lincoln Laboratory, Massachusetts Institute of Technology), 592
Scale (Small-) Turbulent Diffusion in the Atmosphere (F. Gifford), 248
Scallion, R. J. (Martignoni, M. E., and) : Multiplication *in vitro* of a Nuclear Polyhedrosis Virus in Insect Amoebocytes, 1133
Scanning Paper Strips : Modification of Spectrophotofluorometer for (Yasuhiko Takemoto), 1094
Scarselli, Dr. V.: Histochemical Demonstration of Aldehydes by *p*-Phenylenediamine, 1206
Scattering (Electron) Tables : High-Energy (Robert Herman and Prof. Robert Hofstadter), *review* by D. F. Jackson, 204
Scattering (Inelastic), of Conduction Electrons in Dilute Silver–Manganese Alloys at Low Temperatures (M. S. R. Chari), 994
Schaefer, Dr. H. J. : Elected a member of the Life Sciences Section of the International Academy of Astronautics, 495
Schanker, Dr. Lewis S., and Jeffrey, Dr. John J. : Active Transport of Foreign Pyrimidines across the Intestinal Epithelium, 727
Scheans, Daniel J., and others (Prof. L. S. Cressman, in collaboration with) : Cultural Sequences at the Dalles, Oregon—a Contribution to Pacific Northwest Prehistory (Transactions of the American Philosophical Society, New Series, Vol. 50, Part 10), 775
Schenk, Prof. Robert (herausgegeben von Prof. Georg Schmidt und) : Kunst und Naturform, *review* by Prof. T. A. Stephenson, 44
Scherer, Prof. William F. : *Obituary* of Prof. Jerome T. Syverton, 306
Scheuch, D., and others : Role of Glutathione and of a Self-stabilizing Chain of SH-Enzymes and Substrates in the Metabolic Regulation of Erythrocytes, 631
Schild, Dr. H. O. (Edman, Dr. K. A. P., and) : Interaction of Acetylcholine, Calcium and Depolarization in the Contraction of Smooth Muscle, 350
Schistosome Trematodes from New South Wales : A New Intermediate Host of (Wm. H. Ewers), 283
Schistosomes (Avian), in Hertfordshire (Dr. D. L. H. Robinson), 827
Schistosomiasis and Paragonimiasis (Experimental) : Effects of *Tris*(*p*-Aminophenyl)-Carbonium Salts and related Compounds on (E. F. Elslager, F. W. Short, D. F. Worth, J. E. Meisenhelder, H. Najarian and P. E. Thompson), 628
Schizophyzeen (Prof. Dr. Lothar Geitler), zweite Auflage, *review*, 73
Schjeide, Dr. O. A., and Urist, Dr. M. R. : Proteins of the Hen's Egg Yolk, 1175
Schleiden Medal of the Leopoldina German Academy of Science awarded to Prof. Jean Brachet and Prof. Hans Bauer, 312
Schlüter, Prof. A. : Appointed to an Overseas Fellowship at Churchill College, Cambridge, 963
Schmid, Dr. D. O. (Buschmann, Dr. H., and): Transferrin-groups of Foetal Calf-Serum, 1209
Schmid, K., and Binette, J. P. : Polymorphism of α_1-Acid Glycoprotein, 630
Schmid, Dr. R. : Use of Tracers in the Study of Diseases of Porphyrin Metabolism ('Turkish Porphyria'), 870
Schmid, Prof. Rudi (Lester, Roger, and) : Bile Pigment Excretion in Amphibia, 452
Schmidt, Prof. Georg, und Schenk, Prof. Robert (herausgegeben von) : Kunst und Naturform, *review* by Prof. T. A. Stephenson, 44
Schmidt, Prof. L. : At the Fourth World Fertilizer Congress (Experimental Results obtained by Compound Fertilizers and Trace Elements), 1161
Schmidt-Koenig, Dr. Klaus : Sun Navigation in Birds?, 1025
Schneider, Dr. Rose G., and Jim, Dr. Robert T. S. : A New Haemoglobin Variant (the 'Honolulu Type') in a Chinese, 454
Schneierson, Dr. S. Stanley, and others : Enhancement of Intraperitoneal Staphylococcal Virulence for Mice with Different Bile Salts, 829
Schnitzer, Dr. M. (Wright, Dr. J. R., and) : An Estimate of the Aromaticity of the Organic Matter of a Podzol Soil, 703
Schoffeniels, E. (Baillien, Michelle, and) : Origin of the Potential Difference in the Intestinal Epithelium of the Turtle, 1107
Scholander, Prof. Per F. : Elected a Member of the United States National Academy of Sciences, 674
Scholarship : Peter Coats (Textile Institute), 218
  Rowland Spencer (Textile Institute), 218
  Textile Institute (Textile Institute), 218
Schonland, Sir Basil : Controlled Thermonuclear Reactions, *review*, 750
School (International), for Research and Education in Physics established at the University of Uppsala (sponsored by the International Atomic Energy Agency, Unesco, and the Central Committee for Swedish Technical Assistance), 311
School (Medical) : Closed Circuit Television in the (C. E. Engel), 1159
School (Summer), in Health Physics (Radiation Protection), (Imperial College of Science and Technology, London), 680

School (Summer), on Mathematics of Automatic Control (Hatfield College of Technology), 865, 1063
School (Summer), in Quantum Chemistry (St. Antony's College, Oxford), 769
School (Summer), in Science (Fundamental Problems in Statistical Mechanics), (Netherlands University Foundation for International Co-operation), 769
School Children (Asian) : Eye Examinations of, 864
School Shark (New Zealand), *Galeorhinus australis* (MacLeay) : Occurrence of *n*-Odd-Numbered Monoethylenic Fatty Acids in the Liver Oil of the (Isobel M. Morice and Dr. F. B. Shorland), 443
Schools (Grammar) : Physics in, 377
Schreiner, H. R., and Rinfret, A. P. : Effect of Water-soluble Polymers on Nitrate Reductase Activity, 1110
Schubert, Prof. G. : Elected a member of the Life Sciences Section of the International Academy of Astronautics, 495
Schuffelen, Prof. A. C. : At the Fourth World Fertilizer Congress (The Application of Radioisotopes), 1161
Schulze–Hardy Rule and Mass Action Law (Prof. Mirko Mirnik), 689
Schutte, Dr. C. J. H. : The Borohydride Ion in the Lithium Borohydride Lattice, 805
Schwartz, Dr. R. N., and Townes, Prof. C. H. : Interstellar and Interplanetary Communication by Optical Masers, 205
Schwarzschild, Dr. Martin : Awarded the Henry Draper Medal of United States National Academy of Sciences, 307, 674 ; work of, 307
Science : The Ethical Dilemma of, and other Writings (Prof. A. V. Hill), *review* by Sir Henry Dale, 41
  Federal Funds for, in 1959-61 (United States National Science Foundation), 217
  Forecasting Man-power Needs for the Age of (Organization for European Economic Co-operation), 941
  The Foundations of Mathematics, a Study of the Philosophy of (Prof. Evert W. Beth), *review* by F. I. G. Rawlins, 570
  A Further Triumph for, 568
  The Literary Presentation of, *review* by A. L. Bacharach, 847
  A Panorama of, *review* by G. R. Noakes, 64
  Pictorial Guide to Language of, *review* by Prof. T. A. A. Broadbent, 68
  Summer School in (Fundamental Problems in Statistical Mechanics), (Netherlands University Foundation for International Co-operation), 769
  A Triumph for, 291
Science, History of—New Annual Review of Literature, Research and Teaching in the History of Science, 677
Science, Indian Institute of : History of the, 970
Science, Leopoldina German Academy of : Schleiden Medal awarded to Prof. Jean Brachet and Prof. Hans Bauer, 312
Science (German Academy of), Berlin : The 2-Metre Universal Reflecting Telescope of the (Dr. Rudolf Jobst), 301
Science of A. S. Eddington : The Philosophy of (John W. Yolton), *review* by Dr. C. W. Kilmister, 42
Science in Antarctica (Report by the Committee on Polar Research of the United States National Academy of Sciences—National Research Council), Part 1, The Life Sciences in Antarctica ; Part 2, The Physical Sciences in Antarctica, 1062
Science in the Development of Ghana (Ghana Science Association Conference on), 1064
Science in Progress : Eleventh Series (Armand J. Eardley, Richard J. Russell, J. Tuzo Wilson, Serge A. Korff, C. M. Jansky, Jr., Gerald S. Hawkins, Alfred C. Redfield, B. F. Skinner, Roger J. Williams, E. Cuyler Hammond, J. W. Beard, John Turkevich and A. C. Zettlemoyer), (edited by Hugh Taylor), *review* by Prof. Ritchie Calder, 45
Science in Society, 863
Science in West Africa, 1
Science in Writing (T. R. Henn), *review* by Ruxton Villet, 71
Science (Medical) : Autoradiographic Techniques in (Comitato Nazionale per l'Energia Nucleare Symposium on), 219
Science (Nuclear) : Seminars on, 591
Science (Nuclear), National Institute for Research in : Appointment of L. B. Mullett as assistant director for accelerator and applied physics in the Rutherford Laboratory, 393
Science (Physics, Chemistry and General) : Film-Strips and Wall-Charts in (Educational Productions, Ltd.), 395
Science (Soil), British Society of (Clay Minerals Group of the Mineralogical Society and the) : Discussion on Weathering, 1066
Science and Art : Technology,—Common Ground (Hatfield College of Technology series of lectures on), 397
Science and the Chemical Engineer : Industry, (W. K. Hutchison), 588
Science and Education in Communist China, 222
Science and Industry—the Problem of Communication (Department of Scientific and Industrial Research Conference on), 965
Science and Industry, Birmingham Museum of : Rebuilding of the, 491
Science and Technology, Bristol College of : Course for the Diploma in Technology in Applied Biology, 495
Science and Technology, Chelsea College of (London) : Appointment of Dr. J. A. W. Dalziel as reader in inorganic and analytical chemistry, 680
  Appointment of Dr. J. D. Donaldson as lecturer in chemistry, 680
Science and Technology, National Lending Library for : Appointment of Dr. D. J. Urquhart as first director, 215
Science and Technology (Royal College of), Glasgow : Informal Meeting (under the auspices of the Faraday Society) to mark the centenary of the publication by Thomas Graham of his paper on Liquid Diffusion, 312
  Retirement of Prof. J. P. Todd from the chair of pharmacy, 764
  Appointment of Dr. John B. Stenlake to the chair of pharmacy, 764
  Appointment of Dr. Ernest O. Morris to the new chair of applied microbiology and biology, 764
Science and Technology (Food) : The Place of, in the Campaign against Malnutrition (Nutrition Society Symposium on), 398
Science Association (West African) : First Meeting, 1
Science Museum, London : Exhibition on Metallic Corrosion and its Prevention, 15
  Exhibition of a Fourteenth Century Astronomical Clock, 589
Sciences, National Academy of (India) : Symposium on Ecological Problems in the Tropics, 772
Sciences, New York Academy of : Annals, Vol. 91, Article 2, Proceedings of the Conference on Geochronology of Rock Systems (edited by Prof. J. L. Kulp), 1062
Sciences, New York Academy of (Section of Geological Sciences and the Division of Oceanography and Meteorology), in co-operation with the American Meteorological Society : Symposium on Solar Variations, Climatic Change and related Geophysical Problems, 967
Sciences, Polish Academy of : *Review* of the, No. 2, 14
Sciences, U.S.S.R. Academy of : The Cathode Ray Tube Memory of the High Speed Electronic Computer of the (V. N. Laut and L. A. Lyobovich), translated from the Russian by Ruth Feinstein ; edited by F. A. Sowan, *review* by J. C. Cluley, 383
  Information Bulletin I.G.Y., No. 8, 493
  Bibliography of Publications relating to the I.G.Y., 493
  Retirement of Academician A. N. Nesmeyanov as president, 959
  Election of Academician N. Keldysh as president, 959
  Mineraly (Minerals, a Reference Book), Vol. 1, *review* by Prof. C. F. Davidson, 1047
  Yadernaya Geokhronologiya (Nuclear Geochronology), (Dr. I. E. Starik), 1062
Sciences (Arts and), American Academy of : Grants-in-aid, 768
Sciences (Behavioral), Center for Advanced Study in the : Conference on Behavior Genetics, 1156
Sciences (Biological), American Institute of : To undertake a Biological Sciences Communication Project, 13
  An Annotated Bibliography of Influenza, Vol. 1, No. 1, 863
Sciences (Geological), International Union of : Formation of an, 132
  Election of Officers, 132, 219
Sciences et Techniques : Catalogue Collectif des Livres Français de (1950-60), 591
Scientific Attachés : New, 862
Scientific Bodies : Taxation of, 657, 1154
Scientific Commission of Pakistan : Report of the (Government of Pakistan, Ministry of Industries), 1139
Scientific Committee (Parliamentary and) : Annual Report for 1960, 309
Scientific Council for Africa South of the Sahara : Publication No. 52, Open Forests in Tropical Africa, 141
Scientific Development and the Budget, 489
Scientific Enquiry : Louis Pasteur, a Master of (Jacques Nicolle), *review* by T. H. Hawkins, 848
Scientific Film Association (Medical Committee), in collaboration with the Association for the Study of Medical Education : Symposium on the Applications of Television in Medical Research and Teaching, 1159
Scientific Information Notes (United States National Science Foundation), February-March 1961, 961
Scientific Inquiries in Parliament : Recent, 1157
Scientific Institutions : Valuation and Rating of, 309
Scientific Institutions and Scientists in Latin America (Unesco), Vol. 4, Part 5, 769
Scientific Papers : Collected (Paul Ehrenfest), edited by Martin J. Klein, *review* by Prof. J. Hamilton, 115
Scientific Papers of Sir Geoffrey Ingram Taylor (edited by Dr. G. K. Batchelor), Vol. 2, Meteorology, Oceanography and Turbulent Flow, *review* by Prof. P. A. Sheppard, 62
Scientific Policy, Belgian Advisory Council for : First Annual Report (1959-60), 313
Scientific Problems of Exploring Greenland (Deutsche Gesellschaft für Polarforschung Symposium on), 493
Scientific Research and Development : Current Projects on the Economic and Social Implications of, 1960 (United States National Science Foundation), 863
Scientific Societies, South-Eastern Union of : Sixty-sixth Annual Congress (The Changing Country-side), 397
Scientific Unions, International Council of (sponsored by the) : Mechanisms of Colour Discrimination—Proceedings of an International Symposium on the Fundamental Mechanisms of the Chromatic Discrimination in Animals and Man, Paris, 1958, (ediited by Yves Galifret), *review* by Prof. R. W. Ditchburn, 201
Scientific Unions, International Council of (Special Committee on Antarctic Research) : Register of Scientists wishing to work in Antarctica, 311
Scientific and Industrial Research, Council for : Appointment of Sir Harold Roxbee Cox as chairman, 397
Scientific and Industrial Research, Department of : Appointment of Dr. C. J. Jackson as chairman of the Water Pollution Research Board, 135
  Research and Development Requirements of the Shipbuilding and Marine Engineering Industries, 200
  Appointment of Dr. D. J. Urquhart as first director of the National Lending Library for Science and Technology, 215
  Conference on the Control of Noise, to be held at the National Physical Laboratory, 219
  Radio Telescope to be built at Crowthorne for the Radio Research Station, 490
  Committee on Hydrological Research, 490
  Open Days at the National Physical Laboratory, 493
  Grant of £42,300 to the University of Birmingham, for research on organic fluorine compounds, in the Department of Chemistry, 679
  Instruments in the Factory (Dr. J. Thomson), 961
  Open Days at the new Materials Laboratory of the Building Research Station, 963
  Conference on Science and Industry—the Problem of Communication, 965
  National Physical Laboratory, in collaboration with the National Engineering Laboratory and the Building Research Station, Conference on the Control of Noise, 1063
Scientific and Industrial Research Organization (Australian Commonwealth) : Coal Research in C.S.I.R.O., Nos. 1-11, 14
  Rural Research in C.S.I.R.O., No. 23, Control of Red Scale in Citrus Fruit (B. H. Martin and Dr. R. F. Black), 133
  Rural Research in C.S.I.R.O., No. 34, 491
  Appointment of H. J. Frith as officer-in-charge of the Wildlife Survey Section, 676
Scientific and Medical Research : Fund to promote and assist (Life Offices' Association for Australasia), 135
Scientific and Technical Books, 1953-57 : British (edited by L. J. Anthony), *review* by R. Brightman, 119
Scientific and Technical Books (1950-60) : French, 591

Scientific and Technical Books : Recent, Supp. vi, April 29 ; Supp. viii, May 27 ; Supp. ix, June 24
Scientific and Technical Development in Pakistan, 1139
Scientific and Technical Dictionaries : Bibliography of Interlingual (Unesco), fourth edition, 1061
Scientific and Technical Information available to Local Industry : Sources of (Manchester Joint Research Council), 767
Scientific and Technical Man-power in Britain, 843
Scientific and Technological Facilities which Manchester University and the Manchester College of Science and Technology can offer to Industry : An Account of some of the (Manchester Joint Research Council), 767
Scientist (*Australian*), Vol. I, No. I, 217
Scientists wishing to work in Antarctica (Special Committee on Antarctic Research of the International Council of Scientific Unions Register of), 311
Scientists in Government Services : Employment of, 309
Scientists (British) : Opinions of, of Home Office Control of Experiments on Animals (Universities Federation for Animal Welfare), 677
Scientists (Consulting), Association of : Election of Officers, 395
Scientists (Scientific Institutions and), in Latin America (Unesco), Vol. 4, Part 5, 769
Sclare, G. (Taylor, Dr. Geoffrey, and) : Absence of Thyroid Auto-Antibody in Experimental Radiation Thyroiditis, 183
Scolopacidae (Part), (The Birds of the British Isles, by Dr. David Armitage Bannerman, Vol. 9), *review* by Sir Landsborough Thomson, 73
Scolt Head Island (edited by Prof. J. A. Steers), revised edition, *review* by W. H. Dowdeswell, 73
Scorpamins, the Toxic Proteins of Scorpion Venoms (Francois Miranda and Serge Lissitzky), 443
Scorpion Venoms : Scorpamins, the Toxic Proteins of (Francois Miranda and Serge Lissitzky), 443
Scotland, Carnegie Trust for the Universities of : Fifty-ninth Annual Report (1959-60), 316
Scotland (South-East Coast of) : *Elminius modestus* on the (Dr. D. Hemingway Jones), 103
Scott, B. : Comments on the Cainozoid History of Western Tasmania, 677
Erosion Surfaces in Western Tasmania, 677
Scott, J. F. : Mathematics for the Biologist, *review*, 945
Scott, M. C. : Appointed to a Harkness Fellowship (nuclear physics) of the Commonwealth Fund, 308
Scott, P. G. W. (Evans, R. S., and) : Precision and Accuracy in Gas Chromatographic Analysis, 710
Scott, Dr. R. P. W. : Gas Chromatography (Effect of Temperature on Resolution), 867
Scott, Dr. T. A. : Appointed lecturer in the Department of Biochemistry, University of Leeds, 963
Scottish Education Department : Awards to Students, 217
Scottish Field Studies Association : Annual Report for 1960, 590
Scout Satellite : Second United Kingdom, 681
Scrotum of the Ram : Polypnoea evoked by Heating the (Dr. G. M. H. Waites), 172
Scylliorhinus stellaris Testes : Identification of Œstradiol 17β, Testosterone and its Precursors from (Dr. G. Chieffi and Dr. C. Lupo), 169
Sea : Frontiers of the—the Story of Oceanographic Exploration (Robert C. Cowen), *review* by Prof. K. F. Bowden, 202
Sea Floor : Continent and Ocean Basin Evolution by Spreading of the (Robert S. Dietz), 854
Sea Surface Temperature in Coastal Waters of the British Isles : Seasonal Variation of the (F. E. Lumb), 1164
Sea Urchin (Hermaphroditic) : Development of Eggs from a (D. S. Fry), 185
Seal (Grey), *Halichoerus grypus* (Fab.) : Variation in the Secondary Sex-Ratio of the, during the Breeding Season (Dr. J. C. Coulson and Grace Hickling), 281
Seal Tracks in the Taylor Dry Valley (G. G. Claridge), 559
Sealed-edge Theory of Graphite 'Compounds' (Prof. J. G. Hooley), 529
Seaman, G. V. F., and others : Electrophoretic Mobility of Cultured Mesodermal Tissue Cells, 1009
Seaman, W. L., and others : Tinsel-type Structure in Flagella of Zoospores associated with Cabbage Clubroot Tissue, 186
Search of Race Relations : In, *review* by Dr. Margaret Read, 946
Sears, W. R. : Small Perturbation Theory, *review*, 118
Seasonal Acclimatization of Oxygen Consumption to Temperature in a Tropical Poikilotherm, the Earthworm, *Megascolex mauritii* (K. Saroja), 930
Seasonal Rhythm of Wool Growth in Sheep : Photoperiodicity of (L. R. Morris), 102
Seasonal Variation of the Sea Surface Temperature in Coastal Waters of the British Isles (F. E. Lumb), 1164
Seasonal Variation and Age of Radioactive Fall-out (R. P. Parker and J. O. Crookall), 574
Seaweed Research, Institute of : Annual Report for 1960, 970
Sebens, Tine B., and others : Identity of the α-Chains of the Minor Human Haemoglobin Components A_2 and A_2' with the α-Chains of Human Haemoglobin *A* and *F*, 357
Secker, Dr. P. E., and Guile, Dr. A. E. : A Theory of Cold-Cathode Arc Movement in a Magnetic Field, 428
Second United Kingdom *Scout* Satellite, 681
Secondary Sex-Ratio of the Grey Seal *Halichoerus grypus* (Fab.) during the Breeding Season : Variation in the (Dr. J. C. Coulson and Grace Hickling), 281
Secretion of an Aldosterone-stimulating Substance by the Kidney : Evidence of (Dr. William F. Ganong and Dr. Patrick J. Mulrow), 1115
Secretions entering the Digestive Tract of Sheep : Calcium and Magnesium Contents of various (J. E. Storry), 1197
Sectioning and the Embedding Process : The Physics of (Electron Microscopy Group of the Institute of Physics and the Physical Society Symposium on), 591
Sections (Micro-) : Use of Transparent Adhesive Tape in the Preparation of (D. S. Gowers and R. E. Miller), 424
Secular Variation of the Flux Density of the Radio Source Cassiopeia A (D. S. Heeschen and B. L. Meredith), 705
Security Measures and Freedom of the Individual, 132
Sedimentation in Orogenic Belts : Some Aspects of (Geological Society Symposium on), 139
Seed Dressings (Poisonous) : Birds killed by (British Trust for Ornithology and the Royal Society for the Protection of Birds), 218
Seed Production in Wheat : The Effect of Depth of Transplanting on Tillering and (Dr. R. Halwagy), 513
Seedlings in the Absence of Photosynthesis: Gibberellin Action on Growth of (Alan H. Haber, William L. Carrier and N. Jean Enochs), 1034
Seeing : Solar (Consiglio Nazionale delle Ricerche, with the co-operation of the Rassegna Internazionale Elettronica e Nucleare Symposium on), 771
Seidell, Dr. Atherton : Solubilities—Inorganic and Metal-Organic Compounds, a Compilation of Solubility Data from the Periodical Literature, Vol. I, A–Ir, fourth edition by Dr. William F. Linke, *review* by Dr. D. T. Lewis, 74
Seifert, Dr. H. S. : Elected a member of the Engineering Sciences Section of the International Academy of Astronautics, 495
Sein, Ma Khin : *Nothofagus* Pollen in the London Clay, 1030
Sekariah, P. C., and others : A Heteroglycan from *Toxoplasma gondii*, 644
Selection (Natural), and Heterozygote Advantage : The Evolution of Overdominance— (Dr. P. A. Parsons and Dr. W. F. Bodmer), 7
Selected Statistics relating to Local Educational Authorities in England and Wales, Educational Year 1958-1959 (Ministry of Education), 393
Selection (Food), by Silkworm Larvae, *Bombyx mori*—Citral, Linalyl Acetate, Linalol and Terpinyl Acetate as Attractants of Larvae (Yasuji Hamamura and Ken-ichi Naito), 879 ; β-Sitosterol as one of the Biting Factors (Yasuji Hamamura, Keizo Hayashiya and Ken-ichi Naito), 880
Selection (Natural), in Human Populations (Symposia of the Society for the Study of Human Biology, Vol. 2), (edited by D. F. Roberts and G. A. Harrison), *review* by Kenneth A. R. Kennedy, 72
Selective Anti-emetic Agent in Dogs : Haloperidide (*R* 3201), a Highly Potent and (Dr. P. A. J. Janssen and C. Niemegeers), 911
Selenide (Gadolinium) : Anomalous Thermo-electric Properties of (R. C. Vickery and H. M. Muir), 336
Selenium Poisoning in various Animals : Experimentally Produced (Hiroshi Tsuzuki, Kazuhoshi Osawa and Takashi Hosoya), 310
Self-heating and Gas Emission in Nitrate-containing Fertilizers : Control of (K. S. Barclay, J. M. Crewe and K. F. J. Thatcher), 1189
Self-stabilizing Chain of SH-Enzymes and Substrates : Role of Glutathione and of a, in the Metabolic Regulation of Erythrocytes (D. Scheuch, C. Kahrig, E. Ockel, C. Wagenknecht and Prof. S. M. Rapoport), 631
Selfe, F. L. : Chemical Analysis of Cast Iron and Foundry Materials, *review*, 383
Semenov, Academician N. N., and Kondratiev, Academician V. N. : *Obituary* of Academician A. F. Joffé, 761
Semiconductors : Bonds, Bands and, *review* by Dr. B. R. Pamplin, 116
  Physics of (A. F. Ioffe), *review* by Prof. R. E. Burgess, 947
  Progress in, Vol. 5 (edited by Dr. Alan F. Gibson, Prof. R. E. Burgess and Dr. F. A. Kröger), *review* by Dr. B. R. Pamplin, 116
Seminars on Nuclear Science, 591
Sen, Dr. A., and Sinha, N. K. : Comparison of the β-Lactoglobulins of Buffalo's Milk and Cow's Milk, 343
Senftle, Frank E., and Thorpe, Arthur : Magnetic Susceptibility of Normal Liver and Transplantable Hepatoma Tissue, 410
Sensitivity of Haemoglobin to Oxidation in various Conditions (Dr. W. K. Metcalf), 543
Sensitivity (Increased), to Bacterial Endotoxin of F_1 Hybrid Mice undergoing Graft-versus-Host Reaction (Dr. J. G. Howard), 1122
Sensitivity (Spectral), of Single Visual Cells (Prof. H. Autrum and D. Burkhardt), 639
Sensitivity (X-Ray), of HeLa Cells during the Division Cycle : Changes in (Dr. Toyozo Terasima and Prof. L. J. Tolmach), 1210
Sensitized Alligator Erythrocytes : Agglutination of, by Rheumatoid Factor(s), (E. Cohen, A. Nisonoff, P. Hermes, B. M. Norcross and L. M. Lockie), 552
Separation of Barbiturate, Salicylate and Acetophenetidin : A New Technique of Chromatography and Ionophoresis on Ion-Exchange Paper—Application to the (Harold V. Street and Dr. S. K. Niyogi), 537
Separation of Barbiturate, Salicylate, Acetophenetidin and *p*-Acetylaminophenol : A New Technique of Chromatography and Ionophoresis on Ion-exchange Paper—Application to (Harold V. Street and Dr. S. K. Niyogi), 718
Separation of Compounds of Toxicological Interest—Separation of a Mixture of Promazine, Quinine, Sulphacetamide and Acetophenetidin : A New Technique of Chromatography and Ionophoresis on Ion-exchange Paper—Application to (Harold V. Street and Dr. S. K. Niyogi), 1199
Separation of Isomeric Dichlorobenzenes using Gas Chromatography : An Organo-clay Complex for the (C. T. Cowan and J. M. Hartwell), 712
Separation of a Mixture of Promazine, Quinine, Sulphacetamide and Acetophenetidin : A New Technique of Chromatography and Ionophoresis on Ion-exchange Paper—Application to Separation of Compounds of Toxicological Interest—(Harold V. Street and Dr. S. K. Niyogi), 1199
Separation of Two Light Reactions in Noncyclic Photo-Phosphorylation of Green Plants (Dr. M. Losada, Dr. F. R. Whatley and Prof. Daniel I. Arnon), 606, *erratum*, 1063
Separation (Quantitative), and Determination of Brain Glycoproteins, Neuraminic Acid, Hexosamine and Hexoses by means of Whole Tissue Emulsion-Fractionation (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch), 153
Separations (Liquid Chromatographic), using Rubber as the Stationary Phase (P. I. Brewer), 625
Sequence (The Amino-Acid), of Sperm Whale Myoglobin—Chemical Studies (A. B. Edmundson and C. H. W. Hirs), 663 ; A Partial Determination by X-Ray Methods, and its Correlation with Chemical Data (Dr. J. C. Kendrew, Dr. H. C. Watson, Dr. B. E. Strandberg, Dr. R. E. Dickerson, Dr. D. C. Phillips and Dr. V. C. Shore), 666 ; Comparison between the Amino-Acid Sequences of Sperm Whale Myoglobin and of Human Haemoglobin (Dr. H. C. Watson and Dr. J. C. Kendrew), 670
Sequences (Cultural), at the Dalles, Oregon—a Contribution to Pacific Northwest Prehistory (Prof. L. S. Cressman, in collaboration with David L. Cole, Wilbur A. Davis, Thomas M. Newman and Daniel J. Scheans), (Transactions of the American Philosophical Society, New Series, Vol. 50, Part 10), 775
Sequences (Cultural), in Hokkaido, Japan (Lieut.-Col. H. A. MacCord), 864
Sequences (Cultural), in North-West America (Dr. G. H. S. Bushnell), 775
Sequential Growth Response to Gibberellic Acid, Kinetin and Indolyl-3-Acetic Acid in the Wheat Coleoptile (*Triticum vulgare* L.), (Dr. S. T. C. Wright), 699

Sera (Turtle) : *Leptospira*-agglutinating Factors in (Prof. J. van der Hoeden, Esther Szenberg and Z. Evenchik), 95
Sermonti, Dr. G. (Ballio, Dr. A., and) : Action of Mycophenolic Acid on Unstable Diploids of *Penicillium chrysogenum*, 108
Serological Tests for Toxoplasmosis (D. G. Fleck), 1018
Serotonin in Adrenalectomized Animals : Increased Toxicity of (Prof. S. Garattini, P. Gaiardoni, A. Mortari and V. Palma), 540
Serous Glands of Equines : Content of Sialic Acid in (G. Auerli, G. Ferri and A. A. Castellani), 914
Serum during Infancy : Significance of the Presence of Lewis Substances in (Dr. Sylvia D. Lawler and Ruth Marshall), 1020
Serum (Anti-Ribonucleoprotein) : Partial Inhibition of Antibody Formation by means of (Prof. B. D. Jankovič, Dr. K. Isakovič and J. Horvat), 1218
Serum (Blood) : Changes in Density of, after Total-Body Irradiation (Dr. Z. Dienstbier and M. Rakovič), 98
  Increase of Aldolase Activity in, following Irradiation (Dr. B. Dalos), 817
Serum (Foetal Calf-) : Transferrin-groups of (Dr. H. Buschmann and Dr. D. O. Schmid), 1209
Serum (Human): Evidence for Multiple Caeruloplasmin Components in (R. McAlister, Dr. G. M. Martin and E. P. Benditt), 927
Serum and Lysed Erythrocytes : Precipitation Reaction between (Dr. J. F. Wilson and D. M. Jobling), 550
Serum Albumin : Age and Molecular Weight of Dextrans—their Coating Effects, and their Interaction with (Dr. Eric Ponder and Dr. Ruth V. Ponder), 277
Serum Albumin (Bovine) : Prevention by Cysteamine of Radical Formation in, by γ-Rays (D. Libby, M. G. Ormerod, Prof. A. Charlesby and Dr. P. Alexander), 998
Serum Changes in the Rat following Oral Administration of Cadmium (D. J. Lawford), 815
Serum Globulin Fractions : Association of Detectable Antibodies produced by *Haemonchus* spp. Infections in Cattle, with (J. G. Ross), 1019
Serum Proteins : Detection of, within the Renal Collecting Tubule Cells of the Potassium-deficient Rat (Ashton B. Morrison and Kenneth D. Gardner, jun.), 96
Serum Proteins in the Genus *Macaca* : Effects of Speciation on, with Special Reference to the Polymorphic State of Transferrin (Dr. Morris Goodman and Emily Poulik), 171
Servomechanisms, *review* by Dr. E. M. Deeley, 849
Servomechanisms (P. L. Taylor), *review* by Prof. A. Tustin, 1046
Sesquiterpene (Die Terpene, von J. Pliva, M. Horák, V. Herout und F. Sorm, Teil I), *review* by Dr. E. G. Kellett, 849
Sessile Community (Marine) : Inhibition of the Development of a (Dr. Ivan Goodbody), 282
Set Theory : Abstract (Prof. Abraham Fraenkel), second edition, *review* by Dr. R. G. Cooke, 1047
Sex in the House-Mouse : Pulmonary Tumours, Group VII and (Dr. J. A. H. Tatchell), 837
Sex-Chromosomes in the Male of *Drosophila melanogaster* : Non-disjunction of the (P. J. Kelsall), 1035
Sex Genotypes (Multiple), in the Hermaphrodite Polychaete Worm *Ophryotrocha puerilis siberti* : Existence of (Prof. G. Bacci and O. Bortesi), 838
Sex-Ratio (Secondary), of the Grey Seal *Halichoerus grypus* (Fab.) during the Breeding Season : Variation in the (Dr. J. C. Coulson and Grace Hickling), 281
Sex and Strain Differences in Electro-shock Convulsions of the Rat (D. E. Woolley, P. S. Timiras, M. R. Rosenzweig, D. Krech and E. L. Bennett) 515
Sexual Cycle : Hyaluronic Acid in the Uterine Wall of the Guinea Pig during the (I. N. Likar, L. J. Likar and Dr. H. E. Taylor), 1118
Sexual Differentiation in *Allomyces* : Nucleic Acids and (Dr. G. Turian), 825
Shackleton, Prof. R. M. : Some Aspects of Sedimentation in Orogenic Belts (The Dalradians), 139
Shackman, Ralph : Title of professor of urology (at the Postgraduate Medical School of London) conferred on, 963
Shane, Dr. C. D. : Elected a Member of the United States National Academy of Sciences, 674
Shap Granites (Dartmoor and) : Potassium–Argon Ages of the, using the Total Volume and Isotopic Dilution Techniques of Argon Measurement (M. H. Dodson, J. A. Miller and D. York), 800
Shark (New Zealand School), *Galeorhinus australis* MacLeay : Occurrence of *n*-Odd-Numbered Monoethylenic Fatty Acids in the Liver Oil of the (Isobel M. Morice and Dr. F. B. Shorland), 443
Sharp, G. W. G. : Reversal of Diurnal Temperature Rhythms in Man, 146
Shaw, E., and Gibbs, Prof. R. D. : Comparative Chemistry and the Relationship of the Hamamelidaceae, 463
Shaw, N. E. (Martin, Dr. B. F., and) : The Stainable Mucin of Joint Tissues and Synovial Fluid, 835
Shaw, Dr. T. I., and others: Replacement of the Protoplasm of a Giant Nerve Fibre with Artificial Solutions, 885
Shear (Simple) : Creep of Metals under (Prof. E. N. da C. Andrade and K. H. Jolliffe), 431
Sheath (Cuticular), in Normal and Guard Keratin Fibres : Different Permeability of (R. Z. de la Burde), 420
Sheep : Calcium and Magnesium Contents of various Secretions entering the Digestive Tract of (J. E. Storry), 1197
  An Effect of Glucose on Acetate Metabolism in (I. G. Jarrett and O. H. Filsell), 1114
  Photoperiodicity of Seasonal Rhythm of Wool Growth in (L. R. Morris), 102
  Primary Metabolic Defect supervening on Vitamin B_{12}-Deficiency in the —Résumé of Experimental Findings which led to the Present Investigations (Dr. Hedley R. Marston), 1085 ; Demonstration, *in vivo*, of the Site of the Metabolic Defect (Shirley H. Allen, Dr. Hedley R. Marston and Richard M. Smith), 1087 ; Localization, *in vitro*, of the Metabolic Defect, and Separation of the Vitamin B_{12}-containing Methyl Malonyl Co-isomerase (Dr. Hedley R. Marston and Richard M. Smith), 1088 ; Lack of Influence of Vitamin B_{12}-Deficiency on the Sheep's Capacity to Metabolize Glutamate (Shirley H. Allen and Dr. Hedley R. Marston), 1091
Sheep maintained in Florida : Blood Potassium and Sodium of Hereford and Brahman Cattle and some Breeds of (J. R. Howes, G. K. Davis, P. E. Loggins and J. F. Hentges), 181
Sheep (Foetal) : Absorption of Amniotic Fluid in the Gut of (G. H. Wright and Dr. D. A. Nixon), 816
Sheep and the Ked, *Melophagus ovinus* (L.) : Experimental Elimination of *Trypanosoma melophagium* Fly from its Hosts the (W. A. Nelson), 739
Sheep Growth Hormone : Preparation of (A. L. C. Wallace), 535
Sheep Husbandry (Government of Northern Ireland, Ministry of Agriculture, Leaflet No. 47), 962
Sheet (Silicon–Iron) : Anomalous Magnetostriction of the 'Grain-orientated' (Yûki Shirakawa and Ken'ichi Numakura), 523
Sheffield City Museum : Annual Reports for 1958-60, 961
Shells : Elastic, *review* by Dr. J. W. Craggs, 379
Shells (Thin) : The Theory of (V. V. Novozhilov), translated by P. G. Lowe ; edited by Prof. J. R. M. Radok, *review* by Dr. J. W. Craggs, 379
Shells (Thin Elastic) : Proceedings of the International Union of Theoretical and Applied Mechanics Symposium on the Theory of, Delft, 1959 (edited by W. T. Koiter), *review* by Dr. J. W. Craggs, 379
Shelton, R. A. J., and others : Effect of a Thin Oxide Film on the Reaction of Iodine Vapour with Copper, 1183
Shemilt, Prof. L. W. (Dullien, F. A. L., and) : Activity-based Diffusion Coefficients for Liquid Solutions, 526
Shenstone, F. S., and Vickery, J. R. : Occurrence of *Cyclo*-Propene Acids in some Plants of the Order Malvales, 168
Sheppard, Dr. E. M. : Terrestrial Crustaceans, *review*, 382
Sheppard, Prof. P. A. : The Advance of Fluid Mechanics, *review*, 62
Sheppard, Dr. P. M., and others : Transplacental Passage of Red Cells in Man, 922
Sherman, F. G., and others : Proliferative Cycle in the Growing Hair Follicle of the Mouse, 923
Sherrington : Homage to, *review* by Sir John Eccles, 43
Shikama, Keiji, and Yamazaki, Isao : Denaturation of Catalase by Freezing and Thawing, 83
Shipbuilding and Marine Engineering Industries : Research and Development Requirements of the (Department of Scientific and Industrial Research), 200
Shirakawa, Yûki, and Numakura, Ken'Ichi: Anomalous Magnetostriction of the 'Grain-orientated' Silicon–Iron Sheet, 523
Shock (Thermal), and its Effect on Thermistor Drift (J. H. Swartz and R. Raspet), 875
Shock Behaviour (Thermal), of Brittle Materials (Dr. M. L. Levin), 521
Shock Waves : Observation of Far Infra-Red Radiation from (M. F. Kimmitt, A. C. Prior and P. G. Smith), 599
Shock-excited Dark Discharge (A. S. V. McKenzie, J. F. I. Cole and Dr. L. Jacob), 37
Shooter, Dr. R. A. : Appointed professor of bacteriology at St. Bartholomew's Hospital Medical School, London, 131 ; work of, 131
Shooter, Dr. R. A., and others : Hospital Infection, *review* by Kathleen M. Hawkins, 119
Shore, Dr. V. C., and others : The Amino-Acid Sequence of Sperm Whale Myoglobin—A Partial Determination by X-Ray Methods, and its Correlation with Chemical Data, 666
Shorland, Dr. F. B. (Morice, Isobel M., and) : Occurrence of *n*-Odd-Numbered Monoethylenic Fatty Acids in the Liver Oil of the New Zealand School Shark (*Galeorhinus australis* MacLeay), 443
Shorland, Dr. F. B., and others : Effect of Duodenal Administration of Highly Unsaturated Fatty Acids on Composition of Ruminant Depot Fat, 725
Short, F. W., and others : Effects of *Tris*(*p*-Aminophenyl)-Carbonium Salts and related Compounds on Experimental Schistosomiasis and Paragonimiasis, 628
Short-Long-Day Plant : Flower Initiation in *Trifolium repens* L.—a (Roderick G. Thomas), 1130
Shortt, Dr. H. E. : Some Aspects of Disease Transmission by Ticks, 683
Shwartzman Phenomenon : Local Endotoxin Hypersensitivity and its relation to (Dr. Tibor G. Kováts), 177
Shukla, R. R., and others : A Heteroglycan from *Toxoplasma gondii*, 644
Shuler, W. E., and others : Doubling of the Proton Magnetic Resonances of certain Organophosphorus Compounds, 903
Shull, G. M., and others : Introduction of the 16α-Hydroxyl Group into Œstrogens by Streptomycetes, 627
Sialic Acid in a Granuloma Pouch: Presence of (Lorenzo Bolognani, Germano Coppi, Ferdinando Della Berta and Prof. Vittorio Zambotti), 913
Sialic Acid in Serous Glands of Equines : Content of (G. Aureli, G. Ferri and A. A. Castellani), 914
Sialic Acids, *review* by Dr. T. F. Slater, 57
Sialic Acids and related Substances : The Chemistry and Biology of (Dr. Alfred Gottschalk), *review* by Dr. T. F. Slater, 57
Siddall, T. H., and others : Doubling of the Proton Magnetic Resonances of certain Organophosphorus Compounds, 903
Sidhu, Sri S. S. : Ecological Problems in the Tropics (Mangroves), 772
Signals ('Pulsactor') : Korotkov's Sounds—a Function of the Skeleton to Transmit (Wing-Comdr. John E. Malcolm), 1114
Signals (108-216 Mc./s. Radio), from Satellites below the Horizon (L. J. Anderson), 708
Significance : Erosion Surfaces in the Caribbean and their (Prof. John D. Weaver), 1186
Significance of Carbonaceous Meteorites in Theories on the Origin of Life (Prof. J. D. Bernal), 129
Significance in the Genetics and Evolution of Haemoglobin : Haemoglobin F, its (Dr. Wolf W. Zuelzer and Abner R. Robinson), 237
Significance of the Presence of Lewis Substances in Serum during Infancy (Dr. Sylvia D. Lawler and Ruth Marshall), 1020
Significance (Physiological) : Osmotic Pressure Effect of the Red Blood Cells—Possible (Dr. A. Tybjaerg Hansen), 504
Significance (Taxonomic), of Surface Lipids of Plants (S. Jean Purdy and Dr. E. V. Truter), 554
Siivola, A., and others : Mercury-206, a New Natural Radionuclide, 427
Sikhote–Alin Meteorites (Treysa and) : Cosmic Ray Ages of the (Prof. David E. Fisher), 225
Silage : Amines in (H. Neumark), 839
Silicic Acid Chromatography : Quantitative Fractionation of Brain Glycolipids by (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch and Dr. Louis A. Faillace), 150
Silicon : Radioactivation Analysis of Oxygen in, by Irradiation with α-Particles in a Cyclotron (T. Nozaki, S. Tanaka, M. Furukawa and K. Saito), 39
  Unnatural Products—New and Useful Materials from (Prof. Eugene G. Rochow), (Thirty-fourth Annual Priestley Lectures), *review* by Dr. J. S. Anderson, 59

Silicon Nitride Whiskers : Formation of, on a Ferro-Silicon Alloy at Room Temperature (E. Johnson, Prof. K. Grjotheim and C. Krohn), 523
Silicon–Iron Sheet : Anomalous Magnetostriction of the 'Grain-orientated' (Yûki Shirakawa and Ken'ichi Numakura), 523
Silicon (Ferro-) Alloy at Room Temperature : Formation of Silicon Nitride Whiskers on a (E. Johnson, Prof. K. Grjotheim and C. Krohn), 523
Silicones (R. N. Meals and F. M. Lewis), *review* by Dr. J. S. Anderson, 59
Silk and Man-made Fibres Research (Cotton,) : Funds for, 1154
Silk and Man-made Fibres (Cotton,) Research Association : Merging of the British Cotton Industry Research Association and the British Rayon Research Association to be known as the, 589
Silkworm Larvae, *Bombyx mori*: Food Selection by—Citral, Linalyl Acetate, Linalol and Terpinyl Acetate as Attractants of Larvae (Yasuji Hamamura and Ken-ichi Naito), 879 ; β-Sitosterol as one of the Biting Factors (Yasuji Hamamura, Keizo Hayashiya and Ken-ichi Naito), 880
Silver, Lawrence, and others: Effect of Chronic High and Low Salt Intakes on Adrenocortical Function, 348
Silver Dithiocarbamates (Copper and) : Electron Spin Resonance Line-Widths in Solutions of (Roland Asa, Rune Pettersson and Tore Vänngård), 258
Silver Medal of the Royal Aeronautical Society awarded to R. Hafner, 863
Silver–Manganese Alloys (Dilute), at Low Temperatures : Inelastic Scattering of Conduction Electrons in (M. S. R. Chari), 994
Sim, Dr. G. A. : Terpene Chemistry (Determination of the Structure of the Complex Terpenoid Bitter Principle, Clerodin), 19
Simey, M. B. (Simey, Prof. T. S., and) : Charles Booth—Social Scientist, *review* by Prof. L. S. Hearnshaw, 379
Simey, Prof. T. S. : Problems of Economic and Social Development, *review*, 1142
Simey, Prof. T. S., and Simey, M. B.: Charles Booth—Social Scientist, *review* by Prof. L. S. Hearnshaw, 379
Simian Malaria, 686
Similar Timing of Expression in Mice : Two Linked Genes showing a (Kenneth Paigen and Werner K. Noell), 148
Similarity in Behaviour between Gas Bubbles in Liquid and Fluidized Solid Systems (P. D. Bloore and Dr. J. S. M. Botterill), 250
Similarity of Peptides in Two Antigen-combining Fragments released from a Rabbit Antibody by Papain (Prof. David Gitlin and Ezio Merler), 634
Simkiss, Dr. K. : Influence of Large Doses of Œstrogens on the Structure of the Bones of some Reptiles, 1217
Simmonds, Dr. N. W. : Experimental Taxonomy of Flowering Plants (Classification and Nomenclature in Bananas and Potatoes), 968
Simms Gold Medal of the Royal Aeronautical Society awarded to Prof. D. B. Spalding, 863
Simon Memorial Prize awarded to Dr. I. M. Lifschutz by the United Kingdom Committee of the Low Temperature Group of the Institute of Physics and the Physical Society, 1156
Simon-Reuss, I., and others : Electrophoretic Mobility of Cultured Mesodermal Tissue Cells, 1009
Simons, Dr. J. P. : Appointed to a lectureship in chemistry in the University of Birmingham, 679
Simple Shear : Creep of Metals under (Prof. E. N. da C. Andrade and K. H. Jolliffe), 431
Simpson, Prof. Scott : Some Aspects of Sedimentation in Orogenic Belts (The Upper Palaeozoic of South-west England), 139
    Historical Geology, *review*, 202
Simultaneous X-Ray and Ultra-violet Irradiation : Circulating Platelets in Mice subjected to (I. Cserháti, F. Krizsa and K. Rák), 544
Singh, K. P. (Ahuja, B. S., and) : Ecological Problems in the Tropics (Humid Tropics), 773
Singing Sand from the Dnieper (G. G. Velikii), 678
Single Crystals of Polyethylene : Some Electron Microscopic Observations on (R. Westrik and A. M. Kiel), 162
Single-Gene Mutants of *Neurospora* Deficient in Amination : Glutamic Dehydrogenase in (Dr. B. D. Sanwal and Dr. Madhu Lata), 286
Single-Spore Strain of *Lipomyces* : A Superior Fat-synthesizing (D. R. Cullimore and Dr. M. Woodbine), 1022
Single Visual Cells : Spectral Sensitivity of (Prof. H. Autrum and D. Burkhardt), 639
Sinha, N. K. (Sen, Dr. A., and) : Comparison of the β-Lactoglobulins of Buffalo's Milk and Cow's Milk, 343
Sinhalese Peoples (Indian and) : Frequencies of Hairy Pinnae among (K. R. Dronamraju), 653
Siniscalco, M., and others : Favism and Thalassaemia in Sardinia and their Relationship to Malaria, 1179
Sinus Lining Cells of the Spleen : Nature of the (Dr. R. F. Dorfman), 1021
Sircar, Prof. S. M., and Ray, Arati : Growth Substances separated from the Root of Water Hyacinth by Paper Chromatography, 1213
Site (The Active), and Mechanism of Action of Bovine Pancreatic Ribonuclease (Dorothy Findlay, D. G. Herries, Dr. A. P. Mathias, Dr. B. R. Rabin and C. A. Ross), 781
β-Sitosterol as one of the Biting Factors (Food Selection by Silkworm Larvae, *Bombyx mori*), (Yasuji Hamamura, Keizo Hayashiya and Ken-ichi Naito), 880
Situations (Equiprobable) : Patterns of Preference in (Prof. John Cohen and Peter Cooper), 231
Skeleton to Transmit 'Pulsactor' Signals : Korotkov's Sounds—a Function of the (Wing-Comdr. John E. Malcolm), 1114
Skiddaw Slates proved in the Teesdale Inlier (Dr. G. A. L. Johnson), 996
Skin (Isolated Frog) : Electrical Excitability of (A. Finkelstein), 1119
Skin Grafts in Chicks : Dissociation of Isohaemagglutinin Formation and Tolerance of (Otakar Stark, Vladimír Křen and Bohdan Frenzl), 281
Skin Homografts : Influence of Uraemia on the Survival of (F. G. Smiddy, R. G. Burwell and F. M. Parsons), 732
Skin Surface (Mammalian), and in Saline Extracts of Hair : Demonstration of Nucleases on (Dr. Joseph Tabachnick and Dr. Richard Freed), 921
Skinner, B. F., and others : Science in Progress, Eleventh Series (edited by Hugh Taylor), *review* by Prof. Ritchie Calder, 45
Sky : The Night, in May, 312 ; in June, 769 ; in July, 1156
Sky (Night-) Molecular Nitrogen Emission : Enhancement of, in Polar Cap Absorption Events (B. P. Sandford), 245
Slater, Prof. John C. : Quantum Theory of Atomic Structure, *review* by Prof. C. A. Coulson, 1142
Slater, Dr. T. F. : Sialic Acids, *review*, 57
Slates (Skiddaw), proved in the Teesdale Inlier (Dr. G. A. L. Johnson), 996
Slatyer, R. O. : At the Australian Arid Zone Technical Conference (Principles and Problems of Plant and Animal Production and Husbandry —Plant Production), 19
Slatyer, R. O. (Christian, C. S., and) : Australian Arid Zone Technical Conference, 19
Sleeping-Time Test (Hexobarbitone), in Mice : A Potential Source of Error in the (Dr. P. W. Ramwell and I. H. Lester), 640
Slime-wall Formation in the *Salmonellae* (Dr. E. S. Anderson), 284
Slow Potential (Retinal), of the Horseshoe Crab : Effect of Temperature on the (Dr. R. Kikuchi, K. Naito and S. Minagawa), 1011
Slow (Extra-) Technique : Some Features of the Precipitation of Barium Chromate by an (Tadeusz Adamski), 524
Smales, A. A. : Given the status of a Division head in the Atomic Energy Research Establishment, Harwell, 393
Small Amounts (Very), of Hydrogen Peroxide : Determination of (H. Perschke and Prof. E. Broda), 257
Small Perturbation Theory (W. R. Sears), *review*, 118
Small Quantities of 3,4-Benzpyrene : Detection of, directly from Chromatographic Paper (Dr. B. A. Nešković and V. Soškić), 1199
Small-Scale Turbulent Diffusion in the Atmosphere (F. Gifford), 248
Small (Unusually) Ribonucleic Acid : Bromegrass Mosaic Virus, a Virus containing an (Larry E. Bockstahler and Prof. Paul Kaesberg), 192
Smart, K. Marilyn, and others : Inhibition by Cortisone of the Synthesis and Action of Interferon, 650
Smiddy, F. G., and others : Influence of Uraemia on the Survival of Skin Homografts, 732
Smilay, Malcolm, and others : Effect of Chronic High and Low Salt Intakes on Adrenocortical Function, 348
Smith, Dr. A. : Resting Habits of *Anopheles gambiae* and *Anopheles pharoensis* in Salt Bush and in Crevices in the Ground, 1220
Smith, Dr. Alfred A. : Origin of Urinary Pyrocatechol, 167
Smith, Dr. C. E. Gordon : Some Aspects of Disease Transmission by Ticks, 682
    To be presented with the Chalmers Medal of the Royal Society of Tropical Medicine and Hygiene, 963
Smith, Dr. D. A. : Appointed lecturer in the Department of Microbiology in the University of Birmingham, 135
Smith, Dr. E. A. : Appointed a senior lecturer in public health and social medicine in the University of Edinburgh, 680
Smith, Prof. Frederick G. (White, Gordon A., and) : Substrate Specificity of the *Myrothecium* Ascorbic Acid Oxidase, 187
Smith, Herchel, and others : Pigments of *Phoma terrestris* Hansen and their Biosynthesis, 441
Smith, Dr. Hillas : Stathmokinetic (Mitosis-inhibiting) Method for Estimating Plasma Erythropoietic Hormone, 640
Smith, Dr. H., and Taylor, Dr. J. H. : Effect of Feeding Two Levels of Dietary Calcium on the Growth of Broiler Chickens, 1200
Smith, J. F. (Evans, M. B., and) : Prediction of Retention Data in Gas–Liquid Chromatography from Molecular Formulae, 905
Smith, J. G. M., and others : Reactions of Cytochrome-*c* with Methyl Linoleate Hydroperoxide, 908
Smith, J. Maynard (Clarke, Jean M., and) : Independence of Temperature of the Rate of Ageing in *Drosophila subobscura*, 1027
Smith, Dr. Kendric C., and others : Radiosensitization of *E. coli* by Purine and Pyrimidine Analogues incorporated in Deoxyribonucleic Acid, 796
Smith, Dr. Marion E. : Incorporation of Ethanol-1-^{14}C into Fatty Acids in the Normal and Alloxan Diabetic Rat, 273
Smith, M. W. : Some Properties of Rat Mammary Tissue, 541
Smith, P. G., and others : Observation of Far Infra-Red Radiation from Shock Waves, 599
Smith, Dr. P. J. C. : Assay of Pyridine Nucleotide Coenzymes and associated Dehydrogenases with Phenazine Methosulphate, 84
Smith, Dr. R. A. : Appointed to the chair of physics in the University of Sheffield, 960 ; work of, 960
Smith, Ray F. (edited by Edward A. Steinhaus and) : Annual Review of Entomology, Vol. 6, *review* by Harold Oldroyd, 945
Smith, Robert L. (von Kaulla, Prof. Kurt N., and) : Plasma Clot Dissolution by Urea Derivatives, 449
Smith, Richard M. (Marston, Dr. Hedley R., and) : Primary Metabolic Defect supervening on Vitamin B_{12}-Deficiency in the Sheep—Localization, *in vitro*, of the Metabolic Defect, and Separation of the Vitamin B_{12}-containing Methyl Malonyl Co-isomerase, 1088
Smith, Richard M., and others : Primary Metabolic Defect supervening on Vitamin B_{12}-Deficiency in the Sheep—Demonstration, *in vivo*, of the Site of the Metabolic Defect, 1087
Smith, Dr. Wilma W. : Geochemical Effects of Weathering, 1066
Smithsonian Institution : Bureau of American Ethnology, Bulletin No. 177, Archaeological Investigations in British Guiana (Clifford Evans and Betty J. Meggers), *review* by Dr. G. H. S. Bushnell, 72
    Annual Report for 1960 of the United States National Museum, 309
    Publication 4421 (Miscellaneous Collections, Vol. 140, No. 1), Classification and Multiplicity of Growth Layers in the Branches of Trees at the Extreme Lower Forest Border (Waldo S. Glock, R. A. Studhalter and Sharlene R. Agerter), *review* by Prof. F. W. Jane, 850
    Bulletin No. 220 of the United States National Museum, Type Specimens of Reptiles and Amphibians in the United States National Museum (Doris M. Cochran), 863
Smooth Muscle : Interaction of Acetylcholine, Calcium and Depolarization in the Contraction of (Dr. K. A. P. Edman and Dr. H. O. Schild), 350
Smooth Muscles : Contraction of, in Non-Ionic Solutions (Roselyn L. Kolodny and Prof. W. G. van der Kloot), 786
Smythies, John R. (edited by Carl C. Pfeiffer and) : International Review of Neurobiology, Vol. 2, *review* by Dr. Denis Brinton, 850
Sneath, N. : Appointed to a Harkness Fellowship (engineering) of the Commonwealth Fund, 308
Sneddon, I. N. (Defares, J. G., and) : An Introduction to the Mathematics of Medicine and Biology, *review* by J. F. Scott, 945
Sneedon, Dr. R. P. A. : Awarded a Fellowship by the Leverhulme Trust, 678
Snow, O. W. : Science in the Development of Ghana (Agricultural Research in relation to Development), 1064
Soaking the Grain in Solutions of Manganous Chloride : Prevention of Manganese Deficiency in Oat by (Donald S. H. Drennan, Alex M. M. Berrie and Gordon A. Armstrong), 824
Soap Bubbles and the Forces which Mould Them (C. V. Boys), *review* by G. R. Noakes, 64

Soap Fibres (Calcium) : Structure of (R. J. Bird and G. Rooney), 337
Sobotka, Harry, and Stewart, C. P. (edited by) : Advances in Clinical Chemistry, Vol. 3, *review* by Dr. J. N. Davidson, 74
Social Development (Economic and) : Problems of, *review* by Prof. T. S. Simey, 1142
Social Implications (Economic and), of Scientific Research and Development : Current Projects on the, 1960 (United States National Science Foundation,) 863
Société de Chimie Physique (British Biological Society and the) : Informal Discussion on the Effects of Ionizing Radiations on Organic and Biological Solids, 219
Société Française de Physique : Annual Exhibition, 397
Society : Science in, 863
Sociology : Prelude to, *review* by Prof. L. S. Hearnshaw, 379
Sodium : Stimulation of Active Transport of, from Sodium-rich Frog Muscle by Insulin and Lactate (Roderick P. Kernan), 347
Sodium (Blood Potassium and), of Hereford and Brahman Cattle and some Breeds of Sheep maintained in Florida (J. R. Howes, G. K. Davis, P. E. Loggins and J. F. Hentges), 181
Sodium Carrier : Further Evidence for Phosphatidic Acid as the (Dr. Mabel R. Hokin and Dr. Lowell E. Hokin), 1016
Sodium Chloride : Response of Thymus to Increase of Intake of (Dr. M. Pospíšil), 89
  Variation with Temperature of the Photoelastic Constants of (Dr. K. V. Krishna Rao and V. G. Krishna Murty), 429
Sodium Chloride Whiskers (Dr. Gy. Turchányi and Dr. I. Tarján), 79
Sodium Line Reversal Method : Stagnation Temperature Measurements in a Hypersonic Wind-Tunnel Using the (J. L. Stollery), 778
Sodium Transport in Cellular Membranes : Mechanism of (Johan Järnefelt), 694
Sodium Transport and Oxygen Consumption in the Mammalian Kidney (Dr. J. Hess Thaysen, Dr. N. A. Lassen and Dr. O. Munck), 919
Sodium-rich Frog Muscle : Stimulation of Active Transport of Sodium from, by Insulin and Lactate (Roderick P. Kernan), 347
Sodium–Ethylamine : Reductive Dimerization of Naphthalene by (Leslie Reggel, Heinz W. Sternberg and Irving Wender), 81
Soft X-Rays (Very) : Absolute Measurement of Average Energy lost by, per Ion Pair in Air (Prof. B. Rajewsky and Dr. D. Lang), 249
Soil : The—Problems raised by its Use and Misuse (Institute of Biology, the Royal Institute of Chemistry, the Institute of Physics and the Physical Society Symposium on), 770
  Man and the (Dr. Kenneth Mellanby), 770
  The Mycolytic Phenomenon and Biological Control of *Fusarium* in (R. Mitchell and Prof. M. Alexander), 109
  Physical Conditions of (Dr. F. Haworth), 221
Soil (Podzol) : An Estimate of the Aromaticity of the Organic Matter of a (Dr. J. R. Wright and Dr. M. Schnitzer), 703
Soil Fungi : The Ecology of—an International Symposium (edited by D. Parkinson and J. S. Waid), *review* by Dr. P. H. Gregory, 51
Soil *p*H and Mycorrhiza Development in *Pinus* (Dr. B. N. Richards), 105
Soil Physical Conditions affecting Plant Growth (National Vegetable Research Station Association Talks and Demonstrations on), 221
Soil Profile Development : Glaciation as related to (Welsh Soils Discussion Group Meeting on), 219
Soil Science, British Society of (Clay Minerals Group of the Mineralogical Society and the) : Discussion on Weathering, 1066
Soils Discussion Group (Welsh) : Meeting on Glaciation as related to Soil Profile Development, 219
Sokol, F., and others : Haemagglutinating Sub-Units released from Newcastle Disease, Para-influenza I and Mumps Viruses by Treatment with Ether, 834
Sokolov, U. (Jortner, J., and) : Spectrophotometric Determination of the Electron Affinities of some Diatomic Molecules, 1003
Solanum bulbocastanum and *Solanum cardiophyllum* : Hybrids between (K. M. Graham and L. A. Dionne), 744
Solar Flare Effects in the *F* Region of the Ionosphere (R. W. Knecht and K. Davies), 797
Solar Parallax : A New Determination of the, by means of Radar Echoes from Venus (Dr. J. H. Thomson, J. E. B. Ponsonby, G. N. Taylor and R. S. Roger), 519
Solar Seeing (Consilgio Nazionale della Ricerche, with the co-operation of the Rassegna Internazionale Elettronica e Nucleare Symposium on), 771
Solar System : The Scale of the (Staff of Millstone Radar Observatory, Lincoln Laboratory, Massachusetts Institute of Technology), 592
Solar Variations, Climatic Change and related Geophysical Problems (Section of Geological Sciences and Division of Oceanography and Meteorology of the New York Academy of Sciences, in co-operation with the American Meteorological Society Symposium on), 967
Solar Wind : Terrestrial Accretion from the (C. M. de Turville), 156
Solar Wind and Terrestrial Oxygen (N. W. Pirie), 706
Solberg, R. A. (Bald, Prof. J. G., and) : Apparent Release of Tobacco Mosaic Virus in Living Infected Cells, 651
Solecki, Dr. Ralph : Solar Variations, Climatic Change and related Geophysical Problems (Archaeological Studies—Preliminary Findings at the Shanidar Cave in Northern Iraq), 967
Solid Propellant Rocket Research—a Selection of Technical Papers based mainly on a Symposium of the American Rocket Society, held at Princeton University, 1960 (edited by Dr. Martin Summerfield), *review* by Prof. D. B. Spalding, 66
Solid Propellant Rockets (Clayton Huggett, C. E. Bartley and Mark M. Mills), *review* by Prof. D. B. Spalding, 66
Solid Solutions in the System Ammonium Nitrate–Potassium Nitrate (R. V. Coates and J. M. Crewe), 1190
Solid Systems (Liquid and Fluidized) : Similarity in Behaviour between Gas Bubbles in (P. D. Bloore and Dr. J. S. M. Botterill), 250
Solids (Colliding) : Impact—the Theory and Physical Behaviour of (Prof. Werner Goldsmith), *review* by Dr. R. P. N. Jones, 947
Solids (Organic and Biological) : Effects of Ionizing Radiations on (British Biophysical Society and the Société de Chimie Physique Informal Discussion on), 219
Solubilities—Inorganic and Metal-Organic Compounds, a Compilation of Solubility Data from the Periodical Literature (Dr. Atherton Seidell), Vol. I, A–Ir, fourth edition by Dr. William F. Linke, *review* by Dr. D. T. Lewis, 74
Solubilization (Micellar), of Fatty Acids and Monoglycerides by Bile Salt Solutions (Dr. Alan F. Hofmann), 1106
Soluble Melanoid Pigments : Production of, by *Streptomyces* in Gelatin and Glucose Media (Prof. Augusto Capriotti), 464
Solution : Thermo-Reversible Denaturation of Eucollagen in (N. T. Crosby and Dr. G. Stainsby), 80
  Trimerization of Nickel-(II) Acetylacetonate in (Dr. D. P. Graddon and Dr. E. C. Watton), 906
Solution (Methanol) : Properties of Polyadenylic Acid in (R. F. Steiner), 340
Solutions of Copper and Silver Dithiocarbamates : Electron Spin Resonance Line-Widths in (Roland Aasa, Rune Pettersson and Tore Vänngård), 258
Solutions of Manganous Chloride : Prevention of Manganese Deficiency in Oat by soaking the Grain in (Donald S. H. Drennan, Alex. M. M. Berrie and Gordon A. Armstrong), 824
Solutions (Agitated) : Nucleation in (Dr. J. W. Mullin and K. D. Raven), 251
Solutions (Artificial) : Replacement of the Protoplasm of a Giant Nerve Fibre with (P. F. Baker, Prof. A. L. Hodgkin and Dr. T. I. Shaw), 885
Solutions (Bile Salt) : Micellar Solubilization of Fatty Acids and Monoglycerides by (Dr. Alan H. Hofmann), 1106
Solutions (Buffered Aqueous) : Interaction of Proteins and Nucleotides in (Prof. Joseph R. Debro and Melvin Lee), 1008
Solutions (Concentrated) : The Physico-chemical Constants of Binary Systems in (Prof. Jean Timmermans), Vol. 4, Systems with Inorganic + Organic or Inorganic Compounds (excepting Metallic Derivatives). *review* by Dr. E. F. G. Herington, 661
Solutions (Ferrous Sulphate) : Flash Photolysis of (Dr. J. H. Baxendale and A. L. Mansell), 622
Solutions (Frozen) : Photochemical Reactions in (Prof. Shih Yi Wang), 690
Solutions (Liquid) : Activity-based Diffusion Coefficients for (F. A. L Dullien and Prof. L. W. Shemilt), 526
Solutions (Non-Ionic) : Contraction of Smooth Muscles in (Roselyn L. Kolodny and Prof. W. G. Van der Kloot), 786
Solvent (Organic) : Fractionation of Compound Lipids by Dialysation in an Organic Solvent against an (Prof. Sen-itiroh Hakomori and Koh-kiti Takeda), 265
Solutions (Solid), in the System Ammonium Nitrate–Potassium Nitrate (R. V. Coates and J. M. Crewe), 1190
Somers, Dr. E. : Fungicides in Agriculture and Horticulture (Theoretical Bases for Fungicides), 594
Sorbitol Metabolism in Apple Fruits (Prof. A. R. N. Gorrod), 190
Sorieul, Serge, and Ephrussi, Prof. Boris : Karyological Demonstration of Hybridization of Mammalian Cells *in vitro*, 653
Sorm, Prof. F. : Terpene Chemistry (Terpene Compounds with Ten-membered Rings), 18
Sorm, Prof. F., und andere : Die Terpene, Teil I, Sesquiterpene, *review* by Dr. E. G. Kellett, 849
Sorption of Copper by Cellulose (Dr. R. I. C. Michie), 803 ; (Prof. R. D. Preston), 804
Soškić, V. (Nešković, Dr. B. A., and) : Detection of Small Quantities of 3,4-Benzpyrene directly from Chromatographic Paper, 1199
Sound (Recorded), British Institute of (Committee for Biological Acoustics, in collaboration with the) : To set up a Library of Recorded Animal Sounds, 395
Sound (Ultra-) in the Primary Aliphatic Amines : Phase-Velocity of (L. V. Kite), 1183
Sounding Rocket : Measurement of Positive-Ion Density in the Ionosphere by (T. Ichimiya, K. Takayama, T. Dote, Y. Aono, K. Hirao, S. Miyazaki, T. Sugiyama and T. Muraoka), 156
Sounding Rockets : Programme of, 1061
Sounds: Korotkov's—a Function of the Skeleton to Transmit 'Pulsactor' Signals (Wing-Comdr. John E. Malcolm), 1114
Sounds (Recorded Animal) : Library of (To be set up by the Committee for Biological Acoustics, in collaboration with the British Institute of Recorded Sound), 395
Source of Bacterial Contamination in Tissue Culture : Pseudomonadaceae as a (Dr. M. Likar), 1025
Source of Error (A Potential), in the Hexobarbitone Sleeping-Time Test in Mice (Dr. P. W. Ramwell and I. H. Lester), 640
Sources of Energy : Co-ordination of Research and Development of, 1060
Sources of Radio Emission : Galactic Explosions as (Prof. G. R. Burbidge). 1053
Sources (New), of Energy (United Nations Conference on), 1156
Sources (Sulphur and Carbon), in *Aspergillus* and *Neurospora*: Biotin Requirement and (P. Strigini and G. Morpurgo), 557
South Africa : Academic Freedom in, 747
South Africa (Union of) : The Brandberg and other Rock-Shelter Paintings of the (Revel Mason), 311
South African Prehistory, 961
South-Eastern Union of Scientific Societies : Sixty-sixth Annual Congress (The Changing Country-side), 397
South-West England : Age of the Orogeny and Granites in (N. E. Butcher), 253
Southern England : *Bathynella* and other Interstitial Crustacea in (G. M. Spooner), 104
Southern Rhodesia (South-east) : Karroo Igneous Activity and Tectonics in (K. G. Cox, J. R. Vail, L. J. Monkman and R. L. Johnson), 40 ; (D. N. Wood), 802
Southward, Dr. E. C. : Awarded a Research Grant by the Leverhulme Trust. 678
Soya Extracts : Destruction of Linoleate Hydroperoxide by (Dr. J. A. Blain and T. Barr), 538
Space : Conquest of, 567
  The Conquest of—Moon Probes and Artificial Satellites, their Impact on Human Destiny (Albert Ducrocq), 567
Space Encyclopaedia : The—a Guide to Astronomy and Space Research, second edition, *review* by R. H. Merson, 76
Space Flight and Re-entry Trajectories (International Academy of Astronautics of the International Astronautical Federation Symposium on), 312
Space Research : British Participation in, 216
  Radio Techniques and (British Institute of Radio Engineers 1961 Convention), 591
  The Space Encyclopaedia—a Guide to Astronomy and, second edition. *review* by R. H. Merson, 76
Space Research in Britain, 588

Spalding, Prof. D. B. : Interior Ballistics of Rocket Motors, *review*, 66
  Awarded the Simms Gold Medal of the Royal Aeronautical Society, 863
Sparke, J. W. (Calvert, E. S., and) : Awarded the 1961 Laura Taber Barbour Air Safety Award by the Flight Safety Foundation Award, Inc., of the United States Society of Automotive Engineers, Inc., 312
Speakman, J. C., and others (edited by) : Computing Methods and the Phase Problem in X-Ray Crystal Analysis—Report of a Conference held at Glasgow, 1960, *review* by Dr. A. D. Booth, 752
Speciation : Effects of, on Serum Proteins in the Genus *Macaca* with Special Reference to the Polymorphic State of Transferrin (Dr. Morris Goodman and Emily Poulik), 171
Species (Mammalian) : Fructose as a Component of the Foetal Blood in several (Prof. A. St. G. Huggett and Dr. D. A. Nixon), 1209
Species (New), of Rotifer (H. G. S. Wright), 311
Species Difference between *Rattus norvegicus* and *Rattus rattus* : Paracrystalline Haemoglobin as a (Dr. Z. Vokáč), 641
Specificity (A Possible), of Albumin Auto-Antibodies (W. L. Marsh and W. J. Jenkins), 180
Specificity (Substrate), of the *Myrothecium* Ascorbic Acid Oxidase (Gordon A. White and Prof. Frederick G. Smith), 187
Specimens (Type), of Reptiles and Amphibians in the United States National Museum (Doris M. Cochran), 863
Spector, Dr. W. G. (Rees, Dr. K. R., and) : Reversible Nature of Liver Cell Damage due to Carbon Tetrachloride as demonstrated by the Use of Phenergan, 821
Spectra : Structure and, of $[(\text{Phenanthroline})_2\text{Fe}(\text{CNMe})_2]^{2+}$ and $[(\text{Phenanthroline})_2\text{Fe}(\text{CN})_2\text{H}^2]^{2+}$ (N. K. Hamer and Dr. L. E. Orgel), 439
Spectra (Electron Spin Resonance), of γ-Irradiated Carbohydrates and α-Hydroxy Acids (A. J. Bailey, Dr. S. A. Barker, J. S. Brimacombe, D. Pooley and D. H. Spence), 259
Spectra (γ-Ray), from Radiative Capture of Thermal Neutrons : Atlas of (L. V. Groshev, V. N. Lutsenko, A. M. Demidov and V. I. Pelekhov), translated from the Russian by J. B. Sykes, *review* by Dr. E. R. Rae, 75
Spectral Sensitivity of Single Visual Cells (Prof. H. Autrum and D. Burkhardt), 639
Spectrometers : Recording Ultra-violet (Photoelectric Spectrometry Group Test on), 394
Spectrophotofluorometer : Modification of, for Scanning Paper Strips (Yasuhiko Takemoto), 1094
Spectrophotometric Determination of the Electron Affinities of some Diatomic Molecules (J. Jortner and U. Sokolov), 1003
Spectrophotometry (Fluorescence) : Enumeration of Components in Complex Systems by (Dr. G. Weber), 27
Spectroscopic Studies using Time-Resolution Techniques (Applied Spectroscopy Group and the Manchester and District Branch of the Institute of Physics and the Physical Society Joint Meeting on), 312
Spectroscopy : Terrestrial (Prof. C. L. Pekeris, Z. Alterman and H. Jarosch), 498
Spectroscopy (Molecular) : Proceedings of the Institute of Petroleum Hydrocarbon Research Group Conference on (London, 1958), (edited by E. Thornton and Dr. H. W. Thompson), *review* by Dr. A. Knowles, 76
Spectroscopy (Nuclear Magnetic Resonance), in Organic Chemistry : Applications of (Dr. L. M. Jackman), *review* by Dr. J. C. D. Brand, 1043
Spectrum of Vanadium in the Tri-positive Oxidation State (V^{3+}) in Tetrahedral Co-ordination (Dr. D. M. Gruen and R. Gut), 713
Speculations (Theological) : A Diversity of, *review* by the Very Rev. Dr. W. R. Matthews, 943
Speed (High) Electronic Computer of the U.S.S.R. Academy of Sciences : The Cathode Ray Tube Memory of the (V. N. Laut and L. A. Lyubovich), translated from the Russian by Ruth Feinstein ; edited by F. A. Sowan, *review* by J. C. Cluley, 383
Speed (High) Wing Theory (Robert T. Jones and Doris Cohen), *review*, 118
Speelman, J. J., and others : Influence of various Dietary Fats on the Blood Cholesterol Content, 310
Speiser, D. : L. Euler, The Principle of Relativity and the Fundamentals of Classical Mechanics, 757
Spektroskopiya (*Optika i*) : Translations into English to be issued by the Optical Society of America, 769
Spence, D. H., and others : Electron Spin Resonance Spectra of γ-Irradiated Carbohydrates and α-Hydroxy Acids, 259
Spencer, Prof. D. C. : Elected a Member of the United States National Academy of Sciences, 674
Spencer, Dr. D. M. : Fungicides in Agriculture and Horticulture, 593
Spencer, G. C. : Appointed lecturer in mechanical engineering at the University of Southampton, 397
Spencer, H. F. : Training in Occupational Hygiene (Interest of Management in Working Conditions), 1158
Spencer, R. : Chitinoclastic Activity in the Luminous Bacteria, 938
Spencer (Rowland) Scholarship (Textile Institute), 218
Spencer-Booth, Yvette (Free, J. B., and) : Effect of Temperature on *Apis indica* Workers, 933
Sperm (Normal Bull) : An 'Apical Body' in the Galea Capitis of the (Dr. Erik Blom and Aksel Birch-Andersen), 1127
Sperm Whale Myoglobin : The Amino-Acid Sequence of—Chemical Studies (A. B. Edmundson and C. H. W. Hirs), 663 ; A Partial Determination by X-Ray Methods and its Correlation with Chemical Data (Dr. J. C. Kendrew, Dr. H. C. Watson, Dr. B. E. Strandberg, Dr. R. E. Dickerson, Dr. D. C. Phillips and Dr. V. C. Shore), 666 ; Comparison between the Amino-Acid Sequences of Sperm Whale Myoglobin and of Human Haemoglobin (Dr. H. C. Watson and Dr. J. C. Kendrew), 670
Spermatocytes (Primary), of Mouse under Elevated Temperature : Synaptinemal Complexes (Cores) in (Dr. B. R. Nebel and E. M. Hackett), 467
Spermatophore (Artificial) : Use of an, in the Study of Activation of Spermatozoa and Development of Spermatophores in the Cockchafer (Dr. V. Landa), 935
Spermatophores in the Cockchafer : Use of an Artificial Spermatophore in the Study of Activation of Spermatozoa and Development of (Dr. V. Landa), 935
Spermatozoa (Disintegrated), from the Epididymis (Dr. Timothy D. Glover), 185
Spermatozoa and Development of Spermatophores in the Cockchafer : Use of an Artificial Spermatophore in the Study of Activation of (Dr. V. Landa), 935
Spermiogenesis (Atypical), of *Thermobia domestica*, a Thysanuran Insect (R. S. Mathur, 743 ; (Dr. S. R. Bawa), 743
Spheres : Packing of (Dr. J. R. Parrish), 800
Sphériques (Fonctions) de Legendre et Fonctions Sphéroidales (Dr. Louis Robin), Tome 3, *review*, 118
Sphéroidales (Fonctions) : Fonctions Sphériques de Legendre et (Dr. Louis Robin), Tome 3, *review*, 118
Spherulites (Banded), of Hippuric Acid (Dr. N. H. Hartshorne), 1191
Spider (Rare), *Pellenes nigrociliatus* (L. Koch) var. *bilunulata* Simon : Parental Care in a (Dr. Izabella Mikulska), 365
Spin (Electron) Resonance Line-Widths in Solutions of Copper and Silver Dithiocarbamates (Roland Aasa, Rune Pettersson and Tore Vänngård), 258
Spin (Electron) Resonance Spectra of γ-Irradiated Carbohydrates and α-Hydroxy Acids (A. J. Bailey, Dr. S. A. Barker, J. S. Brimacombe, D. Pooley and D. H. Spence), 259
Spin-Lattice Relaxation of Pairs of Chromium Ions in Ruby (J. C. Gill), 619
Spindles (Muscle-) : Efferent Innervation of Mammalian (Prof. D. Barker and N. K. Chin), 461
Spiral (A Notable Growth), on Synthetic Diamond (Prof. S. Tolansky), 992
Spiral Etch-Pits of Ice Crystals (J. Muguruma), 37
Spiral Formation on Natural Crystalline Sulphur (Sayeda H. Emara), 254
Spiral Nerve-endings (Proprioceptors) in the Human Vocal Muscle (G. Rudolph), 726
Spirals (Growth), on Synthetic Magnetoplumbite Crystals (R. A. Lefever and A. B. Chase), 255
Spirtes, Prof. M. A., and Guth, P. S. : An Effect of Chlorpromazine on Rat Mitochondrial Membranes, 274
Spleen : Nature of the Sinus Lining Cells of the (Dr. R. F. Dorfman), 1021
Splenectomy : Effect of, on the Resistance of Rats to Histamine Stress (Arthur M. Sackler, A. Stanley Weltman and Peter Jurtshuk, jun.), 274
Spontaneous Potentials from Explants of Chick Cerebral Hemisphere (Telencephalon) in Tissue Culture (Prof. A. W. B. Cunningham), 816
Spontaneous Potentials from Explants of Human Adult Cerebellum in Culture (Prof. A. W. B. Cunningham), 918
Spooner, Prof. E. C. R., and others : Oxidation of Galena to Lead Sulphate, 78
Spooner, Dr. E. T. C. : *Obituary* of Prof. H. R. Dean, 305
Spooner, G. M. : *Bathynella* and other Interstitial Crustacea in Southern England, 104
Spore (Single-) Strain of *Lipomyces* : A Superior Fat-synthesizing (D. R. Cullimore and Dr. M. Woodbine), 1022
Spot Tests in Organic Analysis (Prof. Fritz Feigl), sixth English edition (translated by Prof. Ralph E. Oesper), *review* by Dr. D. T. Lewis, 479
Spraragen, Sanford, and others : Effect of Chronic High and Low Salt Intakes on Adrenocortical Function, 348
Spreading of the Sea Floor : Continent and Ocean Basin Evolution by (Robert S. Dietz), 854
Spring, Dr. K. H. : Generation of Electricity without the Use of Rotating Machinery, 297
Sprinks, T. : Appointed a Research Fellow in mathematics at the University of Southampton, 397
Sproull, Dr. Wayne T. : Viscosity of Dusty Gases, 976
Spurny, Zd., and Janovsky, I. : Radiolysis of Carbon Tetrachloride in the Presence of Oxygen, 624
Squamous Epithelia : Phagocytic Activity in, and its Role in Cellular Susceptibility to Foot-and-Mouth Disease (Dr. H. Platt), 1075
Squid Giant Axon : Leakage Current Rectification in the (Dr. William J. Adelman and Dr. Robert E. Taylor), 883
Sreenivasan, Dr. A. (Aiyar, Dr. A. S., and) : Intracellular Distribution of Ubiquinone in Rat Liver under certain Stress Conditions, 344
Sreenivasan, Dr. A., and others : Biosynthesis of Choline *in vitro* by Rat Liver, 267
Srinivasan, R. (Ramachandran, Prof. G. N., and) : An Apparent Paradox in Crystal Structure Analysis, 159
St. Antony's College, Oxford : Summer School in Quantum Chemistry, 769
St. Bartholomew's Hospital Medical School, London : Retirement of Prof. L. P. Garrod as professor of bacteriology, 131
  Appointment of Dr. R. A. Shooter as professor of bacteriology, 131
  Appointment of Dr. Dennis Lacy to the readership in zoology and comparative anatomy, 680
  Appointment of Dr. O. J. Lewis to the University of London readership in anatomy, 963
St. George's Hospital Medical School, London : Appointment of Desmond Curran to the University of London chair of psychiatry, 219
St. Mary's Hospital Medical School, London : Title of reader in anatomy conferred on Dr. A. S. Breathnach, 396
Stabilizing (Self-) Chain of SH-Enzymes and Substrates : Role of Glutathione and of a, in the Metabolic Regulation of Erythrocytes (D. Scheuch, C. Kahrig, E. Ockel, C. Wagenknecht and Prof. S. M. Rapoport), 631
Stacey, Dr. Frank : Appointed to a Gassiot research fellowship in the Meteorological Office, 676
Stacey, Prof. M., and Barker, Dr. S. A. : Polysaccharides of Micro-organisms, *review* by Prof. W. T. J. Morgan, 55
Staff College for Further Education : Appointment of W. J. Richards as first director, 308
Stages (Juvenile), of *Fasciola hepatica* in the Liver of the Mouse (Dr. Ben Dawes), 646
Stagnation Temperature Measurements in a Hypersonic Wind-Tunnel using the Sodium Line Reversal Method (J. L. Stollery), 778
Stainable Mucin of Joint Tissues and Synovial Fluid (Dr. B. F. Martin and N. E. Shaw), 835
Staining Plastids in Chlorophyll-deficient Mutant Plants (W. R. Childers), 1029
Staining Reaction for Mast Cells of some Lower Vertebrates : Differences in Mechanism of (Dr. A. Stolk), 360
Stainsby, Dr. G. (Crosby, N. T., and) : Thermo-Reversible Denaturation of Eucollagen in Solution, 80
Stamp, Prof. L. Dudley : The Engineer in Commonwealth Development, 673
Standard Unit of Pressure in Vacuum Physics (Dr. N. A. Florescu), 522 ; (P. H. Bigg), 523
Standards, United States National Bureau of : National Committee on Radiation Protection and Measurements, Report No. 26, X-Ray Protection at High Voltages, 589

Stanley, A. R., and Treays, J. : Television and Film Techniques (Colour Television Engineering—Studio Problems and Techniques), 869

Stanley, A. R., and Watson, S. N. : Television and Film Techniques (Colour Television Engineering—Equipment Problems and Techniques), 870

Stanley, Dr. E. : Principles of Electricity and Magnetism, *review*, 76

Stanley, jun., Wendell M., and Bock, Prof. Robert M. : Mechanisms of Expression of Genetic Information, 299

Stansfield, Dr. D. A. (Evans, R. A., and) : Gastric Esterases of Pigs, 1110

Staphylococcal Virulence (Intraperitoneal), for Mice : Enhancement of, with Different Bile Salts (Dr. S. Stanley Schneierson, Daniel Amsterdam and Ely Perlman), 829

Staphylococci : Biochemical Changes accompanying Impaired Respiration in (Prof. G. F. Gause, G. V. Kochetkova and G. B. Vladimirova), 978

  Effect of, on Leucocyte Pyridine Nucleotides (Dr. M. N. Swartz, P. H. Black and J. Merselis), 516

Stapp, Col. J. P. : Elected a member of the Life Sciences Section of the International Academy of Astronautics, 495

Starch : Recent Advances in the Biochemistry of Glycogen and (Dr. W. J. Whelan), 954

Starch, Flour and Gluten (Wheat) : New Products from (B. H. Thewlis), 260

Starch-Gel Electrophoresis : An Investigation of Closely Related Gamma-Myeloma Proteins and Normal Mouse Gamma-Globulin by Partial Enzymic Degradation and (Dr. Brigitte A. Askonas and Dr. J. L. Fahey), 980

Starch-Gel Electrophoresis of Anterior Pituitary Hormones (K. A. Ferguson and A. L. C. Wallace), 629

Starik, Dr. I. E. : Yadernaya Geokhronologiya (Nuclear Geochronology), 1062

Stark, Otakar, and others : Dissociation of Isohaemagglutinin Formation and Tolerance of Skin Grafts in Chicks, 281

Starr, Mortimer P. (edited by Charles E. Clifton, in association with Sidney Raffel and) : Annual Review of Microbiology, Vol. 14, *review* by Dr. B. A. Newton, 662

Starr, Theodore J., and others : Isolation and Partial Characterization of a Growth-control Factor, 1116

Stars : Hyperon (G. S. Saakyan), 961

Starvation (Pantothenate) : Induction of Heritable Respiratory Deficiency in *Saccharomyces* by (Prof. Alvin Sarachek and Gregory L. Fowler), 792

State (Polymorphic), of Transferrin : Effects of Speciation on Serum Proteins in the Genus *Macaca* with Special Reference to the (Dr. Morris Goodman and Emily Poulik), 171

State Agricultural University, Ghent : Third International Symposium on Phytopharmacy and Phytiatry, 493

Stathmokinetic (Mitosis-inhibiting) Method for Estimating Plasma Erythropoietic Hormone (Dr. Hillas Smith), 640

Stationary Phase : Liquid Chromatographic Separations using Rubber as the (P. I. Brewer), 625

Statistical Mechanics : Fundamental Problems in (Netherlands University Foundation for International Co-operation Summer School in Science), 769

Statistical Review of England and Wales for the Year 1959 : Part 2, Tables—Population (Registrar General), 1061

Statistical Thermodynamics : An Introduction to (Terrell L. Hill), *review* by Dr. H. Steeple, 119

Statistics (Educational), for England and Wales, 393

Statistics (Medical), at the London School of Hygiene and Tropical Medicine, 764

Statistics (Selected), relating to Local Educational Authorities in England and Wales, Educational Year 1958-1959 (Ministry of Education), 393

Steady Electric and Magnetic Fields : Confining a Plasma in (K. A. George), 334

Steady-State : Deviations from the, in Ion Transfer through Perm-selective Membranes (Chaim Forgacs), 339

Steam (Air, Argon, Carbon Dioxide, Carbon Monoxide, Hydrogen, Nitrogen, Oxygen and) : Tables of Thermodynamic and Transport Properties of (Joseph Hilsenrath, Charles W. Beckett, William S. Benedict, Lilla Fano, Harold J. Hoge, Joseph F. Masi, Ralph L. Nuttall, Yeram S. Touloukian and Harold W. Woolley), *review* by Prof. A. R. Ubbelohde, 58

Stebbins, Prof. G. L. : Experimental Taxonomy of Flowering Plants, 969

Steel : The Brittle Fracture of (Dr. W. D. Biggs), *review* by Dr. A. R. Bailey, 573

Steel (Mild) : Cleavage Fracture Initiation in Notched Impact Tests of (J. W. Davies and A. A. Wells), 432

Steelmaking : Thermochemistry for (Prof. John F. Elliott and Molly Gleiser), Vol. 1, *review* by Prof. A. R. Ubbelohde, 58

Steelworkers : The Attitudes of, to Technical Change (Dr. Olive Banks), *review* by F. J. Willett, 382

Steeple, Dr. H. : An Introduction to Statistical Thermodynamics, *review*, 119

Steers, Prof. J. A. (edited by) : Scolt Head Island, revised edition, *review* by W. H. Dowdeswell, 73

Stein, Prof. Gabriel : Recent Advances in the Radiation Chemistry of Aqueous Systems, 16

Steinbuch, Dr. M., and Quentin, M. : Isolation of Haptoglobin by Chromatography on Diethylaminoethyl-Cellulose (DEAE), 1121

Steiner, R. F. : Properties of Polyadenylic Acid in Methanol Solution, 340

Steinhaus, Edward A., and Smith, Ray F. (edited by) : Annual Review of Entomology, Vol. 6, *review* by Harold Oldroyd, 945

Stem Extracts (Crude), from Normal and Tumour Tissues of Plants : Proteolytic Activity of (Prof. C. Gainor and F. D. Crisley), 1031

Stems (Cotton) : Effect of Ringing, on Content of Reducing Sugars and Insoluble Nitrogen and on Degree of Infection with *Xanthomonas malvacearum* (E.F.S.) Dowson (K. A. Sabet and H. M. Hassan), 934

Stenlake, Dr. John B. : Appointed to the chair of pharmacy in the Royal College of Science and Technology, Glasgow, 764 ; work of, 764

Stephens, C. G. : At the Australian Arid Zone Technical Conference (Physical Characteristics of the Australian Arid Zone—Soils), 19

Stephenson, J. M. : Appointed lecturer in the Department of Electrical Engineering, University of Leeds, 963

Stephenson, Prof. T. A. : Form in Art and Nature, *review*, 44

  Obituary by Dr. F. S. Russell, 586

Sterility (Protracted Steroid-induced), in Mice : Recovery of Fertility after (Prof. Alexander Lipschutz and Rigoberto Iglesias), 174

Stern, H. : Awarded a CIBA fellowship in theoretical physics, 489

Sternberg, Heinz W., and others : Reductive Dimerization of Naphthalene by Sodium-Ethylamine, 81

Steroid : Association of a, and a Pigment with a Diffusible Fruiting Factor in *Myxococcus virescens* (J. Jennings), 190

Steroid Acid Complex: Formation of Helical Microfibrils from a (Dr. N. Ramanathan, A. L. Currie and J. Ross Colvin), 779

Steroid-induced Sterility (Protracted), in Mice : Recovery of Fertility after (Prof. Alexander Lipschutz and Rigoberto Iglesias), 174

Steroids (Adrenal Cortical) : Reaction of Antimony Pentachloride with Pregnane-3α, 17α, 20α-Triol, Pregnane-3α, 17α, 20α-Triol-11-One and other (Capt. Robert H. Herman and Joseph Bruton), 444

Steroids (Androgenic) : Effects of certain, on the Increase of Endometrial Carbonic Anhydrase caused by Progesterone (Dr. Kazukuni Yamashita and Ken-ichi Kurouji), 1013

Steroids (Phenolic) : Configuration of the 6-Hydroxyl Group in (Dr. H. Breuer, R. Knuppen and Gerta Pangels), 720

Sterol Methyl Ethers : Gas-Liquid Chromatography of (R. B. Clayton), 1071

Stevens, Dr. B., and Hutton, E. : Lifetime of the Pyrene Dimer, 166

Stevens, D. J., and others : Strontium-90 in Fall-out and in Man in Australia, January 1959-June 1960, 754

Stevens, K., and others : Acetylcholinesterase and the Life-span of the Erythrocyte, 1208

Stevens-Wilson, L. W. : Science and Industry—the Problem of Communication, 966

Stevenson, J. Ross : Absence of Chitinase in *Limnoria*, 463

Steward, Prof. F. C. (edited by) : Plant Physiology, Vol. 1*A*, Cellular Organization and Respiration, *review* by Prof. Walter Stiles, 116 ; Vol. 1*B*, Photosynthesis and Chemosynthesis, *review* by Prof. W. Stiles, 1046

Stewart, C. P. (edited by Harry Sobotka and) : Advances in Clinical Chemistry, Vol. 3, *review* by Dr. J. N. Davidson, 74

Stewart, Prof. F. S. : Bacterial Polyglycerophosphate, 464

Stewart, Air Commodore W. K. : Elected a member of the Life Sciences Section of the International Academy of Astronautics, 495

Stickland, R. G. : Oxidation of Reduced Pyridine Nucleotides and of Sulphite by Pea Root Mitochondria, 648

Stiffel, C., and others : Influence of a Liver Fraction on the Phagocytic Activity of the Reticulo-Endothelial System in Mice, 279

Stilboestrol Diphosphate : Effect of Tri-*p*-anisylethylene, Dienoestrol and (Phagocytic Activity of the Reticulo-Endothelial System), (Prof. T. Nicol, Dr. D. L. J. Bilbey and C. G. Druce), 419

Stiles, Prof. Walter : Advances in Plant Physiology, *review*, 48

  General Plant Cell Physiology, *review*, 116

  Plant Physiology, *review*, 1046

Still Air : Precipitation of Sub-Micron Dust in, by Cloud-size Water Droplets (Dr. M. M. Bhadani and N. G. T. Ludlow), 974

Stilpnomelane in North Wales (Dr. T. W. Bloxam and N. B. Price), 525

Stimulation of Active Transport of Sodium from Sodium-rich Frog Muscle by Insulin and Lactate (Roderick P. Kernan), 347

Stimulation (Ethanol), of Oxidative Metabolism in *Euglena gracilis* (Dr. D. E. Buetow), 1196

Stocken, Dr. L. A., and others : Incorporation of Phosphorus-32 into Adenosine Triphosphate of Adrenal Chromaffin Granules, 354

Stokoe, W. J. (compiled by) : The Observer's Book of Trees, revised edition, *review* by B. J. G. Maitland, 850

Stolk, Prof. A. : Effect of Castration on Experimental Liver Lesion in *Iguana iguana*, 93

  Differences in Mechanism of Staining Reaction for Mast Cells of some Lower Vertebrates, 360

  Histochemical Analysis of some Dehydrogenase Systems in the Erythrocytes of some Lower Vertebrates, 926

Stollery, J. L. : Stagnation Temperature Measurements in a Hypersonic Wind-Tunnel using the Sodium Line Reversal Method, 778

Stommel, H. M. : Elected a Member of the United States National Academy of Sciences, 674

Stone and Iron Meteorites : Origin of (Prof. David F. Fisher), 244

Stonier, Dr. Tom (Lipetz, Dr. Jacques, and) : Effect of 5-Bromuracil on Crown Gall Tumour Induction, 929

Stopford, Lord : *Obituary* by Prof. G. A. G. Mitchell, 391

Storage Tissue : The 'Lag-Phase' in Salt Uptake of (R. F. M. Van Steveninck), 1072

Storey, R. S., and others : Breakdown Strength of Caesium Iodide, 994

Storms (Ionospheric) : Possible Identification of Atmospheric Waves associated with (M. D. Wright), 898

Storry, J. E. : Calcium and Magnesium Contents of various Secretions entering the Digestive Tract of Sheep, 1197

Story : The Neutron (Dr. Donald J. Hughes), *review* by G. R. Noakes, 64

Stott, B. : Movement of Coarse Fish in Rivers, 737

Strain Differences in Electroshock Convulsions of the Rat : Sex and (D. E. Woolley, P. S. Timiras, M. R. Rosenzweig, D. Krech and E. L. Bennett), 515

Strain (Louping Ill) : Comparison of an Attenuated and Virulent (M. Grešíková, P. Albrecht and E. Ernek), 508

Strain (Single-Spore), of *Lipomyces* : A Superior Fat-synthesizing (D. R. Cullimore and Dr. M. Woodbine), 1022

Strains of the Genus *Pediococcus* : Folinic Acid Requirement of (Ellen I. Garvie and Margaret E. Gregory), 563

Strandberg, Dr. B. E., and others : The Amino-Acid Sequence of Sperm Whale Myoglobin—A Partial Determination by X-Ray Methods, and its Correlation with Chemical Data, 666

Stratigraphique : Géologie (Prof. Maurice Gignoux), cinquième édition, *review* by Prof. S. Simpson, 202

Stratton, Dr. F. : Complement-fixing Blood Group Antibodies with special reference to the Nature of Anti-*Le*^{a}, 240

Stratton, Dr. J. A. : Elected vice-president of the United States National Academy of Sciences, 674

Strecker and Bucherer Hydantoin Syntheses: Alkylcyclohexanones in the (L. Munday), 1103

Street, Harold V., and Niyogi, Dr. S. K. : A New Technique of Chromatography and Ionophoresis on Ion-Exchange Paper—Application to the Separation of Barbiturate, Salicylate and Acetophenetidin, 537

  A New Technique of Chromatography and Ionophoresis on Ion-exchange Paper—Application to Separation of Barbiturate, Salicylate, Acetophenetidin and *p*-Acetylaminophenol, 718

  A New Technique of Chromatography and Ionophoresis on Ion-exchange Paper—Application to Separation of Compounds of Toxicological Interest—Separation of a Mixture of Promazine, Quinine, Sulphacetamide and Acetophenetidin, 1199

Strejan, Gill (Citri, Dr. Nathan, and) : Antibodies blocking Neutralization of Penicillinase by the Homologous Antiserum, 1010
Strength (Breakdown), of Caesium Iodide (R. Taagepera, R. S. Storey and Prof. K. G. McNeill), 994
Streptomyces in Gelatin and Glucose Media : Production of Soluble Melanoid Pigments by (Prof. Augusto Capriotti), 464
Streptomycetes : Introduction of the 16α-Hydroxyl Group into Œstrogens by (Dr. D. A. Kita, J. L. Sardinas and G. M. Shull), 627
Stress (Dynamic Yield), for 'Perspex' : Estimation of Dynamic Modulus and (John Roberts), 799
Stress (Histamine) : Effect of Splenectomy on the Resistance of Rats to (Arthur M. Sackler, A. Stanley Weltman and Peter Jurtshuk, jun.), 274
Stress Conditions : Intracellular Distribution of Ubiquinone in Rat Liver under certain (Dr. A. S. Aiyar and Dr. A. Sreenivasan), 344
Stress Corrosion Fracture : Physical Metallurgy of (edited by Thor N. Rhodin), (Metallurgical Society Conferences, Vol. 4), *review* by Prof. F. C. Thompson, 393
Stressed Bone : Properties of (H. M. Pearson), 1217 ; (Prof. C. J. Dreyer), 1217
Stressed (Electrically) Metallic Surfaces in Vacuum : Phenomena occurring at (R. Hawley and Dr. C. A. Walley), 252
Stresses : Thermal, *review* by B. S. Owen, 65
Stresses (Thermal) : Theory of (Prof. Bruno A. Boley and Prof. Jerome H. Weiner), *review* by B. S. Owen, 65
Stretton, Dr. A. O. W. (Ingram, Prof. V. M., and) : Human Haemoglobin A_2—Chemistry, Genetics and Evolution, 1079
Striate Mosaic—a New Disease of Sugar Cane (C. G. Hughes), 366
Striated Muscle Fibre Membrane : Nature of Sarcolemma, the (Prof. F. Lörincz and Dr. G. Biró), 317
Strickland-Constable, Dr. R. F. : Appointed to the University of London readership in chemical engineering at the Imperial College of Science and Technology, 963
Strigini, P., and Morpurgo, G. : Biotin Requirement and Carbon and Sulphur Sources in *Aspergillus* and *Neurospora*, 557
Strips (Paper) : Modification of Spectrophotofluorometer for Scanning (Yasuhiko Takemoto), 1094
Strong Electric Fields : Effect of, on the Boiling Points of some Alcohols (Dr. P. K. Katti and Dr. M. M. Chaudhri), 80
Strong Magnetic Fields : Use of Superconductors for producing, 134
Strontium-90 in Fall-out and in Man in Australia, January 1959-June 1960 (Dr. F. J. Bryant, L. J. Dwyer, D. J. Stevens, Prof. E. W. Titterton and J. R. Moroney), 754
Structural Asymmetry in Cilia and Flagella (I. R. Gibbons), 1128
Structure : The Haemoglobin Particles—Chemical and Genetic Aspects of their (Dr. G. Braunitzer, Dr. N. Hilschmann, Dr. V. Rudloff, Dr. K. Hilse, Dr. B. Liebold and Dr. R. Müller), 480
Structure of the Bones of some Reptiles : Influence of Large Doses of Œstrogens on the (Dr. K. Simkiss), 1217
Structure of Calcium Soap Fibres (R. J. Bird and G. Rooney), 337
Structure of Collagen (Prof. G. N. Ramachandran and V. Sasisekharan), 1004
Structure of Polynuclear Cobalt Complexes (Prof. Cyrill Brosset and Nils-Gösta Vannerberg), 714
Structure of Vapour-deposited Carbon (Dr. George Colligan and Dr. Francis Galasso), 621
Structure (Atomic) : Quantum Theory of (Prof. John C. Slater), *review* by Prof. C. A. Coulson, 1142
Structure (Chemical), of Citrinin (Stefan Kováč, Prof. Pavel Nemec, Vladimír Betina and Jozef Balan), 1104
Structure (Crystal-) Analysis (Prof. Martin J. Buerger), *review* by Dr. A. D. Booth, 752
  An Apparent Paradox in (Prof. G. N. Ramachandran and R. Srinivasan), 159
  Correction for Extinction Errors in (Prof. S. Chandrasekhar and Dr. D. C. Phillips), 1164
Structure (Fine), in HeLa Cells *in vitro* : Activation of Ferritin Synthesis and Induction of Changes in—Implications for Protein Synthesis (Prof. G. W. Richter), 413
Structure (Fine), of Living Matter : Carl Nägeli and the (Dr. J. S. Wilkie), 1145
Structure (Fine), of the Neuromuscular Junction in Patients with Myasthenia Gravis : Abnormalities in the (Dr. S. I. Zacks, W. C. Bauer and J. M. Blumberg), 280
Structure (Protein) : Terminology of (Prof. D. B. Wetlaufer), 1113
Structure (Tinsel-like), in Flagella of Zoospores associated with Cabbage Clubroot Tissue (W. L. Seaman, Prof. R. H. Larson and J. C. Walker), 186
Structure and Function of Muscle (edited by Dr. G. H. Bourne), Vol. 1, Structure, *review* by Dr. I. A. Boyd, 46
Structure and Spectra of $[(\text{Phenanthroline})_2\text{Fe}(\text{CNMe})_2]^{2+}$ and $[(\text{Phenanthroline})_2\text{Fe}(\text{CN})_2\text{H}^2]^{2+}$ (N. K. Hamer and Dr. L. E. Orgel), 439
Structures : Terpene Properties and, *review* by Dr. E. G. Kellett, 849
Structures (Intracellular), in Tumours induced by Polyoma (Leon Dmochowski, Clifford E. Gray, Elizabeth Bereczky and Julian Blicharski), 610
Structures (Random) : Two-Dimensional Fourier Transform Technique for analysing (Dr. Douglas M. C. MacEwan and H. H. Sutherland), 431
Stuart (Herbert Akroyd) Memorial Prize of the Royal Aeronautical Society awarded to J. S. Alford, 863
Students : Third Report of an *ad hoc* Committee on Procedure for Admission of (Committee of Vice-Chancellors and Principals of the Universities of the United Kingdom), 401
Students (Commonwealth), in British Universities, 308
Students (Day-release), in England and Wales, 393
Studentship (Arnold Gerstenberg), for 1962 (University of Cambridge), 396
Studhalter, R. A., and others : Classification and Multiplicity of Growth Layers in the Branches of Trees at the Extreme Lower Forest Border, *review* by Prof. F. W. Jane, 850
Studies in the Causes of Delinquency and the Treatment of Offenders : No. 3, Delinquent Generations—a Home Office Research Unit Report (Leslie T. Wilkins), 24
Studies on *Physalia physalis* (L.) : Part 1, Natural History and Morphology ; Part 2, Behaviour and Histology (A. K. Totton and G. O. Mackie), (Discovery Reports, Vol. 30), 23
Studies (Genetic), with *Klebsiella pneumoniae* (C. H. Clarke), 194
Studies (Microscopic), of Reflecting Surfaces, *review* by J. W. Gates, 117
Studies (Spectroscopic), using Time-Resolution Techniques (Applied Spectroscopy Group and the Manchester and District Branch of the Institute of Physics and the Physical Society Joint Meeting on), 312
Study of Activation of Spermatozoa and Development of Spermatophores in the Cockchafer : Use of an Artificial Spermatophore in the (Dr. V. Landa), 935
Study of Animal Behaviour, Association for the: Symposium on Orientation and Migration, 1063
Study of the Attitudes of Africans to Europeans in Ghana before Independence : White Man—a (Dr. Gustav Jahoda), *review* by Dr. Margaret Read, 946
Study of Blood as a Rheological Fluid : Some Recent Research Problems encountered in the (Cambridge Rheology Club Discussion on), 1062
Study of Congenital Anomalies, Japan Association for : Initial Meeting, 395
Study of Defects in Porphyrin Metabolism by means of Isotopes (Prof. C. Rimington), 870
Study of Diseases of Porphyrin Metabolism : Use of Tracers in the (Biology Division of the French Atomic Energy Commission Colloquium on), 870
Study in Economic Growth : Jamaica, 1830-1930—a (Gisela Eisner), *review* by Prof. T. S. Simey, 1142
Study of Economic Problems and Policies in Contemporary Britain : Growth in the British Economy—a (Political and Economic Planning), 199
Study of Haemoproteins : Precautions in the Use of Ferri- or Ferrocyanide for the (Prof. D. Keilin), 717
Study of Human Biology, Society for the : Symposium on Natural Selection in Human Populations (edited by D. F. Roberts and G. A. Harrison), *review* by Kenneth A. R. Kennedy, 72
Study of the Infectious Degeneration of Grape Vines : New Herbaceous Test-Plants for (E. Baldacci, A. Amici, P. Bonola, E. Betto, G. Fogliani and E. Refatti), 371
Study of Medical Education, Association for the (Medical Committee of the Scientific Film Association in collaboration with the) : Symposium on the Applications of Television in Medical Research and Teaching, 1159
Study of the Origin of the Osteoclast : Use of Tritiated Thymidine for the (Dr. E. A. Tonna and E. P. Cronkite), 459
Study of the Passage of the Ovum in the Reproductive Tract : A Needle Probe Geiger-Müller Counter for the (Movement of the Ovum in the Reproductive Tract), (J. P. Bennett), 788
Study in the Philosophy of Science : The Foundations of Mathematics—a (Prof. Evert W. Beth), *review* by F. I. G. Rawlins, 570
Study (Advanced), in the Behavioral Sciences, Center for : Conference on Behavior Genetics, 1156
Study (Electron Microscope), of the 'Chloride-Secretory Cell' of *Salmo salar* L., with reference to Plasma-Electrolyte Regulation (Dr. Lawrence T. Threadgold and Dr. Arthur Hillier Houston), 612
Study (Philosophical), of the Theory of Evolution : The Ascent of Life—a (Prof. T. A. Goudge), *review* by P. G. Fothergill, 1042
Stuhlinger, Dr. E. : Elected a member of the Engineering Sciences Section of the International Academy of Astronautics, 495
Sturt, Dr. B. : Some Aspects of Sedimentation in Orogenic Belts (Variations within the Dalradian of Perthshire), 140
Sub-Micron Dust in Still Air: Precipitation of, by Cloud-size Water Droplets (Dr. M. M. Bhadani and N. G. T. Ludlow), 974
Sub-Units (Haemagglutinating), released from Newcastle Disease, Parainfluenza 1 and Mumps Viruses by Treatment with Ether (F. Sokol, D. Blaškovič and O. Krizanová-Laučíková), 834
Substance (Aldosterone-stimulating) : Evidence of Secretion of an, by the Kidney (Dr. William F. Ganong and Dr. Patrick J. Mulrow), 1115
Substances (Growth), separated from the Root of Water Hyacinth by Paper Chromatography (Prof. S. M. Sircar and Arati Ray), 1213
Substitution (Aromatic) : Free Radicals in, *review* by Dr. J. Idris Jones, 294
  Homolytic (Dr. G. H. Williams), *review* by Dr. J. Idris Jones, 294
Substrate Specificity of the *Myrothecium* Ascorbic Acid Oxidase (Gordon A. White and Prof. Frederick G. Smith), 187
Substrate and Hormonal Inducers of Rat Liver Tryptophan Pyrrolase : A Difference between the Modes of Action of (Dr. Olga Greengard and Prof. Philip Feigelson), 446
Substrates : Role of Glutatione and of a Self-stabilizing Chain of SH-Enzymes and, in the Metabolic Regulation of Erythrocytes (D. Scheuch, C. Kahrig, E. Ockel, C. Wagenknecht and Prof. S. M. Rapoport), 631
Succinic Acid Dehydrogenase : Reduction of Coenzyme *Q* by (Prof. Józef Heller, Dr. Ludmila Szarkoswka and Czeslawa Petryszyn), 539
Sucker Display of *Octopus* (Andrew Packard), 736
Sugar Cane : Striate Mosaic—a New Disease of (C. G. Hughes), 366
Sugar-Level in Plasma in Young Fowls : Adrenocorticotrophin and the (Dr. D. J. Bell), 913
Sugars in the Manna of Northern Iraq : Identification of (Prof. Zakaria I. Sabry and Nicola A. Atallah), 915
Sugars (Reducing), and Insoluble Nitrogen : Effect of Ringing Cotton Stems on Content of, and on Degree of Infection with *Xanthomonas malvacearum* (E.F.S.) Dowson (K. A. Sabet and H. M. Hassan), 934
Sugiyama, T. and others : Measurement of Positive-Ion Density in the Ionosphere by Sounding Rocket, 156
Sulphacetamide and Acetophenetidin (Promazine, Quinine,) : A New Technique of Chromatography and Ionophoresis on Ion-exchange Paper—Application to Separation of Compounds of Toxicological Interest—Separation of a Mixture of (Harold V. Street and Dr. S. K. Niyogi), 1199
Sulphate (Ferrous) Solutions : Flash Photolysis of (Dr. J. H. Baxendale and A. L. Mansell), 622
Sulphate (Lead) : Oxidation of Galena to (R. V. Culver, N. B. Gray and Prof. E. C. R. Spooner), 78
^{35}S-Sulphate Esters (N-Acetylhexosamine) : *In vivo* Metabolism of (Dr. A. G. Lloyd), 914
Sulphite : Oxidation of Reduced Pyridine Nucleotides and of, by Pea Root Mitochondria (R. G. Stickland), 648
Sulphoxide (Dimethyl) : Effect of, on the Cryo-tolerance of Mitochondria (Prof. D. Greiff and M. Myers), 1202
  Preservation of Mouse Bone Marrow at –79°C. with (M. J. Ashwood-Smith), 1204
Sulphur (Natural Crystalline) : Spiral Formation on (Sayeda H. Emara), 254
Sulphur (Nitrogen and), at the Active Centre of Carboxypeptidase *A* (Dr. Bert L. Vallee, Dr. Robert J. P. Williams and Dr. Joseph E. Coleman), 633

Sulphur Sources (Carbon and), in *Aspergillus* and *Neurospora* : Biotin Requirement and (P. Strigini and G. Morpurgo), 557
Summer School in Health Physics (Radiation Protection), (Imperial College of Science and Technology, London), 680
Summer School on Mathematics of Automatic Control (Hatfield College of Technology), 865, 1063
Summer School in Quantum Chemistry (St. Antony's College, Oxford), 769
Summer School in Science (Fundamental Problems in Statistical Mechanics), (Netherlands University Foundation for International Co-operation), 769
Summer and Autumn Courses (Field Studies Council), 864
Summerfield, Dr. Martin : Elected a member of the Engineering Sciences Section of the International Academy of Astronautics, 495
Summerfield, Dr. Martin (edited by) : Solid Propellant Rocket Research—a Selection of Technical Papers based mainly on a Symposium of the American Rocket Society, held at Princeton University, 1960, *review* by Prof. D. B. Spalding, 66
Summerfield, Dr. Martin, and others : Liquid Propellant Rockets, *review* by Prof. D. B. Spalding, 66
Sun Navigation in Birds? (Dr. Klaus Schmidt-Koenig), 1025 ; (C. J. Pennycuick), 1026
'Sunlight' Flavour of Beer (Y. Obata, M. Koshika and H. Tanaka), 635
Superconducting Compound (New), of Niobium and Tin, Nb$_3$Sn (Bell Telephone Laboratories), 134
Superconducting Film : An Upper Limit for the Resistivity of a (R. F. Broom), 992
Superconductors : Use of, for producing Strong Magnetic Fields, 134
Supercontraction of Wool Fibres reduced with Thioglycollic Acid : Influence of Atmospheric Oxidation on (O. A. Swanepoel), 626
Superior Fat-synthesizing Single-Spore Strain of *Lipomyces* (D. R. Cullimore and Dr. M. Woodbine), 1022
Supervelocity (Apparant Intermediate), of Detonation (Dr. C. H. Johansson), 709
Suppes, Prof. Patrick, and others (edited by) : The Axiomatic Method, with special reference to Geometry and Physics—Proceedings of an International Symposium held at the University of California, Berkeley, 1958, *review* by F. I. G. Rawlins, 570
Supplement to the Kober Reaction for Urinary Œstrogens (Dr. L. Bradshaw), 809
Supposed Clay Fulgurite from Ontario : Analysis of a (Maxwell K. Carron and Paul D. Lowman, jun.), 40
Support for Fundamental Research, 473
Surface (Crystal) : Calcium Exchange of Bone Salts considered as a Measure of the (L. Richelle and Prof. M. J. Dallemagne), 165
Surface (Human Erythrocyte) : Action of Proteolytic Enzymes on the (Dr. G. Uhlenbruck), 181
Surface (Mammalian Skin), and in Saline Extracts of Hair : Demonstration of Nucleases on (Dr. Joseph Tabachnick and Dr. Richard Freed), 921
Surface Area Measurements : Use of Krypton for (Peter Cannon and George L. Gaines, jun.), 340
Surface Coatings : Physics in (1961 Biennial Conference of the Oil and Colour Chemists' Association), 591
Surface Enamel Magnesium and its Possible Relation to Incidence of Caries (Dr. D. B. Ritchie), 456
Surface Lipids of Plants : Taxonomic Significance of (S. Jean Purdy and Dr. E. V. Truter), 554
Surface Microtopography (Prof. S. Tolansky), *review* by J. W. Gates, 117
Surface Temperature (Sea), in Coastal Waters of the British Isles : Seasonal Variation of the (F. E. Lumb), 1164
Surfaces (Electrically Stressed Metallic), in Vacuum : Phenomena occurring at (R. Hawley and Dr. C. A. Walley), 252
Surfaces (Erosion), in the Caribbean and their Significance (Prof. John D. Weaver), 1186
Surfaces (Erosion), in Western Tasmania (B. Scott), 677
Surfaces (Reflecting) : Microscopic Studies of, *review* by J. W. Gates, 117
Surgeons of England, Royal College of : Title of Sir William Collins professor of anatomy (at the Institute of Basic Medical Sciences) conferred on G. W. Causey, 396
  Title of Sir William Collins professor of pathology (at the Institute of Basic Medical Sciences) conferred on Dr. G. J. Cunningham, 396
  Grant of £260,000 from the Wolfson Foundation, for the provision, furnishing and equipment of the Hunterian Museum, 962
Surges (Chromospheric Disk) : Trajectories of (J. M. Malville and Dr. G. E. Moreton), 995
Survey of Chemical Engineering Education and Practice (Prof. R. Edgeworth Johnstone), 113
Survey of Oriental Grasses, *review* by John Lewis, 659
Surveys (Oceanographic) : Use of Artificial Satellites for Navigation and (Paul D. Thomas), 134
Survival on Flies : Mite Orientation and (Bernard Greenberg), 107
Survival of Skin Homografts : Influence of Uraemia on the (F. G. Smiddy, R. G. Burwell and F. M. Parsons), 732
Susceptibilities (Theoretical and Experimental Diamagnetic), for Aromatic Hydrocarbons : The Relation between (Dr. D. W. Davies), 1102
Susceptibility to Bacterial Endotoxin : Effect of Artificial Fever in increasing (Dr. David G. Connor and Dr. Edward H. Kass), 453
Susceptibility (Cellular), to Foot-and-Mouth Disease : Phagocytic Activity in Squamous Epithelia and its Role in (Dr. H. Platt), 1075
Susceptibility (Endotoxin) : Mechanism of Increase of, in Animals showing Delayed Hypersensitivity (Dr. J. Johanovsky, M. Vrána, O. Vejbora and D. Francová), 182
Susceptibility (Increasing), to Bacterial Endotoxin : Effect of Artificial Fever in (Dr. David G. Connor and Dr. Edward H. Kass), 453
Susceptibility (Magnetic), of Normal Liver and Transplantable Hepatoma Tissue (Frank E. Senftle and Arthur Thorpe), 410
Susceptibility (Phage-) : Interspecific Induction of Transformation of Bacteria with respect to (Shigeo Fukuda and Kiyoshi Tsuzuki), 937
'Suspended Loop' of Tube in the Rabbit : Transfer of Ova to the Bursa Ovarii and the (Prof. E. S. E. Hafez and M. E. Ensminger), 557
Sutherland, H. H. (MacEwan, Dr. Douglas M. C., and) : Two-Dimensional Fourier Transform Technique for Analysing Random Structures, 431
Sutin, Norman : Rate of Oxidation of Ferrohaemoglobin by Ferricyanide Ions, 438
Sutton, Evelyn : Some Aspects of Disease Transmission by Ticks, 684
Sutton, Prof. J. : Sedimentation in Orogenic Belts, 139
Sutton, Dr. L. E : Awarded a Fellowship by the Leverhulme Trust, 678
Swaminathan, M. S., and others : Effect of Induced Awn Mutations on Yield in Wheat, 468
Swan, Dr. D. W. : Photoemission into Liquid *n*-Hexane, 903
Swanepoel, O. A. : Influence of Atmospheric Oxidation on Supercontraction of Wool Fibres reduced with Thioglycollic Acid, 626
Swann, Dr. P. G. : Training in Occupational Hygiene (Ranges of Activity of Personnel whose Health had to be Safeguarded), 1158
Swartz, J. H., and Raspet, R. : Thermal Shock and its Effect on Thermistor Drift, 875
Swartz, Dr. M. N., and others : Effect of *Staphylocci* on Leucoyte Pyridine Nucleotides, 516
Swedish Technical Assistance (Central Committee for), and others (sponsored by the) : Establishment at the University of Uppsala of an International School for Research and Education in Physics, 311
Swelling of Isolated Liver Mitochondria : Effects of Oligomycin on Respiration and (Dr. J. B. Chappell and Dr. G. D. Greville), 502
Swelling Characteristics : Transmission of, by Mitochondria of Regenerating Liver (Hans H. Gosch and Prof. Joseph C. Arcos), 272
Swimming in Water-Beetles : Dynamics and Energetics of (Dr. Werner Nachtigall), 224
Swindon Facies in Dorset : Lower Purbeck Beds of (Ian M. West), 526
Swineford, Ada (edited by) : Clays and Clay Minerals—Proceedings of the Seventh National Conference on Clays and Clay Minerals (Washington, 1958), *review* by Dr. D. M. C. MacEwan, 850
Swiss Mice (New-born) : Leukaemogenesis by Urethan in (Dr. L. Fiore-Donati, Dr. L. Chieco-Bianchi, Dr. G. de Benedictis and Dr. G Maiorano), 278
Symbiosis (Complex), *in vitro* : Multiplication of Hansen's Bacillus in (Dr. R. Devignat), 832
Symptoms (Iron and Manganese Deficiency), in Citrus Plants : Biochemical Indications as a means of Distinguishing between (A. Bar-Akiva), 647
Synaptic Sites (Pre- and Post-) : A Proposed Dual Neurohumoral Role of Acetylcholine—its Functions at the (George B. Koelle), 208
Synaptinemal Complexes (Cores) in Primary Spermatocytes of Mouse under Elevated Temperature (Dr. B. R. Nebel and E. M. Hackett), 467
Synchrocyclotron : A Proposal for Increasing the Beam Output from a (F. M. Russell), 335
Syndicat Général de la Construction Électrique, and others : International Exhibition on Measurement Control, Regulation and Automation, 397
Synge, Prof. John L. : Elected president of the Royal Irish Academy, 492
Synovial Fluid : The Stainable Mucin of Joint Tissues and (Dr. B. F. Martin and N. E. Shaw), 835
Syntheses (Attempted Low-Temperature), of Kaolin Minerals (Prof. G. W. Brindley and C. De Kimpe), 254
Syntheses (Hydantoin) : Alkylcyclohexanones in the Strecker and Bucherer (L. Munday), 1103
Synthesis of Infective Virus and Deoxyribonucleic Acid in Pseudorabies Virus-infected Rabbit Kidney Cells : Effect of Mitomycin C on the (Dr. Tamar Ben-Porat, Dr. Magdalena Reissig and Dr. Albert S Kaplan), 33
Synthesis (Amino-Acid), from Hydrogen Cyanide under Possible Primitive Earth Conditions (Prof. J. Oró and S. S. Kamat), 442
Synthesis (Catalysed), of Ammonia on Tungsten : Field-Emission Microscopic Investigation of (K. Azuma), 530
Synthesis (Ferritin) : Activation of, and Induction of Changes in Fine Structure in HeLa Cells *in vitro*—Implications for Protein Synthesis (Prof. G. W. Richter), 413
Synthesis (Photochemical), of Amino-Acids and a New Transamination Process by Transfer of Free Amino-Radicals (Giovanni Ferrari and Prof. Rolando Cultrera), 326
Synthesis (Protein) : Activation of Ferritin Synthesis and Induction of Changes in Fine Structure in HeLa Cells *in vitro*—Implications for (Prof. G. W. Richter), 413
  An Unstable Intermediate carrying Information from Genes to Ribosomes for (Dr. S. Brenner, Dr. F. Jacob and Dr. M. Meselson), 576
Synthesis and Action of Interferon : Inhibition by Cortisone of the (Dr. Edwin D. Kilbourne, K. Marilyn Smart and Barbara Ann Pokorny), 650
Synthetase (Glutamine) Activity : Is *Mycobacterium phlei* Glutamotransferase endowed with (Y. S. Halpern and Prof. Nathan Grossowicz), 812
Synthetic Diamond : A Notable Growth Spiral on (Prof. S. Tolansky), 992
Synthetic Diamonds (G.E.C.) : Coesite as an Inclusion in (Dr. H. Judith Milledge), 1181
Synthetic Heparinoids : Gastro-Intestinal Absorption of Heparin and (E Windsor and G. E. Cronheim), 263
Synthetic Magnetoplumbite Crystals : Growth Spirals on (R. A. Lefever and A. B. Chase), 255
System Ammonium Nitrate–Potassium Nitrate : Solid Solutions in the (R. V. Coates and J. M. Crewe), 1190
System (Aluminium Fluoride–Silica), AlF$_3$–SiO$_2$: Mullite Formation in the (Béla Löcsei), 907
System (Chicken Nervous) : Cholinesterase in the (J. B. Cavanagh and P. Holland), 735
System (Elastic) : Oscillatory Flow in a Fluid-filled (Wing-Comdr. J. E Malcolm), 88
System (Gyroscopic) : Damped Free Oscillations of a (R. Parks and L Maunder), 710
System (Lanthanum Oxide (LaO)($B\rightarrow X$)) : Intensity Aspects as Determinant of r'_e-r''_e in the Bands of the (N. Sreedhara Murthy), 430
System (Reticulo-Endothelial) : Effect of Dexamethasone on the Phagocytic Activity of the (Prof. T. Nicol and C. G. Druce), 91
  Effect of Haemophagin on the Phagocytic Activity of the (Prof. T. Nicol, P. McKelvie and C. G. Druce), 92
  Phagocytic Activity of the—Effect of *B.C.G.* (Prof. T. Nicol, P. McKelvie and C. G. Druce), 418 ; Effect of Tri-*p*-anisylchloroethylene, Dienoestrol and Stilboestrol Diphosphate (Prof. T. Nicol, Dr. D. L. J. Bilbey and C. G. Druce), 419
System (Reticulo-Endothelial), in Mice : Influence of a Liver Fraction on the Phagocytic Activity of the (Prof. B. N. Halpern, C. Stiffel and J. Dedichen), 279
System (Solar) : The Scale of the (Staff of Millstone Radar Observatory, Lincoln Laboratory, Massachusetts Institute of Technology), 592
Systems : Chromium(III)–Oxyanion (G. M. Lukaszewski and J. P. Redfern), 805

Systems with Inorganic + Organic or Inorganic Compounds (excepting Metallic Derivatives), (Prof. Jean Timmermans), (The Physico-chemical Constants of Binary Systems in Concentrated Solutions, Vol. 4), *review* by Dr. E. F. G. Herington, 661
Systems (Aqueous) : Recent Advances in the Radiation Chemistry of (Prof. Gabriel Stein), 16
Systems (Binary) : Constants for, *review* by Dr. E. F. G. Herington, 661
Systems (Binary), in Concentrated Solutions : The Physico-chemical Constants of (Prof. Jean Timmermans), Vol. 4, Systems with Inorganic + Organic or Inorganic Compounds (excepting Metallic Derivatives), *review* by Dr. E. F. G. Herington, 661
Systems (Biological) : Transport and Accumulation in (Dr. E. J. Harris), second edition, *review* by Dr. I. M. Glynn, 848
Systems (Cognitive) : A Basic Notion in the Theory of (Dr. M. C. Goodall), 840
Systems (Complex) : Enumeration of Components in, by Fluorescence Spectrophotometry (Dr. G. Weber), 27
Systems (Dehydrogenase), in the Erythrocytes of some Lower Vertebrates : Histochemical Analysis of some (Prof. A. Stolk), 926
Systems (Liquid and Fluidized Solid) : Similarity in Behaviour between Gas Bubbles in (P. D. Bloore and Dr. J. S. M. Botterill), 250
Systems (Membrane), in Micro-organisms : Method for Revealing the (R. J. North), 1215
Systems (Non-Linear Control) : Analytical Techniques for (Prof. John C. West), *review* by Dr. E. M. Deeley, 947
Systems (Radial Dyke) : Impulse Loading of Rock Targets to produce Fracture Patterns similar to Naturally Occurring (Carl F. Austin), 227
Systems (Rock) : Proceedings of the Conference on the Geochronology of (edited by Prof. J. L. Kulp), 1062
Systems (Two Photochemical), in Photosynthesis (Dr. L. N. M. Duysens, J. Amesz and B. M. Kamp), 510
Syverton, Prof. Jerome T. : *Obituary* by Prof. William F. Scherer, 306
Szafran, Dr. Jacek (Brebner, John, and) : The 'Psychological Refractory Phase' and Ageing, 195
Szafrański, P., and Bagdasarian, M. : Possible Role of Nucleopeptides in Protein Biosynthesis, 719
Szarkowska, Dr. Ludmila, and others : Reduction of Coenzyme Q by Succinic Acid Dehydrogenase, 539
Szarvas, F., and others : Effect of Essential Oils on Atherosclerosis of Cholesterol-fed Rabbits, 731
Szenberg, Esther, and others : *Leptospira*-agglutinating Factors in Turtle Sera, 95
Szeplaky, K., and others : Transmission of Phosphorus-32 incorporated by Parents into Descendants of *Drosophila melanogaster*, 469
Szilard, Prof. Leo : Elected a Member of the United States National Academy of Sciences, 674

TAAGEPERA, R., and others : Breakdown Strength of Caesium Iodide, 994
Tabachnick, Dr. Joseph, and Freed, Dr. Richard : Demonstration of Nucleases on Mammalian Skin Surface and in Saline Extracts of Hair, 921
Tables : High-Energy Electron Scattering (Robert Herman and Prof. Robert Hofstadter), *review* by D. F. Jackson, 204
Tables of Thermodynamic and Transport Properties of Air, Argon, Carbon Dioxide, Carbon Monoxide, Hydrogen, Nitrogen, Oxygen and Steam (Joseph Hilsenrath, Charles W. Beckett, William S. Benedict, Lilla Fano, Harold J. Hoge, Joseph F. Masi, Ralph L. Nuttall, Yeram S. Touloukian and Harold W. Woolley), *review* by Prof. A. R. Ubbelohde, 58
Taeschler, Dr. Max, and Cerletti, Dr. Aurelio : Inhibition of Emotional Reactions by Phenothiazine Tranquillizers, 1014
Tagawa, Dr. K., and others : Photoproduction of Hydrogen, Photofixation of Nitrogen and a Unified Concept of Photosynthesis, 601
Takahashi, Dr. Yasushi : Elected a Member of the Royal Irish Academy, 492
Takase, Sadao (Hosoda, Syun, and) : Non-specific Esterase Activity in Histiocytes, 927
Takayama, K., and others : Measurement of Positive-Ion Density in the Ionosphere by Sounding Rocket, 156
Takeda, Koh-kiti (Hakomori, Prof. Sen-itiroh, and) : Fractionation of Compound Lipids by Dialysation in an Organic Solvent against an Organic Solvent, 265
Taketomo, Yasuhiko : Modification of Spectrophotofluorometer for Scanning Paper Strips, 1094
Talluto, K. F., and others : α-Conarachin, 1125
Tanaka, H., and others : 'Sunlight' Flavour of Beer, 635
Tanaka, S., and others : Radioactivation Analysis of Oxygen in Silicon by Irradiation with α-Particles in a Cyclotron, 39
Tandon, Dr. J. N. : Origin of Cosmic Rays, 246
Tanner, D. W. (Gardner, R. F. G., and) : Giant Grain Growth in Alpha Ferric Oxide, 1166
Tape (Transparent Adhesive) : Use of, in the Preparation of Microsections (D. S. Gowers and R. E. Miller), 424
Targets (Rock) : Impulse Loading of, to produce Fracture Patterns similar to Naturally Occurring Radial Dyke Systems (Carl F. Austin), 227
Tarján, Dr. I. (Turchányi, Dr. Gy., and) : Sodium Chloride Whiskers, 79
Tarkowski, Dr. Andrzej K. : Mouse Chimaeras developed from Fused Eggs, 857
Tarski, Prof. Alfred, and others (edited by) : The Axiomatic Method, with special reference to Geometry and Physics—Proceedings of an International Symposium held at the University of California, Berkeley, 1958, *review* by F. I. G. Rawlins, 570
Tasmania (Western) : Comments on the Cainozoid History of (B. Scott), 677
    Erosion Surfaces in (B. Scott), 677
Tatchell, Dr. J. A. H. : Pulmonary Tumours, Group VII and Sex in the House-Mouse, 837
Tavaria, Dr. D. (Vella, Dr. F., and) : Haemoglobin Variants in Sarawak and North Borneo, 729
Taxation of Scientific Bodies, 657, 1154
Taxonomic Botany at Birmingham, 1059
Taxonomic Significance of Surface Lipids of Plants (S. Jean Purdy and Dr. E. V. Truter), 554
Taxonomy (Experimental), of Flowering Plants (Linnean Society of London Symposium on), 968
Taylor, Dr. C. A. : Beiträge zür Physik und Chemie des 20 Jahrhunderts, *review*, 118
Taylor, Edward C., and others (edited by) : Advances in Organic Chemistry, Vols. 1 and 2, *review* by Dr. J. Idris Jones, 56
Taylor, Dr. Geoffrey, and Sclare, G. : Absence of Thyroid Auto-Antibody in Experimental Radiation Thyroiditis, 183
Taylor, Sir Geoffrey Ingram : The Scientific Papers of (edited by Dr. G. K. Batchelor), Vol. 2, Meteorology, Oceanography and Turbulent Flow, *review* by Prof. P. A. Sheppard, 62
Taylor, G. N., and others : A New Determination of the Solar Parallax by means of Radar Echoes from Venus, 519
Taylor, Hugh (edited by) : Science in Progress, Eleventh Series (Armand J. Eardley, Richard J. Russell, J. Tuzo Wilson, Serge A. Korff, C. M. Jansky, Jr., Gerald S. Hawkins, Alfred C. Redfield, B. F. Skinner, Roger J. Williams, E. Cuyler Hammond, J. W. Beard, John Turkevich and A. C. Zettlemoyer), *review* by Prof. Ritchie Calder, 45
Taylor, Dr. Hugh : Awarded a Queen Elizabeth II Fellowship by the Queen Elizabeth II Canadian Fund to Aid in Research on the Diseases of Children, 863
Taylor, Dr. H. E., and others : Hyaluronic Acid in the Uterine Wall of the Guinea Pig during the Sexual Cycle, 1118
Taylor, Dr. J. H. (Smith, Dr. H., and) : Effect of Feeding Two Levels of Dietary Calcium on the Growth of Broiler Chickens, 1200
Taylor, P. L. : Servomechanisms, *review* by Prof. A. Tustin, 1046
Taylor, Dr. Robert E. (Adelman, Dr. William J., and) : Leakage Current Rectification in the Squid Giant Axon, 883
Taylor Dry Valley : Seal Tracks in the (G. G. Claridge), 559
Taylor (George, of Australia) Gold Medal of the Royal Aeronautical Society awarded to A. J. Troughton, 863
Teachers, National Union of : University Entrance—the Basic Facts, second edition, 16
    Guide to Careers, 1961 edition, 396
Teaching (Medical Research and) : Applications of Television in (Medical Committee of the Scientific Film Association in collaboration with the Association for the Study of Medical Education Symposium on), 1159
Technical Applications of Freshwater Biology, *review* by Dr. H. B. N. Hynes, 1043
Technical Assistance to Overseas Countries, 1039
Technical Assistance from the United Kingdom for Overseas Development (White Paper on), 1039
Technical Books (1953-57) : British Scientific and (edited by L. J. Anthony), *review* by R. Brightman, 119
Technical Books (1950-60) : French Scientific and, 591
Technical Books : Recent Scientific and, Supp. vi, April 29 ; Supp. viii, May 27 ; Supp. ix, June 24
Technical Change : The Attitudes of Steelworkers to (Dr. Olive Banks), *review* by F. J. Willett, 382
Technical Chemist : Export Problems and the, 132
Technical Collaboration : United Kingdom—Euratom, 1154
Technical Colleges : Applied Biology in, 495
    Research Reactors for Universities and, 960
Technical Co-operation : A New Department for, 13
Technical Co-operation Bill : Department of (Second reading in the House of Commons), 1039
Technical Development (Scientific and), in Pakistan, 1139
Technical Dictionaries (Scientific and) : Bibliography of Interlingual (Unesco), fourth edition, 1061
Technical Education in Wales (Ministry of Education, Central Advisory Council for Education—Wales), 774
Technical Information (Scientific and), available to Local Industry : Sources of (Manchester Joint Research Council), 767
Technical Man-power (Scientific and), in Britain, 843
Technical Operations at the International Atomic Energy Agency, 131
Technical Training Week : Commonwealth, 765
Technical Writing : The Craft of (Dr. Daniel Marder), *review* by A. L. Bacharach, 847
Technique of Optical Observations (Royal Astronomical Society Geophysical Discussion on), 1065
Technique (Extra-slow) : Some Features of the Precipitation of Barium Chromate by an (Tadeusz Adamski), 524
Technique (A New), of Chromatography and Ionophoresis on Ion-Exchange Paper—Application to the Separation of Barbiturate, Salicylate and Acetophenetidin (Harold V. Street and Dr. S. K. Niyogi), 537
    Application to Separation of Barbiturate, Salicylate, Acetophenetidin and p-Acetylaminophenol (Harold V. Street and Dr. S. K. Niyogi), 718
    Application to Separation of Compounds of Toxicological Interest—Separation of a Mixture of Promazine, Quinine, Sulphacetamide and Acetophenetidin (Harold V. Street and Dr. S. K. Niyogi), 1199
Technique (Two-Dimensional Fourier Transform), for Analysing Random Structures (Dr. Douglas M. C. MacEwen and H. H. Sutherland), 431
Techniques : Optical Instruments and (British National Committee for Physics Conference on), 963
    Television and Film (British Kinematograph Society and the Television Society Convention on), 868
Techniques in Geophysics : Methods and (edited by Prof. S. K. Runcorn), Vol. 1, *review* by M. J. Keen, 55
Techniques (Analytical), for Non-Linear Control Systems (Prof. John C. West), *review* by Dr. E. M. Deeley, 947
Techniques (Autoradiographic), in Medical Science (Comitato Nazionale per l'Energia Nucleare Symposium on), 219
Techniques (Electrical), in Medicine and Biology : Fourteenth Annual Conference on (Joint meeting of the fourth International Conference on Medical Electronics with the), 397
Techniques (Fluorescent Antibody) : Detection of C-Reactive Protein by (Dr. Robert Goldwasser and Dr. Rachmiel Rozansky), 1020
Techniques (Isotopic Dilution), of Argon Measurement : Potassium–Argon Ages of the Dartmoor and Shap Granites using the Total Volume and (M. H. Dodson, J. A. Miller and D. York), 800
Techniques (Physical), in Metallurgy, *review* by Dr. A. R. Bailey, 661
Techniques (Radio), and Space Research (British Institute of Radio Engineers 1961 Convention), 591
Techniques (Sciences et) : Catalogue Collectif des Livres Français de (1950-60), 591

Techniques (Time-Resolution) : Spectroscopic Studies using (Applied Spectroscopy Group and the Manchester and District Branch of the Institute of Physics and the Physical Society Joint Meeting on), 312
Technological Development in Poland, 14
Technological Education : A Timely Revolution in, 113
Technological Facilities (Scientific and), which Manchester University and the Manchester College of Science and Technology can offer to Industry : An Account of some of the (Manchester Joint Research Council), 767
Technological Properties (Mechanical and), of Metals : Determination of the (B. M. Gliner), translated from the Russian, second edition, *review* by James G. Tweeddale, 573
Technological University : The (Dr. S. C. Curran), 128
Technology : Modern Mineral, *review* by Dr. E. J. Pryor, 70
Technology, Bradford Institute of: Course on Methods of Polymer Characterization and Analysis, 312
Technology, Brunel College of (Acton) : Course for the Diploma in Technology in Applied Biology, 495
Technology, Hatfield College of : Series of lectures on Technology, Science and Art—Common Ground, 397
    Summer School on Mathematics of Automatic Control, 865, 1063
Technology, Massachusetts Institute of : Centenary of the (Dr. James R. Killian, jun.), 948
Technology, Massachusetts Institute of (Staff of Millstone Radar Observatory) : The Scale of the Solar System, 592
Technology in Applied Biology : Diploma in (Bristol College of Science and Technology and the Brunel College of Technology Courses for the), 495
Technology (Advanced), College of (Birmingham) : Establishment by Joseph Lucas, Ltd., of the Joseph Lucas research fellowship in production engineering, 962
Technology (Food Science and) : The Place of, in the Campaign against Malnutrition (Nutrition Society Symposium on), 398
Technology (Fuel) : Metallurgy and, at Cardiff, 12
Technology (Mineral), at the Imperial College of Science and Technology, London, 1153
Technology (Nuclear), (Chemical), (Imperial College of Science and Technology, London, Postgraduate Course in), 16
Technology (Science and), Bristol College of : Course for the Diploma in Technology in Applied Biology, 495
Technology (Science and), Chelsea College of : Appointment of Dr. J. A. W. Dalziel as reader in inorganic and analytical chemistry, 680
    Appointment of Dr. J. D. Donaldson as lecturer in chemistry, 680
Technology (Science and), National Lending Library for : Appointment of Dr. D. J. Urquhart as first director, 215
Technology (Science and), Royal College of, Glasgow : Informal Meeting (under the auspices of the Faraday Society) to mark the centenary of the publication by Thomas Graham of his paper on Liquid Diffusion, 312
    Retirement of Prof. J. P. Todd from the chair of pharmacy, 764
    Appointment of Dr. John B. Stenlake to the chair of pharmacy, 764
    Appointment of Dr. Ernest O. Morris to the new chair of applied microbiology and biology, 764
Technology (Vacuum) Transactions—Proceedings of the Sixth National Symposium, also Cumulative Author and Subject Indexes of 1954-59 Symposia (American Vacuum Society, Inc.), (edited by C. Robert Meissner), *review*, 296
Technology, Engineering and Safety (edited by R. Hurst, R. N. Lyon and C. M. Nicholls), Vol. 2, (Progress in Nuclear Energy, Series 4), *review* by D. English, 204
Technology, Science and Art—Common Ground (Hatfield College of Technology series of lectures on), 397
Tectonics (Karroo Igneous Activity and), in South-east Southern Rhodesia (K. G. Cox, J. R. Vail, L. J. Monkman and R. L. Johnson), 40 ; (D. N. Wood), 802
Teesdale Inlier : Skiddaw Slates proved in the (Dr. G. A. L. Johnson), 996
Teeth : Fluorescence of Tetracyclines in Bone Tumours, Normal Bone and (L. N. Owen), 500
Teitel, Prof. A. : Cholinergic Activity of Hyoscyamine, 814
Telemetry (Radio) : Determination of Physiological Rhythms of Unrestrained Animals by (Warren O. Essler and Prof. G. Edgar Folk, jun.), 90
Telencephalon (Chick Cerebral Hemisphere), in Tissue Culture : Spontaneous Potentials from Explants of (Prof. A. W. B. Cunningham), 816
Telescope (Radio), to be built at Crowthorne for the Radio Research Station of the Department of Scientific and Industrial Research, 490
Telescope (Radio) Interferometer at the Royal Radar Establishment (Dr. J. S. Hey), 1150
Telescope (The 2-Metre Universal Reflecting), of the German Academy of Science, Berlin (Dr. Rudolf Jobst), 301
Television : Applications of, in Medical Research and Teaching (Medical Committee of the Scientific Film Association in collaboration with the Association for the Study of Medical Education Symposium on), 1159
Television (Closed Circuit), in the Medical School (C. E. Engel), 1159
Television Society : Appointment of Charles A. Marshall as honorary secretary, 769
    Election of Geoffrey Parr to honorary life fellowship, 769
Television Society (British Kinematograph Society and the) : Convention on Television and Film Techniques, 868
Television and Film Techniques (British Kinematograph Society and the Television Society Convention on), 868
Temperature : Effect of, on Adhesion to Glass and Histogenic Cohesion of Dissociated Cells (Prof. A. Moscona), 408
    Effect of, on *Apis indica* Workers (J. B. Free and Yvette Spencer-Booth), 933
    Effect of, on the Concentration of Free Radicals in Melanins from *Allium cepa* (M. L. Edwards, Dr. G. A. Kerkut, Dr. K. A. Munday and K. Leach), 1005
    Effect of, on the Retinal Slow Potential of the Horseshoe Crab (Dr. R. Kikuchi, K. Naito and S. Minagawa), 1011
    Independence of, of the Rate of Ageing in *Drosophila subobscura* (Jean M. Clarke and J. Maynard Smith), 1027
    Seasonal Acclimatization of Oxygen Consumption to, in a Tropical Poikilotherm, the Earthworm, *Megascolex mauritti* (K. Saroja), 930
    Variation with, of the Photoelastic Constants of Sodium Chloride (Dr. K. V. Krishna Rao and V. G. Krishna Murty), 429
Temperature (Elevated) : Synaptinemal Complexes (Cores) in Primary Spermatocytes of Mouse under (Dr. B. R. Nebel and E. M. Hackett), 467
Temperature (Low-) Behaviour of Haematite : 'Memory' of Initial Remanent Magnetization and Number of Repeating of Heat Treatments in (Prof. T. Nagata, M. Yama-ai and S. Akimoto), 620
Temperature (Low-) Syntheses (Attempted), of Kaolin Minerals (Prof. G. W. Brindley and C. De Kimpe), 254
Temperature (Room) : Formation of Silicon Nitride Whiskers on a Ferro-Silicon Alloy at (E. Johnson, Prof. K. Grjotheim and C. Krohn), 523
Temperature (Sea Surface), in Coastal Waters of the British Isles : Seasonal Variation of the (F. E. Lumb), 1164
Temperature Fluctuations : Atmosphere (G. S. Callendar), 15
Temperature Measurements (Stagnation), in a Hypersonic Wind-Tunnel using the Sodium Line Reversal Method (J. L. Stollery), 778
Temperature Rhythms (Diurnal), in Man : Reversal of (G. W. G. Sharp), 146
Temperatures (High) : Physicochemical Measurements at (edited by Dr. J. O'M. Bockris, Dr. J. L. White and Dr. J. D. Mackenzie), *review* by Prof. A. R. Ubbelohde, 58
    Towards Physical Chemistry at, *review* by Prof. A. R. Ubbelohde, 58
Temperatures (Low) : Inelastic Scattering of Conduction Electrons in Dilute Silver–Manganese Alloys at (M. S. R. Chari), 994
Temperatures' ('Preferred), of Land Arthropods (David S. Madge), 106
Temple, Prof. George : Appointed chairman of the Aeronautical Research Council, 680
Templeman, Dr. W. G. : Experimental Taxonomy of Flowering Plants, 968
Tencer, R. : Incorporation of Tritium-labelled Thymidine in *Bufo* ♀ x *Rana temporaria* ♂ Hybrid Embryos, 100
Tension (Oxygen) : Wood-boring Activity of *Limnoria* (Isopoda) in relation to (Dr. S. K. Eltringham), 512
Terasima, Dr. Toyozo, and Tolmach, Prof. L. J. : Changes in the X-Ray Sensitivity of HeLa Cells during the Division Cycle, 1210
Teratogenic Effects of Hypervitaminosis-A : Influence of Uterine Position on the Response of the Mouse Embryo to the (Dr. D. H. M. Woollam and Dr. J. W. Millen), 184
Terebellid Polychaete *Eupolymnia heterobranchia* (Johnson) : A Bilatriene Pigment in the Green (Dr. R. Phillips Dales), 168
Term 'Flux' : The Use of the (S. C. Ghose and J. C. Young), 621
Termination of Diapause in *Acheta* by Urea (T. W. Hogan), 367
Termination of Pupal Diapause in the Cinnabar Moth and the Reproductive Capacity of the Resulting Females (Dr. G. F. Bornemissza), 936
Terminology of Protein Structure (Prof. D. B. Wetlaufer), 1113
Termites and Coal Seams in Angola, 767
Terpene : Die (J. Pliva, M. Horák, V. Herout und F. Sorm), Teil I, Sesquiterpene, *review* by Dr. E. G. Kellett, 849
Terpene Chemistry (Chemical Society Symposium on), 18
Terpene Properties and Structures, *review* by Dr. E. G. Kellett, 849
Terpinyl Acetate (Citral, Linalyl Acetate, Linalol and), as Attractants of Larvae (Food Selection by Silkworm Larvae, *Bombyx mori*), (Yasuji Hamamura and Ken-ichi Naito), 879
Terrestrial Accretion from the Solar Wind (C. M. de Turville), 156
Terrestrial Crustaceans, *review* by Dr. E. M. Sheppard, 382
Terrestrial Oxygen : Solar Wind and (N. W. Pirie), 706
Terrestrial Spectroscopy (Prof. C. L. Pekeris, Z. Alterman and H. Jarosch), 498
Terrestrial (Extra-) Radio Transmission (Leland I. Anderson), 374
Test on Recording Ultra-violet Spectrophotometers (Photoelectric Spectrometry Group), 394
Test (Hexobarbitone Sleeping-Time), in Mice : A Potential Source of Error in the (Dr. P. W. Ramwell and I. H. Lester), 640
Test-Plants (New Herbaceous), for Study of the Infectious Degeneration of Grape Vines (E. Baldacci, A. Amici, P. Bonala, E. Betto, G. Fogliani and E. Refatti), 371
Testes (*Scylliorhinus stellaris*) : Identification of Œstradiol 17β, Testosterone and its Precursors from (Dr. G. Chieffi and Dr. C. Lupo), 169
Testing Germination : Moisture Conditions for (Prof. N. Collis-George and Jocelyn E. Sands), 367
Testis of the Immature Rat : Effect of 9α-Fluoro-11β-hydroxy-17-methyltestosterone ('Ultandren') on the (Dr. E. J. Clegg), 542
Testosterone and its Precursors (Œstradiol 17β,) : Identification of, from *Scylliorhinus stellaris* Testes (Dr. G. Chieffi and Dr. C. Lupo), 169
Tests (Crossing) : Determining Mating Type in *Neurospora* without (Prof H. Branch Howe, jun.), 1036
Tests (Notched Impact), of Mild Steel : Cleavage Fracture Initiation in (J. W. Davies and A. A. Wells), 432
Tests (Serological), for Toxoplasmosis (D. G. Fleck), 1018
Tests (Some Preliminary Experimental), of a Novel Method of Radiating at Very Low Frequencies (R. N. Gould), 332
Tests (Spot), in Organic Analysis (Prof. Fritz Feigl), sixth English edition (translated by Prof. Ralph E. Oesper), *review* by Dr. D. T. Lewis, 479
Tetrachloride (Carbon) : Quinine Oxidase in Liver and Blood Plasma of Rabbits poisoned with (Dr. Gilberto G. Villela), 807
    Radiolysis of, in the Presence of Oxygen (Zd. Spurny and I. Janovsky), 624
    Reversible Nature of Liver Cell Damage due to, as demonstrated by the Use of Phenergan (Dr. K. R. Rees and Dr. W. G. Spector), 821
Tetracyclines in Bone Tumours, Normal Bone and Teeth : Fluorescence of (L. N. Owen), 500
Tetrahedral Co-ordination : Spectrum of Vanadium in the Tri-positive Oxidation State (V^{3+}) in (Dr. D. M. Gruen and R. Gut), 713
Textile Institute : Textile Institute Scholarship, 218
    Peter Coats Scholarship, 218
    Rowland Spencer Scholarship, 218
Thackray, M. : Radiometric Precipitation in Filter Paper—a Rapid Method of Micro-analysis, 434
Thalassaemia (Favism and), in Sardinia and their Relationship to Malaria (M. Siniscalco, L. Bernini, B. Latte and A. G. Motulsky), 1179
Thatcher, K. F. J., and others : Control of Self-heating and Gas Emission in Nitrate-containing Fertilizers, 1189
Thaung, Maung Mya : Effects of Ionizing Radiations on Rice Plants, 242
Thawing : Denaturation of Catalase by Freezing and (Keiji Shikama and Isao Yamazaki), 83
Thaysen, Dr. J. Hess, and others : Sodium Transport and Oxygen Consumption in the Mammalian Kidney, 919
Theological Speculations : A Diversity of, *review* by the Very Rev. Dr. W. R. Matthews, 943

Theoretical Elasticity (Carl E. Pearson), *review* by Prof. J. F. Baker, 383
Theoretical Physics at Birkbeck College, 308
Theoretical and Applied Mechanics, International Union of : Proceedings of the Symposium on the Theory of Thin Elastic Shells, Delft, 1959 (edited by W. T. Koiter), *review* by Dr. J. W. Craggs, 379
Theoretical and Experimental Diamagnetic Susceptibilities for Aromatic Hydrocarbons : The Relation between (Dr. D. W. Davies), 1102
Theories of Carcinogenesis, *review* by Dr. M. H. Salaman, 1143
Theories on the Origin of Life : Significance of Carbonaceous Meteorites in (Prof. J. D. Bernal), 129
Theory : Small Perturbation (W. R. Sears), *review*, 118
  Abstract Set (Prof. Abraham Fraenkel), second edition, *review* by Dr. R. G. Cooke, 1047
Theory of Cognitive Systems : A Basic Notion in the (Dr. M. C. Goodall), 840
Theory of Cold-Cathode Arc Movement in a Magnetic Field (Dr. P. E. Secker and Dr. A. E. Guile), 428
Theory of Evolution : The Ascent of Life—a Philosophical Study of the (Prof. T. A. Goudge), *review* by P. G. Fothergill, 1042
Theory of Groups (A. G. Kurosh), translated from the Russian and edited by K. A. Hirsch, second English edition, *review* by Dr. Hanna Neumann, 571
Theory of Thermal Stresses (Prof. Bruno A. Boley and Prof. Jerome H. Weiner), *review* by B. S. Owen, 65
Theory of Thin Elastic Shells : Proceedings of the International Union of Theoretical and Applied Mechanics Symposium on the, Delft, 1959 (edited by W. T. Koiter), *review* by Dr. J. W. Craggs, 379
Theory of Thin Shells (V. V. Novozhilov), translated by P. G. Lowe ; edited by Prof. J. R. M. Radok, *review* by Dr. J. W. Craggs, 379
Theory (Aerodynamic) : Higher Approximations in (M. J. Lighthill), *review*, 118
Theory (Electronic), of Organic Compounds : An Introduction to (H. L. Heys), *review* by Dr. R. I. Reed, 296
Theory (Ergodic) : Lectures on (Prof. Paul R. Halmos), *review* by Dr. I. E. Farquhar, 947
  The Present State of (Dr. I. E. Farquhar), 17
Theory (A Physical), of Carcinogenesis by Aromatic Hydrocarbons (Dr. J. B. Birks), 232
Theory (Quantum), of Atomic Structure (Prof. John C. Slater), *review* by Prof. C. A. Coulson, 1142
Theory (Quantum), and Complementarity : Foundations of (Prof. L. Rosenfeld), 384
Theory (A Sealed-edge), of Graphite 'Compounds' (Prof. J. G. Hooley), 529
Theory (Wing) : High Speed (Robert T. Jones and Doris Cohen), *review*, 118
Theory and Physical Behaviour of Colliding Solids : Impact—the (Prof. Werner Goldsmith), *review* by Dr. R. P. N. Jones, 947
Thermal Diffusion of Oxygen and Nitrogen in Zirconium (Prof. G. D. Rieck and H. A. C. M. Bruning), 1181
Thermal Neutrons : Atlas of γ-Ray Spectra from Radiative Capture of (L. V. Groshev, V. N. Lutsenko, A. M. Demodov and V. I. Pelekhov), translated from the Russian by J. B. Sykes, *review* by Dr. E. R. Rae, 75
Thermal Shock and its Effect on Thermistor Drift (J. H. Swartz and R. Raspet), 875
Thermal Shock Behaviour of Brittle Materials (Dr. M. L. Levin), 521
Thermal Stresses, *review* by B. S. Owen, 65
  Theory of (Prof. Bruno A. Boley and Prof. Jerome H. Weiner), *review* by B. S. Owen, 65
Thermistor Drift : Thermal Shock and its Effect on (J. H. Swartz and R. Raspet), 875
Thermobia domestica, a Thysanuran Insect : Atypical Spermiogenesis of (R. S. Mathur), 743 ; (Dr. S. R. Bawa), 743
Thermochemistry for Steelmaking (Prof. John F. Elliott and Molly Gleiser), Vol. I, *review* by Prof. A. R. Ubbelohde, 58
Thermodynamic and Transport Properties of Air, Argon, Carbon Dioxide, Carbon Monoxide, Hydrogen, Nitrogen, Oxygen and Steam : Tables of (Joseph Hilsenrath, Charles W. Beckett, William S. Benedict, Lilla Fano, Harold J. Hoge, Joseph F. Masi, Ralph L. Nuttall, Yeram S. Touloukian and Harold W. Woolley), *review* by Prof. A. R. Ubbelohde, 58
Thermodynamics (Statistical) : An Introduction to (Terrell L. Hill), *review* by Dr. H. Steeple, 119
Thermoelectric Power of Calcium Oxide : Electrical Conductivity and (Dr. C. H. B. Mee), 1093
Thermoelectric Properties (Anomalous), of Gadolinium Selenide (R. C. Vickery and H. M. Muir), 336
Thermoelectricity (Institute of Physics and the Physical Society Conference on), 963
Thermonuclear Reactions : Controlled, *review* by Sir Basil Schonland, 750
  Controlled (Samuel Glasstone and Ralph H. Lovberg), *review* by Sir Basil Schonland, 750
Thermonuclear Research : Plasma Physics and (edited by G. Longmire, James L. Tuck and Dr. W. B. Thompson), Vol. I, *review* by Sir Basil Schonland, 750
Thermo-Reversible Denaturation of Eucollagen in Solution (N. T. Crosby and Dr. G. Stainsby), 80
Thermostatic Control during Electrophoretic Experiments : Assurance of (Dr. R. J. Wieme), 806
Thewlis, B. H. : New Products from Wheat Starch, Flour and Gluten, 260
Thin Elastic Shells : Proceedings of the International Union of Theoretical and Applied Mechanics Symposium on the Theory of, Delft, 1959 (edited by W. T. Koiter), *review* by Dr. J. W. Craggs, 379
Thin Oxide Film : Effect of a, on the Reaction of Iodine Vapour with Copper (R. A. J. Shelton, S. Blairs and D. Margrave), 1183
Thin Shells : The Theory of (V. V. Novozhilov), translated by P. G. Lowe ; edited by Prof. J. R. M. Radok, *review* by Dr. J. W. Craggs, 379
Thioglycollic Acid : Influence of Atmospheric Oxidation on Supercontraction of Wool Fibres reduced with (O. A. Swanepoel), 626
β-Thiosemicarbazone (isatin) : Derivatives of, with Anti-Viral Chemotherapeutic Activity against Ectromelia Infection (Dr. D. J. Bauer and Dr. P. W. Sadler), 1167
Thomas, Prof. Brinley : The British Economy in Transition, *review*, 45
Thomas, C. J. (Dunning, Dr. J. H., and) : British Industry—Change and Development in the Twentieth Century, *review* by Prof. Brinley Thomas, 45
Thomas, E. Donnall (Kessner, Dr. David M., and) : Renal Proliferation in the Unilaterally Nephrectomized Rat, 175
Thomas, L. A. : Appointed chief physicist at the Hirst Research Centre of the General Electric Co., Ltd., Wembley, 963
Thomas, Paul D. : Use of Artificial Satellites for Navigation and Oceanographic Surveys (United States Coast and Geodetic Survey, Technical Bulletin No. 12), 134
Thomas, Roderick G. : Flower Initiation in *Trifolium repens* L.—a Short-Long-Day Plant, 1130
Thomasson, H. J., and others : Influence of various Dietary Fats on the Blood Cholesterol Content, 310
Thompson, Prof. F. C. : A History of Platinum, *review*, 61
  Physical Metallurgy of Stress Corrosion Fracture, *review*, 383
  Tin and its Alloys, *review*, 753
Thompson, Dr. George E. : Alloxan and Hypersensitivity, 822
Thompson, Dr. H. W. (edited by E. Thornton and) : Proceedings of the Institute of Petroleum Hydrocarbon Research Group Conference on Molecular Spectroscopy, London, 1958, *review* by Dr. A. Knowles, 76
Thompson, John F., and others : Isolation of Beta-Alanine from *Iris tingitana* (var. Wedgewood), 718
Thompson (Mary Clark) Medal of the United States National Academy of Sciences awarded to Dr. Norman D. Newell, 674
Thompson, P. E., and others : Effects of *Tris*(*p*-Aminophenyl)-Carbonium Salts and related Compounds on Experimental Schistosomiasis and Paragonimiasis, 628
Thompson, Dr. W. B. : Plasma Physics, *review*, 65
Thompson, Dr. W. B., and others (edited by) : Plasma Physics and Thermonuclear Research, Vol. I, *review* by Sir Basil Schonland, 750
Thomson, Dr. J. : Instruments in the Factory (Department of Scientific and Industrial Research), 961
Thomson, Dr. J. H., and others : A New Determination of the Solar Parallax by means of Radar Echoes from Venus, 519
Thomson, Sir Landsborough : The Birds of the British Isles, *review*, 73
Thomson, P. J., and others : Pigments of *Phoma terrestris* Hansen and their Biosynthesis, 441
Thomson, Dr. R. Y. (Perretta, Dr. M. A., and) : Effect of Erythropoietine on Incorporation of Formate labelled with Carbon-14 into the Nucleic Acids of Normal Rabbit Tissues *in vitro*, 912
Thorax : Medicine of the, *review* by Dr. Geoffrey Lapage, 476
Thorium–Uranium Cycle (Comitato Nazionale per l'Energia Nucleare Symposium on), 219
Thornton, E., and Thompson, Dr. H. W. (edited by) : Proceedings of the Institute of Petroleum Hydrocarbon Research Group Conference on Molecular Spectroscopy, London, 1958, *review* by Dr. A. Knowles, 76
Thorpe, Arthur (Senftle, Frank E., and) : Magnetic Susceptibility of Normal Liver and Transplantable Hepatoma Tissue, 410
Thorpe, Dr. W. H., and Zangwill, Prof. O. L. (edited by) : Current Problems in Animal Behaviour, *review* by Dr. N. Tinbergen, 570
Threadgold, Dr. Lawrence T., and Houston, Dr. Arthur Hillier : An Electron Microscope Study of the 'Chloride-Secretory Cell' of *Salmo salar* L., with reference to Plasma-Electrolyte Regulation, 612
Three Antibiotics : Acute Effect of, on Diuresis in the Rat (R. J. Girerd and C. L. Rassaert), 536
Thrombin and Trypsin: Inhibition of Proteolytic Enzymes by Decarboxylated Amino-Acid Derivatives—Effect of Toluenesulphonyl(Tosyl)-agmatine (4-Toluenesulphonamidobutylguanidine) on (Dr. L. Lorand and Dr. N. G. Rule), 722
Thrower, L. B. (Thrower, Stella L., and) : Transport of Carbon in Fungal Mycelium, 823
Thrower, Stella L., and Thrower, L. B. : Transport of Carbon in Fungal Mycelium, 823
Thymidine : Incorporation of, into Deoxyribonucleic Acid by Extracts from Bacteria exposed to Ultra-violet Light (C. O. Doudney and Daniel Billen), 545
Thymidine (Tritiated) : Use of, for the Study of the Origin of the Osteoclast (Dr. E. A. Tonna and E. P. Cronkite), 459
Thymidine (Tritium-labelled) : Incorporation of, in *Bufo* ♀ x *Rana temporaria* ♂ Hybrid Embryos (R. Tencer), 100
Thymus : Response of, to Increase of Intake of Sodium Chloride (Dr. M. Pospíšil), 89
Thyroid (Foetal), of the Rabbit : Function of the, with regard to Cholesterol Metabolism studied by Foetal Thyroidectomy (J. G. Bearn, H. B. Koerselman and T. R. E. Pilkington), 822
Thyroid Auto-Antibody : Absence of, in Experimental Radiation Thyroiditis (Dr. Geoffrey Taylor and G. Sclare), 183
Thyroidectomy (Foetal) : Function of the Foetal Thyroid of the Rabbit with regard to Cholesterol Metabolism studied by (J. G. Bearn, H. B. Koerselman and T. R. E. Pilkington), 822
Thyroiditis (Experimental Radiation) : Absence of Thyroid Auto-Antibody in (Dr. Geoffrey Taylor and G. Sclare), 183
Thysanuran Insect : Atypical Spermiogenesis of *Thermobia domestica*, a (R. S. Mathur), 743 ; (Dr. S. R. Bawa), 743
Tiboldi, T., and others : Effect of Essential Oils on Atherosclerosis of Cholesterol-fed Rabbits, 731
Ticks : Some Aspects of Disease Transmission by (Zoological Society of London Symposium on), 682
Tidbury, G. H. : Appointed to a lectureship in automobile engineering at the College of Aeronautics, Cranfield, 218
Tillotson, Albert, and others : Œstrogen Protection against Acute Digitalis Toxicity in Dogs, 1117
Tillotson, E. : The Agadir Earthquake, 138
Tillering and Seed Production in Wheat : The Effect of Depth of Transplanting on (Dr. R. Halwagy), 513
Timber Development Association (University of Southampton and the) : Joint Conference on Timber Engineering, 769
Timber Engineering (University of Southampton and the Timber Development Association Joint Conference on), 769
Time : The Firmament of (Dr. Loren Eiseley), *review* by the Very Rev. Dr. W. R. Matthews, 943
Time (Hexobarbitone Sleeping-) Test in Mice : A Potential Source of Error in the (Dr. P. W. Ramwell and I. H. Lester), 640
Time-Resolution Techniques : Spectroscopic Studies using (Applied Spectroscopy Group and the Manchester and District Branch of the Institute of Physics and the Physical Society Joint Meeting on), 312
Timely Revolution in Technological Education, 113

Timing (Similar), of Expression in Mice : Two Linked Genes showing a (Kenneth Paigen and Werner K. Noell), 148
Timiras, P. S., and others : Sex and Strain Differences in Electroshock Convulsions of the Rat, 515
Timmermans, Prof. Jean : The Physico-chemical Constants of Binary Systems in Concentrated Solutions, Vol. 4, Systems with Inorganic $+$Organic or Inorganic Compounds (excepting Metallic Derivatives), *review* by Dr. E. F. G. Herington, 661
Tin and its Alloys (edited by Dr. Ernest S. Hedges, with the collaboration of Prof. J. W. Cuthbertson, Prof. E. C. Ellwood, Dr. W. E. Hoare and W. R. Lewis), *review* by Prof. F. C. Thompson, 753
Tin (Niobium and), Nb_3Sn : New Superconducting Compound of (Bell Telephone Laboratories), 134
Tinbergen, Dr. N. : Animal Behaviour, *review*, 570
Tinsel-like Structure in Flagella of Zoospores associated with Cabbage Clubroot Tissue (W. L. Seaman, Prof. R. H. Larson and J. C. Walker), 186
Tipper, Dr. C. F. H. : Appointed senior lecturer in inorganic and physical chemistry at the University of Liverpool, 963
Tissue (Cabbage Clubroot) : Tinsel-like Structure in Flagella of Zoospores associated with (W. L. Seaman, Prof. R. H. Larson and J. C. Walker), 186
Tissue (Cell), and Organ, *review* by Dr. N. M. Hancox, 47
Tissue (Luteal), from Pregnant Whales : Identification of 20β-Hydroxy-pregn-4-ene-3-one in (John Kristoffersen, Torleiv Lunaas and Weiert Velle), 1009
Tissue (Rat Mammary) : Some Properties of (M. W. Smith), 541
Tissue (Storage) : The 'Lag-Phase' in Salt Uptake of (R. F. M. Van Steveninck), 1072
Tissue (Transplantable Hepatoma) : Magnetic Susceptibility of Normal Liver and (Frank E. Senftle and Arthur Thorpe), 410
Tissue (Whole) Emulsion-Fractionation : Quantitative Separation and Determination of Brain Glycoproteins, Neuraminic Acid, Hexosamine and Hexoses by means of (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch), 153
Tissue Cells (Mesodermal) : Electrophoretic Mobility of Cultured (D. H. Heard, G. V. F. Seaman and I. Simon-Reuss), 1009
Tissue Culture : Hormonal Induction of Alkaline Phosphatase in Human Cells in (Dr. Rody P. Cox and Dr. Colin M. MacLeod), 85
  Pseudomonadaceae as a Source of Bacterial Contamination in (Dr. M. Likar), 1025
  Spontaneous Potentials from Explants of Chick Cerebral Hemisphere (Telencephalon) in (Prof. A. W. B. Cunningham), 816
Tissue Cultures (Virus-infected) : Use of a 'Mixed Haemadsorption' Method in (Dr. Astrid Fagraeus and Dr. Åke Espmark), 370
Tissues (Animal) : Isolation of Peptides containing Hydroxyproline from (V. Kobrle and M. Chvapil), 909
Tissues (Connective), *in vitro* : Influence of Oxygen Concentration and Mechanical Factors on Differentiation of (Dr. C. Andrew L. Bassett and Ingeborg Herrmann), 460
Tissues (Human and Animal) : Lead-210 in some (C. R. Hill and Dr. Z. S. Jaworowski), 353
Tissues (Joint), and Synovial Fluid: The Stainable Mucin of (Dr. B. F. Martin and N. E. Shaw), 835
Tissues (Normal Rabbit), *in vitro* : Effect of Erythropoietine on Incorporation of Formate labelled with Carbon-14 into the Nucleic Acids of (Dr. M. A. Perretta and Dr. R. Y. Thomson), 912
Tissues (Normal and Tumour), of Plants : Proteolytic Activity of Crude Stem Extracts from (Prof. C. Gainor and F. D. Crisley), 1031
Titanium–Aluminium Alloy (As-Cast) : Occurrence of an Ordered Phase in an (Prof. P. Pietrokowsky), 77
Titow, J. Z. : At the Annual Conference of the British Agricultural History Society (Types of Manors to be found on the Winchester Estates in the Thirteenth Century), 682
Titterton, Prof. E. W., and others : Strontium-90 in Fall-out and in Man in Australia, January 1959-June 1960, 754
Tobacco Manufacturers' Standing Committee Research Unit, Harrogate : Appointment of Dr. T. D. Day as director, 1063
Tobacco Mosaic Virus : Apparent Release of, in Living Infected Cells (Prof. J. G. Bald and R. A. Solberg), 651
  Mutation in, Induced by a New Carcinogen, 4-Nitroquinoline N-Oxide (Dr. Hideya Endo, Akiyoshi Wada, Kin-ichiro Miura, Zyun Hidaka and Chuji Hiruki), 833
Tobias, Cornelius A., and Lawrence, John H. (edited by, assisted by Thomas L. Hayes) : Advances in Biological and Medical Physics, Vol. 7, *review* by Dr. N. M. Blackett, 74
Tobias, P. V. : Evolution of Man in South Africa, 961
Tobin, Noel F. (Giovanelli, John, and) : Adenosine Triphosphate- and Coenzyme A-dependent Decarboxylation of Oxalate by Extracts of Peas, 1006
Tocopherol in Birds : Ubiquinone and (J. Bunyan, E. E. Edwin, A. T. Diplock and Dr. J. Green), 637
Todd, Sir Alexander : Terpene Chemistry, 18
  New Chemistry Laboratories at University College of Swansea opened by, 964
  Appointed Master for 1961-62 of the Salters' Company, 1063
Todd, Prof. J. P. : Retirement from the chair of pharmacy in the Royal College of Science and Technology, Glasgow, 764 ; work of, 764
Todd, Prof. J. P. (O'Neill, G. J., and) : Extraction of Nucleic Acid-free Lipopolysaccharides from Gram-negative Bacteria, 344
Toida, N., and others : Repetitive Hyperpolarizing Response of the Nerve Fibre of Crayfish, 271
Tolansky, Prof. S. : Surface Microtopography, *review* by J. W. Gates, 117
  A Notable Growth Spiral on Synthetic Diamond, 992
Tolerance of Skin Grafts in Chicks : Dissociation of Isohaemagglutinin Formation and (Otakar Stark, Vladimír Křen and Bohdan Frenzl), 281
Tolerance (Cryo-) of Mitochondria : Effect of Dimethyl Sulphoxide on the (Prof. D. Greiff and M. Myers), 1202
Tolmach, Prof. L. J. (Terasima, Dr. Toyozo, and) : Changes in the X-Ray Sensitivity of HeLa Cells during the Division Cycle, 1210
Toluenesulphonyl(Tosyl)agmatine (4-Toluenesulphonamidobutylguanidine), on Thrombin and Trypsin : Inhibition of Proteolytic Enzymes by Decarboxylated Amino-Acid Derivatives—Effect of (Dr. L. Lorand and Dr. N. G. Rule), 722
Toman, K. : Minimum Range to Artificial Earth Satellites, 333, *errata*, 865
Tomita, T., and others : Repetitive Hyperpolarizing Response of the Nerve Fibre of Crayfish, 271
Tomlin, Patricia, and others : Radiosensitization of *E. coli* by Purine and Pyrimidine Analogues incorporated in Deoxyribonucleic Acid, 796
Tomlinson, Dr. J. A. : Diseases caused by Plant Viruses in Crops (Lettuce Mosaic Virus), 220
Tommassen, P. H. (Bokhoven, Dr. C., and) : Continuous Determination of Traces of Nitric Oxide, 435
Tomoda, Yoshitada, and Tsuda, Minoru : The Importance of Hydroxyl Radicals as Intermediates in the Cross-linking of High Polymers by γ-Irradiation, 905
Tonna, Dr. E. A., and Cronkite, E. P. : Use of Tritiated Thymidine for the Study of the Origin of the Osteoclast, 459
Tool-Kit (A Mathematical), for Engineers (H. A. Webb and Dr. D. G. Ashwell), second edition, *review* by Prof. J. Greig, 76
Toothill, C., and others : Intracellular Free Amino-Acids of certain Dermatophytes, 87
Toothill, J. N. : Honorary Companionship of the Royal Aeronautical Society awarded to, 862
Topping, Dr. J. : Electrical Contacts, 867
Torelli, —. : Solar Seeing (Seeing Conditions in Rome), 771
Torto, Dr. F. : Science in the Development of Ghana (Structure of Gums and Mucilages in two Ghana Plants, *Fagara xanthoxyloides* and *Afraegle paniculata*), 1064
Total-Body Irradiation : Changes in Density of Blood Serum after (Dr. Z. Dienstbier and M. Rakovič), 98
Total Magnetic Field Measurements between New Zealand and Antarctica (Dr. D. A. Christoffel), 776
Total Volume and Isotopic Dilution Techniques of Argon Measurement : Potassium–Argon Ages of the Dartmoor and Shap Granites using the (M. H. Dodson, J. A. Miller and D. York), 800
Totton, A. K., and Mackie, G. O. : Studies on *Physalia physalis* (L.), Part 1, Natural History and Morphology ; Part 2, Behaviour and Histology (Discovery Reports, Vol. 30), 23
Touloukian, Yeram S., and others : Tables of Thermodynamic and Transport Properties of Air, Argon, Carbon Dioxide, Carbon Monoxide, Hydrogen, Nitrogen, Oxygen and Steam, *review* by Prof. A. R. Ubbelohde, 58
Townend, Dr. D. T. A. : Elected a Fellow of the Imperial College of Science and Technology, London, 396
Townes, Prof. C. H. (Schwartz, Dr. R. N., and) : Interstellar and Interplanetary Communication by Optical Masers, 205
Toxic Fractions from *Ascaris lumbricoides* : Purification of the, and their Effect on the Guinea Pig (G. Gazzinelli, M. M. Guia, A. G. A. Neves, J. Pudles, W. T. Beraldo and W. Dias da Silva), 813
Toxic Principle in *Acacia georginae* : Isolation of the (P. B. Oelrichs and T. McEwan), 808
Toxic Proteins of Scorpion Venoms : Scorpamins, the (Francois Miranda and Serge Lissitzky), 443
Toxicity of 2-(2-Halogen-4-Chlorophenyl)-2-(4-Chlorophenyl)-1,1,1-Trichloroethanes to Normal and to DDT-Resistant House-Flies (Douglas J. Hennessy, Joseph Fratantoni, James Hartigan, Herbert H. Moorefield and M. H. J. Weiden), 341
Toxicity (Acute Digitalis), in Dogs : Œstrogen Protection against (Edward H. Grinnell, J. Raymond Johnson, James R. Rhone, Albert Tillotson, Jim Noffsinger and Dr. Max N. Huffman), 1117
Toxicity (Increased), of Serotonin in Adrenalectomized Animals (Prof. S Garattini, P. Galardoni, A. Mortari and V. Palma), 540
Toxicological Interest—Separation of a Mixture of Promazine, Quinine, Sulphacetamide and Acetophenetidin : A New Technique of Chromatography and Ionophoresis on Ion-exchange Paper—Application to Separation of Compounds of (Harold V. Street and Dr. S. K. Niyogi), 1199
Toxoplasma gondii : A Heteroglycan from (P. G. Pande, R. R. Shukla and P. C. Sekariah), 644
Toxoplasmosis : Serological Tests for (D. G. Fleck), 1018
Trace Element Concentration in *Crassostrea virginica* : Salinity Response of (James B. Rucker and Prof. James W. Valentine), 1099
Trace-labelling of Insulin with Iodine (Dr. Ellis Samols and H. S. Williams), 1211
Trace Quantities of Acenaphthene : Detection of, by Gas Chromatography (Prof. W. G. H. Edwards, J. G. Clarke and A. G. Williamson), 531
Tracers in the Study of Diseases of Porphyrin Metabolism : Use of (Biology Division of the French Atomic Energy Commission Colloquium on), 870
Traces of Nitric Oxide : Continuous Determination of (Dr. C. Bokhoven and P. H. Tommassen), 435
Tracey, J. G., and others : 'Antibiotic Effects' in Plant Communities, 189
α-Tracks and γ-Background : Discrimination between, in Ilford Nuclear Emulsions (K. Van Camp, M. Dorikens and L. Dorikens-Vanpraet), 38
Tracks (Seal), in the Taylor Dry Valley (G. G. Claridge), 559
Training in Occupational Hygiene (British Occupational Hygiene Society Conference on), 1158
Training Grants (Plastics Industry Education Fund), 963
Training Grants (Postgraduate), in Fishery Research (Ministry of Agriculture, Fisheries and Food and the Department of Agriculture and Fisheries for Scotland), 679
Traité de Pisciculture (Prof. Marcel Huet), troisième édition, *review* by Dr. C. F. Hickling, 51
Trajectories of Chromospheric Disk Surges (J. M. Malville and Dr. G. E Moreton), 995
Trajectories (Re-entry) : Space Flight and (International Academy of Astronautics of the International Astronautical Federation Symposium on), 312
Tranquillizers (Phenothiazine) : Inhibition of Emotional Reactions by (Dr Max Taeschler and Dr. Aurelio Cerletti), 1014
Transamination Process (New), by Transfer of Free Amino-Radicals : Photochemical Synthesis of Amino-Acids and a (Giovanni Ferrari and Prof Rolando Cultrera), 326
Transatlantic Communication Experiment via *Echo* I Satellite (Wm. C Jakes, jun.), 709 ; (H. Carru, R. Gendrin and M. Reyssat), 709
Transfer : Heat (University of Colorado International Conference on), 1156
Transfer of Free Amino-Radicals : Photochemical Synthesis of Amino-Acids and a New Transamination Process by (Giovanni Ferrari and Prof Rolando Cultrera), 326

Transfer of Ova to the Bursa Ovarii and the 'Suspended Loop' of Tube in the Rabbit (Prof. E. S. E. Hafez and M. E. Ensminger), 557
Transfer (Electron), in Biological Molecules (British Biophysical Society Symposium on), 312
Transfer (Ion), through Perm-selective Membranes : Deviations from the Steady-State in (Chaim Forgacs), 339
Transfer (Mass) : Effect of, on the Velocity of Rise of Bubbles in Water (Dr. J. H. Leonard and Prof. G. Houghton), 687
Transferrin : Effects of Speciation on Serum Proteins in the Genus *Macaca* with Special Reference to the Polymorphic State of (Dr. Morris Goodman and Emily Poulik), 171
Transferrin-groups of Foetal Calf-Serum (Dr. H. Buschmann and Dr. D. O. Schmid), 1209
Transfers (Non-Surgical Ovum), in the Cow : A Possible Explanation for the Failure of (Movement of the Ovum in the Reproductive Tract), (M. J. K. Harper, J. P. Bennett and L. E. A. Rowson), 789
Transform Technique (Two-Dimensional Fourier), for Analysing Random Structures (Dr. Douglas M. C. MacEwan and H. H. Sutherland), 431
Transformation of Bacteria : Interspecific Induction of, with respect to Phage-susceptibility (Shigeo Fukuda and Kiyoshi Tsuzuki), 937
Transformation of the Polysaccharide Capsule in Pneumococcus : Mechanism of the (Dr. D. M. Kohoutová), 1171
Transformation (Antigen), of Transplantable Rat Tumour : Mechanism of (Prof. K. Dux, A. Ryzewska and A. Czarnomska), 458
Transformation Groups : Seminar on (Armand Borel), *review* by Dr. Hanna Neumann, 571
Transition : The British Economy in, *review* by Prof. Brinley Thomas, 45
Transmission of Gall-Diseases of Cacao, Mango and Pigeon Pea (J. F. Archibald), 284
Transmission of Phosphorus-32 incorporated by Parents into Descendants of *Drosophila melanogaster* (B. Faludi, I. Csukás, K. Széplaky and F. A. Dániel), 469
Transmission of Swelling Characteristics by Mitochondria of Regenerating Liver (Hans H. Gosch and Prof. Joseph C. Arcos), 272
Transmission (Disease), by Ticks : Some Aspects of (Zoological Society of London Symposium on), 682
Transmissions (Radio) : Extra-Terrestrial (Leland I. Anderson), 374
Transparent Adhesive Tape : Use of, in the Preparation of Microsections (D. S. Gowers and R. E. Miller), 424
Transplacental Passage of Red Cells in Man (Ronald Finn, Dr. C. A. Clarke, W. T. A. Donohue, Dr. R. B. McConnell, Dr. P. M. Sheppard and D. Lehane), 922
Transplantable Hepatoma Tissue : Magnetic Susceptibility of Normal Liver and (Frank E. Senftle and Arthur Thorpe), 410
Transplantable Rat Tumour : Mechanism of Antigen Transformation of (Prof. K. Dux, A. Ryzewska and A. Czarnomska), 458
Transplanting : The Effect of Depth of, on Tillering and Seed Production in Wheat (Dr. R. Halwagy), 513
Transport of Carbon in Fungal Mycelium (Stella L. Thrower and L. B. Thrower), 823
Transport (Active), of Foreign Pyrimidines across the Intestinal Epithelium (Dr. Lewis S. Schanker and Dr. John J. Jeffrey), 727
Transport (Active), of Sodium from Sodium-rich Frog Muscle by Insulin and Lactate : Stimulation of (Roderick P. Kernan), 347
Transport (Ion), an Unorthodox View, *review* by Dr. I. M. Glynn, 848
Transport (Phloem), in Plants (British Biophysical Society Symposium on), 312
Transport (Sodium), in Cellular Membranes : Mechanism of (Johan Järnefelt), 694
Transport (Sodium), and Oxygen Consumption in the Mammalian Kidney (Dr. J. Hess Thaysen, Dr. N. A. Lassen and Dr. O. Munck), 919
Transport Properties (Thermodynamic and), of Air, Argon, Carbon Dioxide, Carbon Monoxide, Hydrogen, Nitrogen, Oxygen and Steam : Tables of (Joseph Hilsenrath, Charles W. Beckett, William S. Benedict, Lilla Fano, Harold J. Hoge, Joseph F. Masi, Ralph L. Nuttall, Yeram S. Touloukian and Harold W. Woolley), *review* by Prof. A. R. Ubbelohde, 58
Transport Undertakings (Nationalized) : Reorganization of the (Ministry of Transport), 137
Transport, Ministry of : Reorganization of the Nationalized Transport Undertakings, 137
Transport and Accumulation in Biological Systems (Dr. E. J. Harris), second edition, *review* by Dr. I. M. Glynn, 848
Trapping : Free Radical, *review* by Dr. B. Brocklehurst, 478
Trapping of Plasma by Red Cells (Peggy Clark and B. J. Walsh), 678
Trapping (Formation and), of Free Radicals (edited by Arnold M. Bass and H. P. Broida), *review* by Dr. B. Brocklehurst, 478
Travelling Research Fellowships for 1961-62 : Carlsberg–Wellcome (Wellcome Trust), 134
Treatise on Analytical Chemistry, *review* by Dr. D. T. Lewis, 294
Treatise on Analytical Chemistry (edited by I. M. Kolthoff and Philip J. Elving, assisted by Ernest B. Sandell), Part I, Theory and Practice, Vol. I, *review* by Prof. R. Belcher, 60
Treatment of *Aspergillus niger* Diploids with *para*-Fluorophenylalanine : Mitotic Haploidization by (Pol Lhoas), 744
Treatment with Cobra Venom and a Detergent : Reversible Block of Axonal Conduction by Curare after (Dr. Philip Rosenberg and Dr. Seymour Ehrenpreis), 728
Treatment with Ether : Haemagglutinating Sub-Units released from Newcastle Disease, Para-influenza I and Mumps Viruses by (F. Sokol, D. Blaškovič and O. Krizanová-Laučíková), 834
Treatment of Offenders : Studies in the Causes of Delinquency and the, No. 3, Delinquent Generations—a Home Office Research Unit Report (Leslie T. Wilkins), 24
Treatment of Ringworm by Griseofulvin, 223
Treatments (Heat) : 'Memory' of Initial Remanent Magnetization and Number of Repeating of, in Low-Temperature Behaviour of Haematite (Prof. T. Nagata, M. Yama-ai and S. Akimoto), 620
Treays, J. (Stanley, A. R., and) : Television and Film Techniques (Colour Television Engineering—Studio Problems and Techniques), 869
Tree Planting in the National Parks (Prof. M. L. Anderson), 496
Trees : The Observer's Book of (compiled by W. J. Stokoe), revised edition, *review* by B. J. G. Maitland, 850
Trees at the Extreme Lower Forest Border : Classification and Multiplicity of Growth Layers in the Branches of (Waldo S. Glock, R. A. Studhalter and Sharlene R. Agerter), *review* by Prof. F. W. Jane, 850
Trees (Broadleaved), of Britain, *review* by J. L. Davidson, 48
Tregenza, N. (Carlisle, Dr. D. B., and) : A Hermit Crab New to Britain, 931
Trematodes (Schistosome), from New South Wales : A New Intermediate Host of (Wm. H. Ewers), 283
Tremor (Limb) : Function of (C. B. Gibbs), 540
Trends in Juvenile Delinquency (T. C. N. Gibbens), (United Nations, World Health Organization, Public Health Papers No. 5), 686
Treysa and Sikhote–Alin Meteorites : Cosmic Ray Ages of the (Prof. David E. Fisher), 225
Tri-p-anisylchloroethylene, Dienoestrol and Stilboestrol Diphosphate: Effect of (Phagocytic Activity of the Reticulo-Endothelial System), (Prof. T. Nicol, Dr. D. L. J. Bilbey and C. G. Druce), 419
Tri-positive Oxidation State (V^{3+}) in Tetrahedral Co-ordination : Spectrum of Vanadium in the (Dr. D. M. Gruen and R. Gut), 713
Trials (Field) : Measurement of Fungicidal Effects in (R. W. Rayner), 328
Trifolium repens L.—a Short-Long-Day Plant : Flower Initiation in (Roderick G. Thomas), 1130
Trimerization of Nickel-(II) Acetylacetonate in Solution (Dr. D. P. Graddon and Dr. E. C. Watton), 906
Trinidad : Resistance to Dieldrin in *Anopheles* in (T. A. Omardeen), 559
Triode : An A.C. Modulated Flame Ionization (J. Middlehurst and B. Kennett), 142
Triphosphate (Adenosine), of Adrenal Chromaffin Granules : Incorporation of Phosphorus-32 into (W. H. Prusoff, Dr. H. Blaschko, Dr. Margery G. Ord and Dr. L. A. Stocken), 354
Triphosphate- (Adenosine) and Coenzyme *A*-dependent Decarboxylation of Oxalate by Extracts of Peas (John Giovanelli and Noel F. Tobin), 1006
Tripsacum laxum and *Zea mays* : *Puccinia polysora* on (P. Tuley), 284
Triology of Chemistry, *review* by Charles Holt, 60
Tris(*p*-Aminophenyl)-Carbonium Salts and related Compounds : Effects of, on Experimental Schistosomiasis and Paragonimiasis (E. F. Elslager, F. W. Short, D. F. Worth, J. E. Meisenhelder, H. Najarian and P. E. Thompson), 628
Tritiated Thymidine : Use of, for the Study of the Origin of the Osteoclast (Dr. E. A. Tonna and E. P. Cronkite), 459
Triticum vulgare L. (Wheat Coleoptile) : A Sequential Growth Response to Gibberellic Acid, Kinetin and Indolyl-3-Acetic Acid in the (Dr. S. T. C. Wright), 699
Tritium-labelled Thymidine : Incorporation of, in *Bufo* ♀ × *Rana temporaria* ♂ Hybrid Embryos (R. Tencer), 100
Tritium Nuclear-labelled Morphine : *In vivo* Formation of Normorphine in the Rat as a Metabolite of (Anand L. Misra, S. J. Mule and Prof. L. A. Woods), 82
Triumph for Science : A, 291
  A Further, 568
Trojanowski, J., and others : Biological Activity of some Humic Fractions isolated by means of Partition Chromatography, 277
Tropical Africa : Open Forests in (Scientific Council for Africa South of the Sahara, Publication No. 52), 141
Tropical Hygiene for Laymen (Ross Institute of Tropical Hygiene, London School of Hygiene and Tropical Medicine Course in), 397
Tropical Hygiene, Ross Institute of (London School of Hygiene and Tropical Medicine) : Course in Tropical Hygiene for Laymen, 397
Tropical Medicine, London School of Hygiene and : Appointment of Dr. Peter Armitage to the University of London chair of medical statistics, 680, 764
  Retirement of Prof. A. Bradford Hill from the chair of medical statistics, 680
Tropical Medicine, London School of Hygiene and (Imperial College of Science and Technology and the) : Postgraduate Courses in Public Health Engineering, 971
Tropical Medicine, London School of Hygiene and (Ross Institute of Tropical Hygiene) : Course in Tropical Hygiene for Laymen, 397
Tropical Medicine and Hygiene, Royal Society of : Annual General Meeting, 963
  Chalmers Medal to be presented to Dr. C. E. Gordon Smith, 963
Tropical Poikilotherm, the Earthworm, *Megascolex mauritii* : Seasonal Acclimatization of Oxygen Consumption to Temperature in a (K. Saroja), 930
Tropics : Ecological Problems in the (National Academy of Sciences of India Symposium on), 772
  Peasant Agriculture in the (E. W. Momber), 962
Tropics (Wet Humid) : National Forests of Agricultural Crops for the (Antony Santiago), 1070
Troughton, A. J. : Awarded the George Taylor (Australia) Gold Medal of the Royal Aeronautical Society, 863
Trowell, Dr. O. A. : Mechanisms in Radiobiology, *review*, 72
True and Mean Anomalies : Relationship between the (C. J. Brookes), 839
Trümpy, Prof. R. : Some Aspects of Sedimentation in Orogenic Belts (The Alps), 139
Truter, Dr. E. V. (Purdy, S. Jean, and) : Taxonomic Significance of Surface Lipids of Plants, 554
Truter, Dr. M. R. : X-Ray Diffraction Photographs, *review*, 69
Trypanosoma melophagium Flu : Experimental Elimination of, from its Hosts the Sheep and the Ked, *Melophagus ovinus* (L.), (W. A. Nelson), 739
Trypsin : Inhibition of Proteolytic Enzymes by Decarboxylated Amino-Acid Derivatives—Effect of Toluenesulphonyl(Tosyl)agmatine (4-Toluenesulphonamidobutylguanidine) on Thrombin and (Dr. L. Lorand and Dr. N. G. Rule), 722
Trypsinized Casein : Fractions of, giving Different Patterns of Bacterial Growth (D. A. H. Hearfield and A. W. Phillips), 266
Tryptophan Pyrrolase (Rat Liver) : A Difference between the Modes of Action of Substrate and Hormonal Inducers of (Dr. Olga Greengard and Prof. Philip Feigelson), 446
Tsai, Chi Shiun, and others : Origin of β-Amino*iso*butyric Acid in Iris, 809
Tschamler, H., and others : Distribution of Oxygen in a Vitrinite and its Extraction Products, 437
Tsetse Fly and Trypanosomiasis Committee : Annual Report (Colonial Office), 21
Tsiolkovsky, Konstantin : Beyond the Planet Earth (translated from the Russian by Kenneth Syers), *review* by G. R. Noakes, 204
Tsuda, Minoru (Tomoda, Yoshitada, and) : The Importance of Hydroxyl Radicals as Intermediates in the Cross-linking of High Polymers by γ-Irradiation, 905

Tsuk, Andrew G., and Oster, Prof. Gerald : Determination of Enzyme Activity by a Linear Measurement, 721
Tsuzuki, Hiroshi, and others : Experimentally Produced Selenium Poisoning in various Animals, 310
Tsuzuki, Kiyoshi (Fukuda, Shigeo, and) : Interspecific Induction of Transformation of Bacteria with respect to Phage-susceptibility, 937
Tube ('Suspended Loop' of), in the Rabbit : Transfer of Ova to the Bursa Ovarii and the (Prof. E. S. E. Hafez and M. E. Ensminger), 557
Tube Investments, Ltd. : Appointment of Lord Clitheroe as a vice-chairman, 493
  Appointment of Prof. J. M. Kay to the Board, as director of research and development, 493
Tubercle Bacilli : Protective Activity of Fractions of, against Isologous Tumours in Mice (Dr. David W. Weiss, Rose S. Bonhag and Dr. Kenneth B. DeOme), 889
Tubers (Potato) : Reversal of γ-Ray-induced Dormancy of, by Gibberellic Acid (Dr. P. B. Mathur), 547
Tubes : Flow of Visco-Elastic Liquids from (J. Harris), 993
Tubing ('Visking') : A Factor associated with, capable of Antagonizing Insulin (M. Deloris Lilley and Dr. J. Vallance-Owen), 1196
Tubule Cells (Renal Collecting), of the Potassium-deficient Rat : Detection of Serum Proteins within the (Ashton B. Morrison and Kenneth D. Gardner, jun.), 96
Tuck, James L., and others (edited by) : Plasma Physics and Thermonuclear Research, Vol. 1, *review* by Sir Basil Schonland, 750
Tukey, Prof. J. W. : Elected a Member of the United States National Academy of Sciences, 674
Tuley, P. : *Puccinia polysora* on *Tripsacum laxum* and *Zea mays*, 284
Tumoral (Anti-) Action of New Sarcomycin Derivatives (Prof. A. Caputo, B. Giovanella and R. Giuliano), 819
Tumour (Ehrlich Ascites) : Antigenicity of Deoxyribonucleic Acids from Mouse Liver and from the (Dr. J. S. Colter and Dr. K. A. O. Ellem), 550
Tumour (Homogenized), mixed with Freund Adjuvant : Growth of Tumours in Rats fed with 4-Dimethylaminoazobenzene injected with (Prof. Nikša Allegretti), 1207
Tumour (Parotid) (Polyoma) Virus : Variant of, showing a Change in Oncogenic Properties (Lloyd W. Law, Alan S. Rabson and Clyde J. Dawe), 97
Tumour (Transplantable Rat) : Mechanism of Antigen Transformation of (Prof. K. Dux, A. Ryzewska and A. Czarnomska), 458
Tumour Cells : Aggregation of Protein Particles in (A. Bolognari), 358
Tumour Cells (Normal and) : Interaction of Enzymes with (D. H. Cormack, G. C. Easty and Dr. E. J. Ambrose), 1207
Tumour Cells (Sarcoma 37 Ascites) : Effect of a Magnetic Field on (Indumati L. Mulay and Prof. L. N. Mulay), 1019
Tumour Induction (Crown Gall) : Effect of 5-Bromuracil on (Dr. Jacques Lipetz and Dr. Tom Stonier), 929
Tumour Tissues (Normal and), of Plants : Proteolytic Activity of Crude Stem Extracts from (Prof. C. Gainor and F. D. Crisley), 1031
Tumours induced by Polyoma: Intracellular Structures in (Leon Dmochowski, Clifford E. Grey, Elizabeth Bereczky and Julian Blicharski), 610
Tumours in Rats fed with 4-Dimethylaminoazobenzene injected with Homogenized Tumour mixed with Freund Adjuvant : Growth of (Prof. Nikša Allegretti), 1207
Tumours (Bone), Normal Bone and Teeth : Fluorescence of Tetracyclines in (L. N. Owen), 500
Tumours (Isologous), in Mice : Protective Activity of Fractions of Tubercle Bacilli against (Dr. David W. Weiss, Rose S. Bonhag and Dr. Kenneth B. DeOme), 889
Tumours (Malignant) : Isolation of Malignolipin from (—. Kosaki and co-workers), 677
Tumours (Pulmonary), Group VII and Sex in the House-Mouse (Dr. J. A. H. Tatchell), 837
Tunebo Indians (Colombian) : Absence of Abnormal Haemoglobins in (Tullio Arends), 93
Tungsten : Field-Emission Microscopic Investigation of Catalysed Synthesis of Ammonia on (K. Azuma), 530
Turbulent Diffusion (Small-Scale), in the Atmosphere (F. Gifford), 248
Turbulent Flow : Meteorology, Oceanography and (The Scientific Papers of Sir Geoffrey Ingram Taylor, edited by Dr. G. K. Batchelor, Vol. 2), *review* by Prof. P. A. Sheppard, 62
Turchányi, Dr. Gy., and Tarján, Dr. I. : Sodium Chloride Whiskers, 79
Turian, Dr. G. : Nucleic Acids and Sexual Differentiation in *Allomyces*, 825
Turkevich, John, and others : Science in Progress, Eleventh Series (edited by Hugh Taylor), *review* by Prof. Ritchie Calder, 45
Turkey Eggs : Rous Sarcoma Virus associated with Parthenogenesis in (Marlow W. Olsen), 191
Turnbull, Dr. Lennox B., and others : Demethylation in the Metabolism of (–)-Nicotine *in vivo*, 910
Turner, J. J. : Appointed to a Harkness Fellowship (infra-red spectroscopy) of the Commonwealth Fund, 308
Turtle : Origin of the Potential Difference in the Intestinal Epithelium of the (Michelle Baillien and E. Schoffeniels), 1107
Turtle Sera : *Leptospira*-agglutinating Factors in (Prof. J. van der Hoeden, Esther Szenberg and Z. Evenchik), 95
Tutin, Prof. T. G. : An Anatomy of Grasses, *review*, *erratum*, 16
Tustin, Prof. A. : Servomechanisms, *review*, 1046
Tweed River Purification Board : Sixth Annual Report (1959-60), 1062
Tweeddale, James G. : Determination of the Mechanical and Technological Properties of Metals, *review*, 573
Twilight and the 'Crep' Unit (Dr. Erik Tetens Nielsen), 878
Twilight Method of Determining the Vertical Distribution of Ozone (A. B. Pittock), 426
Two Antigen-combining Fragments released from a Rabbit Antibody by Papain : Similarity of Peptides in (Prof. David Gitlin and Ezio Merler), 634
Two-Dimensional Fourier Transform Technique for Analysing Random Structures (Dr. Douglas M. C. MacEwan and H. H. Sutherland), 431
Two Inbred Lines of Chickens : Genetic Basis for Graft-against-Host Immunological Reactions between (L. N. Payne and P. Jaffe), 373
Two Levels of Dietary Calcium : Effect of Feeding, on the Growth of Broiler Chickens (Dr. H. Smith and Dr. J. H. Taylor), 1200
Two Light Reactions in Noncyclic Photo-Phosphorylation of Green Plants : Separation of (Dr. M. Losada, Dr. F. R. Whatley and Prof. Daniel I. Arnon), 606, *erratum*, 1063
Two Linked Genes showing a Similar Timing of Expression in Mice (Kenneth Paigen and Werner K. Noell), 148
Two Photochemical Systems in Photosynthesis (Dr. L. N. M. Duysens, J. Amesz and B. M. Kamp), 510
Tyas, J. P. I., and others : Cosmic Noise Measurements from 1960 η1 at 3·8 Mc./s., 616
Type (Mating), in *Neurospora* : Determining, without Crossing Tests (Prof. H. Branch Howe, jun.), 1036
Type Specimens of Reptiles and Amphibians in the United States National Museum (Doris M. Cochran), 863
Tyrosine : Formation of an Ommatin Pigment from, by Ultra-violet Irradiation (Maria Benigna Johnson), 924

UBBELOHDE, Prof. A. R. : Towards Physical Chemistry at High Temperatures, *review*, 58
  Appointed head of the Department of Chemical Engineering and Chemical Technology in the Imperial College of Science and Technology, London, 396
Ubiquinone in Rat Liver : Intracellular Distribution of, under certain Stress Conditions (Dr. A. S. Aiyar and Dr. A. Sreenivasan), 344
Ubiquinone (Coenzyme Q) and the Function of Vitamin E (Dr. J. Green, A. T. Diplock, J. Bunyan, Dr. E. E. Edwin and Dr. D. McHale), 318
Ubiquinone and Tocopherol in Birds (J. Bunyan, Dr. E. E. Edwin, A. T. Diplock and Dr. J. Green), 637
Udder of the Goat : Polypnoea evoked by Heating the (J. L. Linzell and J. Bligh), 173
Ueno, Dr. N. (Yokoyama, Dr. M., and) : The *Gma* Factor in Japanese, 455
Uganda : Pollen Analysis in (Dr. M. E. S. Morrison), 483
Uganda Kob : Unilateral Implantation in the (Prof. H. K. Buechner), 738
Uhlenbruck, Dr. G. : Action of Proteolytic Enzymes on the Human Erythrocyte Surface, 181
Ulcerative Colitis and *Rh* Blood Groups : Correlation between (Dr. William C. Boyd, Dr. Mary Heisler and Prof. Egon Orowan), 1123
Ullman, Frank G. : Electroluminescence of Gallium Phosphide Crystals, 161
Ulster Folk Museum : Site for the, 1155
'Ultandren' (9αFluoro-11β-hydroxy-17-methyltestosterone) : Effect of, on the Testis of the Immature Rat (Dr. E. J. Clegg), 542
Ultrasonic Detection of Choledocholithiasis (Marjorie J. Hill and Ian McColl), 627
Ultra-sound in the Primary Aliphatic Amines: Phase-Velocity of (L. V. Kite), 1183
Ultrastructural Biology? : Molecular Biology or (Prof. C. H. Waddington), 185, 1124 ; (the late Prof. W. T. Astbury), 1124
Ultra-violet Irradiation : Formation of an Ommatin Pigment from Tyrosine by (Maria Benigna Johnson), 924
Ultra-violet Irradiation (Simultaneous X-Ray and): Circulating Platelets in Mice subjected to (I. Cserháti, F. Krizsa and K. Rák), 544
Ultra-violet Light : Incorporation of Thymidine into Deoxyribonucleic Acid by Extracts from Bacteria exposed to (C. O. Doudney and Daniel Billen), 545
Ultra-violet Radiation : Effect on Biological Nitrogen Fixation of Nitrogen Gas treated with (B. Zacharias and C.-G. Hedén), 817
Ultra-violet Spectrometers : Recording (Photoelectric Spectrometry Group Test on), 394
Unanaesthetized Dogs (Intact) : Influence of Changes of Blood Volume on the Concentration of Aldosterone in Peripheral Plasma of (Ejgil Bojesen and Hans Degn), 352
Underwood, E. H. : Science and Industry—the Problem of Communication, 966
Unesco : Scientific Institutions and Scientists in Latin America, Vol. 4, Part 5, 769
  Discussion on the Planning of an International Andean Year, 966
  Bibliography of Interlingual Scientific and Technical Dictionaries, fourth edition, 1061
Unesco, and others (sponsored by the) : Establishment at the University of Uppsala of an International School for Research and Education in Physics, 311
Unified Concept of Photosynthesis : Photoproduction of Hydrogen, Photofixation of Nitrogen and a (Prof. Daniel I. Arnon, Dr. M. Losada, Dr. M. Nozaki and Dr. K. Tagawa), 601
Unilateral Implantation in the Uganda Kob (Prof. H. K. Buechner), 738
Unilaterally Nephrectomized Rat : Renal Proliferation in the (Dr. David M. Kessner and E. Donnall Thomas), 175
Union of South Africa : The Brandberg and other Rock-Shelter Paintings of the (Revel Mason), 311
Unit of Neutron Flux (I. S. McGill, D. C. Menzies and M. R. Price), 162
Unit (Standard), of Pressure in Vacuum Physics (Dr. N. A. Florescu), 522 ; (P. H. Bigg), 523
United Kingdom : Employment of Librarians in the, 133
  Technical Assistance from, for Overseas Development (White Paper on), 1039
United Kingdom—Euratom Technical Collaboration, 1154
United Kingdom, Committee of Vice-Chancellors and Principals of the Universities of the : Third Report of an *ad hoc* Committee on Procedure for Admission of Students, 401
United Kingdom's contribution to the Malaria Eradication Campaign (House of Commons Adjournment Debate on), 490
United Kingdom Atomic Energy Authority : Appointment of L. B. Mullett as assistant director for accelerator and applied physics in the Rutherford Laboratory of the National Institute for Research in Nuclear Science, 393
  Appointment of Dr. W. Wild as head of the Chemistry Division of the Atomic Energy Research Establishment, 393
  Status of a Division head given to A. A. Smales in the Atomic Energy Research Establishment, 393
  Appointment of G. H. Greenhalgh as nuclear energy attaché to the United Kingdom Delegation to the European Communities (Euratom), 1060
United Kingdom Atomic Energy Authority (U.S.S.R. State Committee of the Council of Ministers for the Utilization of Atomic Energy and the) : Collaboration on the Peaceful Uses of Atomic Energy, 960

- United Kingdom Atomic Energy Research Establishment, Harwell
  - Appointment of Dr. W. Wild as head of the Chemistry Division, 393
  - Status of a Division head given to A. A. Smales, 393
  - International Seminar on Nuclear Energy, 591
- United Kingdom *Scout* Satellite : Second, 681
- United Nations : Conference on New Sources of Energy, 1156
- United Nations (Food and Agriculture Organization) : André Mayer Fellowships for 1961, 135
  - Technical Meeting on Plant Exploration and Introduction, 397
  - Appointment of Dr. Hans Dietrich Cremer as chief of the Applied Nutrition Branch, 865
  - Appointment of Dr. Arthur H. Dolff as assistant chief of the Research Branch of the Radiological Health Division, 865
- United Nations (Statistical Office, Department of Economics and Social Affairs) : Patterns of Industrial Growth, 1938-58, *review* by Sir Roy Harrod, 660
- United Nations (World Health Organization) : Technical Report Series No. 204, Second African Conference on Bilharziasis, Lourenco Marques, 1960—Report, 24
  - Public Health Papers No. 4, Aspects of Public Health Nursing, 491
  - Official Records No. 105, The Work of WHO 1960—Annual Report of the Director-General to the World Health Assembly and to the United Nations, 595
  - Public Health Papers No. 5, Trends in Juvenile Delinquency (T. C. N. Gibbens), 686
  - Technical Report Series No. 211, Expert Committee on Addiction-producing Drugs—Eleventh Report, 775
  - Technical Report Series No. 205, Expert Committee on Malaria—Eighth Report, 873
- United States : Funds for Research and Development by Industry in the (United States National Science Foundation, Reviews of Data on Research and Development, No. 24), 14
- United States Antarctic Research Ship *Eltanin*, 765
- United States Bureau of the Census (Department of Commerce) : Funds for Research and Development in Industry, 1957—Performance and Financing, 132
- United States Coast and Geodetic Survey : Technical Bulletin No. 12, Use of Artificial Satellites for Navigation and Oceanographic Surveys (Paul D. Thomas), 134
- United States Geological Survey : Professional Paper No. 373, Aerial Photographs in Geologic Interpretation and Mapping (Dr. Richard G. Ray), 1155
- United States National Academy of Sciences : Henry Draper Medal awarded to Dr. Martin Schwarzschild, 307
  - James Craig Watson Medal awarded to Prof. O. H. L. Heckmann, 489
  - Election of Officers, 674
  - Medal Awards, 674
  - Election of new Members, 674
- United States National Academy of Sciences—National Research Council : Publication No. 799, Digest of Literature on Dielectrics, Vol. 23, 1959 (edited by Louis J. Frisco and Thomas D. Callinan), *review* by Vera Daniel, 75
  - Science in Antarctica (Report by the Committee on Polar Research), Part 1, The Life Sciences in Antarctica ; Part 2, The Physical Sciences in Antarctica, 1062
- United States National Bureau of Standards : National Committee on Radiation Protection and Measurements, Report No. 26, X-Ray Protection at High Voltages, 589
- United States National Museum : Annual Report for 1960, 309
  - Bulletin No. 220, Type Specimens of Reptiles and Amphibians in the United States National Museum (Doris M. Cochran), 863
  - *Proceedings* of the, No. 3443, Cultural Sequences in Hokkaido, Japan (Lieut.-Col. H. A. MacCord), 864
- United States National Research Council (National Academy of Sciences) : Publication No. 799, Digest of Literature on Dielectrics, Vol. 23, 1959 (edited by Louis J. Frisco and Thomas D. Callinan), *review* by Vera Daniel, 75
  - Science in Antarctica (Report by the Committee on Polar Research), Part 1, The Life Sciences in Antarctica ; Part 2, The Physical Sciences in Antarctica, 1062
- United States National Science Foundation : Grant to the American Institute of Biological Sciences to support the undertaking of a Biological Sciences Communication Project, 13
  - Reviews of Data on Research and Development, No. 24, Funds for Research and Development by Industry in the United States, 14
  - Funds for Research and Development in Industry, 1957—Performance and Financing, 132
  - Federal Funds for Science in 1959-61, 217
  - Tenth Annual Report (1959-60), 494
  - Grant of 865,500 dollars to the American Type Culture Collection, towards the construction of a new building to house its collection of micro-organisms, 766
  - Current Projects on the Economic and Social Implications of Scientific Research and Development (1960), 863
  - *Scientific Information Notes*, February-March 1961, 961
- United States Project Mohole, 393
- United States Senate : Bill, S3570, for the Control of Experiments on Animals, 677
- United States Society of Automotive Engineers, Inc. (Flight Safety Foundation Award, Inc. of the) : Laura Taber Barbour Air Safety Award for 1961 awarded to E. S. Calvert and J. W. Sparkes, 312
- United Steel Companies, Ltd. : Appointment of Dr. K. J. Irvine as metallurgical research manager, 591
- Unity and Diversity in Biochemistry, an Introduction to Chemical Biology (Marcel Florkin), translated from the French by T. Wood, *review* by Dr. M. R. Atkinson, 479
- Universal Reflecting Telescope : The 2-Metre, of the German Academy of Science, Berlin (Dr. Rudolf Jobst), 301
- Universe : The Wider (Paul Couderc), *review* by G. R. Noakes, 64
- Universities : Admission to, in Britain, 401
- Universities of Scotland, Carnegie Trust for the : Fifty-ninth Annual Report (1959-60), 316
- Universities of the United Kingdom, Committee of Vice-Chancellors and Principals of the : Third Report of an *ad hoc* Committee on Procedure for Admission of Students, 401
- Universities (British) : Commonwealth Students in, 308
- Universities (New), in Britain, 1063
- Universities Federation for Animal Welfare : Opinions of British Scientists of Home Office Control of Experiments on Animals, 677
- Universities and Technical Colleges : Research Reactors for, 960
- University : The Technological (Dr. S. C. Curran), 128
- University of Adelaide : Mawson Institute of Antarctic Research (Prof. A. R. Alderman), 1157
- University of Birmingham : Appointment of Dr. M. Z. Atassi as Research Fellow in the Department of Chemistry, 135
  - Appointment of Dr. B. Cockayne as lecturer in the Department of Physical Metallurgy, 135
  - Appointment of M. J. Hamlin as lecturer in the Department of Civil Engineering, 135
  - Appointment of Dr. D. A. Smith as lecturer in the Department of Microbiology, 135
  - Title of reader in neuropharmacology conferred on Dr. P. B. Bradley, 135
  - Appointment of Dr. W. F. Vinen to a chair of physics, 587, 679
  - Title of professor of taxonomic botany conferred on Dr. J. G. Hawkes, 679
  - Appointment of Dr. G. V. Chester to a senior lectureship in mathematical physics, 679
  - Appointment of Dr. A. S. Jones to a senior lectureship in chemistry, 679
  - Appointment of Dr. L. W. Poel to a senior lectureship in botany, 679
  - Appointment of Dr. J. W. Railly to a senior lectureship in mechanical engineering, 679
  - Appointment of J. G. Henderson to a senior lectureship in electrical engineering, 679
  - Appointment of Sir Francis Knowles to a senior lectureship in anatomy, 679
  - Appointment of A. A. Walters to a senior lectureship in econometrics and social statistics, 679
  - Appointment of Dr. W. E. Cavenagh to a senior lectureship in social study, 679
  - Appointment of Dr. D. E. Cohen to a lectureship in pure mathematics, 679
  - Appointment of H. P. Rogosinski to a lectureship in pure mathematics, 679
  - Appointment of Dr. R. H. Jones to a lectureship in civil engineering, 679
  - Appointment of Dr. M. H. Jeynes to a lectureship in bacteriology, 679
  - Appointment of W. R. H. Batty to a lectureship in chemistry, 679
  - Appointment of Dr. J. P. Simons to a lectureship in chemistry, 679
  - Appointment of Prof. E. N. Corlett to a lectureship in engineering production, 679
  - Appointment of Dr. A. J. Miller to a lectureship in highway and traffic engineering, 679
  - Appointment of T. Brereton to a lectureship in mining and minerals engineering, 679
  - Appointment of J. R. Rawling to a lectureship in mining and minerals engineering, 679
  - Appointment of Dr. J. Lehmann as I.C.I. Research Fellow in the Department of Chemistry, 679
  - Appointment of P. Johnson to a Research Fellowship in the Department of Medical Biochemistry and Pharmacology, 679
  - Appointment of R. Joy to a Research Fellowship in the Department of Medical Biochemistry and Pharmacology, 679
  - Appointment of Dr. B. Sakita to a Research Fellowship in the Department of Mathematical Physics, 679
  - Grant of £157,143 from the Ford Foundation, to support a long-term programme of research in the Department of Anatomy into the reproductive physiology of monkeys, 679
  - Grant of £42,300 from the Department of Scientific and Industrial Research, for research on organic fluorine compounds in the Department of Chemistry, 679
  - Graduate Course on Electrical Machines, 768
  - Appointment of Dr. J. G. Hawkes to a chair of taxonomic botany, 1059
- University of Bristol : Appointment of R. Bassindale to a senior lectureship in zoology, 396
  - Appointment of Dr. A. Couper to a senior lectureship in inorganic and physical chemistry, 396
  - Appointment of Dr. F. G. Hannell to a senior lectureship in geography, 396
  - Appointment of Dr. J. R. Holmes to a senior lectureship in veterinary medicine, 396
  - Appointment of Dr. W. K. Metcalf to a senior lectureship in anatomy, 396
  - Appointment of W. H. Dearden to a senior lectureship in metallurgy, 396
  - Appointment of Dr. M. S. G. Cullimore to a senior lectureship in civil engineering, 396
  - Appointment of Dr. R. G. Chambers and Dr. D. Bohm as readers in physics, 1156
  - Appointment of A. R. Paterson as lecturer in applied mathematics, 1156
- University of California : The Axiomatic Method, with special reference to Geometry and Physics—Proceedings of an International Symposium held at Berkeley, 1958 (edited by Prof. Leon Henkin, Prof. Patrick Suppes and Prof. Alfred Tarski), *review* by F. I. G. Rawlins, 570
- University of Cambridge : Arnold Gerstenberg Studentship for 1962, 396
  - Appointment of Prof. D. C. Johnson to a chair of mechanics, 488
  - Appointment of Prof. A. Schlüter and Prof. G. Fodor to overseas fellowships at Churchill College, 963
- University (Australian National), Canberra : Appointment of Sir John Cockcroft as chancellor, 680
- University of Colorado : International Conference on Heat Transfer, 1156
- University (Cornell) : George Fisher Baker Non-resident Lectureship in Chemistry—The Proton in Chemistry (R. P. Bell), *review* by Prof. J. A. V. Butler, 57
- University of Edinburgh : Appointment of Dr. Dugald Gárdner as senior lecturer in pathology, 135
  - Appointment of Dr. R. C. Dorf as a lecturer in electrical engineering, 135
  - Appointment of T. Astarabadi as a lecturer in physiology, 135
  - Appointment of Dr. E. A. Smith as a senior lecturer in public health and social medicine, 680
  - Appointment of Dr. Allan Campbell as a senior lecturer in zoology, 680

  - Appointment of G. O. Goudie as a lecturer in engineering, 680
  - Appointment of Dr. Tao-Ching Hsü as a lecturer in engineering, 680
  - Appointment of A. L. Florence as a lecturer in engineering, 680
- University of Florida : Director's Report for 1959-60 of the Florida State Museum, 133
- University of Ghent : Sixth International Nematology Symposium, to be held at the State Agricultural College, 963
- University (State Agricultural), Ghent : Third International Symposium on Phytopharmacy and Phytiatry, 493
- University of Glasgow : Informal Meeting at the Royal College of Science and Technology, Glasgow (under the auspices of the Faraday Society) to mark the centenary of the publication by Thomas Graham of his paper on Liquid Diffusion, 312
  - Appointment of Dr. C. H. Wilson as principal, 680
  - Retirement of Prof. J. P. Todd from the chair of pharmacy in the Royal College of Science and Technology, Glasgow, 764
  - Appointment of Dr. John B. Stenlake to the chair of pharmacy in the Royal College of Science and Technology, Glasgow, 764
  - Appointment of Dr. Ernest O. Morris to the new chair of applied microbiology and biology in the Royal College of Science and Technology, Glasgow, 764
- University of Hull : Appointment of Dr. G. C. Bond to a senior lectureship in chemistry, 1156
  - Appointment of Dr. A. Cunliffe to a senior lectureship in physics, 1156
  - Appointment of Dr. H. W. Parsons to a senior lectureship in mathematics, 1156
- University of Leeds : Appointment of Dr. J. F. Bowers to a lectureship in mathematics, 219
  - Appointment of Dr. A. Myers to a lectureship in physics, 219
  - Appointment of M. Wells to a lectureship in electronic computing, 219
  - Annual Report for 1959-60 of the Librarian, 310
  - Appointment of Dr. A. E. Guile as senior lecturer, and J. M. Stephenson as lecturer, in the Department of Electrical Engineering, 963
  - Appointment of Dr. D. H. Niblett as lecturer in the Department of Physics, 963
  - Appointment of Dr. T. A. Scott as lecturer in the Department of Biochemistry, 963
  - Appointment of D. J. Harberd as lecturer in the Agricultural Section of the Department of Agriculture, 963
- University of Lisbon : Grant of £29,949 from the Gulbenkian Foundation, for cytological work at the Institute of Histology and Embryology, 218
- University of Liverpool : International Symposium on the Ecology of Soil Fungi (edited by D. Parkinson and J. S. Waid), *review* by Dr. P. H. Gregory, 51
  - Appointment of Dr. R. S. Benson as reader in mechanical engineering, 963
  - Appointment of J. O. L. King as reader in animal husbandry, 963
  - Appointment of Dr. J. H. Leck as reader in electronic engineering, 963
  - Appointment of Dr. R. B. Whittington as reader in civil engineering, 963
  - Appointment of Dr. A. Young as reader in numerical analysis, 963
  - Appointment of J. W. Dransfield as senior lecturer in veterinary anatomy, 963
  - Appointment of Dr. W. H. Evans as a senior lecturer in physics, 963
  - Appointment of Dr. D. Flinn as a senior lecturer in geology, 963
  - Appointment of J. Halling as senior lecturer in mechanical engineering, 963
  - Appointment of Dr. D. Hull as senior lecturer in metallurgy, 963
  - Appointment of Dr. J. W. Lynn as senior lecturer in electric power engineering, 963
  - Appointment of Dr. W. R. H. F. Muirhead as a senior lecturer in physics, 963
  - Appointment of Dr. N. Rast as a senior lecturer in geology, 963
  - Appointment of Dr. J. P. Riley as senior lecturer in oceanography, 963
  - Appointment of Dr. C. F. H. Tipper as senior lecturer in inorganic and physical chemistry, 963
  - Appointment of Dr. H. Wilson as senior lecturer in pharmacology, 963
- University of London : Postgraduate Course in Nuclear Technology (Chemical), at the Imperial College of Science and Technology, 16
  - Proceedings of the International Conference on Nuclear Forces and the Few-Nucleon Problem, held at University College, London, 1959 (edited by T. C. Griffith and E. A. Power), *review* by Dr. R. J. N. Phillips, 63
  - Retirement of Prof. L. P. Garrod as professor of bacteriology at St. Bartholomew's Hospital Medical School, 131
  - Appointment of Dr. R. A. Shooter as professor of bacteriology at St. Bartholomew's Hospital Medical School, 131
  - Grant of £10,000 from the Gulbenkian Foundation to the Institute of Archaeology, for the academic part of a postgraduate course in the care and restoration of ancient buildings, 218
  - Appointment of Dr. D. J. Bohm to the University chair of theoretical physics at Birkbeck College, 219, 308
  - Title of reader in spectroscopy in the University (at the Institute of Cancer Research, Royal Cancer Hospital) conferred on Dr. Edna M. F. Roe, 219
  - Title of reader in chemical pathology in the University (at the Postgraduate Medical School of London) conferred on Dr. I. D. P. Wootton, 219
  - Appointment of Desmond Curran to the University chair of psychiatry at St. George's Hospital Medical School, 219
  - Appointment of D. J. Wiseman to the University chair of Assyriology at the School of Oriental and African Studies, 219, 676
  - Appointment of Dr. C. Long to the University readership in biochemistry at the Institute of Basic Medical Sciences, 219
  - Postgraduate Courses, 1961-62, at the Imperial College of Science and Technology, 396
  - Appointment of Prof. D. M. Newitt as senior Research Fellow in the Imperial College of Science and Technology, 396
  - Appointment of Prof. P. M. S. Blackett as pro-rector of the Imperial College of Science and Technology, 396
  - Appointment of Prof. A. R. Ubbelohde as head of the Department of Chemical Engineering and Chemical Technology in the Imperial College of Science and Technology, 396
  - Election of Prof. O. M. B. Bulman, Prof. A. C. Chibnall, T. G. N. Haldane, Dr. D. T. A. Townend and Dr. J. H. Watson as Fellows of the Imperial College of Science and Technology, 396
  - Appointment of Dr. A. H. Chilver to the Chadwick chair of civil engineering in University College, 396, 488
  - Appointment of Dr. F. G. Bailey to the University readership in Asian anthropology at the School of Oriental and African Studies, 396
  - Appointment of Dr. E. G. Gray to the University readership in cytology at University College, 396
  - Title of Sir William Collins professor of anatomy (at the Institute of Basic Medical Sciences) conferred on G. W. Causey, 396
  - Title of Sir William Collins professor of pathology (at the Institute of Basic Medical Sciences) conferred on Dr. G. J. Cunningham, 396
  - Title of reader in veterinary physiology (at the Royal Veterinary College) conferred on Dr. F. R. Bell, 396
  - Title of reader in anatomy (at St. Mary's Hospital Medical School) conferred on Dr. A. S. Breathnach, 396
  - Title of reader in physics (at University College) conferred on Dr. F. F. Heymann, 396
  - Title of reader in chemistry (at University College) conferred on Dr. J. Lewis, 396
  - Title of reader in chemical engineering (at University College) conferred on Dr. J. W. Mullin, 396
  - Retirement of Prof. C. J. Gadd from chair of Ancient Semitic languages and civilizations at School of Oriental and African Studies, 676
  - Appointment of Dr. W. B. Whalley to the University chair of chemistry at the School of Pharmacy, 680, 862
  - Appointment of Dr. I. C. Percival to the University readership in applied mathematics at Queen Mary College, 680
  - Appointment of Dr. S. J. Pirt to the University readership in microbiology at Queen Elizabeth College, 680
  - Appointment of Dr. P. Armitage to the University chair of medical statistics at the London School of Hygiene and Tropical Medicine, 680
  - Appointment of Dr. Dennis Lacy to readership in zoology and comparative anatomy at St. Bartholomew's Hospital Medical College, 680
  - Appointment of Dr. J. A. W. Dalziel as reader in inorganic and analytical chemistry at the Chelsea College of Science and Technology, 680
  - Appointment of Dr. J. D. Donaldson as lecturer in chemistry at the Chelsea College of Science and Technology, 680
  - Summer School in Health Physics (Radiation Protection) at the Imperial College of Science and Technology, 680
  - Sir John Atkins Laboratories of Queen Elizabeth College, 684
  - Retirement of Prof. A. Bradford Hill from the chair of medical statistics in the London School of Hygiene and Tropical Medicine, 764
  - Appointment of Dr. Peter Armitage to the chair of medical statistics in the London School of Hygiene and Tropical Medicine, 764
  - Retirement of Prof. W. H. Linnell from the chair of pharmaceutical chemistry in the School of Pharmacy, 862
  - Appointment of Dr. M. G. Fleming to the University chair of mineral technology in the Imperial College of Science and Technology, 963
  - Appointment of Dr. O. J. Lewis to the University readership in anatomy at St. Bartholomew's Hospital Medical College, 963
  - Appointment of Dr. R. F. Strickland-Constable to the University readership in chemical engineering at the Imperial College of Science and Technology, 963
  - Title of professor of organic chemistry (at the Royal Free Hospital School of Medicine) conferred on Dr. Alexander Lawson, 963
  - Title of professor of urology (at the Postgraduate School of Medicine) conferred on Ralph Shackman, 963
  - Title of reader in chemistry (at the Royal Veterinary College) conferred on Dr. E. G. C. Clarke, 963
  - Appointment of Dr. M. G. Fleming to the new chair of mineral technology in the Imperial College of Science and Technology, 1153
  - Grant of £200,000 from the Wolfson Foundation to University College, to develop the Galton Laboratory and the Department of Eugenics, Genetics and Biometry, 1156
  - Postgraduate Courses in Public Health Engineering at the Imperial College of Science and Technology and the London School of Hygiene and Tropical Medicine, 971
- University of London Institute of Archaeology : Grant of £10,000 from the Gulbenkian Foundation, for the academic part of a postgraduate course in the care and restoration of ancient buildings, 218
- University of London Institute of Basic Medical Sciences : Appointment of Dr. C. Long to the University readership in biochemistry, 219
- University of London School of Oriental and African Studies : Appointment of D. J. Wiseman to the University chair of Assyriology, 219, 676
- University of London School of Pharmacy : Appointment of Dr. W. B. Whalley to the University chair of chemistry, 680, 862
  - Retirement of Prof. W. H. Linnell from the chair of pharmaceutical chemistry, 862
- University of Manchester : Annual Report for 1959-60 of the Manchester Museum, 491
  - Appointment of Dr. F. J. Ursell as Beyer professor of applied mathematics, 680
- University of Manchester, and others : Rutherford Jubilee International Conference, 679
- University of Nottingham : Appointment of D. K. Britton to the new chair of agricultural economics, 132
  - Appointment of Dr. James Crossland as reader in pharmacology, 1156
- University of Oxford : Summer School in Quantum Chemistry at St. Antony's College, 769
- University (Pennsylvania State): Thirty-fourth Annual Priestley Lectures—Unnatural Products, New and Useful Materials from Silicon (Prof. Eugene G. Rochow), *review* by Dr. J. S. Anderson, 59
- University (Princeton) : Seminar on Transformation Groups (Armand Borel), *review* by Dr. Hanna Neumann, 571
- University of Sheffield : Title of Dr. G. Weber's readership announced as reader in biophysics, 396
  - Appointment of J. E. Enderby as a lecturer in physics, 396
  - Appointment of Dr. J. V. S. Mani as I.C.I. Research Fellow in the Department of Fuel Technology and Chemical Engineering, 396
  - Appointment of Dr. R. A. Smith to the chair of physics, 960
  - Appointment of Dr. A. M. Murray as lecturer in physics, 1156
- University of Southampton : Donation of £28,700 (over a period of seven years) from Hawker-Siddeley Aviation, Ltd., to the centenary appeal, for a readership and a lectureship in the Department of Aeronautics and Astronautics, 397
  - Donation of £10,000 from Alcan Industries, Ltd., to the centenary appeal, 397

  Title of senior lecturer in aeronautics and astronautics conferred on K. N. C. Bray, 397
  Title of senior lecturer in electronics conferred on Dr. W. A. Gambling, 397
  Title of senior lecturer in mechanical engineering conferred on Dr. N. S. Grassam, 397
  Title of senior lecturer in chemistry conferred on Dr. A. C. Riddiford, 397
  Appointment of V. J. D. Baston, Dr. H. Holstein and C. R. F. Maunder as lecturers in mathematics, 397
  Appointment of W. S. Hall and T. Sprinks as Research Fellows in mathematics, 397
  Appointment of G. C. Spencer as lecturer in mechanical engineering, 397
University of Southampton and the Timber Development Association : Joint Conference on Timber Engineering, 769
University of Sydney : Appointment of Prof. P. T. Fink to the chair of mechanical engineering, 12
University of Toronto : Appointment of Dr. Arthur Porter as the first professor of industrial engineering, 131
University of Uppsala : Establishment of an International School for Research and Education in Physics (sponsored by the International Atomic Energy Agency, Unesco, and the Central Committee for Swedish Technical Assistance), 311
University (Banaras Hindu), Varanasi : Appointment of Dr. S. P. Ray-Chaudhuri to the chair of zoology, 765
University of Wales : Retirement of Prof. W. R. D. Jones from the chair of metallurgy and fuel technology in the University College of South Wales and Monmouthshire, Cardiff, 12
  Appointment of Dr. H. K. M. Lloyd to the chair of metallurgy and fuel technology in the University College of South Wales and Monmouthshire, Cardiff, 12
  Appointment of Dr. O. C. Zienkiewicz to the chair of civil engineering in University College, Swansea, 215
  New Chemistry Laboratories at University College, Swansea, 964
University (Yale) : Addison Emery Verrill Medal of the Peabody Museum awarded to Dr. J. T. Delacour, 16
University College, Ghana : Retirement of Prof. E. E. Edwards from the chair of zoology, 216
  Appointment of Prof. R. D. Purchon to the chair of zoology, 216
University College, London : Proceedings of the International Conference on Nuclear Forces and the Few-Nucleon Problem, 1959 (edited by T. C. Griffith and E. A. Power), *review* by Dr. R. J. N. Phillips, 63
  Appointment of Dr. A. H. Chilver to the Chadwick chair of civil engineering, 396
  Appointment of Dr. E. G. Gray to the University of London readership in cytology, 396
  Title of reader in physics conferred on Dr. F. F. Heymann, 396
  Title of reader in chemistry conferred on Dr. J. Lewis, 396
  Title of reader in chemical engineering conferred on Dr. J. W. Mullin, 396
  Appointment of Dr. A. H. Chilver to the Chadwick chair of civil engineering, 488
  Grant of £200,000 from the Wolfson Foundation, to develop the Galton Laboratory and the Department of Eugenics, Genetics and Biometry, 1156
University College of North Staffordshire : Grant of £5,000 from the Nuffield Foundation, to pay for an investigation into the effects of the Keele Foundation Year Course, 865
University College of Rhodesia and Nyasaland : Grant of £2,000 from the Gulbenkian Foundation, for a gas liquefier for the Gulbenkian Radiocarbon Dating Laboratory, 218
University College of South Wales and Monmouthshire, Cardiff : Retirement of Prof. W. R. D. Jones from the chair of metallurgy and fuel technology, 12
  Appointment of Dr. H. K. M. Lloyd to the chair of metallurgy and fuel technology, 12
University College, Swansea : Appointment of Dr. O. C. Zienkiewicz to the chair of civil engineering, 215
  New Chemistry Laboratories, 964
University Entrance—the Basic Facts (National Union of Teachers), second edition, 16
University Foundation for International Co-operation (Netherlands) : Summer School in Science (Fundamental Problems in Statistical Mechanics), 769
University Grants Committee : Appointment of M. J. Bishop as a member, 397
University and Industry in Manchester : Co-operation between, 767
Unnatural Products, *review* by Dr. J. S. Anderson, 59
Unnatural Products—New and Useful Materials from Silicon (Prof. Eugene G. Rochow), (Thirty-fourth Annual Priestley Lectures), *review* by Dr. J. S. Anderson, 59
Unorthodox View : Ion Transport—an, *review* by Dr. I. M. Glynn, 848
Unrau, Dr. J. : *Obituary* by Prof. T. J. Arnason, Prof. L. P. V. Johnson, Prof. W. J. White and A. Wilkes, 1057
Unrestrained Animals : Determination of Physiological Rhythms of, by Radio Telemetry (Warren O. Essler and Prof. G. Edgar Folk, jun.), 90
Unsaturated Fatty Acids (Highly) : Effect of Duodenal Administration of, on Composition of Ruminant Depot Fat (Bridget M. Ogilvie, Prof. G. L. McClymont and Dr. F. B. Shorland), 725
Unsealed Radioactive Substances Regulations (Ministry of Labour and National Service), 766
Unstable Diploids of *Penicillium chrysogenum*: Action of Mycophenolic Acid on (Dr. A. Ballio and Dr. G. Sermonti), 108
Unstable Intermediate carrying Information from Genes to Ribosomes for Protein Synthesis (Dr. S. Brenner, Dr. F. Jacob and Dr. M. Meselson), 576
Unstable Ribonucleic Acid revealed by Pulse Labelling of *Escherichia coli* (Dr. Francois Gros, Dr. H. Hiatt, Dr. Walter Gilbert, Dr. C. G. Kurland, R. W. Risebrough and Dr. J. D. Watson), 581
Unusually Small Ribonucleic Acid : Bromegrass Mosaic Virus, a Virus containing an (Larry E. Bockstahler and Prof. Paul Kaesberg), 192
Upland Heaths : Afforestation of (J. W. L. Zehetmayr), 136
Upper Air Densities : A Preliminary Model for the Variations of (Dr. H. K. Paetzold), 35
Upper Atmosphere : Winds and Circulation in the (Royal Meteorological Society Symposium on), 591
Upper Limit for the Resistivity of a Superconducting Film (R. F. Broom), 992
Upper Plastic Limit of Clays : Interpretation of the (Prof. B. P. Warkentin), 287
Uptake (Salt), of Storage Tissue : The 'Lag-Phase' in (R. F. M. Van Steveninck), 1072
Uraemia : Influence of, on the Survival of Skin Homografts (F. G. Smiddy, R. G. Burwell and F. M. Parsons), 732
Uranium as Pyrophosphate : Determination of (J. S. Wright, T. J. Hayes and J. A. Ryan), 1188
Urea : Enzymatic Reduction of Diphosphopyridine Nucleotide with (Hirohisa Omura and Yutaka Osajima), 345
  Termination of Diapause in *Acheta* by (T. W. Hogan), 367
Urea Derivatives : Plasma Clot Dissolution by (Prof. Kurt N. von Kaulla and Robert L. Smith), 449
Urethan : Leukaemogenesis by, in New-born Swiss Mice (Dr. L. Fiore-Donati, Dr. L. Chieco-Bianchi, Dr. G. de Benedictis and Dr. G. Maiorano), 278
Urinary Methylamine in the Rat : Metabolic Origin of (E. Jack Davis and Dr. R. S. De Ropp), 636
Urinary Œstrogens : A Supplement to the Kober Reaction for (Dr. L. Bradshaw), 809
Urinary Pyrocatechol : Origin of (Dr. Alfred A. Smith), 167
Urine (Rat) : Changes of Hexose/Hexosamine Ratio and Degree of Branching in Glycoprotein from, during the Development of Cancer (Prof. Sen-itiroh Hakomori, Hiroaki Kawauchi and Taiko Ishimoda), 265
Urist, Dr. M. R. (Schjeide, Dr. O. A., and) : Proteins of the Hen's Egg Yolk, 1175
Urocanicacidurea associated with Hepatic Coma (Dr. William M. McIsaac and Irvine H. Page), 347
Urquhart, Dr. D. J. : Appointed first director of the National Lending Library for Science and Technology, 215 ; work of, 215
  Science and Industry—the Problem of Communication, 965
Urquhart, Dr. F. A. : The Monarch Butterfly, *review* by Dr. C. B. Williams, 73
Ursell, Dr. F. J. : Appointed Beyer professor of applied mathematics in the University of Manchester, 680
Usborne Memorial Prize of the Royal Aeronautical Society awarded to T. W. F. Moore, 863
Use of Agar Diffusion and Fluorescent Antibody (Richard de Long), 1126
Use of Artificial Satellites for Navigation and Oceanographic Surveys (Paul D. Thomas), 134
Use of an Artificial Spermatophore in the Study of Activation of Spermatozoa and Development of Spermatophores in the Cockchafer (Dr. V. Landa), 935
Use in Differentiating Saprophytic Mycobacteria from other Mycobacteria : Formamidase in Mycobacteria and its (Dr. Hideo Nagayama, Dr. Kiyoshi Konno and Prof. Sutemi Oka), 1219
Use of Ferri- or Ferro-cyanide for the Study of Haemoproteins : Precautions in the (Prof. D. Keilin), 717
Use of Flash Photolysis to Initiate Detonation in Gaseous Mixtures (J. Wadsworth), 623
Use of Krypton for Surface Area Measurements (Peter Cannon and George L. Gaines, jun.), 340
Use of 'Mixed Haemadsorption' Method in Virus-infected Tissue Cultures (Dr. Astrid Fagraeus and Dr. Åke Espmark), 370
Use of Phenergan : Reversible Nature of Liver Cell damage due to Carbon Tetrachloride as demonstrated by the (Dr. K. R. Rees and Dr. W. G. Spector), 821
Use of Rotating Machinery : Generation of Electricity without the (Dr. K. H. Spring), 297
Use of Superconductors for producing Strong Magnetic Fields, 134
Use of the Term 'Flux' (S. C. Ghose and J. C. Young), 621
Use of Tracers in the Study of Diseases of Porphyrin Metabolism (Biology Division of the French Atomic Energy Commission Colloquium on), 870
Use of Transparent Adhesive Tape in the Preparation of Microsections (D. S. Gowers and R. E. Miller), 424
Use of Tritiated Thymidine for the Study of the Origin of the Osteoclast (Dr. E. A. Tonna and E. P. Cronkite), 459
Use (Controlled), of Adsorbents in Enzyme Purification (Dr. I. T. Oliver), 810
Use and Misuse : The Soil—Problems raised by its (Institute of Biology, the Royal Institute of Chemistry, the Institute of Physics and the Physical Society Symposium on), 770
Useful Materials (New and), from Silicon : Unnatural Products— (Prof. Eugene G. Rochow), (Thirty-fourth Annual Priestley Lectures), *review* by Dr. J. S. Anderson, 59
Uses (Peaceful), of Atomic Energy (U.S.S.R. State Committee of the Council of Ministers for the Utilization of Atomic Energy and the United Kingdom Atomic Energy Authority Collaboration on the), 960
Ushakov, S. A. (Lazarev, G. E., and) : Study of the Ice Sheet and of the Earth's Crust in the Antarctic Continent, 677
U.S.S.R. : Meteorites in the, 492
U.S.S.R. Academy of Sciences : The Cathode Ray Tube Memory of the High Speed Electronic Computer of the (V. N. Laut and L. A. Lyubovich), translated from the Russian by Ruth Feinstein ; edited by F. A. Sowan, *review* by J. C. Cluley, 383
  Information Bulletin I.G.Y., No. 8, 493
  Bibliography of Publications relating to the I.G.Y., 493
  Retirement of Academician A. N. Nesmeyanov as president, 959
  Election of Academician M. Keldysh as president, 959
  Mineraly (Minerals, a Reference Book), Vol. I, *review* by Prof. C. F. Davidson, 1047
  Yadernaya Geokhronologiya (Nuclear Geochronology), (Dr. I. E. Starik), 1062
U.S.S.R. State Committee of the Council of Ministers for the Utilization of Atomic Energy and the United Kingdom Atomic Energy Authority : Collaboration on the Peaceful Uses of Atomic Energy, 960
Uterine Position : Influence of, on the Response of the Mouse Embryo to the Teratogenic Effects of Hypervitaminosis-A (Dr. D. H. M. Woollam and Dr. J. W. Millen), 184
Uterine Wall of the Guinea Pig during the Sexual Cycle : Hyaluronic Acid in the (I. N. Likar, L. J. Likar and Dr. H. E. Taylor), 1118

Utilization of Atomic Energy (U.S.S.R. State Committee of the Council of Ministers for the), and the United Kingdom Atomic Energy Authority : Collaboration on the Peaceful Uses of Atomic Energy, 960
Utilization of Nitrate by Micro-organisms (Dr. C. A. Fewson and Dr. D. J. D. Nicholas), 2

VACCINIA Viruses (Rabbit-Pox and) : An Immunizing Antigen from (G. Appleyard), 465
Vacuole of *Candida utilis* : Crystallization of Purines in the (Prof. Allan H. Roush), 449
Vacuum : Phenomena occurring at Electrically Stressed Metallic Surfaces in (R. Hawley and Dr. C. A. Walley), 252
Vacuum Physics : Standard Unit of Pressure in (Dr. N. A. Florescu), 522 ; (P. H. Bigg), 523
Vacuum Society, Inc. (American) : Vacuum Technology Transactions—Proceedings of the Sixth National Symposium, also Cumulative Author and Subject Indexes of 1954-59 Symposia (edited by C. Robert Meissner), *review*, 296
Vacuum Technology Transactions—Proceedings of the Sixth National Symposium, also Cumulative Author and Subject Indexes of 1954-59 Symposia (American Vacuum Society, Inc.), (edited by C. Robert Meissner), *review*, 296
Vail, J. R., and others : Karroo Igneous Activity and Tectonics in south-east Southern Rhodesia, 40
Väisälä, Prof. Vilho : Work of, 1059
Valadon, L. R. G., and others : Nucleic Acid Content of Haploid and Diploid Cells of *Protomyces inundatus*, 836
Valentine, Prof. D. H. : Experimental Taxonomy of Flowering Plants, 968
Valentine, Prof. James W. (Rucker, James B., and) : Salinity Response of Trace Element Concentration in *Crassostrea virginica*, 1099
Valkema, A. T., and others : Influence of various Dietary Fats on the Blood Cholesterol Content, 310
Vallance-Owen, Dr. J. (Lilley, M. Deloris, and) : A Factor associated with 'Visking' Tubing capable of Antagonizing Insulin, 1196
Vallee, Dr. Bert L., and others : Nitrogen and Sulphur at the Active Centre of Carboxypeptidase *A*, 633
Vallender, H. W. : Appointment as deputy director of the Association of British Chemical Manufacturers, 865
Valley (Taylor Dry) : Seal Tracks in the (G. G. Claridge), 559
Valuation and Rating of Scientific Institutions, 309
Values (Relative), of Animal and Vegetable Fats in Nutrition (Scottish Branch of the Nutrition Society Symposium on), 135
Valzelli, G., and others : Lactic Acid Concentration in the Kidney of the Golden Hamster, *Mesocricetus auratus*, in Different Conditions of Diuresis, 178
Van Allen Belts about the Earth : A Radio Wave Mechanism to account for the Known Distribution of (Joseph M. Boyer), 597
van Bath, Prof. Slicher : At the Annual Conference of the British Agricultural History Society (Use of Farm Accounts as material for investigating Farm Management and Agricultural Output between the Middle Ages and the Eighteenth Century), 682
Van Buchem, F. S. P., and others : Influence of various Dietary Fats on the Blood Cholesterol Content, 310
Van Camp, K., and others : Discrimination between α-Tracks and γ-Background in Ilford Nuclear Emulsions, 38
Van Houten, Dr. Robert W. : Elected president of the American Society for Engineering Education, 679
van Rensburg, N. J., and others : Acetylcholinesterase and the Life-span of the Erythrocyte, 1208
Van Steveninck, R. F. M. : The 'Lag-Phase' in Salt Uptake of Storage Tissue, 1072
Van Swaay, Dr. M. (presented by) : Gas Chromatography (Quantitative Analysis of Hydrocarbons with Capillary Columns and Flame Ionization Detectors), (paper by J. G. A. Hölscher), 867
Van Wulften Palthe, Dr. P. M. : Elected a member of the Life Sciences Section of the International Academy of Astronautics, 495
van der Hoeden, Prof. J., and others : *Leptospira*-agglutinating Factors in Turtle Sera, 95
van der Kerk, Prof. G. J. M. : Fungicides in Agriculture and Horticulture (New Developments in Organic Fungicides), 594
Van der Kloot, Prof. W. G. (Kolodny, Roselyn L., and) : Contraction of Smooth Muscles in Non-Ionic Solutions, 786
Vanadium : Spectrum of, in the Tri-positive Oxidation State (V^{3+}) in Tetrahedral Co-ordination (Dr. D. M. Gruen and R. Gut), 713
Vandel, Prof. Albert : Isopodes Terrestres, Première Partie, *review* by Dr. E. M. Sheppard, 382
Vanilla : Flowering Behaviour of (James E. Irvine and Norman E. Delfel), 366
Vanillin : Polarographic Determination of (Jiří Davídek), 1003
Vannerberg, Nils-Gösta (Brosset, Prof. Cyrill, and) : Structure of Polynuclear Cobalt Complexes, 714
Vänngård, Tore, and others : Electron Spin Resonance Line-Widths in Solutions of Copper and Silver Dithiocarbamates, 258
Vapour (Iodine), with Copper : Effect of a Thin Oxide Film on the Reaction of (R. A. J. Shelton, S. Blairs and D. Margrave), 1183
Vapour-deposited Carbon : Structure of (Dr. George Colligan and Dr. Francis Galasso), 621
Varga, D. (Bolliger, Dr. A., and) : Feather Lipids, 1125
Variant : A New Haemoglobin (the 'Honolulu Type') in a Chinese (Dr. Rose G. Schneider and Dr. Robert T. S. Jim), 454
Variant of Parotid Tumour (Polyoma) Virus showing a Change in Oncogenic Properties (Lloyd W. Law, Alan S. Rabson and Clyde J. Dawe), 97
Variants (Haemoglobin), in Sarawak and North Borneo (Dr. F. Vella and Dr. D. Tavaria), 729
Variation in the Behaviour of Different Genotypes of *Drosophila* towards Odoriferous Vegetable Oils (A. J. Clutterbuck and Dr. J. A. Beardmore), 1135
Variation in Height of Anisotropy and Random Drift Velocity of the Irregularities in the Ionosphere (Dr. B. Ramachandra Rao and K. V. V. Ramana), 706
Variation in the Secondary Sex-Ratio of the Grey Seal *Halichoerus grypus* (Fab.) during the Breeding Season (Dr. J. C. Coulson and Grace Hickling), 281
Variation with Temperature of the Photoelastic Constants of Sodium Chloride (Dr. K. V. Krishna Rao and V. G. Krishna Murty), 429
Variation (Seasonal), of the Sea Surface Temperature in Coastal Waters of the British Isles (F. E. Lumb), 1164
Variation (Seasonal), and Age of Radioactive Fall-out (R. P. Parker and J. O. Crookall), 574
Variation (Secular), of the Flux Density of the Radio Source Cassiopeia A (D. S. Heeschen and B. L. Meredith), 705
Variations of Upper Air Densities : A Preliminary Model for the (Dr. H. K. Paetzold), 35
Variations (Solar), Climatic Change and related Geophysical Problems (Section of Geological Sciences and Division of Oceanography and Meteorology of the New York Academy of Sciences, in co-operation with the American Meteorological Society Symposium on), 967
Varieties (Fruit) : Environmental Factors in the Distribution of (European Association for Research on Plant Breeding Conference on), 16
Varma, Dr. M. G. R. : Some Aspects of Disease Transmission by Ticks, 683
Veal, —., and Richey, —. : Television and Film Techniques (Technical Requirements of Systems and Film for Colour Television), 869
Vector (Presumed), of *Hepatocystis* (=*Plasmodium*) *kochi* (Laveran, 1899) : *Culicoides adersi* Ingram and Macfie, 1923, a (Prof. P. C. C. Garnham, R. B. Heisch, D. M. Minter, J. D. Phipps and Michael Ikata), 739
Vector Form : Satellite Orbit Perturbations in (R. R. Allan), 615
Vectors (Aphid) : Negative Evidence against Passage of Whole Plant Virus Particles through Gut Wall in (Prof. Frej Ossiannilsson), 1222
Veevers, J. J. : Appointed to a Harkness Fellowship (geology) of the Commonwealth Fund, 308
Vegetable Fats (Animal and), in Nutrition : The Relative Values of (Scottish Branch of the Nutrition Society Symposium on), 135
Vegetable Oils (Odoriferous) : Variation in the Behaviour of Different Genotypes of *Drosophila* towards (J. A. Clutterbuck and Dr. J. A. Beardmore), 1135
Vegetable Research Station Association (National) : Talks and Demonstrations on Soil Physical Conditions affecting Plant Growth, 221
Végétales (Les Formations), et Paysages Ruraux (G. Plaisance). *review* by N. Y. Sandwith, 478
Vejbora, O., and others : Mechanism of Increase of Endotoxin Susceptibility in Animals showing Delayed Hypersensitivity, 182
Velikii, G. G. : Singing Sand from the Dnieper, 678
Vella, Dr. F., and Tavaria, Dr. D. : Haemoglobin Variants in Sarawak and North Borneo, 729
Velle, Weiert, and others : Identification of 20β-Hydroxy-pregn-4-ene-3-one in Luteal Tissue from Pregnant Whales, 1009
Velocity of Light in a Magnetic Field (Prof. Thomas Erber), 25
Velocity of Light emitted by a Moving Source (Dr. W. G. V. Rosser), 249
Velocity of Rise of Bubbles in Water : Effect of Mass Transfer on the (Dr. J. H. Leonard and Prof. G. Houghton), 687
Velocity (Apparent Intermediate Super-), of Detonation (Dr. C. H. Johansson), 709
Velocity (Phase-) of Ultra-sound in the Primary Aliphatic Amines (L. V Kite), 1183
Velocity (Random Drift), of the Irregularities in the Ionosphere : Variation in Height of Anisotropy and (Dr. B. Ramachandra Rao and K. V. V. Ramana), 706
Venables, Dr. P. F. R. : Technical Education in Wales, 774
Venom (Cobra), and a Detergent : Reversible Block of Axonal Conduction by Curare after Treatment with (Dr. Philip Rosenberg and Dr Seymour Ehrenpreis), 728
Venoms (Scorpion) : Scorpamins, the Toxic Proteins of (Francois Miranda and Serge Lissitzky), 443
Venus : A New Determination of the Solar Parallax by means of Radar Echoes from (Dr. J. H. Thomson, J. E. B. Ponsonby, G. N. Taylor and R. S. Roger), 519
Verification of the Gastropod Golgi Cycle with an Electron Microscope (Prof. Leonard G. Worley and Betty Hershenov), 828
Verona, O., and Benedek, T. : Iconographia Mycologica (*Mycopathologia et Mycologia Applicata*, Vols. 11, 12 and 13), *review* by Dr. David Park, 52
Verrill (Addison Emery) Medal of the Peabody Museum, Yale University, awarded to Dr. J. T. Delacour, 16
Vertebrates (Lower) : Differences in Mechanism of Staining Reaction for Mast Cells of some (Prof. A. Stolk), 360
  Histochemical Analysis of some Dehydrogenase Systems in the Erythrocytes of some (Prof. A. Stolk), 926
Vertical Distribution of Ozone : A Twilight Method of Determining the (A. B. Pittock), 426
Very Low Frequencies : Some Preliminary Experimental Tests of a Novel Method of Radiating at (R. N. Gould), 332
Very Small Amounts of Hydrogen Peroxide : Determination of (H. Perschke and Prof. E. Broda), 257
Very Soft X-Rays : Absolute Measurement of Average Energy lost by, per Ion Pair in Air (Prof. B. Rajewsky and Dr. D. Lang), 249
Vestibular Nystagmus and the Electroencephalogram : Effects of Mental Activity on (William E. Collins, George H. Crampton and Jerome B. Posner), 194
Veterinary Annual 1960 (edited by W. A. Pool), *review* by Dr. G. Lapage, 296
Veterinary College (Royal), London : Title of reader in veterinary physiology conferred on Dr. F. R. Bell, 396
  Title of reader in chemistry conferred on Dr. E. G. C. Clarke, 963
Viaud, Prof. Gaston : Intelligence, its Evolution and Forms, *review* by G. R. Noakes, 64
Vibration (Molecular) : Odour and (R. H. Wright), 1101
Vice-Chancellors and Principals of the Universities of the United Kingdom, Committee of : Third Report of an *ad hoc* Committee on Procedure for Admission of Students, 401
Vickery, J. R. (Shenstone, F. S., and) : Occurrence of *Cyclo*-Propene Acids in some Plants of the Order Malvales, 168
Vickery, R. C., and Muir, H. M. : Anomalous Thermoelectric Properties of Gadolinium Selenide, 336
Victoria (Queen) Museum and Art Gallery, Launceston : *Records*, New Series No. 12, Comments on the Cainozoid History of Western Tasmania (B. Scott), 677
  Records, New Series No. 13, Erosion Surfaces in Western Tasmania (B. Scott), 677
  Annual Reports for 1958-59 and 1959-60, 677
View (Unorthodox) : Ion Transport—an, *review* by Dr. I. M. Glynn, 848

Vieweg und Sohn, Friedrich: One hundred and seventy-fifth Anniversary, 16
  Prizes for papers on mathematics, physics and chemistry, 16
Views (Parents'), on Education (Political and Economic Planning, Broadsheet No. 448), 497
Villela, Dr. Gilberto G. : Quinine Oxidase in Liver and Blood Plasma of Rabbits poisoned with Carbon Tetrachloride, 807
Villet, Ruxton : Science in Writing, *review*, 71
Vinen, Dr. W. F. : Appointed to a chair of physics in the University of Birmingham, 587, 679 ; work of, 587
Vines (Grape) : New Herbaceous Test-Plants for Study of the Infectious Degeneration of (E. Baldacci, A. Amici, P. Bonola, E. Betto, G. Fogliani and E. Refatti), 371
Viral Infections of Infancy and Childhood—a Symposium of the Section on Microbiology, New York Academy of Medicine (edited by Prof. Harry M. Rose), *review* by Dr. N. R. Grist, 659
'Virosome' Concept : Nature of the 'Infective Ribonucleic Acid Component' in Cells infected with Encephalomyocarditis Virus and the (A. J. D. Bellett and A. T. H. Burness), 235
Virulence (Intraperitoneal Staphylococcal), for Mice : Enhancement of, with Different Bile Salts (Dr. S. Stanley Schneierson, Daniel Amsterdam and Ely Perlman), 829
Virulent Louping Ill Strain : Comparison of an Attenuated and (M. Grešíková, P. Albrecht and E. Ernek), 508
Virus containing an Unusually Small Ribonucleic Acid : Bromegrass Mosaic Virus, a (Larry E. Bockstahler and Prof. Paul Kaesberg), 192
Virus Particles (Whole Plant) : Negative Evidence against Passage of, through Gut Wall of Aphid Vectors (Prof. Frej Ossiannilsson), 1222
Virus (Bromegrass Mosaic), a Virus containing an Unusually Small Ribonucleic Acid (Larry E. Bockstahler and Prof. Paul Kaesberg), 192
Virus (Encephalomyocarditis), and the 'Virosome' Concept : Nature of the 'Infective Ribonucleic Acid Component' in Cells infected with (A. J. D. Bellett and A. T. H. Burness), 235
Virus (Infective), and Deoxyribonucleic Acid in Pseudorabies Virus-infected Rabbit Kidney Cells : Effect of Mitomycin *C* on the Synthesis of (Dr. Tamar Ben-Porat, Dr. Magdalena Reissig and Dr. Albert S. Kaplan), 33
Virus (Nuclear Polyhedrosis), in Insect Amoebocytes : Multiplication *in vitro* of a (M. E. Martignoni and R. J. Scallion), 1133
Virus (Parotid Tumour (Polyoma)) : Variant of, showing a Change in Oncogenic Properties (Lloyd W. Law, Alan S. Rabson and Clyde J. Dawe), 97
Virus (Rous Sarcoma), associated with Parthenogenesis in Turkey Eggs (Marlow W. Olsen), 191
Virus (Tobacco Mosaic) : Apparent Release of, in Living Infected Cells (Prof. J. G. Bald and R. A. Solberg), 651
  Mutation in, induced by a New Carcinogen, 4-Nitroquinoline N-Oxide (Dr. Hideya Endo, Akiyoshi Wada, Kin-ichiro Miura, Zyun Hidaka and Chuji Hiruki), 833
Virus-infected (Pseudorabies) Rabbit Kidney Cells: Effect of Mitomycin *C* on the Synthesis of Infective Virus and Deoxyribonucleic Acid in (Dr. Tamar Ben-Porat, Dr. Magdelena Reissig and Dr. Albert S. Kaplan), 33
Virus-infected Tissue Cultures : Use of a 'Mixed Haemadsorption' Method in (Dr. Astrid Fagraeus and Dr. Åke Espmark), 370
Viruses in Diseases of Children, *review* by Dr. N. R. Grist, 659
Viruses (Animal) : A Chemical Basis for the Classification of (Dr. P. D. Cooper), 302
Viruses (Newcastle Disease, Para-influenza I and Mumps) : Haemagglutinating Sub-Units released from, by Treatment with Ether (F. Sokol, D. Blaškovič and O. Krizanová-Laučíková), 834
Viruses (Plant), in Crops : Diseases caused by (Association of Applied Biologists Paper-reading Meeting on), 220
Viruses (Rabbit-Pox and Vaccinia) : An Immunizing Antigen from (G. Appleyard), 465
Viruses (Ribonucleic Acid) : Coding Ratio for the (C. R. Woese), 697
Visco-Elastic Liquids : Flow of, from Tubes (J. Harris), 993
Viscosity of Dusty Gases (Dr. Wayne T. Sproull), 976
Vision : Colour, *review* by Prof. R. W. Ditchburn, 201
'Visking' Tubing : A Factor associated with, capable of Antagonizing Insulin (M. Deloris Lilley and Dr. J. Vallance-Owen), 1196
Visual Cells (Single) : Spectral Sensitivity of (Prof. H. Autrum and D. Burkhardt), 639
Visual Pigment of Grapsoid Crabs (Michael H. Briggs), 784
Vitamin B_{12}-Deficiency in the Sheep : Primary Metabolic Defect supervening on—Résumé of Experimental Findings which led to the Present Investigations (Dr. Hedley R. Marston), 1085 ; Demonstration, *in vivo*, of the Site of the Metabolic Defect (Shirley H. Allen, Dr. Hedley R. Marston and Richard M. Smith), 1087 ; Localization, *in vitro*, of the Metabolic Defect, and Separation of the Vitamin B_{12}-containing Methyl Malonyl Co-isomerase (Dr. Hedley R. Marston and Richard M. Smith), 1088 ; Lack of Influence of Vitamin B_{12}-Deficiency on the Sheep's Capacity to Metabolize Glutamate (Shirley H. Allen and Dr. Hedley R. Marston), 1091
Vitamin E. : Ubiquinone (Coenzyme Q) and Function of (Dr. J. Green, A. T. Diplock, J. Bunyan, Dr. E. E. Edwin and Dr. D. McHale), 318
Vitrinite : Distribution of Oxygen in a, and its Extraction Products (A. Halleux, S. Delavarenne and H. Tschamler), 437
Vladimirova, G. B., and others : Biochemical Changes accompanying Impaired Respiration in Staphylococci, 978
Vocal Muscle (Human) : Spiral Nerve-endings (Proprioceptors) in the (G. Rudolph), 726
Vokáč, Dr. Z. : Paracrystalline Haemoglobin as a Species Difference between *Rattus norvegicus* and *Rattus rattus*, 641
Voltages (High) : X-Ray Protection at (National Committee on Radiation Protection and Measurements of the United States National Bureau of Standards, Report No. 26), 589
Volume and Weight of Living Animals : Determination of the (Prof. C. P. Gnanamuthu), 826
Volume (Total), and Isotopic Dilution Techniques of Argon Measurement : Potassium–Argon Ages of the Dartmoor and Shap Granites using the (M. H. Dodson, J. A. Miller and D. York), 800
von Buddenbrock, Prof. W. : Vergleichende Physiologie, Band 5, Physiologie der Erfolgsorgane, *review* by Prof. O. Lowenstein, 1045
von Euler, Prof. U. S. : Occurrence of Catecholamines in Acrania and Invertebrates, 170
  Elected a member of the Life Sciences Section of the International Academy of Astronautics, 495
von Kaulla, Prof. Kurt N., and Smith, Robert L. : Plasma Clot Dissolution by Urea Derivatives, 449
von Knorring, Dr. O., and Hornung, G. : Hafnian Zircons, 1098
von Laue, Prof. Max (Lise Meitner, Otto Hahn und) zum 80 Geburtstag : Beiträge zür Physik und Chemie des 20 Jahrhunderts—(herausgegeben von O. R. Frisch, F. A. Paneth, F. Laves und R. Rosbaud), *review* by Dr. C. A. Taylor, 118
  50th Anniversary of the discovery by, of the Diffraction of X-Rays by Crystals (International Union of Crystallography Symposium in commemoration of the), 679
von Szilvinyi, Armin, and Rosenkrantz, Utta : Radiation Effect on Yeasts of the Genus *Candida* Berkhout, 1212
Vrána, M., and others : Mechanism of Increase of Endotoxin Susceptibility in Animals showing Delayed Hypersensitivity, 182

WACKMAN, Nancy (Gurney, Dr. C. W., and) : Impairment of Erythropoiesis by Irradiation, 1017
Wada, Akiyoshi, and others : Mutation in Tobacco Mosaic Virus induced by a New Carcinogen, 4-Nitroquinoline N-Oxide, 833
Wada, Dr. Einosuke, and others : Demethylation in the Metabolism of (–)-Nicotine *in vivo*, 910
Waddington, Prof. C. H. : Molecular Biology or Ultrastructural Biology?, 184, 1124
  The Processes of Development, *review*, 475
Wadsworth, J. : Use of Flash Photolysis to initiate Detonation in Gaseous Mixtures, 623
Wagenknecht, C., and others : Role of Glutathione and of a Self-stabilizing Chain of SH-Enzymes and Substrates in the Metabolic Regulation of Erythrocytes, 631
Waid, J. S. (edited by D. Parkinson and) : The Ecology of Soil Fungi—an International Symposium, *review* by Dr. P. H. Gregory, 51
Wain, Prof. R. L. : Fungicides in Agriculture and Horticulture (Research on Systemic Fungicides), 594
Waites, Dr. G. M. H. : Polypnoea evoked by Heating the Scrotum of the Ram, 172
Wakefield Gold Medal of the Royal Aeronautical Society awarded to Dr. E. Eastwood, 863
Wales : Technical Education in (Ministry of Education, Central Advisory Council for Education—Wales), 774
Wales (North) : Stilpnomelane in (Dr. T. W. Bloxam and N. B. Price), 525
Wales (England and) : Day-release Students in, 393
  Educational Statistics for, 393
  Hospital In-Patients in, 1162
  Selected Statistics relating to Local Education Authorities in—Educational Year 1958-1959 (Ministry of Education), 393
  Statistical Review of, for the Year 1959—Part 2, Tables, Population (Registrar General), 1061
Wales (Rural England and), Councils for the Preservation of, and the Joint Action Group for the Protection of Dartmoor and Exmoor (Standing Committee on National Parks of the) : The Case for Control of Afforestation of Open Land in National Parks, 496
Wall, Sri M. K. : Ecological Problems in the Tropics (Ecological Problems in the Western Himalayas), 772
Walker, H. O. : Science in the Development of Ghana, 1065
Walker, J. C., and others : Tinsel-like Structure in Flagella of Zoospores associated with Cabbage Clubroot Tissue, 186
Walker, P. G., and others : Paper Chromatography of Hexosamines and N-Acetyl-hexosamines, 261
Walker, Dr. P. M. B. : Cellular Organization, *review*, 845
Wall, Prof. F. T. : Elected a Member of the United States National Academy of Sciences, 674
Wall-Charts (Film-Strips and), in Physics, Chemistry and General Science (Educational Productions, Ltd.), 395
Wall (Uterine), of the Guinea Pig during the Sexual Cycle : Hyaluronic Acid in the (I. N. Likar, L. J. Likar and Dr. H. E. Taylor), 1118
Wallace, A. L. C. : Preparation of Sheep Growth Hormone, 535
Wallace, A. L. C. (Ferguson, K. A., and) : Starch-gel Electrophoresis of Anterior Pituitary Hormones, 629
  Prolactin Activity of Human Growth Hormone, 632
Walley, Dr. C. A. (Hawley, R., and) : Phenomena occurring at Electrically Stressed Metallic Surfaces in Vacuum, 252
Wallington, C. E., and others : An Experiment in Numerical Forecasting (Air Ministry : Meteorological Office, Scientific Paper No. 5), 973
Walsh, B. J. (Clark, Peggy, and) : Trapping of Plasma by Red Cells, 678
Walter, Dr. W. Grey : The Neurophysiological Aspects of Hallucinations and Illusory Experience (Fourteenth Frederic W. H. Myers Memorial Lecture of the Society for Psychical Research), 394
Walters, A. A. : Appointed to a senior lectureship in econometrics and social statistics in the University of Birmingham, 679
Walton, Dr. G. A. : Some Aspects of Disease Transmission by Ticks, 683
Wang, Prof. Shih Yi : Photochemical Reactions in Frozen Solutions, 690
Ward, Dr. A. H. : Science in the Development of Ghana (Radio Isotope Unit), 1064
Ward, Dr. A. M. : *Obituary* of Dr. E. de Barry Barnett, 1058
Wardlaw, Prof. C. W.: Elected an honorary foreign associate of the Royal Academy of Belgium (Section of Natural Sciences), 1156
Wareing, Prof. P. F. : Appointed a member of the Committee for Wales of the Nature Conservancy, 218
Wark, Dr. I. W. : *Obituary* of Sir David Rivett, 958
Warkentin, Prof. B. P. : Interpretation of the Upper Plastic Limit of Clays, 287
Warner, Dr. Donald T. : Proposed Molecular Models of Gramicidin *S* and other Polypeptides, 120
Waste Heat Recovery (Institute of Fuel Conference on), 591
Wastes : Radioactive (general editor, J. C. Collins), *review* by K. D. B. Johnson, 75
Water : Conservation of, 1062
  Control of the Responsiveness of the Blowfly to (Prof. David R. Evans), 1132
  Effect of Mass Transfer on the Velocity of Rise of Bubbles in (Dr. J. H. Leonard and Prof. G. Houghton), 687
Water (Drinking), Milk and Beef (Air, Precipitation,): Caesium-137 in, in Norway during 1959 and 1960 (T. Hvinden and A. Lillegraven), 402

Water (Ground-) Measurements : Evaluation of Effective Rainfall and Irrigation from (C. Dakshinamurti, P. N. Saxena and E. G. K. Rao), 1100
Water and Lithium Bromide : Interaction of Model Peptides with (Dr. J. Bello and H. R. Bello), 440
Water-Beetles : Dynamics and Energetics of Swimming in (Dr. Werner Nachtigall), 224
Water Droplets (Cloud-size) : Precipitation of Sub-Micron Dust in Still Air by (Dr. M. M. Bhadani and N. G. T. Ludlow), 974
Water Hyacinth : Growth Substances separated from the Root of, by Paper Chromatography (Prof. S. M. Sircar and Arati Ray), 1213
Water Pollution Research Board : Appointment of Dr. C. J. Jackson as chairman, 135
Water Research, 766
Water Research in Britain, 217
Water Research News, Nos. 10 and 11, 766
Water-soluble Polymers : Effect of, on Nitrate Reductase Activity (H. R. Schreiner and A. P. Rinfret), 1110
Waters (Coastal), of the British Isles : Seasonal Variation of the Sea Surface Temperature in (F. E. Lumb), 1164
Watson, Dr. H. C., and Kendrew, Dr. J. C. : The Amino-Acid Sequence of Sperm Whale Myoglobin—Comparison between the Amino-Acid Sequences of Sperm Whale Myoglobin and of Human Haemoglobin, 670
Watson, Dr. H. C., and others : The Amino-Acid Sequence of Sperm Whale Myoglobin—A Partial Determination by X-Ray Methods, and its Correlation with Chemical Data, 666
Watson (James Craig) Medal of the United States National Academy of Sciences awarded to Prof. Otto H. L. Heckmann, 489, 674
Watson, Dr. J. D., and others : Unstable Ribonucleic Acid revealed by Pulse Labelling of *Escherichia coli*, 581
Watson, Dr. J. H. : Elected a Fellow of the Imperial College of Science and Technology, London, 396
Watson, Marion A. : Plant Virus Diseases, 220
Watson, Dr. R. S. : Influence of Gamma-Aminobutyric Acid on the Acetylcholine Responses of the Denervated Rat-Diaphragm Preparation, 724
Watson, S. N. (Stanley, A. R., and) : Television and Film Techniques (Colour Television Engineering—Equipment Problems and Techniques), 870
Watson, Prof. W. H. : *Obituary* of Prof. B. Davison, 306
Watson-Williams, E. J. (Boyer, Prof. Samuel H., and) : The γ-Globulin, Gm^{ab}, in Nigerians, 456
Watton, Dr. E. C. (Graddon, Dr. D. P., and) : Trimerization of Nickel-(II) Acetylacetonate in Solution, 906
Watts, P. E. : Electrical Contacts (Effect of Temperature Asymmetry on Matter Transfer), 866
Wave Motion of Oceans and Atmospheres, *review* by Dr. P. G. Drazin, 1044
Waverley Gold Medal Essay Competition, 1961 (*Research*), 395
Waves (Atmospheric), associated with Ionospheric Storms : Possible Identification of (M. D. Wright), 898
Waves (Shock) : Observation of Far Infra-Red Radiation from (M. F. Kimmitt, A. C. Prior and P. G. Smith), 599
Weardale Granite : Isotopic Ages of the (M. H. Dodson and S. Moorbath), 900
Weather Forecasting for Aeronautics (Joseph J. George), *review*, 846
Weather Forecasting by Numerical Methods (Dr. A. W. Brewer), 973
Weathering (Clay Minerals Group of the Mineralogical Society and the British Society of Soil Science Discussion on), 1066
Weaver, Prof. A. K. : Effect of a Resisting Couple on the Rotational Motion of a Rigid Body, 335
Weaver, Prof. John D. : Erosion Surfaces in the Caribbean and their Significance, 1186
Webb, H. A., and Ashwell, Dr. D. G. : A Mathematical Tool-Kit for Engineers, second edition, *review* by Prof. J. Greig, 76
Webb, L. J., and others : 'Antibiotic Effects' in Plant Communities, 189
Weber, Dr. G. : Enumeration of Components in Complex Systems by Fluorescence Spectrophotometry, 27
Weber's (Dr. G.) readership announced as reader in biophysics (University of Sheffield), 396
Weedon, Prof. B. C. L. : Terpene Chemistry (Structure Determination and Synthesis of Carotenoids and their Biological Precursors), 18
Weiden, M. H. J., and others : Toxicity of 2-(2-Halogen-4-Chlorophenyl)2-(4-Chlorophenyl)-1,1,1-Trichloroethanes to Normal and to DDT-Resistant House-Flies, 341
Weight of Living Animals : Determination of the Volume and (Prof. C. P. Gnanamuthu), 826
Weinberg, Dr. A. M. : Elected a Member of the United States National Academy of Sciences, 674
Weiner, Prof. Jerome H. (Boley, Prof. Bruno A., and) : Theory of Thermal Stresses, *review* by B. S. Owen, 65
Weiss, Dr. David W., and others : Protective Activity of Fractions of Tubercle Bacilli against Isologous Tumours in Mice, 889
Weizmann Institute of Science, Rehovoth : 1961 Chaim Weizmann Memorial Lecture (Dr. Max F. Perutz), 493
Weizmann (Chaim) Memorial Lecture for 1961 of the Weizmann Institute of Science (Dr. Max F. Perutz), 493
Welfare of the Nation : Electricity in the Prosperity and (Thirteenth British Electrical Power Convention of the Electrical Development Association), 680
Welfare and Care of Laboratory Animals, 677
Wellcome Trust : Carlsberg–Wellcome Travelling Research Fellowships for 1961-62, 134
  Gift of £100,000 to the Royal Society, to establish and endow a Henry Dale professorship in medical research, 1153
Wellington, Dr. P. S. : Appointed assistant director of the National Institute of Agricultural Botany, 1154 ; work of, 1154
Wells, A. A. (Davies, J. W., and) : Cleavage Fracture Initiation in Notched Impact Tests of Mild Steel, 432
Wells, M. : Appointed to a lectureship in electronic computing at the University of Leeds, 219
Wells Society (H. G.) : Foundation of the, 962
Welsh Soils Discussion Group: Meeting on Glaciation as related to Soil Profile Development, 219
Weltman, A. Stanley, and others : Effect of Splenectomy on the Resistance of Rats to Histamine Stress, 274
Wender, Irving, and others : Reductive Dimerization of Napththalene by Sodium–Ethylamine, 81
West, Ian M. : Lower Purbeck Beds of Swindon Facies in Dorset, 526
West, Prof. John C. : Analytical Techniques for Non-Linear Control Systems, *review* by Dr. E. M. Deeley, 947
West Africa : Erythrocyte Glucose-6-Phosphate Dehydrogenase Deficiency in (Dr. A. C. Allison, L. J. Charles and I. A. McGregor), 1198
  Science in, 1
West African Rice Research Station (H. D. Jordan), 773
West African Science Association : First Meeting, 1
West Indies : Birds of the (James Bond), *review*, 1046
West Kimberley Region of Western Australia : Rock Paintings in the (P. E. Playford), 767
Westcott, Dr. Cynthia : Plant Disease Handbook, second edition, *review* by D. E. Green, 660
Western Australia : Rock Paintings in the West Kimberley Region of (P. E. Playford), 767
Western Tasmania : Comments on the Cainozoid History of (B. Scott), 677
  Erosion Surfaces in (B. Scott), 677
Westrik, R., and Kiel, A. M. : Some Electron Microscopic Observations on Single Crystals of Polyethylene, 162
Westwood, W., and Mayer, A. : Chemical Analysis of Cast Iron and Foundry Materials, second edition, *review* by F. L. Selfe, 383
Wet Humid Tropics : National Forests of Agricultural Crops for the (Antony Santiago), 1070
Wetlaufer, Prof. D. B. : Terminology of Protein Structure, 1113
Whale (Sperm) Myoglobin: The Amino-Acid Sequence of—Chemical Studies (A. B. Edmundson and C. H. W. Hirs), 663 ; A Partial Determination by X-Ray Methods and its Correlation with Chemical Data (Dr. J. C. Kendrew, Dr. H. C. Watson, Dr. B. E. Strandberg, Dr. R. E. Dickerson, Dr. D. C. Phillips and Dr. V. C. Shore), 666 ; Comparison between the Amino-Acid Sequences of Sperm Whale Myoglobin and of Human Haemoglobin (Dr. H. C. Watson and Dr. J. C. Kendrew), 670
Whales (Pregnant) : Identification of 20β-Hydroxy-pregn-4-ene-3-one in Luteal Tissue from (John Kristoffersen, Torleiv Lunaas and Weiert Velle), 1009
Whalley, Dr. W. B. : Appointed to the University of London chair of chemistry in the School of Pharmacy, 680, 862 ; work of, 862
Whatley, Dr. F. R., and others : Separation of Two Light Reactions in Noncyclic Photo-Phosphorylation of Green Plants, 606, *erratum*, 1063
Wheat : The Effect of Depth of Transplanting on Tillering and Seed Production in (Dr. R. Halwagy), 513
  Effect of Induced Awn Mutations on Yield in (D. Jagathesan, C. Bhatia and M. S. Swaminathan), 468
Wheat Coleoptile (*Triticum vulgare* L.) : A Sequential Growth Response to Gibberellic Acid, Kinetin and Indolyl-3-Acetic Acid in the (Dr. S. T. C. Wright), 699
Wheat Starch, Flour and Gluten : New Products from (B. H. Thewlis), 260
Whelan, Dr. W. J. : Recent Advances in the Biochemistry of Glycogen and Starch, 954
Whipple, Prof. F. L. : Elected a member of the Basic Sciences Section of the International Academy of Astronautics, 495
Whiskers : Sodium Chloride (Dr. Gy. Turchányi and Dr. I. Tarján), 79
Whiskers (Silicon Nitride) : Formation of, on a Ferro-Silicon Alloy at Room Temperature (E. Johnson, Prof. K. Grjotheim and C. Krohn), 523
Whistlers (Multiple-Stroke) : Dispersions of (Prof. N. D. Clarence and Dr. P. A. O'Brien), 1096
White, Gordon A., and Smith, Prof. Frederick G. : Substrate Specificity of the *Myrothecium* Ascorbic Acid Oxidase, 187
White, Prof. J. : Weathering, 1066
White, Prof. J. L., and others : Infra-Red Investigation of the Migration of Lithium Ions into Empty Octahedral Sites in Muscovite and Montmorillonite, 342
White, Prof. J. L., and others (edited by) : Physicochemical Measurements at High Temperatures, *review* by Prof. A. R. Ubbelohde, 58
White, Prof. W. J., and others : *Obituary* of Dr. J. Unrau, 1057
White Blood Cells of Normal and Leukaemic Human Beings : Immunological Differences of Deoxyribonucleoproteins from (Luigi Messineo), 1122
White Man, a Study of the Attitudes of Africans to Europeans in Ghana before Independence (Dr. Gustav Jahoda), *review* by Dr. Margaret Read, 946
White Paper on the Reorganization of the Nationalized Transport Undertakings, 137
White Paper on Technical Assistance from the United Kingdom for Overseas Development, 1039
Whitehead, Lieut. Comdr. D. J. : Awarded the Branch Prize of the Royal Aeronautical Society, 863
Whitehead, Dr. K. P. : Training in Occupational Hygiene (Ranges of Activity of Personnel whose Health had to be Safeguarded), 1158
Whitehead, Dr. R. G., and Arnstein, Dr. H. R. V. : Imidazole Acrylic Acid Excretion in Kwashiorkor, 1105
Whittaker, D., and others : Pyrolysis of Esters of Borneol and *iso*Borneol, 715
Whittem, J. H. (Moule, G. R., and): At the Australian Arid Zone Technical Conference (Principles and Problems of Plant and Animal Production and Husbandry—Animal Husbandry), 19
Whittingham, Prof. C. P., and others : Effect of *iso*nicotinyl Hydrazide on the Path of Carbon in Photosynthesis, 553
Whittingham, Sir Harold E. : Elected a member of the Life Sciences Section of the International Academy of Astronautics, 495
Whittington, Dr. R. B. : Appointed reader in civil engineering at the University of Liverpool, 963
Whole Plant Virus Particles : Negative Evidence against Passage of, through Gut Wall in Aphid Vectors (Prof. Frej Ossiannilsson), 1222
Whole Tissue Emulsion-Fractionation : Quantitative Separation and Determination of Brain Glycoproteins, Neuraminic Acid, Hexosamine and Hexoses by means of (Aminoglycolipids and Glycoproteins of Human Brain), (Dr. Samuel Bogoch), 153
Widdowson, Dr. E. M. (McCance, Dr. R. A., and) : The Composition of Foods (Medical Research Council, Special Report Series No. 297), *review* by Joyce Doughty, 477
Wider Universe : The (Paul Couderc), *review* by G. R. Noakes, 64

Wieme, Dr. R. J. : Assurance of Thermostatic Control during Electrophoretic Experiments, 806
Wigglesworth, Prof. V. B. : Insect Biochemistry, *review*, 1041
Wightman, Dr. William P. D. : Henry Cavendish—his Life and Scientific Work, *review*, 42
Wild, Dr. W. : Appointed head of the Chemistry Division of the United Kingdom Atomic Energy Authority, 393
Wild Life : Conservation of, 960
Wild Mushroom : Chromosomes of the (D. T. Hughes), 285
Wild and Free—Stories of Canadian Animals (H. Mortimer Batten), *review* by B. J. G. Maitland, 851
Wildbooters : The (Fritz Kern), *review* by G. I. Jones, 71
Wilding, J. : Awarded an N. E. Rowe Medal of the Royal Aeronautical Society, 863
Wilkes, A., and others : *Obituary* of Dr. J. Unrau, 1057
Wilkie, Dr. J. S. : Carl Nägeli and the Fine Structure of Living Matter, 1145
Wilkins, Leslie T. : Studies in the Causes of Delinquency and the Treatment of Offenders, No. 3, Delinquent Generations—a Home Office Research Unit Report, 24
Wilkinson, J. D. (Dunlap, Peggy M., and) : Retention of Carbon Dioxide Bubbles on Calcite Etch-Peaks, 524
Willett, F. J. : The Anatomy of Management, *review*, 382
Williams, Dr. C. B. : The Monarch Butterfly, *review*, 73
Williams, E. E. : Science and Industry—the Problem of Communication, 965
Williams, F. I. B. : Awarded a CIBA fellowship in solid-state physics, 489
Williams, Dr. G. H. : Homolytic Aromatic Substitution, *review* by Dr. J. Idris Jones, 294
Williams, H. S. (Samols, Dr. Ellis, and) : Trace-labelling of Insulin with Iodine, 1211
Williams, Prof. J. H. : Elected a Member of the United States National Academy of Sciences, 674
Williams, Prof. R. E. O., and others : Hospital Infection, *review* by Kathleen M. Hawkins, 119
Williams, Roger J., and others : Science in Progress, Eleventh Series (edited by Hugh Taylor), *review* by Prof. Ritchie Calder, 45
Williams, Dr. Robert J. P., and others : Nitrogen and Sulphur at the Active Centre of Carboxypeptidase *A*, 633
Williams Prizes for 1960 of the Iron and Steel Institute awarded to T. McHugh and F. A. Kirk, and to J. Chapman and W. Montgomery, 13
Williamson, A. G., and others : Detection of Trace Quantities of Acenaphthene by Gas Chromatography, 531
Williamson, Dr. J. B. P. : Electrical Contacts (Thermal Instability in a Contact), 866
Willighagen, R. G. J. (Oort, J., and) : Zymograms in Human Pathology, 642
Willis, Dr. E. H. : Solar Variations, Climatic Change and related Geophysical Problems, 967
Willmore, Dr. A. P. : Satellites and Geodesy, 1065
Wilson, Dr. A. T. M. : The Place of Food Science and Technology in the Campaign against Malnutrition (Nutritional Change—some Comments from Social Research), 399
Wilson, A. T. M. (edited by Mary Capes, with the collaboration of) : Communication or Conflict—Conferences, their Nature, Dynamics and Planning, *review* by Prof. F. S. Dainton, 844
Wilson, Dr. B. G. : The Cosmic-Ray Observations of December 4, 1957, 615
Wilson, Dr. C. H. : Appointed principal of the University of Glasgow, 680
Wilson, Prof. Cecil L., and Wilson, David W. (edited by) : Comprehensive Analytical Chemistry, Vol. 1*B*, Classical Analysis, *review* by Dr. D. T. Lewis, 294
Wilson, David W. (edited by Prof. Cecil L. Wilson and) : Comprehensive Analytical Chemistry, Vol. 1*B*, Classical Analysis, *review* by Dr. D. T. Lewis, 294
Wilson, E. G. : Appointed to a Harkness Fellowship (physics) of the Commonwealth Fund, 308
Wilson, Dr. H. : Appointed senior lecturer in pharmacology at the University of Liverpool, 963
Wilson, Dr. J. F., and Jobling, D. M. : Precipitation Reaction between Serum and Lysed Erythrocytes, 550
Wilson, J. Tuzo, and others : Science in Progress, Eleventh Series (edited by Hugh Taylor), *review* by Prof. Ritchie Calder, 45
Wilson, Dr. J. Yanney : Ghana Science Association, 1064
Wilson, Dr. Vernon : Elected a Member of the Geological Society of London, 492
Winand, Louis, and others : Hydrogen Bonding in Apatitic Calcium Phosphates, 164
Wind (Solar) : Terrestrial Accretion from the (C. M. de Turville), 156
Wind (Solar), and Terrestrial Oxygen (N. W. Pirie), 706
Wind Direction : Concentration of Atmospheric Radon and (Dr. F. Barreira), 1092
Wind-Tunnel (Hypersonic) : Stagnation Temperature Measurements in a, using the Sodium Line Reversal Method (J. L. Stollery), 778
Winder, F. G. A. : Elected a Member of the Royal Irish Academy, 492
Winds and Circulation in the Upper Atmosphere (Royal Meteorological Society Symposium on), 591
Windsor, E., and Cronheim, G. E. : Gastro-Intestinal Absorption of Heparin and Synthetic Heparinoids, 263
Winer, Dorothy, and others : Aminoglycolipids and Glycoproteins of Human Brain—Hot Methanol Extraction of Human Brain Aminoglycolipids, 152
Wing Theory : High Speed (Robert T. Jones and Doris Cohen), *review*, 118
Winslow, Dr. R. D. (Harrison, Dr. B. D., and) : Diseases caused by Plant Viruses in Crops (Arabis Mosaic Virus), 220
Wiseman, D. J. : Appointed to the University of London chair of Assyriology at the School of Oriental and African Studies, 219, 676 ; work of, 676
Wiseman, W. A. : Comparison of Helium and Argon in Ionization Detectors, 1187
Wittrick, Prof. W. H. : Awarded the Orville Wright Prize of the Royal Aeronautical Society, 863
Wlerick, Prof. G. : Solar Seeing (Photographs on Nuclear Emulsions with a Lallemand Electronic Camera), 772
Woese, C. R. : Coding Ratio for the Ribonucleic Acid Viruses, 697
Wokes, Dr. E. : The Place of Food Science and Technology in the Campaign against Malnutrition (India's Food Problems), 398
Wolff, Torben : The Deepest Recorded Fishes, 283
  A Bathyal-abyssal Hermit Crab with a Calcified Asymmetrical Abdomen, 931
Wolfson Foundation : Grant of £250,000 to the Royal College of Surgeons of England, for the provision, furnishing and equipment of the Hunterian Museum, 962
  Grant of £200,000 to University College, London, to develop the Galton Laboratory and the Department of Eugenics, Genetics and Biometry, 1156
Wolpers, C., und andere (herausgegeben von) : Vierter Internationaler Kongress für Elektronenmikroskopie, Band 2, Biologisch-Medizinischer Teil, *review* by Dr. V. E. Cosslett, 68
Wolstenholme, G. E. W., and O'Connor, Maeve (edited by) : Ciba Foundation Symposium on Haemopoiesis—Cell Production and its Regulation, *review* by Dr. P. F. Harris, 479
Wood, Prof. A. : Some Aspects of Sedimentation in Orogenic Belts (The Lower Palaeozoic of Wales), 139
Wood, Dr. A. B. : *Obituary* of Dr. C. V. Drysdale, 214
Wood, A. J., and others : Longevity in Mice with a Genetically determined Muscular Dystrophy, 552
Wood, Dr. C. H. : Training in Occupational Hygiene (Survey of Courses related to Occupational Hygiene which are at present available), 1159
Wood, C. W., and Holliday, Dr. A. K. : Inorganic Chemistry, *review* by Charles Holt, 60
  Organic Chemistry, *review* by Charles Holt, 60
  Physical Chemistry, *review* by Charles Holt, 60
Wood, D. N. : Karroo Igneous Activity and Tectonics in South-east Southern Rhodesia, 802
Wood : Cellulose Pulp from, *review* by Dr. Julius Grant, 380
Wood-boring Activity of *Limnoria* (Isopoda) in relation to Oxygen Tension (Dr. S. K. Eltringham), 512
Woodbine, Dr. M. (Cullimore, D. R., and) : A Superior Fat-synthesizing Single-Spore Strain of *Lipomyces*, 1022
Woodcock, Dr. D. : Fungicides in Agriculture and Horticulture (Structure-Activity Correlationships of some Nitrogenous Antifungal Chemicals), 594
Woods, Prof. L. A., and others : *In vivo* Formation of Normorphine in the Rat as a Metabolite of Tritium Nuclear-labelled Morphine, 82
Wool Fibres : Influence of Atmospheric Oxidation on Supercontraction of, reduced with Thioglycollic Acid (O. A. Swanepoel), 626
Wool Growth in Sheep : Photoperiodicity of Seasonal Rhythm of (L. R. Morris), 102
Wool Industries Research Association: New Laboratories for Worsted Processing (H. Lemon), 313
  Publication No. 215, Report of the Director of Research for 1960 (Dr. A. B. D. Cassie), 1068
Woollam, Dr. D. H. M., and Millen, Dr. J. W. : Influence of Uterine Position on the Response of the Mouse Embryo to the Teratogenic Effects of Hypervitaminosis-A, 184
Woolley, D. E., and others : Sex and Strain Differences in Electroshock Convulsions of the Rat, 513
Woolley, Harold W., and others : Tables of Thermodynamic and Transport Properties of Air, Argon, Carbon Dioxide, Carbon Monoxide, Hydrogen, Nitrogen, Oxygen and Steam, *review* by Prof. A. R. Ubbelohde, 58
Wooster, Dr. W. A., and others : The Interpretation of X-Ray Diffraction Photographs, second edition, *review* by Dr. M. R. Truter, 69
Wootton, Dr. I. D. P. : Title of reader in chemical pathology in the University of London (at the Postgraduate Medical School of London) conferred on, 219
Word 'Neutron' : Origin of the (Stephen G. Brush), 251
Work in the Antarctic during I.G.Y., 677

SCIENCE IN WEST AFRICA

PHYSICS DEPARTMENTAL LIBRARY

THE first meeting in Nigeria of the West African Science Association was held in Ibadan during December 16–21.

The West African Science Association is formed by the Science Associations of Ghana, Nigeria and Sierra Leone, membership being open to any other scientific worker in any other country or territory in West Africa—including the French-speaking territories. Its purpose is to provide a forum for discussion, by scientists from all parts, of their common problems and to emphasize to public and Governments alike the fundamental importance of science and technology in the development of these areas.

This meeting had an additional significance, for it was the first major international scientific conference to be held in independent Nigeria. It was held, fortunately, at a time when much of the initial exuberance of political liberation had died down and it was possible to assess the problems ahead in a relatively sober atmosphere. This is important, for there is a real danger of complacency, a tendency to confuse the terms 'freedom' and 'prosperity'—not surprising, perhaps, when one sees the amazing transformation in Lagos, the modern buildings, the hotels, the new roads.

The generation of a potentially powerful African State with a seat in the United Nations Organization is no small thing. Perhaps under different conditions the nations would be little disturbed by the emergence of an independent Nigeria ; but with a world divided into separate and mutually distrustful camps the result is a great deal of outside interest arising not from any deep-seated and humanitarian concern, nor from the prospects of great financial reward, but for purely political considerations. Capital from outside is available for many purposes ; but it is a capital investment based not on sound economic principles but on political expediency.

These points are made merely to emphasize that Nigeria and Ghana—to mention the two territories with which we are more concerned in this context—are passing through a 'honeymoon' period. It is now, or possibly never, that they must take their chance. Capital must be spent wisely if wise development is to occur. Capital wasted now will, in the future, be merely a monument to an opportunity lost.

It may seem surprising that a meeting of scientists should concern itself with such matters. In fact, the meeting as such did not. But it was obviously the background against which much of the discussion took place, for the West African scientist is acutely concerned with the direction of future development, and a meeting such as this gives the best possible picture of the problems.

To one observer, at least, from all the papers and discussions emerged the impression that of all West Africa's problems none was more urgent than the matter of health and feeding. It is easy, in this apparently happy, cheerful community, to forget the grim realities behind. It is easy to forget that half the children born never live to adult life, that even among the adult population, disease extracts a dreadful toll. This would not be quite so bad if we did not already know enough to reduce these figures drastically. But all major health schemes are expensive, and the fact must be faced that West Africa simply cannot afford to keep its children alive. Even so, merely to keep children alive is not enough. They must be fed properly. Nigeria, though it is one of the most densely populated parts of the whole continent, is still a territory with vast, under-populated, undeveloped tracts of land. It is theoretically capable of maintaining a very much higher population. The other territories of West Africa are in a similar state—a great potential of food given over at present to the tsetse fly and incredibly inefficient farming methods.

The development problems implied in all this are, of course, many-sided. There are economic and social problems as well as technological problems—and, of course, educational problems are a vital part of the whole picture. But this meeting was concerned primarily with the technological—including the medical—problems involved. One gained an impression of advancing knowledge on all fronts. On the medical side it was made abundantly clear what modern knowledge properly applied could achieve. On the agricultural side there was an impression of slow advance. The tsetse fly is still unconquered, but it is clearly in retreat. For the rest, it is a matter now, not so much of more research, as of funds to apply what is already known, and to pay the technologists and scientists who will be needed.

Development is admittedly a total thing. For a nation really to emerge it needs far more than freedom. It needs schools, universities, cities—but above all it needs a reasonable expectation of life for its inhabitants and food to feed them. There is a most urgent need for the limited capital available to be well spent. Office blocks and handsome government buildings are no solution ; they have their value, but one suspects that many of them are merely testimony to the validity of Parkinson's law—and these territories cannot afford Parkinson's law.

The suggestion was made—and endorsed enthusiastically—that a Scientific and Economic Advisory Council be set up as a matter of urgency, the task of which would be to advise the Government on the problems of development and how best to use the amount of money available. This would be a start—but even more necessary is a radical reappraisal of values; the vital role of science and technology is still not appreciated. The economic and social status of the scientist still lags far behind that of many professions—and the lot of the science teacher, that most critical member of any modern community, is pitiful. (These remarks probably apply equally to Europe, even to America, but these countries are grown up and are at liberty to commit technological suicide if they wish.) To Africa, technological advance is not just a matter of keeping ahead of, or level with, or catching up with other countries—it is a matter of survival, not in some hypothetical future war but now.

The meeting which prompted these musings made it abundantly clear that scientific workers in West Africa are fully aware of all that has been said. They feel deeply their responsibilities to the future development of these territories. But they are also acutely aware of the difficulties. Scientists, technologists, science-teachers are pitifully few in number and, relative to other professions, underpaid. There is far too little money forthcoming for the vitally important land development schemes which have been mooted, for the damming of rivers, for the intensive campaigns against the tsetse fly, for all the other necessary adjuncts to land development. There are the competing claims of industrialization. But this apart, a great deal of what is available would seem to be diverted at present into non-essential projects.

In Nigeria, at least, the Science Association has begun to face up to its wider responsibilities. It is not just a forum for the holding of yet another conference. It has a vital task in the education of the general public and of the Government. It is probably the only body in Nigeria with the machinery to drive home the basic fact that economic progress depends on technological progress. It has begun its task with vigour, but whether or not it will succeed in instilling the necessary sense of urgency remains to be seen.

UTILIZATION OF NITRATE BY MICRO-ORGANISMS

By DR. C. A. FEWSON and DR. D. J. D. NICHOLAS*

Department of Chemical Microbiology, Long Ashton Research Station,
University of Bristol

INTENSIVE work on various physiological and biochemical aspects of the assimilation and dissimilation of nitrate by micro-organisms and higher plants has been undertaken in many laboratories. We now present a synthesis of the results in an attempt to clarify the present position in regard to the mechanism of the utilization of nitrate by micro-organisms.

Many micro-organisms and higher plants utilize nitrate-nitrogen, and the overall process whereby nitrate is reduced to ammonia with the subsequent formation of amino-acids, protein and other nitrogenous cell constituents is known as 'nitrate assimilation'. Under certain conditions, however, several micro-organisms can use nitrate or some of its reduction products as terminal hydrogen acceptors in place of oxygen. This process has been called 'nitrate respiration' by Sato[1] or 'dissimilatory nitrate reduction' by Verhoeven[2]. A similar process has been described in higher plants[3].

Many classifications have been proposed for the various types of nitrate reduction, but none has been entirely satisfactory. Jensen[4] suggested five categories according to the products of the reaction, whereas Verhoeven[2,5] differentiated between three types of nitrate reduction as follows: (1) *assimilation*, in which nitrate is reduced only for the building up of cell materials; (2) *incidental dissimilation*, in which nitrate acts as a non-essential hydrogen acceptor; (3) *true dissimilation*, in which nitrate acts, at least under certain conditions, as the essential hydrogen acceptor which enables the organism to grow. The separation of incidental and true nitrate dissimilation does not seem to be of great value and has only a teleological significance. Organisms which can carry out incidental dissimilation are those that have a fermentative respiration when both oxygen and nitrate are limiting factors. Thus, Verhoeven[5] showed that his strain of *Escherichia coli* produced large amounts of lactic and succinic acids under anaerobic conditions, but in the presence of either nitrate or oxygen complete oxidation to carbon dioxide occurred. Japanese workers[6,7] have classified nitrate-reducing organisms on the basis of the behaviour of their cytochromes towards nitrate. This is not now satisfactory since in *Neurospora crassa* and *Escherichia coli* an iron system appears to be required for the dissimilatory nitrate reductase but not for the assimilatory enzyme. We propose that nitrate reduction may be best considered under two headings: (1) *nitrate assimilation*, in which the end products are nitrogenous cell constituents; (2) *nitrate respiration* or *nitrate dissimilation*, in which nitrate is used instead of oxygen, usually under anaerobic conditions, as the terminal hydrogen acceptor. Denitrification may be regarded as a special case of nitrate respiration and is defined as the production of nitrogen gas or the oxides of nitrogen by the reduction of nitrate, nitrite or any other suitable intermediate.

Suggested Intermediates

Some of the compounds which are of interest in the intermediary metabolism of nitrate are shown in Table 1. Gayon and Dupetit[8] presented equations for the overall process of denitrification, but recognized only nitrite as an intermediate. Franzen and

---

* Member of the scientific staff of the Agricultural Research Council seconded to the University of Bristol.

Table 1. SUGGESTED INTERMEDIATES IN NITRATE REDUCTION

Oxidation-reduction state of nitrogen atom	Formula	Compound
+5	NO_3^-	Nitrate
+4	NO_2	Nitrogen dioxide
+3	NO_2^-	Nitrite
+2	NO $N_2O_3^=$	Nitric oxide Nitrohydroxylamate
+1	(NOH) N_2O $N_2O_2^=$ $NO_2:NH_2$ $NH(OH)_2$	Nitroxyl Nitrous oxide Hyponitrite Nitramide or imido nitric acid Dihydroxyammonia
0	N_2 $OH.NH.NH.OH$	Nitrogen Dihydroxyl hydrazine
−1	NH_2OH	Hydroxylamine
−2	$H_2N.NH_2$	Hydrazine
−3	NH_4^+	Ammonia

Löhmann[9] and Beijerinck and Minkmann[10] compiled comprehensive lists of possible products of nitrate reduction, but Kluyver and Donker[11] were the first to draw up a scheme for the stepwise reduction of nitrate to nitrous oxide and nitrogen gas. Since then, many pathways have been suggested, based on the assumption that reduction proceeds via a number of two-electron steps. The Delft school[2,5,12] have been particularly active in this field and have presented schemes involving complex molecular re-orientation at the hyponitrite-level of oxidation. Nicholas[13] suggested that nitrate assimilation proceeds according to the following pathway:

$$NO_3^- \longrightarrow NO_2^- \longrightarrow N_2O_2^= \longrightarrow NH_2OH \longrightarrow NH_4^+$$

Nitrate. Gayon and Dupetit[8] demonstrated that nitrite is the first product of nitrate reduction. Quastel, Stephenson and Whetham[14] found that *Bacterium coli* produced nitrite when grown anaerobically; nitrite has since been identified as a product of nitrate reduction in bacteria, fungi and higher plants[5,15]. The agronomic importance of nitrate reductase activity in maize plants has been demonstrated by Hageman and Flesher[16].

The sequence of electron transfer during nitrate reductase activity by the purified enzyme from *Neurospora crassa* has been shown to be[13]:

$$\begin{tikzcd}
TPNH \arrow[r] & FAD \arrow[r] \arrow[d] & Mo \arrow[r] & NO_3^- \\
& \text{2,3}',\text{6-trichlorophenol indophenol} \arrow[ru] & &
\end{tikzcd}$$

A similar molybdo-flavoprotein system has been described in the yeast *Hansenula anomala*[17] and in higher plants[18].

Both molybdenum and cytochrome have been shown to participate in nitrate reduction by denitrifying bacteria[19]. The sequence of electron transfer to the alternative hydrogen acceptors oxygen and nitrate in whole cells of *Pseudomonas aeruginosa* is:

$$\begin{tikzcd}
DPNH \arrow[r] & FAD \arrow[r] & \text{cytochrome } c \arrow[r] \arrow[d] & \text{nitrate reductase (Mo)} \arrow[r] & NO_3^- \\
& & \text{cytochrome oxidase} \arrow[d] & & \\
& & O_2 & &
\end{tikzcd}$$

Sadana and McElroy[20] proposed a similar scheme for nitrate reduction in *Achromobacter fischeri* (≡ *Photobacterium fischeri*), but claimed that molybdenum was not involved. Although they grow the bacteria in peptone medium without the addition of molybdenum, it is unlikely that their cultures were in fact deficient in the micronutrient since no purification methods were used. Thus, further work is required to determine whether *Phytobacterium fischeri* requires molybdenum for the reduction of nitrate.

Many schemes have been postulated for nitrate reduction in *Escherichia coli*, and Taniguchi and Itagaki[21] have recently obtained a homogeneous molybdo-protein which reduces nitrate with cytochrome b_1 as the electron donor. It is probable that the different pathways suggested by various workers using this organism can be explained by the different hydrogen donors in the nitrate reductase assay and by the varied conditions under which the organism was grown. Thus the preparations have probably all contained the same terminal nitrate reductase (that is, the molybdo-protein) with either succinic dehydrogenase[22], lactic dehydrogenase[23], diaphorase[23] or quinone reductase[24] as the penultimate hydrogen-donating system. Table 2 illustrates that differences also occur between strains. Thus *E. coli* (*Pf*) can dissimilate nitrate under anaerobic conditions, and both iron and molybdenum deficiencies reduce the nitrate reductase activity. Nitrite accumulates, and the glucose in the medium is almost entirely oxidized to carbon dioxide. Strain *BLA*, however, can utilize nitrate as the sole nitrogen source for growth[25], but not as a hydrogen acceptor during anaerobic respiration. In this case, iron deficiency has no effect on nitrate reductase activity, indicating that a cytochrome system is not involved. The metabolism of this strain under anaerobic conditions is fermentative, and organic acids accumulate in the medium.

Table 2. GROWTH OF *Escherichia coli* UNDER ANAEROBIC CONDITIONS

The cells were grown in a medium containing both NH_4^+ and NO_3^- ions (ref. 23) under anaerobic conditions for 24 hr. at 37° C.

Strain	*B.L.A.**	*Pf*†
Nitrate reductase activity of iron-deficient cells as a percentage of the activity of normal cells	103	42
Nitrate reductase activity of molybdenum-deficient cells as a percentage of the activity of normal cells	51	48
Carbon dioxide production during growth	+	++++
Nitrite ion in the culture medium	±	++++
Lactic acid in the culture medium	+++	++
Succinic acid in the culture medium	++++	−

* Strain *B.L.A.* was derived from strain *B*, kindly supplied by Dr. R. Herriott, Biochemistry Department, Johns Hopkins University School of Hygiene and Public Health, Baltimore, by sub-culturing it on nitrate medium.

† Strain *Pf* was a gift from Dr. J. Erkama, Biochemistry Department, University of Helsinki.

It has been suggested that cytochromes participate in nitrate reduction only in the dissimilatory process[19,26]. This is confirmed by the results in Table 3, which show that iron deficiency depressed nitrate reductase activity only in organisms dissimilating nitrate under anaerobic conditions. In contrast to this, molybdenum deficiency invariably decreased nitrate reductase activity under either aerobic or anaerobic conditions. It is noteworthy that a deficiency of either iron or molybdenum reduced the enzyme activity of *Rhizobium japonicum* extracted from soy-bean nodules[27].

Table 3. EFFECTS OF IRON DEFICIENCY AND AERATION ON THE NITRITE REDUCTASE ACTIVITY OF MICRO-ORGANISMS

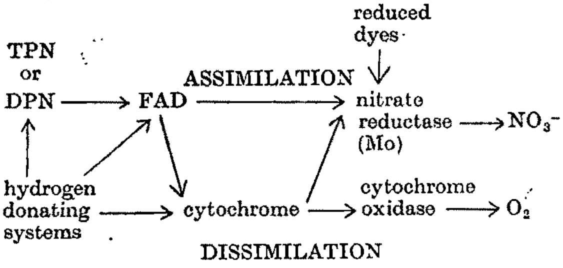
The enzyme activities of homogenates prepared from iron-deficient cells are given as percentages of those of homogenates prepared from normal cells grown under the same conditions of aeration

Organism	Nitrogen source in culture medium	Condition of growth	
		Anaerobic	Aerobic
Clostridium pasteurianum (*W–S*)	Nitrate	122	*
Escherichia coli (*B.L.A.*)	Nitrate + ammonium	103	108
Escherichia coli (*Pf*)	,, ,,	12	106
Micrococcus denitrificans (N.C.I.B. 8944)	,, ,,	28	†
Neurospora crassa (*Em* 5297*a*)	Nitrate	45	130
Pseudomonas aeruginosa (N.C.I.B. 8704)	Nitrate + ammonium	40	†

* Obligate anaerobe which can use neither oxygen nor nitrate as a terminal electron acceptor.

† The denitrifying organisms have negligible nitrate reductase activity under aerobic conditions.

These results suggest that a generalized scheme for electron transport during microbial nitrate reduction can be constructed as shown in scheme 1.



Scheme 1. Alternative pathways of electron transfer to nitrate and oxygen in micro-organisms

This emphasizes the homology of nitrate dissimilation and aerobic respiration, first suggested by Gayon and Dupetit[8]. Takahashi, Taniguchi and Egami[28] have suggested that dissimilatory nitrate reduction is coupled to phosphorylation, and this seems to be probable in view of the similarities in the electron-transfer sequence during respiration with either oxygen or nitrate as the terminal acceptor, and the large change in free energy ($-\Delta F$ approximately 40 kcal./mole) during the reduction of nitrate by reduced diphosphopyridine nucleotide. It is feasible that the coupling reaction might provide a control mechanism whereby a cytochrome system is involved in nitrate dissimilation and not in nitrate assimilation.

Similar alternative hydrogen-donating systems probably occur in higher plants. Thus, Mendel and Visser[29] suggested that the reducing power for nitrate reduction was of respiratory origin in the dark and of photosynthetic origin in illuminated leaves. Stoy[30] concluded that nitrate reduction in the light and dark "are identical in essential parts and that the only difference lies in the various ways in which the hydrogen donors, necessary for the nitrate reduction, can be generated".

Nitrite. Yamagata[31] found a nitrite reductase enzyme in cell-free extracts of *Bacillus pyocyaneus* and Taniguchi *et al.*[32] showed that extracts of *B. pumilis* reduced nitrite when reduced methylene blue was the electron donor. Nitrite reduction has also been demonstrated in species of *Azotobacter*, *Debaryomyces*, *Desulfovibrio*, *Escherichia* and algae (see refs. 5, 13, 25).

Nitric oxide has occasionally been observed as a product of denitrification[33,34], and it has now been identified as the immediate product of nitrite reduction during denitrification by *P. stutzeri*[35], *P. aeruginosa*[25,36] and *M. denitrificans*[25]. The product of assimilatory nitrite reduction has not previously been determined, although the enzyme has been studied in considerable detail[37]. Medina and Nicholas[38] suggested that hyponitrite was the first product of the reduction, but Nicholas and Jones (unpublished results), using a chromatographic technique[39], could not detect it during nitrite reduction by the purified enzyme from *Neurospora*. It is doubtful, however, whether this technique was sufficiently sensitive to detect the small amounts of product expected. The results obtained by Walker[40] in this laboratory suggest that nitric oxide is formed during nitrite reduction by the purified *Neurospora* enzyme.

The assimilatory nitrite reductase purified from *N. crassa*[37] and the dissimilatory enzyme from *P. aeruginosa*[36] appear to be very similar, since they are both flavoproteins which require copper, iron and sulphydryl groups for maximum activity. Walker and Nicholas[36] and Yamanaka *et al.*[41] have shown that the *Pseudomonas* enzyme has cytochrome oxidase activity, but this does not appear to be its primary function, since nitrite is a much more efficient electron acceptor than is oxygen.

Iwasaki and Mori[42] claimed that nitrite and hydroxylamine could react enzymatically to give nitrous oxide and nitrogen, but this could not be confirmed in this laboratory[25] or by Asano[43].

Recent work[44] makes it probable that the disappearance of nitrite noted in soy-bean leaves by Nason *et al.*[45] may not have been due to a nitrite reductase. There is little doubt, however, that a nitritase enzyme exists in plant tissue, since nitrate can be utilized as the sole nitrogen source and nitrite is the only known product of the nitrate reductase enzyme. Butt and Beevers[46] suggested that nitrite is reduced by reduced triphosphopyridine nucleotide generated in the pentose phosphate pathway.

Nitric oxide. We have recently produced evidence that nitric oxide, or a compound with which it equilibrates, is an intermediate in both assimilatory and dissimilatory nitrate reduction[47]. There are two main lines of evidence: (1) nitric oxide is the immediate product of nitrite reduction in *Neurospora* and in several denitrifying bacteria; (2) nitric oxide reductase activity is found in micro-organisms and higher plants which are actively reducing nitrate, but the enzyme is absent or much reduced in organisms grown on ammonium-nitrogen only.

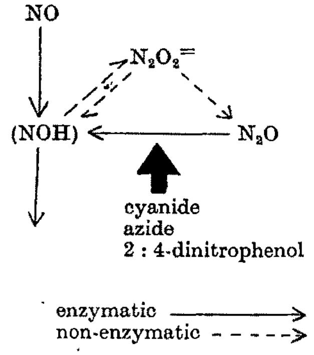
Inhibition of hydrogenase activity by nitric oxide *in vitro* has been noted in species of *Azotobacter*, *Clostridium*, *Escherichia* and *Hydrogenomonas*[47,48], but this is unlikely to have very great significance *in vivo* since nitric oxide probably has only a transient existence in association with the enzyme; indeed, it is formed as the free gas rarely even by denitrifying organisms[47]. This is confirmed by our observations that nitric oxide can act as the acceptor during hydrogenase activity in extracts of *M. denitrificans* and only at relatively high concentrations (greater than 0·05 atmosphere) is it inhibitory. We have also confirmed the observations of Keilin and Hartree[49] than nitric oxide can form a complex with cytochrome *c*, but it is doubtful whether this is of physiological significance.

Hyponitrite, nitroxyl and nitrous oxide. Many workers[2,11,13,50] have suggested that nitrate reduction involves an intermediate at this level of oxidation. Nitroxyl, hyponitrite, nitrous oxide, nitramide and dihydroxyammonia have all been postulated, but experimental evidence for any of these is scanty.

Assimilation of hyponitrite has been reported in *E. coli*[51] and in *N. crassa*[38]. The instability of hyponitrite[52,53] makes experimental work and the interpretation of results difficult. We have confirmed that hyponitrite decomposes rapidly at physiological *p*H, and the presence of whole cells or cell-homogenates of *P. aeruginosa* did not change the rate of non-enzymatic production of gas[25]. This finding is in agreement with the results of Allen and van Niel[52] with *P. stutzeri* and of Kluyver and Verhoeven[54] with *P. aeruginosa* and *M. denitrificans*. These results, however, do not rule out hyponitrite as an intermediate, since it could have a transient existence in association with enzyme surfaces.

Several workers have reported that nitrous oxide can be reduced to nitrogen gas or ammonia by bacteria[2,51,52,54,55]. It is unlikely, however, that nitrous oxide is a usual intermediate in denitrification, since nitrogen production from nitrous oxide can be inhibited by levels of cyanide, azide or 2 : 4-dinitrophenol which have no effect on the rate of production of nitrogen gas from nitrite[52,55]. Experiments on simultaneous adaptation have produced conflicting results; but Sacks and Barker[55] using *P. denitrificans*, and McNall and Atkinson[51] using *E. coli*, found that cells adapted to nitrate utilized nitrous oxide only after a lag period. It is likely that nitrous oxide is utilized *per se* since it is the formal anhydride of hyponitrous acid and dissolves in water to give a true solution[56].

These results can be integrated by assuming that a compound like nitroxyl (NOH), containing one nitrogen atom, is the intermediate in nitrate reduction, and that this is in equilibrium with hyponitrite which can decompose to give nitrous oxide. A further adaptive enzyme is necessary to utilize nitrous oxide. This is illustrated in scheme 2, and is similar in outline to that presented by Lees[57] for the nitrification process.



Scheme 2. Some intermediates during the assimilation and dissimilation of nitrate

The scheme is supported by the following lines of evidence: (1) Nitrous oxide has frequently been reported as a product of denitrification[8,58]. Recent work by Delwiche[59] makes it probable that nitrous oxide is formed non-enzymatically when a compound at the nitroxyl level of oxidation accumulates. (2) The occasional reports of simultaneous adaptation to nitrate and nitrous oxide[52,54] could be caused by induction of the enzyme utilizing nitrous oxide by small amounts of the gas formed during growth. (3) The existence in solution of hyponitrite or nitrous oxide explains the nitrogen 'losses' observed by several workers[60], who measured only nitrate, nitrite, nitrogenous gases, ammonia and cell nitrogen during denitrification. (4) This scheme explains the utilization of hyponitrite, since it would exist in equilibrium with nitroxyl and would also produce nitrous oxide which could be utilized. (5) The true intermediate is likely to contain only one nitrogen atom, as do the other intermediates. A compound such as hyponitrite would involve the consecutive formation and breakage of an N–N bond and this, although possible, is, from a consideration of the energy changes involved, unlikely.

Hydroxylamine. Verhoeven[2] detected hydroxylamine in the culture medium during dissimilatory nitrate reduction by *Denitrobacillus licheniformis* and the reduction of hydroxylamine to ammonia has been demonstrated in a number of micro-organisms[51,61].

Hydroxylamine reductases from *N. crassa*[13] and from *P. aeruginosa*[62] have been shown to be flavoproteins requiring manganese for activity. Kono and Taniguchi[63] have also implicated a cytochrome in reduction of hydroxylamine by a denitrifying *Micrococcus*. The Japanese workers concluded that "hydroxylamine reductase may have physiological meaning other than the mere reduction of hydroxylamine"[64]. This seems unlikely, since the product of the reduction has been shown to be ammonia[40,62], and we have demonstrated[25] that *P. aeruginosa* assimilates small amounts of nitrate-nitrogen (15 per cent of the total cell nitrogen) even while denitrifying actively in a peptone-nitrate medium.

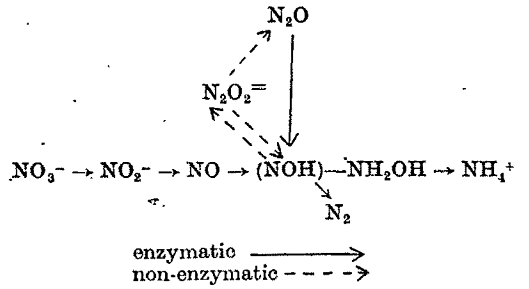
Extracts of higher plants have been shown to oxidize hydroxylamine by means of a peroxidase system stimulated by manganese[44,65]. There is no evidence that this has physiological significance *in vivo*, although there have been reports that nitrate occasionally accumulates in detached leaves kept in the dark[30]. Cresswell and Hewitt[65] suggested that this system "may well provide a basis for the nitrification of hydroxylamine". This may be true for heterotrophic nitrification, for example, by *Aspergillus flavus*[66] (although even here it is of doubtful physiological significance), but is unlikely to apply to autotrophic nitrification by *Nitrosomonas spp.*, where the process is linked to a system yielding energy.

The oxime pathway for utilization of hydroxylamine appears to have little significance except as a detoxication mechanism (see the review by Nicholas[13]).

Aromatic compounds. It has been suggested that alternative or simultaneous mechanisms for reducing nitrate could involve aromatic nitro compounds. There is, however, little evidence for this[13,67]. Enzymes capable of reducing a range of aromatic nitro-compounds have been demonstrated[67,68], but there is no evidence for enzymes responsible for the nitration of the benzene nucleus and this is an obligate step in any such hypothesis.

Common Pathways in Assimilation and Denitrification

The final products of nitrate assimilation are, by definition, nitrogenous cell components. During nitrate dissimilation, however, the following products can be formed: nitrite, nitric oxide, nitrous oxide, nitrogen, hydroxylamine or ammonia. The results already discussed show that the processes involved in both assimilatory and dissimilatory nitrate reduction are very similar. Thus, some of the intermediates have been shown to be the same, and the properties of the enzymes are alike. The assimilatory route has been described in detail previously[13], but it appears that it should now include nitric oxide as a likely intermediate. Schemes for nitrate dissimilation, and for denitrification in particular, have usually been complex[2], but we have shown that the sequence of intermediates may be similar to that in the assimilatory route, and both processes are presented in scheme 3.



N_2O

non-enzymatic

Scheme 3. A pathway for the reduction of nitrate in micro-organisms

It is clear that in dissimilation of nitrate the rate of reduction of nitrate will be much greater than that in assimilation of nitrate, since in dissimilation the nitrate has a respiratory function. Some intermediates, which probably normally exist only as enzyme-bound complexes, may therefore accumulate. On this basis, it is clear that the products of nitrate dissimilation depend on the relative activities of the enzymes of the reductive sequence present in the organism. Thus, those organisms which produce large amounts of nitrite (for example, *E. coli*, *N. crassa*) have a very active nitrate reductase and little or no nitrite reductase activity. On the other hand, some organisms (for example, *B. licheniformis*[2]) produce ammonia during dissimilation, and here all the enzymes in the reductive sequence must be very active. Denitrifying organisms occupy an intermediate position; in a few cases nitric oxide is produced[34], and here the nitric oxide reductase is presumably less active than the nitrite reductase. Similarly, we have suggested how nitrous oxide is produced when the intermediate at the nitroxyl-level accumulates. Denitrification is an efficient form of dissimilation of nitrate in that the products are gaseous and toxic compounds such as nitrite do not accumulate in the medium. This may well have ecological significance. We have demonstrated that *P. aeruginosa* can assimilate nitrate-nitrogen even while actively denitrifying[25], but some denitrifying organisms require ammonium-nitrogen for growth[34,69]. In these cases it is likely that at least one of the later enzymes, probably hydroxylamine reductase, is absent. This is an analogous situation to the *Neurospora* mutants, which can reduce nitrate but not nitrite[70].

The homology of aerobic respiration and dissimilatory nitrate reduction has been pointed out already. That the aerobic process is more efficient is suggested by the following findings: (1) Proliferating bacteria denitrify only under anaerobic conditions, and aeration prevents the induction of the nitrate-reducing enzymes[19,25]. (2) Cell yield is usually lower in bacteria-dissimilating nitrate than in those grown aerobically[25,71]. This might be caused by the formation of a smaller number of high-energy phosphate bonds during the oxidation of carbohydrate substrates by nitrate than by oxygen, that is, a less efficient use of the energy sources. Confirmation of this idea can only come from a study of the extent to which phosphorylation is coupled to nitrate dissimilation. (3) Even cells possessing the nitrate-reducing enzymes use oxygen rather than nitrate as the terminal hydrogen acceptor[19,25,72]. Oxygen has no effect on the enzymes *per se*, but the cytochrome oxidase appears to be more efficient than the nitrate reductase in oxidizing the reduced cytochrome which is involved in the dissimilatory system.

Conclusions

The hypothesis presented here, which serves to link the assimilation and dissimilation of nitrate, is consistent with the data available at the present time. It also agrees with the concept of the "unity of biochemistry"[11,12], which suggests that if similar chemical reactions are carried out by different organisms, then the mechanisms involved are also likely to be similar. Thus, several unrelated organisms can dissimilate nitrate, and it is more likely that a process such as denitrification represents a fairly simple adaptation of a widespread existing system (that is, nitrate assimilation) rather than a *de novo* formation of an entirely different pathway. Similarly, it is probable that a closely related system for nitrate reduction exists in higher plants and, furthermore, the reverse process of nitrification may well involve the same intermediates.

It seems likely, therefore, that the process of nitrate assimilation follows the inorganic sequence to ammonia. Nitrate dissimilation appears to be merely an adaptation of the assimilatory pathway, partly by the intervention of cytochromes in the penultimate electron transfer sequence. Denitrification is a special case of nitrate dissimilation in which the main end-products are nitrogenous gases.

One of us (C.A.F.) gratefully acknowledges the receipt of a postgraduate scholarship from the Ministry of Agriculture, Fisheries and Food. We are also grateful to Dr. W. D. McElroy, McCollum-Pratt Institute, Johns Hopkins University, Baltimore, and Dr. J. Erkama, Biochemistry Department, Helsinki University, for supplying us with cultures of micro-organisms. Mr. M. A. Wright assisted with the growth of the micro-organisms and Mr. R. A.

Coggins identified the organic acids in the culture medium.

THE EVOLUTION OF OVERDOMINANCE: NATURAL SELECTION AND HETEROZYGOTE ADVANTAGE

By Dr. P. A. PARSONS and Dr. W. F. BODMER

Department of Genetics, University of Cambridge

HETEROSIS or hybrid vigour, inbreeding depression and the maintenance of balanced polymorphisms in natural populations have all been associated in one form or another with overdominance. The occurrence of overdominance may be viewed either as an intrinsic phenomenon or as the outcome of an evolutionary process, and in this article we shall argue for the latter possibility.

The term 'overdominance' is applied either when the heterozygote for two alleles at a locus, or more generally when the heterozygote for two genetically different but homologous sections of a chromosome, is superior in mean fitness to either homozygote. Heterosis, or hybrid vigour, on the other hand, is not defined in terms of such specific genetic situations. It describes the observation of a higher mean, with respect to a quantitatively varying character, for the hybrid between two more or less pure lines than for either pure line. When the quantitative character considered is not fitness, Dobzhansky[1] has suggested the term 'luxuriance' should be used instead of heterosis, so that heterosis may be taken to refer specifically to an observed excess fitness of the hybrid. Overdominance may be a cause of heterosis; but the occurrence of heterosis does not imply the existence of overdominance.

Overdominance may also be a cause of the complementary phenomenon of inbreeding depression. The natural causes of heterosis and inbreeding depression have been the subject of much discussion. Some writers, notably Haldane[2] and Lerner[3], have pinpointed overdominance as the basic underlying mechanism, and so have been led to assume an intrinsic advantage for heterozygous genotypes. On the other hand, Fisher[4] and especially Mather[5] have attached overriding importance to non-allelic gene interactions as a cause for heterosis and inbreeding depression. There is on this view no longer a need to attach any intrinsic importance to the phenomenon of overdominance. We shall first of all review the evidence for the occurrence of overdominance and then show how it may evolve.

Causes of Inbreeding Depression

One of the simplest explanations for inbreeding depression is the accumulation of deleterious recessives. However, the loss in vigour from this cause has been shown to be no more than 1–5 per cent[4,6], whereas heterosis of the order of 20 per cent is quite common. On the other hand, the calculation by Fisher[7] of the loss of reproductive value on inbreeding a random-mating population polymorphic for an overdominant pair of alleles, and similar calculations by Haldane[8] and Crow[6], show that overdominance at a comparatively small number of loci might be sufficient to explain observed levels of heterosis and inbreeding depression. There is, however, little direct evidence that supports the simple view of intrinsic overdominance, or 'heterosis *per se*' as it is frequently called, as the basic underlying mechanism. As Mather[5] points out, the occurrence of overdominance in relation to hybrid vigour has scarcely, if ever, been proved, for it is difficult to distinguish from non-allelic gene interaction. Thus, Schuler and Sprague[9], for example, found no evidence in maize for overdominance with respect to specific genetic markers. Further, Jinks[10], using di-allele crossing techniques, found overdominance always in association with non-allelic gene interactions. It has also been shown by Williams[11] that heterosis for a complex character may arise through multiplicative interactions between its various components.

Overdominance, Balanced Polymorphisms and Linkage

Overdominance was shown by Fisher[12] to be a theoretically necessary condition for a balanced polymorphism in a random mating population, when the selective values remain constant. Although, when selective values vary, it is possible to construct models which retain two alleles in a random mating population without overdominance[13,14], it is probable that most of the known cases of balanced polymorphisms are, in fact, associated with the occurrence of overdominance. The association between polymorphism and close linkage was first pointed out by Fisher[15]. One of the first examples of a probable complex of closely linked genes was discovered by Ernst[16] in the distylic polymorphism of some species of *Primula*. Further, Fisher[7] showed how interaction between two or more factors could lead to the tightening of linkage between them. It seems likely, therefore, that we can explain the evolution of closely linked complexes of genes, such as occur in *Primula*, by the accumulation of favourable modifiers linked to a segregating polymorphic locus. The importance of linkage and non-allelic interaction in the building up of complex polymorphic loci has been stressed by Sheppard[17] and Mather[5]. More recently, Clarke and Sheppard[18–20], in a series of papers on mimicry in various African species of *Papilio*, have provided convincing evidence that the mimetic forms are most probably controlled by the various alleles of a 'super-gene' which has evolved in this way. There seems to be little doubt that such polymorphisms are clear examples of an association between overdominance and linkage between interacting genes.

The concept of the balance of polygenic combinations was first developed in a classic paper by Mather[21], although it was, perhaps, foreshadowed by Fisher[7] when writing on "simple metrical characters". On the assumption that natural selection favours intermediate phenotypes, gametic combinations which are well 'balanced' with respect to high and low factors will be continually selected at the expense of poorly balanced combinations which give rise to extreme values. The poorly balanced gametes will be continually produced from well-balanced gametes by recombination so that natural selection will favour closer linkage between factors occurring in a well-balanced combination, or combinations of factors which are already more closely linked. In outbreeding species, selection may thus be expected to cause the accumulation of chromosomes heterozygous for linked balanced polygenic combinations which, although phenotypically uniform, release genetic variability by recombination.

In the simple case of two segregating loci A–a, B–b with A, B acting in one direction, and a, b acting in the other, natural selection will favour the balanced repulsion heterozygote Ab/aB. Evidence for the importance of recombination in releasing significant genetic variability comes from the artificial selection experiments of Mather and Harrison[22], and more recently from the striking phenomenon of repeated response to selection described by Thoday and Boam[23]. More specific evidence for the occurrence of linked balanced complexes in a disruptive selection experiment is given by Gibson and Thoday[24]. The importance of linked interacting gene complexes is also emphasized by experiments with *Drosophila* obtained from natural populations, such as those of Dobzhansky and Levene[25] and of Spiess[26]. There is, perhaps, an analogy between the balanced polygenic combination and the balanced lethal heterozygote and, as pointed out by Mather[5], the former as much as the latter are clearly examples of overdominant situations in the more general form as defined at the beginning of this article.

This brief review of the evidence for the occurrence of overdominance shows that it is most unlikely to be a phenomenon commonly associated with just a single pair of alleles differing at only one genetic site. Even in its simplest form, in a balanced polymorphism, overdominance is closely associated with linkage between interacting genes, and more generally is dependent to an appreciable extent on the genetic background. The dependence on the genetic background is clearly illustrated by the work of Levene, Pavlovsky and Dobzhansky[27], and Dobzhansky[28] with various chromosome rearrangements in *Drosophila pseudo-obscura*, which are frequently polymorphic in natural populations.

Evolution of Dominance

The dependence of overdominance on the genetic background bears a striking resemblance to the similar situation with respect to dominance in such cases as the crinkled dwarf mutant in cotton, which was the first example used by Fisher[29] as evidence for his theory of the evolution of dominance. This theory relates to the common occurrence of the dominance of a wild-type gene over rare deleterious alleles. Since the deleterious allele is rare, it will occur much more frequently in a heterozygous than in a homozygous state, if it is assumed that the heterozygote is less fit than the wild-type homozygote. Fisher argued that modifiers affecting the deleterious mutant would therefore be selected almost entirely for their effect on the heterozygote, and that selection of such modifiers would gradually lead to the resemblance of the mutant heterozygote and the wild-type homozygote. The selection for modifiers will depend on the frequency of the heterozygote, and so increase as its frequency increases, but selection will always be slow so long as the mutant is rare. This will be the case so long as the mutant homozygote is at an appreciable disadvantage. As pointed out by Fisher[30], selection for modification of the mutant homozygote will be slow until the heterozygote is fairly frequent "except in so far as some such an effect has already been produced by the selective modification of the heterozygote". Fisher's theory of the evolution of dominance was criticized by Wright[31] and Haldane[32] soon after its first publication, principally on account of the very slow rate at which modifiers of the mutant heterozygote would be selected. However, subsequent experimental evidence for the breakdown of dominance on outcrossing such as in the work on cotton[33] or in Ford's[34] work with *Triphœna comes* (*Hb*), and more recently in the work of Clarke and Sheppard[18-20] in the mimicry alleles in *Papilio* species, leaves little doubt that, at least in a fair proportion of cases, dominance is an evolutionary phenomenon and its expression depends on the genetic background.

It was pointed out by Fisher[15] that if, for any reason, the heterozygote occurs in appreciable proportions, such as is the case in a balanced polymorphism, evolution of dominance may occur much more rapidly than in the modification of the dominance of an ordinary deleterious mutant. This will, however, apply only to such genetic factors as affect external appearance, where it may be an advantage for the heterozygote to resemble one or other homozygote, but the basic polymorphism is determined by some constitutional effect of the factor other than that on external appearance. It can be shown (Bodmer, unpublished) that modifiers of the three genotypes, formed by two alleles at a locus, occurring in a balanced polymorphism, will be selected according to the prevailing genotype frequencies. Since in such a situation the 'mutant' homozygote is no longer rare, there is not the same differential selection for modifiers of the heterozygote as in the situation to which Fisher originally applied his theory. However, during the initial stages of progress of an advantageous gene, the gene will occur principally in heterozygotes and there may then be opportunities for differential selection of modifiers of the advantageous heterozygote[35]. This is a situation not apparently envisaged by Fisher in his original development of the theory of the evolution of dominance, but one which is exemplified in the classic work of Kettlewell[36] on the industrial melanic forms of the moth *Biston betularia*.

Increase of Newly Occurring Genes

The conditions under which a newly occurring gene will become established have been investigated by Bodmer and Parsons[35] for three specific genetic systems. Their general conclusion was that the newly formed heterozygote must be at an advantage in outbreeding species, and that the measure of the advantage needed to establish the gene decreases as the amount of inbreeding increases. Thus, consider the simple case of a new allele A being introduced into a population which is predominantly aa. Let the frequency of the allele A be q, and of a be p where $p + q = 1$, and suppose the amount of inbreeding to be measured by a constant inbreeding coefficient F. Then if the viabilities of the genotypes AA, Aa, and aa are respectively a, h and b, the frequencies of the three genotypes after selection will be:

$$\begin{array}{ll} AA & a(q^2 + pqF)/T \\ Aa & 2hpq(1 - F)/T \\ aa & b(p^2 + pqF)/T \end{array}$$

where T is such that the frequencies after selection add up to unity. If, initially, A is rare, then q is small and neglecting terms in q^2 the condition that the frequency of A should increase is:

$$aF + h(1 - F) > b$$

and this is the condition for the gene A to become established in the population. When $F = 0$ and there is random mating this gives $h > b$, which is simply the condition that the new heterozygote should be fitter than the prevailing homozygote. When $F = 1$ and there is complete selfing we have $a > b$, and this means that the new homozygote must be fitter than the old homozygote. As F goes from 0 to 1 for increasing amounts of inbreeding, the relative importance of the heterozygote viability h, in determining the initial increase of the gene A, diminishes. Thus the importance of initial heterozygote advantage is entirely a function of the breeding system.

Evolution of Overdominance

Now Haldane[37], in a paper on the theory of selection for melanism in moths, has given an elegant calculation for the total number of heterozygotes produced in the course of the substitution of a new advantageous gene. He argues that if this total number of heterozygotes is H times the average population size in any one generation, then selection for modifiers of the heterozygote will be equivalent to the effects of H generations of selection on a population consisting entirely of heterozygotes. He later qualifies this statement, however, by saying that when the viabilities of the heterozygote and the new homozygote are equal (and, of course, greater than that of the old homozygote) "there is no selective pressure tending to select modifiers of heterozygotes".

This statement is followed up in his paper on "The Cost of Natural Selection"[38], where he considers the number of "selective deaths" as an effective measure of the selection for modifiers of any particular genotype. On this premise, when there are no differences in fitness between genotypes, there can be no selection of modifiers which improve the fitness of any one genotype. It is clear that such a model excludes the possibility of evolving overdominance, for once the viability of the heterozygote has been selected up to that of the new advantageous homozygote, Haldane would argue that there could be no further differential selection of modifiers improving the heterozygote viability. This situation arises from his assumption that on the whole a species "can only maintain its numbers by utilizing its reproductive capacity to the full", and so taking as his basic model a situation in which there is a deterioration in the environment causing a lowering of the mean fitness. Selection of a new gene in this environment is then acting only to return the mean species fitness to its former level. This does not allow the possibility of selection for a gene increasing the mean fitness without any prior deterioration of the environment. It is surely necessary to have a theoretical model which can allow for a positive evolutionary change of this sort. As Thoday (personal communication) has suggested to us, Haldane's basic assumptions do not take into account "the cost of living".

In his original calculations on the theory of dominance, Fisher[30] expressed the selection for modifiers of the heterozygote in terms of the fraction of the ancestry of future generations ascribable to heterozygotes or, as Haldane[39] called it, their "ultimate reproductive value". The calculation assumes a steady state with respect to the rare mutant, the frequency of heterozygotes being maintained by recurrent mutation. In this case the ultimate reproductive value of a heterozygote remains the same, at least during an interval of time when the heterozygote viability has been improved only a little. There is no clear parallel to this concept when we consider the progress of an advantageous gene in an outbreeding population. As we have shown here, such a gene must start off by having an advantage in the heterozygote over the prevailing wild-type homozygote. Even if the new homozygote is initially fitter than the heterozygote, when the new gene is rare and so occurs principally in heterozygotes, the contribution of heterozygotes to future ancestry is still much more than that of homozygotes. However, as the gene frequency increases, and so the proportion of homozygotes relative to heterozygotes increases, this situation will change and homozygotes will end up by contributing much more, in total, to future ancestry.

Following Haldane[37], it is possible to calculate the total number of heterozygotes Aa and homozygotes AA produced as a new advantageous gene increases in a population consisting initially mostly of the genotype aa. By weighting the frequency of a genotype in any generation with its contribution, in terms of reproductive value, to the subsequent generation it is also possible to calculate the total contribution of reproductive value made by the genotypes Aa, AA during the evolutionary progress of the new gene A. Assuming viabilities $1+S_1$, $1+S_1-S$ and 1 for the genotypes AA, Aa and aa respectively, we have calculated the total number, or total reproductive value, contributed by the genotypes AA, Aa as the gene frequency of A increases from q_0 to q_1 for a series of different values of S_1 and S. If we assume that q_0, the initial frequency of A, is small, then these contributions depend largely on $1/S_1$ (where S_1 is the excess viability of AA over aa) for any given value of q_1. Table 1 shows the number of heterozygotes Aa produced by the time A has reached gene frequencies ranging from 0·1 to 0·9 for two different sets of viabilities. In the first case $S_1 = 1$ per cent and $S = 0$, so that A is fully dominant, and in the second case $S_1 = 5$ per cent and $S = 2{\cdot}5$ per cent, so that A is now an 'additive' gene with respect to fitness. The actual numbers in Table 1 represent multiples of the population size (assumed constant) in any generation. The ratio of the number of Aa as compared with the number of AA is given in the last column of Table 1 to the nearest whole number. This ratio is more or less independent of the viabilities S_1 and S, and appears to be a characteristic of the pattern of increase of a new gene in a random-mating diploid population.

Table 1

q_1	No. of heterozygotes Aa $S_1=1$ per cent $S=0$	 $S_1=5$ per cent $S=2{\cdot}5$ per cent	Ratio of heterozygotes Aa to homozygotes AA
0·1	21·3	8·2	37
0·2	45·1	16·4	17
0·3	72·0	24·6	10
0·4	103·2	32·8	7
0·5	140·0	41·0	5
0·6	185·1	49·2	4
0·7	243·2	57·4	3
0·8	325·1	65·6	2
0·9	465·1	73·8	1

where q_1 is the frequency of the 'new' gene A and the viabilities
of AA Aa aa
are $1+S_1$ $1+S_1-S$ 1 respectively.

It is clear that when the frequency of A is small far more heterozygotes than homozygotes have been produced and this excess is still appreciable when q_1 is 40 per cent or even 50 per cent. Thus, if modifiers can have been selected at all in the time taken to reach this gene frequency, they will have been selected much more for their effect on the heterozygote Aa than on the homozygote AA. It is the total number of heterozygotes produced, not the number which have died selectively, which gives an approximate measure of the number of equivalent generations of selection available for a population consisting entirely of heterozygotes.

It can be shown that the difference between the total number produced and between the total contribution of reproductive value is generally only of the order of magnitude of the gene frequency. The details of these calculations will be published elsewhere. The results provide a theoretical basis for the statements by Mather[5,40] that outbreeding species are exposed to natural selection in a predominantly heterozygous condition. It is, of course, clear that as soon as modifiers have increased the fitness of the heterozygote over that of both homozygotes, a balanced polymorphic situation will be achieved in which the heterozygote is permanently maintained in the population.

In a further calculation, Haldane[37] has obtained an expression for the increase in frequency of an independent dominant modifier of the heterozygote, throughout the course of the increase of the advantageous gene. In our notation, the modifier would increase in frequency by a factor :

$$F = \left(\frac{S_1 - S}{S}\right)^{2\mu/(S_1 - 2S)}$$

where μ is the advantage conferred on the heterozygote by the modifier. Haldane considers only the case $\mu = S$ when the modifier brings the viability of the heterozygote Aa up to the level of the homozygote AA. When $\mu = S$, $F \rightarrow 1$ as $S \rightarrow 0$ and the A gene tends to complete dominance. F is large and tends to infinity only as $S/S_1 \rightarrow 1$, in which case the heterozygote Aa has the same viability as the prevailing wild-type homozygote aa and only heterozygotes carrying the modifier will be selected. Only allowing the case $\mu = S$, Haldane again excludes the possibility of evolving overdominance. If $\mu \neq S$, and is a constant, it is easily seen that $F \rightarrow \infty$ as $S \rightarrow 0$, for then the heterozygotes carrying the modifier are effectively overdominant and only such heterozygotes will be permanently maintained in the population. If, for example, $S_1 = 10$ per cent, $S = 1$ per cent and $\mu = 10$ per cent, then $F = 100$, whereas Haldane considers values of F greater than 20 most improbable. Although lack of dominance of the modifier will diminish its relative rate of increase, linkage with the advantageous gene will certainly enormously increase its advantage, more especially if the modifier is initially rare. This will also be true of modifiers tending to increase the viability of Aa when S/S_1 is nearly 1.

It seems clear, from these calculations, that an advantageous gene may evolve overdominance during the course of its evolutionary progress. Experimental evidence for this lies in the work of Levene, Pavlovsky and Dobzhansky[27]. It is also, of course, well known that if a gene is initially overdominant in the heterozygote, a balanced polymorphism will result. As pointed out by Fisher[7], this means that although overdominance as an intrinsic phenomenon may be rare, cases of overdominant genes so maintained in a population will be particularly brought to our notice. However, the evidence, as mentioned earlier in the paper, for the widespread occurrence of linkage between interacting genetic factors in association with overdominance, argues against the simplest form of overdominance associated with a genetic difference at a single site (a muton or recon in Benzer's[41] terminology). As Lewis[42] mentions, even the simplest biochemical models of heterosis in *Neurospora* and *Aspergillus* heterocaryons are the result of the complementary effect of two dominant genes.

Evidence from Micro-organisms

Even in micro-organisms with probably only limited facilities for outcrossing there is considerable evidence for the existence of linked blocks of genes controlling closely related biochemical reactions, which must have an evolutionary origin. Thus, Demerec *et al.*[43] have shown in *Salmonella* that four loci controlling sequential steps in the synthesis of tryptophan occur in a closely linked complex. Similar results have been found for loci concerned with the synthesis of histidine and proline in *Salmonella*, and also for tryptophan loci in *E. coli*[44]. That such blocks are most likely to have an evolutionary origin is emphasized by the fact that the same four steps in tryptophan synthesis, which are controlled by a linked complex in *Salmonella* and *E. coli*, are controlled by four unlinked loci in *Neurospora*[45]. Furthermore, such linked complexes are not a peculiarity of the enteric bacteria because recent work of Gross and Fein[46] has shown the existence of a linked complex in *Neurospora* concerned with the synthesis of aromatic compounds. The work of Pardee *et al.*[47] in *Escherichia coli* on the loci involved in the control of the synthesis of β-galactosidase further shows the existence of linkage between genes which are interacting at an extremely basic level. This is a situation which surely must have an evolutionary origin.

If linkage and interaction are excluded as the basic ingredients for heterosis, and as we have defined it overdominance, it is necessary to search for some intrinsic advantage of overdominance. It has been suggested by Haldane[2] that a heterozygote may be advantageous because it may give rise to more biochemical diversity than either homozygote, as occurs, for example, with the hæmoglobins. However, the occurrence of interaction products from a heterozygote[48,49] belies this simple interpretation. Moreover, the postulated mechanism of Crick and Orgel (personal communication) for heterocaryon complementation certainly suggests the possibility that some heterozygotes are likely to be intrinsically disadvantageous. Rather it seems, from the sort of survey of heterozygote viabilities carried out by Stern and Novitski[50], that a fairly wide spectrum of heterozygote viabilities is likely to occur and that there is little reason to favour any particular combination.

Conclusion

In conclusion, we would argue that overdominance as it is commonly found in outbreeding species is, at least in many cases if not all, an evolutionary phenomenon which results from the nature of an outbreeding diploid species in exposing new geno combinations in a predominantly heterozygous condition. Even in cases where overdominance is found in ostensibly inbreeding species, these almost exclusively have a previous history of outbreeding[51] during which the overdominance may have evolved in the way we have suggested. Our mechanism is just another example of the way in which the breeding system determines the genetic structure of a species, in the same way that outbreeding leads to the balanced genotype of Mather or the integrated gene pool of Dobzhansky. The root of all this organization lies in the advantage of the outbreeding system which, as Darlington[52], Mather[21], Thoday[53], and probably Darwin before them have emphasized, is its flexibility in producing new variation upon which natural selection may act. The evolutionary process is the accumulation of successively interacting genetic factors which together build up the highly adapted and 'integrated' genotype which we now study.

NEWS and VIEWS

Metallurgy and Fuel Technology at Cardiff: Prof. W. R. D. Jones

PROF. W. R. D. JONES will retire from the chair of metallurgy and fuel technology at the University College of South Wales and Monmouthshire, Cardiff, at the end of the present academic session. He graduated from that College in 1919, and in the same year commenced teaching duties. Coming from a family well known in mining circles, and forming a close association with the iron and steel industry in South Wales, his research work has nevertheless largely been directed towards light alloys containing magnesium. His determination of the copper–magnesium phase-diagram brought him his D.Sc. in 1932, and in the following year he was appointed head of the Department in succession to Prof. A. A. Read. Prof. Jones has always taken a very full part in academic work, being at various times deputy principal, dean of the Faculty of Science and a member of the Academic Board of the University of Wales. Combined with this he promoted a vigorous research school, the publications of which in the *Journal of the Institute of Metals* are notable contributions to our knowledge of magnesium alloys. Other work has been concerned with strain-ageing of steels and the viscosity of molten metals and alloys. His genial personality has made him popular with staff and students and he is a well-known figure in public and social life in Cardiff. He became actively interested in the South Wales Institute of Engineers and was elected president in 1953.

Dr. H. K. M. Lloyd

DR. H. K. M. LLOYD, who has been appointed to succeed Prof. W. R. D. Jones, is senior lecturer in metallurgy in the University of Nottingham. He graduated with honours in metallurgy at the University College of Swansea in 1942, and then gained industrial experience as a metallurgist in a steelworks, and afterwards became experimental officer in the Aeronautical Inspection Directorate. As a result of research on hydrogen in steel in the University of Sheffield he was awarded a Ph.D. in 1948 and the Brunton Medal, and continued for a year on the teaching staff. Since 1949 Dr. Lloyd has lectured at the University of Nottingham, first in the Mechanical Engineering Department, and from 1954 in the new Department of Metallurgy, which he largely established and equipped. He has maintained close contacts with the iron and steel industry and various engineering firms, which have sponsored some of his research work. This has chiefly been concerned with engineering metallurgy, and his work has been published in a variety of journals. In 1950 Dr. Lloyd was invited to examine metallurgical problems in an oil installation in the Persian Gulf, and during 1951 was awarded a Nuffield travelling fellowship and visited plants in the United States and Canada. His interests have extended to technical institutions and he is a governor of Corby Technical College, while as a founder member of the East Midlands Metallurgical Society he became president in 1953. In returning to Wales, Dr. Lloyd will feel quite at home in the metallurgical work which awaits him at Cardiff.

Mechanical Engineering at Sydney: Prof. P. T. Fink

AT the beginning of the current academic year, Peter Thomas Fink was appointed to the chair of mechanical engineering in the University of Sydney. Prof. Fink was educated in Birmingham, England, and the University of Sydney, where he graduated in aeronautical engineering in 1944. Continuing at Sydney as a research student and teaching fellow under Prof. A. V. Stephens, he worked on problems in aircraft stability in conjunction with the Commonwealth Scientific and Industrial Research Organization (Melbourne) until his appointment as assistant lecturer under Prof. A. A. (now Sir Arnold) Hall at the Department of Aeronautics, Imperial College of Science and Technology, London, in 1947. Prof. Fink spent the next ten years at the Imperial College as assistant lecturer, lecturer, and (from 1956) reader in aeronautics, playing a prominent part in the expansion of teaching and research activities under Prof. Hall and later Prof. H. B. Squire. During this period he published papers on aircraft stability and aerodynamics, including some important contributions to the understanding of the flow past slender delta wings. Prof. Fink also collaborated with Mr. Donald Campbell in the design of his record-breaking hydroplane. In 1957 he returned to Sydney to take up an appointment there as reader in aeronautical engineering.

The Iron and Steel Institute : Awards

THE Council of the Iron and Steel Institute has made the following awards : *Bessemer Gold Medal for 1961* : Mr. William Barr, director and chief metallurgist, Colvilles, Ltd., president during 1959–60 of the Institute ; *Sir Robert Hadfield Medal for 1961* : Mr. Emrys Davies, managing director, Brymbo Steel Works ; *Williams Prizes for 1960 (£50 each)* : Mr. T. McHugh and Mr. F. A. Kirk (Low Moor Fine Steels, Ltd.) for the paper "Some Aspect of Steel Extrusion" (*J. Iron and Steel Inst.*, 194, 423 ; 1960) ; their co-author, Mr. R. Cox, was not eligible for an award ; and Mr. J. Chapman (Steel, Peech and Tozer) and Mr. W. Montgomery (Round Oak Steel Works, Ltd.) for the paper "The Effect of Flow Distribution on Air Preheat in the Open-hearth Furnace" (*J. Iron and Steel Inst.*, 196, 15 ; 1960).

A New Department for Technical Co-operation

IN the House of Commons on March 21, the Prime Minister announced new procedures for dealing with technical assistance overseas. Hitherto, requests for such assistance have been dealt with through different administrative channels, depending on whether they came from a dependent territory, an independent country of the Commonwealth or a foreign country. Such arrangements were adequate in the past, but with the growth of size and importance of plans for helping overseas countries with trained men and women, special equipment, and so on, closer co-ordination has become necessary; the Government, therefore, proposes to set up a new Department of Technical Co-operation. The new Department, Mr. Macmillan said, would be in the charge of a Minister of equivalent rank to that of a Minister of State, and while the Foreign Secretary, the Commonwealth Secretary and the Colonial Secretary would continue to be responsible for matters of general policy, within these limits the new Department would take over the present responsibility of these three overseas Departments for the provision of technical assistance other than capital projects. It would be concerned with much of the technical assistance provided with the help of the United Kingdom through international organizations as well as with that given direct to the recipient countries. As one of its duties the new Department would administer the scheme set out in the White Paper of last October for the continued employment of overseas offices; but the transfer, promotion and discipline of the Overseas Service in dependent territories would remain the responsibility of the Colonial Secretary.

The statement was warmly welcomed by Mr. H. Gaitskell for the Opposition, and in reply to questions Mr. Macmillan added that the Vote would be separate and the Minister would be a member of the House of Commons. Capital aid would remain with the three overseas Departments, and the existing Colonial organization would continue. Educational assistance through the United Nations Educational, Scientific and Cultural Organization would still be a matter for the Ministry of Education, and the work of the British Council in providing teachers of English would continue, though Mr. Macmillan agreed that all this would need co-ordination, and that the new Department would take over many requests for educational assistance. It might also be preferable to continue to operate in inter-university matters through existing non-governmental bodies such as the Inter-University Council for Higher Education Overseas, or the Council for Overseas Colleges of Arts, Science and Technology and the Association of Universities of the British Commonwealth, although he thought the new Department might be able to help here, too. In reply to a suggestion that the new Department might have specific responsibility for the Inter-University Council, Mr. Macmillan said he would not like to give a precise answer without consulting the Chancellors of the Universities. Mr. Macmillan said, reasonably enough, that it would take some time to work out all the details. The new Minister would be concerned with providing training facilities in Britain for men and women from these territories, particularly from within the Commonwealth, as well as with finding and sending abroad technically trained people of British nationality. Some would belong to the Overseas Services, and others would be serving on contract for a limited period. A similar statement, made simultaneously by Lord Hailsham in the House of Lords, added that the proposals would mean bringing together work done in overseas Departments, and that in general the staff would come from these Departments. He also made it clear that the new Department would not be responsible for the Colonial Development Corporation, relations with which would continue to be handled through the Colonial Office and the Commonwealth Relations Office. The necessary Bill was read for the first time in the House of Commons on March 23.

The American Institute of Biological Sciences

SUPPORTED by a grant from the National Science Foundation, the American Institute of Biological Sciences has undertaken a Biological Sciences Communication Project to seek ways of improving the overall effectiveness of the control and dissemination of biological information. An examination of the methods of acquiring, indexing, storing and retrieving printed scientific literature will be followed by an investigation into the needs for and use of information by biologists, and of the characteristics of the dissemination activities of existing agencies. The effectiveness of visiting biologist's programmes, conferences and symposia will also be appraised and the project will consider developing a practical method for obtaining and disseminating in the

United States valuable research information obtained by United States scientists in visiting other countries. The project will also take account of the problem of scientific communication as influenced by the training of scientists and of the needs of teachers, administrators and science writers, which may be quite different from those of the research worker. An advisory committee has been formed to assist the Institute in providing liaison among allied biological groups.

Funds for Industrial Research in the United States

A PRELIMINARY report issued by the National Science Foundation indicates that funds for research and development by industry in the United States amounted in 1959 to 9,400 million dollars, an increase of 15 per cent on 1958, and the total is expected to reach 10,000 million dollars in 1960 (*Reviews of Data on Research and Development*, No. 24. N.S.F. 60–61. Washington 25, D.C., December 1960). Of the total, 5,400 million dollars came from federal funds, an increase of 17 per cent, whereas that financed by industry itself increased by 12 per cent. Expenditure on fundamental research was 344 million dollars, an increase of 17 per cent on 1958. Three-quarters of the Federal contribution went to two industries heavily engaged in research and development projects concerned with missiles, rockets and satellites, the aircraft industry alone receiving 2,500 million dollars, and the other industry, electrical equipment and communication, 1,600 million dollars.

Computing Chemical Plant Automation

THE first British-produced digital computing system to be used to control a chemical process without human intervention has been ordered by Imperial Chemical Industries, Ltd., for use in their chemical plant at Fleetwood, Lancs. The machine concerned is the Ferranti *Argus* computer, which, because it uses only solid-state electronic elements, is deemed reliable enough to operate in relatively 'docile' chemical processes without a constant human monitor. It is interesting to note that the computer is of the pluggable sequence type ; the 'plugs' in this case being small ferrite rods which alter the coupling between mesh points of a set of mutually orthogonal conductors. In line with recent thought, the *Argus* has facilities for time sharing, the acceptance and emission of analogue signals, and the capacity of accepting additional drum storage of up to 50,000 words. The Imperial Chemical Industries, Ltd., installation has the basic capacity of 1,024 orders and core storage for 1,024 words. More than 300 analogue signals of six different types can be read in and outputs to control 100 pneumatic valves are provided. The arithmetical speeds are such that 50,000 additions or 10,000 multiplications can be performed each second.

Coal Research in Australia

THE Coal Research Division of the Commonwealth Scientific and Industrial Research Organization has during the past four years published an attractive series of 16-page pamphlets (*Coal Research in C.S.I.R.O.*, Nos. 1 (May 1957)–11 (August 1960). Melbourne : Commonwealth Scientific and Industrial Research Organization) at the rate of three a year, describing facets of its work. Presentation and style are excellent ; the articles are brief, popularly written and broadly informative, yet technically precise. Directed towards industrial producers and users of coal, the series would appear to serve four purposes and these may be illustrated with reference to recent articles. The 'educative' function is represented at present by a series on macerals, petrological constituents of coals roughly analogous to the minerals in rocks. Their nature and appearance and their influence on properties of coal are described with the aid of typical photomicrographs. Descriptions of 'techniques' and of 'recent research work' are closely related to one another, though the emphasis differs greatly between general application and specific results according to the topic under discussion. Examples of the former are "Fluidization Technique", "Porosity Measurements", and fundamental methods of investigation such as "Molecular Still for Tar Distillation" and "High Sensitivity Gas Chromatography". Among the latter may be mentioned "Coal Structural Studies", "Coal Macerals in Solution", "Char Blending makes Better Coke" and "Air-Flow in Cupolas" ; the aim, methods used, type of information obtained, and likely applications or significance are all touched on. Finally, some articles might be regarded first and foremost as 'surveys of a field', as "Coke Production and Cupola Practice", "Utilization of High-Ash and Small Coals" and "Pitch for Making Electrode Carbon". The last-mentioned article, for example, gives information on methods of preparation and properties required. Each issue concludes with abstracts of papers published by staff of the Coal Research Division. While the breadth of treatment assists understanding and is to be preferred to a parochial approach, the impression is sometimes created (since acknowledgment of work elsewhere is not made) that the techniques, methods of interpretation, and detailed findings alike originated in the Research Organization's laboratories. Sometimes this is so ; but often the work described forms part of the world-wide advance, and the article is partly concerned with this broader advance. These pamphlets deserve attention and success for their competent attempt to 'sell' research in industry.

Technological Development in Poland

A RECENT issue of the *Review of the Polish Academy of Sciences* (No. 2, 5, April–June 1960) contains a survey by I. Malecki of fifteen years of technology in Poland and one by T. Nowicki of the six-years work of the Polish Academy of Sciences' Institute of Basic Technical Problems founded in 1953. Dealing first with the starting up of technology in Poland after the War, and the reconstruction and development of its technical basis, Dr. Malecki describes the development of particular industries, including transport and communications. Power production increased by 310 per cent between 1946 and 1958, production of cast iron and steel from 1,200,000 tons and 1,900,000 tons, respectively, in 1948, to 3,900,000 tons and 5,600,000 tons in 1958. There were major advances in the engineering industry which represented 19 per cent of industrial production in 1958 compared with 13 per cent in 1938, and the output of the chemical industry rose nine-fold compared with 1938. The industry now provides 70 per cent of pharmaceuticals compared with 12·5 per cent in 1949. The Institute of Basic Technical Problems comprises eight scientific centres covering three main fields : electrotechnics, mechanics and technical physics, and includes departments for the theory of telecommunication, electrical engineering, electronics, mechanics of continuous media, fluid mechanics, vibrations research and analogues, and a laboratory. for research on isotopes.

Radioisotopes and Radiation in Entomology

THE International Atomic Energy Agency in Vienna recently convened a symposium under the above title with the object of discussing and developing plans for the wider use of radioisotopes and radiation in the control of insect pests. It was held in Bombay during December 5–9, 1960, when twenty-five papers were read and discussed by delegates from the host country, India, Federal Republic of Germany, France, Italy, Pakistan, Philippines, United Kingdom, United States and U.S.S.R. The papers covered a pertinent range of topics, such as the use of irradiation as a direct means of disinfesting food products, as an indirect means by inducing sterility in male insects, and so interrupting reproduction in field populations, and the use of radioactive tracers in entomological and insect biochemical research. There was lively but constructive discussion, for example, in the respective merits of static radioactive materials and electrical machines as radiation sources. Through the kindness of the Indian Government the delegates visited the Atomic Energy Establishment and the new reactor at Trombay, where impressive facilities have been created for the peaceful applications of atomic energy. There are major agricultural and insect pest problems in the less-developed regions of the world in which irradiation and radioisotope techniques can undoubtedly play a valuable part. Excellent facilities for the application of these techniques now exist in India, so that the symposium was indeed timely and effective. The balanced and up-to-date nature of the programme will render the collected proceedings a valuable document provided that publication is not long delayed.

Sabouraudia

THE aptly named *Sabouraudia*, the new journal of the recently formed International Society for Human and Animal Mycology and the first number of which was published during January, can truly be regarded as a milestone marking the rapid extension of the science of mycology into the sphere of human and animal mycoses (Vol. 1, Part 1. Edited by J. C. Gentles. Pp. 72 + 12 plates. (Edinburgh and London: E. and S. Livingstone, Ltd., 1961). Subscription price per volume (four issues) 80*s*. or 12 dollars. Single parts 20*s*. or 3 dollars). Indeed, as pointed out in an excellent review of the subject by the president, Dr. Juan Makinnon, order is steadily being brought out of chaos by the insistence of a few discerning enthusiasts on the observance of the rules of the international codes of nomenclature for bacteriology and botany. It is, perhaps, the recent trend towards accuracy in species diagnosis and nomenclature of the causal fungi, in contrast to the over-emphasis on clinical aspects characteristic of older work, which has been responsible for the enhanced status of medical and veterinary mycology. This is well exemplified by two papers describing some of the techniques being evolved for obtaining the sexual, or 'perfect', states of parasites content to be known previously only by their conidial states. The remaining six papers are of an agreeably high standard, and mycology will be well served if the journal continues to maintain this standard. It is printed clearly on good quality, quarto-sized paper with excellently produced illustrations, and includes book and film reviews and news of scientific societies in a total of 71 pages.

Protection of Cleaned Iron Objects

THE protection of iron objects after they have been cleaned has for a long time been a major problem in the conservation of museum objects. In the February issue of the *Museums Journal*, Mr. K. J. Barton details some experiments and conclusions on this subject. The most interesting result is that the phosphate coated object (using one of the commercial phosphoric acid cleaners) shows no evidence of corrosion under the experiments. The one disadvantage of this coating is that the resultant colour is poor and always patchy. This can be overcome by dyeing the phosphate coating black with 'Hematine' crystals, thus giving a matt surface which can be polished with a stiff brush. Other tests covered vapour-phase inhibitors using cyclohexylamine carbonate. Shell Nos. 220 and 260 were found to be the most effective and their use is limited to objects made of steel, iron, tinplate, zinc and aluminium. They must not be used in association with lead or copper since they are liable to attack.

Atmosphere Temperature Fluctuations

THE subject of climatic change is one which has for long interested climatologists and meteorologists, but especially so during recent years. Direct temperature observations, the recession of glaciers, the movement of fish and insects northwards in the northern hemisphere, as well as a similar movement of the tree-line have all indicated an appreciable rise in atmospheric temperature in many parts of the world during the past few decades. A recent contribution to the subject has been made by G. S. Callendar, of the Ministry of Aviation, in a paper which appears in the *Quarterly Journal of the Royal Meteorological Society* (87, No. 371; Jan. 1961). From his analysis he concludes that the rising trend is significant from the Arctic to about 45° S. lat., but is small and indeed locally non-apparent in regions below 35° N. as yet. A number of theories to account for the rise have been advanced, and there has been much speculation as to whether or for how long it will continue. One widely held theory is to the effect that the rising trend is a result of increased incoming solar radiation, due either to an increased output of solar energy or to an increased atmospheric transparency resulting from a decrease in volcanic activity. Callendar considers that such a hypothesis is not inconsistent with the observed zonal short-period fluctuations, but that it fails to explain the pattern of the overall climatic trend. The latter is considered to be not incompatible with the increased carbon dioxide theory, which is to the effect that the trend could be due to back radiation from the additional carbon-dioxide produced by fossil-fuel combustion. The points at issue seem to be: Does Nature control the whole process, or has human activity caused the trend, on which Nature has merely imposed the fluctuations ?

Corrosion Prevention

A SPECIAL exhibition on metallic corrosion and its prevention is being organized at the Science Museum, South Kensington, during March 27–April 22. This collection of exhibits has been assembled by the Corrosion Group of the Society of Chemical Industry to mark the first International Congress on Metallic Corrosion, to be held in London during April 10–14. It has been estimated that the yearly cost of corrosion to Great Britain alone is at least £200 million (£5 a head per annum); the subject is, therefore, of great national economic importance and of direct interest to the layman. For this reason although the exhibition will be of particular interest to the delegates to the Congress, it has been designed so as to be intelligible and interesting to the non-specialists who form the majority of visitors to the Museum. It sets out to answer in simple terms the questions: What is Corrosion? How and when does it take place? What can be done to prevent it?

University Entrance

A SECOND edition of *University Entrance—The Basic Facts* has appeared. It will enable one to find out (*a*) which universities provide first-degree courses and in what subjects; (*b*) the minimum to be attained in matriculation for entering individual universities; (*c*) faculty and departmental requirements; (*d*) the approximate cost of study based on amounts paid at present by the Ministry of Education to scholars who need maximum help; (*e*) what the present policy is regarding grants to students; the approximate scale of awards and parental contribution. It is suggested to readers that they watch the national or educational Press for announcements about the Government's future policy on financial help to students. The pamphlet, published by the National Union of Teachers, can be obtained from Hamilton House, Mabledon Place, London, W.C.1 (price 4*s*. 6*d*. post free). It should be of great help to head-masters, teachers, parents and students.

Friedrich Vieweg and Son Anniversary Competition

ON April 1, 1786, Friedrich Vieweg established at Brunswick a publishing house that was to become associated with such great names as Goethe, Herder, Alexander and Wilhelm von Humboldt, Justus von Liebig, Gottfried Keller, Wilhelm Raabe, Hermann von Helmholtz, Wilhelm von Bode, Madame Curie, Arnold Sommerfeld, Ludwig Prandtl, Albert Einstein, Max von Laue and Erwin Schrödinger. During the past years the house has been mainly concerned with the publication of books and periodicals in the fields of mathematics, natural sciences and engineering. On the occasion of its one hundred and seventy-fifth anniversary the house of Friedrich Vieweg is offering a number of prizes for papers in the field of mathematics, physics and chemistry for publication in book form, to be judged by a panel of distinguished scientists. Further information can be obtained from Friedrich Vieweg und Sohn, Postfach 185, Burgplatz 1, Braunschweig, Germany.

Announcements

DR. J. T. DELACOUR, formerly director of the Los Angeles County Museum and president emeritus of the International Council for Bird Preservation, has been awarded the Addison Emery Verrill Medal of the Peabody Museum, Yale University.

DR. A. R. BATTERSBY, lecturer in chemistry in the University of Bristol, has been awarded the Corday-Morgan Medal and Prize of the Chemical Society, in consideration of his work on the stereochemistry of emetine and its congeners, and also on the chemistry of curare alkaloids and the biogenesis of papaverine. The award consists of a silver medal and a monetary prize.

THE British Iron and Steel Research Association will hold open days at its Sheffield Laboratories on June 15 and 16. Further information is available from the Association, 11 Park Lane, London, W.1.

THE spring meeting of the Parasitology Group of the Institute of Biology is to be held at Wills Hall, Bristol, during April 11–13. Included in the programme will be an invited address by Prof. C. P. Read on "The Host-Parasite Interface: Molecular Basis of Parasitism". Further information can be obtained from Dr. L. P. Joyner, Central Veterinary Laboratory, Ministry of Agriculture, Fisheries and Food, New Haw, Weybridge, Surrey.

A POSTGRADUATE course in nuclear technology (chemical) is being administered by the Department of Chemical Engineering and Chemical Technology, Imperial College of Science and Technology, London. The course is to be full-time and of one year's duration. Applications for admission should be made by June 1 to the Registrar, Imperial College of Science and Technology, London, S.W.7, from whom further information and application forms can be obtained.

Two lectures on "Recent Advances in the Radiation Chemistry of Aqueous Systems" will be given by Prof. Gabriel Stein of the Department of Physical Chemistry, Hebrew University of Jerusalem, at the Imperial College of Science and Technology, London, during May 3–10. The first lecture will be on basic processes in aqueous solutions and the second on some systems of biochemical interest. Further information can be obtained from Dr. A. J. Swallow, Department of Chemical Engineering and Chemical Technology, Prince Consort Road, London, S.W.7.

THE European Association for Research on Plant Breeding is holding a conference on "Environmental Factors in the Distribution of Fruit Varieties" at Het Huis de Provincie, Arnhem, during April 27–28. The programme will include two sessions, namely: (1) surveying work on local growth conditions and plant responses; (2) analysis of causal relations. Further information can be obtained from the Institute of Horticultural Plant Breeding, P.O. Box 16, Wageningen, The Netherlands.

THE British Leather Manufacturers' Research Association is holding open days at its Laboratories, Milton Park, Egham, Surrey, during May 2–4. Included in the programme are two lectures, one by Mr. H. Bradley, director of research, British Boot, Shoe and Allied Trades Research Association, on "Requirements of the Shoe Industry from the Leather Industry", and the other by Dr. K. W. Pepper, director of the British Leather Manufacturers' Research Association, on "Adhesion in the Manufacture of Leather and Leather Goods". Further information can be obtained from the director at the Laboratories.

ERRATUM. In *Nature* of March 18, p. 865, column 2, line 16, for 'Melville' read 'Metcalfe'.

THE PRESENT STATE OF ERGODIC THEORY*

By Dr. I. E. FARQUHAR

Queen Mary College, London

THE purpose of ergodic theory is to establish the necessary and sufficient conditions for a system to approach equilibrium from a non-equilibrium situation. It does not define the manner in which a system approaches equilibrium; that is the province of transport theory and master equations. Ergodic theory has, in fact, the characteristics of a mathematical existence theorem, and it possesses, accordingly, both the strength and the weakness of such a theorem. Its strength lies in its generality—it deals with arbitrary physical systems in arbitrary situations. Its weakness appears whenever attempts are made to apply it to any specific physical situation.

The procedure is to derive conditions for the equality of time and ensemble averages, in classical statistics, of phase functions, and in quantum statistics of expectation values of operators. Here there is illustrated one example of the lack of specific application of ergodic theory, for the time averages considered are always evaluated over an infinite period. To interpret these time averages physically, that is, as values observable physically during the time intervals occupied by measurements on the system, it is necessary to assume that the appropriate relaxation time of the system is much shorter than the duration of the measurement. Yet ergodic theory in itself provides no estimate of this relaxation time, so that, to apply ergodic theory in any specific case, recourse must be had either to some other theory, or to experiment, in order to obtain this relaxation time. Further, just as it says nothing about values of relaxation times, so ergodic theory yields no information regarding values of transport coefficients, although it is perfectly consistent with the occurrence of transport processes.

In classical statistics, Birkhoff's theorem[1] remains basic. It asserts the equality of time and ensemble averages almost everywhere on the surface of constant energy in phase space corresponding to the energy of an isolated system, provided this energy surface is metrically indecomposable. This is equivalent to the requirement that there are no invariant integrals of the motion independent of the energy. It has, in fact, been shown[2] that time and ensemble averages are equal, almost everywhere on the reduced manifold in phase space which is defined by the set of *all* invariants of motion of the system.

Although metrical indecomposability is thus a criterion for ergodicity, the trouble is that it is not known how many invariants of the motion an arbitrary physical system possesses. Hence, efforts have been made to circumvent the question of metrical indecomposability by restricting the scope of the theorems.

One method of doing so is to give full weight to the fact that statistical mechanics deals with macroscopic systems. Birkhoff's theorem is a result of general dynamics, independent of the number of degrees of freedom of the system. But it may be inquired whether time and ensemble averages are equal asymptotically in the limit as the number of degrees of freedom of the system becomes infinite. An asymptotic ergodic theorem of this form, without any requirement of metrical indecomposability, has been given by Khinchin[3] by restricting the class of phase functions, the ergodic behaviour of which is required. Khinchin's restriction is to the class of phase functions the phase dispersion of which is small, although it is only for phase functions which are sums of corresponding functions for the individual molecules of a system with separable Hamiltonian that Khinchin has shown the phase dispersion to be small. In certain cases where Birkhoff's theorem asserts that a system is non-ergodic, Khinchin's approach gives the positive result that the departure from ergodic behaviour is, nevertheless, vanishingly small in the limit of an infinite number of degrees of freedom.

In all these cases, the theorems are valid 'almost everywhere', and so some form of 'coarse-graining', by introducing phase cells, is required to avoid effects associated with exceptional phase points from showing up in practice.

In quantum statistics the basic treatment has been that of von Neumann[4], who showed how phase cells and 'coarse-grained' operators may be defined, which are consistent with the quantum-mechanical commutation rules. It is in terms of such coarse-grained operators and corresponding coarse-grained distributions that thermodynamical properties are described. By making use of the macroscopic nature of the system, here reflected in the high density of quantum energy-levels, von Neumann established an ergodic theorem, but only at the expense of introducing an averaging over all possible coarse distributions; these are treated as equally probable. Without such an averaging, von Neumann could not eliminate reference to the particular coarse-grained distribution used. Von Neumann's proof depended on the Hamiltonian of the system being non-degenerate and this requirement of non-degeneracy came to be regarded as the quantum-mechanical ergodicity condition, analogous to the classical criterion of metrical indecomposability.

However, it was shown recently[5] that von Neumann's argument does not in fact yield any criterion for ergodicity, since his proof may be carried through even if the Hamiltonian is degenerate. It is the assumption in von Neumann's approach, of equal *a priori* probabilities for coarse distributions, that leads to the result that *all* systems are ergodic. This overstrong assumption removes not only the possibility of obtaining ergodicity conditions[5], but also any requirement on the time evolution of the system other than that the norm of the state vector be constant. In particular, the time evolution operator need not be unitary[6]. The assumption of equi-probability of coarse distributions thus leads to results which are too general to be of physical significance. This does not, of course, invalidate von Neumann's general method of averaging over coarse distributions, but only the special case in which the *a priori* distribution of these coarse distributions is assumed equi-probable.

---

* Substance of paper at a conference on "Statistical Mechanics and Irreversibility" arranged by the Institute of Physics and the Physical Society and held at Queen Mary College, London, during December 19–20.

An alternative proposal put forward in a series of recent papers by an Italian school[7] is to average, not over all coarse distributions for a fixed initial state, but over all initial states for a fixed coarse distribution. It is assumed that all initial states are *a priori* equally probable and hence the averaging methods developed by von Neumann may be used. Once again, this treatment is too general to yield any ergodicity criterion; but, unlike von Neumann's method, it does require that the time evolution operator of the system be unitary.

To obtain ergodicity conditions it would be necessary, in both von Neumann's and the Italians' treatments, to make a less strong assumption regarding the *a priori* distribution, whether of coarse distributions or of initial states. The Italians themselves[8] have gone some way towards relaxing this strong assumption by replacing the averaging over all initial states of the entire energy shell by separate averaging within each phase cell; the initial states within any phase cell again are assumed equally probable. This procedure does yield ergodicity conditions, but the conditions are somewhat formal and, although they can be linked with the Hamiltonian of the system, the connexion has not been worked out fully. Furthermore, as with the classical criterion of metrical indecomposability, it would appear difficult to determine whether actual physical systems satisfy the conditions. Other ergodicity conditions, which again have a rather tenuous connexion with the Hamiltonian, have been obtained by Landsberg[9], who considers a class of averaging processes which includes, as special cases, averaging over coarse distributions and over initial states. The class is defined in such a way that averages are independent of particular phase cells and quantum states, and, as with Khinchin's theorem, a condition on the averaging procedure is required.

Ergodic theory has been attacked[10] on the grounds that it is not of physical significance to consider, as it does, an isolated system. Two points may be made here: first, in the attempt to relate dynamical and thermodynamical properties of a system, ergodic theory provides only a first step; once ergodic behaviour has been established, the system of interest, hitherto considered isolated, must be coupled to a large heat-bath, and only the combined system is then regarded as isolated. The interaction between system and surroundings is vital. Secondly, those who favour introducing irreversibility[10] by way of external influences at the boundaries of a non-isolated system do not appear to be justified in assuming arbitrarily that these external influences are random. Although an arbitrary assumption regarding *a priori* probabilities appears both in von Neumann's and in the Italians' treatments, this assumption refers to methods of handling the system rather than to the system itself. The assumptions therefore are not 'assumptions of disorder', in the sense in which the term was used in early work on kinetic theory.

The work of van Hove[11] on master equations does not fall within the province of ergodic theory, since it deals with particular systems and seeks to study in detail their time-development. It seems, however, that a generalization of this approach may well prove to be a most fruitful method of studying the approach to equilibrium of arbitrary systems.

TERPENE CHEMISTRY

A SYMPOSIUM on terpene chemistry, organized by the Chemical Society, was held in the Chemistry Department of the Imperial College of Science and Technology on February 23, and attracted an audience of more than two hundred. The programme consisted of six main lectures.

The first session was opened by the president, Sir Alexander Todd, who gave a warm welcome to the speakers and visitors from abroad. Prof. E. R. H. Jones was chairman of the opening session, in which the first paper on "Terpene Compounds with Ten-membered Rings" was given by Prof. F. Šorm, of Prague. After a brief historical introduction, the chemistry of germacrome, a typical ten-membered cyclic terpene, was reviewed in detail, special reference being made to the trans-annular reactions which are so characteristic of this series. A theoretical treatment of the non-classical interaction of double bonds in this series was also provided. Further examples of structural determinations of this class of terpenes were provided by costunolide, balchanolide and *iso*balchanolide, cnicin, scabiolide and parthenolide.

Later, Prof. B. C. L. Weedon (Queen Mary College) reviewed his recent work on structure determination and synthesis of carotenoids and their biological precursors. Particularly striking results have been achieved with the aid of nuclear magnetic measurements carried out and interpreted by Dr. L. M. Jackman at the Imperial College. Examples included spirilloxanthin, spheroidene and the paprika ketones capsorubin, capsanthin and capsanthone. Physical methods have also been applied successfully in determining the structures of a variety of hydrolycopenes, for example, phytoene, ζ-carotene and neurosporene, believed to be biogenetic intermediates of carotenoids. New methods for building up the carotenoid ring systems were also described as part of the syntheses of canthaxanthin and astacene.

After lunch, Prof. D. H. R. Barton introduced Prof. O. Jeger (Zurich), who discussed the structures of a series of oxidation products of the diterpenes manool and sclareol. Many of these had potential values in the perfumery industry, and evidence for the structures suggested was based on numerous physical measurements as well as chemical degradations and correlations with other diterpene degradation products; a notable feature of this symposium was the extensive use which chemists are making of nuclear magnetic resonance measurements in structural problems. Prof. H. C. H. Erdtman (Stockholm) then correlated, so far as was possible, the distribution of terpenes among the various orders of the Coniferae and stressed the taxonomic importance of this group of organic compounds. This extensive survey will have far-reaching effects on biogenetic studies of the terpenes; in the course of the work several new terpenes were discovered and the elucidation of these structures was also described.

In the final session, the two papers presented related to the determination of the structure of the complex terpenoid bitter principle, clerodin. Prof. Johnson, as chairman, introduced Prof. Monteath Robertson, who described the potentialities of the X-ray diffraction method in the elucidation of structures of molecules containing up to one hundred atoms (other than hydrogen).

Prof. Robertson's colleague, Dr. G. A. Sim, then illustrated the general points by discussing the case of clerodin (as a simple derivative) in detail. This elegant work was only one of several similar topics solved by this method in the Glasgow laboratories. Prof. Barton, in his usual lucid style, then discussed the underlying chemistry of this substance and showed how the structure had been derived on the basis of chemical degradations. His work was also complementary to the nuclear magnetic resonance measurements carried out by Dr. Jackman, who described this aspect of the problem. In the ensuing discussion, Dr. K. H. Overton (Glasgow) outlined his elucidation of the stereochemistry of the bitter principle, columbin.

A. W. JOHNSON

AUSTRALIAN ARID ZONE TECHNICAL CONFERENCE

AN Arid Zone Technical Conference was held at Warburton, Victoria, during December 5–9. It was attended by more than seventy delegates representing a very wide range of organizations and sciences. Several overseas visitors were present as observers, including Dr. P. C. Raheja and Dr. Y. Satyanarayan (Central Arid Zone Research Institute, India), Dr. M. H. Aslan (Desert Range Research Station, Egypt) and Mr. M. U. Khan (Meteorological Service, Pakistan).

The programme was organized into nine major sessions. In Session 1, the physical characteristics of the Australian arid zone were outlined in terms of geology (L. C. Noakes, Bureau of Mineral Resources, Canberra), geomorphology (J. A. Mabbutt, Commonwealth Scientific and Industrial Research Organization (C.S.I.R.O.), Canberra), soils (C. G. Stephens, C.S.I.R.O., Adelaide), vegetation (N. C. W. Beadle, University of New England, Armidale), and climate (H. L. Ashton, Bureau of Meteorology, Melbourne). This material was primarily descriptive in nature and provided a continent-wide background for those scientists not directly active in arid zone problems, or concerned with only one geographical locality in the arid zone.

Sessions 2 and 3 were devoted to the principles and problems of plant and animal production and husbandry, and formed the central basis of the conference. Review papers were presented on plant production (R. O. Slatyer, C.S.I.R.O., Canberra), and utilization (R. M. Moore, C.S.I.R.O., Canberra), and on animal production (W. V. Macfarlane, Australian National University, Canberra), and animal husbandry (G. R. Moule, C.S.I.R.O., Prospect and J. H. Whittem, Animal Industry Branch, Alice Springs) and an additional thirty-four contributed papers covered a wide range of specific subjects within these fields of research. In Session 2 data were presented indicating that the existing communities are relatively inefficient in the conversion of rainfall to plant material, and that this phenomenon is due in part to extreme soil mineral deficiency and the physiological and ecological characteristics of the individual species, as well as to the low and intermittent rainfall regime. Experimental data were also presented on the possibilities of introducing new plant species and the problems associated with their establishment, persistence and natural dissemination. This information, together with a recognition of the desirability of concentrating water run-off for more effective use, led to the general concept of concentrating effort for increased plant production on the most favoured parts of the landscape, rather than attempting a blanket improvement of the whole countryside.

The management of the pasture communities under grazing is of special importance under arid conditions, partly because of the need to maintain reserves of perennial evergreen species for drought reserve and partly because of the delicate plant-climate balance and the ease with which communities can be damaged by overgrazing. Also, efficient utilization is influenced by property development, particularly by spacing of watering points and fencing. It was considered that the most advantageous developments in this field can only be achieved if the requirements and responses of the animal are also considered. In consequence, integrated studies of both plants and animals, with the development of range condition standards and management procedures, was recommended.

The main form of commercial production in arid areas in Australia appears likely to remain some form of animal production and this will be restricted mainly to sheep and cattle. In Session 3, it was emphasized that there is need for more information about both species, but particularly cattle, and with special reference to adaptation, nutrition and reproduction in the more tropical parts of the zone, where there is at present active development of the cattle industry.

As any widespread change in the level of nutrition in the more arid areas will probably be a slow process, emphasis was placed on the need to breed better adapted and better producing animals, either by selection within the genetic material already in the country or by introducing new genes. Evidence was given of advances in the first field, and it was also indicated that the determination of selection criteria could be assisted by more basic physiological study, one particular example being potassium-levels in the blood.

To a large extent, the cattle population of the arid area and to a lesser extent the sheep population, exist as a series of wild herds and flocks. While property management aims at bringing them under better control, management practices are introduced against a background of almost complete lack of quantitative information on the ecology of the herds and flocks, their drinking and grazing habits, reproductive patterns, the nature and time of mortalities, and their individual, group and herd behaviour. It was recommended that a detailed study of these, using ecological and behavioural approaches developed by wild-life ecologists, should be encouraged.

Sessions 4–7 dealt with aspects of water and included a review paper (R. Powles, Soil Conservation Service, Condobolin) and contributed papers on soil and water conservation, underground water, irrigation and special aspects such as the suppression of evaporation from water storages, the sealing of earth dams, demineralization, and the significance of advection phenomena in arid zone irrigation areas. The importance of evaluating quantitatively the distribution and nature of occurrence of the limited water resources was emphasized. For maximum effectiveness it was suggested that such an inventory should reveal the dynamic characteristics of individual aquifers and catchments, and since it is impossible, at present, to envisage the appraisal of all water resources in this manner, it was proposed that a systematic approach should be adopted in which selected type situations within defined landscape patterns (land systems) could be studied and the results extrapolated as widely as possible.

Session 8 dealt with human settlement in arid regions and included contributions on demography (W. D. Borrie, Australian National University, Canberra), human function (W. V. Macfarlane, Australian National University, Canberra) and human organization (R. K. Macpherson, University of Sydney) in the Australian arid zone. It was apparent that there is a tendency in Australia to take arid zone environments for granted with all their physical disabilities and other stresses on human beings. The conference stressed that much could be done to make living conditions more acceptable.

The conference was impressed by the advantages following from the combined discussion of arid problems by the representatives of many different disciplines and stressed the need to define, in biological terms, the problems of plant and animal production specific to the arid zone ecosystem. Perhaps the main impression gained was a general confidence among delegates that research would achieve more efficient production from arid and semi-arid areas. There was much evidence of research having entered a phase in which quantitative data were becoming available to replace subjective estimates. This particularly applied in such fields as mineral resources, hydrology, microclimatology, geomorphology, plant and animal physiology, animal breeding, economics and human physiology.

FUTURE OF NATURAL FAUNAS

THE twenty-sixth annual meeting of the Association of British Zoologists was held at the Zoological Society of London on January 7 under the presidency of Prof. C. M. Yonge. The theme of "Looking Ahead—The Future of Natural Faunas" was introduced by Sir Julian Huxley, who described and illustrated, by means of colour slides, what he had seen on his recent visit to East Africa. The central problem there, he said, was essentially one of human ecology. The fauna was a relic of the pre-human ecological climax and still presented a unique array of types in which some twenty-five or more species appeared to be collaborating in exploiting a number of exceptionally brittle habitats. The advent of pastoralism had brought many problems in its train and the situation was aggravated by the African, who thought of cattle as a symbol of wealth and prestige rather than as a source of protein. Recent studies by a number of investigators, including Fulbright Scholars, had shown that the land could be induced to yield more protein per acre from game than from cattle. In South Africa, a depleted fauna was being given some encouragement in game 'farms' from which there was a large demand for animals for re-stocking purposes. Sir Julian emphasized the importance of the tourist trade as an economic factor of conservation and he pointed out that parks were already being recognized as a source of tribal pride. The future of the fauna of East Africa was certainly in the balance, but the situation was not nearly as bad as he thought it would be when he went out there. Sir Julian concluded by directing attention to the conference at Arusha in Tanganyika in September, which was being organized by the International Union for the Conservation of Nature and other agencies with the object of influencing African public opinion towards conservation and the wise use of natural resources, including wild life.

Mr. Max Nicholson (director-general, Nature Conservancy) said that apart from the virtually unpredictable effects of human population pressure during the next forty years, the future of the British fauna depended to a great extent on climatic changes. These might include some brought about by the agency of man such as a barrage across the Bering Strait, the break-up of Arctic pack-ice by atomic means, the reversal of flow of some of the big Russian rivers and the flooding of depressions in the Sahara. The consequent rise in ocean-levels and the effects on the course of the Gulf Stream might well induce a Mediterranean type of climate in Britain. Birds could be regarded as sensitive indicators of climatic change, and it was significant that the rook and green woodpecker were steadily moving north. Although it was possible that no species would be lost in the next forty years, there was a tendency towards the replacement of a broad range of specialized species by a narrow range of adaptable species. Among the outstanding hazards to which the fauna was subject were the exploitation of waterways, marshland and estuaries, pollution by oil and toxic chemicals, mortality on fast highways, the burning of heathland and the sprawling out of cities. Isolation was becoming increasingly difficult to find and the time might well be coming when it would have to be administratively regulated. Referring to the work of conservancy in managing and studying what he hoped would eventually be some 150 reserves in Britain, a number representing the full spectrum of the country's natural habitats, Mr. Nicholson said that people were getting away from the sentimental idea that reserves were places where nothing was killed. The cropping of vertebrate resources might prove to be the best form of land management.

Dr. L. Harrison Matthews (scientific director of the Zoological Society of London) said that of the three orders of marine mammals, the Cetacea, the Pinnipedia and the Sirenia, the future of the whales was unquestionably precarious, but as the future of whaling was precarious too, the two facts might cancel each other out. There had been a virtual break-down in the international control of the situation; populations of the blue whale might be at a minimum for recovery and the overall length of the fin-whale was getting smaller. However, with the advent of pelagic factory-ships, whaling as an economic proposition might stop long before the whales were killed off, although the Japanese, who hunted for meat, might well go on. He thought that if carefully managed the future of the seals was reasonably secure; the elephant seal was now re-colonizing its former haunts in the Antarctic and the walrus seemed to be holding its own. Less, however, could be said about the future of the sirenids, the dugongs and manatees. The latter were now less common than they were in the Carribean, but were reasonably plentiful in northern South America. Recent trials had shown that the manatee had an unusual appetite for grasses and aquatic herbs, and if it could be successfully introduced into weed-choked waterways it might become a useful and important animal in the ecology of the tropics.

Mr. P. H. Greenwood (British Museum (Natural History)) said that the freshwater fauna of tropical Africa, particularly the fishes, posed numerous evolutionary, zoogeographical and ecological problems. Each lake was characterized by a high degree of endemism, especially among the Cichlidae, which had undergone extensive adaptive radiation in the past ten million years. Likewise, each river system was characterized by its own assemblage of species co-existing with others of a more general distribution. The danger, he thought, was in the widespread introduction of species from one system or lake to another where it was not endemic. These actions were partly the consequence of steps taken to counter-balance the threat or the fact of the over-fishing of the endemic species. The results were unpredictable because so little was known about the overall ecology of the waters, but they might well upset the bionomy of the lakes. Mr. Greenwood pointed out that some species were known to run up rivers and temporary flood streams to spawn in areas inundated during the biannual rains. Such species were particularly vulnerable to the effects of flood control and irrigation projects. As the future of the two British freshwater stations in Uganda and Rhodesia was by no means assured, he hoped that every effort would be made to ensure their continued existence.

Dr. Peter Crowcroft (British Museum, (Natural History)) reviewed what little information was available about changes in the status of Australian mammals, particularly the small marsupials and native rodents which had been replaced over immense areas by the introduced house mouse and ship rat. The introduction of the European fox constituted one of the greatest threats to many terrestial forms, but the available evidence suggested that the arboreal marsupials were in no danger. It was noteworthy, too, that both the Monotremes, the spiny anteater (*Tachyglossus*) and the duck-billed platypus (*Ornithorhyncus*) were widespread and abundant in the eastern States. Although Tasmania possessed less species, it appeared to have a better chance of preserving them, particularly as the fox had not been introduced. The fate of the thylacine or Tasmanian 'tiger' remained in doubt, but the Tasmanian devil (*Sarcophilus*) was abundant. An important new factor in conservation was the recently formed Australian Mammal Society, which was stimulating research and co-ordinating survey work. This should enable further changes to be assessed with far greater accuracy. The paucity of information about the distribution and numbers of Australian mammals in the last century made it difficult to distinguish between those changes caused by settlement and those which were already proceeding naturally, perhaps as a consequence of climatic changes.

JOHN HILLABY

COLONIAL RESEARCH, 1959-60

*COLONIAL RESEARCH, 1959–60**, follows the pattern of recent reports. It is slightly shorter, due in part to the disappearance of a report from the disbanded Colonial Products Council, which is replaced by a brief report from the Tropical Products Institute of the Department of Scientific and Industrial Research on work done on behalf of Colonial territories. It also includes the fifteenth annual reports of the Committee for Colonial Agricultural, Animal Health and Forestry Research and the Colonial Medical Research Council, the sixteenth annual report of the Colonial Social Science Research Council, the thirteenth annual reports of the Colonial Economic Research Committee and the Colonial Pesticides Research Committee, the fifth annual report of the Colonial Road Research Committee, the annual report on fisheries research of the Colonial Fisheries Advisory Committee and reports from the Tsetse Fly and Trypanosomiasis Committee and the Director of the Anti-Locust Research Centre. Besides the annual report on Colonial research, there is a section dealing with research matters not covered by the reports of the specialist advisory bodies, and this refers to building and housing research, industrial and engineering research, meteorology, and geological surveys, as well as to the work of the Falkland

Islands Dependencies Survey and of the Man-power Research Unit, Jamaica.

The annual report on Colonial research notes the dissolution of the Colonial Research Council, and afterwards of the Colonial Road Research Committee, in June 1960, and of the Colonial Medical Research Committee, in July 1960. The functions of the former have been absorbed by the new Committee on Overseas Road Research, which will advise the Road Research Board of the Department of Scientific and Industrial Research, and also the Colonial Secretary, on Colonial road research. Those of the latter have been absorbed by the new Tropical Medicine Research Board set up by the Medical Research Council, and the new Board will advise the Colonial Secretary, through the Medical Research Council, on all medical research in and for the Colonies financed from Colonial Development and Welfare Funds. To the work of the Overseas Research Council there is only the slightest reference: the Council is said to be considering the retention and recruitment of scientific staff for work overseas, and it is stated that the Council will be able to call for advice on existing research organizations, including the Colonial Research Advisory Committee; but it is apparent that, while these bodies are to keep the Overseas Research Council informed of their activities, they are to report direct to the Colonial Secretary.

There is, in fact, nothing in *Colonial Research, 1959–60,* to provide the conspectus of overseas research which the establishment of the new Overseas Research Council might be expected to provide, or to indicate that the new Council is likely to be in a position to provide such a conspectus in the near future. Nor can any justification be found in its pages for the change of name, and the dropping of a honoured term to which the Colonial Secretary paid a timely and handsome tribute in the House of Commons in December. It would appear that activities will continue much as before, and there is no hint of the vision and imagination that are required to seize the opportunities that overseas research and technical assistance generally now present.

These opportunities are, in fact, stressed by the substantial increase in Colonial Development and Welfare Research Schemes made during the year. The 134 new schemes and 82 supplementary schemes, involving grants totalling £2,370,261, compare with 71 new schemes and 63 supplementary schemes, totalling £798,974 in the previous year, and brought the total allocation to research schemes since 1940 to £21,864,193. About 42·6 per cent of the £2·37 million granted in 1959–60 was for agricultural, animal health and forestry schemes, 15·8 per cent for medical research, 2·6 per cent for fisheries research, 1·9 per cent for tsetse and trypanosomiasis research, 2·1 per cent for social science economic research, 23·7 per cent for pesticides research, 2·4 per cent for products research, and 7·1 per cent for anti-locust research. About 33·5 per cent of the gross allocation was for schemes to benefit the East African territories, 7 per cent for the West African group, 15·5 per cent for South-East Asian territories and Hong Kong, 12·5 per cent for the West Indian Colonies, British Guinea and British Honduras, 1 per cent for the Central African territories and 30·5 per cent for other territories or for schemes of general interest.

Twenty-four new appointments were made during the year to the Research Branch of the Overseas Civil Service; but the total complement in March 1960 was 199 compared with 207 in March 1959. Two Research Fellows, one studying human trypanosomiasis at the West African Institute for Trypanosomiasis Research, and the other investigating arterial hypertension in Jamaica at the University College of the West Indies, completed their investigations during the year; a third Research Fellow, studying the effect of diet on the levels of various co-factors and enzymes concerned with carbohydrate and fat metabolism at the University College of the West Indies was released from his fellowship for other research work. Two further research fellowships and six research studentships were awarded during the year.

Although, as already stated, *Colonial Research* does not provide the conspectus of overseas research that might be expected and that indeed is essential, the reports of the several specialist advisory committees, besides including a list of publications during the year, contain much information on research activities outside the direct responsibility of the particular committees. That of the Committee for Colonial Agricultural, Animal Health and Forestry Research —much the longest—includes accounts of the work of the several regional research organizations in that field in East and West Africa, and the West Indies and of the Imperial College of Tropical Agriculture, and also accounts of research carried out by the Colonial Departments of Agriculture, Forestry and Animal Health. Similarly, the Colonial Fisheries Advisory Committee reports on the work of the Sierra Leone Fisheries Research and Development Unit, the East African Fisheries Research Organization, Jinga, the East African Marine Fisheries Organization, Zanzibar, the Northern Rhodesian–Nyasaland Joint Fisheries Research Organization, the Tropical Fish Culture Research Institute, Malacca, and the Fisheries Research Unit of the University of Hong Kong. The Colonial Medical Research Committee likewise reports on the work of the regional organizations for medical research, and a research undertaken and financed by the Medical Departments of Colonial Territories, while that of the Colonial Pesticides Research Committee, besides reviewing the work done for the Committee by its research units at Porton and in East Africa, by the Agricultural Research Council's Unit of Experimental Agronomy, Oxford, at Long Ashton Research Station, at Rothamsted Experimental Station, at the Imperial College Field Station, Silwood Park, and by the Herbicide Unit of the Regional Research Centre, Trinidad, gives more than half its space to research not under the ægis of the Committee. The report of the Colonial Social Science Research Council has appended to it the annual reports of the East African Institute of Social Research, the Nigerian Institute of Social and Economic Research, the Institute of Social and Economic Research, the University College of the West Indies and of the Rhodes–Livingstone Institute. The report of the Tsetse Fly and Trypanosomiasis Committee is essentially an account of the work of the regional research organizations in East and West Africa, supplemented by a review of activities of territorial departments, and that of the Director of the Anti-Locust Research Centre on Locust Research and Control is no less essentially an account of regional and co-operative effort.

The material is thus largely available for some authoritative conspectus of research effort overseas and also much evidence of the extent to which that effort is interlocked with research effort in Britain generally. What is lacking appears to be the authority or the will. If the Minister for Science is indisposed to accept responsibility which appears to arise directly out of his responsibility for the Overseas Research Council and the other Research Councils, the inquiry already set on foot by the Colonial Secretary into the organization of technical assistance can scarcely fail to shatter the present complacency. It may stimulate something of the reappraisal and oversight of the whole of this research effort and its adequacy in relation to existing and future needs and to available resources of man-power as well as of finance that is overdue.

THE PORTUGUESE MAN-OF-WAR

IN a well-produced report on the Portuguese man-of-war*, Mr. A. K. Totton and Dr. G. O. Mackie have written complementary accounts, natural history and morphology by the former, and behaviour and histology by the latter. The two sections are based, partly on material from the *Discovery* collections, and partly on the results of a three-months trip to the Canaries.

Mr. Totton provides a non-technical description of *Physalia* for the layman and goes on to describe its habits, somersaulting behaviour, flotation and motion in relation to wind and water. From experiments at Arrecife he finds that the animal floats with its long axis at an angle of about 45° from the down-wind direction. He does not accept Woodcock's hypothesis that specimens from the southern hemisphere are nearly always mirror images of those from north of the equator, and the following explanation advanced by Mr. Totton appears to be much more satisfactory: "I think that left or right-handedness in a particular individual must be established on the first windy day that the larva keeps to the surface. The larval tentacle would cause a drag on the windward side, so that the float would be blown (so to speak) to leeward. As new tentacles grow. . . this drag would be increased and the part of the float from which they are budded would become bowed out to windward as a bulge, resulting fortuitously in a left- or right-handed individual".

The main part of Mr. Totton's report, however, is a detailed re-investigation of the complex budding pattern in the cormidial groups of appendages, in which he has been able to substantiate and amplify the basic work of Huxley, Lens and van Riemsdijk, Steche and Okada. These structures are described in great detail, and there are many excellent photographs; but this morphological section would have been easier to understand if more stylized drawings (like text-figure 26), as well as stereo-diagrams, had been used to clarify the complicated pattern of budding.

On origins, the author accepts the well-known idea that the ancestral form was a kind of actinula with an apical float and that this became colonial, as implied by Delage and Hérouard (1901, pl. 28). It is further suggested that "the evolution of *Physalia* and the other siphonophores seems to be linked with that of certain corymorphine, myriotheline and margelopsine hydroids; with *Pelagohydra* and with the so-called Disconantha (*Velella, Porpema, Porpita*)". This is a curious assemblage of forms because the tubularoids (including, *inter alia*, corymorphines and margelopsines), the myriothelines and the so-called Disconantha (Chondrophores) are very distinct hydroid groups. In particular, the Chondrophores have been conclusively shown to be 'pteronemid' hydroids (that is, allied to *Zanclea* rather than *Tubularia*) by Picard, but the author seems to have overlooked this and much other recent work bearing on his problem. Nor does he discuss the possibility of siphonophore evolution from a group other than capitate hydroids, and, in this connexion, the Actinulida have a strong claim for consideration.

There is some confusion in terminology, there being, for example, no distinction drawn between a hydromedusan gonozooid (medusa or medusa bud) and a disconanth gonozooid (reproductive hydranth bearing medusa buds). It is also surprising to find that the author equates "an asexual replicated gonozooid of *Velella*" with a blastostyle of *Climacocodon*. Dr. Mackie (p. 372) also promotes this same view that the blastostyles of *Corymorpha* and the reproductive polyps of *Velella* "are alike and homologous in every respect", but this interpretation is unlikely to be acceptable to hydroid specialists.

On the association of the fish *Nomeus* with *Physalia*, Mr. Totton does not discuss a new interpretation of the immunity of some fish to cœlenterate stings put forward by Davenport and Norris. These authors, working on *Amphiprion* and the sea anemone *Stoichactis*, demonstrated that while the thick mucus covering of the fish remains intact, the nematocysts are not stimulated, but once this is removed (as with contact with a net) the fish is vulnerable. Some such mechanism may protect *Nomeus*.

Dr. Mackie's plan to investigate the behaviour and reactions of *Physalia* was broadened to include also histology in order to establish, in particular, the extent of the nervous co-ordination between the different parts of a siphonophore colony. He was able to examine the muscular and nervous systems, the mesoglœa, the gas gland, the nematocysts and the histology of the digestive regions, the whole being a valuable contribution to siphonophore biology.

In specimens of *Physalia* exposed to the wind, the crest or sail is erected, and, although the way in which the wind acts has not been determined, any stimulus causing an overall tightening of the float musculature will normally result in crest erection. Dr. Mackie aptly describes the mechanism as reminiscent of a pneumatic tyre with an inflatable rubber tube—the tube corresponding, of course, to the pneumosaccus inside the float.

Space does not allow full consideration of these exceptionally well-illustrated reports, but the fate of the gonophores, the great puzzle in *Physalia*, remains unsolved; it is suggested that the eggs undergo development in the depths.

BIRTH OF DELINQUENTS

ALTHOUGH a connexion between economic depressions and other social catastrophes—such as war—with the origin of delinquency in children has long been suspected, little statistical evidence to support the hypothesis has been available. The evidence is now brought out in a report published by the Home Office Research Unit, entitled *Delinquent Generations**, which shows that the peak of the effect is shown to occur not for those children born during the 1939–45 War, but for those born during 1935–42. These are children a large proportion of whom passed through their fourth to fifth year during the War, suggesting that the social disturbances which occur during the fourth and fifth year of life may have a greater effect than at other ages.

The analysis is based on criminal statistics for the period 1946–57 for each year of birth from 1925–26 to 1948–49. The argument is developed from simpler analyses to a complex process of standardization. In the first place the crime-rate for eight-year-old male offenders is followed from 1946 to 1957, and this shows that the crime-rate was least (for this age) when the number of children of that age was greatest; the statistical work also shows that, for children born after the War, there is a positive correlation between the number of children of a given age at risk and the crime-rate for that age, whereas for pre-War births the tendency is towards a negative correlation.

In 1948, with one of the smallest populations of eight-year-old boys, the crime-rate for this age was the worst for any year of the period studied. There was a continuous and marked improvement until 1956, with 1955 showing the lowest crime-rate (together with the peak of the population bulge). Not only did eight-year-old boys have the worst crime-rate in 1948 but also the highest crime-rate for seventeen-year-old boys occurred in 1957, when this same generation was seventeen years old.

Analyses of this kind are then generalized for all ages from eight to twenty years of age, for both males and females separately in England and Wales, and for males in Scotland. It is interesting to find that the same patterns of crime-proneness apply to both sexes and to both Scotland and England, notwithstanding that the rates at different ages are not at all similar.

Another finding is that youths between seventeen and twenty-one in 1955 and onwards, who would, according to the general findings of this research, have been expected to be exceptionally delinquent because of the effects of the War, have in fact been even more delinquent than could have been predicted. Either some new and different factor has operated during recent years, or the earlier influences have an additional effect at adolescence.

BILHARZIASIS

WHILE economic development usually reduces general morbidity, it has been found in a number of countries that improvement of irrigation networks has resulted in the spread of bilharziasis. Ways of dealing with this growing menace were studied at the second African conference on "Bilharziasis", convened jointly by the World Health Organization and the Commission for Technical Co-operation in Africa South of the Sahara, and held during March 30–April 8, 1960, in Lourenço Marques. The report, which has just been published, constitutes a general assessment of the present bilharziasis control situation in Africa where "the pressing problems of control are related rather to the deployment of skills, materials and work than to the uncertainty of methods"*.

Assessment of morbidity is complicated by the chronic nature of the disease which may be recognized only if it entails a period of incapacitation for work. Of the three phases of the disease described in the report, the conference considered the last—that of irreversible pathological effects and *sequelae*—to be by far the most significant from both the public health and the socio-economic point of view. The report directs attention to the pulmonary effects of *S. haematobium* infection, and to the fact that eggs may sometimes be recognized in the sputum of patients. Methods of assessing morbidity are reviewed, and the advantages of certain methods brought out.

The merits of the various types of classic molluscicide (copper sulphate, pentachloriphenate) and also of the more recent products (Bayer 73, I.C.I. 24223, and 'Aqualin') are examined, together with ways in which these products are used in African territories. Water management, land use and agricultural practices were examined at length in relation to the transmission and spread of bilharziasis. Some countries in the African region have adopted legislation relating to the control of communicable diseases, and the report cites an example of one law which might be modified and adapted to local health and economic conditions elsewhere. Methods of irrigation and agriculture and of bilharziasis control aspects of engineering techniques applied to watercourses, ponds and reservoirs are studied, and the frequently neglected possibility of using rainwater is also touched on.

In addition to the steps taken to improve irrigation plans, it would be desirable to construct bridges and culverts, to install safe washing and bathing places and at the same time to develop an effective health education programme so that people may be made aware of the danger of natural waters.

VELOCITY OF LIGHT IN A MAGNETIC FIELD

By Prof. THOMAS ERBER

Department of Physics, Illinois Institute of Technology, Chicago

RECENT advances in several areas of technology, in particular the production of very high steady ($\sim 0\cdot25$ megagauss) and pulse-imploded (~ 30 megagauss) magnetic fields, have brought closer the prospect of the experimental observation of a number of vacuum polarization effects. It seems appropriate at this time to make a preliminary survey of some of these possibilities and to provide some evaluation of their technical feasibility.

I begin by recalling that non-linear electromagnetic effects enter quantum electrodynamics essentially through the diagram presented in Fig. 1. This depicts schematically the dissociation of a photon into an electron-positron pair, usually virtual, which is afterwards annihilated to re-create a photon. The arrow symbolizes an external electromagnetic field (it may be another photon) which exchanges energy and momentum with the pair in the intermediate state. In this sense quantum electrodynamics gives rise to light-light and light-field interactions.

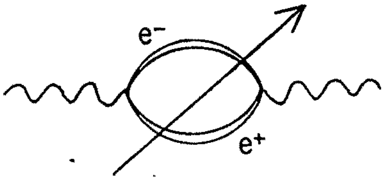

Fig. 1

Suppose the original photon is propagated in the z-direction and that the arrow represents a constant magnetic field the lines of flux of which are in the y-direction. One then finds that the real part of the index of refraction of the vacuum stressed by the external field is given by[1-3]:

$$n = 1 + \frac{\alpha}{4\pi}\left[\frac{B}{B_{cr}}\right]^2 N(\chi) \qquad (1)$$

where:

$$\alpha = \frac{e^2}{\hbar c} \sim \frac{1}{137};$$

$$B_{cr} = \frac{m^2c^3}{e\hbar} = \alpha\frac{e}{r^2} \sim 4\cdot5 \times 10^{13} \text{ gauss};$$

$$\chi = \frac{h\nu}{mc^2}\cdot\frac{B}{B_{cr}};$$

ν is photon frequency; m, electron mass; B, external field (gauss); r, classical electron radius. $N(\chi)$ is a very weakly varying function of χ in almost the entire range of practical interest. For photons polarized in the direction of B, that is, the y-axis, one may take $N(\chi) \sim 0\cdot2$ in the range $0 < \chi < 0\cdot1$; for photons polarized perpendicularly to B a similar approximation gives $N(\chi) \sim 0\cdot3$. Further details are contained in Toll's thesis[3].

I now consider a number of applications:

(1) *Cotton-Mouton effect:* Equation (1) essentially says that there is a selective slowing down of light in a transverse magnetic field. By using polarized light and exploiting $N_{\parallel} \neq N_{\perp}$ one can achieve a rotation of the plane of polarization. This is in complete analogy to the transverse double refraction of optically active media (even to the B^2 dependence) and therefore deserves to be called a 'Cotton–Mouton' effect. From these remarks it follows readily that θ, the angular rotation of the plane of polarization (radians) is given by:

$$\theta \simeq \frac{\alpha}{15}\,\frac{l}{\lambda}\left(\frac{B}{B_{cr}}\right)^2 \qquad (2)$$

where l is the path-length and λ is the wave-length. The key point of this approach is the enormous help of the factor l/λ. Assuming a field of 3×10^7 gauss[4] and a path-length of about 10^2 cm. one finds:

$$\theta \simeq \frac{1}{2\lambda}\,10^{-13} \text{ radians} \qquad (3)$$

At this point it is clear that it would be advantageous to choose a λ well into the γ-ray region. Unfortunately the experimental means for measuring θ are very poor at these frequencies. Since the pulse-imploded fields cannot be maintained for periods longer than about 1μ sec., the accurate γ-ray polarimetry possible with the Mössbauer effect cannot be used.

In the optical range one sacrifices λ but has some compensating advantages: (*a*) The short working times permitted by the pulsed fields are no longer prohibitive since rapid shuttering (Kerr cells) and sufficient intensities are available. (*b*) Path folding techniques may be used for maximum exploitation of the available magnetic volume. (*c*) Very precise measurements of θ, probably down to at least $\sim 5 \times 10^{-7}$ radians, are possible[5]. It seems likely that a moderate extension of present techniques would make the experiment represented by (3) feasible in this region.

(2) *Refraction of light:* Experiments of this type have the unique advantage of not requiring large field volumes; the non-linearities arise from the mere presence of an interface between a field and field-free region of space. This is particularly suited to the pulse-imploded fields since their strong point is the creation of a magnetic 'shock' travelling ahead of the detonation wave. By suitable arrangement of the explosive charges it should be possible to focus these magnetic waves and enhance the non-linearities through field superposition. The observation of refraction effects then becomes the analogue of ordinary schlieren photography.

An extraordinarily sensitive refraction experiment of this kind has been performed by Jones[6]: Using a static magnetic field of 8000 gauss shaped in the form of a prism with apex angle $\sim 100°$, he looked for a deviation with a 'light lever' capable of sensing an angular deflexion $\sim 5 \times 10^{-13}$ radian. In this case:

$$\Delta n \equiv n - 1 \simeq \tfrac{1}{2}\delta > 10^{-13} \tag{4}$$

where δ is the angle of deflexion. No effect was observed. For such feeble fields this follows readily from (1): We have directly that:

$$\Delta n \simeq B^2 \times 10^{-13} \sim 6 \cdot 4 \times 10^{-24} \tag{5}$$

which is many orders of magnitude below the limit set by (4). Even for the largest static field configurations at present contemplated[7] $\Delta n \sim 6 \times 10^{-21}$, which is still far too small. For the pulse-imploded fields, however, $\Delta n \sim 10^{-16}$, and this begins to come into the realm of practicability. It remains to be seen whether the development of intense pulsed optical maser (laser) sources will facilitate the construction of sensitive 'fast' levers.

(3) *Interferometric experiments:* These are among the most straightforward means of detecting a variation in Δn. With conventional interferometer arrangements:

$$\Delta n \equiv \beta\, \lambda / l \tag{6}$$

where β is the fringe shift and l denotes the effective interferometer length. Assuming values of $l \sim 10^2$ cm., $\lambda \sim 5 \times 10^{-5}$ cm., and an optimal β of about 10^{-3}, one estimates[8]:

$$\Delta n \sim 5 \times 10^{-10}$$

Comparing with (5) it becomes evident that this is at least six orders of magnitude too large. This experiment has already been tried by Farr and Banwell[9] using a static transverse field of about 20,000 gauss; essentially no detectable shift in Δn could be established. It is interesting to note that Jones's gain of 10^3 in absolute accuracy is partially off-set by a factor of 1/6 in relative accuracy due to the lower field intensity. This emphasizes again the crucial importance of high field strengths in the detection of non-linear effects.

Interferometric techniques will undoubtedly reap great benefit from the introduction of coherent sources of optical radiation. Unfortunately it does not seem likely that this will make the velocity-shift experiments any easier. Laser sources will simply relax the present limitations on l; this still leaves the very considerable problem of providing expensive and elaborate equipment for manufacturing large magnetic volumes. A likelier avenue of improvement lies along an increase in the accuracy of measuring phase shifts. Coherent light could in principle be heterodyned to produce signals in a convenient radio-frequency range; rapid β-determinations down to about 10^{-4} would then seem to be feasible[10].

(4) *Dispersion effects:* The abrupt shift in the accepted value of the velocity of light (a change of about 5 parts in 10^5) brought about by the introduction of radar techniques during the Second World War has given rise to a persistent undercurrent of speculation about a possible dispersion in the velocity of light. (See for example the discussion in Ditchburn[11].) Recently Softky and Squire[12] have proposed a test of this hypothesis using a nuclear explosion in outer space. The blast would produce a sharply defined pulse of wide-band radiation. It is estimated that by clocking the difference in arrival time of radio-frequency- and γ-rays over a baseline of 2 light-seconds, a dispersive effect of less than one-twentieth of the 'post war' shift (across a frequency spread of 10^{11}) could be reliably detected.

Theoretically speaking such an effect is already contained in the weak dependence on frequency of $N(\chi)$ of (1). (It is important to note that an external field is always required to produce dispersive effects in the Euler–Kockel Lagrangian[1].) Unfortunately even with a generous estimate of 10^{-4} gauss for the effective fields encountered in traversing the interplanetary baseline, the incremental arrival times would be only about $2\Delta n \sim 10^{-36}$ sec., that is, far beyond present instrumental resolution. Any measurement of $\Delta n(RF)/\Delta n(\gamma)$ along these lines would seem to be out of the question in the foreseeable future.

Conversion to frequency shift: Present experimental technique excels in the precise determination of frequency. It would seem most attractive therefore to measure minute velocity shifts in terms of a frequency shift. If indeed $\Delta\nu/\nu \sim \Delta n$ then according to (5) one would merely require an accuracy of $\Delta\nu/\nu \sim 10^{-16}$, which is not at all unreasonable in the light of what has already been achieved in connexion with the Mössbauer effect. Unfortunately, specific schemes for velocity to frequency conversion, quite apart from all instrumental difficulties, seem to involve unfavourable proportionality factors which increase the sensitivity requirements on $\Delta\nu/\nu$ still further. I consider briefly two possibilities, the Doppler effect and γ emission: (i) In a typical Doppler shift experiment, for example the reflexion of light from a moving mirror, one obtains a relative frequency shift given by:

$$\frac{\Delta\nu}{\nu} = 2\,\frac{v}{c}$$

where v is the mirror velocity. Suppose that the experiment were also carried out in a very strong ambient field (H) the sole effect of which is to decrease the velocity of light. In this case one should find a slightly different shift since it is the ratio of the mirror velocity to the actual light velocity that enters. The net change is:

$$\frac{\Delta\nu}{\nu}(H) - \frac{\Delta\nu}{\nu}(0) = 2\,\frac{v}{c}\,\Delta n \tag{7}$$

which shows clearly that in this type of conversion experiment the minute effects of Δn are diminished even further by the presence of the factor v/c. (ii) Another method of converting the velocity shift to a frequency shift hinges on the relationship between the energy and momentum of a photon; $cp = h\nu$. To first order it may be assumed that it is only the photon momentum and not the photon energy which is affected by the presence of an external field. In order to obtain a frequency shift it is necessary to consider a decay process so that the final photon frequency is fixed by both the energy and momentum balance. In calculating this there is some ambiguity involved in carrying through the relativistic kinematics in an anisotropic space but the net frequency shift fortunately is insensitive to the details of the assumptions. I find:

$$E_r(H) - E_r(0) = \frac{E_1}{E_0}\Delta n \qquad (8)$$

where E_1 is the energy available in the γ transition; E_0 is the rest energy of the residual nucleus; and $E_r = (E_1 - h\nu)/E_1$ is the fractional recoil shift of the emitted γ-ray. In this case it is also evident that any effects due to Δn will be minimized by the presence of the unfavourable conversion factor E_1/E_0.

ENUMERATION OF COMPONENTS IN COMPLEX SYSTEMS BY FLUORESCENCE SPECTROPHOTOMETRY

By Dr. G. WEBER

Department of Biochemistry, University of Sheffield

THE constancy of the spectral distribution of the fluorescence for a given substance excited with light of different wave-lengths permits the development of a simple quantitative criterion for the determination of the number of independent fluorescent components in a mixture and also results in an interesting extension of the concept of resolution as commonly applied in spectroscopy.

In fluorescence spectrophotometry a number of fluorescence intensity measurements are made, following excitation with different wave-lengths. Both fluorescence observation and excitation cover discrete wave-bands. Continuously recorded fluorescence and fluorescence-excitation spectra are to be considered here as finite series of measurements with effective band-widths determined by the conditions used[1]. In either case the results may be set down as an $m \times n$ matrix, where the m columns are determined by the wave-lengths of excitation and the n rows by the wave-lengths of observation. The matrix elements, F_{ij}, are numbers proportional to the response of the detector, that is, photocurrents in the ordinary case. The i, j element of this *EF* matrix, as I propose to call it, is the fluorescence emitted at wave-length j on excitation with light of wave-lengths i. When several components are present in a mixture the *EF* matrix may be written as:

$$|EF|_{mn} = \begin{vmatrix} \sum\limits_k F_{11}^k & \sum\limits_k F_{12}^k \ldots\ldots & \sum\limits_k F_{1m}^k \\ \sum\limits_k F_{21}^k & \sum\limits_k F_{22}^k \ldots\ldots & \sum\limits_k F_{2m}^k \\ \cdots\cdots & \cdots\cdots & \cdots\cdots \\ \sum\limits_k F_{n1}^k & \sum\limits_k F_{n2}^k \ldots\ldots & \sum\limits_k F_{nm}^k \end{vmatrix} \qquad (1)$$

The superscript k refers to the different components. Of the quanta absorbed in the solution from the exciting beam at wave-length i, a fraction f_i^k will correspond to the k'th component, while the fluorescence emission by the same component at wave-length j is denoted by the absolute quantum yield at this wave-length band q_{ij}^k, where the subscript i is also present to describe the possible, though rare[1,2], eventuality of change of quantum yield with exciting wave-length. Consequently:

$$F_{ij}^k = A_i f_i^k B_j q_{ij}^k \qquad (2)$$

A_i is a row multiplier that stands for the absolute number of exciting quanta absorbed at wave-length i, and B_j a column multiplier proportional to the detector response to a quantum of radiation of j wave-length. A and B can therefore be eliminated from the matrix without affecting the properties in which we are interested, and the *EF* matrix may be written as:

$$|EF|_{mn} = \begin{vmatrix} \sum\limits_k f_1^k q_{11}^k & \sum\limits_k f_1^k q_{12}^k \ldots\ldots & \sum\limits_k f_1^k q_{1m}^k \\ \cdots\cdots & \cdots\cdots & \cdots\cdots \\ \sum\limits_k f_n^k\, q_m^k & \sum\limits_k f_n^k q_{n2} \ldots\ldots & \sum\limits_k f_n^k q_{nm} \end{vmatrix} \qquad (3)$$

An arbitrary 2×2 minor of the matrix is:

$$|EF|_{2,2} = \begin{vmatrix} \sum\limits_k f_i^k q_{ij}^k & \sum\limits_k f_i^k q_{il}^k \\ \sum\limits_k f_n^k q_{nj}^k & \sum\limits_k f_n^k q_{nl}^k \end{vmatrix} \qquad (4)$$

If the spectral distribution of the fluorescence is independent of the exciting wave-lengths as appears to be in all known cases of substances in solution,

$$\frac{q_{ij}^k}{q_{il}^k} = \frac{q_{nj}^k}{q_{nl}^k} = R_{jl}^k \qquad (5)$$

and the value of the last determinant becomes:

$$\Delta = \Big(\sum_k f_i^k q_{il}^k R_{jl}^k\Big)\Big(\sum_k f_n^k q_{nl}^k\Big) - \Big(\sum_k f_i^k q_{il}^k\Big)\Big(\sum_k f_n^k q_{nl}^k R_{jl}^k\Big) \qquad (6)$$

Thus the important rule follows that all the 2×2 determinants of the *EF* matrix are zero when: (1) There is a single fluorescent component in the solution, whether the absorption is due to one or more components ($q_{ij}^k = 0$, for $k > 1$). (2) There is more than one fluorescent species in the solution, but they all possess the same absorption spectrun ($f^1 = 1, f^k = 0$, for $k > 1$). This obviously provides for the possibility of demonstrating the appearance of a new fluorescent species during the life-time of the excited state.

Because of the fixed ratios of the q-values for each component independently of the exciting wave-length (equation 5), it follows that when there are two independent components in the solution the second-order determinants of the *EF* matrix will not all vanish, but the 3 × 3 determinants will vanish identically, and in general, the rank of the *EF* matrix gives the number of components in the system having distinct absorption and fluorescence spectra. Conversely, the 'purity' of a fluorescent solution can be tested and the presence of fluorescent impurities detected by observing whether the 2 × 2 minors of the *EF* matrix vanish. Moreover, the non-vanishing determinants cover the region over which both fluorescence and absorption spectra differ and can be used to single out such a region.

In practice the determinants will not exactly vanish, but approach zero within the experimental error of the method. If the average photocurrent involved in a 2 × 2 determinant is $\bar{F} \pm \delta F$, then a zero determinant will appear to have the value :

$$\Delta = 0 \pm 2\bar{F}\delta F ; \quad \frac{\Delta}{P} \simeq \frac{\delta F}{\bar{F}} \qquad (7)$$

where P is the permanent or value resulting from adding all the determinant products, so that for the 2 × 2 determinant, $P \simeq 2\bar{F}^2$. The last equation permits one to evaluate significant departures from nullity. A ratio of determinant to permanent of 3 times the coefficient of variation of the measured photocurrents can be considered significant. Moreover, the appearance of the non-zero values over compact regions of the spectrum as well as the constancy of sign can be used to refine the criteria for nullity. The value of the determinant will depend on both f and q, and by the use of equation 6 it is possible to see that in favourable cases it will be possible to detect an impurity present as a molar fraction of the total much smaller than the ratio Δ/P.

In agreement with the usual spectroscopic criterial a fluorescence spectrum may be called partially resolved into components, if there are spectral regions which can be demonstrated to belong to each component separately. In a spectrum of two components (2 × 2 minors non-zero, 3 × 3 minors = 0) the spectrum will be partially resolved, if there is at least one region where all 2 × 2 determinants are zero, when both the fluorescence wave-bands are selected from this region, and the exciting wave-lengths chosen arbitrarily, but some 2 × 2 determinants are non-zero when only one component is selected from within the region.

In the experimental use of the *EF* matrix two possible causes of error must be given consideration : the fluorescence spectrum may appear to change with exciting wave-length if the absorption of the exciting radiation becomes weaker than or even comparable to the absorption of any of the observed fluorescence wave-bands by the solution. Also, scattering of the exciting radiation may have a similar effect by adding a short-wave component to the fluorescence, when the wave-bands of excitation and observation become too close to each other. With good monochromators, it is possible to bring these two band-widths very near the theoretical limit. In one of the experiments quoted below, the wave-lengths of observation and excitation were brought within 13 mμ while the sum of the band-widths was 6 mμ, without impairing the results.

The detector response must be linear within the range of photocurrents measured, otherwise the spectrum will appear to change, depending on the signal strength, or in other words B_j will not be a true column multiplier but a function of q. In practice, the detector response must be kept constant through the series of measurements of either rows or columns of the *EF* matrix. In the former case, a series of excitation spectra of defined fluorescence bands is obtained; in the second, a series of fluorescence spectra excited by definite wave-bands is obtained.

Two examples are given below of the usefulness of the matrix treatment of the data of fluorescence spectrophotometry. The first example refers to the fluorescence of human serum albumin. This protein contains seventeen tyrosine and one tryptophan residue, all potentially capable of fluorescence[3], although in previous work no contribution from the tyrosine was detected[4], and the whole emission was attributed to the single tryptophan. The *EF* matrix obtained with a solution of human serum albumin at neutral *p*H is given below. The wave-bands for excitation and observation were both 3·0 mμ.

		Excitation wave-lengths (mμ)		
		275	285	295
Observation wave-lengths (mμ)	308	66	89	65
	325	100	141	205
	350	108	153	290

The value of the 3 × 3 determinant/3 × 3 permanent is 0·002 or zero within error. Thus, there are less than three distinct components detectable. The 2 × 2 minors are analysed in the following table which gives the ratios of Δ/P for each pair of excitation and observation wave-lengths :

		Excitation pairs	
		275–285	285–295
Observation pairs	308–325	+ 0·022	+ 0·35
	325–350	+ 0·003	+ 0·135

The presence of two distinct components in the absorption and fluorescence is clear, since the experimental error in the determination of the photocurrents was about 1 per cent. From the signs of the two by two determinants it can be concluded

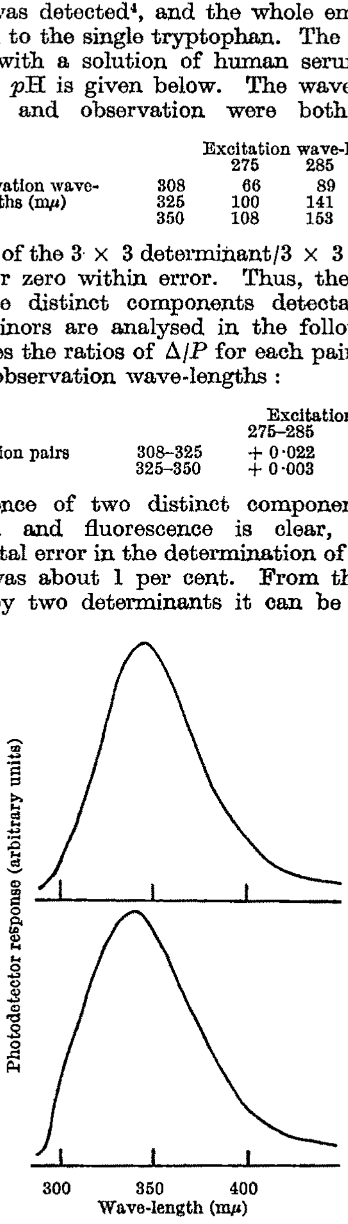

Fig. 1. Fluorescence spectra of 0·5 per cent solution of human serum albumin in water. Excitation and fluorescence band-width of 2 mμ. Upper figure excited at 292 mμ ; lower excited at 278 mμ. All spectra shown are direct recordings uncorrected for grating transmission or photodetector (*EMI* 6255) response

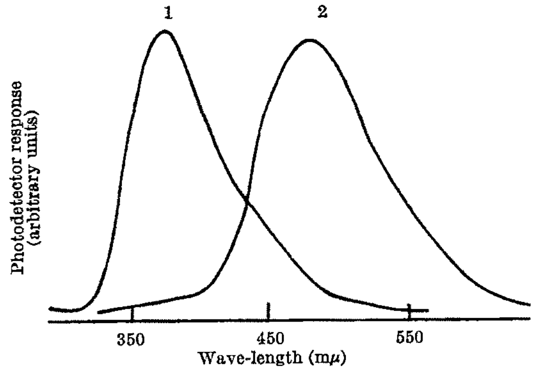

Fig. 2. Fluorescence spectra of 10^{-3} *M* sodium naphthionate in water. Excitation at 340 mμ. Band-widths = 2 mμ. (1) Neutral solution ; (2) 3 *N*, sodium hydroxide solution

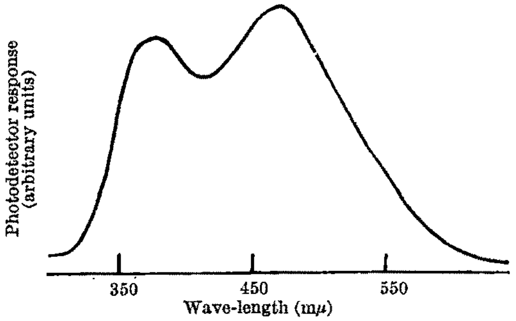

Fig. 3 Fluorescence spectrum of weakly alkaline solution of sodium naphthionate

that the component increasing its absorption fraction over the 285–295 mμ region is the one emitting at the longer wave-lengths as expected from tryptophan. The minors for 275–285 excitation are virtually zero, showing that there is no change in the fractional absorption of the two components over this interval. Following the indications given by the matrix treatment, fluorescence spectrum recordings using narrow bands of excitation at 278 and 292 mμ were undertaken and are shown in Fig. 1, where the contribution from tyrosine appears clearly as a shoulder on the short-wave side of the spectrum, excited at 278 mμ and is virtually absent in the spectrum excited with 292 mμ. The absolute quantum yield of the tyrosine is estimated as between 0·015 and 0·025.

The matrix treatment has also been applied to the fluorescence data from alkaline solutions of sodium naphthionate. The fluorescence spectrum of this compound in neutral solution has a maximum at 395 mμ, while in 2*N* sodium hydroxide the maximum is found at 502 mμ, both spectra being as shown in Fig. 2. Boaz and Rollefson[5] and Förster[6] have concluded from their work on this and similar compounds that the fluorescence shift is due to abstraction of a proton from the amino-group during the lifetime of the excited state so that the long-wave fluorescence is due to the NH^- ion, a species virtually non-existent in the ground-state. The *EF* matrix given below was obtained with a moderately alkaline solution in which both fluorescence bands were present to about the same extent (Fig. 3):

		Excitation wave-lengths (mμ)			
		280	300	340	360
Observation wave-lengths (mμ)	400	81	91	68	98
	450	78	88	66	95
	500	74	83	63	91
	550	43	48	37	53

All nine independent 2 × 2 minors are zero within experimental error, confirming that there is a single species in the ground-state in spite of the complex fluorescence spectrum.

The examples examined show one of the potentialities of fluorescence spectrophotometry as compared with absorption spectrophotometry. In the latter, the determination of the number of components cannot be done without reference to the absorption spectrum of the pure species while in fluorescence spectrophotometry this determination is always possible in principle and may be expected to be practically possible in most cases.

ABSENCE OF PHOSPHATASE REPRESSION BY INORGANIC PHOSPHATE IN SOME MICRO-ORGANISMS

By MAU-HUAI KUO* and PROF. HAROLD J. BLUMENTHAL
Department of Bacteriology, University of Michigan Medical School, Ann Arbor

THE formation of alkaline phosphomonoesterase in strains of *Escherichia coli*[1,2] and *Bacillus subtilis*[3] has been observed to be repressed in a medium containing inorganic phosphate. It was suggested that phosphate, which is a product of phosphatase action, controlled the level of enzyme synthesis via a negative feed-back system[2]. Such a phosphate–phosphatase regulatory system conceivably could play an important part in the phosphorus economy of the cell. In order to determine if this mechanism applied as well in other organisms and to the acid phosphatases, the effect of inorganic phosphate on the formation of both acid and alkaline phosphatase was studied in various strains of *E. coli* and *Staphylococcus aureus*, and in a fungus, *Neurospora crassa*.

Various strains of *E. coli* were grown in a medium containing per litre : 0·1 gm. crystalline magnesium sulphate, 1·0 gm. ammonium sulphate, 0·5 gm. sodium citrate, 10·0 gm. glucose, 12·2 gm. *tris*-(hydroxymethyl)-aminomethane and thiamine or

PHYSICS DEPARTMENTAL LIBRARY

amino-acids, as necessary, to the auxotrophic strains; the *p*H was adjusted to 7·4. The growth medium for coagulase-negative staphylococci contained per litre : 0·04 gm. crystalline magnesium sulphate, 0·001 gm. sodium chloride, 0·001 gm. crystalline ferrous sulphate, 0·02 gm. crystalline manganese sulphate, 1·0 gm. glucose, 1·0 gm. yeast extract (Difco), 12·2 gm. *tris*-(hydroxymethyl)-amino-methane, and *p*H was adjusted to 7·4. The coagulase-positive staphylococci were grown in a medium containing glucose, casein hydrolysate, cystine, salts, thiamine and nicotinic acid in the amounts recommended by Evans[4] except that 12·2 gm. of *tris*-(hydroxymethyl) - aminomethane / litre replaced the inorganic phosphate. All three media also contained 10 μgm. phosphorus/ml. as potassium dihydrogen phosphate. The bacteria were subcultured once before inoculating into the growth media, and incubated at 37° C. on a rotary shaker. Alkaline phosphatase was assayed, after an autolysis with toluene, by the method described by Horiuchi *et al.*[2], with minor modification. The reaction mixture was incubated for 30 min. at 30° C., and *p*-nitrophenol liberated was determined by the procedure of Bessey *et al.*[5]. Acid phosphatase was assayed in the same manner in *p*H 5·6 acetate buffer. The optical densities of cell populations were measured using filter 50 in a Klett–Summerson photometer while inorganic phosphate in the medium was determined by the procedure of Fiske and SubbaRow[6].

Neurospora crassa strain 5297*a* was grown for 48 hr. in a synthetic medium[7] on a rotary shaker at 30° C. The mycelium was then blended aseptically for 30 sec. in a Waring blender and aliquots of the suspension were used to inoculate groups of duplicate flasks containing medium in which the level of potassium dihydrogen phosphate was reduced to 43 μgm. phosphorus/ml. After incubation on the shaker at 30° C., replicate flasks were removed at appropriate intervals of time and the mycelium was harvested by filtration, pressed dry and weighed. Aliquots of the filtered medium were also assayed for inorganic phosphate and phosphatase activity. The weighed mycelia were triturated in a cold mortar with 8 parts (w/w) of washed fine glass beads, and the enzyme was solubilized in distilled water. The supernatant fluid obtained after centrifugation was used for assay of both acid and alkaline phosphatase activities using sodium β-glycerophosphate as the substrate[8].

The effect of inorganic phosphate on alkaline phosphatase formation is shown along with the growth curves of two typical *K*12 strains of *E. coli* in Fig. 1. In strain *K*40, alkaline phosphatase formation took place only in the absence of extracellular inorganic phosphate whereas strain 180 formed the enzyme early in its growth while inorganic phosphate was still present in the medium. Addition of phosphate to a culture of strain *K*40 actively synthesizing alkaline phosphatase resulted in the complete repression of alkaline phosphatase, but not general protein synthesis, whereas in strain 180 there was a stimulation of phosphatase synthesis. These findings in strain *K*40 are consistent with what has been reported by previous workers in *E. coli* strains *K*12, *ML* and *W*[1] and strain *B*[2]. On the other hand, the absence of a phosphate-repressible alkaline phosphatase, as found in strain 180, has previously not been reported. The results of similar experiments with various *E. coli* strains are summarized in Table 1. Only three of ten strains tested were found to have a phosphate-repressible alkaline phosphatase, and at least one strain of each mating type, *Hfr*, *F*+, and *F*−, was not repressible, suggesting there is no direct relationship between phosphate repressibility and mating type. None of the strains had a phosphate-repressible acid phosphatase, in agreement with the findings of Torriani[1]. Strain differences are known to exist in other repressible systems. Thus, Gorini[9] reported that in only two of four strains of *E. coli* tested was arginine a repressor for ornithine transcarbamylase.

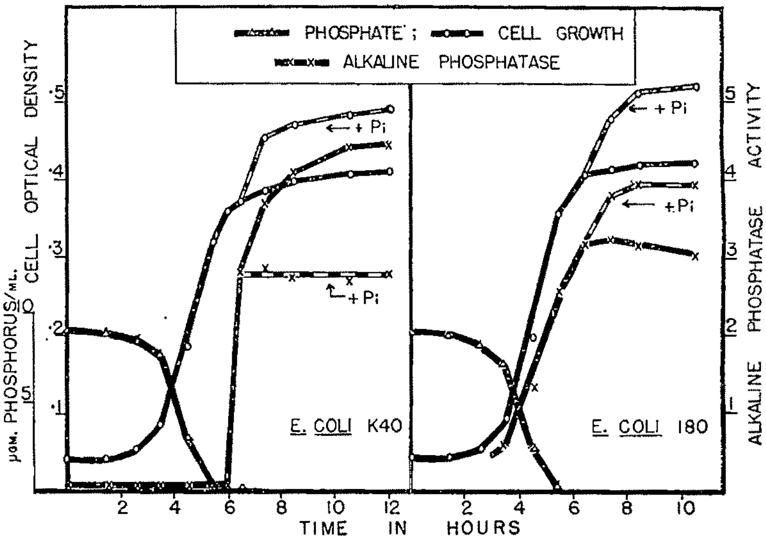

Fig. 1. Relation between the content of inorganic phosphate and the formation of alkaline phosphomonoesterase in two *K*12 strains of *E. coli*. Cells were grown as described in the text. At zero time, 2 ml. of a 12-hr. culture of *E. coli* was inoculated into flasks containing 100 ml. of the synthetic medium in which the phosphorus content was 10 μgm./ml. Samples were withdrawn for determination of cell population, inorganic phosphate (Pi), and alkaline phosphatase at the indicated time intervals. After 6 hr., the inorganic phosphate in the medium was completely utilized and the flasks were divided into two groups. One group received 50 μgm. phosphorus/ml., as potassium dihydrogen phosphate, while the other group received none. Determination of cell population and alkaline phosphatase was continued for another 6 hr. The alkaline phosphatase is plotted in relative units

The amount of phosphatase produced by *Staphylococcus aureus* has been correlated with coagulase production as a biochemical index of pathogenicity[10]. In a recent survey of more than 100 strains of this organism growing in a complex medium, Pan and Blumenthal (unpublished results) found that the average amount of acid phosphatase produced by coagulase-positive strains was about four times greater than that produced by the average coagulase-negative strains. To test the possibility that a phosphate-repressible acid or alkaline phosphatase system was operative in the staphylococci, 17 coagulase-negative and 3 coagulase-positive strains were tested. The results, presented in Table 1, indicate that a phosphate-repressible system could not be detected in any of the strains.

The results of an experiment with a wild-type strain of *N. crassa* are presented in Table 2. The

67	0·766	1·790	6·5	17·5	3·5	7·0

Cultivation of the mould is described in the text. In the control flasks (–P), no inorganic phosphate was detectable in the medium after 20 hr. of cultivation.

* One unit of phosphatase is defined as the amount of enzyme which can release one μ-mole of phosphorus per min. under respective assay conditions.

† –P, flasks to which no additional inorganic phosphate was added. +P, flasks to which 122 μgm. phosphorus/ml., as potassium dihydrogen phosphate, was added after 20 hr. of incubation.

amounts of both acid and alkaline phosphatases, which were present only in the mycelia, were found to be approximately proportional to the cell weight throughout the course of the experiment. The presence of extra-cellular phosphate did not repress the enzyme formation and the phosphatase formation did not increase significantly even after the depletion of phosphate from the medium. This strain of *N. crassa*, therefore, was a non-repressible strain.

Although it is likely that in the future other micro-organisms will be found with phosphate-repressible alkaline phosphatases, the absence of such a system in 20 strains of *S. aureus*, 1 strain of *N. crassa* and 7 of 10 strains of *E. coli* indicates that this is not a common property of micro-organisms. Even closely related strains, like those derived from *E. coli K*12, differ in this respect. It therefore seems unlikely that this particular repressor system will prove to be part of a general mechanism for the regulation of microbial phosphorus metabolism, although it may take such a role in those strains possessing this repressor system.

These studies were supported by grants from the U.S. Public Health Service and the Graduate School of the University of Michigan. We would like to thank Dr. A. Campbell and Dr. A. Wheeler for cultures of the *K*12 strains of *E. coli* and *S. aureus*, respectively.

INTESTINAL CARBOHYDRASES OF A NEW-BORN PIG

By DR. ARNE DAHLQVIST

Department of Physiological Chemistry, University of Lund, Sweden

THE activity of digestive carbohydrases of the new-born mammal differs from that of the adult animal. The development of the digestive carbohydrase system of the pig as well as the ability of the growing pig to utilize various dietary sugars have been the subject of several recent investigations[1-6]. It has been found that the lactase activity of the small intestinal mucosa is high at birth, and remains so for the first weeks of life[3,6]. It then gradually decreases, although some lactase is present in the small intestine of the adult pig too[7]. The intestinal maltase and invertase activities, to the contrary, which for many years have been thought to be due to a single enzyme, intestinal α-glucosidase[8], are weak or absent at birth and develop gradually during growth[3,6]. The amylase activity of the pancreas likewise is low at birth and increases during growth[2]. The new-born pig, therefore, is unable to utilize some dietary carbohydrates, as sucrose and starch, which are readily utilized by the adult animal[1,5,6].

Recently it has been found that the digestive carbohydrase system of the adult pig is more complicated than was believed earlier. Instead of a single intestinal α-glucosidase[8] there exist five or six different intestinal α-glucosidases[9], namely, three different maltases (maltase I–III), one of which (maltase I) also exerts all the intestinal invertase activity[10,11], a specific intestinal trehalase[12], an *iso*maltase[13] and a phenyl-α-glucosidase[13]. The two latter enzymes may, however, be identical[9,13]. Since lactase is also present[7], the adult pig has at least six different intestinal glycosidases. In addition, preparations of intestinal mucosa are known to hydrolyse β-glucosides[14]. An intestinal dextranase, distinguished from amylase, has also been found[15,16].

To define those enzymes present at birth, the carbohydrase activities of a homogenate of the small intestine of a new-born pig have been measured. The pig was slaughtered a few hours after birth, and the small intestine, which weighed 19 gm., was homogenized for 2 min. in an Ultra-Turrax homogenizer with 19 ml. of 0·01 *M* phosphate buffer, *p*H 6·0. After centrifugation in a laboratory

Table 1

	Activity of homogenate units/ml.	
	(*a*) New-born pig	(*b*) Adult pig
Invertase	0	78
Maltase I	0	55
Maltase II	13	248
Maltase III	7	66
*Iso*maltase (total)	0	30
Trehalase	0	36
Phenyl-α-glucosidase (total)	0·8	16
Lactase	104	42
Cellobiase	30	13
Gentiobiase	1·8	0·7
Phenyl-β-glucosidase	24	2·1
Amylase	26	1,800
Dextranase	0	2

Carbohydrase activities of homogenates of (*a*) the small intestine of a new-born pig, and (*b*) mucosa from the upper part of the jejunum of an adult pig. Protein contents of the homogenates (*a*) 44 mgm./ml. and 62 mgm./ml. The figures in (*a*) and (*b*) can be compared, but only approximately.

centrifuge for 5 min. the opalescent supernatant, which contains the carbohydrase activities[7], was analysed by means of methods described elsewhere[16,17]. Conditions for the carbohydrase activity determinations were such that 0·5 unit per ml. of homogenate could be detected.

The carbohydrase activities of the homogenate are seen in Table 1. For comparison, this table also includes the carbohydrase activities of a mucosal homogenate from the upper part of the jejunum of an adult pig.

The wall of the small intestine from the new-born pig was so thin that it proved impossible to scrape off the mucosa; hence, the entire small intestine was homogenized. This means, however, that the homogenate, made 1 : 1 w/v in buffer, was somewhat more dilute in mucosal protein than in the experiments with the adult pig, where only the mucosa from the intestine was homogenized. The values expressed are thus somewhat lower than would be found in a mucosal homogenate, but an approximate comparison with the adult pig values is possible.

No invertase activity could be detected in the homogenate from the new-born pig, which is in accordance with earlier findings[3,6] and also with the fact that new-born pigs cannot utilize dietary sucrose[1]. The homogenate from the adult pig had strong invertase activity (Table 1).

Maltase activity was found in the preparation from the new-born animal, although this activity was weak. The maltase activity was less than one-tenth that of the adult animal preparation (Table 1). Since it is known that the maltase activity of the ileum of adult animals is greater than that of the jejunum[16], the difference would have been still greater if the whole small intestine had been used in the experiments with the adult animal.

The maltase activity seems, however, to increase rapidly during the first phase of growth[3,5]. After two days of life pigs seem able to utilize dietary maltose[5], although they are still unable to utilize sucrose.

Heat inactivation experiments, performed as described earlier[9,17–19], indicated that the maltase activity of the preparation from the new-born pig was exerted by a mixture of maltase II (65 per cent) and maltase III (35 per cent). Apparently these enzymes appear in the small intestine of the growing pig earlier than maltase I, which hydrolyses sucrose in addition to maltase[9–11].

Neither trehalase nor *iso*maltase activity could be detected in the preparation from the new-born pig. In the small intestine of the adult pig there exist one trehalase and one specific *iso*maltase[9,12,13]. The weak *iso*maltase activity known to be exerted by maltase II and maltase III[10] was too weak to be detected under the conditions used.

The phenyl-α-glucosidase activity was less than one-tenth that of the preparation from the adult animal. This activity may very well be caused by maltase II and maltase III[10,17], and hence there is no specific phenyl-α-glucosidase[13] present in the intestine of the new-born pig.

Lactase activity, in accord with earlier reports[3,6], was greater in the preparation from the new-born animal, which is of obvious physiological importance. However, the β-glucosidase (cellobiase, gentiobiase and phenyl-β-glucosidase) activities were high although β-glucosides are not physiological nutrients for the new-born pig. The high β-glucosidase activities of this preparation suggest that these activities may be exerted by intestinal lactase (β-galactosidase) and that there exists no specific intestinal β-glucosidase. This idea is also supported by separation experiments which are in progress in our laboratory.

The phenyl-β-glucosidase activity may, however, be exerted by more than one enzyme, since the phenyl-β-glucosidase/lactase activity quotient of the preparation from the new-born pig was about 5 times that of the preparation from the adult pig, while the cellobiase/lactase and gentiobiase/lactase activity-quotients were the same in both preparations.

Amylase activity was low, compared with that of the preparation from the adult animal. Since the main source of amylase in the pig is the pancreas[16], however, no conclusions may be drawn about the ability of the new-born pig to digest starch. The pancreatic amylase activity of new-born pigs and their ability to digest starch have been studied by others[2,4].

Dextranase activity could not be detected. In contrast to amylase, this enzyme is localized to the intestinal mucosa of the adult animal[16], but its activity is quite weak.

This investigation has been supported by grants from the Medical Faculty of the University of Lund.

EFFECT OF MITOMYCIN C ON THE SYNTHESIS OF INFECTIVE VIRUS AND DEOXYRIBONUCLEIC ACID IN PSEUDORABIES VIRUS-INFECTED RABBIT KIDNEY CELLS

By Dr. TAMAR BEN-PORAT, Dr. MAGDALENA REISSIG and Dr. ALBERT S. KAPLAN
Albert Einstein Medical Center, Northern Division, Philadelphia 41, Pa.

THE antibiotic mitomycin *C* prevents the synthesis of deoxyribonucleic acid (DNA) without affecting the synthesis of ribonucleic acid (RNA) or protein in *Escherichia coli*.[1,2]. After infection with bacteriophages T_2, T_3, and T_5, cells treated with mitomycin *C* regain the ability to synthesize DNA, as shown by Sekiguchi and Tagaki[2]; the phage particles produced by these cells are, however, non-infective. These results are interpreted by the authors to mean that DNA synthesis proceeds in phage-infected bacterial cells through a pathway which differs from that of non-infected cells and which is resistant to the action of mitomycin *C*.

An alternative explanation of these results is that infection of the cells is followed by a massive induction of the enzymes connected with the synthesis of DNA, some of which are inhibited by mitomycin *C*. Previous experiments[3] have revealed that infection of rabbit kidney cells with pseudorabies virus causes an increase or decrease in the rate of DNA synthesis depending on the physiological state of the host cells. It was of interest, therefore, to examine the effects of mitomycin *C* using the pseudorabies virus–rabbit kidney cell system with particular emphasis on a comparison of the results obtained with rabbit kidney cells in the stationary and in the actively growing phases.

Primary monolayer cultures of rabbit kidney cells were prepared as described previously[4] and were cultivated in Petri plates in a medium composed of 96·5 per cent Earle's saline, 0·5 per cent lactalbumin hydrolysate, and 3 per cent bovine serum. Cultures were incubated at 37° in a humid atmosphere containing 5 per cent carbon dioxide. Virus titres were measured by the plaque method. The procedures used for the determination of RNA, DNA, and protein and for the incorporation of labelled nucleosides were the same as reported previously[3]. The number of virus particles was determined by electron microscopy. Virus preparations were mixed with a known number of polystyrene latex particles, the mixtures were sprayed on electron microscope screens, and counts were made from electron micrographs[5,6].

The action of mitomycin *C* on rabbit kidney cells is similar to its action on bacterial cells. The addition of 5 μgm. of mitomycin *C* per ml. to rabbit kidney cells results in an immediate reduction in the ability of these cells to incorporate thymidine into their DNA. After 4 hr. of incubation with the antibiotic the cells incorporate only 2–3 per cent as much thymidine as the untreated controls. The same concentration of mitomycin *C* has comparatively little effect on the incorporation of uridine into RNA: even after 24 hr. of incubation with mitomycin *C* this incorporation is reduced by only approximately 25 per cent.

The synthesis of DNA in pseudorabies virus-infected cells treated with mitomycin *C* is highly dependent on the physiological state of the cells at the time of addition of mitomycin *C*. (Previous experiments have demonstrated that cells in the stationary phase of growth are stimulated by pseudorabies virus infection to incorporate up to twenty-fold more thymidine than non-infected controls; infection of actively growing cells results, on the other hand, in a reduction in their capacity to incorporate thymidine[3].) Nine-day-old stationary phase cultures, as well as 4-day-old actively growing cultures, were incubated with 5 μgm. of mitomycin *C* per ml. for 18 hr. Part of the cultures was infected with an adsorbed multiplicity of 5 and incubation was continued in the presence of mitomycin *C*. Cultures which had not been exposed to the antibiotic (infected and non-infected) were used as controls. At various times after infection 3·3 × 10^4 c.p.m. of thymidine-2-^{14}C (specific activity 8·7 × 10^3 c.p.m./μgm. of thymidine) were added to the cultures and incorporation was allowed to proceed for 1 hr. The specific activity of the DNA was then determined. Fig. 1 summarizes the results of this experiment.

Nine-day-old cultures treated with mitomycin *C* regain the ability to incorporate thymidine after infection and for the first 4 hours incorporate thymidine at a rate similar to that of the untreated controls; after 4 hours there is a sharp decrease in the rate of this uptake. Four-day-old cultures treated with mitomycin *C*, however, remain unable to incorporate thymidine after infection. Thus, the action of mitomycin *C* on DNA synthesis is reversed by infection with pseudorabies virus only in cells in which the synthesis of DNA is thereby stimulated. These results suggest that this reversal may be a reflexion of the induction in these cells of enzymes (some of which are sensitive to mitomycin *C*) con-

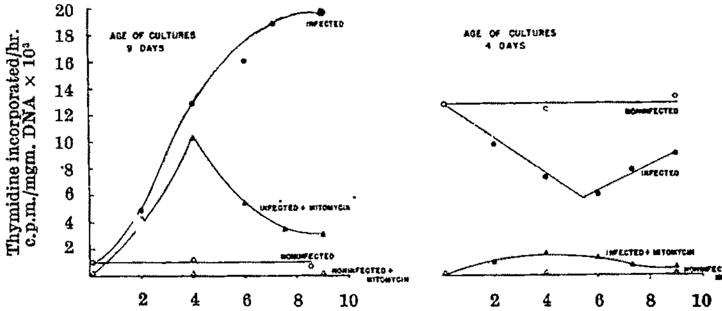

Fig. 1. The effect of virus infection on stationary phase and actively growing rabbit kidney cells, after treatment with mitomycin *C*, on their ability to incorporate thymidine-2-^{14}C

nected with the synthesis of DNA. Furthermore, the initial rapid increase in the ability of 9-day-old infected cultures treated with mitomycin *C* to incorporate thymidine, which is followed by a loss of this ability, seems to be due to the induction of these enzymes at a rate which, for the first 4 hr. after infection, exceeds the rate of their inhibition by mitomycin *C*. Thus, under certain conditions, infection with pseudorabies virus overcomes the block of the synthesis of DNA caused by mitomycin *C*, as infection with bacteriophage does in *E. coli* treated with mitomycin *C*. In the case of pseudorabies virus-infected rabbit kidney cells, however, this reversal is readily explainable in terms of a massive induction of enzymes connected with the synthesis of DNA.

Despite the ability of 9-day-old cultures treated with mitomycin *C* to synthesize DNA after infection with pseudorabies virus, the yield of infective virus produced by these cells is low. Non-infective virus particles are, however, formed by cells treated with mitomycin *C*, as shown in the next experiment. Cells were incubated for 4 hr. with 5 μgm. of mitomycin *C* per ml. They were infected and incubated for an additional 24 hr. in the presence of mitomycin *C*. (Cultures treated identically in the absence of mitomycin *C* were used as controls.) The fluids were harvested, the cellular debris was removed by centrifugation, and the clear supernatant fluids were subjected to 2 alternate cycles of high-speed (73,300 *g* for 60 min.) and low-speed (1,700 *g* for 20 min.) centrifugations. The preparations, suspended in one-tenth the initial volume, were assayed for infective virus (measured by plaque-forming units) and for physical particles (determined by electron microscopy). Table 1 shows the ratio of plaque-forming units to physical particles in these preparations. Although the number of plaque-forming units in the sample obtained from the cells treated with mitomycin *C* is more than 700 times lower than that of the control sample, the number of physical particles in both samples differs by only a factor of 3·2.

Table 1. EFFECT OF MITOMYCIN *C* (MC) ON THE ABILITY OF RABBIT KIDNEY CELLS TO PRODUCE INFECTIVE AND NON-INFECTIVE VIRUS PARTICLES

	MC-treated	Untreated	$\frac{\text{MC-treated}}{\text{Untreated}}$
Virus titre, PFU/ml.	$1 \cdot 5 \times 10^7$	$1 \cdot 1 \times 10^{10}$	1/740
Virus particles/ml.	$1 \cdot 8 \times 10^{11}$	$5 \cdot 5 \times 10^{11}$	1/3·2

PFU, plaque-forming units.

The next experiment shows that the non-infective particles produced by cells treated with mitomycin *C* can induce in the cells to which they are adsorbed the characteristic cytopathic changes (intranuclear inclusions and syncytia) which result from infection of rabbit kidney cells with normal infective virus particles. Cultures were incubated with 5 μgm. of mitomycin *C* per ml. for 4 hr. They were infected and incubated for an additional 24 hr. in the presence of mitomycin *C*. The fluids of these cultures, as well as of control cultures not treated with mitomycin *C*, were harvested and submitted to low-speed centrifugation to remove the cellular debris. One ml. of different dilutions of these fluids was added to rabbit kidney cultures (containing 4×10^6 cells ± 10 per cent per culture). After an adsorption period of 1 hour the cultures were washed to remove unadsorbed virus and were incubated in 5 ml. of medium for 3 hr. at 37°. The cells were then fixed with Bouin fluid, stained with hæmatoxylin, and the percentage of cells containing inclusion bodies determined. (Inclusion bodies start to appear in the nucleus 3 hr. after inoculation and increase in number with time. Previous experiments (unpublished) have shown that between 3 and 6 hr. after infection the number of inclusions is proportional to the multiplicity of infection. Since the latent period of pseudorabies virus in rabbit kidney cells is approximately 4–5 hr., the experiment was ended at 4 hr. to avoid the problem of recycling.) Assuming a Poisson distribution, the number of inclusion-forming units, which give rise to an inclusion during the first 4 hr. of incubation, was calculated from the number of intranuclear inclusions obtained with various concentrations of the samples. Table 2 shows the number of plaque-forming units and inclusion-forming units in mitomycin *C*-treated and untreated samples. Although the number of plaque-forming units produced by the treated cultures is 220 times lower than that of the untreated controls, the number of inclusion-forming units in both samples differs by only a factor of 3·4. The ratio of the number of inclusion-forming units produced by treated and untreated cells is comparable to the ratio of the number of viral particles in the two samples as determined by electron microscopy. Moreover, syncytia are formed in cultures infected with mitomycin *C* virus with a multiplicity of plaque-forming units per cell too low to induce these cytopathic changes with control virus. We conclude from these experiments that the non-infective virus particles which are formed in cells treated with mitomycin *C* are able to induce in rabbit kidney cells to which they are adsorbed the characteristic changes observed after inoculation of these cells with infective pseudorabies virus.

Table 2. NUMBER OF PLAQUE-FORMING UNITS (PFU) AND INCLUSION-FORMING UNITS (IFU) PRODUCED BY MC-TREATED AND UNTREATED RABBIT KIDNEY CELLS

	MC-treated	Untreated	$\frac{\text{MC-treated}}{\text{Untreated}}$
PFU/ml.	1×10^7	$2 \cdot 2 \times 10^9$	1/220
IFU/ml.	$8 \cdot 8 \times 10^7$	3×10^8	1/3·4

The action of mitomycin *C* on the rabbit kidney cell–pseudorabies virus system is thus similar to that previously reported for the *E. coli*–bacteriophage system. Our findings may be summarized as follows: the inhibition of DNA synthesis in cells treated with mitomycin *C* is overcome under certain conditions by infection with pseudorabies virus, probably as a result of an induction by the virus in the infected cells of enzymes connected with the DNA synthesizing mechanism; the DNA formed under these conditions does not seem to be functional and the virus particles formed are non-infective.

We should like to thank Dr. Joseph Lein, Bristol Laboratories, Inc., for a generous supply of mitomycin *C*. This work was supported by grants from the National Institute of Allergy and Infectious Diseases (*E*-2432 and *E*-3362).

LETTERS TO THE EDITORS

GEOPHYSICS

A Preliminary Model for the Variations of Upper Air Densities

SATELLITE observations have shown a significant variability of the density of the upper air above a height of 200 km. During the period 1957–60, several major effects must be distinguished, in addition to dependence on altitude. The construction of general representative atmospheric models is therefore extremely difficult, as has been found by several authors[1]. Hence it seems to be more useful to give a model for the variability, from which the density of the air can be calculated for special cases. Three influences seem to be predominant[2]: (1) The solar *W*-effect produced by the variable short wave-length solar ultra-violet radiation. This is demonstrated by a strong correlation with the sunspot number[3] or with the solar radio emission in the decimetre wave-length region[4]. (2) The day–night effect, the amplitude of which increases strongly with height[5]. (3) The annual effect. This effect shows a pronounced annual and a semi-annual period[2]. It is demonstrated by the fact that for different satellites the day–night variation is not constant in phase and amplitude if it is normalized for a constant solar *W*-effect[6]. This third effect is probably caused by the interaction with interplanetary plasma, the density of which varies along the Earth's orbit perhaps due to an interstellar wind[7].

Let F be the intensity of the solar ultra-violet radiation at 10 cm. wave-length; θ be the local time; a be the date in the year, $\rho_{\text{max.}}(\theta)$, $\rho_{\text{min.}}(\theta)$ be the diurnal and annual maximum density. Then the three influences above can be expressed by the following functions:

$$f(\theta) = \log \frac{\rho_{\text{max.}}(\theta)}{\rho(\theta)},\ g(a) = \log \frac{\rho_{\text{max.}}(a)}{\rho(a)},$$
$$i(F,h) = \log \frac{\rho(220,\ h)}{\rho(F,h)} \qquad (1)$$

$\rho(220)$ means the air density when the intensity of 10-cm. wave-length solar radiation is $F = 220 \times 10^{-22}$ W./m.^{2}c./s. The dependence on altitude of $f(\theta)$ and $g(a)$ may be expressed by the function $\theta(h)$ and $a(h)$. Then the air density $\rho(h)$ can be calculated as a good first approximation from:

$$\log \rho(h) = \log \rho_{\text{stand.}} - [f(\theta)\theta(h) + g(a)a(h) + i\,(F,h)] \qquad (2)$$

$\rho_{\text{stand.}}$ is given in Table 1, while the other functions are shown in Figs. 1 and 2. The function $\rho_{\text{stand.}}$ was extended up to 1,500 km. altitude by the observed acceleration of *Echo I* ($1960\iota_2$) (ref. 8). The plausible physical product of the combinations $f(\theta).\theta(h)$ and $g(a).a(h)$ has been proved by the observations of different satellites, which agree well with this assumption.

Table 1

Height (km.)	Density (gm./cm.^{3})	Height (km.)	Density (gm./cm.^{3})
180	$5{\cdot}9 \times 10^{-13}$	500	$4{\cdot}7 \times 10^{-15}$
220	$3{\cdot}0$	600	$1{\cdot}8$
260	$1{\cdot}2$	700	$7{\cdot}1 \times 10^{-16}$
300	$5{\cdot}9 \times 10^{-14}$	1,000	$7{\cdot}8 \times 10^{-17}$
400	$1{\cdot}5$	1,500	$8{\cdot}0 \times 10^{-18}$

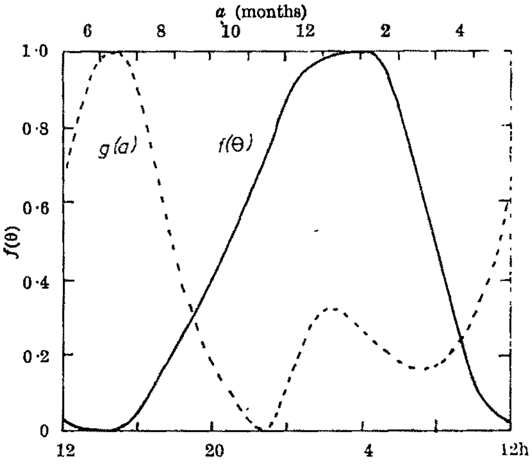

Fig. 1. Diurnal and the annual effects

Further, some minor influences exist. The magnetic activity enhances the air density by about 5 per cent if the planetary magnetic index Ap increases from 10 to 20, etc. Greater variations are only observed during magnetic storms, when the density may increase by about 30 per cent over 200 km. in height[9]. Finally, a weak influence of latitude and seasons has been found from observations of some of the *Discoverer* satellites, the orbits of which extended to polar latitudes (unpublished work). At an altitude of 200 km., the density of the air is about 10 per cent smaller in polar latitudes than in lower latitudes

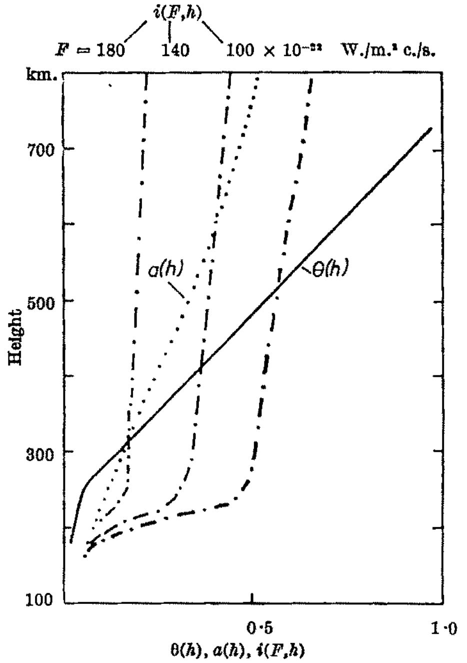

Fig. 2. Dependence on altitude of the *W*-effect, the diurnal and the annual effect

during the winter. On the other hand, a density gradient of about 15 per cent exists from the equator to the pole over the summer hemisphere.

The proposed model covers only the variations of density with a time-scale greater than one day. During strong solar flares the density of the upper atmosphere may increase considerably for a short time. The function $g(a)$ in Fig. 2 relates to the time November 1957–July 1960. Apparently in the yearly variation an annual and a semi-annual period are superposed[7]. The first has been already found in the variations of the F-layer[10] and recently also in the exospheric electron-density after whistler observations[11]. The semi-annual effect has been recently found also for the E-layer[12]. Because the annual and semi-annual effects are probably caused by the influence of the inter-planetary plasma on the upper atmosphere, its amplitude may vary with the solar cycle. This is shown by the last observations up to February 1961, when the sunspot activity was already weak. During this time the annual and the semi-annual effect was found to be considerably lower than that during the strong sunspot maximum of 1957–58. Further, some minor irregularities of the air drag seem to remain, perhaps due to inhomogeneities of the interplanetary matter. In summary, the fluctuations of the density (and temperature) of the upper atmosphere are so complex that any model may differ considerably sometimes from the real values.

Palæomagnetic Evidence relevant to a Change in the Earth's Radius

Cox and Doell[1], applying a suggestion of Egyed[2] to test the reality of the expansion of the Earth through geological time, have calculated the radius of the Earth implied by comparison of Permian palæomagnetic measurements in the Maymecha–Kotuy region of Siberia and localities in western Europe, and find that although the standard deviation of the individual results is very wide indeed, the average of the computed radii of the Earth is close to the present radius. From this they conclude that the substantial post-Palæozoic expansion of the globe deduced by me on tectonic grounds is unlikely.

Cox and Doell state that "in the expansion of the Earth envisaged by Carey, Heezen and Egyed, the continents do not increase in area; hence, the distance between any two points on a stable part of one continent remains constant". When applied to the geotectonic synthesis presented by me in the paper quoted by them[3], this statement is certainly invalid. In each of the figures for the Asian continent in my paper I show the Asian block as composite, and elongation since the Palæozoic is explicitly shown on Fig. 9, and implicitly on Figs. 10, 39*b* and 39*d*. The Ob rhombochasm is discussed on pp. 203–204 and rhombochasm is defined on p. 192 as "a parallel-sided gap in the sialic crust occupied by simatic crust and interpreted as a dilatation". The extensions specified above fall between the sampling areas used by the authors and involve an extension of some 900 km. This is of the right order for the angular distance measured between these districts to remain unchanged if the surface area of the Earth had increased some 45 per cent since the Palæozoic.

The magnetic data presented by Cox and Doell are therefore what they should be if the tectonic synthesis presented by me is correct.

It would be possible to apply Egyed's method to places on the Earth which would provide a decisive test. This may be done, either by comparing localities which do satisfy the conditions stated by Cox and Doell, or alternatively by selecting localities on separated blocks such as Africa and South America or Australia and Siberia and testing whether the surface distance between them on the Palæozoic reconstruction, taken with their ancient latitudes implied by the palæomagnetic data, correspond to an Earth of the present radius or of a different radius. I examined the data superficially from this point of view in 1958, but concluded that the uncertainty within the magnetic data then available was too wide to give a useful result.

S. Warren Carey

[2] Egyed, L., *Geofisica pura e applicata*, **45**, 115 (1960).
[3] Carey, S. W., *Continental Drift: a Symposium*, 177 (Univ. Tasmania, 1958).

It is important to note that if, during an expansion of the Earth, each point on the surface were to move radially outward, then all sampling areas would have the same relative geographical co-ordinates before and after expansion. Palæomagnetic results could not be used to detect an expansion of this type. However, an alternative model of expansion is that in which most or all of the increase in area is reflected by an increase in the area of the ocean basins. We considered Prof. Carey's model of Earth expansion to be of this general type, since he concludes[1] that the Atlantic, Indian and Pacific Ocean basins formed by dilatation attendant on expansion. If the ocean basins formed in this way, the method we used would show an increase in the Earth's radius, even if the continents had also grown a lesser amount.

The crucial point raised by Prof. Carey concerns a proposed separation of the two sampling areas used in our calculation. The 900-km. dilatation suggested by him would certainly mask an increase of 1,100 km. in the Earth's radius, provided the elongation took place along the meridian connecting the two sampling areas and the ancient pole. Implicit in Prof. Carey's reconstruction of the Eurasian landmass[2] there is, indeed, a 900-km. displacement of the Siberian sampling area with respect to Europe; its direction, however, is not along the ancient meridian, but rather at an angle of some 50° to it. The component of elongation in the ancient meridional direction in Prof. Carey's reconstruction is less than

600 km., not enough to mask an expansion of 1,100 km. Thus Prof. Carey's detailed model is not supported by the European and Siberian palæomagnetic results.

We join Prof. Carey in looking forward to future applications of this method. As he suggests, the method might also be applied to data from different continents after reassembling them into a single land-mass, assuming continental drift has occurred. However, such a calculation of the ancient radius would introduce additional uncertainties concerning the particular reconstruction used. We consider it preferable to use results from individual land-masses to test for expansion, and then proceed to compare results between continents as a test for continental drift.

PHYSICS

Shock-excited Dark Discharge

THE existence of the so-called dark discharge region has been known from the earliest days of discharge in gases. Here, continuous current densities of the order of μamp./cm.^{2} involve no luminous effects and are attributed to the by-products of cosmic ray or other sources of weak ionization in the discharge space; as the current density is made to increase, the well-known 'glow' and 'arc' regions are successively established.

It is, however, possible to obtain current densities of about 5 amp./cm.^{2} for the 'dark' discharge condition when excitation is induced by the partial discharge of a small condenser bank in a somewhat critical pressure-range. We have found that in hydrogen, at pressures not exceeding 0·1 mm. mercury and using plane brass electrodes of diameter 2½ in., spacing 5¼ in., not heat-treated or specially cleaned in any way, shock excitation of the gas yields a dark discharge (that is, with no apparent visible glow) involving peak currents of some 400 amp. lasting for a time of the order of 1 μsec. The main features of the discharge can be summarized as follows:

(1) Although the upper limit of pressure appears to be critical around 0·1 mm. mercury, it is possible to excite the dark condition at lower pressures, if the potential is increased.

(2) Current densities range from about 2·5 to 15 amp./cm.^{2}, but repeatability was generally poor due to the presence of fatigue factors—these could be annulled by working at higher excitation voltages.

(3) The range of current values correspond with that expected from the approximate charge transferred, $2\cdot5 \times 10^{-4}$ coulomb as a minimum; values as high as 10×10^{-4} coulomb yielded little variation in peak current, but produced a longer discharge time.

(4) Above the critical pressure, an increase of pressure by a few per cent gave the standard glow in place of the 'dark' discharge at the higher voltages; however, even at this somewhat increased pressure, once the glow condition has been established, it is possible to induce a 'dark' discharge at about one-third of the glow voltage.

(5) There is no 'follow through' for this type of discharge—a certain amount of energy is drained away and the factors responsible for building up the more highly conducting condition disperse rapidly.

(6) The initiation of the 'dark' condition appears to be connected with the properties of the surfaces taking part in and exposed to the gas—'conditioning' by a succession of such discharges involving higher and higher energy dissipation makes it extremely difficult to reproduce the discharge under the conditions available to us.

(7) It was very occasionally possible to record a 'dark' discharge in air at a pressure of 0·01 mm.

The use of 'slow' mercury switching in these experiments is likely to introduce a variable and somewhat high-resistance path in the early conducting stages; it may well be that the 'build up' to the dark condition is a function of the manner and amount of the energy loss at the switch: in many cases the tube 'build up' is rapid enough to 'blow' one of the four switches (in parallel) in the bank.

An interesting parallel to the behaviour described in this communication followed some work reported in an early communication[1] on the scintillation discharge in neon. Here, one of the authors (L. J.) met the 'silent' discharge condition in neon and other gases—krypton, hydrogen, carbon dioxide, nitrogen—in the pressure range 1–10 mm., and where, in fact, the ratio of electrode separation to mean free path was of the same order as in the present experiments. Whereas current densities of some 100 amp./cm.^{2} were then recorded for the 'scintillation' condition, only some 5 amp./cm.^{2} was noted for the 'silent' discharge. The development of the 'scintillation' in hydrogen in the present experiments involved current densities of the order of 250 amp./cm.^{2} and generally followed a pre-breakdown glow stage; there appears to be no 'pinch' effect present. Some factors on which the heavy current condition depends—for example, surface properties of the electrodes, polarity of the discharge, ratio of electrode areas—are expected to affect the dark discharge condition in much the same way.

We are indebted to the Department of Scientific and Industrial Research for a grant towards this work.

Spiral Etch-Pits of Ice Crystals

THOUGH the correspondence of etch-pits to dislocation has been investigated by many workers for various crystals, there have not been many direct observations of spiral structure of the etch-pit, which may be considered to be related to the screw dislocation. Spiral etch-pits on sodium chloride[1], on germanium[2,3], on silicon[4], on α brass[5], and on antimony[6] have been reported. The observed step-heights of etch-terraces are in the range 500 Å.–40,000 Å. Since these values of step-heights are large in comparison with a Burgers vector, the relation between these spiral etch-pits and the screw-dislocation is not as definite as that between the spiral growth pattern of crystal and the screw-dislocation.

Higuchi[7] succeeded in producing large etch-pits on the surface of ice by the use of plastic replica film. The size of these large etch-pits is about 0·5 mm., and the crystallographic basal plane appears in the etch-pits, when the surface of the ice is nearly perpendicular to the optical axis. By electron-microscope observations, it was found that minute hexagonal etch-pits are formed on the basal plane of these etch-pits by the evaporation process, and that some of them showed the spiral structure.

I used lake ice and on the ice surface nearly perpendicular to the c-axis. I produced large hexagonal etch-pits with basal planes by Higuchi's method. Then, the positive plastic replica of these basal planes was made with 'Formvar'[8], the concentration being 0·5 per cent. After shadowing with chromium vapour at an angle of 12°, this plastic replica was observed under an electron-microscope.

Figs. 1 and 3 show electron-photomicrographs of the minute etch-pits produced on the basal plane. Fig. 2 is a sketch of the stepped structure shown in Fig. 1. As seen in these figures, the stepped structure shows the spiral pattern. From many electron photomicrographs, the mean height of steps was estimated to be 200 Å.–2,000 Å. These values are nearly of the same order of magnitude as reported for the stepped structure of a growing ice-surface[9]; that is, 500 Å.

Discrimination between α-Tracks and γ-Background in Ilford Nuclear Emulsions

We have attempted to improve the discrimination between α-tracks and γ-background in Ilford 50μ nuclear emulsions by utilizing the Herschel effect[1]. The Ilford emulsions being sensitive to infra-red, direct application of the Herschel effect resulted only in a blackening of the emulsions. Therefore a desensitizer was necessary ; phenosafranine was chosen[2]. The emulsions were treated in the following way :

(1) Superficial irradiation with α-particles from a uranium-233 source.

(2) γ-Irradiation from a 17·5-MeVp betatron (doses varying from 2 r. up to 2,000 r.).

(3) Bathing in an aqueous solution of phenosafranine (for concentration see below) ; 1 hr. was necessary to allow the solution to penetrate into the emulsion.

(4) Rinsing with distilled water and drying in a slow air current.

(5) Infra-red irradiation : the light of a Philips infra-red lamp (220 V., 250 W., *E* 27, 13352 *E*/479), the filament of which was at a distance of 15 cm. from the emulsion, was passed through Schott filters *RG* 10 and *RG* 7. The filters must be placed with their esculine film side towards the lamp[3]. During the irradiation, the emulsion remained in a copper box, cooled by running water and two electric fans. An aspirator produced a cold-air current in the box. The irradiation time varied from 2 to 80 min.

(6) Immediately afterwards the emulsions were treated by temperature development (20 min. at 2° C., 15 min. at 22° C.) in a developer of the following composition :

Na_2SO_3, anhydrous	15 gm.	per litre of solution
Glycin (Johnson)	10 gm.	
Na_2CO_3, crystalline	23 gm.	
Ethyl alcohol, 94 per cent	10 c.c.	
Johnson 142	10 c.c.	

Then the emulsions were fixed in the following solution :

$Na_2S_2O_3$, crystalline	400 gm.	per litre of water
Na_2SO_3, anhydrous	12·5 gm.	
CH_3COOH 10, per cent	10 c.c.	

The emulsions were immersed in a fixing-bath at half the given concentration for 30 min., then in a fixing bath for 90 min. at full concentration, then again for 30 min. in a bath at half the concentration.

(7) Finally, the emulsions were rinsed in running water until all traces of colouring matter had disappeared ; and then they were dried.

This procedure gave the following results:

Emulsion *G*5 showed a clarification after 13 min. of infra-red irradiation and a bath in phenosafranine at a concentration of 10^{-2} gm./l., with the filter *RG* 10+*RG* 7. Discrimination improved. Higher concentrations of phenosafranine increased the clarification, but the α-tracks showed many gaps when irradiated for more than 13 min. with infra-red.

Emulsions *L*4 and *K*5 showed a clarification and an improvement of discrimination after a bath in phenosafranine at a concentration of 0·25 gm./litre and after 13 and 30 min. of infra-red irradiation with *RG* 10+*RG* 7.

With the *RG* 7 filter alone, we obtained a very noticeable clarification in all types except *C*2 ; but in each of the other types (*K*0, *K*5, *L*4, *G*5) the α-tracks showed many gaps, even after 2 min. of infra-red irradiation.

In emulsions *C*2 and *K*0, we could not improve the discrimination between α-tracks and γ-background.

A bath in phenosafranine alone was found to give a slight clarification, without impairing the quality of the α-tracks.

Another desensitizer, pinacryptol yellow, was tried, but gave no results whatever.

In Table 1, results are given for emulsion *L*4 ; *A* represents number of background grains per cm.^{3} of dry developed emulsion ; *B* represents number of gaps in the α-tracks per 100 blobs or grains in the track.

Table 1

Duration of infra-red irradiation	0	2m. 24s.	5m. 45s.	13m. 49s.	33m. 11s.
A	171×10^3	166×10^3	154×10^3	134×10^3	111×10^3
B	36·6	43·1	48·2	51·5	57·6

With G_5 and K_5 analogous results were obtained.

This work was part of the research programme of the Interuniversitair Instituut voor Kernwetenschappen-Belgium. We thank Prof. J. L. Verhaeghe. C. Beets and J. Fournaux for their interest in this work. We are also indebted to Prof. P. M. Van Vaerenbergh and Dr. J. Allewaert for the gamma irradiations.

Radioactivation Analysis of Oxygen in Silicon by Irradiation with α-Particles in a Cyclotron

Although the determination of a trace of oxygen in transistor-grade silicon is very important, it cannot be done reliably by a chemical or by a neutron activation method. Radioactivation analysis using $^{16}O(t,n)^{18}F$, $^{16}O(\gamma,n)^{15}O$ and $^{17}O(d,n)^{18}F$ reactions were tried[1–3], but were far from satisfactory. Use of tritium in an atomic reactor resulted in low precision and sensitivity, owing to its short range and the inevitable presence of oxygen in lithium. Chemical separation of oxygen-15 is impractical because of its short life, and radioactivation of oxygen-17 is less advantageous because of its low abundance.

We have made use of the $^{16}O(\alpha,pn)^{18}F$ reaction for this purpose and succeeded in determining as small an amount of oxygen as 0·3 p.p.m. The excitation function for this reaction was determined by two of us[4]. A plate of silicon (30 mm. × 17 mm. × 1 mm., 1·2 gm.) was placed on a water-cooled holder with the aid of a spring washer for good contact, and irradiated with 40-MeV. α-particles in a cyclotron (5 μamp., 15 min.). Too high a flux and a poor contact caused slight fusion on the surface of the sample. The surface of the irradiated silicon was washed with dilute hydrofluoric acid containing a small amount of nitric acid to remove the surface contamination and pulverized in an iron mortar. The product was added in small portions to fused potassium hydroxide (25 gm.) containing sodium fluoride (10 mgm.) and disodium hydrogen phosphate (5 mgm.) as carrier. Sodium nitrate (0·5 gm.) was then added to convert radioactive phosphorus produced by $^{29}Si(\alpha,p)^{32}P$ and $^{30}Si(\alpha,pn)^{32}P$ reactions into phosphate, which served as an internal monitor for the flux of the α-particle beam. The cake was dissolved in sulphuric acid (200 ml.) and the fluoride distilled at 150–160° C., the distillate being caught by aqueous ammonia. The fluoride was precipitated as calcium fluoride together with calcium carbonate, filtered off, washed, dried and radioactivity measured. The time required for the separation was about 2 hr. and the overall recovery of fluoride was about 80 per cent.

The annihilation radiation was measured with a sodium iodide (1·5 in. dia. × 1 in. high and 1·75 in. dia. × 2 in. high) scintillation counter of a known efficiency, with and without a coincidence device.

The counting-rate was measured every hour for 10 hr. together with the γ-ray spectrum, which consisted only of the annihilation peak at 0·51 MeV. The decay curve agreed with that of fluorine-18. The oxygen content was calculated from the disintegration-rate of fluorine-18 by the absolute method, the contribution of $^{18}O(\alpha,p3n)^{18}F$ and $^{17}O(\alpha,p2n)^{18}F$ reactions being negligible under our conditions.

A raw silicon contained 4 p.p.m. oxygen, while a transistor-grade silicon had 0·3 p.p.m. By this method 10^{-3} p.p.m. oxygen can be determined. This method appears to be the most sensitive method for the determination of oxygen and is useful for the analysis of a solid sample having a high melting point and a low vapour pressure. The recoil effect, the evaporation of fluorine during irradiation and other details will be reported elsewhere.

GEOLOGY

Analysis of a Supposed Clay Fulgurite from Ontario

THE existence of 'clay fulgurites' from Kingston, Ontario, was reported recently by Hawkins[1]. These were described as "partially fused ellipsoids" resulting from lightning striking clay sediments. The report was of considerable interest to us because it suggests that lightning may be responsible for the formation of tektites. At our request, Dr. Hawkins kindly sent us a sample of this material. The composition is as follows:

SiO_2	29·69
Al_2O_3	12·45
Fe_2O_3	30·97
FeO	1·63
CaO	0·47
MgO	1·72
H_2O	15·50
MnO	0·31
TiO_2	0·21
Na_2O	0·44
K_2O	1·84
Organic matter	4·18
	99·41

The specimen analysed was an irregular lump 3 cm. long with a yellowish-brown colour and streak, earthy lustre, and hardness of about 1 (Mohs). Portions of the specimen were covered with a shiny brown coating which was soluble in acetone and presumed to be organic (Fig. 1). In the analysis total water was determined by the Penfield tube method and organic matter by difference between loss on ignition and total water. The chemical analysis indicates that the specimen may be mostly a hydrated iron aluminium silicate or oxide. An X-ray powder diffraction pattern showed the specimen to contain some quartz, kaolinite, and additional material as yet unidentified. Petrographic examination disclosed no lechatelierite or glass. This specimen has no resemblance to any known fulgurite or tektite in composition. Therefore it appears to have no relation to the origin of tektites.

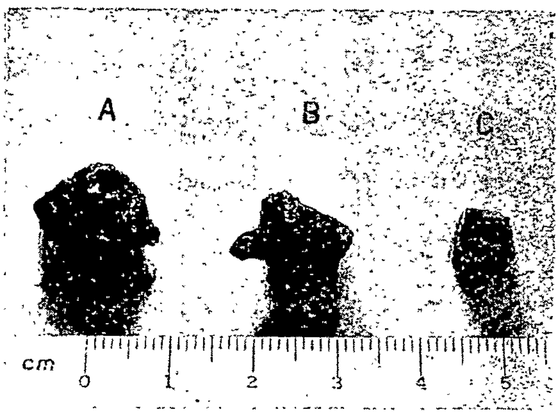

Fig. 1. Portions of the specimen marked *A* and *B* are untreated, showing their shiny coating of organic matter. The portion marked *C* was treated by immersion in acetone, exposing its dull surface

Thanks are due to E. C. T. Chao of the U.S. Geological Survey for furnishing X-ray data and to J. I. Dinnin, also of the U.S. Geological Survey, for determination of the alkalis.

Karroo Igneous Activity and Tectonics in south-east Southern Rhodesia

DURING the period 1956–60, members of the University of Leeds Research Institute of African Geology, under the direction of Prof. W. Q. Kennedy, have been investigating Karroo (early Mesozoic) igneous activity and tectonics in the south-east of Southern Rhodesia. Field-work has now been completed and it is intended in due course to publish the results in detail. In the meantime, we present here some aspects of the geology of the area which may be of general interest.

The Basement Complex underlying the area investigated (see Fig. 1) consists of highly folded gneissose rocks and represents part of the east-north-east trending Limpopo orogenic belt (*circa* 2,000 m.y.)[1], which separates the stable blocks of Southern Rhodesia and the Transvaal.

Warping and fracturing of the Dominion Reef, Loskop and Waterberg systems in the northern Transvaal indicate that the Limpopo belt continued to mark an important tectonic line at a later period (? late-Precambrian).

In the Karroo period, a relatively thick succession of sandstones, mudstones and shales, with some coal, was deposited in the vicinity of the present-day

The Population Explosion and Christian Responsibility

By Dr. Richard M. Fagley. Pp. xii+260. (London: Oxford University Press; New York: Oxford University Press, Inc., 1960.) 28*s*. net.

DR. FAGLEY has written a useful and timely book which, it must be hoped, will be read by many thoughtful citizens. As the title indicates, it is directed to Christians, in the first place, with the purpose of arousing them to think seriously on the dangers inherent in the "Population Explosion", a picturesque name for the rapid expansion of the population of the world. In this it should be successful, for the writing is lively and clear, while the Christian background of the author is evident throughout. No one should dismiss it, however, as one more appeal to uninformed sentiment or theological dogma. The demographic facts are clearly set out with references to sources, and the probable consequences for the future of mankind are stated calmly and objectively. So far as I can judge, the author has put the case with due regard to scientific accuracy, and, when more than one estimate of the future development of populations is available, has chosen the least alarming among those offered by competent authorities. The Christian bias in this section of the book makes a welcome appearance at the conclusion of the factual and impersonal exposition, when the author reminds us of the human values which are in danger. "The main issue is the family caught in the ferment and upheaval of social change, bewildered, frightened, subject to disruptive forces, tending to lose its spiritual and social moorings. Here is found the most fundamental cost of the new pressures of population."

The book surveys various possibilities of mitigating the situation. A short discussion of the potentialities of improved methods of food production tends to the conclusion that they are unlikely to be adequate to do more than defer the catastrophe. The most controversial section of the book deals with birth-control, its methods, its sociological bearings and its ethical problems. In this, of course, we come squarely up against religion, and, to many readers, the author's summary of the different attitudes and teachings of the chief religions of the world will be most informative. Naturally by far the greatest space is devoted to Christianity, and, in spite of a few unimportant historical slips, the account of the chief traditions in the Church on the subject of birth-control is clear and fair. The chapter on the Roman Catholic doctrine is pre-eminently objective and sympathetic, which is no small achievement by a writer who cordially disagrees with it. His opinion, supported by documents, is that the rest of Christendom and its groups, with various velocities and degrees of clarity of thought, are moving towards an agreement on the subject of birth-control and the formulation of a moral theology for the guidance of their members. The present writer cannot forbear to point out that the Anglican Church, according to Dr. Fagley, has advanced further than any other in its thinking on this matter. But this is of small importance. The really important message of the book is that the time is short. We cannot wait for a century of discussion. The time to think and act is now, and Christians have a responsibility to reach an informed judgment and to persuade the politicians to lift their eyes to the future and consider the prospects of the human race.

W. R. MATTHEWS

A. V. HILL

The Ethical Dilemma of Science and Other Writings

By Prof. A. V. Hill. Pp. xiii+395. (New York: Rockefeller Institute Press; London: Oxford University Press, 1960.) 7·50 dollars; 52*s*. net.

THERE may be some, perhaps, who will expect the short title of Prof. Hill's book, as it appears on the cover, to indicate the general tone and purpose of its contents as a whole. They should be neither disappointed nor relieved to find that it provides, in fact, a meal of many different courses. "The ethical dilemma of science" must, indeed, for the author, as for any man of science concerned for the future of civilization, be a subject seldom absent from his thoughts. In this widely ranging collection of his writings, however, it figures primarily as the title of the noble presidential address which he gave to the British Association at its Belfast meeting in 1952; and it is then applied, more inclusively, only to the first chapter, consisting of various addresses dealing with the aims and prospects of science.

The internal title-page of the book adds "and other writings"; and such an extension is certainly required to give any inkling of the rich variety characterizing the products of his wide interests and agile brain which Prof. Hill has here collected. They range, indeed, from deeply considered and eloquently presented addresses, lectures and speeches, some of them in Parliament during his war-time membership, to typically generous and affectionate memorials and tributes, to men who have been his heroes, comrades and friends. They include full-blooded denunciations of social and political tyranny, and championship of its victims; claims for what science could do, criticism of its neglect and misuse, from first-hand experience in two world wars; and advocacy of what it could yet do for the Commonwealth, and especially for India's problems, based in the latter case on knowledge gained directly on a special mission.

Prof. Hill's personal researches in science have, of course, been centred on fundamental physiology, largely in terms of thermodynamics. These have no specific mention in this collection; but the enthusiasm for physiology, and for experimental science as a whole, which they have kindled in him, warms and colours all the wider interests and all the wise and generous human impulses which are here displayed. And, together with its major components, Prof. Hill, with an impatience for stolid conventions which his friends and admirers have learned to expect, has included in his book quite an array of the records of his random effusions and explosions—a journalistic *canard* involving the apparent loss by the late Prof. Donnan of his famous equilibrium, letters to *The Times*, squibs, lampoons, parodies, shafts of scornful humour aimed at many targets. These too represent, indeed, a part of the essential "A. V.". It is to be hoped that they will give enjoyment to many readers, widely beyond the circle of the professional scientists, but all capable of responding to the more serious challenge and stimulus of the book as a whole. My only personal complaint of it is that I have found it rather heavy in the hand for reading in bed.

H. H. DALE

EDDINGTON: PHILOSOPHER OR PROPHET?

The Philosophy of Science of A. S. Eddington

By John W. Yolton. Pp. xiii+151. (The Hague: Martinus Nijhoff, 1960.) 11.50 guilders.

MORE than fifteen years after Eddington's death there is still an Eddington problem. The problem has changed somewhat, it is true, but has not become less puzzling. At first—during the last ten years of Eddington's life—it seemed as if the right question to ask was, 'Has he done what he says he has done ?', and immediately after his death this assumed in many people's minds the less scientific form, 'Can he have done what he said he did ?'. Now both these questions seem to be answered by a more or less firm negative; the more interesting question, 'Is it possible to formulate the idea of a theory of Eddington-type, in such a way that it will be a significantly new type of theory giving a greater insight into science, but at the same time one which will indeed be possible ?', is that of most immediate interest. Roughly, a theory of Eddington-type would mean a theory which seeks to exploit to the full any limitations imposed on the propositions of scientific theories by the methods employed in making the experiments. Such a theory would need to discuss this kind of limitation very carefully: and, because we must understand 'proposition' here in a very general sense to mean a thought, sentence written or spoken or a manipulation with bits of the physical world, a theory of Eddington-type must itself be in a sense a philosophy of science—but not in the sense usually meant.

Before such a plan could be carried out we should need to get one 'white elephant' out of our path: that is, the fact that Eddington himself philosophized not 'in' what he was doing, but 'about' what he was doing, and not always in a very consistent manner. The present book is of some assistance here. It is a revised version of the essay which won first prize in the Belgian Eddington competition, and it seeks to show this self-conscious Eddington philosophy in its correct, essentially British, context. Locke and Hume are shown as the ancestors of a theory of knowledge, the most recent professional exponents of which include Russell. "Any analysis of Eddington's philosophy of science must recognize the twin strands of operationalism and dualism in his thought and must appreciate the possibility of uniting them . . . [by] . . . a careful analysis of dualist meaning." Such a discussion gets us no nearer to an appreciation of scientific theories of Eddington-type, but the author is clear and comprehensive in his purely philosophical task.

C. W. KILMISTER

HENRY CAVENDISH: HIS LIFE AND SCIENTIFIC WORK

Henry Cavendish

His Life and Scientific Work. By A. J. Berry. Pp. 208+4 plates. (London: Hutchinson and Co. (Publishers), Ltd., 1960.) 35*s*. net.

IT is more than a century since George Wilson published (under the auspices of the Cavendish Society) his *Life of the Honourable Cavendish* in which he remarked on the paucity of information regarding the man himself. It is a careful and thorough piece of work, so it is not surprising that no further attempt was made to write a life of Cavendish, at least until after 1879, when there appeared Maxwell's edition of Cavendish's electrical researches, for the most part not previously published, hence unknown to physicists before that date. This revelation would have led, one might have thought, to a revaluation of the place of Cavendish in the history of science, adapted to the needs of those not having the detailed knowledge to read the *Collected Researches*, a further volume of which, *Chemical and Dynamical*, appeared with a revised version of the former in 1921. Mr. A. J. Berry's book can be said quite literally to fill this long-felt want.

Of Cavendish's life and personality little more could be added to what Wilson had written, but the new presentation of the evidence should at least dispel the common opinion that the sole occasions of Cavendish's emergence from Clapham Common were his attendances at the Royal Society Dining Club. Whenever and wherever a scientific matter was involved, Cavendish was an active and often a leading participant. Perusal of the Council minutes of the Royal Society reveals his very regular attendance at meetings of that body over two separate periods of several years; that he was chosen several times as one of the auditors of the Society's accounts; and was a member of the committees 'on measuring the attraction of hills and mountains', the protection from lightning of the Purfleet powder magazines, the disposal of meteorological and magnetic recording instruments at Somerset House, the flooring of powder mills such as Waltham Abbey, the 'erosion' of the gold coinage and the thermometric scale. Above all, he regularly took part in the 'Visitations to the Royal Observatory', and his name is usually prominent where a report on any special instrument was called for. Many of these duties, as also some of his private researches, involved a good deal of travel. Finally, the fact that a year before his death he was asked to join the group within the Royal Society known as the 'Society for the Promotion of Animal Chemistry' suggests that he was a colleague with whom other scientists, at least, found it a pleasure to work.

After a preliminary sketch of the state of science in the eighteenth century, Mr. Berry deals with Cavendish's researches under the separate heads of chemical, electrical, thermal, meteorological, and dynamical. In the case of the chemical he wisely devotes a separate chapter to the discovery of the composition of water. This *cause célèbre*—on the relative priorities of Watt, Cavendish, and Lavoisier—might have been thought to have been settled by the report of Lavoisier, Laplace, and others to the Paris Academy in 1790. But it is still necessary to express Cavendish's discovery in guarded terms, owing, as Mr. Berry reminds us, to the "question as to what Cavendish understood by phlogiston".

In his chapters on the research on electricity and heat (for the most part unpublished by Cavendish) Mr. Berry brings out admirably the peculiar nature of Cavendish's genius, revealed by his deep understanding of the distinction between what we should call the intensity and capacity factors of electricity and heat: the theory of divided circuits involving an implicit application of Ohm's Law; the equivalent conductivity of electrolytes; the better-known work on dielectrics; and, perhaps most remarkable of all, the thermal properties of heterogeneous systems, leading to the recognition of the existence of definite hydrates crystallizing at 'points of easiest freezing'.

Mr. Berry succeeds in bringing all this neglected work to life in a highly readable manner without historical distortion. The book is well produced; one must, however, regret that a book which should have a wide appeal must be sold at such a relatively high price. WILLIAM P. D. WIGHTMAN

HOMAGE TO SHERRINGTON

The Discovery of Reflexes

By Prof. E. G. T. Liddell. Pp. vi+174. (Oxford: Clarendon Press; London: Oxford University Press, 1960.) 30*s*. net.

THIS is a book of scholarship and insight that has been written as a "tribute to the life and work of Charles Sherrington. It is not a text-book and it is not a biography. . . ". As I have read the book, it has appeared to me to have more the dramatic quality of an epic. It is with consummate skill that Liddell has set out to survey the development of scientific thought in the attempt to understand the essential features of the structure and function of the nervous system.

This historical outline of neurophysiology falls into two parts: the first, before Sherrington's time, showing the system of beliefs that were current at the outset of his active life; the second, during the first twenty years of his active life—that is, up to the appearance of his great book *The Integrative Action of the Nervous System.* In the first three chapters of the book, Liddell traces the development of three separate modes of investigation which were to be fused together by Sherrington.

In these days of electron-microscopy, the investigations of histologists even a hundred years ago look extremely primitive. Yet a few years later Deiters, "the forgotten histologist" as Liddell calls him, was drawing pictures of nerve cells that have never been surpassed in accuracy and beauty. One can be confident that the classical flowering of neurohistology would have been a generation earlier, but for Deiters' tragically premature death at the age of twenty-nine. So the first chapter of the book closes in the last decade of the nineteenth century with the development of the twin concepts of the neurone and the synapse. The independence of the neurone, as established particularly by Cajal, led Sherrington to postulate the functional connexion at the zones of very intimate contact, the synapses, that had been seen by Held and Auerbach.

The third chapter, "Experimental Approaches", describes in great detail not only the experiments but also the controversies that abounded in nineteenth century neurophysiology. In retrospect, one can regret that so much heat was generated where there was often so little light, and one can at the same time be sobered with the thought of how poor our present efforts may look after a further century of retrospect. Bell, Majendie, Marshall Hall, Müller, Grainger, Pflüger are the dominant figures, and the young Sherrington must have recognized the muddled thinking and the unjustifiable arguments that characterized much of the literature. Yet Liddell surmises that the seeming confusion would have been mitigated, because Sherrington would have the advantage of Michael Foster's *Text-book of Physiology* and of a remarkable book by Vulpian, *Leçons sur la physiologie du système nerveux,* which Sherrington remembered with pleasure all his life. One can sense that Sherrington owed much to his early exposure to the thoughts of Vulpian on the nervous system.

By contrast with these two main influences on Sherrington, the second chapter, on "Animal Electricity", is of less interest, and this certainly reflects the impression it must have made on Sherrington. Electricity certainly provided him with convenient stimulating devices; but, even at the end of his scientific life, electrical recording was primitive and he made very little use of it. His great contributions were based on the analysis of muscular contractions.

After the three chapters that formed the background on which the performance of Sherrington is to be staged, Liddell introduces Sherrington in this remarkable way. "In the year 1879 two events took place, which, though quite unrelated at the time, may both seem now, seventy years after, to have been significant for the science of neurology. The first was the appearance of volume 1 of *Brain, a Journal of Neurology.* It contained, as it happened, a paper by George Henry Lewes on 'Muscle Sense', an old problem which in due course engaged the attention of Sherrington and others after him. The second event was the admission of Charles Scott Sherrington to Cambridge, at the age of twenty-one." . . . The chapter so introduced was to me of particular interest because Liddell himself naturally adopts a personal relationship to his subject. So much that he writes about Sherrington comes from that understanding which derives from the close personal relationship that existed between Liddell and Sherrington during the Oxford phase of Sherrington's life. We can see how quick Sherrington was to grasp the significance of the organization that was being revealed in the central nervous system by Cajal, von Kölliker, van Gehuchten, Golgi and others. The story that Liddell has told shows how the young Sherrington applied all this new knowledge with unerring intuition so that he was able to build up, in a few years, the basic concepts of reflex function that have formed the foundation of the neurology that we know to-day.

We are indeed grateful for a book with such insight and appreciation of the atmosphere in which Sherrington found himself in the latter nineteenth century and of his amazing creative achievements at that same time. Liddell has made this formative period of modern neurology live for us in a way that no one else could and we must be very grateful to him for it.

The book is very well produced, and there is a most valuable biographical appendix. J. C. ECCLES

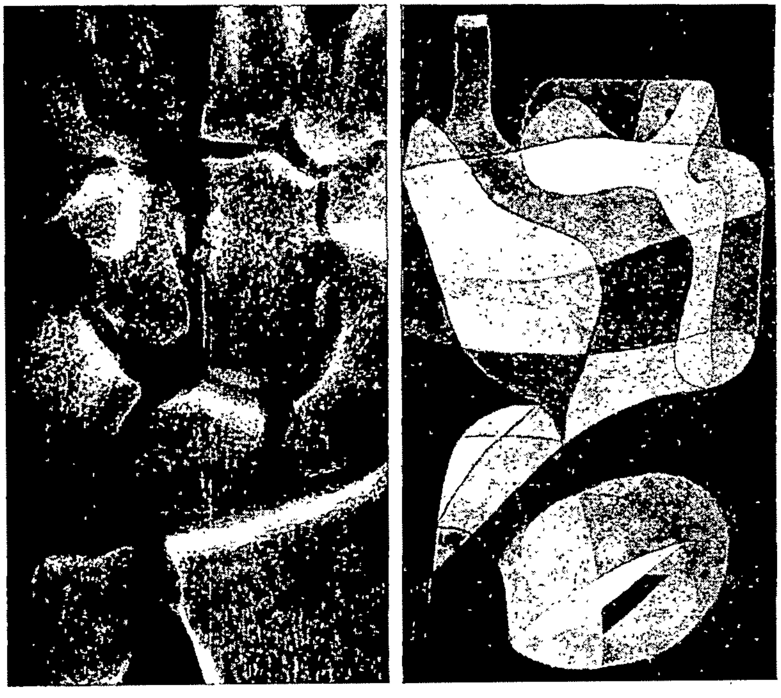
FORM IN ART AND NATURE

Kunst und Naturform (Form in Art and Nature)
Herausgegeben von Prof. Georg Schmidt und Prof. Robert Schenk. Pp. 134 (68 tafeln). (Basel: Basilius Presse, A.G., 1960.) 68 francs.

THE problem of form in art and in Nature has been discussed in one sense or another at least since the period of the Egyptian dynasties, and one wonders whether the discussion had a counterpart even among the Aurignacian and Magdalenian artists. In the twentieth century there have been a number of works which approach the problem from various angles, commonly from a mathematical point of view. Among these we may recall Colman and Coan's *Nature's Harmonic Unity*, Cook's *The Curves of Life*, Hambidge's essays on *Dynamic Symmetry*, Irma Richter's *Rhythmic Form in Art*, P. E. Nobb's *Design: a Treatise on the Discovery of Form*, D'Arcy Thompson's *On Growth and Form*, Loran's *Cézanne's Composition* and others.

The book under notice provides a novel approach, because it makes a comparison between photomicrographs and modern non-representational paintings (or sculptures). It originated in an exhibition held in the Kunsthalle at Basle in 1958, and entitled "Form in Art and Nature", where the same comparison was made on a larger scale. The book provides short introductory articles by Willy Jäggi, Adolf Portmann, Georg Schmidt and Robert Schenk, followed by a series of well-printed plates, many of them in colour. The plates are arranged in pairs, so that on each left-hand page is a photomicrograph of some plant, animal or mineral subject, faced on the right-hand page by a reproduction of a work of art (usually a painting). The painters represented include Cézanne, Braque, Picasso, Mondrian, Matisse, Kandinsky, Klee, Giacometti, Jackson Pollock and various others, and the designs illustrated include a number of successful and attractive patterns and textures, mostly of the type covered by the term 'non-representational', though classified here under several headings. The aim of the exhibition and of the book has been to demonstrate a close similarity between forms revealed by the microscope, and those to be seen in the work of certain artists; and to comment on this resemblance. It is not claimed that photomicrographs or sections seen by artists under the microscope actually inspired the designs which resemble them (though this must have happened occasionally), but that the works of art came to resemble the microscopic preparations because of the "prevailing intellectual climate" of the twentieth century.

Now the pictures in this book are instructive, attractive, and intriguing; the text is sensible and thoroughly interesting; but I think none the less that the conclusions should be challenged. In the first place I believe that many of the pairs of pictures are not genuinely comparable. *Some* of them are (so much so that their independent evolution is remarkable); but in other cases comparisons are made which seem to me quite invalid. For example, Cézanne's "Sous-Bois" seems peculiarly unlike the photomicrograph of deformed brass printed opposite to it. The same applies to comparisons between Braque's "Paysage à l'Estaque" with the minute surface-structure of aluminium, and between a cubist Picasso and another aluminium surface. Again, an X-ray photograph of the human wrist-bones—hard, bony, three-dimensional and fibrous—is compared with a design in flat washes by Paul Klee, which shows a delicately coloured pattern of irregular shapes having no fundamental resemblance to the X-ray picture (Fig. 1). Further, a rigid, angular skeletal structure attributed to a marine isopod is compared with a pattern of coloured areas by Poliakoff which entirely lacks the hard, three-dimensional sculpture of the skeleton. But whether the painted pattern resembles a microscopic prepara-



A *B*

Fig. 1. *A*, X-ray photograph of a human wrist. *B*, Paul Klee: "Lichtbreitung" (1929). (From *Form in Art and Nature*, pp. 106–7)

tion more or less closely, one feels that on the whole the comparison is fallacious because the natural object has a structure and function depending on certain peculiarities of its own such as rigidity, tensile strength or elasticity, rendering its fine structure (which is 'representational' of a certain architecture and function) fundamentally unlike the work of art which, being 'non-representational', is a pattern or texture representing no structure and function. To me it seems that the comparison is superficial and meaningless (although undoubtedly intriguing), that no conclusion can be based on it, and that it has nothing to do with the "intellectual climate" of our century. I feel that it is allied to the view so often presented to us by art critics that modern artists of certain types reveal to us 'fundamental natural forms' which underlie the real natural shapes which we see. A biologist who has studied plant and animal forms in great detail over many years may well agree that Nature has 'fundamental forms'; but he knows more or less clearly what these forms are, and is less likely to agree that modern art reveals them. For example, when Henry Moore carves something intermediate between a human figure and a pelvic girdle, I believe that he is making a plain mixture of superficial natural forms and not revealing anything fundamental: this is merely an interpretation, not a criticism. Similarly, I believe that the similarities in the book under review, in so far as they exist at all, are accidental, and reveal nothing fundamental.

This conclusion has no element of antipathy to the works of art in question, many of which I find fascinating or even beautiful in themselves, just as the photomicrographs are fascinating in themselves. But to me they are two independent series. I think that some of the earlier books dealing with form in art and Nature may have approached the truth more closely than this one, though nobody has yet solved the problem.

T. A. Stephenson

SCIENCE IN PROGRESS

Science in Progress, Eleventh Series

By Armand J. Eardley, Richard J. Russell, J. Tuzo Wilson, Serge A. Korff, C. M. Jansky, Jr., Gerald S. Hawkins, Alfred C. Redfield, B. F. Skinner, Roger J. Williams, E. Cuyler Hammond, J. W. Beard, John Turkevich and A. C. Zettlemoyer. Edited by Hugh Taylor. (The Society of the Sigma Xi devoted to the Encouragement of Research in Science. National Lectureships 1957 and 1958.) Pp. xii+379. (New Haven, Conn.: Yale University Press; London: Oxford University Press, 1960.) 60*s*. net.

THIS book will appeal to professing amateurs and to amateur-professionals—to those who, as a cultural exercise, are interested in science and what is happening in various fields; and to those scientists who are interested in developments outside their own specialities. Since it consists of essays which are surveys and re-appraisals, it will not tell those working in the selected subjects much that they did not already know.

A Greek scholar (say) would find the three contributions on the earth-sciences (Eardley's "The Cause of Mountain Building"; Russell's "Instability of Sea-Level"; and Tuzo Wilson's "Continental Growth") intelligible and informative. A professor of theology, bracing himself for the disputations on "steady state", would be well briefed on techniques of radio astronomy by reading Gerald S. Hawkins, with a side-interest in "Origins of Cosmic Radiation" (Korff), but he might feel that he was getting more insight into C. M. Jansky, jun., than into his brother Karl and "The Beginnings of Radio Astronomy" about which he was supposed to be writing. The student of geophysics would feel less rewarded, since the work reflects only the thoughts and activities aroused by the International Geophysical Year and little, if any, of the findings.

On the other hand, he, or any exact scientist, would surely find Williams's "Chemical Anthropology" engrossing and challenging. Here is the proposal for the "marriage of chemistry and anthropology". Neither physical nor social anthropology will be superseded but something new will be added. The study of human beings in terms of their biochemical individuality can be said to have started with Landsteiner's discovery of blood groups, but now, with insight into enzymes, endocrine glands and all the subtle differences in the body-chemistry, the chemist should be able to assemble the kind of information which would explain the 'eachness' of all of us. One thing which Williams shows is that there is no such thing as the 'average man'. Skinner complements this with "The Experimental Analysis of Behaviour".

Not only does the environment determine the conditions under which life exists, but also reciprocally the organisms influence the conditions prevailing in their environment. From that, Redfield proceeds to show how the chemical factors can be influenced biologically. Conversely, Hammond's masterly paper on the statistics of smoking and lung cancer might be said to show how biological factors can be influenced chemically. In the ultramicroscopic environment, we have Beard on "Viruses as a Cause of Cancer", and Turkevich on "The World of Fine Particles" and, to finish up, Zettlemoyer on "Molecular Interactions with the Surfaces of Solids".

Of course, as in any symposium, the quality of presentation varies, but in general it can be said that any intelligent person can have his ignorance of any of the subjects illumined.

Ritchie Calder

THE BRITISH ECONOMY IN TRANSITION

British Industry

Change and Development in the Twentieth Century. By Dr. J. H. Dunning and C. J. Thomas. Pp. 232. (London: Hutchinson and Co. (Publishers), Ltd., 1961.) 30*s*. net.

THIS survey of the changes in the British economy since 1914 manages to cover a very broad field in a little more than 200 pages. The topics include industrial structure, ownership and location, energy and power, research and trained man-power, new materials and processes, the State and industry, and international aspects. Drawing on a wide range of sources, the authors have given a clear quantitative picture of developments under each of their main headings. The book is intended for first- and second-year undergraduates reading economics, as well as the layman interested in British industrial development in general.

The authors find that British industry in 1914 was "structurally maladjusted in relation to the world economic trends then emerging", and it is inferred that this was a major reason for the relative stagnation between the wars. A comparison between the rate of industrial growth of 2 per cent per annum between 1880 and 1913 and 3–4 per cent per annum between 1815 and 1876 is taken to indicate a falling behind in the race; Britain had become "over-specialized"; her share of world trade in manufactured goods fell from 38 per cent to 27 per cent between 1876 and 1913; in this period, too, a large part of her investments were directed to the Dominions, South America and the United States, "principally at the expense of domestic capital formation". This assessment is not free from internal contradictions. The fall in Britain's share of world trade was simply a reflexion of the arrival of new large countries in a much-expanded world; and this share would have shrunk more if she had not indulged so liberally in foreign investment. Moreover, it is misleading to characterize capital exports over the period 1870–1913 as being principally at the expense of domestic capital formation. There was an inverse relation between long cycles in home and foreign investment in that period, and so one might just as well say that in certain phases of the cycle domestic investment was at the expense of foreign. It would have been better if the authors had inquired to what extent the organization of the British capital market in the pre-1914 period set a premium on capital exports.

Most readers will be interested in the contrast between recent industrial growth and the stagnation of the inter-war years; within its compass, the book gives a clear account of the most striking new features. It succeeds very well in describing technical progress in reasonably non-technical terms. It is salutory to be reminded that, at the peak of full employment in 1955, coal imports rose to £73·7 million (some £20 million more than coal exports), and that the revision of projected atomic energy investment in 1960 cut the earlier programme by half. There is one singular omission in the analysis of resources; nothing is said of the bearing of water supplies on the growth of industry and agriculture.

On Britain's external economic problems in recent years the argument is uneven. On p. 211 we learn that Britain has increased her share of the expanding group of export trades by more than that of any of her major competitors: on p. 217 we are told that two-thirds of Britain's export trade is with "the poorer and less highly industrialized countries whose people have comparatively simple tastes" and so it is not surprising that Britain's share of total world trade has been falling. The analysis would have been clearer if the authors had been less impressed by the significance of changing 'shares' and more concerned with the movement of the terms of trade corrected for productivity changes in the export sector. One would have liked to have, as a concluding section, a more thorough examination of Britain's dilemma concerning the European Economic Community.

BRINLEY THOMAS

STRUCTURE AND FUNCTION OF MUSCLE

The Structure and Function of Muscle

Edited by G. H. Bourne. Vol. 1: Structure. Pp. xvi+472. (New York: Academic Press, Inc.; London: Academic Press, Inc. (London), Ltd., 1960.) 14 dollars.

THIS volume contains chapters contributed by a number of eminent workers. It is obviously impossible to deal with all aspects of muscle in any one book, but a better balance could have been obtained. Recent findings with the electron microscope dominate throughout. Apart from a description of the motor end-plate, there is little reference to the innervation of skeletal or smooth muscle. The difference between phasic, tonic and slow muscle is dealt with in less than a page.

The volume is entitled *Structure*, but it has proved difficult to separate structure from function. Indeed, the value of a book of this kind is in the integration of structure with function. The chapters in which this has been done are excellent.

Chapters 1 and 2 contain good general descriptions of the anatomy of whole muscles and their relation to movement, and of the micro-anatomy of muscle. Both appear to have been written with the student, rather than the experienced worker, in mind, and in this they are out of keeping with the rest of the volume. The development of striated muscle is dealt with in Chapter 3, which makes difficult reading; more diagrams would be helpful. Chapter 4 is a résumé of the histochemistry of developing muscle, with good illustrations. The significance of the findings merits attention in greater detail. Chapter 5 is a clear exposition of the structure and behaviour of skeletal muscle in culture.

In Chapters 6 and 7 the structure of skeletal muscle, as shown by the electron microscope, is described in detail, emphasis being placed on the sarcoplasmic reticulum in the former, and on the contractile elements in the latter. The presentation of Chapter 6 is outstanding, and forms an excellent pattern for an advanced reference work. Chapter 7 includes a clear description of the sliding filament theory of muscular contraction, and the figures are very good.

Chapter 8 deals with the difficult subject of smooth muscle, but is unnecessarily obscure. No clear picture emerges of what is, in fact, known, and detailed acquaintance with the literature is assumed. The problem of the relation and conduction between cells is not mentioned. Many figures are not referred to in the text and cannot be interpreted from the legends. A very good, comprehensive, review of the comparative anatomy, biochemistry and physiology of invertebrate and vertebrate muscle is given in Chapter 9. The subject is treated at a very advanced level, but is well presented, and a good summary is included.

Chapter 10 describes clearly the detailed structure of the motor end-plate, as demonstrated by standard staining techniques and by electron microscopy. There is no reference to the number of end-plates on different types of fibre, or to *en grappe* terminations. The structure and behaviour of muscle-spindles and other receptors in muscle are dealt with in considerable detail in Chapter 11, which is readily intelligible, nevertheless. The section on comparative physiology of muscle receptors is particularly good. Chapter 12 is a convincing description of the evidence obtained from high-resolution electron microscopy that the intercalated disks divide cardiac muscle into definite cell territories.

Some chapters have excellent summaries, and uniformity in this would be helpful to less experienced readers. The practice of having magnification scales on the plates should be used throughout. Printing errors are few; the author index page numbers referring to the last three chapters are two pages out. Several chapter page headings are not sufficiently specific.

The book is not, and is not intended to be, a textbook on muscle; it is an encyclopædic reference work. The aim of providing a balanced source of information has not been achieved fully, and more uniformity in presentation is desirable. Nevertheless, the volume contains much excellent material of value to those who work with muscle, and Chapters 7, 10, 11, and the summary to Chapter 9, should be read by all advanced students and teachers.

I. A. Boyd

CELL TISSUE AND ORGAN

Notions de Cytologie et Histologie

Par Prof. M. Chèvremont. Réimpression 1960. Pp. iv+991. (Liège: Éditions Desoer, 1960.) n.p.

During the past twenty years or so, the microscopic investigation of form and function has made tremendous strides through the invention of new methods. Their influence on cytology and histology is reflected strongly in this interesting and important book.

The text is divided into three main sections, and of these the most noteworthy is perhaps the first; it certainly imparts to the rest a special, if not a unique, flavour. It comprises a series of chapters on the cell. Since the author has had long experience of work with the ciné-camera and tissue culture, it is not surprising to find that reference is continually made to events in the living cell and that dynamic aspects of structure are preferred to discussion of morphological minutiæ. In this section are many striking illustrations taken from the author's motion picture studies. Among the early chapters is a full and detailed account of histochemical techniques, the results of which are illustrated by many excellent colour plates. Unfortunately, owing to rapid developments since the book was written, this is already out of date; nevertheless, it indicates the general aims and potentialities of histochemistry. Since original publication there has also, of course, been an almost explosive growth of information from the electron microscope following on perfection of techniques for ultra-thin sectioning. The next edition will call for the inclusion of better illustrations and more mention of such topics as the endoplasmic reticulum and the newer views on the structure and function of the Golgi apparatus.

The second part deals with the basic bodily tissues, and the third with organs and cell systems. The approach is consistently dynamic; attributes of the living tissues are discussed continually and further accentuated by description of their behaviour *in vitro*. A chapter in the third section which will naturally be read with great interest concerns the 'histiocyte' system, to use the word preferred by the author for 'reticulo-endothelial'. Prof. Chèvremont's intriguing views on the transformation of comparatively specialized cells, even muscle or epithelium, into wandering phagocytes are here expressed in a stimulating fashion.

Minor criticisms are that although many names are quoted in the text there are few bibliographical references, and that some of the photomicrographs might with advantage be replaced by diagrams. However, there is no doubt that the postgraduate student and junior staff member particularly will find the book invaluable, as would anybody wishing to assess the present status of the subject. Inevitably, since they have held the field so long, comparison of this book must be made with the trans-Atlantic manuals. It would be fair to say that the illustrations on the whole are inferior; however, the text is written in a more adult style than some; but the principal difference, stemming from the first section, seems to lie in the continual reference back to the functional attributes of individual cells. Indeed, the inclusion of such a lively and interesting introduction to cytology within the covers of a book on histology raises questions about the relationship between the two. For example, How much cytology ought the student to know before embarking on histology? The latter, of course, deals mainly with the arrangement, maintenance and function of cell populations, and seeks by experiment to identify the controlling factors. In the majority of standard books the cell itself is still dismissed quite shortly. Neglect of the brick when little was known about it and concentration on the edifice may have been unavoidable a generation ago. Now, however, there is a mass of knowledge about cells which is of absolutely basic importance; basic for the graduate in biochemistry, physiology, biology, and basic for the medical student with his additional interest in abnormal cells. Prof. Chèvremont has erected a signpost. In most histology laboratories in Britain, unfortunately, it cannot be followed until additional curriculum time and staff are provided.

N. M. Hancox

ANIMAL HUSBANDRY

Animal Husbandry Heresies

By Dr. Allan Fraser. Pp. 200. (London: Crosby Lockwood and Son, Ltd., 1960.) 16*s*. net.

In twenty short essays the author criticizes in a most interesting way many current beliefs in animal husbandry. Both the practical and scientific aspects of animal production are covered under four main headings—inheritance, environment, husbandry and purpose. After discussing early breed improvement and Bakewell's methods of inbreeding and progeny testing which led to the formation of breed societies, the latter are criticized for paying too much attention to the trade-marks of colour and form rather than to commercial qualities. It is pointed out that the recent extension of such breeds as the Clun sheep and Friesian cattle are due to the latter. Exhibits at shows of dairy bulls, poultry and sheep without production records are considered futile. Dr. Fraser is critical of the authenticity of many pedigrees in the past, but does not mention the new blood-group test.

Geneticists come under fire. From a production point of view the postulation of new genes gets us nowhere, and, although progeny tests are useful, the method of their application needs further research. In man the differences in physique at different class-levels are due to the environment of rearing and but little to genetics; this is also true for animals. Certain environmental effects, such as vitamin deficiencies, may be passed on to the next generation. as may maternal effects such as size in horses. His main criticism of present-day genetics is that it does not give enough credit to environment, both external and internal, for it is only the provision of proper nutrition which allows the full genetical potential for production to be expressed.

The science of animal nutrition places too much faith in rationing on tables of food analysis which are based on chemistry and not enough on the biological value to the animal; this is the case with non-protein nitrogen. The present distinction between maintenance and productive rations needs a new outlook, for a cow can draw on her body for milk production. The transition from peasant to mechanized animal husbandry, which has not yet proceeded far enough in Great Britain, is outlined and the losses and gains assessed. On the medical side, it is doubted whether the protective value of foods, such as milk and eggs, is as good as it used to be before intensive methods of production were employed. The author's description of hill ewes at the end of winter as being "pregnant skeletons concealed in wool" is typical of the force with which he makes his points.

The book is provocative, for there is just cause for some of his criticisms, while for others, one hopes that they will stimulate replies from the specialists concerned. JOHN HAMMOND

BROADLEAVED TREES OF BRITAIN

Guide to British Hardwoods

By Dr. W. B. R. Laidlaw. Pp. viii+240. (London: Leonard Hill (Books), Ltd., 1960.) 30*s*.

THE main purpose of this handbook is to provide students, foresters, and others interested in the subject with a ready and accurate means of identifying the broadleaved trees of Britain. This is achieved with notable success for, although the range of subject-matter is wide enough to attract the interest of those who have a fairly extensive knowledge of botany, the presentation is so clear that the intelligent novice should have little difficulty in using it to identify all but the least commonly found trees and shrubs.

To some the title of the book will seem misleading. Does not the term hardwood suggest a discussion of timbers and the trees which produce them? But here is a field approach to the whole range of native broadleaved trees and shrubs together with those which have become so well established in Britain that they form a regular feature of its countryside, parks, and gardens, and there is also a carefully made selection of less frequently seen introductions. Only brief references are made to the qualities of the timber for which many hardwoods are of importance (Are all the major hardwoods really in such short supply as the writer would have us believe?), and none to structural features.

All characteristics not considered essential for identification of the species in the field in all seasons have rightly, in a book of this kind, been discarded for the sake of clarity, but no trouble has been spared to show how the essential features may be used, through several lines of approach, for accurate identification. There are, for example, separate keys based on winter bud and twig details, summer characters, and fruits, summarized field characters in a concise tabular form, a table of seasonal characteristics, and the short, but adequate, descriptions of each species. One of the most outstanding features of the book must be the beautifully drawn and reproduced illustrations of leaf, flower, etc., in fine detail but with commendable clarity. The omission of any scale is, however, most regrettable.

For the beginner there is a short account of botanical anatomy and morphology. This is necessarily very condensed, and the beginner may find a little difficulty at first in absorbing parts, but such features as leaf- and flower-form, used extensively in identification of species, are given more fully. Together with the glossary of terms elsewhere in the book, the student should have sufficient background information to enable him to make full use of the main part of the work.

Those who are familiar with the commoner trees will find much of interest in the less-known species which the writer was, fortunately, persuaded to include, and will be most grateful for the more complete treatment given to the complex problem of identifying the willows and poplars.

J. L. DAVIDSON

ADVANCES IN PLANT PHYSIOLOGY

Annual Review of Plant Physiology

Vol. 11. Edited by Leonard Machlis, in association with Winslow R. Briggs. Pp. vii+468. (Palo Alto, Calif.: Annual Reviews, Inc., 1960.) 7 dollars.

WITH the present volume of the *Annual Review of Plant Physiology* this useful publication enters the second decade of its existence. As in past years the subjects dealt with range widely over the whole field of plant physiology. This volume of the *Review* has very much an international character, for the contributors have been drawn from no fewer than ten countries. Five of the contributions are from the United States, three from England, two from Germany and one each from Australia, Canada, Denmark, France, Japan, New Zealand and the U.S.S.R.

Of the seventeen articles, nine are concerned with various aspects of metabolism, which include the primary processes of photosynthesis discussed by A. A. Krasnovsky, and energy transfer through phosphorylation mechanisms in photosynthesis by O. Kandler. Nitrogen metabolism is represented by a short article by C. S. Yocum in which recent advances in knowledge of nitrogen fixation are considered, while the special metabolism of the succulent Crassulaceae is reviewed by S. L. Ranson and M. Thomas. Articles on transport in the xylem and in the phloem are contributed by E. G. Bollard and M. H. Zimmermann respectively, while the relationship between salt uptake and water absorption by intact plants is dealt with by R. Scott Russell and D. A. Barber. A less-familiar subject, that of heat transfer between the plant and its environment, is discussed by K. Raschke. Another topic to which not much attention has been previously given in the *Review*, and the account of which by A. C. Neish is therefore of particular value, is that of the formation and inter-conversion of aromatic compounds in plants.

Articles on growth and development again include accounts of certain aspects of auxin and gibberellin action, the former by A. W. Gelston and W. K. Purves and the latter by B. O. Phinney and C. A. West, while P. Chouard contributes an interesting discussion on vernalization and its relation to dormancy.

An innovation in the present volume is the grouping of the articles in the list of contents under a number of main headings. Under the heading "Cell Structure and Function", F. Mercer writes on the submicroscopic structure of the cell. In this, particular attention is naturally directed to the contributions made by electron microscopy to the elucidation of the fine structure of the cytoplasm and its inclusions. Another subject which might well have been included under the same heading, but which actually appears under the heading of "Special Topics", is the physics and chemistry of protoplasmic streaming by that authority on the subject, N. Kamiya. Another special topic considered is the productivity of the oceans, discussed by E. Steemann Nielsen. The two remaining articles concern tobacco mosaic virus and pectic and cellulolytic enzymes in plant disease, the former contributed by A. Siegel and S. G. Wildman and the latter by R. K. S. Ward.

What will be found particularly useful in this volume is an index of all the articles which have appeared in the eleven volumes of the *Review* that have so far appeared. The value of this index is enhanced by the grouping of the titles of the articles under twelve main subject headings, which makes reference easy. WALTER STILES

THE FLORA OF THE PACIFIC STATES

Illustrated Flora of the Pacific States

Washington, Oregon, and California. By Leroy Abrams and Roxana Stinchfield Ferris. Vol. 4: Bignoniaceae to Compositae (Bignonias to Sunflowers). By Roxana Stinchfield Ferris. Pp. vii+732. (Stanford, California: Stanford University Press; London: Oxford University Press, 1960.) 140*s*. net.

IN North America, at least, it has been a relatively rare phenomenon for an incomplete Flora to survive the death of its author and be brought to completion. Asa Gray's *Synoptical Flora* and N. L. Britton's *North American Flora* come to mind as examples of great works, valuable even in their incompleteness, but incomparably less valuable than they would be had they been finished.

It is, then, a real pleasure to record the completion of Leroy Abrams's *Illustrated Flora of the Pacific States*, for its author died in 1956, and had been in poor health since 1948. It is some measure of the respect that he commanded, and of the affection that he inspired, that this fourth and last volume was carried through to completion by a number of distinguished contributors and by Abrams's friend and assistant of forty years standing, Roxana S. Ferris.

In 1910 the flora of the Pacific coast of the United States (California, Oregon, and Washington) was not well known. Nevertheless Leroy Abrams, at that time assistant professor (that is, a lecturer) in botany at Stanford University in California, began work on an illustrated Flora which he hoped would do for the Pacific Coast what Britton and Brown's *Flora* had done for the north-eastern United States. Abrams was not unacquainted with the flora of western North America and the difficulties that its study entailed. He had already published a *Flora of Los Angeles and Vicinity* and had just completed *A Phytogeographic and Taxonomic Study of the Southern California Trees and Shrubs* for which Columbia University in New York City had awarded him the Ph.D.

As a research student in New York, Abrams had known N. L. Britton, and had become acquainted with Britton and Brown's *Illustrated Flora of the Northern United States, Canada, and the British Possessions*, a work which aimed ". . . to illustrate and describe every species, from the ferns upwards, recognized as distinct by botanists and growing wild within the area adopted . . . within such moderate limits of size and cost as shall make it accessible to the public generally. . . ." 'Britton and Brown', as it is affectionately known, may be taken as the culmination of a century of botanical study in the north-eastern United States. That the first volume of the first edition (1896) was issued within six years of the inception of the work, and that it was completed with a third volume two years later, is some indication of the amount of taxonomic knowledge that was available to the authors. The first edition of 1896–98 included 4,162 species. The third edition of 1952 covered about 4,680 species. This is another indication of the relatively complete knowledge of the flora of the north-eastern United States that existed at the turn of the century.

Despite the very considerable difficulties inherent in the study of an essentially unknown, though not unexplored, area, Abrams set himself, in 1910, to the production of an *Illustrated Flora of the Pacific States*. In contrast to the speed with which 'Britton and Brown' was written, the first volume of Abrams's *Flora* was not published until 1925, and the fourth and last volume did not appear until 1960. That the illustrations, the literature citations, and the text are accurate and that the keys work are a result of the integrity of Leroy Abrams. That there were many distinguished collaborators is freely acknowledged. The uniformly high standard of scholarship and the relative uniformity of treatment must be attributed to Abrams, who, alone or with the help of Mrs. Ferris, supplied about half the text.

In common with many, if not most, present-day American Floras, the plant families are treated more or less in the sequence adopted by Engler for his *Die Naturlichen Pflanzenfamilien*. Thus, Volume 1 of the *Flora* covers the ferns, the fern allies, the Gymnosperms, the Monocotyledons, and the beginning of the Dicotyledons from the Saururaceae to Aristolochiaceae; Volume 2, the Polygonaceae to Krameriaceae (the end of the Leguminosae, *sensu* *latu*) ; Volume 3, Geraniaceae to Scrophulariaceae; and the present Volume 4, the Bignoniaceae to Compositae. Two bits of data appear noteworthy. First, the ratio of Monocotyledons : Dicotyledons is 1,019 : 4,884, or roughly 1: 4·8, as contrasted with the north-eastern United States where the ratio is 1,415 : 3,955 or roughly 1 : 2·7, and with the south-eastern United States with 1,479 : 4,045 or also roughly 1 : 2·7. The statistics for the Gramineae are 78 genera and 389 species (1 : 5) on the west coast, 110 genera and 487 species (1: 4·4) in the north-east, and 100 genera and 476 species (1 : 4·8) in the south-eastern United States. Thus it appears that the west coast of the United States is significantly poor in numbers and diversity of species of Monocotyledons. Secondly, Abrams lists 939 species of Compositae in 176 genera (1 : 5·3) as compared with the north-eastern United States with 703 species in 115 genera (1 : 6) and the south-eastern United States with 770 species in 150 genera (1 : 6). It appears that although there are more species and genera of Compositae (though there are fewer grasses) on the west coast of the United States, the generic and specific diversity is little, if any, greater there than in the east. This does not seem to support the thesis that semi-arid regions have richer floras, in terms of diversity, than more mesic areas. The relative paucity of grasses must also cast some doubt on the general validity of this thesis.

Abrams's *Flora* comprises 6,069 species of higher plants in an area of about 324,000 square miles. It is rather startling, for botanist and layman alike, to discover that a recently published Flora of California comprehends something more than 5,000 species in slightly less than half the area (about 158,600 square miles). A close comparison of the two works shows, however, that this does seem to be the case. For example, in the first 420 pages of the fourth volume of Abrams's *Flora* there are only about 100 naturally occurring species (out of 770) which do not occur in some part of California. This fact suggests that the primary job of cataloguing the flora is virtually completed, for the west coast as it is for the north east, and the taxonomist may now turn his attention to some of the other fundamental questions which Abrams's inventory has exposed (one cannot help wondering how long it will be before the flora of the other two-thirds of the United States is equally well catalogued).

The completion of Abrams's *Flora*, then, enables us to formulate some of the fundamental problems presented by the flora of the west coast of the United States. Why are the Monocotyledons so poorly developed in the area ? What, precisely, is the real taxonomic status of the many 'endemic' species that occur in the area ? How are they to be compared with other, generally accepted, species in the area and outside it ? What, indeed, is a species ? How are we to recognize one when we see it and how are we to measure it ? Why have we been led to regard the west coast flora as an exceptionally rich one, when, on the testimony of its published Floras, it is no richer than many other comparable floras in its same latitude, both in North America and elsewhere ? These, and many more, questions will present themselves to the thoughtful student of the flora of western America. He will be grateful that he has so reliable a guide as Abrams's *Illustrated Flora of the Pacific States*.

G. P. DeWolf

HYPOGEAN FAUNAS

Biologie des Eaux Souterraines, Littorales et Continentales

Par Claude Delamare Deboutteville. (Actualités Scientifiques et Industrielles, No. 1280.) Pp. 740. (Paris: Hermann, 1960.) 60 NF.

ORGANISMS which are to be found in the cracks and fissures of rock or within the voids of sands and gravels form the subject of this important new book. Delamare Deboutteville's *Biologie des Eaux Souterraines, Littorales et Continentales* brings together for the first time in a comprehensive and readable account the work carried out in the past thirty years by European and American zoologists on these little-known but widespread and important faunas.

He treats this niche as similar in character, whether it occurs beneath the ground, beneath the sea, or beneath the intertidal zone. Moreover, this environment is continuous between sea and land, so that organisms have been able to spread along it in the course of evolution. This view is shared by a number of other workers such as Angelier, Chappuis and Spooner, the last having coined the collective term 'hypogean', which may usefully be applied to all such faunas.

The book is divided into six parts. The first concerns the environment. After a useful survey of collecting methods it gives a well-illustrated account of the physical geography and hydrology of the habitat, together with a summary of what little is known of its physical and ethological conditions. Finally there are examples of the localization of the fauna on certain beaches.

The second and third section of the book are the most valuable for the general reader, and indeed should be read by all students of marine zoology. They include a fascinating account of the adaptations of hypogean forms, followed by descriptions of the wide range of animal life, with representatives of most of the invertebrate phyla, which are to be found in the interstices of sand and gravel. Some of the figures which illustrate only parts of such animals might, with advantage, have been replaced by figures of complete animals, but otherwise the survey is excellent.

The fourth and fifth sections are in monograph form, reprinted from *Vie et Milieu*. Though of some value to the specialist, their content could with advantage have been summarized for the general reader.

In the final part there is an interesting account of the segregation and speciation of faunas, showing how continental forms have been derived from marine species by passing along the continuous subterranean habitat.

Deboutteville does not pretend to include a complete bibliography, and even some text references are not cited ; nevertheless, it will form a valuable starting point for new workers and research students.

This important and, for the most part, attractive work should help to bring to the notice of zoologists, especially in Britain where the subject has been neglected, the existence of a fascinating and important group of organisms which have as yet been studied only from the faunistic point of view. Their physiology, ethology and bionomics are virtually unknown.

FISH CULTURE

Traité de Pisciculture

Par Prof. Marcel Huet. Troisième édition. Pp. xii+369. (Bruxelles: Éditions Ch. de Wyngaert, 1960.) 450 francs; 9 dollars.

It is a pleasure to welcome the third edition of Huet's treatise on fish culture. The new material in this edition consists of some expansion of the section on the culture of *Tilapia* in tropical Africa, and new methods (using new synthetic herbicides) for controlling excessive vegetation in ponds.

The book is written for fish culturists in temperate climates, and this in effect means largely carp culture and trout culture. Carp culture has had adequate treatment elsewhere, for example in Wunder's *Fortschrittliche Karpfenteichwirtschaft*, (reviewed in *Nature*, July 8, 1950), so Huet is right in giving the most detailed treatment to trout culture. He devotes 63 pages of text and 62 plates to the subject—the largest section in the book. But he has by no means neglected other fish which are cultured, and has chapters or sections on carp, on tench and other fish which can be cultured with the carp, and on the culture of the pike, of coregonids, black bass, eel, and of *Tilapias* in tropical Africa. Huet interprets 'fish culture' in the wide sense, dealing with the raising of fry and fingerlings for the stocking of natural waters, as well as for raising to table size in ponds. Only the fancy-fish trade is omitted, and this has its own extensive literature.

The sections on general principles are useful and well illustrated. Chapter 1 deals with the construction and management of fishponds, on the choice of site, the levelling to be done, the sources and quality of the water, the soil, and the engineering work needed. The diagrams are especially useful. This theme is continued in Chapter 7, with accounts of pond maintenance and improvement, including the control of weed-growth, which may not only much diminish fish production, but can also lead to complete filling up of the pond.

There follow accounts of the 'dry period' and alternative crops, the use of lime and the reasons for it, and the use of fertilizers to increase production. In my opinion, these sections could have been expanded; for at a time when labour costs are rising, and suitable fish-fodders are in many cases becoming more costly, the correct use of fertilizer is still the cheapest way of securing a large increase in the fish crop, and the possibilities are by no means fully explored.

Chapter 2 covers the food of fish in ponds, with some good illustrations of the most important food organisms. The treatment includes a brief account of the ecology of a pond and the nutritive cycle, and ends with the practice of supplementary feeding and a list of the most important supplementary fodders, their preparation and their nutritive quotients. Huet repeats the view that at least 50 per cent of the food of carp in ponds must consist of natural food, because the latter contains enzymes which assist the fish in the digestion of the supplementary food; but this is surely no longer accepted. The stomach-less carp nevertheless possesses a very effective range of digestive enzymes; in fact, recent work in Israel suggests that the carp is as efficient a digester of fodder as cattle. The unquestioned value of a high proportion of natural food lies partly in its high protein content, which means that supplementary fodder can consist largely of cheap carbohydrates, and partly in something resembling the 'animal protein factor' of the stock-raisers and poultry farmers, which may well be associated with vitamin B_{12}.

Chapter 3 deals with carp culture, Chapter 4 with trout culture, and Chapter 5 with the culture of other fish. Chapter 6 deals with rates of stocking and productivity, and emphasizes, among other things, the difficulty in assessing the probable natural rate of productivity of newly constructed ponds. A final Chapter, 8, covers the methods of fishing out of a pond, and the handling and transport of the fish.

This is a lot of ground to cover in 270 pages of by no means closely printed text (there are 93 pages of photographs), and I have no doubt that Huet has been obliged to exert rigorous selection of his material. The obvious success of the book has justified his treatment. The paper and format are excellent, and the 280 photographs are very well done. It is regrettable that the book has no index, and that the references to the literature are inadequately given. Perhaps these could be supplied in the next edition. C. F. Hickling

ECOLOGY OF SOIL FUNGI

The Ecology of Soil Fungi

An International Symposium. Edited by D. Parkinson and J. S. Waid. Pp. xi+324. (Liverpool: The University Press, 1960.) 42*s*. 6*d*. net.

Nearly fifty years ago Waksman raised the problem of whether the soil is the home of an indigenous mycoflora, or merely the sink for fungus spores floating in the atmosphere. The answer, which he and subsequent workers gave, has been so clear that it has even been suggested that the fungal load of the atmosphere is largely derived from the soil population. The next phase of research on the soil fungi was largely floristic: the components of the mycoflora were identified and enumerated; the world-wide distribution of many species was established; floras characteristic of different soils and also of environments within soils (especially the rhizosphere and the roots of hosts susceptible to pathogenic fungi) were recognized. More recently, attention has been directed to research on the activity of fungi in the soil, and during 1958 a small group of workers was convened at the University of Liverpool for a symposium on the ecology of soil fungi. The publication of the proceedings of the symposium in this book emphasizes the value of such specialized meetings, although the value of including verbatim reports of the discussions is doubtful, as such matter is impermanent and often inconsequential.

The general picture of the soil fungi emerging from this symposium is one of populations consisting largely of resting organisms in a mosaic of micro-environments with micro-zones of antagonism, making little mycelial growth, but bursting into activity when some event brings fresh nutrient to resting cells able to exploit it. Small soil animals, root growth and litter accumulation play an important part in producing such events. Much of our present knowledge of the activity of soil fungi comes from dilution-plating techniques, the limitations and merits of which, as well as those of alternative methods, are discussed in detail. All workers recognize that the traditional methods are highly selective, little able to discriminate between passive and active states of the organisms under study; hence the attempts to supplement plating techniques with visual microscopic methods, difficult as these are with an opaque medium such as the soil. Slowly we are gaining knowledge about the presence and mode of life of Basidiomycetes in the soil. It is even possible that a future book on the ecology of soil fungi would be mainly about the Basidiomycetes and Actinomycetes instead of the moulds which occupy the centre of interest at present.

Despite the unusually abundant misprints (not even insertion of the customary accents would remove the odd appearance of some passages in French), the large amount of original research presented here, with reviews of progress and methods, makes this a valuable and stimulating work.

P. H. Gregory

ILLUSTRATIONS OF FUNGI

Iconographia Mycologica

By O. Verona and T. Benedek (*Mycopathologia et Mycologia Applicata*, Volumes XI, XII, & XIII). (I) Plates *A*1–18; *B*1–10; *C*1–18; *D*1–4. (II) Plates *A*19–46; *B*11–23; *C*19–25; *D*5–6. (III) Plates *A*47–84; *C*26–33; *D*7–10. (Den Haag: Uitgeveij. Dr. W. Junk, 1959–60.)

THREE supplements to the journal *Mycopathologia et Mycologia Applicata* have recently appeared from the pens of O. Verona, plant pathologist, and T. Benedek, medical mycologist, under the title *Iconographia Mycologica*. These supplements consist of a series of folded sheets each containing drawings of characteristic features and a brief description of one or more selected genera of fungi. It is stated that the sheets are separate so that the owner has a choice in the manner in which he decides to arrange the collection. In fact, two systems of classification are given, one strictly orthodox and taxonomic; the other into the four categories: saprophytes, plant parasites, animal parasites and industrially important fungi. As a system of filing, this second arrangement would soon become impossible since some genera, for example, *Aspergillus*, fall into at least three of the four categories. Therefore the taxonomic system of filing is the only one that could be useful.

What, then, is the advantage in a loose-filing system here? It does allow additions to be fitted into the collection as these appear, but this is a dubious advantage since, if the rate of appearance of additions continues at a high level for long, the work as a system of identification is going to be incomplete and useless for just that long. If it is soon complete and up to date, then I see no advantage over the preparation of a complete book published at one time and ready for use, and in which the occasional minor change can easily be entered in hand by the owner. It seems, then, as though the work is not intended to assist in identification. This supposition is supported by the fact that there are no keys to groups, and while in some genera some species are mentioned, in others no specific epithet is given. Moreover, there are no references to works by which specific identity could be confirmed. One is left with the single conclusion that the main use for the loose-filing system is that sheets can be taken out as wanted with the aim of demonstrating or illustrating some point, presumably to an undergraduate class. The sheets here, then, serve the same functions that used to be performed by lecture-room wall charts and diagrams. It is doubtful that they perform these functions better for being smaller and monochromatic.

In fairness, it should be stated that the standard of drawing here is considerably higher than that found in illustrations to the more usual works of general identification such as Gilman's *Manual of Soil Fungi* and Barnett's *Imperfect Fungi*, but it is not so high as that which one has become accustomed to from the type of Commonwealth Mycological Institute publication issued under the names of E. W. Mason and S. J. Hughes, from which, incidentally, many of the illustrations in the present supplements appear to be taken.

David Park

HURRICANES

Atlantic Hurricanes

By Gordon E. Dunn and Banner I. Miller. Pp. xx+326. (Baton Rouge: Louisiana State University Press; London: Interscience Publishers, Ltd., 1960.) 75*s*.

THIS book has been written for the layman. The authors say that it is desirable he should have some meteorological background, and indeed already at the beginning of the second chapter he will encounter streamlines, contour lines and isotachs (should he feel at a loss, he can refer to a glossary of terms in an appendix), and then easterly waves and the Intertropical Convergence Zone. Still, his enthusiasm may have been stimulated by the first chapter, an eye-witness account of one of the most intense hurricanes of this century, and it is better that he should come to feel that his background could be improved than that the authors underestimate him.

The book continues as a well-illustrated, non-mathematical and very interesting account of practically all that is known about hurricanes and the related hazards of storm floods and tide surges, including how to prepare for, and ride out, these disasters. It becomes evident how much their study is now in the hands of American scientists, and in particular how the modern techniques of radar and reconnaissance by aircraft, and doubtless soon also by satellite, are being developed under the impetus of the National Hurricane Research Project, in which the authors work. It seems a far cry from the days, more than a century ago, when Englishmen took a leading part in the study of tropical storms. It may be said that the Americans have a special interest: each year they suffer a hundred million dollars' worth of damage from hurricanes, a sum equivalent to several times the expenditure on the entire meteorological service of Britain. But similar storms in the Bay of Bengal last October drowned at least

12,000 members of the Commonwealth; there, tropical storms are about as frequent as in the Caribbean, and there it was that Henry Piddington studied them and invented for them the name 'cyclone'. About the same time, the engineer, Major-General William Reid, after arriving in Barbados to restore Government buildings blown down by a hurricane, took the lead in the study of Caribbean storms. In the present book we read that his own, first published in 1838, "is still held in high esteem as a book of reference". Of course, in those days a spirited man, even on his own, might make some impact; to-day it requires a group of men, handling facilities too expensive to be provided by other than Governments. Nevertheless, the facilities exist; Can it be the spirit which is missing ?

F. H. Ludlam

EARTH HISTORY

The Age of the World

Moses to Darwin. By Prof. Francis C. Haber. Pp. xi+303. (Baltimore, Md.: The Johns Hopkins Press; London: Oxford University Press, 1959.) 40*s*. net.

In the not very distant past the question of the age of the world was not the sole concern of scientists and naturalists, but one about which theologians, the informed public, and even the uninformed public were deeply concerned. As recently as 1838, the Rev. Baden Powell, Savilian professor of geometry at Oxford, declared that the most inconceivable assertions of the astronomers and chemists were admitted and even applauded, whereas, on the other hand, the geologist was regarded as visionary and presumptuous if he attempted to draw the obvious conclusions from the rocks he studied and to claim that millions of years ago the Earth was governed by the same physical laws as to-day. The reason for this attitude was, of course, that at that time geologists were attempting to establish natural laws that contradicted the account of the Creation given in the book of Genesis, as well as the statement carried by every Bible then (and for many years afterwards) that the date of the Creation was 4004 B.C.

To-day it is accepted as axiomatic that the age of the superficial rocks of the Earth's crust is of the order of several thousand million years, and that living organisms must have existed on the Earth's surface for at least 500 million years, and probably very much longer. Yet, historically speaking, this conception of the length of the geological time-scale is quite recent.

The complete revolution in scientific thought that has led to the unquestioned acceptance of age figures of such magnitude by scientists and laymen alike has seldom formed the subject of special study, but it has now received the examination it deserves by Prof. F. C. Haber, of the University of Florida, in his book *The Age of the World*. The author is a professional historian and, following the modern tendency in studies in the history of science, he deals with his subject as a special aspect of human history. The sub-title of Prof. Haber's book, *Moses to Darwin*, indicates the period that he covers in detail. So far as the Christian world is concerned, this limitation is justified. Once the teaching of Christianity spread, the Mosaic account of the Creation came to be accepted as literally true throughout Christendom, and this belief was not successfully challenged until the nineteenth century. It not only determined lay opinion for centuries but also exerted an inhibiting effect on the development of more rational views by scientists and naturalists.

In the latter half of the seventeenth century, however, and during the eighteenth century, many advances were made by both geology and cosmogony. In this period, the author points out, doubts were expressed from time to time as to the validity of the Mosaic dogma. For example, in 1681, Thomas Burnet, sometime Master of the Charterhouse, published the first volume of his *Sacred Theory of the Earth*, a book very widely read at the time and for many years afterwards. While of little scientific import, it had the merit of conforming to the teachings of the Bible. Yet even Burnet, himself a divine, ventured to suggest in a later book that the Biblical days of the Creation might be considered as allegorical rather than literal days. As a result of this heresy he lost his position at Court. A further instance, not noticed by Prof. Haber, was the publication by the astronomer Halley, in 1715, of a rather cautious suggestion that the Biblical account of the Creation could not be taken literally. Halley also made what was probably the first suggestion of a scientific method for determining the age of the Earth—by measuring the rate of increase of the salinity of the oceans—a method that was actually used some two hundred years later[1].

In 1749 the great French naturalist Buffon published a *Theory of the Earth*[2] in which he expressed unorthodox views about its age. In consequence the Faculty of Theology in the Sorbonne forced him to retract certain statements and to express a belief in the scriptural account of the Creation. In 1788, and again in 1795, the geologist James Hutton published his well-known dictum that in the rocks of the Earth's crust he could find "no vestige of a beginning —no prospect of an end". He was followed in 1802 by Lamarck, who, in his *Hydrogéologie*, emphasized that the geological processes of Nature must have required vast periods of time. His views were not well received at the time, and were soon overshadowed by the more popular doctrine of successive catastrophes advocated by his fellow countryman Cuvier.

These and other occasional expressions of enlightened opinion had no very marked effect on the broad stream of scientific thought at the time they were published. During the first two or three decades of the nineteenth century, however, geology and related sciences rapidly progressed so that the views of geologists about the age of the Earth could no longer be dismissed as entirely imaginative and had to be given serious consideration. The struggle between Church and science which, so far as geology was concerned, had been smouldering for a century or more, now flared up into the open. Not surprisingly, the statement by Hutton had added fuel to the fire, for to have accepted it would have done away entirely with belief in the Mosaic account of the Creation. Geological science had to contend with religious beliefs that had been firmly held for some eighteen centuries and were not to be overthrown easily, more especially since they were held by many, probably most, scientists of repute, some of whom were in Holy Orders themselves. For a time at least geologists were reluctant to declare, openly and unequivocally, opinions directly contrary to their religious beliefs, and some prominent geologists, notably Buckland in England and Cuvier in France, attempted to reconcile their geological views with these beliefs. A contemporary publisher's advertisement of an English translation of Cuvier's *Discours sur les Révolutions du Globe*, published in 1813, sums up the situation in the following notice: "The Christian may furnish himself, from the publication of a Parisian philosopher, with armour to defend his faith against those writers who have endeavoured to overturn it by objections against the Mosaic account of the Deluge, and the age of the human race"[3]. The tide had turned, however, and more rational views about the age of the Earth gradually gained ground, even though theological opposition persisted for many years.

Two landmarks stand out on the road of progress towards modern views on the subject. One was the publication of Charles Lyell's *Principles of Geology* (1830–33), which, as a clear, logical and well-documented exposition of the new geology, had a profound and lasting effect on geological thought. The second was the appearance, in 1859, of Darwin's *Origin of Species*, which provided a new and compelling reason for extending geological time. Once the doctrine of evolution was accepted as a reality, there remained only one obstacle in the minds of those who were reluctant to abandon completely the Mosaic account of the creation of the world. This was the strongly held belief that man was a special creation. Evidence from other sources, anthropology, archæology, ethnology and philology, had by this time accumulated to an extent that made it unlikely that this belief would survive long in scientific circles. In any event, it did not effect the main issue, that of the length of geological time, which was already widely accepted as being of immense, though uncertain duration, and the long struggle for recognition of this fact was now over.

This, briefly, is the story discussed at length and with an appropriate historical background by Prof. Haber. He also points out how other branches of knowledge gained from the changed ideas about secular time. Thus, it became possible to explain the occurrence of archæological remains of cultures that, apparently, had been at their height at a time when, hitherto, it had been thought the world had not been created; and it was also possible to accept the suggestion of philologists that the development of languages seemed likely to have commenced in times much earlier than the date assigned by Biblical scholars as that of the Creation. Another anomaly done away with was that produced by the astronomical conception that light emanating from distant sources in the universe had been travelling so long that it had, in the view of the astronomers, left its source before the universe was created.

Prof. Haber's book contains five chapters. In the first he discusses especially the ideas about time held since the dawn of the Christian era and shows how, for centuries, no progress was made towards rational thought on the subject, until the breaking of what he calls the "6,000 year time scale" set up by Archbishop Ussher and others. In Chapter 2, entitled "Historicism and the Scientific Revolution", he considers the growth of geological ideas in relation to the development of science as a whole, up to the end of the seventeenth century. He traces the history of ideas about the origin and significance of fossils. From the time of Aristotle the problem had remained unsolved. Although there appears to be little that is new in his account, he justifies his conclusion that "by the end of the seventeenth century the fossil enigma had been brought into the mainstream of European thought about cosmogony". Consideration is also given in this chapter to the contributions to astronomy and cosmogony made by Descartes, Newton and Leibniz, more particularly regarding the conception that the Earth had cooled from a molten mass. This assumption constituted a considerable advance in geological thought and was later used as a means of calculating the age of the Earth.

In Chapter 3 the author deals with the outlook on his subject that developed during the eighteenth century, a period in which the biological sciences came to the fore, and the idea of perfection of design in Nature was developed. This latter conception, however, did not preclude belief in the Mosaic chronology and cosmogony. In this chapter Prof. Haber also discusses the importance of Buffon's contributions to the advancement of natural history, and gives an account of the remarkable series of experiments, little noticed in Britain, which he carried out in an attempt to make a positive estimate of the age of the Earth. Buffon prepared a series of balls of each of the materials of which the Earth is composed, including rocks, minerals and metals, and after raising them to white heat, determined the rate at which they cooled to room temperature. On the assumption that the Earth had once been a molten mass he calculated the duration of several periods in its history, allotting about 40,000 years as the time that had elapsed since the Earth had cooled sufficiently to allow life to exist on its surface. Buffon published a full account of these experiments in 1778, in his *Epoques de la Nature*[4]. Though, by present-day standards, his results are quite unacceptable, they indicate an advance in the thought of that period.

Chapter 4 is entitled "The Biblical Age of the Earth Surrendered", the first part having the subtitle "The Flood Triumphant". At the beginning of the nineteenth century it became evident to geologists in both Europe and America that vast land areas were covered with unconsolidated deposits, sometimes containing mammalian remains, that could easily pass for material left by a retreating flood. This fact was seized on by theologians and many geologists, as proof that a more or less universal Noachian flood had been a reality in the not too distant past. The author goes on to describe what he calls the "Lyellian Revolution", which played a large part in the final overthrow of belief in the Mosaic chronology among scientists. The chapter concludes with an account of "Mosaic Geology in America". In his final chapter the author discusses the effect of the publication of the *Origin of Species* on ideas about geological time; and, lastly, the origin of man.

Among scientists the overthrow of belief in the Biblical chronology of the Creation was now virtually complete, and the only question that remained a live issue was not one of geology versus theology but what, in more precise terms than had as yet been proposed, really was the age of the Earth. During the nineteenth century attempts were made to estimate this in various ways. Prof. Haber does not enlarge on them, and he makes only a very brief reference to the work of Sir William Thomson (Lord Kelvin), who, shortly after the publication of the *Origin of Species*, attempted to solve the problem by means of astronomical and physical data. The story of his intervention, the concern it caused among biologists, particularly Darwin, and among geologists, too, and the revolutionary effect the discovery of radioactivity had on the resolution of the problem, leading, as it did, to an entirely new method of calculating the Earth's age, is an interesting one. It would have rounded off Prof. Haber's story in a very satisfactory way if he had continued it in rather more detail to the time when the new radioactive methods of determining the age of the Earth were first used, some fifty years ago. This criticism apart, he has written an extremely interesting book, which is not just a record of isolated opinions, events and discoveries but a continuous narrative of the development of ideas on his subject. There is no bibliography, but extensive footnotes provide a valuable guide to source material.

GEOPHYSICAL METHODS

Methods and Techniques in Geophysics

Vol. 1. Edited by Prof. S. K. Runcorn. Pp. ix+374. (New York: Interscience Publishers, Inc.; London: Interscience Publishers, Ltd., 1960.) 10 dollars; 72*s*.

MANY books and review articles have been written which are concerned with the observational data of geophysics and the deductions from them; Prof. S. K. Runcorn's aim in presenting this book is to provide a comparable account of the methods and techniques which are used to obtain the observations, which will be useful to those who wish to start a particular type of experimental work and to those who wish to evaluate critically the methods and the results.

It contains accounts of the techniques used in a variety of investigations: there are two articles on heat-flow, one by Sir Edward Bullard and the other by A. D. Misener and A. E. Beck; articles on borehole surveying by T. F. Gaskell and P. Threadgold; the geomagnetic elements by K. Whitham; palæomagnetism by D. W. Collinson and K. M. Creer; gravity at sea by J. C. Harrison; earth movements by P. L. Willmore; earth currents by G. D. Garland; the properties of rocks under high pressure and temperature by D. S. Hughes; and the secular motion of the pole by W. Markowitz.

The accounts are good, and admirably fulfil their purpose; obviously, it is not possible to give a complete account of all the experimental techniques involved in every type of measurement, but the general principles and sufficient practical details and difficulties are related, and quite detailed references have been given. The measurement of heat-flow is an important geophysical technique and this has been recognized by two articles on it. Harrison's account of the measurement of gravity at sea includes an account of the cross-coupling effect, and points out that in the case of a beam-gravimeter stabilized along the true vertical the error due to it in an extreme case could be as high as 500 mgals; in actual operation, however, the error with the Graf instrument can be maintained less than 15 mgals and a correction can of course be made for it. The errors involved in gravity at sea are still essentially navigational.

The article on measurements in palæomagnetism shows a curious balance in that so much is concerned with the astatic magnetometer. It might perhaps be argued that the original papers in which the instrument was described are not easy to obtain, and that it is the fundamental instrument used in the study of rock magnetism; nevertheless, it is curious that there is no account of the effects of pressure on the magnetic properties of rocks, or an account of alternating-current bridge methods of measuring susceptibility.

These criticisms are trifling, however; this is an excellent book and is well produced. It is bound to be of use to many geologists and geophysicists.

M. J. KEEN

POLYSACCHARIDES OF MICRO-ORGANISMS

Polysaccharides of Micro-Organisms

By Prof. M. Stacey and Dr. S. A. Barker. Pp. vii+228+8 plates. (Oxford: Clarendon Press; London: Oxford University Press, 1960.) 30*s*. net.

IT was a courageous undertaking on the part of Prof. Stacey and Dr. Barker to attempt to review the extensive field of microbiological polysaccharides in one small volume of more than 200 pages. They have, however, achieved this task, and have produced an elegant little book which is both up to date and readable, and will be much appreciated and enjoyed by those who already have a good grounding in carbohydrate chemistry.

Early in the book there is a short account of carbohydrate nomenclature and conformation, which is followed by a brief description of the various monosaccharide components encountered and their biosynthesis. There follows an account of the structural components of cells, of the function of capsular and cell-wall polysaccharides and of biological activity; and, in an attempt to appeal to the non-specialist reader, the authors have included two chapters in which the older (classical) and modern approaches to the isolation, purification and structural analysis of polysaccharides are given. These chapters are of necessity concise, but are timely in that they emphasize the value and importance of employing the results of physical, chemical and serological measurements to establish the homogeneity, or more correctly, the lack of demonstrable heterogeneity, of the materials under investigation. The establishment of the suitability of polysaccharide preparations for structural studies is an aspect of polysaccharide chemistry which has been much neglected until recently.

The remaining seven chapters are devoted to the polysaccharides associated with Gram-negative and -positive bacteria, viruses, rickettsiæ, moulds, yeasts, yeast-like fungi and protozoa.

The bacterial heteropolysaccharides have been longest and most thoroughly studied; but, in spite of all the effort since many of these important substances were discovered in the early part of the century, the progress in elucidating their detailed structure and, in some instances, even the qualitative composition, has been disappointingly slow. However, recently there has been a renewed attack on these materials in many different laboratories and already startling results are being obtained, especially in determining the fine structural details which are primarily responsible for the outstanding and characteristic serological specificity of many of the microbial polysaccharides. Indeed, it is the use of enzymic and serological inhibition studies and the more modern techniques of carbohydrate chemistry, such as periodate oxidation, that has enabled so much progress to be made in such important fields as the association of a known chemical structure with the delicate and specific serological reactions as developed in the outstanding Kauffmann-White scheme for *Salmonella* classification. Here the important new work of Westphal and of Staub and their associates is rightly described. It is, however, unfortunate that the closely related and pioneering work of McCarty in this field has been overlooked.

The nature of the dextrans produced by many strains of *Leuconostoc mesenteroides* and closely related organisms is considered in detail, and a very valuable table (17) is included, in which are given the amounts of 1–6, 1–4 or 1–3 glycosidic linkages which may be expected to be present in a particular bacterial dextran.

Little can yet be said about the polysaccharides of rickettsiæ and viruses. The chapter on the polysaccharides of the so-called 'Higher Bacteria', which deals largely with the products derived from human, bovine and avian strains of *Mycobacterium tuberculosis*, makes fascinating reading and contains much useful information. The polysaccharides of moulds have been much studied, but, in many instances, apart from some knowledge of the qualitative composition of the polysaccharides obtained, little or nothing is known of their structure. Similarly, with a few exceptions, the carbohydrate complexes produced by yeasts and protozoa are, as yet, largely uninvestigated.

Two appendixes, one containing the melting points and specific rotations of the monosaccharides most frequently encountered in the polysaccharides considered, and a second giving a brief account of some of the more important papers which have appeared since the manuscript was completed, are most useful additions.

The book is beautifully produced, and the paper, printing and binding are all that could be desired. The formulæ given in the text are well set out and clearly produced, and the selection of those references believed to be of key importance are remarkably complete up to 1958. The book is reasonably priced and the authors and publishers are to be congratulated on producing a short, well-written and up-to-date account of polysaccharides synthesized by micro-organisms.

W. T. J. Morgan

THE GROWTH OF ORGANIC CHEMISTRY

Advances in Organic Chemistry

Methods and Results, Vol. 1. Pp. ix+387. 90*s*. Vol. 2. Pp. vii+504. 113*s*. Edited by Ralph A. Raphael, Edward C. Taylor and Hans Wynberg. (New York: Interscience Publishers, Inc.; London: Interscience Publishers, Ltd., 1960.)

"THE subject of organic chemistry exercises a perennial fascination for the scientific publisher." It is with this rather naïve admission that the editors introduce the present series and presumably seek to justify its existence. There is no denying the advances in organic chemistry, in methods and results. But is this series really necessary when, in addition to the recognized sources of information, a parallel series covering progress in organic chemistry is already well established and has gained popular acceptance?

Six topics are reviewed in Volume 1. These are: Kolbe electrolytic synthesis (B. C. L. Weedon); polyphosphoric acid as a reagent in organic chemistry (F. Uhlig and H. R. Snyder); the Wittig reaction (S. Trippett); hydroxylation methods (F. D. Gunstone); selective degradation of proteins (E. O. P. Thompson); optical rotatory dispersion and the study of organic structures (W. Klyne). Of these, four have been the subject of reviews elsewhere within the past few years and an authoritative text-book on one of the themes has recently appeared. Still, this new publication may be taken as an indication of the widespread interest in and the vigorous development of the fields in question. Volume 2 certainly strikes a newer note. Here, the editors have been more discriminating in the selection of topics, which include: alkenylmagnesium halides (H. Normant); dialkoxydihydrofurans and diacyloxydihydrofurans as synthetic intermediates (N. Elming); ethynyl ethers and thioethers as synthetic intermediates (J. F. Arens); ketene in organic synthesis (R. N. Lacey); nuclear magnetic resonance in organic structural elucidation (H. Conroy); hydrogenation-dehydrogenation reactions (L. M. Jackman): ultra-violet photochemistry of simple unsaturated systems (P. de Mayo); muscarine (C. H. Eugster).

Normant's review will be warmly welcomed. His discovery that alkenylmagnesium halides are formed in excellent yield by the Grignard reaction when solvents such as tetrahydrofuran are used in place of ether constituted an important advance in preparative organic chemistry. The reaction has been exploited in many directions; it has proved particularly useful in the field of organometallic chemistry. The elegant electrolytic method for the dialkoxylation of furans due to Clauson-Kaas has made available a group of new and versatile intermediates. These dialkoxydihydrofurans and the related diacyloxy derivatives have been widely used for many synthetic purposes. Elming, who has been closely associated with this work, gives an admirable survey. Arens provides an excellent review of the preparation and reactions of ethynyl ethers and thioethers. This is a valuable addition to the literature on acetylene chemistry. Although earlier reviews on certain aspects of ketene chemistry have appeared, Lacy, in his contribution, gives a unified presentation of the reactions of ketene and its derivatives—diketene, *iso*propenyl acetate and β-propiolactone—compounds which are of considerable industrial importance. Despite the existence of several standard works on the subject, the inclusion of a chapter in this series on the applications of nuclear magnetic resonance in structural elucidation is not surprising; such are the potentialities of this new tool. As the author rightly points out, its intelligent use demands more of an understanding of the principles involved than does any other form of spectroscopy in popular use by organic chemists. However, within this brief compass, the author is only able to deal with those aspects of theory which have direct structural analytical significance. The treatment is concentrated almost exclusively on proton resonance, and solid-state spectra are omitted. Despite these limitations, the review has its obvious merits and will be appreciated by practising organic chemists.

There are occasions when the use of hydrogen-transfer reactions offers striking advantages over catalytic hydrogenation and dehydrogenation and, in consequence, they have their established place in the armoury of the organic chemist. The advantages arising from the usually complete stereospecificity of biochemical hydrogen-transfer reactions had led to some subtle and elegant applications. Jackman's survey of new developments in this field is timely, and many would wish that the section dealing with biochemical systems could have been amplified. Recent years have witnessed a renaissance in photochemistry, and preparative photochemical methods are rapidly gaining favour in certain fields. De Mayo does a signal service by focusing attention on recent developments and suggesting further areas where photochemical processes might prove useful and profitable. Finally, Eugster presents an interesting account of the chemistry of the alkaloid muscarine, the relatively simple, but unique, structure of which has only recently been unravelled, despite the combined endeavours of many illustrious organic chemists over many years.

The series has a truly international flavour, and a very high standard is maintained throughout. The inclusion of some details of experimental procedures adds to the value of the series. If the more individual and original character of the second volume can be maintained in future issues, the series is likely to earn for itself a worthy place on the private book-shelves of many organic chemists as well as in their institutional libraries.

J. Idris Jones

THE PROTON IN CHEMISTRY

The Proton in Chemistry

By R. P. Bell. (The George Fisher Baker Non-resident Lectureship in Chemistry at Cornell University.) Pp. vii+223. (London: Methuen and Co., Ltd., 1959.) 42*s*. net.

It is perhaps ungenerous to complain that the title of this book is wider than the contents, when the author himself has admitted this in his introduction and made his excuses. The book is, in fact, mainly about the properties of acids and bases, or at least about the transfer of protons from one molecule to another. Within this chosen field, these lectures, given at Cornell University while the author was George Fisher Baker non-resident lecturer, provide a readable, accurate and lucid account of acid-base theory and associated phenomena, and the book can be wholeheartedly recommended to students of physical chemistry as a supplement of their regular texts.

In the final chapter the author has done much to clarify what is known about the isotope effect, that is, the change of properties resulting from the substitution of the proton by the deuteron, in acids and bases.

There are, of course, many other chemical phenomena with which protons are concerned. No doubt some of these would have taken the author too far from the general theme of the book, but some, such as hydrogen bonding, which is only briefly mentioned, might well have been treated at greater length. In view of the great importance of hydrogen bonding in organic and biological compounds, some consideration of the strength of hydrogen bonds would have been welcome.

An account of the present state of knowledge of the structure of liquid water would also have provided a useful background to the properties of the hydronium ion. Another rather surprising omission, since energy curves for proton transfers are given, is any reference to the neutralization of the proton in electrolysis, one of the most direct and simple ways of observing such transfers. It would also probably not be stretching the matter too far to include those redox potentials in which protons are involved.

Another matter of considerable interest, which might well be dealt with in a future edition, might be the circumstances in which a proton, free or hydrated, can capture a free electron and the properties of the hydrogen radical so formed. In view of recent work on the chemisorption of hydrogen at metal surfaces, the polarization of hydrogen atoms and their reactivity, it is not out of the question that this subject might also find a place among the phenomena which might reasonably be included.

It is only necessary to add that the book is very well produced and, under present conditions, reasonably priced.

J. A. V. Butler

SIALIC ACIDS

The Chemistry and Biology of Sialic Acids and Related Substances

By Dr. Alfred Gottschalk. Pp. ix+115+8 plates. (Cambridge: At the University Press, 1960.) 22*s*. 6*d*. net

This book deals with a class of naturally occurring substance which has attained great biological importance in the past few years. Although the initial chemical work on the carbohydrate components of mucous secretions was done before the beginning of this century, it was not until about ten years ago that biochemical interest in the mucins of epithelial secretions was awakened by the discovery of their role in blood-group-specific substances and in the inhibition of influenza virus hæmagglutination; Dr. Gottschalk is closely associated with the latter work.

The book starts out with a clear exposition of the historical development of the subject and is followed by a chapter (28 pages) on the chemistry of sialic acids. A section (25 pages) on the preparation and determination of sialic acids is valuable for its discussion of the advantages and disadvantages of the various methods used. The next two chapters (23 pages) deal with what is to me the most exciting part of the book: the linkage and occurrence of sialic acids in biologically active mucoproteins, mucolipids and other natural products. The following chapter, on the sialic acid content of tissues, usefully collects together scattered data into a readily accessible form. Other chapters deal with enzymes acting on sialic acids and a comparison with bacterial muramic acid.

Minor points are that a structural formula of N-acetyl neuraminic acid would, I think, be helpful on the first page of the historical development, and the section on milk oligosaccharides could well include mention of the work of György and of Malpress.

These are, of course, trifling criticisms of a book which is well written, beautifully produced and, at the price, is good value as an introduction to the sialic acids.

T. F. SLATER

TOWARDS PHYSICAL CHEMISTRY AT HIGH TEMPERATURES

Tables of Thermodynamic and Transport Properties of Air, Argon, Carbon Dioxide, Carbon Monoxide, Hydrogen, Nitrogen, Oxygen and Steam

By Joseph Hilsenrath, Charles W. Beckett, William S. Benedict, Lilla Fano, Harold J. Hoge, Joseph F. Masi, Ralph L. Nuttall, Yeram S. Touloukian and Harold W. Woolley. Pp. xiii+478. (London and New York: Pergamon Press, 1960.) 140*s*. net.

Thermochemistry for Steelmaking

Vol. 1. By Prof. John F. Elliott and Molly Gleiser. (Sponsored by the American Iron and Steel Institute.) Pp. viii+296. (Reading, Mass.: Addison-Wesley Publishing Company, Inc.; London: Pergamon Press, 1960.) 75*s*. net.

Physicochemical Measurements at High Temperatures

Edited by Dr. J. O'M. Bockris, Dr. J. L. White and Dr. J. D. Mackenzie. Pp. viii+394. (London: Butterworths Scientific Publications; New York: Academic Press, Inc., 1959.) 75*s*.; 13.50 dollars.

THE publication of three books serves to emphasize the flow of research and development at present, in regard to systems at high temperatures. Probably the most detailed and most extensive information already within reach concerns the thermodynamic and transport properties of gases. *Tables of Thermodynamic and Transport Properties of Air, Argon, Carbon Dioxide, Carbon Monoxide, Hydrogen, Nitrogen, Oxygen and Steam* presents a valuable compilation of mutually consistent data for temperatures from 10° to 3,000° K. and from 0·01 to 100 atmospheres, for the gases named and for steam and air. Experimental measurements for the various gases were considered to varying degrees in choosing molecular force constants. From the best values, equations of state were derived in the form of virial expansions; a large number of mutually consistent results have been derived from such equations of state. Thermodynamic properties of the ideal gases were derived from spectroscopic data using standard formulæ of statistical thermodynamics. Transport properties were calculated either from empirical data or using force constants based on the Lennard-Jones 6–12 potential. Properties tabulated include (with few exceptions) the compressibility factor, density, entropy, enthalpy, specific heat, specific heat ratio, and velocity of sound, as well as the viscosity, thermal conductivity, and Prandtl number, and vapour pressure of liquid and solid. Other quantities derived for the ideal gases include specific heats, entropies, enthalpies and free energies. In these Tables the only quantities which may still be described as crudely empirical are vapour pressures.

This bold and systematic use of statistical thermodynamics, combined with spectroscopic data and evaluations of molecular force constants, shows very well how the thermal properties of gases at high temperatures can be mastered by the mechanization of thermodynamic calculations. The results are of immediate importance in the conduct of aerodynamic research, and applications to other fields may be predicted with confidence. From these *Tables*, any remaining obstacles to the development of high-temperature thermodynamics of gases seem likely to be overcome without much difficulty. (Librarians should note that these *Tables* were originally published as *U.S. Bur. Stand. Circ.* 564. This edition is a 1960 reprint with revisions. The publishers do not indicate how extensive these are.)

More specialized experimental information required for other fields is by no means available in the same massive way. There has been a need for data at high temperatures in the steel industry for a very long time. One outcome is that much experimental information of use in high-temperature technology is being collected and collated as the result of sponsorship by the American Iron and Steel Institute. *Thermochemistry for Steelmaking* constitutes the first fruits of a large programme of work, and covers a field even wider than steel-making. Physical properties tabulated include density, thermal conductivity, viscosity and surface tension of the liquid state of the elements. Tables are given of standard thermodynamic functions of elements and selected compounds which have been computed up to 3,000° K. Vapour pressures are also given for the more common elements and for selected compounds. Such compilations should prove very valuable in high-temperature chemistry generally, and are likely to stimulate advances not only in steel-making but also in other fields.

The third publication, *Physicochemical Measurements at High Temperatures*, deals with methods of laboratory investigation at high temperatures. In this field the advancement of knowledge must still be described as of uneven quality. Because of their technological implications for extraction metallurgy, certain problems such as the study of chemical equilibria in melts and in slags have received much attention, and considerable mastery has been achieved. A considerable body of fundamental scientific information has also been accumulated through laboratory research on glasses and on refractories. Much still needs to be done, however, to bring the most recent ideas about condensed states of matter to bear on problems which are also of technological importance.

The plan of the book is to present a collection of articles by various experts concerned predominantly with solids and melts. Only brief reference is made to flames or gases at high temperatures. It is to be regretted that the interaction between gases and condensed states of matter is not dealt with. Such interaction is the origin of many difficulties in making measurements at high temperatures, and its study is of great practical as well as theoretical interest.

In its chosen fields, this book is a useful guide to techniques of research at high temperatures. It contains chapters on temperature measurement and control, on refractory materials, on various equilibria, and on applications of calorimetry, densitometry and viscosity. Measurements are described on surface tension, on vapour pressures, on light scattering, on ultrasonic velocities, on diffusivity, and on various electrochemical parameters. Probably unavoidably at the present stage of high-temperature studies, individual sections of this text differ considerably in critical quality. Some of the authors attempt to survey the field in perspective, and to arrive at conclusions, however provisional, that may at least guide new entrants into the field. Others tend to provide catalogues of work at high temperatures, without much discriminating comment.

Physico-chemical properties have generally been studied at high temperatures only because of some compelling technological requirement, or because new opportunities for making fundamental measurements have become available by the development of new techniques not too difficult for laboratories of general physical chemistry. Further progress in the very important field of high temperatures depends on both kinds of research stimuli. It can be argued that the development of research at high temperatures on an adequate scale in Britain awaits the provision of more specialized research laboratories with really adequate resources, closely allied with technological development projects. However this may be, the publication of books such as the present triad offers valuable help in mastering present achievements and in planning for the future. A. R. UBBELOHDE

UNNATURAL PRODUCTS

Silicones

By R. N. Meals and F. M. Lewis. (Reinhold Plastics Applications Series.) Pp. xi+267. (New York: Reinhold Publishing Corporation; London: Chapman and Hall, Ltd., 1959.) 48*s*. net.

Organosilicon Compounds

By Dr. C. Eaborn. Pp. x+530. (London: Butterworths Scientific Publications, 1960.) 80*s*.

Unnatural Products

New and Useful Materials from Silicon. By Prof. Eugene G. Rochow. (Thirty-fourth Annual Priestley Lectures.) Pp. vii+117. (University Park, Pennsylvania: Phi Lambda Upsilon, Pennsylvania State University, 1960.) 2.75 dollars.

TWENTY years ago, organo-silicon chemistry would have been identified largely with Kipping's monumental life-work. Since then there has been an enormous accretion of new knowledge, partly because of a general broadening in the scope of organic chemistry, but largely stimulated by the development of silicone polymers and novel methods of synthesis. These three books are all concerned with the chemistry and technology of organo-silicon compounds, but they present it from three quite diverse points of view and for different circles of readers.

Meals and Lewis set out to provide a readable and self-contained account of the silicones for those whose primary interest lies in the silicone oils and resins as technological materials: engineers, chemists in industry and students of technology. The essentials of silicone chemistry and the structural basis of the useful properties of the polysiloxanes are concisely set out; about half the book is devoted to the manufacture of the monomers, the fabrication of materials such as resins and rubbers, based on the silicone polymers, and typical applications of these materials in industry. Due attention is given throughout the book to the properties that confer or limit their usefulness and, within its clearly visualized terms of reference, the book contains a great deal of information.

Dr. Eaborn's book, by contrast, is very definitely written for the research chemist with academic leanings, and he deliberately—and rightly—cuts down to the bare minimum his account of the application of alkyl silicon halides and their derivatives. He has produced an authoritative and comprehensive account of the organic chemistry of silicon (as at late 1958), which will serve as the standard work of reference for all who are interested, as active workers or as teachers of organic (and inorganic) chemistry, in this and cognate fields. To keep the subject within bounds, he imposed some restrictions on his work—the omission of most technical aspects and a self-denying omission (which many readers will regret) of comparisons between organo-silicon chemistry and the organic chemistry of other elements. A commendable feature of the book is the way the author has introduced order into the great mass of factual material by means of three rather general chapters, together making up about a third of the book, and dealing respectively with methods of forming silicon-carbon bonds, bond properties (stereochemistry, bond character and the mechanism of substitution reactions) and the characteristic reactions of silicon–carbon bonds in different molecular environments. A great deal of information, with the relevant references, is summarized here in tabular form.

Much of the fascination of silicon chemistry lies in the analogy that may be drawn with carbon, and the extent to which carbon is really unique. Eaborn emphasizes particularly that the essential difference between carbon and silicon lies in the availability of 3*d* orbitals; this has several far-reaching effects in the chemistry of silicon. It confers a considerable amount of double-bond character on bonds formed between silicon and the halogens, nitrogen and other elements; it enables silicon to attain a five- or six-co-ordinate state in stable compounds or in transient reaction intermediates; it influences profoundly the reaction path in substitution reactions at the silicon atom. The critical way in which these physical-organic concepts are developed will make these general chapters profitable reading for many chemists who are not directly concerned with the remainder of the book. This reviews systematically the formation, structure and properties of the main classes of organo-silicon compounds—halides, hydrides, oxygen compounds of different types, cyclic compounds, etc. The disparities in length between chapters may perhaps reflect the extent to which some classes of derivative are ripe for investigation. Ample use is made, throughout, of the general concepts developed in the first part, though the organization of the material largely follows the traditional organic chemist's approach. Every chapter is followed by the appropriate bibliography, and the total coverage of the literature is very extensive indeed.

If the first two books are devoted principally to facts, *Unnatural Products*, which embodies Dr. Rochow's Priestley Lectures before Pennsylvania State University, is concerned with ideas. In it he lets his ideas range widely, and develops a theme that he stated briefly in his foreword to the book by Meals and Lewis. In brief, the abundance of silicon in the universe is the direct consequence of its nuclear structure; the chemistry is determined by its electronic structure. The very abundance of silicon challenges technological man to explore and exploit the differences between the familiar compounds of carbon and substances, having no counterpart in Nature, based on the chemistry of silicon. Only by extending our chemical knowledge, so as to make kinetically possible the sort of reaction paths that look attractive thermodynamically, will it be feasible to make the best use of the world's resources of raw materials and energy. In his lectures, Rochow ranged over the modern inorganic chemist's approach to his subject, embracing everything from classical descriptive chemistry, through thermodynamics, to molecular spectroscopy. The lectures afforded an unusual opportunity for a distinguished chemist to show how he thinks about his work. The result (except for one lecture on intramolecular motions and energy barriers, which must have made singularly hard going for his audience) is a very readable little book.

J. S. ANDERSON

TRILOGY OF CHEMISTRY

Inorganic Chemistry

An Intermediate Text. By C. W. Wood and Dr. A. K. Holliday. Pp. viii+393.

Organic Chemistry

An Introductory Text. By C. W. Wood and Dr. A. K. Holliday. Pp. xxii+321.

Physical Chemistry

An Intermediate Text. By C. W. Wood and Dr. A. K. Holliday. Pp. viii+322.

(London: Butterworth and Co. (Publishers), Ltd., 1960.) 21*s*. each.

THESE three attractively produced books form a series intended to meet the chemistry requirements at Advanced and Scholarship levels of the General Certificate of Education of the various examining boards. They should be useful also to first-year undergraduates (not only those reading for a degree in chemistry) and to students preparing for Higher National Certificate, graduateship of the Royal Institute of Chemistry, etc., in colleges of technology.

The authors give no hint of a later volume to cover the concomitant practical work (qualitative and volumetric analysis, typical preparations, etc.), but these already published give concise qualitative tests for each element, and précis the chief organic preparations.

It may be said at once that the volumes more than cover their field, yet not so amply as to make them intimidating to the good advanced-level student. Their large pages and carefully considered typographical plan make them easy to read and to refer to: diagrams, though on the small side and drawn in 'stencil' fashion, are sufficiently clear. Equations are prominently displayed, mainly in structural form in the organic volume, and ionically, where appropriate, in the inorganic.

Each volume is complete in itself: thus, physical chemistry topics, atomic structure and valency, etc., are fully treated in the physical volume, but enough of each is carried into the others to illuminate discussions there. The historical approach is pleasing, without ever becoming oppressive. Much information of interest to the keen student, and not otherwise accessible save by very wide reading, is to be gleaned from the footnotes. The up-to-date treatment may be judged by the adoption of C=12 as the basis for atomic weights: few school text-books have reached this yet.

Misprints are negligible, though the close formulation of ions as, for example, SO_4^{2-} and $N_2H_6^{2+}Cl_2^{2-}$, instead of in the more open standard form, is rather irritating.

Collaboration between an experienced schoolmaster and a university lecturer seems most effective for work at this 'frontier' level. My own preference is for the physical volume; I feel some slight regret that the authors did not take this opportunity to develop in print the simple approach to organic chemistry recommended by Sir Robert Robinson in a presidential address to the Science Masters' Association about eight years ago, which many of us have found by experience to be more easily assimilable than the wholly systematic impact.

CHARLES HOLT

TREATISE ON ANALYTICAL CHEMISTRY

Treatise on Analytical Chemistry

A Comprehensive Account in Three Parts. Edited by I. M. Kolthoff and Philip J. Elving, assisted by Ernest B. Sandell. Part I: Theory and Practice, Vol. 1. Pp. xxvi+809. (New York: Interscience Encyclopedia, Inc., 1959. Distributed by Interscience Publishers, Inc., New York; and Interscience Publishers, Ltd., London.) 133*s*.

THIS *Treatise on Analytical Chemistry* is to be a major work extending to many volumes. Part I, which is to consist of eight or nine volumes, is devoted to theory and practice. Part II, the analytical chemistry of the elements, will deal extensively with organic as well as inorganic analysis in a series comprising some ten volumes. Part III, which is as yet not fully planned, will be concerned with the analyses of industrial products. The first volume of this last part will be divided into two sections, one dealing with the philosophy relating to the significance and organization of analytical chemistry and the other with specifications and standards;

subsequent volumes of Part III will describe analytical procedures associated with plastics, fabrics, fine chemicals, etc. The final volume of each of the three parts will contain an index for all volumes in that part. There is no index in individual volumes.

The senior editor, Prof. Kolthoff, is noted for his pioneer work on the systematization of analytical procedures and for his ability, both as an investigator and a teacher, to interpret analytical processes on a sound physico-chemical basis. Many of the authors contributing to this first volume are his co-workers and former pupils, and the continuity of his influence can be observed clearly throughout these pages. The approach of the seventeen authors of these first nineteen chapters is remarkable for its uniformly high standard. The clear descriptions of essentials and fine details are outstanding.

The subject-matter of this volume may be listed briefly as follows: methods of analytical chemistry; errors, their detection, determination and control; evaluation and interpretation of accuracy and precision; sampling, rationale and techniques; elements and compounds, an account of modern atomic and molecular theories; atomic weights; thermodynamics of chemical equilibria; graphical presentation of data; electrode potentials; concept and determination of *p*H; acid-base theories; acid-base strength and aqueous titration curves; non-aqueous acid-base titrimetry; complexometry; mechanism of redox titrations; redox equilibria; solubility; precipitation; equilibrium in precipitation reactions.

Thus this volume is chiefly concerned with the basic principles of analysis and more particularly with classical analytical chemistry. But this is not just old material in a new guise, for a fresh approach to the topic is made in almost every chapter. For example, the reader might justifiably expect a conventional treatment of the theory of acid-base titrations, but much new material is to be found in both chapters devoted to this subject.

It is perhaps not entirely fair to single out individual sections for praise, but a special commendation might be given to the chapters on solution and precipitation phenomena, which constitute a lucid account of modern theory written with a strong analytical bias.

To sum up, this volume is a notable beginning to a monumental work which, if the present standard is maintained, will become the standard reference-book of analytical chemistry. R. BELCHER

A HISTORY OF PLATINUM

A History of Platinum from the Earliest Times to the Eighteen-Eighties

By Donald McDonald. Pp. x+254. (London: Johnson, Matthey and Co., Ltd., 1960.) 35*s*.

FOR many years the author of this fascinating book has been investigating the history of platinum and its associated metals, and speaks with unrivalled knowledge and authority. The result is a most important study which, within the boundaries which Mr. McDonald has set himself, must remain for very many years at least the final statement of fact. In his own words: "the story recounted is that seen by the refiner and fabricator engaged in commerce. It does not concern itself with the recondite parts of the geology of the deposits, nor with the abstruse chemistry which has grown up round the complex series of compounds into which the platinum metals enter so freely. . . . The account is remarkable in its continuity and slow development over the best part of two hundred years and it has never before been told as a continuous tale". The present volume carries the story down to 1880–1890, before which time "the work on the metal was of a fundamental nature and was largely conducted by scientists who published their results. The few people who were tempted into manufacture were either scientists like Wollaston and Deville, who sooner or later published, or they were people like Chabaneau and Bréant, whose secrets eventually leaked out. The facts therefore are available to the historian". To me this would appear to be a remarkable under-statement of the author's task, the whole book bearing the marks of long-continued and most pertinacious research.

"After the period of 1880–1890 the position is very different. By then the platinum industry, at any rate as far as Europe is concerned, had moved out of the laboratories of the scientists into the factories of industrialists working in competition with each other." This competition resulted somewhat naturally in great reluctance to publish details of their processes, and the facts have either never been recorded or, if recorded, have since been lost.

Of the ancient civilizations the only one from which undoubted finds of platinum occur appears to be the Egyptian, whither it had found its way mixed with gold imported from Ethiopia where platinum is known to occur even to this day. A seventh-century B.C. box from Thebes with 'silver' characters on one side was sent to Berthelot, who demonstrated beyond doubt that one of these characters consisted of native platinum alloyed with small amounts of gold and iridium. No evidence was found that the Egyptian craftsmen had noticed any difference between this piece of metal and the silver used for the other characters; it had been hammered out in the same way as the rest, and its occurrence was in all probability purely fortuitous.

Other references from Roman times onwards which have been suggested as applying to platinum are of doubtful applicability, and in the author's opinion "there seems no doubt that the platinum which about the middle of the eighteenth century began to reach Europe from the Spanish Colonies in South America was the first to be recovered in any quantity and the first to attract the scientific curiosity of mankind". The story of the discovery and exploitation of the metal there is told in great detail from the time that the Spanish colonists threw it away as a nuisance in their search for gold, though a few samples were sent back to Spain. The earliest known rumour of its existence based on some solid foundation occurs in the writings of della Scala (1484–1558), an Italian scholar and poet, but how unimportant the metal was considered is shown by the fact that the first mention of it in European literature appears to be a book published in Madrid in 1746. From then onwards the list of scientists who became interested contains the names of almost everyone of renown: Lavoisier and Bergman, Faraday and Wollaston, Wohler, Berzelius and very many others, and more than half the book is devoted to this section of the history; not merely the history of platinum, it amounts almost to a history of contemporary science.

The author's long association with the firm of Johnson, Matthey and Co., Ltd., to which more than to any other body the commercial development of this and its allied metals is due, has enabled him to use records which have proved invaluable in the elucidation of the later stages of his work. Percival Norton Johnson—of whom Mr. McDonald has already published an outstanding biography—published an account of work on the separation of gold and platinum in 1812 and from then, until he retired in 1860, he and his partners played a major part in both the scientific as well as the industrial evolution of the platinum metals.

Mr. McDonald has presented his story in a most scholarly yet delightful and readable form, and his firm has published a volume which it is a pleasure to read, and which constitutes an outstanding contribution to the history of the precious metals.

F. C. THOMPSON

THE ADVANCE OF FLUID MECHANICS

The Scientific Papers of Sir Geoffrey Ingram Taylor
Edited by Dr. G. K. Batchelor. Vol. 2: Meteorology, Oceanography and Turbulent Flow. Pp. x+515. (Cambridge: At the University Press, 1960.) 75*s*. net.

THE second of four volumes of Sir Geoffrey Taylor's collected works has now appeared, and we gasp at the achievement represented by this one volume only. Its fields, of meteorology, oceanography and turbulent flow, are in fact almost one, for the main theme is turbulence, whether in the atmosphere, the oceans or in the laboratory, and whatever the medium discussed, the growth of ideas is essentially continuous. Of the 45 papers presented, however, some five or six deal with gravity waves in fluids and these have their own special appeal.

Theoretical work on atmospheric turbulence began with Taylor's classical *Philosophical Transactions* paper of 1915, "Eddy Motion in the Atmosphere", in which he invented the 'mixing length' concept of turbulent exchange and applied it to the thermal and moisture modifications of air masses and the distribution of wind in the terrestrial boundary layer. Moreover, he was able to put flesh on to the bones of his theory from observations he had taken only a year or so earlier from the ice-scout ship *Scotia* and, in so doing, established a way of working which always kept theory and observation reacting closely on each other. In fact, there is about one paper only on turbulence in this volume which is not in some sense immediately framed by observation. That is the famous 1921 paper, "Diffusion by Continuous Movements", in which the mixing length concept was generalized in terms of the Lagrangian autocorrelation function and a notable relation between certain statistical properties of a turbulent field was first stated. The development of this approach was, however, hindered by lack of observations on the statistical properties treated, and from 1921 until 1935 the pace of Taylor's original work on turbulence slackened somewhat; though this period contained the very thoughtful work on the difference between momentum transfer, in which pressure forces are concerned, and the transfer of inert 'substance' such as heat (in some circumstances) and matter. Then, during 1935–36, came the great surge, the beginning of the modern era, with the "Statistical Theory of Turbulence", Parts 1–5, growing out of the 1921 paper, but now testable because of the introduction of more readily observed Eulerian statistics and because of advances in observational techniques, particularly the hot-wire anemometer, over the previous few years. The strength of this work largely derives from the results which Taylor was able to deduce when the turbulence is isotropic and essentially dissipative; it left the structure and behaviour of the large, energy-containing and transferring eddies mainly as a subject for further inquiry and that remains more or less true to-day. In this connexion it is of interest that the penultimate paper, of 1956, deals in a sense with one aspect of the latter problem, the behaviour of large eddies, produced by buoyancy, in a stably stratified fluid.

The other work in this volume, on gravity waves, has a special contemporary interest in our present age of 'big bangs'. In 1929 Taylor showed that the travel of the pressure wave from the Krakatoa eruption would not support the thesis, deriving from Kelvin, that the marked semi-diurnal variation of pressure in the atmosphere could be ascribed to resonance with the 12-hour tidal force. But he later showed that the atmosphere might have free periods other than that associated with the Krakatoa wave, and he suggested that these might arise from the complex thermal structure of the upper atmosphere. That, as Pekeris, and Weekes and Wilkes later showed, was in fact the case, and tidal resonance was 'saved'. But the theory of the semi-diurnal variation of pressure is not, on that account, complete.

This volume is to be prized on a number of counts: not least, of course, as a record of the growth of ideas, but more, I believe, as providing the possibility of finding out how the record has been achieved, and, perhaps, of doing likewise. There is only one Sir Geoffrey Taylor, but his recipe for cooking could mightily help a good young chef if he will read the recipe carefully enough. To any with the love of the tantalizing study of fluid motion it will bring enjoyment and enrichment, and a new knowledge of the art of science.

P. A. SHEPPARD

REVIEWS OF NUCLEAR PHYSICS

Progress in Nuclear Physics
Vol. 8. Edited by Prof. O. R. Frisch. Pp. vii+304. (London and New York: Pergamon Press, 1960.) 90*s*. net.

THE latest volume in Prof. O. R. Frisch's review series contains six articles, three written by experimentalists and three by theoreticians. The subjects embrace cosmic rays, high-energy nuclear physics (well represented this time in both its theoretical and experimental aspects), and low-energy physics, where the emphasis is on nuclear models and theoretical interpretation. As in previous volumes in this series, the articles are all of a high standard in their primary function of collating and discussing critically the relevant published work on their particular subjects. Most of them are also commendable for their clarity of presentation and their provision for readers not already experts in the specific fields.

In the first article, "The Composition of the Primary Cosmic Radiation", C. J. Waddington presents a masterly and clear discussion of the present data on fluxes and the charge and energy spectra of light and heavy nuclei in the primary cosmic radiation. From the sometimes conflicting information available, he extracts a table summarizing what appear to be the present best flux-values, and points out the interest and importance of future work with balloon- and satellite-borne equipment.

"The Interaction of Polarized Nucleons with Nuclei" is treated by E. J. Squires, who considers the various theoretical approaches which have been made to the interpretation of polarization data. The approximations involved in deriving the theoretical formulæ are discussed, and the limitations which they impose are pointed out. Squires's treatment, which is thorough and includes copious references, is intended primarily for the specialist and may be found somewhat heavy going by readers inexperienced in this field.

"Collective Motion in Nuclei" by D. M. Brink is a survey of the present status of the rotational, vibrational, and unified nuclear models. The author first summarizes the essentials of the subject as covered in previous reviews. He then goes on to discuss in somewhat greater detail more recent advances, particularly particle coupling schemes and the attempts which are being made to justify the models theoretically.

"Dispersion Relations for Elementary Particles" by J. Hamilton is food for theoretical physicists. It is, moreover, an excellently constructed review article, presenting the subject in an interesting and lucid fashion. The introduction shows clearly what a dispersion relation looks like and its uses in simple examples. There is a brief but instructive section explaining the importance and scope of dispersion relations as a technique for studying the properties and interactions of elementary particles. Then follows the main substance of the article, in which a variety of scattering and related problems are ably discussed.

In "Cherenkov Detectors" G. W. Hutchinson gives a clear and up-to-date review of recent developments in these detectors as applied to the physics of high-energy machines. The main emphasis is on progress which has been made since the appearance of previous reviews on the subject. Particularly valuable are the accounts of various forms of the gas counter and of the solid–liquid critical reflexion counter. Total absorption counters are discussed briefly; there is very little mention of cosmic-ray applications.

In the final contribution, on "The Photoproduction of Pions", E. H. Bellamy describes the experimental techniques used for investigating the production of charged and neutral pions by high-energy photons, and surveys the data at present available on cross-sections and angular distributions. In a series of useful diagrams the data are summarized and compared with theoretical curves. However, some sections, particularly in the first half of the article, are not very clearly presented.

JOAN M. FREEMAN

A FEW NUCLEONS

Nuclear Forces and the Few-Nucleon Problem

Proceedings of the International Conference held at the Physics Department, University College, London, 8–11 July, 1959. Edited by T. C. Griffith and E. A. Power. Vol. 1: Pp. xiii+1–340. Vol. 2: Pp. vii+341–712. (London and New York: Pergamon Press, 1960.) 200*s*. per set of two volumes.

A GOOD way to stimulate activity in a particular field of research is to hold an international conference. Such a conference was held in July 1959, at University College, London, to discuss the nuclear few-body problem (reported briefly in *Nature*, 184, 1113; 1959). The two volumes under review are the official Proceedings.

The difficulty in understanding systems of a few nucleons is mainly mathematical; it is very hard to calculate their properties reliably from given nuclear forces, or to learn about the latter from the former. Except in the two-nucleon system, there are too many independent variables for comfort and yet too few to justify taking averages (as in the many-body problem). The conference produced no spectacular solution, but it directed attention to the problem, summarized the present situation and indicated some lines for further research.

The conference began with the two-nucleon problem and what has been learned about the basic two-body forces. This occupies a quarter of the Proceedings: rather a large share, but a fair indication of where most progress has been made. Next came high-energy scattering of nucleons from light nuclei, much of which can be reduced approximately to two-body interactions, and a session on photonuclear reactions. The conference then reached the core of the few-nucleon problem: binding energies and low-energy scattering and reactions, involving three to eight nucleons. Here the true difficulties emerged and all manner of approximations were used to overcome them. Some of the latter look rather crude to an outsider, but clearly solutions which are anything like exact are not feasible. The full calculations are too much for present fast electronic computers; a relatively simple example was estimated to need several hundred hours on an I.B.M. 704 computer. Of course, as a man from Los Alamos remarked, it depends on how many 704's you have. The conference finally ended on the border of the many-body problem, with systems of up to sixteen nucleons.

Each topic was introduced by a review paper, followed by more specialized papers and periods of discussion (the last have been edited for brevity). Altogether there are about ten reviews and seventy other contributions, divided between theory and experiment in the ratio of two to one. The authors include such names as Blatt, Breit, Brueckner, Chew, Marshak, Massey and many other well-known physicists. The Proceedings are thus an authoritative document. They are also much more readable than the learned journals; the style is often that of the spoken word, and most speakers come quickly and concisely to the point. The discussion provides a stimulating commentary on the main text, raising fresh questions and points of view, and bringing some touches of humour. The volumes are handsomely produced, the layout is clear and the errors commendably few. All this is in their favour.

On the other hand, there is inevitably some confusion of notation: the first six authors to write the two-nucleon scattering matrix do so in six different ways. More regrettable, however, is the lapse of some seventeen months before these Proceedings appeared, especially since this kind of literature declines rapidly in value with time. Through special efforts, other conference proceedings have appeared within six months or even—a recent spectacular case—in two. Nevertheless, these volumes retain considerable value and will be read with interest by many physicists.

R. J. N. PHILLIPS

A PANORAMA OF SCIENCE

The Neutron Story

By Dr. Donald J. Hughes. (The Science Study Series, Book 1.) Pp. 158. (London: William Heinemann, Ltd., 1960.) 4*s*. 6*d*.

Magnets

The Education of a Physicist. By Prof. Francis Bitter. (The Science Study Series, Book 2.) Pp. 155. (London: William Heinemann, Ltd., 1960.) 4*s*. 6*d*.

Soap Bubbles and the Forces which Mould Them

By C. V. Boys. (The Science Study Series, Book 3.) Pp. 156. (London: William Heinemann, Ltd., 1960.) 4*s*. 6*d*.

Echoes of Bats and Man

By Prof. Donald R. Griffin. (The Science Study Series, Book 4.) Pp. 156. (London: William Heinemann, Ltd., 1960.) 4*s*. 6*d*.

How Old is the Earth?

By Dr. Patrick M. Hurley. (The Science Study Series, Book 5.) Pp. 160+8 plates. (London: William Heinemann, Ltd., 1960.) 4*s*. 6*d*.

The Wider Universe

By Paul Couderc. (Arrow Science Series.) Pp. 128+4 plates. (London: Arrow Books, Ltd., 1960.) Bound, 10*s*. 6*d*.; Paper, 5*s*.

Matter and Antimatter

By Maurice Duquesne. (Arrow Science Series.) Pp. 127+4 plates. (London: Arrow Books, Ltd., 1960.) Bound, 10*s*. 6*d*.; Paper, 5*s*.

Intelligence

Its Evolution and Forms. By Prof. Gaston Viaud. (Arrow Science Series.) Pp. 127 + 4 plates. (London: Arrow Books, Ltd., 1960.) Bound, 10*s*. 6*d*; Paper, 5*s*.

The Anatomy of Plants

By Prof. P. Font Quer. (Arrow Science Series.) Pp. 128. (London: Arrow Books, Ltd., 1960.) Bound, 10*s*. 6*d*.; Paper, 5*s*.

TO deal with nine volumes at a time may seem more like a march-past than a review. The essential qualitative information can even be dealt with smartly at the double; they are all good, some distinguished, and one a revered classic. One group was written in the United States to serve a specific purpose, at a certain level in schools, as part of a planned programme of physics teaching; I do not know of anything comparable of English origin at present, and regard this as a very valuable series. For the other group, it does seem fair to ask whether we need have gone so far afield, and whether translation in any case is worth while, at least from French; but this also is the start of a series, of which the later members are to be written by the British authors.

The five volumes of the Science Study Series published by Heinemann are the first transplantations of the readers sponsored by the Physical Science Study Committee in the United States. This enterprise, backed by high-level scientists, imagination—and funds—has been conducting a major operation in vitalizing the teaching of physics, and the provision of background reading to supplement the formal course is one of its many sides. These books are intended to be read by very intelligent pupils of about seventeen, and in relation to sixth-form pupils in Britain, it must be said at once that they will not help anyone to get 65 per cent at Advanced level. But they will convey an appreciation of the ideas and methods of science, and a sense of contact with first-rate scientists who have tried to communicate their enthusiasm as well. The difference between them and, say, the excellent books that Pelicans provide is in the type of reader foreseen.

The Neutron Story, by the late Donald Hughes, deals with the discovery of the neutron, its properties and uses, the problems of its decay, and nuclear power. Francis Bitter's book is an introspective account of how the concepts of magnetism take root in a person's mind; he mentions that his interest in science was first aroused by a course in celestial mechanics, an opening gambit which the Ministry of Education's recent Pamphlet 38 would endorse. He reminisces of his work at Cambridge with Kapitza, and of war-time degaussing, and goes on to explain the principles of the work at Massachusetts Institute of Technology on nuclear magnetic resonance. Boys's *Soap Bubbles* is a welcome reprint of a masterpiece; and very timely now that we can get liquid detergents that will supplant the elaborate recipe with Price's glycerin and Castile soap. Griffin's *Echoes of Bats and Men* is a simplified version of *Listening in the Dark*, and is the easiest of the batch to read. I have done some consumer research on Hurley's book, which I used for half a term as the backbone of work with a non-science sixth form; we found it rather difficult, chiefly because I was trying to explain radioactivity concurrently instead of doing this first. But it did its job well, stimulated participation, and as it concentrates on a single problem and its pursuit, gives an excellent example of the way in which scientific ideas develop. I shall do this again, and can recommend it. For the rest, I would make them available for sixth-form pupils to read; so far, nothing else quite at this level and price seems to be published in Britain.

The Arrow Series are translations, three from France and one from Spain. Couderc's *The Wider Universe* is a very good survey of recent progress in astronomy, leading up to the modern theories of cosmology. Duquesne's *Matter and Antimatter* is less satisfying, chiefly because the early chapters deal with familiar work which is in all the text-books, and the discussion of anti-particles (up to 1956) seems a sort of tail-piece. Gaston Viaud's *Intelligence* is an experimental psychologist's approach to the development of conceptual thought, and the processes behind the analytical technique for breaking down an apparently insuperable problem into lesser and manageable units; I found it clear, stimulating and enjoyable. Font Quer's *The Anatomy of Plants* really scarcely belongs to the group, for it is, in fact, part of the section on morphology from a major work; it is well illustrated, and one's only criticism is that the examples chosen seem to include many plants that are common in Spain but unfamiliar in Britain.

These four books, though probably breaking no new ground in the paper-back field (except by offering a non-paper-back edition as well) are sufficiently distinctive to be recommended for a library as a group; with a special recommendation for Couderc and Viaud. G. R. NOAKES

PLASMA PHYSICS

Plasma Physics

By S. Chandrasekhar. Pp. 217. (Chicago: University of Chicago Press; London: Cambridge University Press, 1960.) 14*s*. net.

DURING the past few years there has been growing interest in the dynamics of fully ionized gases, much of it stimulated by the hope of releasing energy by the controlled thermonuclear fusion of light elements. Although the classified research in this field was released at the Second Geneva Conference on the Peaceful Uses of Atomic Energy, there is a serious shortage of comprehensive reviews of recent developments, which this collection of Prof. Chandrasekhar's lectures will do much to alleviate. The lecture course was chiefly concerned with the most interesting approach to plasma dynamics—one that lies between a detailed consideration of individual particle orbits, a method which is usable in only the simplest geometries, and the crude but widely applied magnetohydrodynamic method in which the plasma is represented as an electrically conducting fluid. The method is valid for a diffuse plasma in a strong magnetic field and is based on the assumption that the Larmor radius of a typical particle orbit is much smaller than any other length in the problem, and the corresponding gyrofrequency is much greater than any other frequency, including the molecular collision frequency. It is then possible to use a perturbation treatment of particle orbits and make use of a number of adiabatic invariants to simplify the self-consistency problem for the macroscopic fields.

Chandrasekhar's lectures begin with a brief review of the Maxwell–Lorentz theory of the interaction of an assembly of charges with an electromagnetic field, then proceed to a discussion of the orbits of charged particles in slowly varying fields, introducing and considering rather carefully the significance of the adiabatic invariants of the motion. The first-order orbit theory is then applied to a number of problems, including the equilibrium and stability of plasma in a magnetic field, and the propagation of low-frequency oscillations. There is a brief chapter on plasma oscillations, and a final section in which the possibility of intermolecular collisions is admitted and certain transport processes considered.

The subject is necessarily mathematical in character; but formalism is not allowed to get out of hand. There is no mention of experiment, a particularly unfortunate circumstance in a subject as full of surprises as the physics of ionized gases. The preface confesses that Prof. Chandrasekhar has not read the material, and it is not clear that he would have published it in its present form; however, although not the authoritative monograph for which one might have hoped, this work will be welcome to everyone interested in plasmas, and it should be read by anyone studying theoretical aspects of the subject. W. B. THOMPSON

THERMAL STRESSES

Theory of Thermal Stresses

By Prof. Bruno A. Boley and Prof. Jerome H. Weiner. Pp. xvi+586. (New York: John Wiley and Sons, Inc.; London: John Wiley and Sons, Ltd., 1960.) 15.50 dollars; 124*s*.

THE authors give a comprehensive survey of methods of calculating stresses and deformations in a solid body due to temperature variations. Elastic, visco-elastic, and plastic materials are considered under static, quasi-static, and dynamic conditions, and sections are included dealing with thermodynamic fundamentals and heat conduction.

The book is divided into four parts, of which the first is concerned with basic thermodynamics, and derives the stress-strain and heat-flow equations. For most practical problems, the terms in the heat-flow equations, representing convertibility of mechanical and thermal energy, may be neglected, so that the calculations of temperature distribution, and of stress and displacement distribution, may be made separately. Most of the problems treated in later sections of the book are of this type. The remainder of the section considers various ways of formulating the thermoelastic problem in 2 and 3 dimensions.

The second part is devoted to the solution of the Fourier heat conduction equation for various boundary conditions. Methods described include the superposition and imaging of sources and sinks and the use of Green's functions, characteristic function solutions, the use of Laplace transforms, conformal mapping, approximate solutions using finite differences, electrical analogues, the variational methods of Kantorovich and Green, and Biot's method, obtaining the equations in Lagrangian form. Static solutions may be extended to cover dynamic cases using Duhamel's theorem.

The third and largest section of the book deals with the determination of stress and displacement for a given temperature distribution for various structural elements. Curved and straight beams, trusses, rings, cylinders, plates, reinforced sheet, and shear-lag problems are dealt with mainly by using the approximations of strength of materials theory, St. Venant's principle being invoked in the treatment of end effects. Exact and approximate theories are compared for the case of the rectangular beam. Semi-inverse methods are used for most of the exact solutions described, energy methods being used to obtain approximate solutions. Other methods described are Goodier's method, the use of centres of dilatation, stress functions, and finite difference and influence coefficient methods. Thermally induced vibrations of plates and beams are briefly considered and there is a chapter on stability.

The fourth part, dealing with inelastic systems, serves as an introduction to a rapidly developing field. Laplace transforms are used to solve linear visco-elastic problems, and creep buckling is discussed. The final chapter gives examples of plate and cylinder analysis for plastic materials.

The book covers a wide range, from classical thermoelasticity to recent developments in visco-elastic theory, and it is pleasing to report that the cross-referencing is good. Parts 2 and 3 are largely self-contained, a fact which will be welcomed by readers concerned with practical aspects of the subject. The numerous references to published work are listed, with comments, in footnotes. I feel that a list of references at the end of each chapter, and a list of symbols at the beginning of the book, would have been helpful. Despite these minor imperfections, the book meets a real need for a reference work in English on this subject, and should prove to be of great value to research and design engineers working in this field. B. S. Owen

FLAME PHOTOMETRY

Flame Photometry

By Prof. John A. Dean. (McGraw-Hill Series in Advanced Chemistry.) Pp. viii + 354. (New York: McGraw-Hill Book Company, Inc.; London: McGraw-Hill Publishing Company, Ltd., 1960.) 89*s*.

THE application of flame photometry to the determination of microconstituent elements in biological, mineralogical and related materials has been of continuing interest to chemists since the pioneer work of Lundegaardh on flame excitation, and this interest has increased enormously in the past decade.

The present book by Prof. Dean is a comprehensive account of investigations and of instrumental developments in this field. A general, but adequate introduction dealing with atomization, flame characteristics and the nature of emission spectra is followed by a chapter of particular interest which deals with the use of organic solvents, either added to aqueous solutions to enhance emission by their effect on such physical properties as surface tension and viscosity, or in selective extraction methods to increase the concentration of the test element and reduce interference by extraneous ions.

Following a full description of modern flame photometers, burner systems and photo-sensitive detectors, there is a detailed discussion on interferences arising from flame background, cation and anion enhancement and suppression and spectral coincidences.

Individual chapters are devoted to specific periodic groups giving spectral emission lines and band-heads for various elements, comments on possible interferences and specific applications. Scandium, yttrium and the rare-earths are dealt with, and original spectra of these elements are given. Atomic scientists will notice that beryllium is not mentioned, and that the sensitivity of boron is poor as compared with, for example, the fluorimetric method. Strontium and barium receive detailed treatment.

The principles of atomic absorption spectrophotometry are only briefly discussed, and one hopes that, in view of the interest shown recently in the possibilities of this technique, it will not be long before Prof. Dean deals more fully with this subject.

The later chapters are concerned with the determination of non-metals and with agronomic, clinical and botanical applications. An extensive bibliography of 780 references is given which covers a wide range of materials and analytical procedures.

The book will prove a most valuable working volume for the laboratory and has much to offer the student of spectrophotometry. H. L. Bolton

INTERIOR BALLISTICS OF ROCKET MOTORS

Rocket Propellant Handbook

By Boris Kit and Douglas S. Evered. Pp. xiv + 354. (New York and London: The Macmillan Company, New York, 1960.) 12.50 dollars; 87*s*. 6*d*.

Liquid Propellant Rockets

By David Altman, James M. Carter, S. S. Penner and Martin Summerfield. (Princeton Aeronautical Paperbacks, No. 1.) Pp. v + 189. (Princeton, N.J.: Princeton University Press; London: Oxford University Press, 1960.) 2.95 dollars; 24*s*. net.

Solid Propellant Rockets

By Clayton Huggett, C. E. Bartley and Mark M. Mills. (Princeton Aeronautical Paperbacks, No. 2.) Pp. v + 167. (Princeton, N.J.: Princeton University Press; London: Oxford University Press, 1960.) 2.45 dollars; 20*s*. net.

Solid Propellant Rocket Research

A Selection of Technical Papers based mainly on a Symposium of the American Rocket Society, held at Princeton University, Princeton, January 28, 29, 1960. Edited by Martin Summerfield. (Progress in Astronautics and Rocketry, Vol. 1.) Pp. xix + 692. (New York: Academic Press, Inc.; London: Academic Press, Inc. (London), Ltd., 1960.) 6.50 dollars.

ROCKET motors are mechanically simple devices; that they are nevertheless difficult to design and expensive to develop is due to the fact that present-day quantitative knowledge of the relevant chemical and physical processes is still hopelessly inadequate. The upper limit to the performance of a rocket is relatively easy to predict: only the laws of thermodynamics are required, coupled with the availability of the thermodynamic properties of the propellants, the assumption of equilibrium, and the ability to obtain numerical solutions to a dozen or so simultaneous non-linear algebraic equations. It is the rate processes which present the difficulty: how large the motor must be for a given approach to the maximum performance depends, for example, on rates of chemical reaction, on the fluid mechanics of droplet break-up, and on the interactions between finely divided solids; none of these processes can be accurately computed at present.

In these circumstances, design must proceed mainly by trial and error. The role of theory is reduced to that of investigating models which are no more than caricatures of reality. Such investigations are successful if they correctly predict the trends of the performance variations resulting in changes to the design; for they can then guide the development engineer in the most hopeful directions and assist him to distinguish between major and minor influences. Such models are needed both for 'normal' and 'abnormal' operation, that is, for the desired smooth and steady burning, and for the unsteady phenomena, known as 'chugging', 'chuffing' or 'screaming', which all too often intervene at the last moment to destroy a promising design. It appears likely that steady burning in liquid-propellant motors is best represented by models in which the flight and vaporization of droplets play the major parts with the atomization process, one which must be studied experimentally. Steadily burning solid-propellant rockets conform well to the supposition that the burning-rate per unit area of propellant surface area depends mainly on pressure, and secondarily on initial temperature and transverse gas velocity; these dependences have, however, to be determined experimentally for each propellant. The most disastrous type of unsteady burning, 'screaming', is known to involve, for both classes of rockets, large-amplitude acoustic vibrations within the combustion chamber; but the nature of the interactions with the combustion process by which the vibrations are driven remains an almost complete mystery.

To turn now to the four books under review, the first, by Kit and Evered, is a contribution to the simplest aspect of the problem: the thermodynamic prediction of maximum performance. The authors have collected all the relevant thermodynamic data they could find, and presented it in the form of tables with connecting discussion. The enterprise is a useful one, and the result will be accepted gratefully by propellant-system designers; the gratitude of the latter will, however, not be unmixed with dismay, and occasional fury, when they find that vital information has carelessly been omitted. To take the first entry of Table 1–1 as an example, the authors state that the heat released in the hydrogen–oxygen reaction is 57·80 kcal./gm. mole; temperature and phases are not indicated. Two pages later we are told that such figures 'usually' relate to 1 atmos. and 25° C., and that the phase of the H_2O "must always be stated"; but they still fail to give that information. There are numerous such small but paralysing omissions in the book.

The two paper-back books, *Liquid Propellant Rockets* and *Solid Propellant Rockets*, are reprints from the Princeton series of volumes on high-speed aerodynamics and jet propulsion; they have been made available for the benefit of students. I am not enthusiastic about them for this purpose, for they lack the formal organization, carefulness of definition and freedom from distracting speculative material which students justifiably expect; they are also, of course, considerably out of date. The article on liquid-propellant motors by Summerfield may serve as useful background reading, but that on thermodynamics by Altman and Carter can only confuse, while the solid-propellant sections are chiefly of historical interest.

Solid Propellant Rocket Research falls into an entirely different category. It contains the papers presented at the symposium held at Princeton in January 1960, under the auspices of the American Rocket Society, together with a few additions. Sections included are: mechanical properties of grains (that is, of solid-propellant charges), steady-state burning mechanisms, combustion of metals, theories of unstable combustion, experiments on unstable combustion, and solid-propellant ignition. The book gives an impressive view of the magnitude and vigour of the present effort being made by the United States in this field; it also adds emphasis to the remarks about present ignorance made at the beginning of this review. To cite two examples, though both Nachbar and Summerfield *et al.* present theoretical models for the burning process of composite propellants, none of the authors would claim that the models can be made to fit experimental findings for more than a very restricted range: the relation of the theories of oscillatory burning to the experimental facts is still more tenuous. Nevertheless, if money, man-power and professional expertise can find solutions to these problems, few can doubt that it is the American workers who are most likely to succeed. D. B. SPALDING

THE NEW LOOK IN MATHEMATICS

Mathématiques Générales

Algèbre—Analyse. Par Prof. Charles Pisot et Prof. Marc Zamansky. (Collection Universitaire de Mathématiques, 4.) Pp. xxiv+648. (Paris: Dunod, 1959.) 4,500 francs.

TO those brought up on a *Cours d'Analyse* of the classical French tradition, the new look is austere. Pisot and Zamansky have planned their book for students just beginning a university course in mathematics, of honours standard, working on a basis acquired at school, which, the authors assert frankly, is insufficient in some aspects and useless in others, though they are optimists enough to believe that, in France at least, this state of affairs will be remedied in a few years.

There are four main sections. The first introduces logical notions and the elements of set theory, with illustrations to show that many of these ideas are known at school, if not clearly identified there. The second section is on algebra, mainly linear algebra: the fundamental ideas of a vector space and the linear mapping of one vector space on another serve to give, in compact form, the basic theory of matrices, determinants and related concepts. The section on analysis is based on two main principles: first, the Cauchy sequence $\{x_n\}$ in which $x_p - x_q$ tends to zero as p and q tend to infinity; secondly, the doctrine, somewhat subtle at this stage, of uniform convergence. Early introduction of this latter concept allows much use of piece-wise constant functions. Thus, for example, an integral can be defined more or less intuitively for these functions, and then extended to limits of sequences of such functions; this establishes the existence of integrals for all the functions ordinarily encountered, though it does not quite give the Riemann integral. But most analysts would now maintain that the persistence of the Riemann integral is due to "the stubborn conservatism of academic tradition", and the approach to integration in this volume would carry over quite easily to Lebesgue integration. Most of the technique of analysis is reserved for the final section, which includes some work on differential equations.

How would this book fit into a British course? Some of the ideas are already incorporated in our courses, though perhaps not as first-year work, and more will undoubtedly follow. But how much? A comparison of this book with the new volume by Dieudonné, *Foundations of Modern Analysis*, shows that the former is itself still a compromise between the classical and the contemporary in analysis. Dieudonné, we may suppose, represents the pure gospel according to Bourbaki, when he insists on the modern emphasis on conceptual notions, as opposed to the computational aspect expounded, for example, in Whittaker and Watson. His is the remark above about the Riemann integral. If the older analyst should doubt whether the concept-conscious undergraduate would succeed with, say, some of the stiffer examples in Whittaker and Watson, it would certainly not be quibbling to suggest that there is no reason why he should: indeed, the epsilon-conscious undergraduate of the 1920's might have been no more successful with some of Wolstenholme's teasers on conics. Mathematics changes in mode as it grows in content, and the undergraduate must be taught in the style and idiom of living mathematics. Yet this may not be a complete answer, save as regards the training of pure mathematicians. It is true that certain concepts of modern abstract mathematics have found a place in branches of mathematical physics, but too much abstraction might hamper the student whose chief interest in mathematics lies in its physical applications. Are we then to impose an early separation between the pure and the applied mathematician? Before accepting this harsh doctrine, we may remember that Maxwell, Rayleigh, J. J. Thomson were all products of the old Tripos, and hope that some British mathematician will set himself the task of writing a text for our universities which will weave together the modern abstract concepts with the older computational technique, which will absorb Bourbaki without exorcising Whittaker and Watson, which will save us from the sterility of ideas without technique and from the superficiality of technique without ideas.

T. A. A. BROADBENT

PICTORIAL GUIDE TO THE LANGUAGE OF SCIENCE

Mathematics in the Making

By Lancelot Hogben. Pp. 320. (London: Macdonald and Co. (Publishers), Ltd., 1960.) 50*s.* net.

"SCIENTISTS need to be taught mathematics", Sir Cyril Hinshelwood has said, "as a language they can actually speak"; one implication of this is that those non-scientists who wish or need to know what modern science is doing should have some knowledge of the mathematical language, though a phrase-book may serve them instead of a complete grammar and dictionary. Hogben has given us a vivid and stimulating phrase-book, built up in roughly chronological order, with a wealth of coloured plates, diagrams and pictures. The representations of three-dimensional surfaces, for example, are so admirable that some irrelevancies—Samurai, the mosque at Cordova—can be forgiven. The team-work which has gone into the making of the book deserves all the praise which Hogben bestows on it.

Neugebauer and Needham have thrown a completely new light on early mathematics in Egypt, Mesopotamia, China, India, and Hogben's account is clear and illuminating. He is rather less at home with the Greeks, since he under-estimates the importance of the Greek contribution to the concept of mathematical proof, and over-estimates the role of measurement in mathematics. Hogben says that we must learn to communicate in language which the electronic brain understands; the mathematician would say that the electronic brain has been constructed to obey the commands given to it in our language.

The influence of the Moslem civilization bridges the gap in the Western World from the Hellenic legacy to the seventeenth century. Here Descartes showed us how to describe geometrical properties in algebraic language, Fermat groped towards the Newton–Leibniz calculus, Pascal and Bernoulli initiated the doctrine of probability. On probability, the author is at his best; his enthusiasm is infectious, his excellent diagrams and pictures are genuinely constructive, and his somewhat old-fashioned obsession with visual aids is pardonable. By way of contrast, there is much clumsy symbolism and heavy-handed manipulation in dealing with algebraic geometry and calculus. More modern mathematics is dismissed briefly: hasty references to topology, non-Euclidean geometry, an ugly version of vector algebra lacking any motivation for the non-commutative product, Boolean algebra and recent views on logic and the nature of mathematics. The author is willing to deal sketchily with these topics because, to use a favourite phrase of his, they have as yet had little or no 'pay-off'. But it may be fair to suggest that there is a further reason; Hogben has no interest in or liking for mathematics as a creative art. This may well diminish the value of his book to the many amateur students of mathematics who, outside their surgeries, court-rooms, offices, enjoy the delights of mathematical investigation without worrying very much about the material 'pay-off'.

Success for the book is certain, and, on the whole, well deserved. There is a warmth and vitality which over-ride some minor irritations. Ideological epigrams about Roman gangsters, remittance men in Kenya and the third person of the Trinity can be ignored.

T. A. A. BROADBENT

ELECTRON MICROSCOPY

Vierter Internationaler Kongress für Elektronenmikroskopie

Berlin, 10–17 September, 1958. Verhandlungen Band I: Physikalisch-Technischer Teil. Herausgegeben von G. Möllenstedt, H. Niehrs und E. Ruska. Pp. xix+851. 228 D.M. Verhandlungen Band II: Biologisch-Medizinischer Teil. Herausgegeben von W. Bargmann, D. Peters und C. Wolpers. Pp. xv+649. 196 D.M. (Berlin: Springer-Verlag, 1960.)

BETWEEN them, these two volumes contain more than 1,500 pages and nearly 1,700 illustrations, mostly electron micrographs very well reproduced. Of the 400 separate contributions, just one-half are in English, one-tenth in French and the remainder in German; the authors come from 26 different countries (as the foreword tells us), and the subjects dealt with run into almost every conceivable branch of science and technology. Volume 1, devoted to the physical basis and technological applications of electron microscopy, is almost half as long again as Volume 2, which comprises the biological and medical applications. This uneven division confounds the view that the development of the instrument is more or less complete and that the subject is now mainly concerned with its uses, particularly in biological investigations. In fact, more than half the first volume is taken up with papers on the principles, design and operation of the electron microscope, and with basic preparative methods, such as shadow-casting and object supports. The interaction of the electron beam with the specimen is now also receiving considerable attention, especially the removal of material from embedded sections. Field emission microscopy, to which a special symposium was devoted, is represented by sixteen papers.

Compared with the previous conferences, the most striking change is the increase in metallurgical applications. More than sixty papers are concerned with crystal growth, the origin and movement of dislocations, and transition and precipitation processes in metals. This increased activity is largely due to the methods developed in the past few years of preparing, from bulk metal, films thin enough for electron microscopy, an advance comparable with the revolution in biological work when the technique of cutting very thin sections of tissue was devised. The metallurgist is in a better position, however, in that he can carry out meaningful experiments on his specimen while it is in the electron beam. Several papers describe attachments for heating, cooling and straining a metal film, and a number of cinematographic records have been made of the resulting changes. We may now expect to see the same rapid extension of electron microscopy into metallurgical laboratories, as occurred earlier in biology.

A fair number of ultra-microtomes is now available for cutting sections down to about 100 Å. thickness ; one or two are described in Volume 2 and more were on show at the conference. Biologists of all kinds are now busily engaged in sorting out the unexpectedly rich micro-anatomical detail revealed by this new technique in all tissues and micro-organisms. Almost the whole of Volume 2 is taken up with papers describing observations on thin sections, under the headings of cell morphology, anatomy, pathology, botany and micro-biology. The latter section also includes much work on the structure of isolated bacteria and especially of viruses. In general, biologists are now engaged with the electron microscope in the same sort of rapid extension of structural knowledge as was made possible by improvements in the optical microscope in the last half of the nineteenth century. To complete the picture, active efforts are being made to discover suitable means of staining particular cell components with compounds of high density, so as to show them up in the electron image.

The Berlin conference was by far the biggest of the four international meetings on electron microscopy so far held. Since for much of the time there were four parallel sessions, it is most valuable to have a permanent record of the contributions. The editorial committee of the German Electron Microscopical Society has gone to great trouble to make the record complete, and the publishers have given us a work which is in the best traditions of German book production. However, one cannot but ask if it is not too much (in bulk and in cost), and too late. This standard of presentation is right and proper for a subject which has reached a certain state of finality : the *Handbuch der Physik* is all that one could require. But electron microscopy is still in rapid flux : many of the findings reported here are provisional and most of the authors are likely to have published one or more further papers in specialist journals during the two years which it took to produce these proceedings. As a survey of the state of electron microscopy in 1958 they are a most admirable record. For the working scientist it would be more useful to have a much quicker, but technically speaking a poorer, printing of the manifold contributions, so that he could refer to them while they were still relevant to work in progress, and also, if this be not too vain a hope, so that the price could be low enough to have a copy on his own shelves as well as in the library. Active exploration of alternative ways of publishing conference proceedings are urgently necessary ; one such experiment is now in progress in connexion with the European conference on electron microscopy held in Delft in 1960. V. E. Cosslett

X-RAY DIFFRACTION PHOTOGRAPHS

The Interpretation of X-ray Diffraction Photographs
By Dr. N. F. M. Henry, Prof. H. Lipson and Dr. W. A. Wooster. Second edition. Pp. x+282. (London : Macmillan and Co., Ltd. ; New York : St. Martin's Press, Inc., 1960.) 63*s*. net.

THE battered condition of the reviewer's copy of the first edition (1951) of this book testifies to its value to generations of impecunious research students. In the second edition, the authors have maintained the high standards set by the first, and in their preface they explain that parts of the book are corrected, but substantially unchanged, and new sections have been added to deal with techniques which have come into general use in recent years, for example, the counter diffractometer.

The main emphasis is the same as that of the first edition, namely, on explaining crystal lattices, the geometry of X-ray diffraction and how to index good X-ray photographs of various kinds. These topics are treated in considerable detail and explained clearly by means of fully worked examples. An outstanding feature of the treatment is that the examples chosen illustrate the difficult cases encountered in practice, and the explanations are explicit. Triclinic and rhombohedral examples are given in detail and not avoided by the not uncommon practice of assuring the unwary reader that "extensions to systems of lower (or higher) symmetry are obvious". Only very elementary knowledge of mathematics is assumed ; normally, explanations are given in geometrical terms aided by extremely good diagrams. The problems, with answers in an appendix, are a most useful feature for the beginner. Appendixes contain tables of formulæ, of multiplicity factors and of crystal classes and their physical properties.

For the chapters devoted to detailed explanation, the book can scarcely be bettered ; unfortunately, apart from a masterly chapter on the properties of X-rays, those in which topics are outlined are disappointing. For example, a reference (1930) is given for the application of a correction to apparent intensities measured on oscillation photographs, but none for the other kinds of photographs now in more common use. Similarly, there is some vagueness about problems concerning crystals which are unsuitable for accurate morphological measurement. Thus, although the unit cell dimensions of monoclinic crystals have actually been measured accurately by purely X-ray methods, the beginner might not realize this from "but, no doubt, by suitably choosing reflections, it should be possible to devise methods similar to those described in 13, 4·2". It seems a pity that, after so much trouble has been taken to make the reader familiar with the reciprocal lattice, the tables of correction factors are given in terms of θ instead of sin θ.

In a book of this kind it is extremely difficult to avoid numerical typographical errors, and even three authors have not been sufficient to prevent some from appearing.

These are minor criticisms of a book which is, on the whole, extremely good. The printing and paper are good and the diagrams excellent. Both beginners and experienced crystallographers will find much of value in this book, which is not unreasonably priced.

M. R. TRUTER

MODERN MINERAL TECHNOLOGY

International Mineral Processing Congress, 1960

Proceedings of a Congress arranged by the Institution of Mining and Metallurgy, held on 6th to 9th April, 1960, at Church House, Westminster, London, S.W.1. Pp. xiii+1118. (London: Institution of Mining and Metallurgy, 1960.) 100s.; 14.50 dollars.

THIS volume contains the inaugural address, the fifty-two papers and their discussion at the 1960 International Mineral Processing Congress, the fifth of these meetings to be held since the War. The change of title from 'ore dressing', 'mineral dressing' and 'mineral engineering' still leaves this ebullient engineering science inadequately described. A stroke of genius is needed which will bring its activities in metallurgy, chemical engineering, physical chemistry, electromagnetics, nuclear physics and the rest to a titular focus. As with the previous congresses, held in Britain, France, Germany and Sweden, papers from leading laboratories and industrial operators in many mining countries are roughly grouped—in this case in nine divisions. Detailed review of such a mixed bag is impossible. The work recorded shows that the challenge of industry continues to be met at all levels, from improvement of established processes to creation and development of the new ones required by the insatiable demand of modern civilization for metals, earths and high-purity mineral concentrates.

The first group of five papers deals with comminution, the step in ore treatment in which valuable minerals are exposed for surface attack or detached from the accompanying gangue. New methods of grinding, some with a discipline of statistical mathematics, are described. Papers 6–10 deal with particle dynamics in aqueous media, both under conditions of free fall and of centrifugal acceleration. X-ray scanning of opaque slurries is described. By the aid of these techniques large tonnages of 'pulp'—an aqueous suspension of small particles, mostly less than 20 μ in diameter—are controlled as to size, shape and/or mass into equal-responding fractions. This, coupled with the comminuting processes, is an essential preliminary to concentration (separation of the various mineral species in the ore).

In papers 11–18, fundamental physical chemistry is related to flotation research. Improved methods of micro-auto-radiography are described in connexion with adsorption of tagged reagents to mineral surfaces. Relative rates of reaction in response to surface agents, the mechanisms of complexing, physical stability of sorbed layers and reactions in the zeta zone which surrounds a particle in aqueous suspension are investigated, using ultrasonics, photomicrography and thermochemistry. The transporting role of air is considered, using contact-angle measurement or over-gassed water. The depressive effect of typical accompanying minerals in sphalerite ore undergoing flotation is shown. In the next group of papers (19–23) advances in flotation practice are described and process economics receive some attention.

Interest in the older processes of concentration by gravitational force continues to stimulate research (papers 24–30). Jigging of transparent objects in organic liquids and the study of stratifying action show the value of statistical appraisal in complex problems of dynamics. Dense-media separation finds a novel control valve in the shape of a magnetic field which constrains the ferro-magnetic media at the under-flow end of the separating vessel. Tetrabromo-ethane (specific gravity 2·963) is proposed as a dense separating liquid in place of magnetite or ferro-silicon pulped with water, the usual fluid mixture. Cyclone physics continues on its scientifically turbulent course. In commercial practice it has established its value everywhere, but agreement as to how it works is not yet complete.

Papers 31–38 describe advances in the magnetic, electronic and high-tension electrical treatment of ores. The effect of moisture and surface conditioning on the behaviour of small particles in an electrostatic field promises to extend the use of electrostatic separation by improving control. A novelty is the use of a refracted beam of light to trigger a mechanism by means of which diamonds can be automatically removed from passing gravel. Papers 40–44 are concerned with the chemical processing of galena, scheelite, wolframite, some silicate minerals and uranium ores, and the use of autoclaves to aid solvation. These are followed by the last eight papers (39 and 45–52), which deal with process study, control and testing, fluidized-bed roasting, automatic control, statistical analysis and the observation of concentrating techniques performed mechanically on the stage of a microscope.

Despite the fact that many of these highly technical scripts were written in Russian, Japanese, Italian, German and French, the translation is admirable. The book is excellently produced and well indexed. It bears no signs of the problem which bedevils all important meetings today—so much to do, so little time. The subject-matter covered ranges over wide fields of research and production activity, and leaves me more conscious of what has been left out of his conspectus than of what he has crowded in. The book is essential for workers in the integrated field of mineral technology.

E. J. PRYOR

SHORT REVIEWS

Sir Isaac Newton

By Dr. H. D. Anthony. (Life of Science Library, Vol. 39.) Pp. 224+10 plates. (London: Abelard-Schuman, 1960.) 21*s*. net.

TO write a readable account of Newton's life and achievements is a task of very great difficulty, as all who have attempted it will agree. Although Newton's extension in time was considerable (85 years), his extension in space was restricted to the neighbourhood of Woolsthorpe, Cambridge and London. His achievements in astronomy and mechanics are not easy to explain, owing partly to the confusion surrounding his definition of 'mass', a definition which was wrongly translated by the exponents of his mathematical principles of natural philosophy from his day until the present. An exception was Henry Pemberton, one of the young men who received generous help from Newton, and who had the privilege of reading over, with him, the manuscript of his *View of Sir Isaac Newton's Philosophy* (1728). Newton defined mass as a 'measure'—not something which a body had, which 'could' be measured.

Dr. Anthony has succeeded in overcoming these difficulties by giving a more balanced account of Newton, including considerably more detail about his early life and contemporary background, his emergence into public life, his activities at the Mint and his theological writings, than has been usual in former biographies. The explanation of Newtonian dynamics is lightly but clearly outlined, with the exception of a paragraph on the tides, where we are unfortunately told that neap tides occur at full moon. Two minor errors are: "Sir" Robert Boyle (p. 102), and "the American airmen who made the first Trans-Atlantic flight" (p. 41). The author has forgotten two of Newton's countrymen who also voyaged "through strange seas . . . alone".

This is a well-produced book with excellent illustrations. An appendix containing interesting notes on the illustrations, a useful short bibliography and an explanatory list of words used with special meanings in British universities (for example, subsizar), all contribute to making this volume one that can be strongly recommended. G. BURNISTON BROWN

Science in Writing

A Selection of Passages from the Writings of Scientific Authors, with Notes and a Section on the Writing of Scientific Prose. By T. R. Henn. Pp. 248. (London: George G. Harrap and Co., Ltd., 1960.) 20*s*. net.

IT is a pity that so much scientific prose fails to be beautiful. Yet scientists in the past and of to-day have succeeded in writing with mastery. Mr. Henn has chosen examples from the works of several scientists ranging from Pliny to living authors.

These passages are not presented as models to be imitated, but they help to illustrate very cogent suggestions for good writing which Mr. Henn gives in the last part of his book. He feels that these authors have excelled because they have controlled their material so well. This control is derived from sheer knowledge of the facts and a persistent quest for what is relevant until "the whole assumes an ordered and organic pattern".

It is intriguing to see how devices of style are used (consciously or otherwise) and how the personality gleams through the prose. Newton's symmetry of thought, his dignified and authoritative tone are evident. Rayleigh's style, as complete in itself as a Mozart string quartet, would suffer loss were attempts made to amplify or compress it in any way. Darwin develops his argument simply and modestly yet evoking excitement. Allbutt's "sweeping brush-strokes" are a contrast to Duke-Elders's gradual unfolding of ideas. Punctuation is used by Whitehead, Max Born, Hinshelwood and Ricardo to give a limpid flow and abounding clarity. As in 'humane' prose, there can be scope for imagery and rhythm. Contrasted and associated rhythmic sequences can give a breathing quality to prose, so making it more pleasurable to digest. Imagery may provide analogies, may convey shades of meaning; sometimes frankly poetic as in Jacquetta Hawkes's writing.

The book should interest any scientist who wishes to write well. RUXTON VILLET

The Wildbooters

By Fritz Kern. Pp. xi+204. (Edinburgh and London: Oliver and Boyd, Ltd., 1960.) 21*s*. net.

THIS is an English translation, edited by K. J. Narr, of the late Prof. F. Kern's *Der Beginn der Weltgeschichte* (1953). Its thesis is the same as that put forward by Prof. W. J. Sollas in *Ancient Hunters* (1911), that archæology and ethnology can be combined to present "a picture of the early history of mankind" (p. 54). Wildbooters, Kern's word for hunters and collectors, replaces ancient hunters, protolithoid Lower Palæolithic, and instead of Australians (Palæolithic), Eskimo (Magdalenian) and Bushmen (Mesolithic), Ituri Pygmies, Chenchus and Yamanas are chosen to reveal the "essential traits" of man's "basic culture"; but the objections to this thesis remain the same. Archæology is a science, ethnology is not; the cultural stratigraphy of the ethnologist is one thing, that of the archæologist is another; and "reconstructive imagination" is no substitute for factual history. The first six chapters attempt to summarize and synthesize the prehistoric racial and archæological background, the seventh deals with the oldest cultural (ethnological) stratum, the rest describe the economy, religion and social organization of this stratum as deduced from ethnological accounts of their modern survivors.

There are no bibliography, maps or index. *The Wildbooters* provides a stimulating hypothesis of the life of early man, but archæologists and ethnologists will demand more detail, social anthropologists will wonder why so many of his sociological data are drawn from such little-known and inadequately studied tribes, while the general reader will be defeated by the morass of conflicting racial and archæological theories in the first few chapters. G. I. JONES

Archæological Investigations in British Guiana

By Clifford Evans and Betty J. Meggers. (Smithsonian Institution: Bureau of American Ethnology, Bulletin No. 177.) Pp. xxi+418+68 plates. (Washington, D.C.: Government Printing Office, 1960.) n.p.

THE authors, who are well known for their work at the mouth of the Amazon and other parts of lowland South America, spent the winter of 1952–53 in British Guiana. Their report can be assumed to have answered most of the questions of any importance which are likely to arise in the archæology. There is, however, one important problem, probably insoluble, to which they direct attention for the first time, namely, the possible existence of an early hunter horizon of the age of the first occupation of South America. The evidence consists of seven large stemmed stone points, four of which they illustrate, to which I may add three of rather different form in the University Museum of Archæology and Ethnology, Cambridge. All are casual finds, they are unlike anything known of later date, and the possibility of finding a site which puts them in their context is remote in the environment.

For the rest, the work covers the North-West District and two inland areas. The first produced a pre-ceramic shell-mound stage, with polished-stone tools and extremely crude percussion-flaked ones, with pottery and agriculture coming into its latest stages, perhaps from Venezuela. It is ascribed to the early centuries A.D. There follow three distinct ceramic phases, the first from Venezuela *c.* A.D. 500, the second from Trinidad *c.* 1100, and the third probably from the East *c.* 12–1300. All lasted until the arrival of the Europeans. The inland areas, the Rupununi Savanna and the Upper Essequibo, were chosen as likely ones for finding traces of people immigrating from the south. Traces were indeed found in the shape of distinctive pottery, but all belonged to people known to have come after 1670, some of them, the Wai-Wai, very recently indeed.

The sum of it all is that British Guiana was never a great centre of aboriginal development and had no great attraction for them. Various peoples entered it from time to time, most of them at a late period, and probably under pressure.

G. H. S. BUSHNELL

Natural Selection in Human Populations

Edited by D. F. Roberts and G. A. Harrison. (Symposia of the Society for the Study of Human Biology, Vol. 2.) Pp. viii+76. (London and New York: Pergamon Press. 1960.) 20*s*. net.

IN the first paper, "Natural Selection in Man: Some Basic Problems", Prof. L. S. Penrose discusses the particular genes recognizable in human populations in terms of their frequencies, precise effects, origins, degrees of stability, and quantitatively observable trends. The popular view that present-day cultural practices have abolished the effects of natural selection upon our species is rejected. Rather, the process has been transferred at certain points from one genotype to another, as may be observed in the role that medical control of infectious disease has exerted in reducing the advantage of those genes whose frequency in the gene pool was once maintained for fighting disease. Dr. Penrose regards the primary force of selection today to be directed towards the embryonic level, where most anomalies occur. Such selectivity does not harm the gene pool since its victims do not live to reproduce.

Dr. A. R. G. Owen's paper, "Mathematical Models for Selection", approaches selection in terms of its effects solely upon the genotypes themselves. His mathematical model is a representation of the polymorphism of multiple alleles which he suggests as a means of approach to the complex factors of heterozygosity.

"The Relative Fitness of Human Mutant Genotypes" by Dr. C. A. Clarke and "Natural Selection and Some Polymorphic Characters in Man" by Dr. P. M. Sheppard are clinical approaches to those gene complexes we identify as the units of human polymorphism. The fourth contribution to the Symposium, by Prof. T. Dobzhansky, "On Selection of Gene Systems in Natural Populations", emphasizes the frequently overlooked fact that natural selection works on organized gene systems rather than on single discrete genes which are the concern of some human geneticists embogged at the biochemical level.

The final paper, which is by Dr. Ashton, "The Rate of Change in Primate Evolution", is essentially a review of the primate fossil record and of studies of the St. Kitts green monkey population. Dr. Ashton regards the rate of morphological change for the primates as completely indeterminable.

This collection of researches should be useful to the physical anthropologist concerned with problems of human genetics and the intellectual history of this phase of the discipline. As a broad study of natural selection in human groups the book is only partially successful. Little attention is given to the cultural factors affecting the frequencies and distribution of human polytypes. An understanding of that relationship of social tradition to genetic complexes is the very crux of anthropological theory.

KENNETH A. R. KENNEDY

Mechanisms in Radiobiology

Edited by Maurice Errera and Arne Forssberg. Vol. 2: Multicellular Organisms. Pp. xiii+395. (New York: Academic Press, Inc.; London: Academic Press, Inc. (London), Ltd., 1960.) 13 dollars.

THIS is not a text-book. The five chapters, all by different authors, show little sign of editorial integration and vary greatly in quality. "Gametes and Developing Embryo", by Roberts Rugh, is a useful literature source, but by no means easy reading. Rugh's contention that cells are more radiosensitive during differentiation than during division may help to loosen some of the present fixity of radiobiological thought. "The Adult Organism", by Clemedson and Nelson, is the least satisfactory chapter in the book. It is not only uncritical but seriously incomplete. For example, there exist six classical papers concerning radiation effects on the thymus, but only one of these is mentioned and that incorrectly. Structural changes in the retina, on which there is an important literature, are dismissed in five lines. Testis and ovary could have been omitted in view of their more complete coverage in Rugh's chapter.

"Immunology", by Hašek and Lengerová, is too short (sixteen pages, excluding chimeras) to do justice to this important topic. "Protective and Sensitizing Action", by Eldjarn and Phil, is a good and critical survey, despite its somewhat pro-SH bias.

The last chapter, "Recovery and Therapy", by van Bekkum, seems quite outstanding. Not only is it aptly critical and fully informed, but also the author has been able to digest his material and present it in a gracious literary form, and much wisdom withal: a model of science writing. O. A. TROWELL

Scolt Head Island

Edited by Prof. J. A. Steers. Revised edition. Pp. xi+269+29 plates. (Cambridge: W. Heffer and Sons, Ltd., 1960.) 50*s*. net.

SCOLT Head Island is a strip of marshland, shingle ridges and dunes approximately four miles long, lying off the north Norfolk coast between Burnham, Overy Staithe and Brancaster. Of the seventy-odd statutory Nature reserves which now exist throughout Great Britain, it can justly hold pride of place as one of the most intensively studied by botanists, zoologists and physiographers. The present volume provides ample testimony to the work of a great number of individuals during the past thirty-five years or so. As is to be expected, the physiography and evolution of the Island receive extensive treatment, evidence being provided of the structure of the various marshes, their rates of accretion and the influence of extraneous forces on them. The Island is evidently in a state of dynamic equilibrium, the beaches and dunes being built up at one time and eroded at another. Such circumstances demand constant adjustment and great adaptability by plant and animal colonists, and so provide wonderful opportunities for the ecologist. That these opportunities have been fully realized is evident from the accounts of pollen analysis in the peat and the detailed studies of flowering plant and bryophyte ecology. Of the animals, birds are treated in some detail with particular reference to terns, wildfowl and waders. There is a useful section on marine invertebrates and an interesting account of terrestrial molluscs in relation to the fluctuating variety of habitats that the Island has to offer. The insects of the Island appear to have been studied less than the other groups already mentioned, and the account of their ecology is rather fragmentary. Clearly, there are opportunities here for the investigation of micro-evolutionary changes for which they might provide admirable material.

The reappearance of this splendid symposium in revised and expanded form will be welcomed by anyone with a love of ecology and natural history. It provides an example of the ecological survey at its very best. W. H. DOWDESWELL

Schizophyzeen

Von Prof. Dr. Lothar Geitler. 2, umbearbeitete Auflage. (Handbuch der Pflanzenanatomie, Band VI, Teil 1. Zweite, völlig neubearbeitete Auflage herausgegeben von Prof. Dr. W. Zimmerman und Prof. Dr. P. Ozenda.) Pp. vii+131. (Berlin-Nikolassee: Gebrüder Borntraeger, 1960.) 57.50 D.M.

IT would be a mistake to assume that this volume, as might be suggested by the title of the series, deals only with the gross structure of the Schizophyceae—or, as they are better known in Great Britain, the Cyanophyta, Myxophyceae or blue-green algae. The author has interpreted anatomy in a broad sense, and almost every page has reference to other features of wider interest.

The morphological range in the group is adequately summarized, but in addition there is a particularly good account of modern work on the structure of the protoplast, a subject of considerable importance on account of the low level of cellular organization as revealed by the absence of differentiation into nucleus and cytoplasm. That botanical enigma, the heterocyst, also receives adequate treatment, but it would seem that there is still no satisfactory explanation as to the function, if any, of this peculiar type of cell.

The text is illustrated by many fine figures, while the printing and binding are all that could be wished for.

The Birds of the British Isles

By Dr. David Armitage Bannerman. Illustrated by George E. Lodge. Vol. 9: Scolopacidae (Part). Pp. xii+398+26 plates. (Edinburgh and London: Oliver and Boyd, Ltd., 1961.) 63*s*. net.

THIS ninth volume (with three still to come) is devoted entirely to the Scolopacidae and does not, indeed, completely cover that large family. Here we have the curlews, godwits, and an array of sandpipers; the phalaropes, separated by some authorities, are also included. So many of these species are not natives of the British Isles that Dr. Bannerman has had to be even more assiduous than usual in gathering extraneous material for full accounts of their life-histories. In doing this he has drawn on a wide knowledge of the literature and information supplied by correspondents, while other authors have contributed certain sections by invitation. In this way the birds are followed on one hand to breeding grounds in the high Arctic or in North America or Asia, and on the other to winter quarters by tropical coasts, rivers and lakes—a valuable compendium of evidence. Some of these 'waders' (or 'shore-birds' as the Americans have it) were among the best subjects of the late George Lodge's artistry. LANDSBOROUGH THOMSON

The Monarch Butterfly

By Dr. F. A. Urquhart. Pp. xxiv+361+12 plates. (Toronto: University of Toronto Press; London: Oxford University Press, 1960.) 52*s*. net.

IN a well-printed and well-produced book of 350 pages and twelve coloured plates, Dr. F. A. Urquhart, of the Royal Ontario Museum, has produced a very full account of the monarch butterfly, *Danaus plexippus* Linn., particularly from the point of view of its life-cycle, its habits—including its remarkable annual migrations—and its relation to other species in a 'mimicry' complex. The first part of the book, 96 pages, is a general survey: the second gives in more detail the investigations carried out by Urquhart and his collaborators in the field during many years.

Nearly all the book is of interest to the field naturalist, but its most outstanding contribution is undoubtedly the results of the author's work on marking of the butterflies on their autumn and spring migrations, and recoveries at great distances. It has been generally accepted for many years that the monarch in North America must migrate over long distances to the south in the autumn and back to the north in the spring, but absolute proof was lacking.

Marking experiments with insects have been tried in many countries in the past thirty years, but the number of recoveries at any long distance has been negligible. Urquhart has been much more successful. Out of many thousands of butterflies marked, chiefly in the autumn at the beginning of their southward movement, but some also in the spring, his list of recoveries includes 98 in the autumn and 13 in the spring at more than 13 miles from the place of marking. Of these the maximum distance for a spring marking was 600 miles; while for the autumn movement there were 25 recoveries at more than 350 miles, of which 8 were more than 1,000 miles. The most distant recovery was one marked in Ontario on August 18, 1957, and recovered on January 25, 1958, in San Luis Potosi, Mexico, a distance of 1,870 miles in a direct line. For these results alone the book should be in every library.

C. B. WILLIAMS

Solubilities

Inorganic and Metal-Organic Compounds—a Compilation of Solubility Data from the Periodical Literature. By Dr. Atherton Seidell. Vol. 1: A–Ir. Fourth edition by Dr. William F. Linke. Pp. iv+1487. (Princeton, N. J.: D. Van Nostrand Company, Inc.; London: D. Van Nostrand Company, Ltd., 1958.) 187*s.* 6*d.*

PROBABLY every scientific library contains at least one of the complete editions of this famous series *Solubilities*, first published by Dr. Atherton Seidell in 1907.

A regular revision of a compilation of data of this nature is absolutely imperative if the work is to provide the scientist with the most recent and up-to-date information. Even in the short period of a decade, numerous original investigations on organic and inorganic solution equilibria are published in the multitudinous modern scientific periodicals and journals, and all these require a critical periodical assessment and tabulation.

The volume under review is the first of the new fourth edition, revised and compiled by Dr. W. F. Linke, and is the result of a detailed, critical study of investigations recorded in the chemical abstracts up to the 1956–57 period. The data of various authors on particular substances have been compared and combined; unreliable observations have been omitted, whereas closely agreeing results are plotted and averaged.

As in the well-known earlier editions, the elements are listed alphabetically according to their chemical symbols, and the anions of compounds also fall into a similar alphabetical sequence. A welcome innovation to the present edition is the inclusion of a complete index of substances and compounds which renders the location of specific data a much more facile procedure. The usual author and reference index is extensive and comprehensive.

This new edition is to be published in three volumes. The first volume covers argon to iridium, and volume 2 will complete the inorganic compilation. Volume 3 is to be devoted to the solubilities of organic compounds in various solvents.

The new series comprises a valuable modernized edition of a reference work which has been of the greatest value to chemists for more than fifty years, and, like a good wine, it 'needs no bush'.

D. T. LEWIS

Advances in Clinical Chemistry

Vol. 3. Edited by Harry Sobotka and C. P. Stewart. Pp. xiii+400. (New York: Academic Press, Inc.; London: Academic Press, Inc. (London), Ltd., 1960.) 12 dollars.

THE third volume of this useful annual, which has now established itself as an essential piece of equipment on the desk of every hospital biochemist and which can be read with profit by general biochemists and clinicians alike, maintains the high standards set by its two predecessors. Particularly valuable is the chapter by Brown on œstrogens, for it not only provides a useful survey of their metabolism and clinical significance but it also gives full experimental details for their estimation in blood and urine in a form which is not readily available elsewhere. Folic acid and vitamin B_{12} are discussed in twin chapters by Girdwood and Gräsbeck respectively, while the account of kernicterus by Arias includes a useful survey of present-day knowledge of bile pigment metabolism.

The chapter on flocculation tests in relation to liver disease by Reinhold is both exhaustive and critical in its treatment of a commonly employed procedure which is simple to carry out, but which has hitherto been difficult to explain in other than empirical terms. In striking contrast is the account of infra-red absorption analysis by Schwarz. While infra-red spectra are invaluable to the organic chemist in the identification of unknown compounds they have only recently come to be applied to the examination of tissue constituents and they are discussed here with particular reference to lipid analysis. Nevertheless, it is likely to be a long time before an infra-red spectrometer becomes a standard piece of equipment in every clinical chemistry laboratory, in Great Britain at least.

J. N. DAVIDSON

Advances in Biological and Medical Physics

Vol. 7. Edited by Cornelius A. Tobias and John H. Lawrence. Assisted by Thomas L. Hayes. Pp. ix+362. (New York: Academic Press, Inc.; London: Academic Press, Inc. (London), Ltd., 1960.) 10 dollars.

THIS volume presents a further selection of seven topics from the wide field covered by this series.

First there is an excellent chapter by G. S. Stent and C. R. Fuerst on the genetic and physiological effects of the decay of phosphorus-32, following incorporation into bacterial viruses and bacteria. These effects are primarily the result either of the transmutation of phosphorus-32 to sulphur-32 or of the recoil of the nucleus and not to the ionization produced by the β-particle emission. There is a useful chapter on radiation effects on the nervous system by N. N. Livshits, covering much of the Russian literature in this field. Another chapter, by L. W. Law, on radiation carcinogenesis provides a wealth of data, but the discussion is confined almost exclusively to the mutational hypothesis for the induction of neoplasia. Confusion over dosage units leads to the incorrect statement that Wistar rats are 200 times more sensitive to phosphorus-32 than are CF_1 mice to strontium-90 for bone tumour induction. A chapter by D. Carlstrom deals with the technique of micro X-ray diffraction in biology, but only a few applications of the technique are described. There is a clear introduction to autoradiography with tritium-labelled compounds by J. H. Taylor; however, important results on the damage to cells by so-called 'tracer' doses in experimental animals have appeared in the Press since the article was written. L. E. Lipetz provides a chapter on mechanisms for the transfer of information from the light image to the optic nerve in the horseshoe crab and D. Gitlin and C. A. Janeway deal with isotopic studies on the distribution and metabolism of plasma proteins.

In general, the authors have presented their subjects clearly and concisely, and the volume should provide a useful introduction to the various topics covered. N. M. BLACKETT

Radioactive Wastes

Their Treatment and Disposal. General Editor: J. C. Collins. Pp. xxi+239. (London: E. and F. N. Spon, Ltd., 1960.) 55*s*.

MR. COLLINS has brought together ten chapters, each written by an expert in his own field, which, together under one cover, form a logical and thorough treatment of a relatively new subject. Introductory chapters on the nature of radioactivity and sources of radioactive waste put the general problem in perspective. R. F. Farr's contribution on the hazards of radiation is a masterly summary. It takes account of dose-rate, total dose, external and internal irradiation, biological effectiveness of different radiations, the concentration of ingested isotopes in specific organs, and then shows how these factors are allowed for quantitatively in fixing maximum permissible levels of radioactive species in the body, in air, in drinking water, and on contaminated surfaces.

The law about disposal of radioactivity in Britain is summarized. The last five chapters describe techniques for meeting in practice the stringent standards which have been set for safe disposal of gaseous, liquid and solid radioactive wastes.

This is a technical book, full of factual information, but its very full glossary and index to abbreviations, combined with its logical style, should make it attractive to a very wide readership. It will be valuable to all those people who have responsibilities for public health, the husbanding of natural resources, nuclear power programmes and industrial use of radioactive materials. One feels that the book will be enjoyed also by those who read *Nature*, because they enjoy dipping into branches of science other than their own, and one hopes that through them this book may lead to well-informed discussion of a subject of importance to the general public.

K. D. B. JOHNSON

Digest of Literature on Dielectrics

Vol. 23, 1959. Edited by Louis J. Frisco and Thomas D. Callinan. (Publication No. 799.) Pp. xiv+423. (Washington, D.C.: National Academy of Sciences—National Research Council, 1960.) 8 dollars.

THE latest volume of this series comes up to the expected high level. The number of publications on the subject within a year is surprisingly large. There are 2,214 abstracts, and the origin of the papers is truly international.

In the measurement field, frequencies greater than 100 Mc./s. are coming into the forefront, and at the highest frequencies optical techniques attract increasing attention. A good deal of work is reported on dielectric properties and molecular structure. The chapter on conduction contains experimental results which are interpreted in terms of band theory, but conduction in good dielectrics still remains a difficult subject.

Breakdown in solids, liquids and gases has been reviewed systematically this year. At present there is interest in pre-breakdown currents, and relatively much work is reported on non-uniform fields.

In ferro-electricity and piezo-electricity one is impressed with the wide range of techniques used and the large Russian effort on the subject. The so-called relaxation dielectrics are attracting attention. The digest includes an impressive chapter on magnetism, with 528 references. Developments in this subject include new theoretical work on exchange forces and statistical mechanics and experimental work on thin films and devices.

The last third of the book is devoted to the technological application of insulating materials, and contains references to the patent literature. There is much interest in insulation for high temperatures.

In conclusion, the digest contains a complete bibliography of the subject, and the authors succeed in giving a fair critical appraisal of the papers abstracted. VERA DANIEL

Atlas of γ-Ray Spectra from Radiative Capture of Thermal Neutrons

By L. V. Groshev, V. N. Lutsenko, A. M. Demidov and V. I. Pelekhov. Translated from the Russian by J. B. Sykes. (International Series of Monographs on Nuclear Energy. Division 4: Isotopes and Radiation, Vol. 1.) Pp. iv+198. (London and New York: Pergamon Press, 1959.) 140*s*. net.

THE *Atlas*, which was first published in English in 1959, was the first attempt at an exhaustive compilation of information on thermal neutron capture γ-rays to be published in book form, though a rather similar compilation, not quite so comprehensive, was published as a Chalk River Report, *AECL*.669, by Bartholomew and Higgs in 1958. The work of the Russian group led by Groshev, in the field of neutron capture γ-rays, is too well known to require comment, and the *Atlas* contains much of their own work and that of the Chalk River Group, together with the relevant work published elsewhere up to and including 1958. The bibliography contains 97 entries.

The information presented begins with tables of stable isotopes giving isotopic abundances, thermal neutron capture cross-sections, spins and parities of target and product nuclei, and binding energies and half-lives of the product nuclei. The tables contain references to the original literature. Following the tables are the capture γ-ray spectra, together with further tables of intensities as measured by various authors, assignment, where possible, of the γ-rays to the appropriate compound nuclei, and also, where possible, energy-level diagrams.

This impressive compilation is invaluable both to the nuclear physicist and to the reactor engineer who is concerned with shielding problems. The only criticism of the book which I feel is justified concerns the technical matter of the reproduction of the figures. This appears to have been done rather hurriedly so that some of the curves are distorted and occasionally the lettering is difficult to read. Such technical defects seem out of place in a book costing £7. E. R. RAE

The Space Encyclopædia

A Guide to Astronomy and Space Research. Second, revised edition. Pp. 288. (Horsham: The Artemis Press, 1960.) 35*s*.

THE first edition of this fascinating work was published just before the launching of *Sputnik* 1. Much that was then mere speculation is now accomplished fact, and the many alterations in the new edition reflect the present rapid advance in space research. The section on "Artificial Satellites" has been completely re-written, with details of the 25 satellites and space probes launched prior to April 1960. The forty-odd new sections, ranging from "*Black Knight*" to "Van Allen Belts", have been added at the expense of certain minor topics and the condensation of others. In particular, several missiles hitherto treated separately are now collected under the new heading "Missile".

The appearance of the book is much improved by the addition of eight colour plates, one of which shows the beautiful "Veil Nebula in Cygnus". The famous Russian "Far side of the Moon" is one of several new photographs.

Certain misprints persist. In the Table of Planets, p. 230, the masses of Mars to Neptune are incorrect and on p. 155 the period of Phobos is still given as 7d. 39m. A curious mistake also occurs in the diagram on p. 28, where the track of *Sputnik* 1 is shown starting off south-east instead of north-east. These errors apart, the *Space Encyclopædia* will provide a useful reference to space enthusiasts for the next year or two, when we shall look forward to a further revised edition. R. H. MERSON

Principles of Electricity and Magnetism

By Y. Rocard. Translated by G. F. Herrenden Harker. Pp. x+779. (London: Sir Isaac Pitman and Sons, Ltd., 1959.) 70*s*. net.

A NEW book in this field would need to be outstanding to make the task of translating worth while. The book is very up to date, and the many examples of the practical uses of the topics discussed bring new life into what is often regarded as a dull, text-book subject. Although the author advocates the use of rationalized M.K.S. units he in fact uses e.s.u., e.m.u., and practical units. The scope of the book is much wider than is implied by the title. Some sections have become so condensed that they have little value. The section on X-rays, which seems out of place in this volume, contains a number of mistakes (for example, it is suggested that a Laue photograph is obtained with a stationary crystal and *monochromatic* radiation, and, later, a powder diagram is described as a Laue photograph).

The Grenoble electrostatic generator is described in considerable detail, but no information is given about its performance. It is encouraging to see the permalloy magnetometers included in this type of book. The chapters on polyphase currents and d.c. machines are more complete than one expects in a book aimed at physicists rather than engineers. The notation throughout the book is not uniform. In Chapter 13 the Langevin formula is given and the symbols used are defined. In Chapter 31 the detailed theory is given using a different set of symbols. It is a pity, in a book designed for undergraduates, to find no problems for the students to solve.

E. STANLEY

Proceedings of the Institute of Petroleum Hydrocarbon Research Group Conference on Molecular Spectroscopy

Held in London, 27–28 February, 1958. Edited by E. Thornton and Dr. H. W. Thompson. Pp. vii+352. (London and New York: Pergamon Press, 1959.) 70*s*. net.

THIS report gives the twenty-two papers presented together with the relevant discussion at the second two-day conference on molecular spectroscopy held by the Hydrocarbon Research group. The contributors are from both industrial and academic laboratories in several countries, and are leaders in fields ranging from nuclear magnetic resonance through infra-red to ultra-violet spectroscopy, able to discuss with authority new ideas and techniques.

The range of topics presented is far from being confined to the petroleum field and will be of interest to every physical and organic chemist. The extent to which the conference is topical is demonstrated by the high proportion of space devoted to nuclear magnetic resonance spectroscopy and other new fields, for example, the applications of polarized infra-red radiation, shock-tube excitation and free-radical spectra. A range of papers shows advances in the infra-red region, including new instrumentation, theories of band intensities and the study of intermolecular forces in compressed gases, in surface adsorption, in solution and in the formation of hydrogen bonds.

The organizers of the conference are to be complimented on bringing this interesting diversity of speakers together. However, it does seem that the fields covered by the heading of "Molecular Spectroscopy" are rapidly becoming too numerous and too specialized to be covered adequately in a two-day meeting. A. KNOWLES

A Mathematical Tool-Kit for Engineers

By H. A. Webb and Dr. D. G. Ashwell. Second edition. Pp. vii+116. (London: Longmans, Green and Co., Ltd., 1959.) 15*s*.

A CONCISE account of the more important mathematical topics dealt with in the final year of engineering undergraduate courses is published, in second edition, under the intriguing title *A Mathematical Tool Kit for Engineers*. This title is truly descriptive of the book. Within the compass of little more than one hundred pages, eleven chapters deal with complex numbers, differential equations, Fourier series and Bessel functions, together with the calculus of variations and the theory of errors. A chapter on Macaulay methods discusses a little-known technique for discontinuous differential equations, and the Laplace transform is associated, through the integral inversion formula, with a chapter on contour integration. The most important basic formulæ, in relation to engineering application, are derived as simply and directly as possible, without, of course, any attempt at mathematical rigour, and techniques of application are suitably illustrated. That arguments presented with such conciseness and economy can still carry conviction is a tribute to the skill and ingenuity with which the derivations have been devised and developed. The selection of material is excellent. The little book should be of great value to engineering undergraduates and, as a work of occasional ready reference, to practising engineers. J. GREIG

Limpopo River. In contrast, neighbouring areas to the north and south are characterized by a very thin sequence of Karroo sediments which in places is absent altogether. Strong normal faulting developed along the sedimentary trough during the period of Karroo sedimentation.

A very much thicker volcanic sequence overlies the sediments and comprises a lower group of olivine basalts and tholeiites with associated picritic minor intrusives, and an upper group of ignimbrites of rhyolitic composition. A thick and extensive sill of granophyre, here termed the Main Granophyre, intrudes the volcanics near the base of the ignimbrite group.

The volcanic activity culminated with the development of eight intrusive complexes closely comparable with those found in Damaraland, South West Africa[2]. Six of the complexes lie in the vicinity of the Mateke Hills, Nuanetsi District, Southern Rhodesia, and have been mapped in detail. The alignment of most of the complexes along the Limpopo orogenic belt is a further demonstration of the importance of the belt in controlling Karroo geology.

Three of the complexes, of which the largest is the Northern Ring, consist of early gabbroic and later acid phases, the latter commonly being ring-intrusions. In the Northern Ring[3], an extensive layered gabbro series is exposed. The gabbroic intrusions are older than the Main Granophyre, while the acid ring-intrusions are younger. Most of the remaining complexes consist only of acid rocks, several phases of granitic and granophyric intrusion being present in each.

In the eastern part of the area, Cretaceous marine strata unconformably overlie the Karroo rocks, including the Main Granophyre. This is a strong indication that all the intrusive activity can be assigned to the late Karroo period.

METALLURGY

Occurrence of an Ordered Phase in an As-Cast Titanium-Aluminium Alloy

Phase equilibria in the titanium-rich region of the titanium–aluminium constitution diagram have not been elucidated despite many experimental investigations. The results of earlier work[1] indicated an extensive region of hexagonal close-packed α solid solutions. At a temperature of 800° C. it was reported that 36·5 atomic per cent aluminium was soluble in the low-temperature modification of titanium. It was also concluded that the first intermediate phase on this side of the diagram was γ, which exists over a region of homogeneity and resulted from a pertectic reaction involving a β solid-solution and the melt. A study of the variation in lattice parameters as a function of composition in the proposed α phase region has been made[2]. Several papers have presented X-ray powder diffraction evidence for an intermediate phase in this same region of the diagram. This crystallographic species, the δ phase, has been observed in heat-treated specimens containing 25 and $33\frac{1}{3}$ atomic per cent aluminium[3,4]. Experiments performed with an electron microscope[5] have demonstrated the epitaxial relationship of α and δ. A constitution diagram has been proposed[6] in which two intermediate phases exist between the terminal α phase and γ.

During an X-ray diffraction investigation of this region of the constitution diagram the δ phase has been observed in an as-cast alloy containing 37·1 atomic per cent aluminium. A fragment of an arc-melted ingot was examined and revealed Laue symmetry 6/*mmm*. Weissenberg photographs of the zero and first layer lines were obtained with copper and molybdenum radiation. The diffraction maxima were sharp and doublets well resolved. Multiple-film techniques have been employed to obtain the structure factors. The unit cell content was placed in the following special positions of space-group D_{6h}^4: 2 aluminium atoms in (*c*), and a statistical distribution of titanium and aluminium atoms in the six-fold position (*h*). The compositional parameter associated with this configuration was assumed to be constant in the trial structure, and it was derived from the ingot composition. This assumption seems reasonable in view of the lattice parameter versus composition data[2] and the variation of structure factor with composition. Agreement of intensity measurements for strong and weak reflexions indicates a single crystal in object space. Previous papers reporting evidence for the δ phase derived their data from heat-treated specimens. The fact that the δ phase has been found in an as-cast alloy would suggest that the proposed phase equilibria for this constitution diagram be given careful consideration.

A paper published by previous investigators[4] requires a comment. I established the similarity between X-ray powder diffraction photographs of Ti_3Sn and those of a titanium–aluminium alloy and a titanium–aluminium–vanadium alloy (Jaffee, L. D., to Margolin, H., private communication, September 29, 1955). The latter films had been obtained by other research workers in previous investigations at the California Institute of Technology Jet Propulsion Laboratory. These existing data were evaluated by me without prior knowledge that either a unit cell or indexing of maxima had been proposed for the δ phase. Furthermore, the necessity for consideration of composition and position parameters in the crystal structure determination of δ has been discussed in a private communication by myself to H. Margolin, October 25, 1955. I have neither demonstrated nor asserted that Ti_3Sn and Ti_3Al are isomorphous, as has been stated in the literature[4].

CHEMISTRY

Oxidation of Galena to Lead Sulphate

Beveridge and Denbigh[1] have directed attention to the development of a concentric shell of zinc oxide when a compressed sphere of zinc sulphide powder was oxidized in air at 1,250° C. This shell was presumed to arise from the reaction between zinc and sulphur diffusing outwards from the surface of the zinc sulphide and oxygen diffusing inwards. The distance between the core and the shell increased with increasing temperature, and the diameter of the shell was greater than the diameter of the original core. During the oxidation of a crystal of galena (lead sulphide) to lead sulphate we have observed the formation of an approximately spherical product layer detached from and concentric with the galena crystal. The mechanism by which this product layer is formed appears to differ from that proposed for zinc oxide[1].

Using a thermobalance we have examined the rate of oxidation of discrete crystals of galena in an atmosphere containing oxygen, sulphur dioxide and nitrogen at temperatures from 700° to 800° C. Depending on the respective partial pressures of oxygen and sulphur dioxide, the oxidation product may be lead, lead oxide, mono-, di-, or tetra-basic lead sulphate, or lead sulphate[2]. In particular we have followed the formation of lead sulphate in oxidizing atmospheres containing 1–50 per cent oxygen and 1–50 per cent sulphur dioxide, the balance being nitrogen. The rate of oxidation has been calculated from the increase in weight of the sample observed over measured time-intervals. The galena crystals were not preheated in an inert gas before oxidation on account of the loss in weight from vaporization and oxidation to lead by traces of oxygen in the inert gas. Our results show that the oxidation proceeds as follows: Initially an adherent layer of lead sulphate builds up on the surface of the galena crystal; later this layer of lead sulphate becomes detached from the surface of the galena (leaving it free from oxidation products) and forms a brittle spherical envelope the dimensions of which approximate those of the original galena crystal; finally, cracks occur in the envelope as it progressively thickens and expands, and lead sulphate is again formed on the surface of the galena crystal. The composition of the product is confirmed by X-ray analysis.

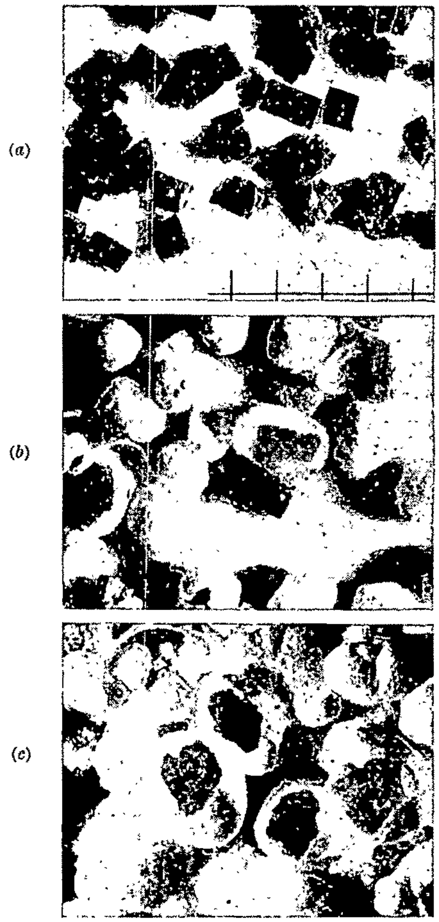

Fig. 1. − 36 + 44 mesh galena crystals. *a*, Unoxidized; *b*, oxidized for 1 hr.; *c*, oxidized for 2 hr. Scale: 1 division = 0·5 mm.

Fig. 1*b* and *c* shows galena crystals which have been oxidized at 750° C. in an atmosphere containing 10 per cent oxygen, 15 per cent sulphur dioxide, and 75 per cent nitrogen. Several of the lead sulphate envelopes have been broken to reveal the partly reacted galena crystals.

In accounting for the development of the spherical envelope, we suggest that there is a gradual diminution in the permeability of the adherent layer of lead sulphate to the oxidizing atmosphere. Then following the vaporization of galena—with some dissociation into lead and sulphur[3]—a stage is reached where oxidation occurs predominantly by diffusion of lead and sulphur ions through the envelope to react with the oxidizing atmosphere outside. Thus the envelope thickens, and, as the volume ratio of lead sulphate to lead sulphide is greater than unity, the resulting stresses cause the envelope to expand.

The rate of formation of the adherent layer of lead sulphate has been found to depend on the temperature and the sulphur dioxide content of the atmosphere; variations in the oxygen content, however, do not markedly affect the reaction-rate.

Sodium Chloride Whiskers

It is generally believed that the fast and unidirectional growth of the major part of whiskers may be partly due to the winding up of one or more screw dislocations along the whisker axis[1]. S. Amelinckx demonstrated this dislocation mechanism in sodium chloride whiskers by the decoration technique[2]. He observed on whiskers grown by a simple method also the broadening of hollow, tubo-like pyramids probably developed from spiral terraces which are thought to originate from axial screw dislocations[3].

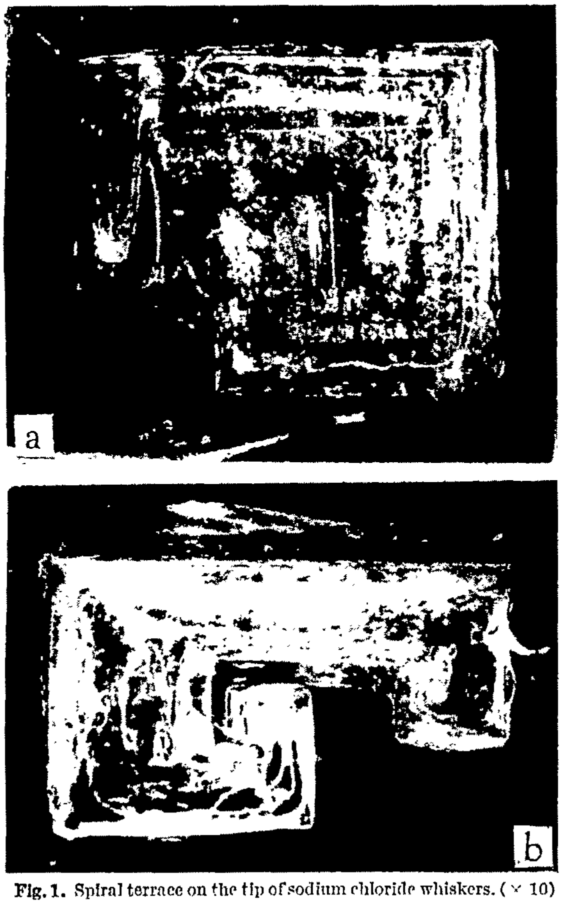

Fig. 1. Spiral terrace on the tip of sodium chloride whiskers. (× 10)

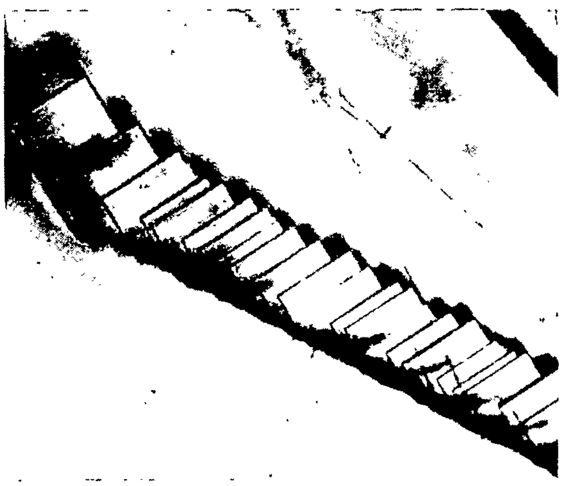

Fig. 2. A scale-like sodium chloride whisker. (× 150)

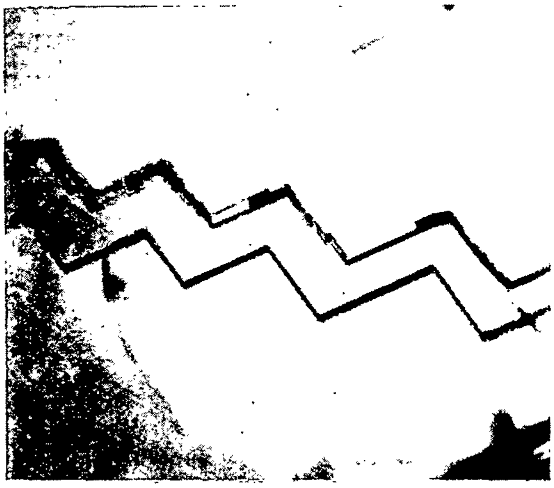

Fig. 3. A two-dimensionally twisted sodium chloride whisker (× 150)

The pyramid growth pattern is known. V. D. Kusnezov suggested that its presence in crystals grown from solution may be related to the small dependence on temperature of the solubility of rock-salt[4]. The observations of Z. Gyulai refer to the growth of such pyramids from vapour[5]. We, too, found such 'troughs', not only on the tip of whiskers grown from vapour but also on sodium chloride plates exposed for some time to vapours of sodium chloride[6]. Hexagonal spiral-terrace patterns of N. A. Shamba and N. N. Sheftal on silicon crystals frozen from cooled melt, and observed easily with the optical microscope, are further examples[7].

We wish to report some interesting patterns obtained by growing sodium chloride whiskers from vapour. The pyramidal tip of the whiskers in Fig. 1(*a*) shows undoubtedly a spiral construction. The linear length of the pattern was 8 mm. Fig. 1(*b*) shows a similar whisker tip after the other parts of the pyramid were removed. The linear measurement of the spiral was in this case 6 mm.

Fig. 2 shows another example: it is suggested that this whisker with a scale-like construction refers to spirals[8].

The zig-zag pattern in Fig. 3 indicates that the two-dimensional explanation of S. Amelinckx[9] of the helically twisted silver whiskers observed by Brenner[10] refers to a two-dimensionally twisted whisker shape which actually exists.

We wish to thank Miss F. Jost for her help.

Effect of Strong Electric Fields on the Boiling Points of some Alcohols

WHILE investigating the molecular theory of liquids and liquid mixtures we were led to examine the effect of strong electric fields on the saturation vapour pressures (boiling points) of liquids. Results of those investigations for methyl, ethyl and *iso*propyl alcohols are reported here.

The liquid is in a cylindrical tube about 20 cm. long which is immersed in a transformer oil bath. A condenser, fitted to the side of the tube through a ground-glass joint, keeps the boiling liquid in contact with the outside atmosphere while at the same time vapours condense and flow back into the liquid without escaping out of the apparatus. A Beckmann thermometer, graduated in hundredths of a degree centigrade, is inserted from the upper end of the tube and held vertical with its bulb just above the surface of the boiling liquid. When the liquid is boiling the bulb remains completely covered with a continuous film of the liquid formed by the condensing vapours which trickle back into the liquid in the form of drops. A built-in condenser is provided near the upper end of the tube to prevent any possible leakage of vapours through the upper portion. A regulated supply of heat to the oil bath is given by an electric heater controlled by a 'Variac' transformer. The temperature of the oil bath is maintained a few degrees above the boiling point of the liquid. Under these conditions the boiling point could be maintained constant to 0·01 deg. C. for fairly long intervals.

The tube containing the boiling liquid and its vapours is held between two parallel metal plates to which an alternating voltage of about 20 kV. can be applied through a transformer.

Samples of pure specimens used in the present investigations were Merck's analytical reagents from freshly opened bottles which were further purified by the usual methods until their boiling points and densities agreed with those quoted in the literature. The liquid was allowed to boil first in the absence of the field, and after the temperature remained steady for about ½ hr. the field was switched on. The temperature starts falling almost immediately and becomes steady after some time. On switching off the field the boiling points rose to their original values.

The depression in the boiling points, ΔT, for fields E, varying from 0 to 5 kV./cm., were determined for methanol, ethanol and *iso*propanol.

Observations were also made with three different tubes A, B and C of diameters 3·65 cm., 3·00 cm. and 2·50 cm. respectively. These are shown in Table 1.

Table 1. DEPRESSIONS IN THE BOILING POINTS OF METHANOL ETHANOL AND *ISO*PROPANOL IN ELECTRIC FIELDS

Applied voltage (kV./cm.)	ΔT (°C.)								
	Methanol			Ethanol			*Iso*propanol		
	A	B	C	A	B	C	A	B	C
0·00	0	0	0	0	0	0	0	0	0
2·36	0·68	0·70	0·80	—	—	—	—	—	—
2·89	1·05	1·08	1·10	0·32	0·34	0·35	—	—	—
3·42	1·25	1·29	1·40	0·40	0·43	0·45	0·20	0·20	0·23
4·00	1·80	1·87	1·90	0·60	0·65	0·64	0·25	0·26	0·26
5·00	2·00	2·00	2·10	0·70	0·72	0·76	0·40	0·42	0·42

However, when the field was applied only to the liquid region and not to the vapour phase, a rise of 0·1 deg. C. was observed in the case of methanol at 5 kV./cm.

Observations with other polar as well as non-polar liquids are in progress.

We wish to thank Prof. D. S. Kothari for suggesting the problem and helpful discussions. One of us (M. M. C.) is grateful to the Council for Scientific and Industrial Research for financial assistance.

Thermo-Reversible Denaturation of Eucollagen in Solution

A SUBSTANTIAL proportion of mature collagenous tissue will dissolve in weakly acidic media after a cold pre-treatment in alkali. The resulting solutions of soluble eucollagen show qualitatively many of the characteristics of solutions of acid-soluble collagens[1]. In particular, a very dilute solution in 0·15 M citrate (pH 3·7) possesses a high specific viscosity (η_{sp}/C about 10 dl./gm. at $C = 0{\cdot}02$ gm./100 ml.) over the temperature range 5–25° C., and a very much lower value (η_{sp}/C about 0·4 dl./gm.) at 35° C. and higher temperatures. The high viscosity at low temperatures suggests that eucollagen, like collagen, has a rigid, rod-like form in solution, while the relatively low viscosity at 35° C. and higher temperatures reflects the very flexible nature of the gelatin molecules which are formed rapidly and irreversibly under such conditions from the eucollagen solution.

At intermediate temperatures (for example, 30° C.) the initially high viscosity falls with time, and on re-cooling to 20° C., the solution shows a marked and rapid rise in viscosity. Examples are given in Fig. 1. Boedtker and Doty[2] have stated that solutions of soluble collagen, after partial denaturation by heating, show an increase in viscosity on re-cooling, and have suggested that this is due to aggregation of the gelatin molecules previously formed

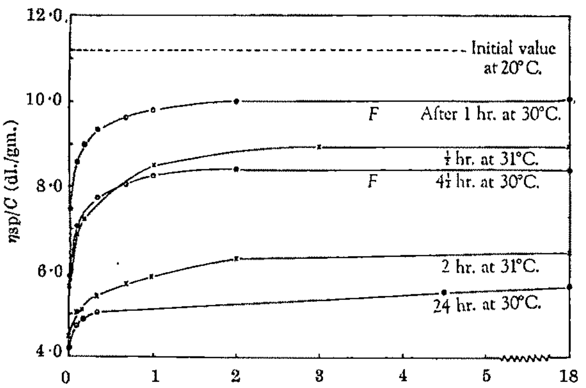

Fig. 1. The time dependence of η_{sp}/C at 20° C. for eucollagen solutions which have been heated at 30° or 31° C. for the times stated. Concentration, $C = 0{\cdot}05$ gm. eucollagen per 100 ml. 0·15 *M* citrate (*p*H 3·7). Eucollagen prepared from demineralized bone

at the higher temperature. However, if this were the explanation of the present results, the viscosity should increase with time only slowly in the initial stages, at 20° C., more rapid increases following as larger and larger aggregates are built. Fig. 1 shows clearly that the rate of rise decreases with time. Moreover, the maximum possible contribution to the viscosity from aggregation of derived gelatin is far smaller than the observed changes in the viscosity of soluble eucollagen at 20° C. after a period at 30° C. This is confirmed (Fig. 2) by observing the aggregation in eucollagen solutions which have been completely denatured by heating at 60° C. for 10 min. Thus the recovery in viscosity at 20° C., after partial denaturation at 30° or 31° C., can be due to gelatin aggregation only to a minor extent.

It is therefore presumed that the structural disorganization on heating eucollagen in solution at 30 or 31° C. proceeds in two steps, the first of which is, at least, partially reversible by cooling, while the second gives rise irreversibly to gelatin. The partially disorganized, thermo-reversible states for dissolved eucollagen have considerable stability at 30° C. (Fig. 1). At higher temperatures, however, the life-time of any intermediate state is short, so that the conversion of eucollagen to gelatin proceeds in effect in only one step.

Exploratory experiments have shown that fibrils are formed from incompletely denatured eucollagen solutions re-cooled to 20° C. and dialysed against 1 per cent sodium chloride. (The solutions used are marked *F* in Fig. 1.) Such fibrils have a shrinkage temperature 5–10 deg. C. less than the value for fibrils prepared from a sample of the original, undenatured solution. The formation of fibrils from the denatured solutions could arise either from eucollagen particles which were unaffected by the higher temperature, or from particles re-organized from intermediate states formed on heating. The observed fall in shrinkage temperature suggests that the latter particles are an important constituent.

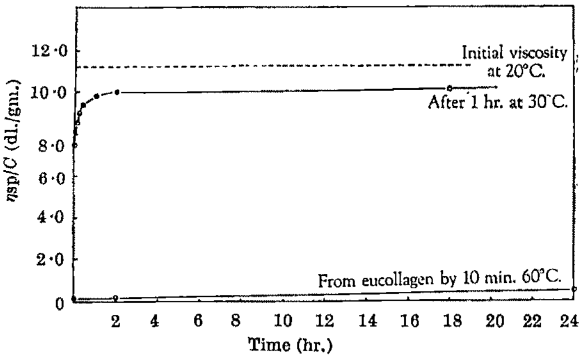

Fig. 2. The time dependence of η_{sp}/C at 20° C. for a partially and a completely denatured eucollagen solution, in 0·15 *M* citrate (*p*H 3·7)

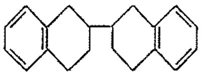
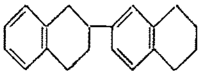
Reductive Dimerization of Naphthalene by Sodium–Ethylamine

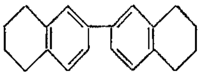
Benkeser *et al.* have reported[1] that naphthalene is reduced to octalin and decalin by lithium–ethylamine; however, sodium–ethylamine was said to convert naphthalene to unidentified polymeric materials. Because of our interest in the reduction of organic compounds and of coal by metal–amine systems[2], we have re-investigated the naphthalene–sodium–ethylamine reaction. The so-called polymeric material has been identified as a stereoisomer of 1,2,3,4,1′,2′,3′,4′-octahydro-2,2′-dinaphthyl, (I).



(I)



(II)



(III)

A mixture of 6·40 gm. of naphthalene, 10·35 gm. of sodium, and 200 gm. of ethylamine was refluxed for 5½ hr. Ether was added, the solution decanted from a large amount of unreacted sodium, and the product washed, dried and distilled. There was obtained 3·73 gm. of material, b.p. 180–200° (2–3 mm.), which slowly crystallized. The low-voltage mass spectrum showed mass 132 (tetralin), 260 (hexahydrodinaphthyl) and 262 (octahydrodinaphthyl). Three recrystallizations from ethanol gave 1·70 gm. of white crystals, m.p. 84·0–85·0°, mass 262. Anal. calcd. for $C_{20}H_{22}$: C, 91·55; H, 8·45; found: C, 91·38; H, 8·43. This purified material was used to calibrate the mass spectrometer, and the assumption was made that the instrument would have the same sensitivity for the hexahydrodinaphthyl as for the octahydrodinaphthyl. On this basis the original reaction product contained: tetralin, 9 per cent; hexahydrodinaphthyl, 19 per cent; octahydrodinaphthyl, 72 per cent. Dehydrogenation of the octahydrodinaphthyl (palladium-on-charcoal, 330–355°) gave 2,2′-dinaphthyl, identified by melting point and infra-red spectrum.

Only three structures (I, II, III) can be written for an octahydro-2,2′-dinaphthyl if it is assumed that each nucleus contains a benzene ring. The ultraviolet absorption spectrum (peaks at 2732 Å., $E = 1417$ and at 2660 Å., $E = 1241$; shoulder at 2615 Å., $E = 893$) of the hydrocarbon described here eliminates the structure (III), which would have a spectrum similar to that of diphenyl[3]. The structure (II) is eliminated because it contains a 1,2,4-substituted benzene ring, which would be expected to have the long wave-length band at about 2790 Å. (ref. 4). Since (I) consists of two tetralin nuclei it should have peaks at positions almost identical with those of tetralin, with about twice the intensity of the tetralin peaks. For comparison, values for tetralin are 2734 Å., $E = 625$; 2662 Å., $E = 537$; 2618 Å., $E = 370$.

The structure (I) was substantiated by dichromate oxidation of the hydrocarbon, which gave only phthalic acid; by nuclear magnetic resonance spectroscopy (aliphatic H/aromatic H, calcd., 1·75; found, 1·8; aliphatic H_α/aliphatic H_β, calcd., 1·33; found, 1·4); and by the infra-red spectrum (absorption maxima at 5·15, 5·22, 5·30, 5·45, 5·53, 5·57, 12·25, 13·36 and 13·52μ) which is consistent only with (I) (ref. 5).

The structure (I) could exist in both a meso and a racemic form, but only one compound was actually isolated; hence some step in the reaction sequence which fixes the configuration of the product must be stereospecific.

The reaction is under investigation to find other systems which will give dimeric products. Anthracene and phenanthrene have been reduced, but no dinuclear materials have been found. It is of interest that electrolytic reduction of phenanthrene yields 9,10,9′,10′-tetrahydro-9,9′-diphenanthryl, but no dinuclear product is obtained by electrolytic reduction of naphthalene[6]. On the other hand, we have found (Sternberg, H. W., Delle Donne, C. L., Reggel, L., and Wender, I., unpublished work) that lithium–ethylenediamine reduction of naphthalene at 15° gives about 30 per cent of dimeric reduction products, the structures of which have not yet been determined.

We wish to thank Dr. R. A. Friedel for the spectroscopic studies.

Ionization Potential and Molecular Complex of Benzothiazol with Iodine

THE three aromatic molecules benzophenone, indol and benzothiazol should act as electron donors and, as such, should favour the formation of molecular complexes with electron acceptors such as the halogens[1]. A spectroscopic investigation of such a possible effect between these molecules and iodine was therefore undertaken and we briefly report the results here.

For benzophenone and indol, no changes in the spectra of solutions of these compounds were noticed when adding iodine (solvents were *n*-hexane for indol, and carbon tetrachloride for benzophenone), and neither any colour modification of the iodine solution nor new absorption in the ultra-violet region was observed. No complex thus seems to be formed between benzophenone or indol and iodine; at least none is detectable under the conditions of our experiments.

On the contrary, in the case of a solution of benzothiazol in carbon tetrachloride, a slight colour modification of the iodine solution was noticed when properly chosen proportions of benzothiazol and iodine were used (about 30 times more benzothiazol than iodine). The 517-mμ absorption maximum characteristic of iodine is practically not shifted (new maximum at 516 mμ), but a new absorption occurs in the near ultra-violet region around 300 mμ, as observed with a Zeiss spectrophotometer. Using a Beckman automatic *DK* II spectrophotometer, a new and intense ultra-violet absorption band characteristic of a new compound was observed at 282 mμ. Its intensity is about that of the usual high ultra-violet absorption of molecular complexes, and may perhaps be ascribed to a charge-transfer phenomenon.

It is well known that charge-transfer maxima are closely related to ionization potentials and a simple expression for this relation has been proposed[2]. A curve relating ionization potentials and ultra-violet charge-transfer maxima was published recently[3]; from this it is possible to deduce an ionization potential for benzothiazol.

It is found in this way that the 282 mμ maximum corresponds to an ionization potential of 8·65 V. for benzothiazol. This is considerably lower than the ionization potential of benzene[4], but closer to the ionization potentials of pyrrole[5] and thiophene[5], and might indicate that it corresponds to the removal of a non-bonding electron from either the nitrogen or sulphur atom, rather than a π-electron of the benzenic system.

BIOCHEMISTRY

In vivo Formation of Normorphine in the Rat as a Metabolite of Tritium Nuclear-labelled Morphine

EVIDENCE for the N-demethylation of morphine has been provided by the demonstration *in vivo* of the pulmonary excretion[1,2] of carbon-14 labelled carbon dioxide from morphine-N-methyl-^{14}C and *in vitro*[3,4] by the enzymatic liberation of formaldehyde. The formation of normorphine *in vivo* has not been demonstrated directly, principally because of the low sensitivity and poor specificity of procedures used. The recent preparation of tritium nuclear-labelled morphine[5] has provided the means by which the *in vivo* formation of normorphine from morphine could be observed in a sensitive and specific manner using selective paper chromatography.

Male rats (Sprague–Dawley strain) were injected subcutaneously with tritium nuclear-labelled morphine sulphate (10 mgm./kgm., as free base) and the urine was cage-collected for 48 hr. under toluene. The urine was autoclaved with 1/10 volume of concentrated hydrochloric acid for 25 min. at 18 lb. pressure, cooled, neutralized with sodium hydroxide solution to *p*H 9, and buffered with phosphate buffer, *p*H 10·3. An appropriate amount of cold normorphine was added as carrier, and the solution saturated with solid sodium chloride and extracted by shaking for 45 min. with ethylene dichloride containing 30 per cent *n*-amyl alcohol. The organic layer was separated and the aqueous phase re-extracted with fresh organic solvent. The residue, obtained by evaporation of pooled organic solvent extracts, was dissolved in absolute methanol and the solution chromatographed (descending) on a large Whatman No. 3 *MM* sheet using *n*-butanol, acetic acid and water (4 : 1 : 2, by volume) as the solvent system. A narrow guide strip from the chromatogram was scanned for radioactivity by elution of 1-cm. strips with dilute hydrochloric acid, the eluates being transferred to individual counting vials and evaporated to dryness. The residues were dissolved in absolute methanol, phosphor solution was added, and the samples were counted in a liquid scintillation Packard 'Tri-Carb' spectrometer. The scan revealed a single sharp peak of radioactivity (R_F 0·57). The area under this peak was cut from the rest of the chromatogram, eluted repeatedly using hot absolute methanol, and the eluate concentrated to a small volume and chromatographed on Whatman 3 *MM* paper strips, buffered with 0·2 *M* phosphate buffer (*p*H 8) using *tert.*-amyl alcohol, *n*-butyl ether and water (80 : 7 : 13, by volume) as a solvent system. The scanning of a guide-strip resolved the single peak of the previous chromatogram into two peaks of radioactivity, one of R_F 0·76, due to tritium-labelled morphine, and the other of R_F 0·20.

The area under the peak of R_F 0·20 was eluted with hot absolute methanol and chromatographed on Whatman 3 *MM* paper strips with *n*-butanol, acetic acid and water (4 : 1 : 2). Scanning the chromatogram revealed a major sharp peak of radioactivity at R_F 0·57 coinciding with cold normorphine on co-chromatography. A small broad peak with R_F 0·39–0·51 which produced a diazoblue colour reaction (50 mgm. tetrazotized diorthoanisidine dissolved in 15 ml. of 0·2 *M* phosphate buffer *p*H 9 ; purchased from Dajac Laboratories as Naphthanil Blue *B*) and another very small peak at R_F 0·82 also appeared in this chromatogram. The identity of the compound giving the peak of radioactivity at R_F 0·57 was further confirmed by co-chromatography with cold normorphine on Whatman 3 *MM* paper strips buffered at *p*H 8·9. The R_F of the radioactive peak was 0·18, and identical with the R_F obtained by spraying with diazoblue reagent. Some radioactivity also appeared at the origin of this chromatogram and in a small broad band at R_F 0·37–0·49.

Adequate chromatographic controls ensured the absence of normorphine in injected drug and the possibility of chemical artefacts resulting from the extraction procedures.

Direct chromatography of urine from a second group of rats, injected as described previously, on large Whatman 3 *MM* sheets using *n*-butanol, acetic acid and water (4 : 1 : 2) showed two areas of radioactivity, one having broad-band R_F 0·027–0·19 (probably due to conjugated morphine and conjugated metabolites) and another with R_F 0·67–0·72 (probably due to free morphine and free metabolites). The two areas were manipulated separately. Acid eluate from the area having R_F 0·67–0·72 was extracted as before, using cold normorphine as carrier. The residue obtained by the evaporation of the organic phase was dissolved in absolute methanol, chromatographed as described on Whatman 3 *MM* paper strips buffered at *p*H 8·0 and 9·3. Known cold normorphine gave identical R_F values.

Similarly, the area having R_F 0·027–0·19 was eluted, the eluate autoclaved and treated as described to give similar results. Evidence was obtained that normorphine was also present in conjugated form as a metabolite. A detailed report will appear elsewhere.

Denaturation of Catalase by Freezing and Thawing

THE effects of freezing and thawing on the structural and functional integrity of various biological materials, for example tissue, red blood cells[1], spermatozoa[2] and mitochondria[3], have received increasing attention recently, especially from the point of view of low-temperature storage. At the level of isolated enzyme proteins, investigations[4,5] have been qualitative in nature.

This communication deals with the fundamental aspects of the effects of freezing and thawing on the biochemical activities of fresh ox liver catalase. (Catalase became completely resistant against freezing and thawing denaturation after several months storage in solution (*p*H 7·0) or crystalline states in a refrigerator.) In our experiments, 0·5-ml. samples of *M*/100-buffered catalase solution (0·8 μgm./ml.) in test-tubes (1·0 cm. × 10·0 cm.) were frozen by immersion in a bath set to each required low temperature. After a given time the solution was removed and thawed rapidly in a bath at 25° C. After suitable dilution the remaining activity was determined in *M*/75 phosphate buffer, *p*H 7·0, at 0° C.

Partial inactivation of catalase occurred within 10 min. after immersion and then its activity remained constant during the next few hours. The extent of this inactivation depended on various experimental conditions, such as freezing temperature, enzyme concentration, and *p*H of the enzyme

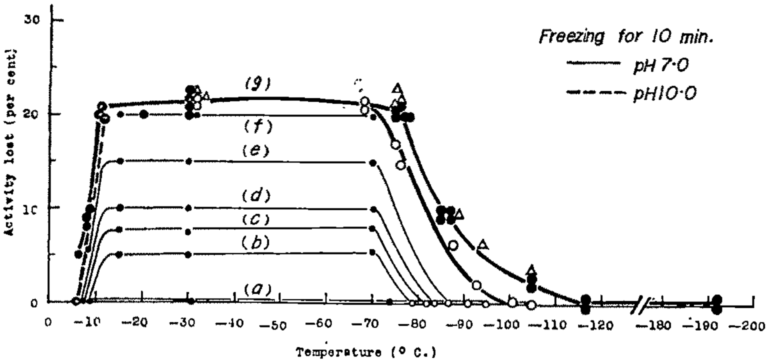

Fig. 1. Activity lost when catalase solutions containing various solutes are frozen. In all experiments the enzyme was frozen in *M*/100 phosphate buffer at *p*H 7·0 (except for *p*H 10·0 indicated by a broken line), for 10 min. by immersion at the temperature indicated, directly (●), or transferred from pre-freezing at −192° C. (○), or by an air jacket (△). Catalase concentration: $8·4 \times 10^{-3}$ mgm. dry weight/ml.
Curve (*a*) illustrates the protective action of 0·01 per cent gelatin; (*b*) 0·5–1·0 *M* glycerol; (*c*) 1 *M* glucose, 0·1 *M* sodium acetate, ammonium sulphate, sodium butylate, sodium caprylate; (*d*) 5×10^{-4} *M* sodium dodecyl sulphate; (*e*) 1 *M* sucrose; 2·5 *M* ethylene glycol; (*f*) 0·01 per cent ovalbumin; (*g*) no additive

solution. Concentrated enzyme solution was more resistant against freezing inactivation. The activity lost – freezing temperature curve (Fig. 1) indicates that there is a temperature-range in which catalase is denatured during freezing and thawing. The inactivation of catalase by freezing commenced at about − 6° C., then reached the 20 per cent level at − 12° C., remained at this level to near − 75° C., and at last was reduced gradually between −75° C. and −120° C.; and over the range from −120° C. to −192° C., catalase solutions retained their activities completely against freezing and thawing.

The upper boundary of this critical region depends on the initial *p*H of freezing solutions. At −6·5° C. no damage occurred at *p*H 10·0, but the increasing damage occurred on either side[6]. At temperatures below −12° C., however, no dependence on *p*H was observed (*p*H range 5–11). The lower boundary, on the other hand, seems to be connected with the cooling-rate. Some shifting of this inactivation curve has been demonstrated under three conditions (Fig. 1); first, test-tubes were immersed directly into low-temperature baths; secondly, they were immersed with air jacket by placing them in larger tubes; and thirdly, they were frozen rapidly to −192° C., and then transferred to the required low-temperature bath.

It is interesting that even if catalase solutions are transferred to −30° C. after pre-freezing at −6·5° C. (*p*H 10·0) or at −192° C. without inactivation, they both suffer 20 per cent inactivation of activity within 10 min., which completely coincides with the level of inactivation by freezing directly in −30° C. bath for 10 min. This strongly suggests that the denaturation of the enzyme by freezing and thawing may be caused by the transition processes of the ice-crystal state responsible for the critical region of temperature, whether from the liquid state or from the frozen state outside the above range.

It was of interest to investigate whether glycerol and ethylene glycol, which have attracted increasing attention recently as 'antifreezer'[1,2], provided protective action against denaturation of catalase by freezing and thawing. In addition, some sugars, inorganic electrolytes, fatty acids (which have been known to inhibit the denaturation of some proteins) and other substances of interest were also tested (Fig. 1).

The results of these observations show the considerable protective action of 1 *M* glycerol, 1 *M* glucose, 0·1 *M* sodium acetate, 0·1 *M* ammonium sulphate, 0·1 *M* sodium butyrate, 0·1 *M* sodium caprylate, and also 5×10^{-4} *M* sodium dodecyl sulphate. Gelatin gave complete protective action over the whole temperature region in a low concentration of 0·01 per cent, but the same concentration of ovalbumin had little effect.

Our present knowledge is insufficient to give an experimental explanation for the existence of our critical region of temperature. However, it is interesting to compare these results with the analogous phenomena which Lovelock[1] reported on the hæmolysis of human red blood cells by freezing and thawing.

We wish to thank Prof. K. Aoki, of this University, for his interest and encouragement.

Assay of Pyridine Nucleotide Coenzymes and Associated Dehydrogenases with Phenazine Methosulphate

SINCE the original application of phenazine methosulphate to the assay of soluble succinic dehydrogenase by Singer and Kearney[1], this useful reagent has been increasingly employed as a carrier in a number of histochemical techniques[2,3].

Recent announcements of the use of the dye colorimetrically, coupled to 2 : 6-dichlorophenol indophenol, for the assay of certain soluble pyridine nucleotide-linked enzymes[4], and for the oxidative decarboxylation of pyruvate[5], prompts the publication of a manometric assay method, which has been in use in this laboratory for some time, employing phenazine methosulphate to measure di- and triphosphopyridine nucleotide-linked dehydrogenases in connective tissue. As the method described can be used for particulate as well as for soluble dehydrogenases a short account of its use is given here. Full details of theoretical and practical considerations will be reported elsewhere.

It has been found that the aerobic oxidation of reduced pyridine nucleotide coenzymes can be made to proceed stoichiometrically via the autoxidation of phenazine methosulphate in the Warburg apparatus. This is illustrated for the case of reduced

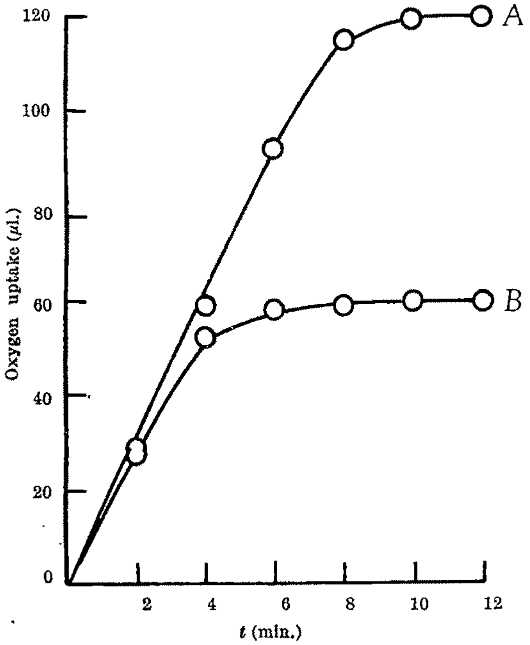

Fig. 1. Oxidation of DPNH by phenazine methosulphate. Warburg flasks contained: 2·45 ml. phosphate buffer, 0·1 *M*, *p*H 7·3; 0·1 ml. phenazine methosulphate, 10 mgm./ml.; 0·25 ml. DPNH (83 per cent by optical assay), in side-arm. *A*, 7 μmoles; *B*, 3·5 μmoles; water to 3·0 ml. Flasks tipped at zero time. Temperature, 20°. Gas phase air

diphosphopyridine nucleotide (DPNH) in Fig. 1. Experimentally, it applies equally to reduced triphosphopyridine nucleotide (TPNH). The amount of reduced coenzyme originally present in a test sample can be ascertained from the total oxygen consumption, and the fact that one mole of reduced coenzyme per mole of oxygen participates in the reaction. Added diaphorase is without effect on either the rate or extent of the oxygen uptake.

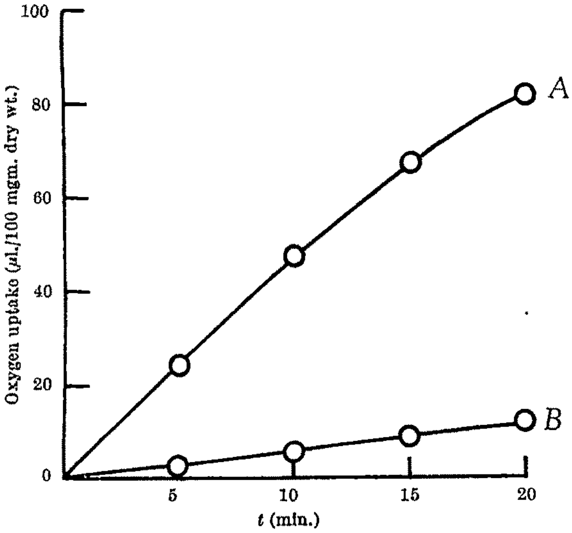

Fig. 2. Glucose 6-phosphate dehydrogenase activity in experimentally treated rabbit synovial tissue pulp. Warburg flasks contained: 1·7 ml. phosphate buffer, 0·1 *M*, *p*H 7·3; 0·1 ml. phenazine methosulphate, 10g mm./ml.; 0·2 ml. D-glucose 6-phosphate (25 m*M*); 0·2 ml. TPN, 15 mgm./ml.; 0·1 ml. cyanide (0·1 *M*); 0·2 ml. 10 per cent potassium hydroxide (in centre well); 0·5 ml. tissue. *A*, Complete system; *B*, minus D-glucose 6-phosphate. Substrate, TPN and phenazine methosulphate in side-arm; tipped after equilibration. Temperature, 37°. Gas phase air

From these and other observations it appears that, in a similar fashion, reduction of pyridine nucleotide coenzyme also can be followed. Dehydrogenase activity of a chosen tissue in the presence of suitable substrate and coenzyme can be compared with the endogenous activity of the same tissue with or without addition of inhibitors. Lately, the dehydrogenases of both pulped and intact connective tissue preparations from the region of joints have been studied in this manner and, to choose one example, Fig. 2 shows the D-glucose 6-phosphate dehydrogenase activity of a pulp-preparation of synovial tissue from experimentally treated rabbits. Cytochrome oxidase and catalase, if present, are inhibited by use of cyanide in the incubation mixture[6]. This extension of the Singer and Kearney method for succinic dehydrogenase to pyridine nucleotide-linked enzymes may therefore find application in situations where, by the nature of the tissue, optical or colorimetric assays are precluded.

Hormonal Induction of Alkaline Phosphatase in Human Cells in Tissue Culture

During an investigation of differences between established lines of human cells in culture, the alkaline phosphatase content was found to vary from high activity in certain epithelial lines to trace or no detectable activity in other epithelial lines. In a series of six HeLa lines the variation in alkaline phosphatase was as great as among cell lines derived from other tissues and from different species. Among the six lines of uncloned HeLa cells four showed marked 'constitutive' alkaline phosphatase activity and two showed trace or no activity (Table 1).

The human origin of the HeLa lines was established by their poliovirus susceptibility, immunological properties and chromosomal morphology[1].

Table 1. Phosphatase Activity of Six HeLa Cell Lines

* Mgm. of phenolphthalein released by a deoxycholate lysate containing two million cells. Incubation with substrate was for 2 hr. (ref. 5) at 37° C.

† Furnished by Dr. L. Coriell, Southern New Jersey Research Institute, Camden, N.J., who had propagated these lines in his laboratory for more than a year.

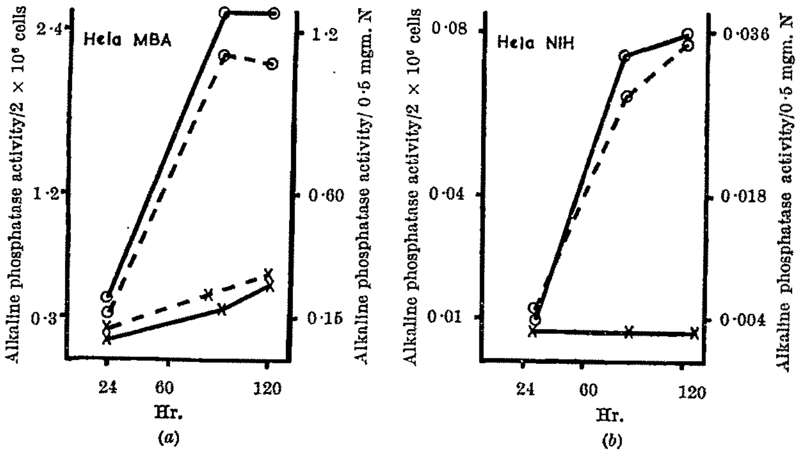

Fig. 1. Alkaline phosphatase activity of cultures grown with and without prednisolone 0·5 γ/ml.: (*a*), HeLa MBA, an example of a strain with 'constitutive' activity rising about 8-fold with prednisolone induction; (*b*), HeLa NIH, an example of a strain without detectable 'constitutive' alkaline phosphatase which develops activity by prednisolone induction. ×, without prednisolone; O, with prednisolone. Solid line, alkaline phosphatase activity per 2 million cells; broken line, alkaline phosphatase activity per 0·5 mgm. nitrogen

Alkaline phosphatase synthesis is known to be of the inducible type in micro-organisms[2], in explants of avian and mammalian embryonic tissue[3], and in human leucocytes *in vivo*[4]. It is of particular interest that adrenal glucocorticoids induce alkaline phosphatase activity in embryonic intestinal epithelium of chicks and mice earlier than it normally appears during development.

Two HeLa lines (Henle and NIH) contain trace or no detectable alkaline phosphatase unless grown in medium containing prednisolone (Δ′ hydrocortisone) 0·5 γ/ml. In the presence of prednisolone these otherwise 'negative' lines developed as much as one-fourth the alkaline phosphatase activity usual in the other four lines. Either prednisolone hemisuccinate or prednisolone phosphate was equally effective as inducer. Most but not all epithelial cell lines with high constitutive alkaline phosphatase show an increase in enzyme when cultivated in medium with added prednisolone. We are preparing a report on the effects of prednisolone on different cell lines.

In addition to inducing alkaline phosphatase, prednisolone has a number of other effects on human epithelial cell lines. It reduces cell multiplication by about 40 per cent; it causes an increase in epithelial cell cytoplasm with almost a doubling of cell volume and a 30–50 per cent increase in cell protein. In epithelial cells grown in the presence of prednisolone, acid phosphatase activity remains constant per unit of cell nitrogen. On the other hand, alkaline phosphatase activity of inducible lines increases markedly.

Table 2. Increase in Alkaline Phosphatase Activity of Cells grown with Prednisolone added

HeLa cell lines	No. of experiments	Cells (2 × 10⁶) grown without prednisolone			Cells (2 × 10⁶) grown with prednisolone		
		Alkaline phosphatase*	Acid phosphatase*	Protein N†	Alkaline phosphatase*	Acid phosphatase*	Protein N†
MBA	7	0·40	0·04	0·10	1·50	0·05	0·13
Henle	6	< 0·01	0·12	0·10	0·05	0·22	0·15
NIH	7	< 0·01	0·08	0·10	0·06	0·15	0·15

* Mgm. of phenolphthalein released by a deoxycholate lysate containing 2 × 10⁶ cells. Incubation was at 37° C. for 2 hr. (ref. 5).

† Total nitrogen in deoxycholate lysates of two million cells. Determined by micro-Kjeldahl.

Within each experiment the cultures grown with and without prednisolone were replicate. Cells grown in medium 199 with 10 per cent human serum.

Cells were free of contamination with pleuropneumonia-like organisms and no latent viruses could be demonstrated.

Table 2 presents the result of experiments on three HeLa lines. One of these, MBA, has constitutive alkaline phosphatase and the two others, Henle and NIH, have trace or no detectable activity unless grown in medium with added prednisolone. Within each experiment all cultures were replicate and were handled similarly except for the addition of prednisolone 0·5 γ/ml. to the experimental cultures. As shown in Table 2, alkaline phosphatase activity is increased in cultures grown in medium with prednisolone whereas acid phosphatase is not significantly altered when expressed on the basis of cell nitrogen.

Fig. 1*a* shows the results of a representative experiment with HeLa MBA, which possesses constitutive alkaline phosphatase. Alkaline phosphatase activity is expressed on the basis of two million cells (solid line and left-hand ordinate) and also on the basis of cell nitrogen (broken line and right-hand ordinate). The cells grown in medium containing prednisolone 0·5 γ/ml. have marked elevation of alkaline phosphatase activity when compared to a replicate culture grown in the absence of the hormone. Fig. 1*b* shows an experiment with HeLa NIH, a cell line with no detectable alkaline phosphatase when grown in the absence of prednisolone. In fact, alkaline phosphatase activity of lysates prepared from six times the usual concentration of cells was below the sensitivity of our method[5] (0·01 mgm. of phenolphthalein released in 2 hr. at 37° C.). When grown in medium containing prednisolone alkaline phosphatase activity is easily detected in Hela NIH.

Unlike bacterial alkaline phosphatase[2] the mammalian cell enzyme is independent of the phosphate ion concentration in the culture medium. Reduction of the phosphate medium to 0·04 m*M* does not enhance the alkaline phosphatase content in cell lines that contain the enzyme nor does it induce alkaline phosphatase in the prednisolone inducible 'negative' HeLa cells. Increase of phosphate ion concentration of the medium to 5·0 m*M* does not repress prednisolone induction of alkaline phosphatase nor does it alter the enzyme activity of cells with constitutive alkaline phosphatase. Under conditions of de-adaptation, the alkaline phosphatase activity of prednisolone-induced HeLa cells is diluted by cell multiplication.

Alkaline phosphatase may be induced also in certain cultured cell lines by high concentrations of organic monophosphates (greater than 200 γ/ml.[6]).

In summary, a hydrocortisone analogue, prednisolone, can induce alkaline phosphatase activity in certain epithelial cell lines in culture. Acid phosphatase is not significantly altered. Induction is independent of phosphate ion concentration. Under conditions of de-adaptation the induced enzyme appears stable and is diluted by cell multiplication.

Intracellular Free Amino-Acids of Certain Dermatophytes

THE identification and classification of the dermatophytes is dependent on macroscopic and microscopic morphological characteristics developed during growth on standard media. The formulation of biochemical tests to assist in identification would be of considerable value. The work of Mattick *et al.*[1], which showed that extracting cells of various species of *Lactobacilli* with 10 per cent acetic acid removed a mixture of amino-acids and peptides from the cells which was characteristic for each species and constant for strains within a species, suggested the application of a similar technique for the identification of dermatophyte species.

This communication records the findings for representative strains of *Trichophyton*, *Epidermophyton* and *Microsporum* species. The results show the presence in such extracts of a pattern of free amino-acids which is very similar for all organisms examined and the absence of any distinctive peptide components. It was the latter that Mattick *et al.* found of greatest taxonomic value in the *Lactobacilli*. Thus the results appear to show the pattern of cytoplasmic amino-acids in these fungi, which is borne out by the fact that other extractants, for example, 75 per cent ethanol, dimethylformamide and boiling water, known to extract the cytoplasmic contents from bacteria and fungi[2-5], have given extracts containing the same amino-acids.

It is well recognized that the patterns of the free amino-acids present in the cytoplasm of closely related micro-organisms show considerable similarity. Thus the technique is not of value in identification of the organisms; but the results are recorded as affording an interesting comparison with similar findings in *Aspergillus oryzae*[6], *Aspergillus flavus*[7], *Penicillium chrysogenum*[8] and *Neurospora crassa*[9], and as a preliminary to a more detailed examination of the amino-acid metabolism of these fungi.

The organisms were grown on a synthetic medium with DL-glutamic acid as nitrogen source. Strains of *Microsporum canis* were grown for 8–10 days at room temperature, whereas those of *Trichophyton rubrum*, *Trichophyton mentagrophytes*, *Trichophyton verrucosum* var. *discoides* and *Epidermophyton floccosum* were grown for 11–14 days at 30° C. The mycelium was collected on a sintered glass funnel and washed three times with a large volume of distilled water. The last washing was concentrated and examined by paper chromatography to ensure that carry-over of glutamic acid from the medium was minimal. The mycelium was dried so far as possible by suction, weighed and then extracted by immersion in 10 per cent (v/v) acetic acid (5 ml./gm. mycelium) for 4 hr. at room temperature. The extracts were examined for amino-acids by two-dimensional paper chromatography based on the method of Levy and Chung[10]. Whatman No. 4 chromatography paper (22 × 22 in.) was irrigated in one direction by the organic phase of butanol–acetic acid–water (4 : 1 : 5 by volume), then dried and, except for the strip containing the partially separated amino-acids, sprayed with a borate buffer of *p*H 8·3 (prepared from 300 ml. of 0·1 *M* boric acid and 60 ml. of 0·1 *N* sodium hydroxide) and again dried. The solvent system for the second dimension was prepared by mixing 30 gm. of *m*-cresol, 15 gm. phenol and 7·5 ml. of the borate buffer. The amino-acids were detected by spraying the dried chromatograms with the modified ninhydrin spray of Mattick *et al.*, drying at 40° C. for about 15 min. and then heating at 105° C. for 5 min. Hydrolysis of extracts was effected by heating with 6 *N* hydrochloric acid for 18 hr. at 120° C.

The principal amino-acids found and the frequency of their occurrence in the extracts are given in Table 1. In addition to the amino-acids shown the following were occasionally detected as faint spots on the chromatograms: cystine, lysine, asparagine, valine/methionine, glycine, leucine/*iso*leucine and threonine.

Table 1. INTRACELLULAR FREE AMINO-ACIDS OF DERMATOPHYTES (Figures refer to the number of times each amino-acid occurred)

	E. floccosum	*M. canis*	*T. rubrum*	*T. mentagrophytes*	*T. verrucosum* var. *discoides*
No. of strains examined	7	6	6	1	1
Glutamic acid	7	6	6	1	1
Glutamine	7	6	6	1	1
Aspartic acid	7	6	6	—	1
Alanine	7	4	6	1	1
Serine	4	6	6	—	1
Proline	5	6	5	—	1

Growth medium: 130 mgm. DL-glutamic acid, 36 mgm. potassium dihydrogen phosphate, 20 mgm. dipotassium hydrogen phosphate, 200 mgm. D-glucose, 20 mgm. crystalline magnesium sulphate, 140 μgm. crystalline zinc sulphate, 100 μgm. crystalline calcium chloride, 1 mgm. thiamine hydrochloride, 1 mgm. *i*-inositol and 100 μgm. biotin dissolved in 20 ml. glass-distilled water and brought to *p*H 6·8. The inoculum was 1·0 ml. of a homogenate of mycelium grown on Sabouraud's broth.

Hydrolysis eliminated the glutamine spot and led to the intensification of a number of spots by the hydrolysis of peptides which did not move in the solvent systems used; however, no amino-acids were found on hydrolysis which were not also present in the free state in the original extract.

These results show a similarity to those found in the other fungi cited here in that the major components of the intracellular free amino-acids are aspartic and glutamic acids, glutamine, alanine, serine and proline (except in *N. crassa*). A major difference appears to be that the basic amino-acids are absent or only present in minor amounts in the dermatophytes, whereas one or more of them are present as major components in the other fungi listed. Glycine was also present in *A. flavus*, *A. oryzae* and *P. chrysogenvm* but was only seen occasionally in the dermatophyte extracts.

We wish to thank Dr. Jaqueline Walker and Dr. C. J. La Touche for strains of the organisms used in this work.

A New Fatty Acid from Royal Jelly

IT has been shown by Butler, Callow and Johnston[1] that queen honey-bees (*Apis mellifera*) secrete material which affects bees in two ways, inhibiting the development of ovaries in workers and influencing their behaviour by inhibiting queen rearing. Callow and Johnston[2] have determined that the active principle in the material is 9-oxodec-2-enoic acid. It is referred to as 'queen substance'.

The close structural relationship between this 'queen substance' and 'royal jelly acid', 10-hydroxydec-2-enoic, found abundantly in royal jelly, would lead one to assume that the latter is a precursor of the former. Moreover, it would seem reasonable to predict that 9-hydroxydec-2-enoic acid might be an intermediate, and possibly occur in small amounts in royal jelly.

We observed that the carboxylic acid mixture, isolated from royal jelly by the procedure described by Brown and Freure[3], gives a weak iodoform reaction but no test for the carbonyl function with 2,4-dinitrophenylhydrazine. Oxidation of this acid mixture with aqueous chromic acid gave a product which, on treatment with aqueous 2,4-dinitrophenylhydrazine reagent, yielded a small amount of a 2,4-dinitrophenylhydrazone. This derivative has an infra-red absorption spectrum identical with that of the 2,4-dinitrophenylhydrazone of 9-oxodec-2-enoic acid.

Thus it appears that 9-hydroxydec-2-enoic acid is present in royal jelly in minute amounts. A more detailed account of the investigation will be published later.

Authentic samples of 9-oxodec-2-enoic acid and its 2,4-dinitrophenylhydrazone were supplied by Dr. R. K. Callow and Miss Norah C. Johnston, for which we are grateful.

PHYSIOLOGY

Oscillatory Flow in a Fluid-filled Elastic System

THERE is a pronounced tendency for a fluid-filled elastic tube to oscillate when the fluid is caused to flow by a small head of pressure. This may be demonstrated with a model (Fig. 1) which stems from a new theory of the action of the heart, published by me[1].

Water flows from the tap into a reservoir where a constant level is maintained, then down a rigid tube connected at the lower end to a rubber tube lying horizontally on a small platform. The distal end of the rubber tube is connected to a short length of rigid tubing, through the other end of which fluid is allowed to escape freely into the sink. Provision is made to vary the height of the reservoir and of the outlet.

Arranged parallel to the platform is a metal bar on which three springs are mounted which can be moved at will. These are of mild steel, twisted around the bar and secured at one end by a clamp. The other end of each is drawn out into a straight extension that presses against the rubber tube, with a force equivalent to a weight of 50 gm. approximately, the tension being adjusted by twisting the spiral part of the spring with the clamp.

Latex tubing is employed (0·7 cm. in diameter) with a volume pressure curve almost linear up to a pressure of 150 cm. of water. A suitable length, to start with, is 97 cm., the reservoir being set 1 m. above, and the outflow 4 cm. below, the level of the platform.

The position and pressure of the springs are adjusted until maximum oscillation occurs, when each is found to be at a critical distance from the distal end of the tube. A water hammer now develops, associated with momentary interruption and even regurgitation of flow. A sharp sound is heard at each pulse,

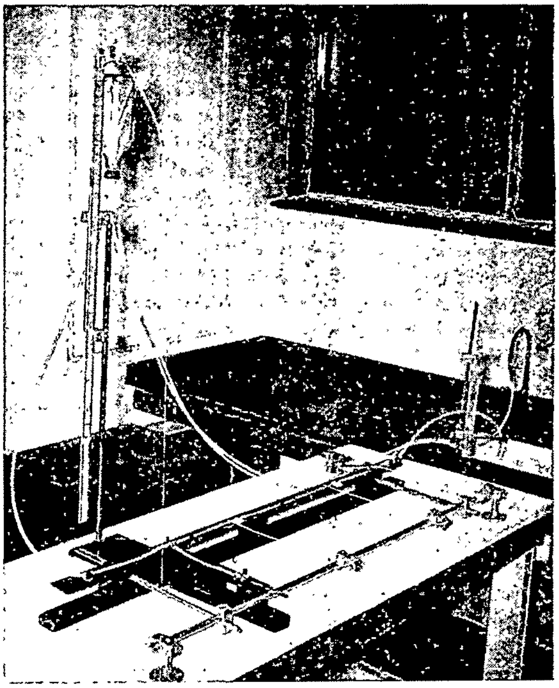

Fig. 1. The oscillator

audible at a distance of half a metre when the springs are correctly arranged. To facilitate the adjustment, the sound is detected with the aid of a microphone which is seen to the right of the model, at the back. Sounds are generated at the site of each spring but the loudest occur at the site of the distal end.

Oscillation is explained as follows: Viscous drag of the fluid in contact with the elastic wall produces waves which are reflected from the distal end of the tube: flow being slowed by the distal spring, stationary waves develop upstream where the flow velocity corresponds to the wave-length.

The stationary waves are of two types, long of some 75 cm. and short of about 1·5 cm., corresponding to gravity and capillary waves respectively. Current and pressure become 90 deg. out of phase in a manner similar to that of the current and voltage when stationary waves arise in an electrical transmission line, as a result of reflexion from a short-circuited end. The two proximal springs locate adjacent antinodes of the system of longer waves, giving the half wave-length. The corresponding quarter wave-length is given by the distance between the middle and distal springs; but, owing to the development of short waves at the distal end, the distal spring determines the site of a pseudo-stationary node about 1·5 cm. from the end of the tube.

When stationary wave motion is established, either of the two proximal springs, by altering the cross-sectional area of the tube, produces velocity modulation of the stream. The distal spring affects density modulation and, resonating, gains energy from the stream. Part of the energy is fed back as a wave which drives the proximal spring.

By altering the height of the reservoir and that of the outlet, differing frequencies of oscillation are obtained, as also by regulation of the pressure of the individual springs. In the case of the distal spring the closer the point of application to the end of the tube, the higher the frequency and conversely. Harmonics occur, a variety of modes of oscillation and occasionally a mode jump.

A 'T'-piece is introduced into the proximal segment of the elastic tube at the site of a node, the side branch communicating with a further piece of rubber tubing 20 cm. in length, the other end of which is closed with a piston. Adjustment of the position of the piston enables the device to be used as a quarter-wave matching stub, to suppress stationary waves at the inflow which otherwise interfere with the motion of the proximal spring.

The model, which will oscillate when filled with blood instead of water, demonstrates that stationary waves, in the centimetre range, readily arise in fluid-filled elastic tubes at physiological pressure. That oscillation is obtained from a stream maintained in flow by a pressure, initially constant, raises the question as to whether the peripheral pulse is developed from the static pressure of the blood in the great vessels and not from the heart wave.

Further work on this is proceeding.

Response of Thymus to Increase of Intake of Sodium Chloride

It is a well-known fact that the metabolism of the body fluids and electrolytes is closely connected with all metabolic processes in tissues. I have examined the significance of the changes in sodium balance for the activity of the lymphatic tissue of the thymus.

Adrenalectomized rats were used (Wistar, males. average weight of each group 190–222 gm.): (1) treated with deoxycorticosterone acetate (DCA), 2 mgm. intramuscularly per rat daily, and supplied with tap water; (2) treated with the same doses of DCA and supplied with isotonic saline solution. Treatment with DCA started immediately after adrenalectomy and later after 24 and 48 hr. respectively. 72 hr. after adrenalectomy the rats were killed by decapitation. The thymus was weighed and the lymphocytes of thymus were counted. At the same time a part of muscle (m. quadriceps femoris) was removed for electrolyte analysis. The specimens of the muscle were dried, defatted, and the potassium and sodium content was determined by flame photometry and expressed in milleqnivalents of ions per 100 gm. of fat-free dried material.

The analysis of the electrolyte concentration of the muscle has shown that the animals of the group treated with DCA and supplied with tap water maintain a relative balance in electrolytic proportions (intact control rats: potassium, 46·0 m.equiv./100 gm.; sodium, 10·5 m.equiv./100 gm.). Animals treated with DCA and saline have shown an increased retention of sodium which is demonstrated by a lower concentration of potassium and a corresponding increase of sodium in muscle. It is a well-known fact that sodium chloride stimulates the excretion of potassium in animals treated with DCA (ref. 1).

Table 1 shows that the animals treated with DCA and saline have an enlarged thymus. An increase in the average weight of the thymus is conditioned by an increase in the number of cells. The mean weight of the thymus of animals treated only with DCA does not differ from the mean weight of the thymus of intact control animals of the same body-weight (*n*-13, mean thymus weight: 180 mgm.).

Table 1

Treatment	Mean body-weight (gm.)	Mean thymus weight (mgm.)*	No. of cells $\times 10^6$*	Muscle electrolytes (m.equiv./100 gm.) Na	K	Na/K*
DCA	192 (10)†	177	576	12·1	44·9	0·26
DCA + NaCl	199 (21)	241	872	13·3	41·0	0·31

* Statistical significant differences between both groups ($P < 0·01$).
† In parentheses, number of rats used.

The experiments have shown that the thymus of adrenalectomized animals reacts to stimuli produced by an imbalance in the electrolytes of the internal environment (increase of sodium intake) by intensified activity. The mechanism of this action is not clear. We may assume both direct and indirect influence. It is known that the maintenance of ion concentration gradients requires metabolic energy. The hyperfunction of the thymus tissue may perhaps be an expression of increased metabolic efforts to maintain the homeostasis of the internal environment. My results indicate that the electrolyte metabolism has an important role in the regulation of the growth of thymolymphatic tissue.

Determination of Physiological Rhythms of Unrestrained Animals by Radio Telemetry

The results of 24-hr. rhythm measurements are frequently influenced by perturbations due to the presence of an observer and the measuring equipment. These perturbations can be minimized if the desired physiological data are obtained by radio telemetry[1,2]. The transmitter carried by the animal should be characterized by small size, long battery life, and sufficient range for unrestrained movements. Several transmitters with these design goals were constructed successfully and used to relay temperature and heart-rate information to a distant observer.

The transmitters contain a basic oscillator which is frequency-modulated by a voltage proportional to the phenomenon measured. For a description of the design, see ref. 3. The frequency of each temperature transmitter is controlled in part by the intrinsic dependence on temperature of the transistor in the oscillator and also by a voltage derived from a thermistor half-bridge circuit. The transmitter is built around the antenna, which is a ferrite core. The life of the 75 MAH mercury cell in this circuit exceeds 200 days. The frequency of the E.K.G. transmitter is controlled by amplified potentials derived from the heart. Additional circuitry is needed for amplification ; this increases power consumption and reduces battery life to about forty days. Units with more batteries have a longer life. Both the temperature and the E.K.G. units are suitable for surgical implantation provided a non-toxic covering is used. In these experiments temperature transmitters were hermetically sealed in cases machined from nylon rod. The temperature-sensitive elements were covered with the tip from a finger of a latex surgical glove, although they could be designed to protrude into a portion of a nylon shell. Seals between the latex finger tip and the nylon case were made successfully by wrapping and tying with nylon suture. No toxic reactions were noted when a unit prepared in this manner was implanted in a dog. Ref. 3 describes the pretreatment required before implantation.

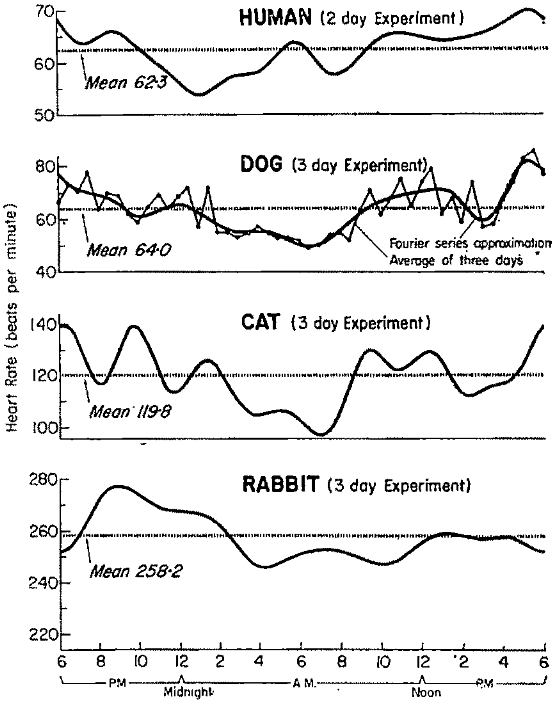

Fig. 1. 24-hr. periodicity in heart-rates of man and three laboratory animals. A Fourier series approximation was used for curve smoothing. Original data for the dog are included

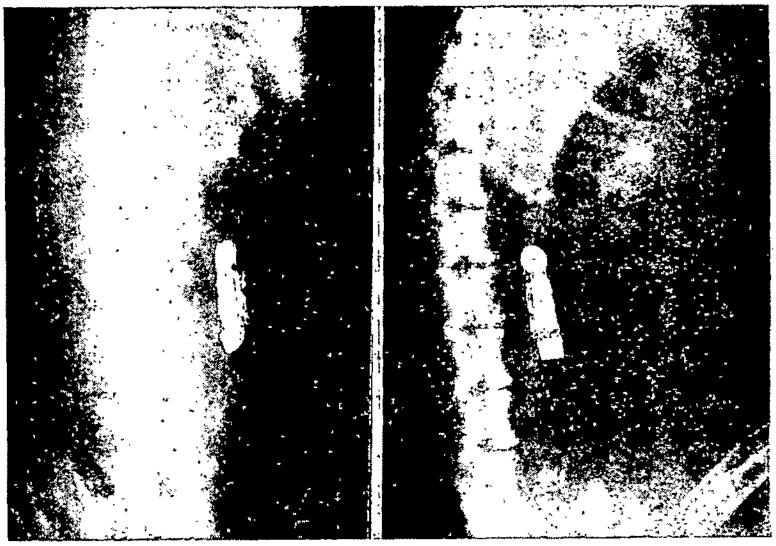

Fig. 2. Dorsal-ventral (left) and right to left lateral (right) roentgenographs showing position of the temperature transmitter in the dog

In a series of short experiments 24-hr. rhythms (circadian rhythms) of heart-rates for a dog, a cat and a rabbit were obtained. In each case the animal was trained to wear a harness on which the transmitter was mounted. The input leads to the transmitter were connected to tantalum electrodes which were implanted surgically weeks in advance. The electrodes were put in subdermally over the right scapula and on the dorsal mid-line near the first lumbar vertebra, a position favouring the detection of heart-potentials. Fourier analysis of the data was made in order that the 24-hr. periodicity could be expressed quantitatively in the form :

$$F(t) = C_0 [1 + C_1 \sin(15t + \theta_1) + C_2 \sin(30t + \theta_2) + \\ \ldots + C_n \sin(15t + \theta_n)]$$

One may think of this Fourier series as a curve of best fit for the given frequency components. The Fourier series approximation, which is uniquely applicable to repetitive phenomena, is analogous to the *n*th order polynomial of best fit frequently used in statistical analysis. The 3-day average heart-rate of a dog is shown in addition to the Fourier series approximation (Fig. 1). In each analysis the average value (C_0) plus eight frequency components were used. Note that the centre of the period of lowest heart-rates for man occurs at 3 a.m., and this time progresses to 5 a.m. for the dog, 6 a.m. for the cat, and 8 a.m. for the rabbit. These experiments were conducted when the human subject and the experimental animals were isolated in an insulated, quiet chamber with a 12-hr. light cycle (6 a.m.–6 p.m.). Data were recorded outside the chamber from signals picked up by an antenna.

Simultaneous body temperatures and heart-rates of the dog were also recorded to study the interdependence of these variables. The technique for measuring heart-rates in this experiment is as described, but with the animal wearing a harness. A temperature transmitter was put in retroperitoneally immediately caudal to the right kidney (Fig. 2). A 12-day recovery period was allowed before the experiment was begun. The resulting data (Fig. 3) indicate a close correlation between the two variables.

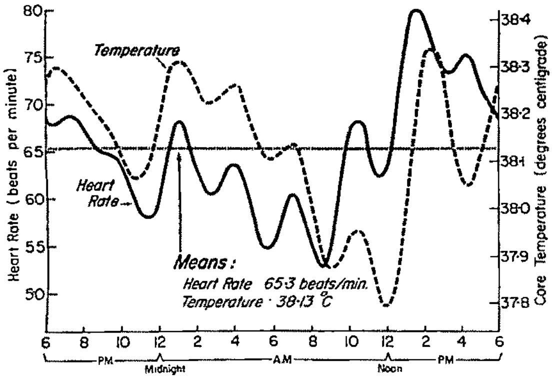

Fig. 3. Fourier series approximation of 24-hr. periodicity in core temperatures and heart-rates of a dog. The original data were obtained during a 24-hr. experiment

The data presented here support previous concepts of the day–night heart-rate characteristics of human beings, dogs, cats and rabbits. In addition, a very close correlation has been shown to exist between heart-rate and core temperature in the dog. These pilot experiments, which tested the radio telemetry technique for measuring temperature and heart-rate over extended periods of time, justify additional experiments of longer duration involving more animals.

This investigation was supported by the College of Medicine Trust Fund, State University of Iowa. One of us (W. O. E.) was a Fellow of the National Institutes of Health (Inst. Grant No. 2*G*-225).

Effect of Dexamethasone on the Phagocytic Activity of the Reticulo-Endothelial System

It has been reported previously[1] that cortisone, prednisone and prednisolone are strong depressants of the reticulo-endothelial system. The mechanism by which cortisone lowers the body defences has been shown by Nicol *et al.*[2] to be due to depression of the phagocytic activity of the reticulo-endothelial system, the total and differential white cell counts in the blood, and the gamma globulin-level in the serum. It has also been shown that after cortisone treatment is stopped, the depressant action of the cortisone can be reversed[3] and converted into one of moderate stimulation by diethylstilbœstrol. However, if cortisone and diethylstilbœstrol are administered separately, but at the same time, the depressant action of cortisone is prevented and considerable stimulation of phagocytic activity occurs.

The present research was carried out to ascertain the effect of dexamethasone phosphate on the phagocytic activity of the reticulo-endothelial system and compare it with the effects of cortisone acetate, prednisone and prednisolone previously reported[1].

The present experiments were made on 20 male white mice (*T.O.* Swiss strain) of 20–25 gm. body-weight. Ten of the animals each received 0·5 mgm. dexamethasone phosphate in aqueous solution subcutaneously, once daily, for 6 days. On the eighth day after the commencement of the treatment, the phagocytic activity was measured by the rate of disappearance of a known amount of specially prepared carbon from the circulating blood[4]; the procedure which we used is that described in previous communications[1,3] and the total body phagocytic activity or phagocytic index is denoted by the symbol *K*. Ten control animals received no treatment and in these the phagocytic activity was also measured by the carbon method.

After the assessment of the phagocytic activity, blood counts were made in all the animals, which were then killed and the weights of the liver and spleen determined.

The results show that in the mouse the phagocytic index in the control animals ($K = 20$) is depressed by dexamethasone ($K = 9$), compared with cortisone ($K = 7$), prednisone ($K = 8$) and prednisolone ($K = 8$)[1]. In the animals treated with dexamethasone, no change was found in the weights of the liver or spleen; and in the blood, the total red cell count was normal, the circulating lymphocytes were reduced from a control-level of 5,000 to 1,900 per cu. mm., the polymorphs increased from 1,400 to 2,500 per cu. mm. and the monocytes remained unaltered in number. Reduction in the number of lymphocytes was also found in guinea pigs treated with cortisone[5], but during the first week of treatment the polymorphs became reduced in number, then increased during the second week.

The therapeutic dose of dexamethasone is stated to be 5–7 times less than that of prednisone or prednisolone; and clinically, it is 28 times more potent than hydrocortisone and about 35 times more potent than cortisone.

The present results show that dexamethasone phosphate, like cortisone acetate, prednisone and prednisolone, is a strong depressant of phagocytic activity, but, although it is much more potent clinically than cortisone, its depressant effect on the reticulo-endothelial system is of no greater magnitude than that of the other corticosteroids at present in use.

In these researches we gratefully acknowledge a gift of dexamethasone from Messrs. Merck, Sharp and Dohme and financial assistance from the Medical Research Council.

Effect of Hæmophagin on the Phagocytic Activity of the Reticulo-Endothelial System

Hæmophagin is produced at the Austrian Institute for Hæmoderivatives, Vienna, by a special catalytic method from the blood of normal donors. It is stated to increase antibody formation against various bacterial antigens and also to cause increased phagocytosis; and it is given intramuscularly or intravenously when there is danger of infection after operation or injury.

It is generally acknowledged that the reticulo-endothelial system is an important defence of the body against infection, and extensive researches on the functions of the reticulo-endothelial system have recently been reported. We have previously shown[1-3] that the active œstrogens are strong stimulants of the reticulo-endothelial phagocytes; and unpublished results in our laboratory also show that when the reticulo-endothelial system of the guinea pig is stimulated the serum gamma-globulin is raised to about twice the normal level, and, in addition, both mice and guinea pigs are protected against virulent infections. It therefore seems rational that when antibacterial substances are being used to combat infection the reticulo-endothelial system should at the same time be stimulated to raise the body defence. The œstrogens may be used for this purpose but most of them have undesirable side-effects. In view of this, extensive research is being conducted to find, if possible, a strong reticulo-endothelial stimulant without œstrogenic effects. In these circumstances, we have been interested in testing the claimed action of hæmophagin by our experimental methods.

Fifty male white mice (*T.O.* Swiss strain) of 20–25 gm. body-weight were used for this investigation. Ten of the animals each received 1/40 of the human dose of hæmophagin once daily intramuscularly for 6 days and a second group of ten received half the dose for the same period. On the eighth day the phagocytic activity was measured in each animal by the rate of disappearance of a known amount of specially prepared carbon from the circulating blood[4], the procedure used being that described in previous communications[2,3] and the total body phagocytic activity or phagocytic index being denoted by the symbol *K*. Thirty of the animals were used as controls. Ten control animals received no treatment; ten received diethylstilbœstrol 0·1 mgm. once daily subcutaneously for 6 days; and ten received tri-*p*-anisylchloroethylene 1·0 mgm. once daily orally for 6 days. The phagocytic activity was also measured in the control groups by the carbon method, which was carried out on the eighth day in those treated with diethylstilbœstrol and tri-*p*-anisylchloroethylene. After the assessment of phagocytic activity blood counts were made in all the animals; they were then killed and the weights of the liver and spleen determined.

The results were as follows: In the untreated control animals the total phagocytic index (*K* value) was 16 ± 2, while in the control groups given diethylstilbœstrol and tri-*p*-anisylchloroethylene the *K* values were 75 and 83 respectively. In the animals which received a daily dose of 1/40 of the human dose of hæmophagin the *K* value was 19 ± 2 and in those which received a daily dose of 1/80 of the human dose the *K* value was 13 ± 1.

In the blood of the hæmophagin-treated animals no change was found in the total red cell count. When the dose of hæmophagin was 1/40 of the human dose, the total white cell count increased from a control level of 8,000 to 11,000 per cu.mm., the increase being due to increase in the number of circulating lymphocytes from 6,000 to 9,000 per cu.mm.; when the dose of hæmophagin was 1/80 of the human dose the total white cell count remained within normal limits.

The above results suggest that hæmophagin has little or no effect on the phagocytic activity of the reticulo-endothelial system of mice and that its action may be related to its influence on the white cells of the blood.

We gratefully acknowledge financial assistance from the Medical Research Council.

Incorporation of Palmitic-1-^{14}C Acid into Blood Cells

It has been shown that Ehrlich mouse ascites tumour cells *in vitro* readily absorb palmitic acid and use it as an energy source and for synthesis of other lipids[1]. Although this has not been demonstrated for blood cells, it has been reported by several investigators that these cells are able to synthesize lipids from acetate[2-5].

The present investigation concerns the incorporation of palmitic acid-1-^{14}C into the lipids of blood cells during incubation.

To 150 ml. of fresh human blood was added 37·5 ml. of A.C.D. solution (1·32 per cent sodium citrate, 0·48 per cent hydrous citric acid, 1·47 per cent dextrose). After centrifugation at 900*g* for 15 min., 50 ml. of the plasma was removed and shaken for 5 min. with 9·5 ml. of potassium palmitate-1-^{14}C solution. (This solution contained 3 mgm. of palmitic acid-1-^{14}C dissolved in 9·5 ml. of 0·01 *M* potassium hydroxide with a total radioactivity of 35,112 c.p.s.) The plasma-palmitate mixture was added to the blood cells and remainder of the plasma. Fifteen-ml. samples of this suspension were then incubated with slight shaking at 37° C. in an atmosphere of 5 per cent carbon dioxide–air and in the presence of 1,000 units per sample of both penicillin and streptomycin. Some of the incubations were carried out in the presence of 72γ of œstrone or 200γ of ethylenediamine tetraacetic acid (added as the sodium salt) per ml. of suspension. After 8 hr. the cells were separated and freed from the plasma and the lipids of both were extracted by the method of Delsal[6].

Total radioactivity was measured in a flow counter (Nuclear Instruments and Chemical Corporation *D*-47 Micromil Flow Counter). Total lipids were separated by silicic acid chromatography into six fractions (cholesterol esters, triglycerides, cholesterol, diglycerides, monoglycerides and phospholipids) using a modification (1, 5, 10 and 25 per cent ether in petroleum ether, ether and methanol) of the method described previously[1-7].

The first 3 fractions were purified by passage through a short alumina column to remove free fatty acids[7] and the radioactivity of each fraction was measured by the direct plating technique of Entenman *et al.*[8].

Under the conditions of the present experiment, at least 10 per cent of the total radioactivity of added palmitic acid was recovered in the blood cells. The radioactivity was found largely in the triglyceride, cholesterol and phospholipid fractions.

In general the glyceride fractions had the highest specific activity although the greatest percentage (more than one-half) of the total activity was in the phospholipid fraction. No significant amount of radioactivity was found in the cholesterol ester fractions. Some evidence was obtained indicating that in the presence of ethylenediamine tetraacetic acid and œstrone the distribution of the radioactivity among the different lipids was altered.

These results will be discussed in greater detail in a subsequent communication.

Effect of Castration on Experimental Liver Lesion in *Iguana iguana*

To gain an impression of the development of the hormones produced by the ovary in the liver of *Iguana iguana* in 30 castrated and 30 mature females a liver lesion was effected by means of the carbon tetrachloride method of Kaufmann. Afterwards the animals were observed for 70 days, the deaths occurring during this period being recorded. Just as in the rat[1,2], deaths began immediately in the mature group, most animals succumbing in the third week.

In the group of the castrated animals no losses were suffered in the first few weeks. Deaths occurred not before the fourth week with a maximum in the fifth week. In a period of 70 days, 24 of the 30 mature animals died and only 10 of the 30 castrated animals. This significant difference between the death-rates of the two groups suggests that castration is capable of exerting a protective action in the experimental liver lesion and that the hormones provided by the ovary reach development more poorly in the mature than in the castrated animals. This is also suggested by observations that in the case of an equal degree of liver lesion the castrated animals tolerate better the load of experimentally administered ovarian extract and evidently the injected animals develop more rapidly than the mature animals.

These results are in good agreement with the data obtained in the rat[1,2], and therefore have a certain general significance. Obviously, the no longer normal liver is seriously damaged by the hormones produced by the ovary, so that the mature animals perish more rapidly and in larger numbers after liver lesions. When the source of these hormones is eliminated by castration, the liver can to a considerable extent be relieved, through which the progress of the disease is prevented.

HÆMATOLOGY

Absence of Abnormal Hæmoglobins in Colombian Tunebo Indians

AN examination by paper electrophoresis has been carried out of hæmoglobin from 100 Tunebo Indians from the Santa Librada Mission located at San Luis de Chuscal (Department of Santander, Colombia). This tribe, whom historical and anthropological references consider to be a branch of the large Chibcha Indian group, consists of approximately 2,000 inhabitants spread over 22 small communities along the Rivers Suisiga, Cobaría and Cobugón, tributaries of the River Arauca, situated on the eastern slopes of the Sierra Nevada de Cocuy, between lat. 6° 15′ and 7° 10′ N., and long. 71° 50′ and 72° 20′ W. All the individuals studied were adults, apparently normal. Both sexes were proportionally represented and the blood was drawn only from subjects not closely related.

The hæmoglobin solution was prepared by Drabkin's method[1] without the use of aluminium chloride. Paper electrophoresis was carried out in a tank permitting the use of two sheets of 46·5 cm. × 21·0 cm. filter paper, resting on two glass rods, on an inclined plane at 45° with the anode facing the higher end. The size of the sheets facilitated comparing the relative migration of seven different samples. This method is somewhat similar to that used by Gordon *et al.*[2] for serum proteins.

All the samples examined showed a single spot with the same mobility as hæmoglobin A, indicating that no abnormal hæmoglobin could be detected by this method in the Tunebo Indians.

This work, which is apparently the first of its kind ever conducted on a Colombian population, confirms previous assumptions[3] that either American Indians lack abnormal hæmoglobins, or the frequency of occurrence of such hæmoglobins is very low. In spite of the relatively few subjects examined, who represent but 5 per cent of the whole tribe, the results obtained seem to indicate that either the stimuli which in other continents are presumed to have led to the production of abnormal hæmoglobins have not been operative in this Mongoloid branch on the American continent, or the whole Indian stock has enough 'resistance' not to undergo these mutations.

It is interesting to note, in this respect, that the ecological conditions in which these Indians live still permit a high incidence of malaria. By combining the results obtained in the present work with results found for Venezuelan Indians inhabiting malarial zones[4], it may be concluded that although the sickle-cell trait confers a certain resistance to malaria, as shown by Allison, the mutation leading to the production of hæmoglobin S is apparently not produced by malaria. As a matter of fact, this phenomenon has not yet been observed in pure South American Indians.

We thank Dr. Miguel Layrisse, of the Caracas Blood Bank, for supplying the blood samples; Dr. J. Wilbert, of the Fundación Científica La Salle, for the geographical data.

Bohr Effect in the Hæmoglobins of Marine Mammals

VERTEBRATE blood hæmoglobins discharge protons on oxygenation. This is part of the Bohr effect[1]. Recent work[2,3] has shown that in hæmoglobins from a variety of terrestrial mammals ranging in size from mouse to elephant the smaller the animal the greater is the sensitivity of its hæmoglobin to changes in pH. Thus elephant hæmoglobin discharges only about 1·5 protons during oxygenation while mouse hæmoglobin discharges about 3·8. An approximate inverse linear relation exists between the number of protons discharged by the hæmoglobin during oxygenation and the logarithm of the body-weight of the animal from which the hæmoglobin comes: one additional proton discharged corresponds to a decrease in body-weight by a factor of about 300. The extrapolation of this relationship to the weights of large whales suggested that whales might possess hæmoglobins with either a zero or small Bohr effect.

I have now examined the hæmoglobins of the humpback whale (*Megaptera nodosa*), pilot whale (*Globicephala scommonie*), and harbour porpoise (*Phocaena phocaena*), and find that the relation between the Bohr effect and body-weight existing among terrestrial mammals does not appear, so far, to extend to marine forms.

All blood samples were treated immediately with 0·1 vol. of 0·5 per cent sodium citrate and placed on ice. The preparation of the hæmoglobins was identical with that previously described[3]. The washed cells were lysed with distilled water and the hæmolysate then dialysed versus glass-distilled water for 15 hr. Cellular debris was removed by high-speed centrifugation. The oxygen equilibrium was determined as previously described in 0·1 M potassium phosphate buffer at various pH values between 7·0 and 7·6 at 35° C.[3]. The hæmoglobin concentrations were $1·4 \times 10^{-3}$ M (whale), $0·9 \times 10^{-3}$ M (porpoise), and $0·6 \times 10^{-3}$ M (pilot whale) on the basis of oxygen capacity measurement and assuming 4 molecules of oxygen per mole hæmoglobin. All measurements were made within 72 hr. of the original drawing of the blood.

The results of these measurements are given in Table 1. The porpoise and pilot whale have hæmoglobins with identical Bohr effects, about 0·52, expressed as $\frac{\Delta \log P_{50}}{\Delta p\text{H}}$, although porpoise hæmoglobin has an over-all oxygen affinity 38 per cent lower than pilot whale hæmoglobin. In contrast, humpback whale hæmoglobin possesses a large Bohr effect, $\frac{\Delta \log P_{50}}{\Delta p\text{H}}$ being about 0·82. Both the Bohr effect and the oxygen affinity are almost identical with those previously found for guinea pig hæmoglobin[3].

Large whales are known to be able to remain submerged for at least 1 hr.[4]. It appears that the large Bohr effect may be a homeostatic molecular adaptation facilitating diving for long periods. It would augment the physiological adaptations already known: the tolerance of high carbon dioxide concentration, the large blood volume, the high hæmoglobin concentration, the high concentration of myoglobin in the muscles, and low lung volume[4,5]. A large Bohr effect would enable the blood to absorb more carbon dioxide with a smaller drop in blood pH than would otherwise be possible. Similarly, a large Bohr effect should facilitate the discharge of the accumulated carbon dioxide when the animal surfaces.

The lower Bohr effect in pilot whale and porpoise hæmoglobins presumably reflects their predominantly surface behaviour. Although the humpback whale is also a surface feeder, it can dive for much

Table 1. ALL EXPERIMENTS PERFORMED AT 35° C. IN 0·1 M PHOSPHATE BUFFER

Animal	pH	log P_{50} (in mm. mercury PO_2)	$\frac{\Delta \log P_{50}}{\Delta p\text{H}}$	Estimated weight (kgm.)
Porpoise	7·03 7·32	1·382 1·231	0·52	90
Pilot whale	7·08 7·39	1·220 1·058	0·52	680
Humpback whale	7·08 7·42	1·395 1·115	0·82	41,000

longer periods than either the porpoise or the pilot whale. Observations by Dr. Kenneth S. Norris (private communication) indicate that the average diving time of pilot whales is less than 3 min., and seldom more than 5 min. Similarly, the harbour porpoise seldom dives for more than a few minutes.

In summary, the humpback whale, known to be capable of long dives, has a hæmoglobin with a large Bohr effect, while the pilot whale and harbour porpoise apparently do not dive for as long periods and have blood hæmoglobins with much smaller identical Bohr effects.

Humpback whale hæmoglobin was obtained from an adult male, estimated weight 41,000 kgm., within 12 hr. after the death of the animal. Pilot whale blood was obtained by syringe from the counter-current vessels of the flukes of a 12-ft. male weighing about 680 kgm. Porpoise blood was obtained by syringe immediately after catching a harpooned animal weighing about 90 kgm.

I wish to express thanks to Mr. Charles and Gaeton Caito of the Del Monte Fishing Co., San Francisco; to Dr. Kenneth S. Norris, of Marineland of the Pacific, California; and to Dr. William McFarland, of the Institute of Marine Science, Port Aransas, Texas, for invaluable assistance in obtaining the blood samples. I wish to thank Mrs. Marilyn G. Wells for assistance in carrying out some of the measurements. The work was supported in part by a grant from the National Science Foundation.

Leptospira-agglutinating Factors in Turtle Sera

IN our epidemiological research on the carriership of pathogenic *Leptospira* among wild animals in Israel, 58 swamp turtles (*Clemmys caspica*) of various ages originating from twelve different regions of the country were investigated for the presence of agglutinins. Serum tests were carried out against 13 serotypes of *Leptospira* (*L. icterohaemorrhagiae, canicola, grippotyphosa, pomona, hebdomadis, sejroe, australis A, autumnalis Rachmat, bataviae, hyos, ballum, poi* and *mini Szwajizak*). With 11 of these strains no reaction was observed. However, all sera showed highly significant titres in the agglutination test with *L. ballum*, both the 'complete' (Castellon) strain and the 'incomplete' (*S* 102) strain. (Three sera reacted with titre 250, two with titre 500, seven with titre 1,000, fourteen with titre 2,000, fourteen with titre 4,000, twelve with titre 8,000, three with titre 16,000 and four with titre 32,000.) Besides agglutinins, lysins were also demonstrated. In fifteen sera low titres were also found for *L. hyos* (eight up to 50, five up to 100, three up to 250), the remaining sera showing no agglutination with this serotype. Negative results were obtained too with *L. icterohaemorragiae* 'incompleta' and *L. sarmini*, which have some antigenical relationship with *L. ballum*.

None of the turtle sera agglutinated four out of five saprophytic water *Leptospira* strains (*L. biflexa*, provided by Dr. C. D. Cox, Vermillion, S.D.), and *L. Sao Paulo, L. Patoc I, L. Wa-Z* and *L. Wa-Leiden*, all provided by Prof. J. W. Wolff, Amsterdam).

A fifth strain of water *Leptospira, L. biflexa-Gent* (from Prof. Wolff), however, was agglutinated to approximately the same titres as *L. ballum* by all *Clemmys* sera examined (one in dilution 1 : 250, five 1 : 500, four 1 : 1,000, seven 1 : 2,000, six 1 : 4,000, four 1 : 8,000, six 1 : 16,000 and two 1 : 32,000).

Leptospira could not be isolated in direct culture from the liver, spleen and kidneys of the turtles, nor from the organs of hamsters intraperitoneally injected with a mixture of drained *Clemmys* organs.

It is remarkable that without exception the sera of *Clemmys* (of very different ages and at least partly from widely removed regions of the country) showed practically the same high agglutination-level with one of the strains of water *Leptospira* (*L. biflexa-Gent*) as with *L. ballum*, although these serotypes have no antigen in common. This aroused some doubt as to whether the serum reactions of the turtles depended on the classical antigen–antibody phenomenon.

The following investigations were intended to throw more light on the active agent in the sera of turtles compared with agglutinating antibodies provoked as a result of active immunization with the serotype strains concerned.

The globulins were separated from our *Clemmys caspica* sera, by ammonium sulphate precipitation, then washed and dialysed. Quantitatively the total amount of the agglutinating factor was contained in the globulin fraction of the sera.

A culture of *L. ballum* failed to be agglutinated in the presence of *Clemmys* sera and of sera of rabbits immunized against *L. ballum*, when the antigen was washed and finally suspended and the sera were diluted in distilled water. Consecutive addition, to the negative tests, of saline to a final concentration of 0·9 per cent brought about immediate reaction up to the original agglutination-level of the sera. This result indicated the necessity of the presence of electrolyte for this reaction.

The influence of high temperature on the agglutinating agent was investigated in twelve sera of *Clemmys caspica* and three sera of rabbits immunized against *L. ballum*. The critical temperature at which the turtle and rabbit sera lost their agglutinating property was 68°–69° C.

After freezing and consecutive thawing of turtle sera, the concentration of the agglutinating factor on the bottom of the tubes was about 20-fold that of the supernatant layer.

The 'agglutinins' were totally absorbed from *Clemmys* sera by addition of an adequate amount of *Leptospira* of the ballum serotype. The 'incomplete' serotype (*S* 102) deprived turtle sera of their agglutinating factor for the 'complete' (Castellon) strain as well as for the incomplete serotype. Hence the active factor in turtle sera reacts as an agglutinin of the 'incomplete' *ballum* serotype.

Turtle sera with low *hyos*-titre, absorbed by *L. ballum*, lost their agglutinating power for both serotypes. Absorption by *L. hyos*, however, did not change the titre for *L. ballum*.

Preliminary investigations have been carried out in order to determine whether there are other properties in addition to agglutinating and lytic factors which prevent infection by *L. ballum* in *Clemmys* sera.

Intraperitoneal infection in white mice with a mixture of two cultures of *L. ballum* resulted in prolonged presence of the organism in the kidneys, and its excretion in the urine of all the animals. No *Leptospira* were, however, found in mice that had been injected with the same culture to which a small amount of *Clemmys* serum was added.

These results strongly suggest that *Clemmys* sera contain immune bodies against the *Leptospira* mentioned. It appears that the capability of *Clemmys caspica* to produce *Leptospira*-agglutinating antibodies is very limited. Two turtles showed a titre as low as 50, and a third one reached only 1 : 100 after repeated injections of large quantities of *L. grippotyphosa* culture into its body cavity.

It seems desirable to investigate a possible relationship between the agglutination of *L. ballum* and *L. biflexa-Gent* in turtle sera.

After absorption with *L. ballum* (strain Castellon or *S* 102), the 'agglutinins' disappeared, not only for the *ballum* strains but also for the heterologous *biflexa-Gent* strain. Absorption with *L. biflexa-Gent* similarly eliminated the agglutinating power for both strains. This unexpected result is remarkable in the light of our experience with sera of rabbits, guinea pigs and land tortoises (*Testudo graeca*), which were immunized separately by repeated injection with *L. ballum* or *L. biflexa-Gent*. These immune sera contained agglutinins only for the strains injected, and absorption with the heterologous strain did not significantly affect the serum titre for the homologous serotype.

Sera of hedgehogs naturally infected with *L. ballum* and showing significant titres with this serotype revealed no agglutinins for *L. biflexa-Gent*.

It would thus seem that the agglutinating factor in *Clemmys* sera is based on a principle different from that of the immune antibodies. The origin and character of this factor and the mutual relationship between the *ballum* and *biflexa-Gent* agglutination are as yet obscure. Contrary to the positive results with the sera of *Clemmys caspica*, no agglutination was observed in blood samples of local land tortoises (*Testudo graeca*), soft water turtles (*Trionyx triunguis*) and water snakes (*Natrix tessellata*).

Similar results have been recorded recently by Combiesco *et al.*[1]. Six land tortoises did not reveal *Leptospira* antibodies, but ten out of eleven swamp turtles (*Emys orbicularis*) reacted strongly with *L. mitis* (probably syn. *L. hyos*). *Leptospira* were not isolated from the reacting animals. Injection of a virulent *L. icterohaemorrhagiae* culture produced only little agglutinin (titre 80–320).

Further investigation is necessary to determine the origin and nature of the agglutinating and protecting factors present in certain water turtles. As a working hypothesis, we assume that saprophytic water *Leptospira* play a part in the genesis of these factors.

PATHOLOGY

Detection of Serum Proteins within the Renal Collecting Tubule Cells of the Potassium-deficient Rat

In potassium-deficient rats characteristic granules appear within the cytoplasm of the collecting tubule cells; the origin and nature of the granules have not been established. By labelling the serum proteins with the dye *T*-1824 it has been examined whether or not they might be made up, at least in part, of serum protein entering from the tubular lumen.

Solutions of *T*-1824, kindly presented by the Warner-Chilcott Laboratories, New York, were injected into the tail veins of twelve 200-gm. male Wistar rats (5 mgm./100 gm. body-weight of the rat) that had been made potassium-deficient by feeding for three weeks on a diet deficient in potassium. Twelve control rats on a similar diet adequately supplemented with potassium were also injected with dye. Rats from the experimental and control groups were killed 1, 2, 8, and 14 days after injection, and unstained frozen sections of the kidneys were examined microscopically. In the potassium-deficient rats killed 8 and 14 days after dye injection the collecting tubule cells contained blue granules ; no such coloured granules were seen in this location in either the control animals or in the potassium-deficient rats killed 1 and 2 days after injection.

T-1824 is firmly bound to serum proteins under many varying conditions[1-4], and the blue granules in the collecting tubules are presumed to contain dye-tagged serum protein. Since the granules containing the dye were mostly at the side of the tubular cells nearest the lumen it seems probable that the dye-protein complex entered the cell from that direction. This conclusion is supported by the absence of coloration in the granules in rats killed 1 and 2 days after dye injection, as more prompt coloration might be expected to occur after *T*-1824 injection were the peritubular capillaries the source of the dye-protein complex.

It is known that when *T*-1824 is injected into normal rats it accumulates in droplet form within the proximal convoluted tubule cells of the kidney[1,2] ; this has been related to the normal process of reabsorption of serum protein by the convoluted tubule cells[2,3]. There was a diminution in the number and intensity of *T*-1824 stained material in the convoluted tubules of all the potassium-deficient animals examined when compared with the controls ; this suggests that the normal process of protein reabsorption by the convoluted tubule cells may be decreased in potassium-deficient rats. The attractiveness of this explanation is enhanced by the appearance of blue-coloured protein in the urines of the potassium-deficient animals injected with *T*-1824, while the urinary protein of the injected controls was uncoloured. In addition, in a separate experiment, it was demonstrated that potassium-deficient rats had a greater proteinuria than normal rats. This was done by measuring the urinary protein, precipitated by the method of Shevky and Stafford[5], in four male Wistar rats before and after potassium depletion ; a two- to three-fold increase was found in the rate of protein excretion after the deficiency was established (Table 1).

It is concluded that potassium-deficient rats possess collecting tubule cells so altered by the deficiency as to permit the movement of serum protein from the

Table 1. URINARY PROTEIN EXCRETION-RATE OF RATS BEFORE AND AFTER POTASSIUM DEFICIENCY

	During control period (mgm./hr.)*		During potassium deficiency (mgm./hr.)*		
	Day *A*	Day *B*	Day 13	Day 20	Day 27

* All urine specimens analysed were 24-hr. collections.

tubular lumen into the cells, where it appears in the form of granules in the cytoplasm. This work supports the view[6,7] that the cytoplasmic granulations of the collecting tubules in potassium-deficient rats are not simply distorted mitochondria as has been claimed[8,9]. Potassium-deficiency also leads to a greater degree of proteinuria in the rat. This may result from a decrease in the proximal convoluted tubule reabsorption of protein, from changes in the glomerular filtration-rate, or from changes in the integrity of the glomerular filter.

Variant of Parotid Tumour (Polyoma) Virus showing a Change in Oncogenic Properties

THE striking differences, as reported by several laboratories, in the types and frequencies of lesions and neoplasms produced in the same inbred strains of mice by parotid tumour virus indicate the existence of different variants. Close antigenic relationships, however, have been established for many of the different 'strains' of virus.

In our laboratory a thymotropic strain of virus was isolated from a *C3Hf/Bi* mouse with a tumour. This strain has been propagated serially by passage in a tissue-culture cell-line (*P*–388 *D*1) derived from a lymphocytic neoplasm of *DBA/*2 origin. The origins of the tissue culture cell line and of the virus have been described[1,2]. The biological properties of the virus-strain have been reported in detail[2–4]. The tumour-inducing capacity of the virus, propagated by passage in *P*–388 *D*1, has been evaluated through the fifteenth passage material. This passage represents a total effective theoretical dilution from the starting material of approximately 1×10^{-45}. Throughout this period, this strain of virus has been strikingly virulent in its oncogenic properties, and it induced in *C3Hf/Bi*.$(C3H \times AKR)F_1$ and $(C3H \times AKR)F_2$ mice nearly 100 per cent thymic epithelial tumours as early as sixteen days after neonatal injection. Many other primary sites besides the thymus have been involved in tumour induction. Parotid, submaxillary and sub-lingual salivary glands have been affected, as well as the lacrimal and thyroid glands and glands within the submucosal tissues of the trachea, oropharynx and nares. In addition, a lesion of the renal cortex, producing an alteration of the tubular epithelium[5], regularly results from the inoculation of this strain of virus[3].

At the time this polyoma virus strain was first introduced into *P*–388 *D*1 cell cultures grown in a medium containing 40 per cent human serum[3], the virus was also introduced into *P*–388 *D*1 cultures which had been adapted to grow in a serum-free medium containing non-fat milk[6]. Cytopathic effects in tissue culture, and induction of multiple sarcomatous and angiomatous lesions in hamsters and *Mastomys*, have been described for this virus strain after multiple passages in milk medium[7–9].

The tumour-producing capacity of polyoma virus passaged in *P*–388 *D*1 cells in a serum medium was compared with tumour-inducing capacity of virus after passage in the serum-free milk medium. Virus was collected from the combined fourteenth and fifteenth consecutive passages of each tissue-culture cell-line. Subcutaneous inoculations of 0·05 ml. into $(C3H \times AKR)F_1$ and $(C3H \times AKR)F_2$ mice less than 72 hr. of age were performed. Recipient mice were born of mothers having hæmagglutination-inhibiting antibody titres of < 100. Under these conditions antibodies[4] would not interfere with tumour-inducing capacities.

Polyoma passaged in the 30–40 per cent human serum medium has consistently shown a low titre as measured by hæmagglutination, tissue-culture infectivity and mouse-antibody production[10] determinations, but has maintained its high tumour-inducing capacity. The amount of $TCID_{50}$/ml. of the fourteenth-fifteenth passaged pool of *S* virus was $1 \times 10^{4\cdot9}$ and of the *M* virus, $1 \times 10^{6\cdot1}$; infectivity tests were run in parallel using *P*–388 *D*1 cells in a medium supplemented with 5 per cent calf serum. The number of hæmagglutination units/ml. for serum and serum-free milk media was 100 and 2,500, respectively.

The comparative tumour-inducing effects are shown in Table 1 in mice observed over a 10–14-month period. In addition to the striking reduction in frequency of tumours induced by virus propagated in *P*–388 *D*1 cells grown in the milk medium, attenuation of tumour-inducing capacity was also indicated by the decreased number of primary tissue sites involved in tumour formation. Of the 2 mice which developed pleomorphic parotid gland tumours, one had a small thymic epithelial tumour; the other had parotid gland involvement only. In only one of the three mice with thymic epithelial tumours were any other primary sites of tumour formation found. In this mouse, small areas in the parotid gland tissue were altered. Of 14 mice which have come to autopsy in milk the medium group, only two showed definite renal lesion. There appeared to be, however, no attenuation of the oncogenic activity for hamsters of the polyoma virus passaged in *P*–388 *D*1 cells in milk medium. Four separate pools of virus, ranging in $TCID_{50}$/ml. from $10^{5\cdot2}$ to $10^{7\cdot2}$, induced characteristic tumours in hamsters as follows: 16 in 16, 5 in 6, 5 in 6 and 4 in 10 animals inoculated

Table 1. TUMOUR-INDUCING CAPACITY IN MICE OF PAROTID TUMOUR (POLYOMA) VIRUS OF TWO STRAINS HAVING A COMMON ORIGIN

Virus in medium	Dose of virus/mouse $TCID_{50}$	No. of litters from hæmag. inhib.-negative mothers	No. of mice	No. of tumours*		Latent period in months (range)
				Thymus	Parotid gland	
Serum (14th–15th passages)	$1 \times 10^{3\cdot 7}$	5	43	28	8	3·3 (1½–6)
				(83·7 per cent)		
Milk (14th–15th passages)	$1 \times 10^{4\cdot 0}$	12	72	3	2	4·8 (1½–6)
				(6·9 per cent)		

* Sites of first appearance of tumours, grossly.

shortly after birth and subjected to autopsy afterwards.

The results reported here in which polyoma virus showed attenuation of tumour-inducing capacity for mice without obvious changes in tumour-inducing capacity for hamsters or infectivity for tissue culture and mouse tissues (antibody-production tests) are in contrast with the results reported by Sachs and Medina[11]. These authors observed attenuation of a strain of polyoma virus in its tumour-inducing capacities for both hamsters and mice without loss of cytopathic effect in tissue cultures.

Our findings may indicate selection of a genetic variant with little oncogenic activity in mice. They could also be explained on the basis of some change in protein coat of the virus. A third possible explanation is that a large amount of non-oncogenic virus is produced in the infected cells in milk-medium in association with a small amount of virus with oncogenic properties similar to those of virus grown in serum-containing medium. Inoculation of newly born mice with such a mixture might produce a rapid immune response and hence interfere with induction of tumours.

RADIOBIOLOGY

Changes in Density of Blood Serum after Total-Body Irradiation

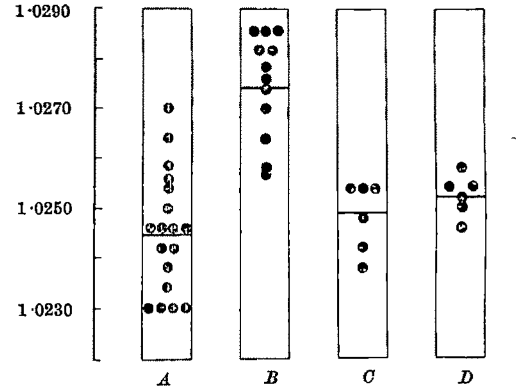

Fig. 1. Abscissa, density of blood serum; ordinate, col. *A*, control animals; col. *B*, animals irradiated by 600 r.; col. *C*, scorched rats; col. *D*, rats deprived of drink

IT is known that the ionizing radiation causes changes in some physical–chemical properties in living organisms[1,2]. It is assumed that changes of the physical-chemical properties have an important bearing on the development of the post-irradiation syndrome. We have followed the changes in the density of blood serum.

The blood serum was obtained by decapitating rats and centrifuging their blood. Serum density was determined by measuring 0·25 ml. volume by means of a microburette manipulated with a micrometric screw and by weighing on an analytical balance. The microburette was kept at 20° C. The volume of the serum pressed out from the microburette was always calibrated by redistilled water.

The rats were irradiated by X-ray therapeutic Meta apparatus at 200 kV., 10 m.amp., 4 mm. aluminium filter, from a distance of 75 cm. in a rotating low wooden cylinder in which the animals were placed in individual boxes. The average radiation beam was 13·5 r./min.

Scorching was effected by putting a 4-cm.^{2} hot metal sheet on the back of the animals for 15 sec.

We examined the blood serum density in groups of six white laboratory rats, Wistar strain, of both sexes. The animals were fed on standard diet.

The results obtained in three control groups are indicated in Fig. 1, col. *A*. In Fig. 1, col. *B*, are the results obtained in two groups of rats irradiated with 600 r. The rats were killed 6 hr. after irradiation. In col. *C* are the results of the scorched-rat groups 6 hr. after scorching and in col. *D* representing the group of animals that were refused drink for 48 hr. before killing. In these experiments the density of the serum was deducted after previous 24 hr. incubation, at 4° C.

The convenient period of incubation was verified by measurement of the serum density after different

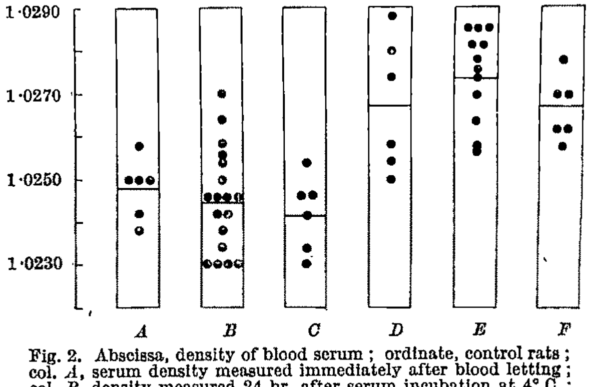

Fig. 2. Abscissa, density of blood serum; ordinate, control rats; col. *A*, serum density measured immediately after blood letting; col. *B*, density measured 24 hr. after serum incubation at 4° C.; col. *C*, density measured 48 hr. after serum incubation at 4° C.; irradiated rats dosed 600 r.

periods of storing, at different temperatures. While the stored serum in a thermostat, at 37° C., appeared to be inconvenient, incubation at 4° C. always yielded statistically significant results between the controlled and the irradiated animals.

In Fig. 2 are indicated the values of serum densities in three control groups after immediate decapitation of the animals (col. *A*), after 24-hr. incubation of the serum at 4° C. (col. *B*), and after 48 hr. incubation at 4° C. (col. *C*). In cols. *D, E, F* are values obtained in respect of three groups of rats after 600 r. irradiation, where the measurements were carried out under the same conditions as those of the control groups.

From these experiments it follows that after the total-body irradiation the blood serum increases in density. In the irradiated rats, in contradistinction to the controlled, as well as to the stressed animals, the differences are statistically significant. On the other hand the difference between the controlled and the stressed groups is not statistically significant.

We are examining the cause affecting post-irradiation increase in blood serum density. We believe that the cause may be due to the post-irradiation of nucleic acid katabolites because it is well known that these, especially deoxyribonucleic acid, are highly radiosensitive and they decrease in organs after irradiation[3,4]. Nucleosides and their precursors are represented in blood even under physiological conditions[5]. After irradiation an agglomeration of some of them occurs in a more considerable measure in blood and in urine excreted as in the case with deoxycitidine[6].

It is also possible to imagine that there is a correlation between sudden decrease of leucocytes after irradiation and the increase in serum density.

Hæmagglutinin Production in Pre-immunized Mice exposed to Continuous γ-Radiation

Benjamin and Sluka[1] first showed that X-radiation in sub-lethal doses could depress precipitin titres in rabbits when the radiation was given just before administration of the antigen, but that when the radiation was given after the antigen the precipitin titres were not depressed to the same extent. Since that time many workers have confirmed these observations (for review, see Taliaferro and Taliaferro[2]). With smaller doses of acute whole-body radiation, the results have been more conflicting, some workers claiming that antibody production could even be enhanced by small doses of X-rays. Very few, if any, observations have been made on the effect of continuous, as opposed to intermittent, radiation on antibody production.

In this preliminary report of some observations on the effect of continuous γ-radiation on pre-immunized mice it is shown that, despite the accumulation of a large dose of radiation, hæmagglutinin titres are maintained at normal levels during the period of radiation and at higher levels for a period of time after radiation.

Thirty-two Strong *A* male mice 3–4 months old were divided into 2 groups of 16 mice each and each group further subdivided into 4 boxes of 4 mice each. All 32 mice were then given a single intraperitoneal injection of 0·1 ml. of packed, washed sheep red cells as a primary immunizing dose of antigen. Fourteen days later, all the mice were weighed and then bled from the tail to a maximum of 0·25 ml. of blood.

The serum was separated from each individual sample and hæmagglutinin titration of the serum was carried out in 'Perspex' trays with doubling dilutions of the serum in saline against equal volumes of a 3 per cent suspension of washed sheep red cells. After 60 min. incubation at 37·5° C. the end points were read under the low power of the microscope. Ten days after the first bleeding, the 16 mice to be irradiated were then placed in aluminium boxes in a special unit containing a central source of 6·7 c. cæsium-137 so that they were receiving a continuous daily radiation dose of 84 rad/day. A short description of this unit has been published elsewhere[3].

At weekly intervals, 2 mice were removed at random from the unit and, after weighing, were bled from the tail under anæsthesia for serum and then killed. Two control mice were bled in the same way each time a pair of radiated mice was removed from the unit.

After 31 days in the unit, during which time the remaining mice had accumulated a total of 2,604 rads, these mice were then removed. Pairs of mice from this group together with pairs of control mice were bled from the tail and killed at intervals for a further month.

Fig. 1 shows the change with time of the hæmagglutinin titres for both the irradiated and control groups. In all cases the change is expressed as the difference in logarithms of the titre at the time of killing and that determined for the same animal 14 days after the primary antigenic stimulus of sheep red cells and prior to the start of continuous radiation (in the case of the irradiated group).

During the period of radiation, although the mean increase in the titres of the irradiated group is higher than that of the control group, this difference is not statistically significant. However, in the post-irradia-

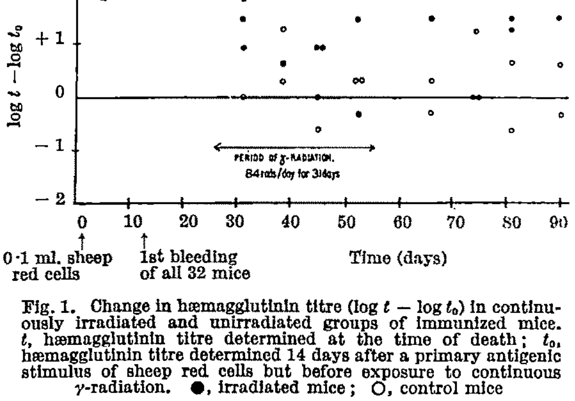

Fig. 1. Change in hæmagglutinin titre (log t − log t_0) in continuously irradiated and unirradiated groups of immunized mice. t, hæmagglutinin titre determined at the time of death; t_0, hæmagglutinin titre determined 14 days after a primary antigenic stimulus of sheep red cells but before exposure to continuous γ-radiation. ●, irradiated mice; ○, control mice

tion period there is quite clearly a statistically significant difference at the 5 per cent level between the two groups.

From the results of the present experiment, the time of onset of this difference between the two groups is not readily apparent. However, the results of a small preliminary experiment in which mice were immunized with sheep red cells and exposed to radiation in the same way, but in which the sera were obtained from consecutive bleedings of the same animal, indicated that this relative increase in hæmagglutinin titre in the irradiated group could be demonstrated towards the end of the period of radiation and persisted well into the post-irradiation period.

The maintenance of normal hæmagglutinin titres during continuous irradiation indicates that antibody-producing mechanisms are not seriously disturbed despite the accumulation of relatively large doses of radiation, and the fact that antibody titres are sometimes higher than before radiation suggests that active antibody production is still in progress and that it is not merely preformed antibody-levels which are being measured.

It is unlikely that the maintenance of antibody-levels is merely a reflexion of the destruction of large numbers of lymphoid cells, with the consequent liberation of antibody as was suggested by Dougherty, Chase and White[4], following the injection of pituitary adrenotrophic hormone, since during continuous irradiation the peripheral white blood count falls to low levels within a few days at this dose-rate, and remains low throughout the period of radiation and for some time afterwards. Moreover, Marshall and White[5] failed to detect increases in circulating antibody following the destruction of lymphocytes by nitrogen mustard.

It seems likely, therefore, that some other relatively radioresistant cell belonging to the reticulo-endothelial system is responsible for antibody production.

Hill[6] has described the development of increasing pyrinophilia of the reticular cells of lymphoid tissue and the development of immature plasma cells following doses of 500 r. whole-body radiation. Nossal[7] has also observed marked plasma cell proliferation in rats following single doses of 500 r. whole-body radiation and considers that the plasma cell is more radioresistant than the lymphocyte. Preliminary histological studies of the spleen and lymph nodes in the present experiment suggest that plasma cell proliferation is also taking place in these continuously irradiated mice. These observations and their relationship to antibody production will be reported in more detail elsewhere.

I should like to acknowledge the help and encouragement I have received from Prof. W. V. Mayneord, head of this Department.

BIOLOGY

Incorporation of Tritium-labelled Thymidine in *Bufo* ♀ × *Rana temporaria* ♂ Hybrid Embryos

IT is well known that cross-fertilization can often be performed in amphibians; development, in anurans, often does not proceed further than the late blastula or early gastrula stage. The reasons why this block in development occurs are not yet well known. I hoped that an autoradiographic study of the incorporation of nucleic acid and protein precursors into lethal hybrids might help in elucidating the problem. The precursor used in this work is tritium-labelled thymidine. B. C. Moore[1] has shown that this precursor, if injected into female *Rana pipiens* before ovulation, is incorporated, at the morula stage, in the nuclei of normal *Rana pipiens* and of androgenetic *pipiens* embryos. Thymidine is also incorporated into the deoxyribonucleic acid of the lethal diploid hybrids *pipiens* ♀ × *sylvatica* ♂.

The incorporation of labelled precursors into amphibian embryos is limited by the presence of the surface coat which renders the embryo nearly impermeable to a large number of substances. In order to rule out this permeability problem, we have worked on embryos the coat of which had been disintegrated in a medium devoid of calcium ions.

The embryos at the 2-cells stage were incubated in the following medium: sodium chloride (17 per cent) 20 ml.; potassium chloride (0·5 per cent) 10 ml.; water 966 ml.; *tris* 560 mgm.; *N* hydrochloric acid 4 ml.; sodium citrate 5 gm. Tritium-labelled thymidine was added at a concentration of 5×10^{-6} *M* (2·5 mc.). After a 17-hr. incubation, the embryos were fixed by freeze-substitution[2] and the incorporation was studied by the autoradiography technique of A. Ficq[3].

In the lethal combination studied in the present work, the embryos stopped development at the late blastula stage. The incorporation was investigated at the time of the arrest of development and 24 hr. later. The controls were at the gastrula and at the neurula stage respectively. In these experiments, I have followed Barth's[4] directions concerning the dissociation of the cells and the culture medium. The embryos, deprived of the vitelline membrane, were first incubated in the dissociating medium; after dissociation, they were placed in the culture medium containing labelled thymidine. The cells were fixed, after a 90-min. or a 24-hr. incubation, with a mixture of acetic acid and alcohol (10/90 v/v) and put through the autoradiography procedure.

Thymidine was found to be incorporated into the nuclei, and nearly all the radioactivity could be removed by deoxyribonuclease (0·1 mgm./ml. in *tris* buffer *p*H 7·5 containing Mg^{2+} *M*/300—1 hr. at 37°); on the other hand, there was no diminution of radioactivity following a ribonuclease treatment (0·2 mgm./ml. in *tris* buffer *p*H 7·5 containing Mg^{2+} *M*/300 —1 hr. at 37°). In the arrested blastulæ, we have observed the cytological abnormalities already described by Brachet[5]; in several nuclei the chromatin sticks to the nuclear membrane, where it forms a thin layer; the radioactivity is associated with this area. Sometimes, labelled chromatin is found in the cytoplasm. Finally, the nuclei often consist of two hemikaryons which can be distinguished by their staining properties towards methyl green and pyronine ; in this case, there is a good correspondence between methyl green staining and the number of silver grains in the emulsion.

Labelling of deoxyribonucleic acid could thus be observed in morula as well as in blastula cells of the lethal hybrids. Moreover, 24 hr. after development stopped, tritium-labelled thymidine was still incorporated into deoxyribonucleic acid, a fact which suggests that the block in development is not due to the arrest of deoxyribonucleic acid synthesis. Such a conclusion has already been reached by Løvtrup and Gregg[6], for the similar *Rana pipiens* ♀ × *Rana sylvatica* ♂ combination, on the basis of biochemical measurements of deoxyribonucleic acid synthesis.

Chloride-secreting Cells in the Gills of European Eels

In a recent communication Parry, Holliday and Blaxter[1] reopened the question of the chloride-secreting cells of the gills of fish and, in agreement with Bevelander's[2] arguments, they brought new indirect evidence against Keys and Willmer's theory[3] and Copeland's[4] conclusions.

Eels provide an excellent material for direct investigation of this point : Keys[5] demonstrated that branchial chloride is excreted by animals adapted to sea-water ; whether chloride absorption occurs is doubtful[6]. Moreover, silver eels migrate from fresh water to the sea and this behaviour should be related to a change in osmo-regulative capacities.

Gills of yellow and silver eels, adapted to fresh and sea-water, have been studied with Leschke's histochemical test for chloride. Although Leschke's method lacks specificity and is reproducible only within rather wide limits (cf. Lison[7]), a comparison of results obtained with identical tests in standard conditions from different animals can give reliable information.

The acidophil cells of yellow eels living both in fresh and in sea-water gave a positive chloride test, although slight and somewhat variable. With silver eels, the chloride test was strongly positive (Fig. 1) for animals adapted to sea-water, but clearly negative for those maintained in fresh water (Fig. 2).

These results confirm Keys and Willmer's theory and Copeland's data (on *Fundulus*) of the role of the acidophil cells of the gills of some fishes in chloride secretion, and demonstrate a different osmo-regulation between yellow and silver eels.

Yellow eels appear to be more euryaline and capable of secreting and absorbing chloride through the gills, but this conclusion should be confirmed by physiological experiments on eels of a definite stage of development. Silver eels seem to be able to secrete but not to absorb chloride by the gills.

These differences in osmotic function between yellow and silver eels explain the migration of silver eels from fresh water to the sea more clearly than the 'demineralization' theory postulated by Fontaine[8].

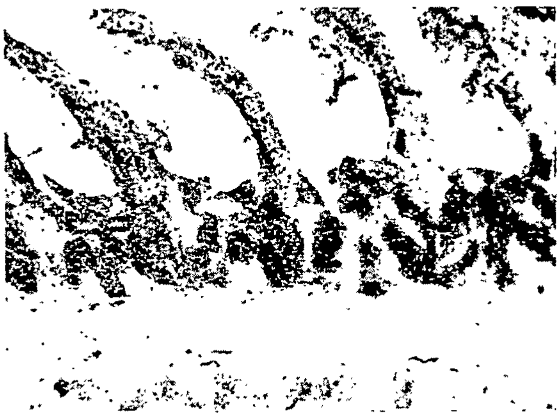

Fig. 1. Longitudinal section of gill filament of a silver eel adapted to sea-water. The acidophil cells at the base of lamellæ show a positive test for chloride, with Leschke's method. (× 300)

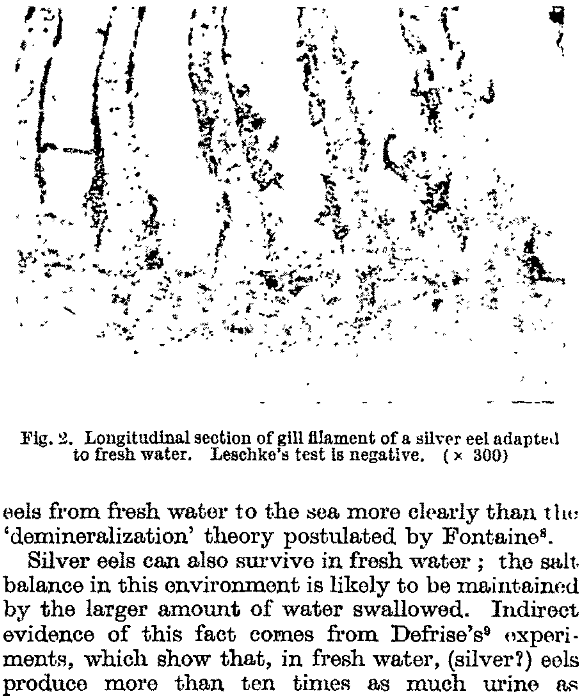

Fig. 2. Longitudinal section of gill filament of a silver eel adapted to fresh water. Leschke's test is negative. (× 300)

Silver eels can also survive in fresh water ; the salt balance in this environment is likely to be maintained by the larger amount of water swallowed. Indirect evidence of this fact comes from Defrise's[9] experiments, which show that, in fresh water, (silver?) eels produce more than ten times as much urine as sea-adapted eels.

A full account of this research is in the press[10].

I am indebted to Prof. U. D'Ancona for suggestions and criticisms.

Photoperiodicity of Seasonal Rhythm of Wool Growth in Sheep

The existence of a seasonal rhythm of growth of wool of sheep on a uniform diet was first shown in 1949 by Ferguson, Carter and Hardy[1]. These authors and Wodzicka[2] present indirect evidence which suggests that this rhythm, with maximum growth in summer and minimum in winter, is induced mainly by seasonal changes in temperature. However, certain photoperiodic responses in wool growth reported by Coop and Hart[3] and by Hart[4], together with the proof by Yeates[5,6] that the seasonal breeding-cycle in sheep is photoperiodically controlled, suggested that seasonal changes in length of day should be investigated in some detail as a possible cause of the seasonal wool growth cycle. The following experiment was therefore carried out.

Three groups of mature non-pregnant Romney Marsh ewes were fed a uniform ration of lucerne chaff which was sufficient to maintain a slight steady increase in body-weight. The control group was kept under environmental conditions (sub-tropical) normal to Brisbane. The second group remained under normal environmental temperature conditions but was subjected to an accentuated reversed rhythm of seasonal changes in length of day as used by Yeates[6] and illustrated in Fig. 1. The third group received normal hours of daylight but was exposed to a somewhat reversed seasonal temperature-cycle as shown in Fig. 2. It was not possible to arrange an ideal reversal of seasonal changes in temperature for this third group, owing to other projects using the controlled-temperature rooms at the same time.

The experiment started with 8 sheep in each of the three groups, but during the 2 years of the experiment a total of 6 sheep died, and during the second year two suffered a marked decrease in body-weight and were therefore excluded from the experiment. This left 16 sheep (4 controls, 7 in the reversed day-length group and 5 in the reversed temperature group) which remained in good condition throughout the experiment, and from which the wool growth curves in Figs. 1 and 2 were compiled. It was observed that each of the eight sheep finally excluded because of death or loss of weight closely followed the wool growth rhythm of its respective group while it remained in good condition.

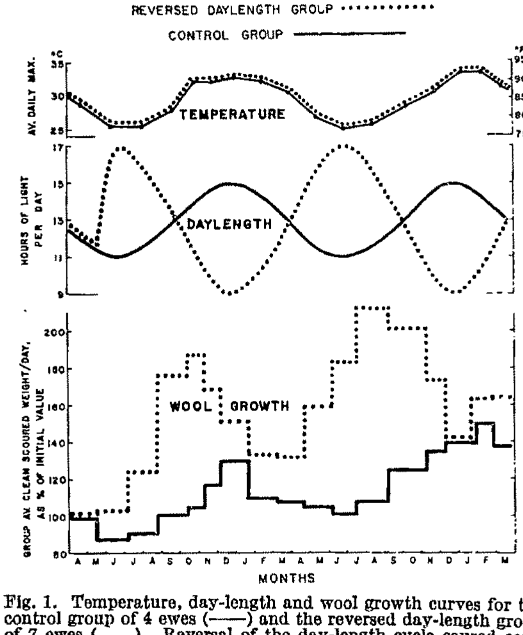

Fig. 1. Temperature, day-length and wool growth curves for the control group of 4 ewes (——) and the reversed day-length group of 7 ewes (....). Reversal of the day-length cycle caused complete reversal of the wool growth-cycle

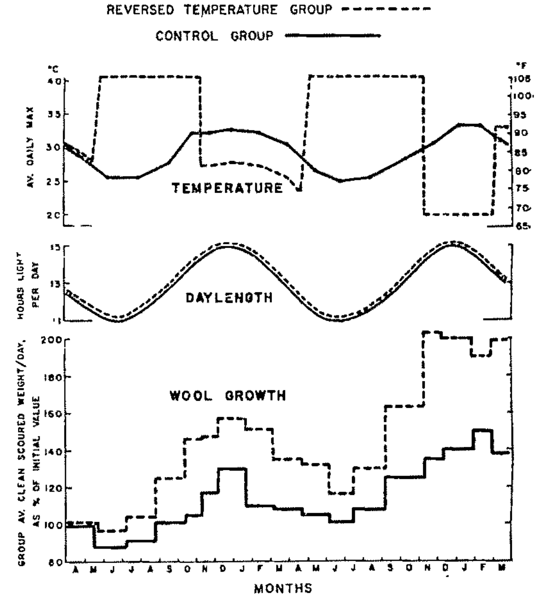

Fig. 2. Temperature, day-length and wool growth curves for the control group of 4 ewes (——) and the reversed temperature group of 5 ewes (– – –). An ideal reversal of the seasonal temperature cycle was not possible, but it can be seen that heating the latter group in winter and cooling them in summer had no obvious effect on the wool growth-cycle

Wool samples were clipped at approximately 6-week intervals from a 100 sq. cm. tattooed area on the mid-side of each sheep. The group averages of clean scoured weight/day for each growth period are shown in Figs. 1 and 2 as percentages of the initial average for the respective group. Fibre-diameter and staple-length were measured on the samples at selected periods during the experiment.

The following results were obtained :

(*a*) The control ewes showed a minimum wool growth-rate in winter and maximum in summer, as found by other workers[1–4].

(*b*) The ewes subjected to the reversed seasonal day-length rhythm developed a reversed seasonal wool growth rhythm with maximum wool growth in winter and minimum in summer. This reversal of wool growth rhythm occurred gradually, and took two years to complete.

(*c*) The reversal of the clean scoured weight rhythm resulted from a reversal of the rhythms of both fibre-diameter and staple-length.

(*d*) Upsetting the normal seasonal temperature cycle in the third group had no obvious effect on the wool growth-cycle of this group.

(*e*) The seasonal variation in wool growth was greatest in the reversed day-length group, a result which can reasonably be attributed to the greater seasonal variation in day-length experienced by this group.

(*f*) The overall increase in wool growth-rate over the 2 years was greater in the reversed day-length and temperature groups than in the control group. It is not known whether this is a direct result of the experimental treatments, the result of some other factor such as the more secluded environment in the reversed day-length pen and the controlled temperature rooms, or simply a result of chance.

The most significant of the above findings is the reversal of the seasonal rhythm of wool-growth by a reversal of the seasonal rhythm of day-length. This means that progressively decreasing day-lengths decrease wool growth and increasing day-lengths increase it, regardless of temperature changes. It is concluded therefore that the seasonal wool growth-cycle is induced primarily by seasonal day-length changes and not by seasonal temperature changes. Further evidence supporting this conclusion is provided by the temperature experiment illustrated by Fig. 2, in which the natural wool growth-cycle was not obviously altered by heating the sheep in winter and cooling them in summer.

The fact that 2 years of exposure to a greatly accentuated reversed day-length rhythm was required to reverse completely the wool growth rhythm shows that the light-induced wool growth rhythm is difficult to alter, and this is probably why Wodzicka[2] was not able to eliminate the natural seasonal wool growth-cycle simply by subjecting sheep to a uniform day-length régime for 12 months. The effect of temperature on wool growth-rate should be studied in some detail, and with due regard to the persistence of the light-induced rhythm, since it is clear from the results reported here that the temperature effect, if one exists, is not very marked.

The suggestion that a high level of adrenocortical activity in winter might cause the natural decline of wool growth during this season (Lindner and Ferguson[7]) now seems unlikely, since the seasonal cycle of wool growth is light-induced whereas the seasonal cycle of adrenocortical activity seems to be induced by temperature and not by light (Robinson and Morris[8]).

This work will be published in more detail at a later date.

I sincerely thank the Wool Research Trust Fund (Australia) for financing this project.

Elminius modestus on the South-East Coast of Scotland

Elminius modestus Darwin was first recorded in Britain in 1947 by Bishop[1], who found it to be well established in Chichester Harbour. Since that date numerous reports have been published giving the spread of this immigrant barnacle afterwards around the coasts of the British Isles.

Table 1. Population Densities of *Elminius modestus* at Various Stations in the Forth and Tay Areas

Tay and St. Andrews Area

		Adults	Juveniles
22	St. Andrews	*D*	—
23	Tayport	*D*	—
24	Newport-on-Tay	—	—

Grades. *A*, Found with ease, population estimated as more than 10 per cent; *B*, found without difficulty, population estimated as more than 1 per cent; *C*, found fairly easily, either as isolated specimens or small groups fairly widely spaced; *D*, found only with difficulty after some minutes searching, usually isolated specimens; —, none found after searching for about 10 min. at each of three or four suitable places. In each grade the numbers of juveniles are slightly higher than those of the adults.

This spread was relatively rapid in most parts of England and Wales but in the north-east, about 1951, it ceased abruptly at the mouth of the Humber[2]. A recent report by Crisp[3] states, however, that *Elminius* has now been found as far north as the mouth of the River Tees.

In October 1960 I found numerous mature specimens of *Elminius* and a fairly recent but heavy settlement of spat at Portobello, on the south shore of the Firth of Forth. Dr. Crisp, in a private communication, has since confirmed the occurrence of the barnacle in this area, settlement having occurred on test panels immersed at Rosyth between August 24 and September 7; and October 3 and 27, 1960.

Therefore, in October and November 1960 I made an extensive but fairly rapid survey of the Forth estuary to determine the local limits of distribution of *Elminius* and to estimate roughly the proportion that it forms of the total barnacle population. The results of this survey are shown in Table 1 and Fig. 1.

A clear distribution pattern appeared on both shores of the Firth of Forth. The highest proportion of *Elminius* was found to the west of the Forth Bridge, at Queensferry, diminishing steadily towards the eastern, open end of the estuary. *Elminius*

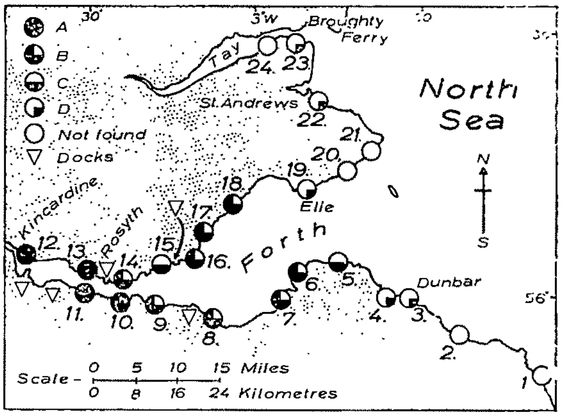

Fig. 1. Distribution of *Elminius modestus* Darwin in south-east Scotland. For key to station numbers and symbols see Table 1

extended slightly farther east on the south coast (Dunbar) than it did on the north coast (Elie). In addition, this barnacle was found in small numbers at St. Andrews and at Tayport, at the south-east end of the Tay estuary.

The distribution of the most recently settled larvæ followed a similar pattern to that of the adults but was less extensive. The young stages were more numerous on the south shore of the Forth, but a comparison of their sizes suggests that settlement had probably occurred earlier and persisted over a longer period on the north shore.

It seems likely that the focal point of the colonization of the Forth area developed as a result of remote dispersal[2] by ships, since it appears to have been centred on the inshore western end. Even if the settlement in the Tees area[3] were not of recent date, the distance and the nature of the intervening coast make it unlikely that marginal (that is, coastal) dispersal could have been responsible, since the maximum possible distance across which the animal can be dispersed by such means appears to be not more than about thirty miles[4].

The exact locality of the original Forth settlement must remain a matter for conjecture as there are numerous docks which take shipping from warmer waters (Fig. 1); perhaps the most likely possibility is the naval dockyard at Rosyth. In addition, there is a number of smaller fishing and sailing harbours which could have assisted in the subsequent local spread.

It is difficult, also, to estimate the probable date of the arrival of the initial colony or colonies. In 1956 Dr. Crisp failed to find *Elminius* at Portobello and Queensferry, where it is now common, but the present density and extent of the populations suggest that at least two, or possibly three, seasons have passed since the barnacle first became established. The rate of colonization may have been influenced in the early stages by the size of the original settlement, or settlements, and possibly by later introductions; but an initial period of build-up is necessary in order to produce the large numbers of larvæ requisite for dispersal and settlement in the area. It is likely that growth and reproduction will be slower in the colder latitude of the Forth than in the southern parts of Britain, where Crisp[2] suggested that the rate of colonization by marginal dispersal along an open coast is about 20–30 km. per annum. On consideration of these facts, therefore, it seems probable that the initial settlement occurred in 1958; a consolidation of the settlement and an extension in the enclosed waters to the west and the immediate east of the Forth Bridge may have occurred during the warmer summer in 1959; and the extension in quantity to the open part of the Firth in 1960.

The earliest record of *Elminius* on the east coast of Scotland comes from Dr. G. A. Horridge, of the Gatty Marine Laboratory, who, in a private communication, reports that it was noted at St. Andrews in 1958. Dr. Crisp, however, was unable to find the species at Broughty Ferry, Arbroath or Montrose, all north of the Tay, in February 1960.

The past history of the *Elminius* populations of this area is therefore far from clear, but it seems likely that the species will become established over a wider area of the east coast of Scotland with its numerous small harbours and sheltered coves. Although only recently established, the population in the Forth area has already become more numerous than the former dominant species, *Balanus balanoides* L., at some points, namely Blackness Point, Kincardine Bridge and Charlestown.

Bathynella and Other Interstitial Crustacea in Southern England

The report of a specimen of *Bathynella* from near Oxford[1] was a reminder that in Great Britain zoologists have still neglected to study the fauna inhabiting the interstitial water of strata below ground, though the potential interest of this habitat was clearly pointed out by A. G. Nicholls as long ago as 1946[2].

More recent work on the Continent, as, for example, that of Husmann[3] in Germany, is beginning to throw light on the nature of this fauna and how its members are distributed, at least in the more accessible sites. It has been realized for some time that several small 'hypogean' animals that occur sporadically in wells or cave water are really generally spread in interstitial water of strata bathed by a permanent water-table, and indeed primarily belong to this habitat. The crustacean family Bathynellidae provides perhaps the most striking example. About thirty species, classified in five genera, are now known from various parts of the world, including Eurasia, Africa, South America and Madagascar. Few of them greatly exceed 1 mm. in length and being very narrow are well suited for moving through not only gravels but also coarser sands. Throughout central Europe, eastward to Roumania, one species[4]—*Bathynella natans* Vejdovsky (= *chappuisii* Delachoux)—has been found in interstitial ground water in many places where it has been sought. Its status in Britain might be presumed to be the same, but evidence has been lacking.

Among other crustacean genera known from underground interstitial water in central or southern Europe are three (*Microcharon*, *Ingolfiella* and *Bogidiella*) that are represented in marine gravel on the bed of the English Channel[5]. This find raises such questions as whether these genera may not also be represented in sub-surface fresh water in Britain, and, more generally, whether there is not a transition zone where sub-surface fresh water grades into that held in strata below the sea bed, making possible a gradual exchange of fauna between the two.

More information is needed from the landward side, and, in pointing out this neglected field, and urging that fresh water biologists might profitably turn attention to it, I can report the results of some tentative steps I have myself been taking in this direction.

Attempts to sample ground-water have been made in three ways: (1) by filtering water delivered by an electric pump through a pipe driven into water-bearing gravel; (2) by washing stones and gravel at the point of issue of hill-slope springs; and (3) by digging shallow pits in gravel where the water-table is high, such as in the ox-bow of a river. Each of these methods, simple though they are, produced encouraging results at the first attempt, particularly with regard to the crustaceans collected. Three species in particular deserve mention.

Bathynella natans Vejd. Examples have been collected by all three techniques. (1) At Whitchurch (Oxon), in the Thames valley opposite Pangbourne (Berks), through an opportunity kindly presented by Dr. I. H. H. Yarrow (to whom and to whose family I am extremely indebted for help), an estimated volume of 3,400 gallons of water raised from the alluvial gravel, on April 2 and 3, 1960, and filtered through a fine-meshed plankton tow-net, produced ten specimens. Here a 1-in. metal pipe had been driven 14 ft. into the ground and an electric pump delivered water through it at the rate of about 500 gallons an hour. The pump had not been used for nearly a year. The catches were distributed over the two days.

(2) One of the two springs emerging in fields (owned by my colleague, Dr. J. A. C. Nicol) at Moortown, near Tavistock, Devon, on the slope of Dartmoor, produced a single adult *Bathynella*, when sampled on May 3. This site is at 560 ft. O.D., on metamorphosed slate, and about half a mile from the edge of the main granite outcrop. At the point of issue of the water a rough conduit had been made with flat stones, under which the water flowed over a small accumulation of stones and gravel some inches thick. Handfuls of the latter were swilled in a bucket and the water strained off.

(3) A pit was dug in a gravel spit alongside the River Plym, a little way above Cadover Bridge, in the granite area on the south-west side of Dartmoor, at 696 ft. O.D. Ground-water was reached just below 1 ft. and the gravel dug out for another foot. The gravel removed, consisting mainly of granite fragments with little detritus, was washed and the washings strained off, as well as much water that constantly seeped into the pit. The fauna collected included twelve specimens of *Bathynella*, mostly juvenile. A second pit, dug close at hand on May 27, in warmer weather, yielded two specimens at the lowest level dug. These observations are of interest in showing that *Bathynella* tolerates the acidic, peaty and very soft water for which Dartmoor is notorious.

On these findings, scanty as they are, it is difficult to escape the conclusion that *Bathynella natans* must be very widespread in water-holding strata through much of Britain. The gravels of the London basin may be expected to hold a large population. The zoological departments of some universities must be in a position to obtain a ready supply by simply boring into the gravels on which their buildings rest.

Niphargus glenniei Spooner. This small member of the amphipod genus of 'well-shrimps' was described from the limestone caves of Buckfastleigh and Ashburton (Devon)[6], which had remained the only known habitat. Several examples, however, have been obtained during this investigation. Two came from the Moortown spring that produced the *Bathynella*, and five from another spring at 700 ft. O.D. and nearer the granite. The second pit dug by the River Plym, in granite gravel, produced four specimens. Another example was got from a well on the edge of Dartmoor, near Wrangaton. Evidently, therefore, this species must be widely spread, in Devonshire, in interstitial ground-water, tolerating a wide range of *p*H. It seems to be the counterpart of *Niphargellus* spp. on the Continent.

Crangonyx subterraneus Bate. One of these amphipods was obtained from the water pumped at Whitchurch (as described above). Since first recognized by Spence Bate more than a hundred years ago, from a pump, there seem to be only two subsequent occurrences in Britain (one from a well, and one from a cave pool). The apparent scarcity would be explained if this species also proved to be primarily an inhabitant of interstitial water, and accidental elsewhere.

Granted that crustaceans of this sort, along with certain copepods, ostracods, mites, oligochaetes, nematodes, etc., regularly inhabit interstitial water, it may be asked how far do they range; or how deep into the geological strata do any of them penetrate.

Soil *p*H and Mycorrhiza Development in *Pinus*

MYCORRHIZAS of *Pinus* will not develop profusely on trees growing in neutral or alkaline soils, and it has usually been assumed that this is so because the mycorrhizal fungi are acidophilic. During investigations of the fertility status of a nodular podzolic soil from the coastal lowlands of southern Queensland, I have found that formation of mycorrhiza in pine seedlings is not always inhibited by a rise in soil *p*H, and when it is, the effect can usually be explained in terms of host nutrition. The direct effect of alkalinity in restricting the growth of the fungus may be less important than was formerly thought. These results are derived from a series of pot experiments designed primarily to test for nutrient deficiencies, but also to study the effect of nutrient supply on the degree of mycorrhizal infection of seedlings. Comparison of relative mycorrhiza development was based on the number of mycorrhizas expressed as a percentage of the total number of short roots per seedling ('mycorrhiza per cent'). The criterion of infection used was the presence of dichotomous branching or forking of the short roots. Since dichotomy of short roots of *Pinus* is not always associated with mycorrhizal infection, some care is necessary in accepting forked short roots as mycorrhizas. Experience has shown that it is possible to recognize mycorrhizas of *Pinus* on the basis of their external morphology. In the work reported here, counting was carried out initially under a stereo-microscope (× 12·5), and after experience had been gained in this way a binocular loupé was used.

The forked mycorrhizas of the seedlings examined were predominantly of Melin's type *A* which, as described by Robertson[1], occur in acropetal succession on the parent long root. Type *B* mycorrhizas were far less common and these were counted along with the former type. Where any doubt existed, the short roots were regarded as uninfected. This also applied

Table 1. EFFECT OF AMMONIUM NITRATE AND CALCIUM CARBONATE ON SOIL NITRATE-LEVEL, SOIL pH, AND MYCORRHIZA DEVELOPMENT OF *P. caribaea* (EXPERIMENT SOWN, APRIL 30, 1957)

Treatment	Nitrate as p.p.m. nitrogen (June 10, 1957)	pH (Nov. 19, 1957)	'Mycorrhiza, per cent'* (Nov. 19, 1957)
Nil	12·7	6·3	19·5 (25·83)
Calcium carbonate, 16 cwt./acre	21·3	7·5	8·7 (16·86)
Ammonium nitrate, 3 cwt./acre	71·4	5·8	2·0 (7·21)
Calcium carbonate, 16 cwt./acre + ammonium nitrate, 3 cwt./acre	115·3	6·9	4·3 (8·19)
Significant difference			
($P < 0{\cdot}05$)	12·8	0·2	(5·26)
($P < 0{\cdot}01$)	17·6	0·3	(7·25)

* Mean arc sine transformations shown in brackets.

to unbranched mycorrhizas: while these could frequently be recognized under the stereo-microscope, their identification by means of the binocular loupé was by no means certain. Full details of this work will be published elsewhere, but the meantime the results can be summarized as follows: (1) Lime-induced chlorosis of *P. taeda* L. occurred at pH 7·5 and the seedlings had relatively few mycorrhizas. Normal mycorrhiza development was restored by adding the iron complex of ethylene diamine tetra-acetic acid to the soil without altering its pH; (2) both ammonium nitrate and calcium carbonate reduced mycorrhiza development in *P. caribaea* Mor. Calcium carbonate promoted nitrification, and as the nitrate-level in the soil increased, 'mycorrhiza per cent' declined, irrespective of whether soil pH increased or decreased (Table 1); (3) ammonium nitrate greatly reduced 'mycorrhiza per cent' of *P. taeda* growing at pH 5·5, but sodium carbonate did not affect mycorrhiza development even though it raised soil pH to 7·4; (4) sodium nitrate retarded mycorrhiza formation in *P. taeda*, and the greater the amount added, the longer the delay in mycorrhiza formation; (5) in an experiment designed to separate the effect of the sodium and nitrate ions, it was found that sodium ions did not affect mycorrhiza development in *P. taeda* even though they increased soil pH, whereas nitrate ions greatly reduced 'mycorrhiza per cent' (Table 2).

These experiments were all carried out using the closed pot system, that is, the pots were undrained. Because of this, no nitrate could be lost through leaching; nor was any evidence of denitrification encountered. It seems therefore that mycorrhiza formation in *P. taeda* and *P. caribaea* is not inhibited in neutral or slightly alkaline soils, provided the soil nitrate-level is low. That this has not been recognized previously may be due to the fact that mineralization of nitrogen proceeds rapidly in such soils.

Table 2. EFFECT OF SODIUM NITRATE AND SODIUM CARBONATE ON SOIL pH AND MYCORRHIZA DEVELOPMENT OF *P. taeda*

Treatment	pH	'Mycorrhiza, per cent'*
Nil	6·5	33·6 (35·28)
Sodium nitrate	7·0	9·2 (14·92)
Sodium carbonate	7·0	22·9 (29·29)
Sodium nitrate + sodium carbonate	7·3	11·3 (17·14)
Significant difference		
($P < 0{\cdot}05$)	0·1	(7·60)
($P < 0{\cdot}01$)	0·1	(10·19)

* Mean arc sine transformations shown in brackets. 10 ml. *N*/10 solution of each salt applied per pot.

The depressive effect of readily available nitrogen on mycorrhiza development may also explain why mycorrhizas are less abundant in mull soils than in mor. Although not necessarily more alkaline than mor soils, mulls nitrify well and have a higher content of ammonium and nitrate nitrogen in the natural state[2].

ENTOMOLOGY

'Preferred Temperatures' of Land Arthropods

STUDIES on arthropod behaviour have often been concerned with the 'preferred temperatures' of the animals and attempts have been made to correlate results with the microclimatic changes in the animal's natural environment. It appears, however, that insufficient attention may have been paid to the other physical factors the variations of which cannot be easily eliminated from a temperature gradient. These factors have sometimes been assumed to be unimportant or have been disregarded altogether, and a preference shown by the animal for a particular zone within a temperature gradient apparatus has been attributed solely to temperature.

The main purpose of this communication is to point out that variables may exist in most of the usual types of closed temperature-gradient apparatus. For example, even in a gradient apparatus designed for observing small arthropods of 1·5 mm. × 1 mm. or less, the air temperature differs by more than 3 deg. C. from that of the floor. The air will be cooler than the floor at the 'warm half' and warmer than the floor in the 'cool half' of the temperature gradient. These differences will cause a 'thermal flow' from the warm end to the cool extreme with, at high humidities, the deposition of water droplets on the roof of the warm region and on the floor of the cool end.

It is often assumed that 'saturated air' may be easily produced and thus uniform humidity conditions obtained throughout a temperature gradient. However, if the air temperature is higher than that of the floor, the air in fact will not be completely saturated, although if the floor is warmer than the air the relative humidity will be 100 per cent. The rate of evaporation at any point in the apparatus can be determined by introducing there a modified Piche micro-evaporimeter; because the warm air flows into the cool region, evaporation may be much higher at the cool end than at the warm end.

Animals introduced into such an apparatus will consequently be acted on by (*a*) floor temperature, (*b*) air temperature, (*c*) thermal air currents, (*d*) differences in relative humidity and (*e*) evaporating gradients. All these factors, in addition to others depending on the physiological state of the organisms, must be considered in the interpretation of any results.

I have been concerned with aspects of the physiology and ecology of certain free-living mites (Oribatoidea, Acarina). Batches of fifty adult *Belba*

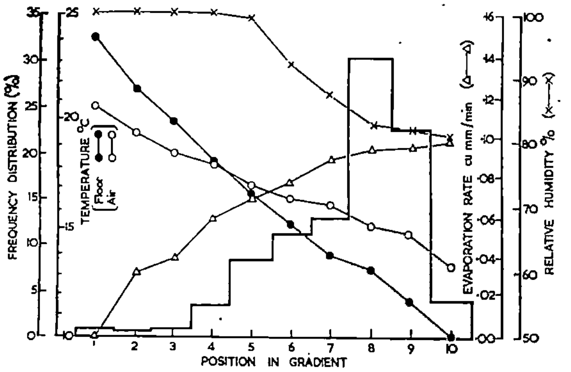

Fig. 1. Distribution of adult *Belba geniculosa* in a temperature gradient in 'saturated' air (mean of three experiments)

geniculosa Ouds., a common oribatid mite of oak-litter, were acclimatized to constant conditions and offered a linear temperature range under 'saturated' conditions. Their positions were recorded at fixed time-intervals to determine where they aggregated.

The apparatus consisted of a copper bar 22 cm. × 4 cm. × 0·2 cm. embedded at each end into insulated copper boxes, which contained heating and cooling agents. The upper side of the metal strip was surrounded by narrow glass sides (1 cm. deep) and covered with a glass plate marked at intervals to facilitate numerical records. The metal strip was covered with moist filter paper and floor and air temperatures within the apparatus were determined at definite intervals by thermistors; evaporation-rates 1 mm. above the floor were measured by a micro-evaporimeter. The relative humidity in the 'cool half' was calculated from aqueous vapour pressures derived from the floor and air temperatures; the atmosphere in the 'warm' half remained completely saturated. Except when recording, the apparatus was kept in darkness.

In Fig. 1 the frequency distribution of adult *B. geniculosa* in a 'saturated' temperature gradient after periods of 3 or 6 hr. is related to the temperature gradient and other physical variables.

By introducing desiccating and humidifying agents into the apparatus, the behaviour of the mites could be recorded under a range of conditions of temperature and humidity. Regardless of changes in relative humidity and evaporating gradients, *B. geniculosa* always aggregated within a floor temperature zone of about 12–14° C. (air temperature 14–16° C.). These results are somewhat surprising for the mites will quickly move towards the region of highest humidity offered to them in a linear relative humidity chamber at constant temperature. Thus temperature seems to have a greater effect than other physical factors and the mites seem to select a zone where death from desiccation will not long be delayed. However, other experiments indicate that desiccation is slow in humidities above 80 per cent, so the situation is more complicated than might be expected.

Temperature is not always the most important factor. Wellington[1,2], for example, found that larvæ of the spruce budworm, *Choristoneura fumiferana* (Clemens), aggregated within certain regions of evaporating gradients independent of temperature and these results were explained in terms of their micro-habitat[3].

Laboratory findings with *B. geniculosa* have been treated somewhat academically in this report and in further work it is hoped to correlate behaviour distributions under controlled conditions with diurnal changes and long-term micro-climatic phenomena in their natural environment.

It is suggested that in future more importance should be attached to all possible physical factors other than temperature in certain types of temperature gradient apparatus. In this way it may be possible to explain some of the existing inconsistencies between field and laboratory observations.

I gratefully acknowledge the receipt of a post-graduate Agricultural Research Council grant during the course of these investigations.

Mite Orientation and Survival on Flies

PHORESY among arthropods has been widely noted and its importance in population dispersal and survival appreciated. Hypopi, the phoretic stage of mites, have been studied for the most part isolated from their hosts, and little is therefore known of their interaction. We have recently described some behavioural adaptations of the hypopus of *Myianoetus muscarum* (Anoetidae) to fly factors which favour the mite's dispersal[1]. Hypopi are attracted to a volatile substance produced by the pupæ of several fly species, including *Musca domestica, Muscina stabulans* and *Stomoxys calcitrans*, and cluster on the anterior end of the pupal case from which the fly is due to emerge. This communication describes the behaviour of the same mite on adult *M. stabulans*.

Hypopi can be found throughout the fly-breeding medium and may cluster on pupæ well down as well as on the surface. Their distribution, however, is mainly on the surface and in large infestations the surface is covered with cinnamon-coloured patches containing thousands of mites. A strip of paper towelling partially inserted into the medium will show a sharp boundary of mites just above the surface—presumably an indication of a preference for moisture. Aggregates of hypopi remain on the pupal case until eclosion, at which time they transfer to the emerging fly. After a brief excursion on the host, the mites occupy characteristic locations for attachment. One of the choice sites is under the dorsal conjunctival folds at the base of the abdomen; another is at the base of setæ. Horizontal rows of mites build outward and toward the rear. In moderate infestations, mites collect on areas bearing setæ and avoid smooth cuticle (Fig. 1). On all areas of the abdomen mites uniformly face toward the rear. This orientation is directly correlated with the pattern of setæ and conjunctival folds which are directed towards the posterior. I have observed hypopi back to the base of an overhanging seta or into a fold in the cuticle, presumably to obtain maximum contact with their anal suckers. This would serve to explain their aversion to smooth cuticle. Mite orientation on the thorax is obscured by its more complex chætotaxy.

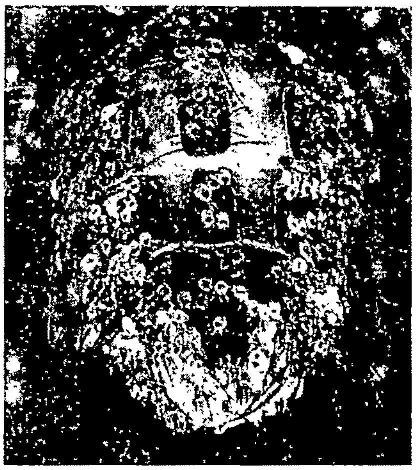

Fig. 1. Ventral abdominal aspect of fly showing preference of mites for areas bearing setæ and their orientation toward the rear

Once settled on the fly, hypopi remain sessile. There is a non-adaptive aspect of this behaviour which is strikingly demonstrated in two ways. The majority of mites will remain attached despite numerous visits of their hosts to a suitable breeding medium. Furthermore, the mites will remain attached to a dead host until they too succumb. Thus, for the majority, phoresy may be a one-way ride. Some of those mites which do transfer to a breeding area remain active for two weeks or longer without moulting. Others soon become quiescent and distended as a result of what appears to be a considerable intake of water. I measured the idiosomal heights of hypopi before and after contact with moisture and found them to be 67μ and 110μ, respectively. The mechanism of water absorption is not known, as the mouthparts are considered to be non-functional. A minimum of two days is required for the appearance of the tritonymph which may moult to the adult stage one day later (at 24° C.).

I have found dessication to be the most crucial factor in mite survival. The following results are based on three replications using about 200 mites in each test. The various stages of the mite were placed in a dry Petri dish at 24° C. and 50 per cent relative humidity. Under these conditions, the feeding stages suffered 100 per cent mortality within 2 hr., while the hypopi completely succumbed after 30 hr. The longevity of hypopi on caged flies kept under the same conditions was a minimum of 47 days. In my experiments the flies died before the mites. It is noteworthy that the microclimate of the fly is most favourable for the survival of hypopi. This is additional evidence of the adaptive value of the phoretic habit.

This work was supported by a National Science Foundation grant, *G*9934, and conducted, while a guest investigator (1960–61), in the University of Illinois College of Pharmacy. I am grateful to Prof. P. D. Carpenter, for advice and assistance during the course of this work, and to Dr. L. de la Torre of the College of Agriculture for the photograph.

MICROBIOLOGY

Action of Mycophenolic Acid on Unstable Diploids of *Penicillium chrysogenum*

Diploids of *Penicillium chrysogenum* heterozygous for the genes y/Y (yellow versus green conidia) and w/W (white versus green conidia) have green conidia. On plating, these give rise to a majority of green colonies, together with a small percentage (less than 1 per cent) of yellow or white colonies, or green colonies with white and/or yellow sectors. The proportion of these 'segregant' colonies and sectors is strongly increased (by more than 20–30 per cent) if the conidia are treated with the nitrogen mustard, methyl-*bis*(β-chloroethyl)amine (HN–2) or with X-rays[1]. When certain of the colonies with sectors are sub-cultured by the plating of green conidia, they give rise to a population of colonies with sectors; these colonies maintain the unstable character indefinitely in successive transfers. A dozen unstable clones were isolated, each of which showed sectors with a single phenotype (rarely two) characterized by the presence of nutritional markers as well as by the colour of the conidia. Manganous chloride, added to the agar medium at 40 m*M* concentration, inhibited the production of sectors with nearly all the unstable clones; the inhibition, however, was not of a permanent nature, and disappeared when the clones were subcultured on medium free from manganous chloride[2].

During one experiment, a chance contaminant colony of *Penicillium* sp. was found to grow on a plate of unsupplemented nutrient agar on which colonies of an unstable strain (*D*) produced by treatment with HN–2 were giving rise to yellow sectors. Around the contaminant colony, colonies of strain *D* did not show sectors. The contaminant strain was isolated and cultivated in submerged culture in a corn-steep – dextrin medium, and the filtered broth was sterilized by autoclaving. 1 ml. of broth added to the agar on which strain *D* was plated completely inhibited sectoring of the colonies. As with manganous chloride, when conidia from such colonies were replated on unsupplemented medium, they gave rise again to sectoring colonies.

By extraction with *n*-butyl acetate at acid *p*H, a substance was isolated from the broth which could be easily crystallized from water or from carbon tetrachloride and which reproduced the effect observed with the culture filtrate of the *Penicillium* sp. The chemical and physical properties of this compound agreed closely with those of mycophenolic acid, a well-known metabolite of several *Penicillia*. The identity of the substance was confirmed by comparing its physical, chemical and biological properties with those of a sample of mycophenolic acid kindly supplied by Prof. J. H. Birkinshaw.

Mycophenolic acid inhibits sectoring of strain *D* and other unstable diploid strains of *Penicillium chrysogenum* at a concentration of 1 μgm./ml., that is, at a molar concentration about 10,000 times less than the minimum concentration of manganous chloride required to produce the same effect. The abolition of yellow sectors is not due to a selective effect; yellow colonies derived by plating conidia collected from sectors formed in the absence of mycophenolic acid grew and sporulated normally on agar containing mycophenolic acid. Nevertheless, the formation of yellow sectors from unstable strains is prevented by this substance.

---

[1] Greenberg, B., and Carpenter, P. D., *Science*, 132, 738 (1960).

Mycophenolic acid does not show any of the other effects which manganous chloride produces on *Penicillium chrysogenum* treated with mutagens[2], namely, reactivation of viability after treatment with HN–2 and reduction of somatic segregation induced by HN–2 or by X-rays.

The mechanism of genetic instability in diploids of *Penicillium chrysogenum* is still unknown, and therefore the mode of action of mycophenolic acid in this process cannot yet be investigated. The inhibition of the formation of yellow diploid sectors has also been observed with an unstable diploid of *Aspergillus nidulans*; in this strain the yellow sectors were due to a high frequency of somatic crossing-over in chromosome I, probably connected with a breakage-fusion cycle set up in chromosome II (ref. 3).

The Mycolytic Phenomenon and Biological Control of *Fusarium* in Soil

THERE have been many attempts to make use of biological control measures for the suppression of plant pathogens, borne by soil. Frequently, these attempts involve the inoculation into soil of organisms which antagonize the pathogens *in vitro*; such procedures try to disturb the natural microbiological equilibrium by the simple introduction into the environment of individual isolates. The frequent failure of the added micro-organisms to become established is not surprising because the biological associations and antagonisms within the ecosystem determine the composition of the microflora, the climax population being a reflexion of the physical and chemical characteristics of the habitat. By modifying the habitat, however, it is possible to alter the composition of the microflora, and such microbiological alterations may destroy plant pathogens borne by soil.

The possibility that mycolytic bacteria, that is, organisms which lyse fungi, are involved in the suppression of certain plant pathogens has been proposed frequently. For example, a lytic factor has been implicated in the control of *Fusarium* by strains of *Achromobacter* and *Pseudomonas*[1] and in the suppression of *Helminthosporium halodes* by *Bacillus subtilis*[2]. In an investigation of the disappearance of *Fusarium oxysporum* f. *cubense* from artificially infested soils, a number of bacteria capable of lysing the fungus were obtained. For the isolation of the mycolytic bacteria, a modification of the method of Mueller and Durrell[3] was used in which living *Fusarium* cells in water agar were included in the enriching medium. The active bacteria grew readily in an inorganic salts medium containing living or dead cells of *F. oxysporum* f. *cubense* as the sole carbon source, but fungus cell-walls isolated by treatment with potassium hydroxide could be substituted for the intact mycelium as the source of carbon. Three of the lytic micro-organisms were identified as strains of *Bacillus cereus*, two others as *Bacillus megaterium*, and a sixth isolate as a strain of *Pseudomonas*. When added to a growing culture of *F. oxysporum*, these bacteria caused a lysis of the fungus. Similar results have been obtained with fungi of several other genera. Furthermore, the bacteria-free culture filtrate of a lytic strain of *Bacillus cereus* grown in a medium containing *F. oxysporum* brought about the lysis of both the living and the dead fungus.

All the mycolytic bacteria exhibited chitinase activity and developed in media containing chitin as the only source of carbon, but culture filtrates prepared from media in which chitinoclastic micro-organisms were grown did not lyse *F. oxysporum*. The latter organisms were obtained from soil by use of chitin-containing enrichment solutions. Similarly, a strain of *Pseudomonas chitinovorans* possessing strong chitinase activity did not lyse the fungus. It would seem, therefore, that chitinase may be implicated in the mycolytic phenomenon, but lysis does not appear to result solely from the activity of this enzyme.

It is possible that mycolysis is a natural means for the biological control of susceptible *Fusaria*. If the active flora could be stimulated selectively in soil, the population of pathogenic fungi might decline. In preliminary work with sterile soil, it was noted that the mycelium of *F. oxysporum* was digested following the addition of a lytic *Bacillus* strain, but, as expected, the addition of mycolytic bacteria to normal soil failed to disturb the microbiological equilibrium to an extent sufficient to result in control of pathogenic *Fusaria*. On the other hand, the fact that all isolates had in common the capacity to utilize chitin suggested that the addition to soil of this polysaccharide might provide a selective means of stimulating the mycolytic population.

To test the possibility for control by such treatments, soil infested artificially with *Fusarium solani* f. *phaseoli* was planted to kidney beans immediately following amendments with chitin, cellulose or ammonium chloride. After six weeks, the severity of root-rotting was determined using a disease index: 0 for no disease and a value of 100 for severe rotting, the final disease index being the mean of all the values for each treatment. The results summarized in Table 1 demonstrate that chitin at a rate of 200 lb. per acre markedly reduced the severity of the root-rotting. Similar results have been obtained with the vascular wilt of radishes caused by *Fusarium oxysporum* f. *conglutinans*. In the radish wilt, chitin reduced the disease index from 47 for infested, untreated soil to a figure of 10 for infested soil treated with 200 lb. chitin. Neither cellulose, another polysaccharide slowly decomposed by the soil microflora, nor inorganic nitrogen produced similar beneficial effects.

Table 1. EFFECT OF CHITIN, CELLULOSE AND AMMONIUM CHLORIDE ON THE SEVERITY OF ROTTING OF THE BEAN-ROOT CAUSED BY *Fusarium solani* f. *phaseoli*

Treatment	Disease index (per cent)
None	39
Cellulose, 182 lb./acre	47
Ammonium chloride, 54 lb./acre	43
Cellulose + ammonium chloride	33
Chitin, 200 lb./acre	23
Uninoculated, unamended	0

The influence of chitin may result from an increase in the number of mycolytic micro-organisms. Chitin, however, is known to be one of the few substances which markedly increase the actinomycete population[4]. Because actinomycetes are particularly active in antibiotic production, in culture media at least, the content of antifungal substances in chitin-amended soil was determined by the method described previously[5]. The results obtained indicate that the toxicity of aqueous extracts of chitin-treated soils is far greater than that in unamended controls (K. C. Lu and J. E. Dawson, personal communication). Further work is in progress on the mechanism of the chitin-induced suppression.

This work was supported partly by a grant from the United Fruit Co., Boston, Massachusetts. The strain of *Pseudomonas chitinovorans* was provided by Dr. Hans Veldkamp, to whom we express our appreciation.

Biological Characteristics of Colicine *X*

THE name colicine *X* was given[1] to a colicine produced by the strain of *Escherichia coli* used industrially by Hageda, AG., Berlin-Köln, for the preparation of the emulsion 'Mutaflor'. This colicine can be distinguished from other types of colicines by the following characteristics:

(1) *Specificity of mutants resistant to colicine X.* Specificity to colicines is determined by receptors, which are specific for each colicine[2]. The sensitive bacteria can lose the specific receptors one after another by mutation. By successive mutations a sensitive strain may become resistant towards many colicines. In a series of experiments I used two strains sensitive to colicines X, V, B, E, I, K, S_3+I, D, S_4, $J+I$, A and C, and by successive mutations I was able to isolate 200 mutants resistant to one or more colicines. Loss of receptor for colicine *X* was never accompanied by a loss of receptor for another type of colicine, and cross-resistance between colicine *X* and one of the other 12 colicines was not observed. The experiments prove that mutants resistant to colicine *X* are specific.

(2) *Spectrum of activity.* Colicine *X* is very active against some groups of Enterobacteriaceae; but like the other colicines does not inhibit growth of *Staphylococcus aureus*, *Bacterium anitratum* or *Pseudomonas* (Table 1). The *Escherichia coli*, *Citrobacter* and *Klebsiella-Cloaca* group are more frequently sensitive to colicine *X* than to other colicines, while *Salmonella* and *Proteus* are generally resistant. Strains of *Escherichieae* and *Klebsielleae* isolated from animal fæces are more sensitive to colicine *X* than strains isolated from human fæces; but it is still impossible to explain this ecological difference[3].

Table 1. ACTIVITY SPECTRUM OF COLICINE *X*

Organism	No. of strains examined	No. of strains sensitive	Percentage
Staphylococcus aureus	30	0	0
Bacterium anitratum	20	0	0
Pseudomonas	27	0	0
Enterobacteriaceae			
Salmonella	40	1	2·5
Proteus	20	0	0
Escherichia coli	130	100	76·9
Citrobacter	16	13	81·2
Klebsiella-Cloaca	40	27	67·5

The sensitivity of *E. coli* isolated from animal fæces towards 13 colicines is reported in Table 2. The results show clearly that colicine *X* is more active against *E. coli* than any other colicine used in this work.

Table 2. SENSITIVITY OF 80 STRAINS OF *Escherichia coli* TOWARDS COLICINE *X* AND 12 OTHER COLICINES

Type of colicine	No. of sensitive strains	Percentage
X	74	92·5
D	60	75
F	30	37·5
V	29	36·2
B	25	31·2
S_3+I	24	30
E	11	13·7
$J+I$	10	12·5
I	4	5
C	4	5
K	3	3·7
S_4	3	3·7
A	3	3·7

(3) *Other characteristics.* (*a*) The production of colicine *X* is not influenced by growth of the colicinogenic strain in synthetic medium[1].

(*b*) The diameters of the inhibition zones in nutrient agar are usually 20–26 mm. The morphology of the inhibition zone is not characteristic, but resembles that of colicines *D* and *K*.

(*c*) It has been difficult to study the heat resistance of colicine *X*, because suspensions of this colicine with a high titre cannot be prepared by the usual methods (see *d*). Undiluted colicinogenic cultures in broth were used for heat-resistance experiments, and it was found that colicine *X* is destroyed after boiling for 15 min.

(*d*) Colicine *X* is rapidly destroyed by the addition of 2–4 ml. chloroform to 100 ml. of bacterial culture in 'Oxoid' nutrient broth. The strain 'Mutaflor' is sensitive to streptomycin but the addition of streptomycin to the broth culture does not offer any advantages for the preparation of suspensions of colicine, as the concentration of colicine *X* in broth is low. It is possible that colicine *X* does not diffuse easily outside the bacterial cell.

(*e*) Colicine *X* is resistant to the proteolytic enzymes, which are produced by some strains of *Bacilli* or *Proteus*.

The foregoing characteristics permit the distinction of colicine *X* from the other 12 colicines produced by the type cultures of P. Fredericq.

FORTHCOMING EVENTS

*(Meetings marked with an asterisk * are open to the public)*

Wednesday, April 5

Royal Meteorological Society (at 49 Cromwell Road, London S.W.7), at 5 p.m.—Prof. T. Bergeron (University of Uppsala): "The History of Meteorology" (Evening Discourse).

Royal Society of Medicine, History of Medicine Section (at 1 Wimpole Street, London, W.1), at 5.15 p.m.—Dr. K. D. Keele: "Three Early Masters of Experimental Medicine—Erasistratus, Galen, Leonardo di Vinci" (Presidential Address).

Institute of Petroleum (at 61 New Cavendish Street, London, W.1), at 5.30 p.m.—Dr. W. Domzalski: "Airborne Techniques in Petroleum Information".

Wednesday, April 5—Friday, April 7

Institute of Physics and the Physical Society, in collaboration with the Institution of Electrical Engineers (at Brunel College of Technology, Acton, London, W.3)—Symposium on "Electrical Contacts".

Thursday, April 6

Institute of Refrigeration (at the Institute of Marine Engineers, The Memorial Building, 76 Mark Lane, London, E.C.3), at 5.30 p.m.—Mr. J. A. Cox: "Results of Practical Experiments on Relative Humidity Control".

Institution of Electrical Engineers (at Savoy Place, London, W.C.2), at 5.30 p.m.—Mr. W. Casson and Mr. H. J. Sheppard: "Technical and Economic Aspects of the Supply of Reactive Power in England and Wales".

British Institution of Radio Engineers, Television Group (at the London School of Hygiene and Tropical Medicine, Keppel Street, Gower Street, London, W.C.1), at 6 p.m.—Discussion on "Transistorized Television Receivers".

Institute of Metals, London Local Section (at 17 Belgrave Square, London, S.W.1), at 6 p.m.—Annual General Meeting, followed by Mr. K. M. Bills: "Physical Methods of Analysis for Major Alloying Constituents".

Society for Analytical Chemistry, Biological Methods Group (at "The Feathers", Tudor Street, London, E.C.4), at 6.30 p.m.—Discussion Meeting on "Principles Involved in Collaborative Studies" opened by Mr. S. A. Price.

Friday, April 7

Institution of Electrical Engineers, Medical Electronics Discussion Group (at Savoy Place, London, W.C.2), at 6 p.m.—Discussion on "The Conversion of Biological Data into Electrical Signals".

APPOINTMENTS VACANT

Applications are invited for the following appointments on or before the dates mentioned:

Lecturer in Mathematics—The Principal, Nottingham Training College, Clifton, Nottingham (April 10).

Demonstrator in Chemistry—The Registrar, University College of North Staffordshire, Keele, Staffs (April 14).

Assistant in the Department of Zoology—The Secretary, The University, Edinburgh (April 15).

Assistant Lecturer in Inorganic Chemistry—The Registrar, The University, Manchester 13 (April 15).

Lecturer (suitably qualified science graduate) in Bacteriological Biochemistry—The Registrar and Secretary, King's College (University of Durham), Newcastle upon Tyne (April 15).

Lecturer (with medical qualifications) in Anatomy—The Secretary, Medical College of St. Bartholomew's Hospital, West Smithfield London, E.C.1 (April 15).

University Demonstrator in Botany, with special reference to cytology and genetics—Dr. C. B. Goodhart, Museum of Zoology, The University, Downing Street, Cambridge (April 17).

Lecturer (suitably qualified graduate with experience or interest in the problems of agricultural research) in Statistics—The Secretary, Wye College (University of London), near Ashford, Kent (April 21).

Assistant Lecturer, Grade B (preferably with a university degree or equivalent qualifications) in the Department of Science and Metallurgy, to teach physics and mathematics mainly to Ordinary National Certificate classes—The Principal, North Lindsey Technical College, Kingsway, Scunthorpe, Lincs (April 22).

Senior Lecturer or Lecturer in Veterinary Anatomy; a Senior Lecturer or Lecturer in Veterinary Histology; a Senior Lecturer or Lecturer in Veterinary Medicine; and a Senior Lecturer or Lecturer in Veterinary Pharmacology at the University of Khartoum—The Registrar, University of Khartoum, c/o Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1 (April 22).

Lecturer in Electrical Engineering; and a Lecturer in Mechanical Engineering—The Registrar, Trinity College, Dublin (April 24).

Lecturer or Assistant Lecturer in Philosophy—The Registrar, The University, Hull (April 24).

Reader or Lecturer in the Philosophy of Mathematics—The Secretary of Faculties, University Registry, Oxford (April 24).

Research Fellow (with a Ph.D. degree or equivalent experience) in the Chemistry Department, for fundamental work on compounds of potential use in the paint industry—The Professor of Chemistry, The University, Hull (April 24).

Assistant Lecturer (preferably with an interest in theoretical or experimental plasma physics) in Physics—The Secretary, The Queen's University, Belfast (April 29).

Lecturer in Applied Mathematics—The Principal, Jesus College, Oxford (May 1).

Lecturer in Histology and Embryology at the University of Sydney, Australia—The Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1 (Australia and London, May 5).

Research Demonstrator (graduate in botany), to engage in research, preferably in plant physiology and biochemistry, plant pathology and ecology; and a Research Assistant (graduate in botany or graduating this year), to assist the Professor in the establishment and maintenance of a collection of plant organ and tissue cultures and in research involving these cultures—The Registrar, University College, Singleton Park, Swansea (May 13).

Chair of Mathematics (R.A.A.F. Academy), University of Melbourne—The Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1 (Australia and London, May 15).

Assistant Lecturers (with appropriate qualifications and teaching and research experience) in Applied or Pure Mathematics at the University of Hong Kong—The Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1 (Hong Kong and London, May 19).

Lecturer (preferably with the ability to offer courses in methods of teaching chemistry and/or biology) in Education at the University of Hong Kong—The Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1 (Hong Kong and London, May 19).

Lecturer (with an honours degree in zoology and preferably some experience of teaching and research) in Zoology at the University of Hong Kong—The Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1 (Hong Kong and London, May 30).

Bacteriologist (graduate in science or veterinary science) at the Animal Health Trust Farm Livestock Research Centre, Stock, Essex, to assist in a programme of research into enteric diseases of young farm animals, with special reference to pigs—The Scientific Director, Animal Health Trust, 14 Ashley Place, London, S.W.1.

Glassblower—Dr. J. K. N. Jones, Chemistry Department, Queen's University, Kingston, Ontario, Canada.

Head of the Department of Science and Electrical Engineering—The Principal, College of Technology, Broadway, Letchworth, Herts.

Laboratory Technician (Grade III) in the Department of Physiological Chemistry, to assist with classes in practical physiology and some experimental work—The Assistant Bursar, The University, Reading.

Postdoctoral Fellow in the Department of Chemical Engineering, for research in flame spectroscopy or a related subject—Dr. A. G. Gaydon, Imperial College of Science and Technology, Prince Consort Road, London, S.W.7.

Research Assistant (preferably with a good chemical background) in the Department of Chemical Engineering, for work on the fractionation and analysis of lipoprotein extracts—The Secretary, University College London, Gower Street, London, W.C.1.

Research Fellow in the Department of Electrical Engineering, for work on instrumentation and telemetering for physiological measurement on athletes—The Academic Registrar, Loughborough College of Technology, Loughborough, Leicestershire, quoting Ref. 20/AF/2.

Research Fellows (2) (preferably with a Ph.D. degree in engineering or physics, or equivalent research experience) in the Department of Electrical Engineering under Prof. A. L. Cullen, for research in the field of millimetre wave techniques—The Registrar, The University, Sheffield 10.

Scientific Officer, Senior Scientific Officer or Principal Scientific Officer (preferably with experience in tissue culture techniques), for research work in virus diseases—The Secretary, Animal Diseases Research Association, Moredun Institute, Gilmerton, Edinburgh 9.

WITHOUT A SHADOW OF DOUBT

To check the accuracy of metal or glass lighting components such as lenses and reflectors, Mr. R. M. Callender of the Lighting and Heating Group of The General Electric Company's Hirst Research Centre at Wembley makes profile photograms of the sectioned parts on Kodak B.40 plates. These silhouettes are made either with a camera or by placing the specimen in direct contact with the photographic plate and flashing with light. After printing on Kodak Bromide Foil Card, the photograms are used for making precise dimensional measurements of the components.
This technique provides many working copies, each a facsimile of the original—at any suitable magnification. The illustration shows the photogram of a small studio spotlight lens, produced in negative form to facilitate the additional drawing.

for every job— **Kodak** **PHOTOGRAPHIC MATERIALS**

A TIMELY REVOLUTION IN TECHNOLOGICAL EDUCATION

A SURVEY has been made to find out specifically what training a chemical engineer requires*. The results are interesting, since they provide a basis from which one may deduce a general principle regarding education of the technologist.

Chemical engineering is defined, in the *Encyclopædia Britannica*, as that branch of engineering which relates to the "design, construction, erection and operation of industrial plants in which matter undergoes a change of state or composition". The science, or craft, of the chemical engineer has been, and still is, the prime mover in developing the processes which serve to satisfy our technological needs. How best to fit the developing engineer for his task is, therefore, an important problem. The subjects which comprise his curriculum, as well as the time devoted to them, will determine, to a large extent, his ultimate effectiveness as a useful, well-integrated operator in industry.

With characteristic zeal for technological matters, the Americans, already in 1952, started to evaluate engineering training of all kinds†. An investigation was made by the American Society for Engineering Education. The method consisted in directing inquiries to a range of engineering colleges, industries and various professional organizations throughout the United States. The survey lasted three years; the replies were the considered opinions of authorities. Analysis revealed that, in a college engineering curriculum, 25 per cent of the time should be spent on mathematics and basic science, 50 per cent on engineering technology and the remainder on social studies, which include management techniques and applied economics. With its wide experience in industry and teaching, the Institution of Chemical Engineers in Britain recommends the following scheme: 45 per cent of the time to be spent on pure science and mathematics, 51 per cent on technological subjects and the remaining time on the social sciences, report writing and foreign languages.

No doubt these opinions are very useful, but they are nevertheless opinions. Realizing the need for factual information, Prof. R. E. Johnstone undertook an ingenious survey to find out in what way and to what extent the subjects taught at universities actually were being used by chemical engineers employed in British industry. With the aid of Mr. C. B. Lax, head of the Statistical Section at the Springfield Works of the United Kingdom Atomic Energy Authority, a questionnaire was so designed that replies would be "factual, quantitative, and amenable to statistical analysis". The questionnaires were sent to all corporate and graduate members of the Institution who were resident in the British Isles, except those engaged in full-time teaching. From a list of twenty-four sciences and techniques, engineers were requested to indicate which of these they had applied during the previous working week. To supplement information gained readily from almost two thousand engineers, Prof. Johnstone analysed his personal diary, a record of work done in industry over a period of twenty-eight years. This included most chemical engineering jobs in an eminently representative set of industries.

Results from these two complementary sources have been used, most elegantly, to design a suitable scheme of study for the engineer. Prof. Johnstone derived two limits within which the curriculum should lie. One limit, the "applied bias", represents a course of study in which the applied, technological type of subject predominates; the "pure bias", in contrast, stresses subjects for which there is not necessarily direct application. These limiting cases are summarized; so, too, is the scheme of the Institution as follows:

Subject	Per cent time of curriculum		
	Pure bias	Applied bias	Scheme of the Institute
Chemical engineering science	45	44	42
Pure science	22	14	34
Management and economics	6	19	2
Higher mathematics	13	9	11
Other engineering science	8	8	9
Report writing and foreign languages	6	6	2

Agreement with the scheme recommended by the Institution is remarkably close, except for pure science. Even if an engineering course with a leaning toward the 'non-applied' is required, the amount of time recommended for pure science by the Institution is rather excessive (34 per cent versus 22 per cent). At the other limit, namely, with an applied bias, more than twice as much time would be assigned to the study of pure science than is actually required by industry. There would be a consequent deficiency in time spent on training in management and economics.

Prof. Johnstone points out that much of the chemistry and physics used by practising chemical engineers is not above university entrance-level. Time allocated to such subjects probably could be spent far more effectively on topics of real engineering virtue. Moreover, as Prof. Johnstone states, "a scientist can practise his profession at a university, the engineer cannot". Engineering is a "large-scale activity which requires considerable resources in men, materials, accommodation and equipment before it can be carried on at all". Not only is a university engineering laboratory a very different place from an industrial factory, but also the work done is very different. Much of this information serves to confirm what experienced engineers have known for some time. Nevertheless, the advantages of such a survey are: "that it places the facts of the situation beyond reasonable argument" and "it provides quantitative data in place of judgments that have hitherto been largely qualitative", as Prof. Johnstone concludes. He and his colleague are indeed to be congratulated on their survey.

---

* *A Survey of Chemical Engineering Education and Practice*, presented by Prof. R. Edgeworth Johnstone at a meeting of the Institution of Chemical Engineers, January 24, 1961.

† *Report on Evaluation of Engineering Education*, 1952–1955. American Society for Engineering Education, Illinois.

Now, the facts are plain. So, too, is the inescapable question: Would it not be of greater advantage to teach technology elsewhere rather than at a university?

There have been numerous complaints from industry that universities do not produce the kind of engineer required. From the academic side come weak rejoinders that industry does not know what is good for it. At last the solution is clear. Considering the demands of industries (and this survey has proved their demands most reasonable) the training of an engineer could probably be accomplished best by institutes of advanced technology, working in close liaison with industry. They would be similar in function to the practice-school of engineering at the Massachusetts Institute of Technology. Students there spend a large portion of their time in selected industries, but preserve close contact with the Institute.

The advantages are clear. Student engineers would have far more confidence when finally they are ready to begin their professional careers, due to their familiarity with actual processes of production. They will have learned, among a host of useful techniques to do working designs of fractionating towers with all the non-idealities involved, heat-balances on commercial furnaces, density measurements on fluid catalytic reactors and regenerators in operation, process 'trouble-shooting', and investigations on the idiosyncrasies of large-scale automation. They may have delved into marketing strategy, into the operation of consumer demand and/or company policy in determining the industrial processes to be used and into the methods of design for the best 'pay-out' on investment of capital. Moreover, they will gain an insight into the art of managing personnel and process operations. Along with this, they will develop an intuition for the enlightened guess-work which characterizes much of technology. Industry would welcome technologists who have been nurtured under its wing, so to speak.

Apart from the immeasurable financial advantage of having more efficient engineers in industry, the State would spend less in educating them. The unit cost of training a technologist is conceivably far less at a technical institute than at a university. Since industry will be supplying the *ne plus ultra* of engineering equipment, no longer will universities have to budget for expensive, though inadequate, substitutes. No longer will the academic staff suffer the malaise of not knowing whether to emphasize the 'applied' or the 'pure' aspects of learning. Happily, they will be free to encourage disinterested inquiry, the real function of a university.

If it seems better to teach technology in institutes separate from universities, then the question arises whether the engineering research which is carried out by universities should rather be done elsewhere. It is well to examine how the engineer aids technology in his research. In general, chemical engineering research appears as a stage after pure chemical research. When a new compound or a new way of synthesizing or converting known compounds has been discovered by a research chemist, and a market demand is established, the research engineer takes up the tale. He has to specify ultimately the type, size and operating conditions of equipment to yield the products required. Bench-scale experiments or pilot-plant work is used. Although pilot-plants are very expensive, it is often safer to base commercial designs on them, since scale-up from small experiments tends to be risky.

The theoretical problems involved are often quite abstruse. For example, the kinetics of the reacting system is usually a far cry from ordinary chemical kinetics, yielded by test-tube experiments. Complexities arising from heat, mass and momentum transfer must be taken into consideration. Engineering systems are non-ideal and hence not readily amenable to formulation. But here is where engineering research has displayed its particular genius in setting up mathematical models, often rough, but which serve, nevertheless, as reasonable approximations in describing physical systems. However, as the research engineer delves deeper into the theoretical aspects of these problems, he finds that he needs the tools of the applied mathematician and chemical physicist more and more. He needs to command a knowledge of mathematical probability theory, stochastic processes, variational principles, the absolute differential calculus, statistical mechanics and perhaps topology as well, to probe effectively into physical problems. Formal engineering education tends to fit him rather inadequately for this.

To do advanced experimental engineering research is a very costly business; consider items like shock-tubes, equipment for investigating turbulent shear flow, electronic computers, the apparatus for study of plasma-jets and so forth. Not only does industry have a personal commercial incentive to do such work, but also it commands the resources. It is unjust to say that industry is concerned entirely with empirical reseach. Consider, for example, from whence hails the revolutionary theory which explains the effect of interfacial turbulence on mass transfer. Large-scale industry is sophisticated enough to appreciate that to have research workers with advanced theoretical background in physics, chemistry and applied mathematics doing fundamental research can lead to unexpected results with vast technological implications.

Bearing all this in mind, it seems very obvious indeed that not only technology but also research in technology are out of place in the universities. Thus, the following system is recommended: technical institutes and industry will co-operate in producing efficient technologists; universities will play their part in educating first-rate applied mathematicians and chemical physicists to do research work in industry.

Sir John Cockcroft has stressed, on several occasions, the need for institutes of technology quite separate from universities proper. This timely transfer of technologies from the domain of the university is also contemplated by Dr. S. C. Curran in his article on p. 128 of this issue of *Nature*. Like winged *Drosophila*, they will take off to flourish in a new environment, leaving their erstwhile neighbours in the university to breathe more freely, too. The function of an institute of technology must not be confounded with that of a university. To preserve efficiency in this increasingly competitive world we must follow inevitably the economic dictum of 'division of endeavour'.

The ideal division thus seems to be with universities on one side. They will stress sound instruction and lecturing of the highest quality in the 'pure' fields. Research at the university should be of secondary importance and more of a fundamental, theoretical kind. The tenor of 'the academic market-place', it is hoped, will disappear. Academic staff will no longer be compelled to 'publish or perish'. On the other side, there will be the institutes of technology, well integrated with industry, which will thus exert a greater influence in determining the educational background of its technological force. Industry should not be denied this privilege. After all, it does supply the purpose for training technologists. The traditional, though lately diminishing, sovereignty of the universities should remain intact.

The net effect will be a stream-lining of physical science and a more potent research force. Technologists will be the fully fledged empiricists whom industry requires and they will know precisely what technological questions to ask. In the research departments of industry there will be a complementary force of well-equipped research workers. They will know where to seek the answers. Altogether, it seems reasonable that this would be a far more efficient, more manageable, neater and more powerful system than to have semi-empiricists of the twilight zone who neither know exactly what questions to ask nor how to set about answering them.

THE WORKS OF PAUL EHRENFEST

Collected Scientific Papers

By Paul Ehrenfest. Edited by Martin J. Klein. Pp. xii+632. (Amsterdam: North-Holland Publishing Company, 1959.) 90*s*.

PAUL EHRENFEST, the Dutch theoretical physicist, was born in 1880, took his doctor's degree under Boltzmann in 1904, and succeeded H. A. Lorentz in the chair of theoretical physics at Leyden in 1912; he remained there until his death in 1933. His active life therefore spanned most of the great period of transition from classical to modern theoretical physics, and his collected papers show the important part he had in helping on, interpreting, and clarifying this transition.

The earlier papers are mainly on classical statistical mechanics; in particular, Ehrenfest was much concerned with elucidating the basic ideas of Boltzmann's theory. To the same period belongs the great article on the fundamentals of statistical mechanics which was written in collaboration with his wife when he was in Leningrad, and was published in the *Encyclopädie der Mathematischen Wissenschaften* in 1912. In the later papers he dealt mainly with quantum statistics, methods of quantization and related topics. In particular, his famous paper on adiabatic invariants, which had so considerable an influence on the development of quantum theory, is also an outcome of his work on statistical mechanics.

His inaugural discourse at Leyden in 1913 is a good example of some characteristic features of his work, although it is only a semi-popular exposition. His subject was the downfall of the theories of the æther. He pictures an observer situated at the centre of a vast hollow reflecting sphere. The observer has by him a powerful lamp which he uses to send out a short flash of light uniformly in all directions. A little later the observer will see the whole inner surface of the sphere lit up simultaneously. Next, Ehrenfest asks us to think of the same vast sphere (and the observer) moving uniformly. If Newton were the observer, he would again expect to see the whole inner surface lit up simultaneously. Fresnel, however, would expect to see just a narrow band of illumination on an equator of the sphere. The illuminated band would then rapidly broaden until it reached the poles. Finally, Einstein, with the help of Lorentz, would expect to see the same as Newton. Here we have the elegant model used to illustrate a physical idea and to bring out the essential features of the problem. The discourse also provides an example of Ehrenfest's constant concern with the careful discussion of basic principles.

The short paper on the rotating dipole—written in collaboration with G. Breit in 1922—illustrates very well the difficulties of the period up to 1926 during which Ehrenfest was striving to clarify the old quantum theory of Bohr. It was a time when physicists stuck very closely, and very literally, to classical concepts. Ehrenfest and Breit of course had a model. It was an electric dipole which could rotate freely about an axis which was perpendicular to the dipole and passed through its mid-point. When the angle of rotation became $\pm f.2\pi$ where f is any large number (rational or irrational) the dipole is thrown back elastically. It is perhaps not surprising that Bohr's quantization rules could not cope with this system in a reasonable way. (It has a somewhat curious period and a quasi-period). However, Ehrenfest and Breit showed, in an elegant analysis, that the correspondence principle could be used to make the quantization rules yield the correct value for the angular momentum.

Ehrenfest admired H. A. Lorentz and held him in great respect; his obituary notice for Lorentz is included here. However, it is in an appreciation of Lorentz as a research physicist that we see his celebrated sense of fun for once managing to get into his writing. This appreciation was written on the occasion of Lorentz's seventieth birthday in 1923. The third paragraph is as follows:

"Perhaps too our ear suddenly recalls the variety of nuances of sound with which we have heard the name Lorentz pronounced by brilliant men of all nations. If an American pronounces it, or a

Frenchman or a Russian or a Scandinavian, or Planck, Boltzmann or Einstein, one can surely notice that each one means his own Lorentz. If a Netherlander has to mention the name Lorentz, he does it with pride, but softly, as if he fears that 'Perhaps Mr. Lorentz will be able to hear that he is being spoken about'." J. Hamilton

GENERAL PLANT CELL PHYSIOLOGY

Plant Physiology

A Treatise. Edited by F. C. Steward. Vol. 1*A*: Cellular Organization and Respiration. Pp. xxvii+331. (New York: Academic Press, Inc.; London: Academic Press, Inc. (London), Ltd., 1960.) 13 dollars.

THIS is the first volume in order of numbering of the treatise on plant physiology in process of production under the general editorship of Prof. F. C. Steward, although it is actually the second to appear, the volume numbered 2 having already been noticed in these pages. Volume 1*A* contains three articles, the first on the plant cell and its inclusions, the others on some aspects of general plant cell physiology. It is desirable, indeed necessary, that a treatise on plant physiology should begin with an account of the cell, the system in which physiological actions take place, and R. Brown gives an account of this which is generally adequate and up to date. The conclusions drawn during recent years regarding cellular membranes, largely as a result of electron microscopy, are properly stressed, but as in all probability comparatively few readers will have had actual first-hand experience of the electron microscope, a brief description of how results are obtained by its use, and the reasons for the accepted interpretation of the structures so observed, might not have been out of place. These conclusions, it may be noted, in so far as they refer to the plasmatic membranes, fall well into line with those suggested by the conception of free space due to Briggs and Robertson.

The second article, by B. Vennesland, is entitled "Proteins, Enzymes, and the Mechanism of Enzyme Action". There is reason to believe that protoplasmic proteins, at least in many cells, are largely held in enzymes, and this account deals mainly with enzyme structure, which includes the structure of protein molecules, and the mechanism of enzyme actions. No classification of enzymes has ever received universal acceptance, and the author does not attempt a new one. However, in dealing with enzyme reaction mechanisms three different kinds of enzymes are considered separately. These are: (1) oxidation-reduction enzymes containing firmly bound prosthetic groups; (2) enzymes containing thiamine or pyridoxine derivatives; (3) pyridine nucleotide-linked dehydrogenases. Other aspects of enzyme reactions considered are their kinetics, inhibitors, group transfers and the problem of the active site. The article provides a good and succinct account of the present position of our knowledge of enzyme structure and action.

The final article deals mainly with what is generally called the mechanism of respiration and gives satisfactory accounts of the various ways by which it is now supposed the respiratory substrates are broken down, though perhaps more attention might have been given to the action of lactic dehydrogenase leading to the formation of lactic acid. I cannot agree with the statement that the production of lactic acid from pyruvic acid is "relatively rare in higher plants, though traces of lactic acid are found in potato fermentation . . . and in wheat and rice". Actually the production of lactic acid has been observed in other plants, while in potatoes Barker found that at the beginning of a period of anaerobiosis the production of alcohol and carbon dioxide might be negligible in comparison with the production of lactic acid. In tomato stems a production of lactic acid recorded as amounting to 13·7 per cent of the carbon dioxide produced can scarcely be described as a trace. Again, I do not think that the acceptance of the universality of the EMP pathway was as surprising and uncritical as the authors suggest. And, was such a universality as dogmatically asserted as they say? Surely it was no more than a tacit acceptance, a view which was readily modified when definite evidence of an alternative pathway was forthcoming.

The production of the volumes of this treatise is of the high quality we have come to associate with the publications of the Academic Press.

Walter Stiles

BONDS, BANDS AND SEMICONDUCTORS

Progress in Semiconductors

Vol. 5. Edited by Dr. Alan F. Gibson, Prof. R. E. Burgess and Dr. F. A. Kröger. Pp. vii+316. (London: Heywood and Co., Ltd., 1960.) 63*s*. net.

IS the band theory of semiconductors the modern phlogiston theory? Lavoisier's discovery of oxygen brought about the downfall of the latter; by some eyes the discovery of vitreous and liquid semiconductors is seen as the herald of the fall of band theory. Others, less extreme, see a better historical analogy to the current band-bond battle in the wave-particle war and consequently expect an amalgamation of the two theories. Band theory has reached a high degree of sophistication, as is evidenced by most articles in the latest addition to this invaluable series of progress reports. The chemical bond approach discussed by E. Mooser and W. B. Pearson is by comparison in its infancy. The authors discuss rules derived from it for predicting semiconductivity (their own rule appears in a modified form which allows for cation-cation bonds), and then attempt to classify semiconductors on the basis of their structures. In the concluding sections some intriguing empirical graphs relating semiconductor and structural parameters are reproduced. Some discussion of alloy semiconductors, especially as regards superlattice formation, might have been included.

Optical properties, as the editors admit, predominate in this issue. T. P. McLean reviews recent work on the absorption edge spectrum of semiconductors, in particular of germanium and silicon. B. Lax and S. Zwerdling have obviously striven to minimize the mathematics in their survey of magneto-optical phenomena. In the well-balanced meal they produce there is both meat for the specialist and gravy for the beginner. T. S. Moss, in a short article on indium antimonide, omits chemical and structural work in his haste to reach the optical properties where, of course, his interests lie. The sixty-nine references might well have been considerably increased. His final section on applications is of special interest.

The electrical properties of semiconductor surfaces, a very difficult subject, is ably reviewed by T. B. Watkins, with 26 figures in the text and 99 references. He concludes with some pertinent comments on the effects of surface conditions in semiconductor devices.

J. Appel's article on thermal conductivity of semiconductors is concerned almost exclusively with the theoretical aspects of the subject, which are developed from two angles: first, phenomenological, and secondly, quantum mechanical. The conclusion touches very briefly on the practical problem of thermoelectric cooling. The author is to be congratulated on the clarity of his exposition since English is not his native tongue.

R. R. Haering and S. Mrozowski give a masterly survey of the band structure and electronic properties of graphite crystals. The authors divide the properties they discuss into two groups: those which can be explained on a band model and those which cannot as yet. This article should inspire further work as it stresses unsolved problems.

A welcome addition at the end of the book is a table of contents of past and future volumes. Many interesting articles on the properties of semiconductors in general and the elements germanium, silicon, carbon, tellurium and bismuth in particular are in preparation. There are, however, several bad gaps in the programme. Compound semiconductors and their alloys seem ignored entirely. Interest in these stems especially from thermoelectric cooling and thermoelectric energy conversion, and so it is not surprising to find these topics absent too. No proposed article deals specifically with any topic in semiconductor chemistry or crystallography. This may be deliberate policy, but, if so, perhaps the editors should change the title of the series to *Progress in Semiconductor Physics*.

B. R. PAMPLIN

MICROSCOPIC STUDIES OF REFLECTING SURFACES

Surface Microtopography

By Prof. S. Tolansky. Pp. viii+296. (London: Longmans, Green and Co., Ltd., 1960.) 55s. net.

PROF. TOLANSKY describes here a series of investigations made with the collaboration of his research students over the past fifteen years or so. Most of the work has involved the use of a microscope, in some cases with phase-contrast techniques, but more often with the multiple-beam interference methods for which Prof. Tolansky is famous. The space devoted to each topic is necessarily short, but each is illustrated by many beautiful photographs printed on the glossy paper used throughout the book.

As the author remarks in the preface, the book is a kind of atlas, in which the 359 excellent pictures show 'maps' of various physical features of the structure of solid surfaces and their behaviour under the action of physical agencies. It is remarkable how wide a field of study is open to the application of multiple-beam interferometry in spite of the rather stringent limitations set by the need for the specimen to be able to withstand the cleaning and vacuum evaporation of silver without change. A large part of the book is concerned with crystals, particularly diamond, and the investigations cover aspects of their growth, cleavage, and etching, as well as studies of hardness and wear in relation to the crystalline structure. Other sections of the book include selected features of work on thin films, metal crystals and hardness testing, quartz crystals, silicon carbide, mica, and piezoelectric oscillators. The methods used are capable of extremely high sensitivity, and it is claimed that, in favourable cases, height differences of only a few angstroms can be estimated.

Something of value can be found here by those engaged in any of the branches of study included in the book, but in addition the book as a whole is valuable to students of optical techniques and to anyone who is likely to be inspired and stimulated by a fascinating account of highly informative experimental work carried out with very simple means. The text conveys the enthusiasm Prof. Tolansky so obviously has for this subject, and the way in which the story of each investigation is related holds the imagination and carries the reader along from the unravelling of one knot in the mystery to the next.

The first five chapters are concerned with the basic techniques of multiple-beam interferometry, and include better illustrations and diagrams of the equipment than have been published before. The diagrams, however, are still barely adequate to give more than just an idea of the arrangement of the apparatus required, and in some respects are actually misleading. One or two near-scale drawings of the apparatus would have been much more helpful to anyone wishing to try the technique, although this book is obviously not intended to be an instruction manual.

The remaining eighteen chapters are arranged in six groups, covering the topics already mentioned, and accompanied, where necessary, by further description of special techniques. The volume is concluded by two addenda introducing two more special interference systems, and two bibliographies confined to the publications of Prof. Tolansky and his students, and to the theses of his students. Other references are given in the text of the book as they occur. Some misprints and distortions of language seem to have escaped the proof-reading and editing, and this is annoying in a book of this price and quality; in a few cases the account of an experiment seems to have been shortened to an extent which makes the argument difficult to follow. A possible case of this occurs on p. 194, concerning the electro-deposition of layers, where the explanation seems to show an inconsistency with the illustrations. The point at issue here would best be resolved by line diagrams of the profiles of the edges of the layers, as in Plate 242. More profile diagrams of this kind would be helpful at other places too.

These minor defects do not detract much from the value of the book, if at all, as its chief function would seem to be as an introduction to the unique studies described more fully in the papers and theses on which it is based, and as a fascinating and stimulating account of a great deal of masterly experimental work.

J. W. GATES

Gasdynamic Discontinuities

By Wallace D. Hayes. (Princeton Aeronautical Paperbacks, No. 3.) Pp. v+68. (Princeton, N.J.: Princeton University Press; London: Oxford University Press, 1960.) 1.45 dollars; 11*s.* 6*d.* net.

Small Perturbation Theory

By W. R. Sears. (Princeton Aeronautical Paperbacks, No. 4.) Pp. v+63. (Princeton, N.J.: Princeton University Press; London: Oxford University Press, 1960.) 1.45 dollars; 11*s.* 6*d.* net.

Higher Approximations in Aerodynamic Theory

By M. J. Lighthill. (Princeton Aeronautical Paperbacks, No. 5.) Pp. v+147. (Princeton, N.J.: Princeton University Press; London: Oxford University Press, 1960.) 1.95 dollars; 16*s.* net.

High Speed Wing Theory

By Robert T. Jones and Doris Cohen. (Princeton Aeronautical Paperbacks, No. 6.) Pp. v+243. (Princeton, N.J.: Princeton University Press; London: Oxford University Press, 1960.) 2.95 dollars; 24*s.* net.

THAT there is a strong case for publishing 'The Sonnets' independently of the 'Complete Works' is scarcely to be disputed. There is at least as strong a case for separate publication of some, if not all, of the parts of the heterogeneous and overlapping collection of papers by dozens of authors which will eventually make up the twelve volumes of the Princeton Series on "High Speed Aerodynamics and Jet Propulsion". From the pleasantly rounded presentation of the individual contributions it appears that the ties of co-operative endeavour did not too severely constrict the individual authors. Consequently, the six paper-back extracts so far republished should meet a lively demand from those who have been attracted by the two-inch-thick volumes of the original series and from those who have been daunted by them; they will be warmly welcomed by students.

Numbers 1 and 2 in the paper-back series are concerned with rockets. Numbers 3, 4, 5 and 6 are respectively Vol. 3 Section *D*, Vol. 6 Section *C*, Vol. 6 Section *E* and Vol. 7 Section *A* of the Princeton Series, all widely applauded when they first appeared a few years ago. Number 6, by Mr. and Mrs. Jones, stands particularly well on its own as a really excellent text-book. In subsequent paper-backs in this series the publishers ought briefly to explain their system of cross-references.

Beiträge zür Physik und Chemie des 20 Jahrhunderts:

Lise Meitner, Otto Hahn, Max von Laue zum 80 Geburtstag. Herausgegeben von O. R. Frisch, F. A. Paneth, F. Laves und P. Rosbaud. Pp. xii+285+3 tafeln. (Braunschweig: Friedr. Vieweg und Sohn, 1959.) 29.50 D.M.

THIS is a collection of essays which was published to mark the eightieth birthday of three distinguished scientists, Lise Meitner, Otto Hahn and Max von Laue. About two-thirds of the book is in German and the remainder is in French and English. Some of the essays are historical and others contain accounts of very recent work; all are designed to demonstrate the importance of the early fundamental work of the three great pioneers. Many of the papers undoubtedly make extremely important contributions to knowledge; the present writer is much more concerned, however, with another aspect. Prof. Hooykaas of Amsterdam, speaking at the "Technology and Purpose" Conference at Oxford in 1959, deplored the impersonal nature of modern scientific writing. He pointed out as an example that in early chemical text-books the experimenter was portrayed in full academic robes whereas in modern texts the experimenter is eliminated; the test-tubes apparently support themselves.

The inestimable value of this collection of essays is that it begins to sketch in the character and personality not only of the scientists honoured but also of the many contributors. For example, we find Prof. Przibram recounting anecdotes about other learned professors, we find Dame Kathleen Lonsdale throwing stones into a pond and we find a paper by Prof. Rosenblum on "Spectres Magnetique des Particles Alpha" beginning "Je regarde mon pouce . . . ".

I can read German only with great difficulty and continual recourse to a dictionary; but in spite of this three vivid impressions have been obtained. The first is of the explosive growth of science in the fifty or so years covered; the second is of the immense fruitfulness of the work of the three great pioneers which stimulated this growth; the third is that perhaps the greatest tribute of all is simply that they should inspire the contributors to write in such warm human terms on subjects that would normally be regarded as completely objective and impersonal.

C. A. TAYLOR

Fonctions Sphériques de Legendre et Fonctions Sphéroidales

Tome 3. Par Dr. Louis Robin. (Collection Technique et Scientifique du Centre National d'Études des Télécommunications.) Pp. viii+289. (Paris: Gauthier-Villars, 1959.) n.p.

THIS is the concluding volume of Dr. Robin's encyclopædic treatise on Legendre functions and related topics; for the English reader, it supplements Hobson's 1931 treatise by its account of work done in recent years. The main sections deal with addition theorems, zeros, problems relating to a spheroid, torus or cone, and with functions allied to the Legendre functions, such as the Gegenbauer polynomials and functions. There is also a section on the spheroidal functions, mainly an epitome of the full account in Meixner and Schäfke, *Mathieusche Funktionen und Sphäroidfunktionen*, and a brief note on spherical Bessel functions. There are numerous bibliographical references, and useful lists of available numerical tables. The text, with its inevitable mass of complicated formulæ, is scarcely light reading, but the book forms a most valuable work of reference, well deserving a place in any mathematical library.

Biochemical Preparations

Vol. 7. Edited by Henry A. Lardy. Pp. ix+102. (New York: John Wiley and Sons, Inc.; London: Chapman and Hall, Ltd., 1960.) 42*s.* net.

THE series of *Biochemical Preparations* needs no special commendation in these columns. It will be sufficient to say that Volume 7 extends and enhances the reputation of established usefulness and merit which the series has already gained, and that it betrays no sense of strain or dilettantism in the choice of matter forming the list of contents.

Of particular interest in the present volume are the methods for the preparation of N-acetylneuraminic acid from human milk; for preparing phosphorus-32-labelled adenosine di- and triphosphates by both chemical and enzymic means—the latter neatly adapted to give A-P-P*-P and A-P-P-P* as well as A-P-P*-P* ; and for a preparation of flavine adenine dinucleotide from the mycelium of *Eremothecium ashbyii* which gives better yields than the more usual preparations from animal tissues or yeast. The other methods included are for : β-amino*iso*butyric acid ; carbamyl phosphate ; (−)-carnitine chloride ; cerebrosides ; coproporphyrin III tetramethyl ester ; 6-deoxy-6-fluoro-D-glucose ; dihydroxyacetone phosphate ; D-fructose 1-phosphate ; 3-hydroxy-L-kynurenine ; hydroxypyruvic acid phosphate ; methylmalonic semialdehyde ; potassium dihydrogen $L_s(+)$-*iso*citrate ; S-palmityl coenzyme-*A* ; stearic acid, methyl stearate and homologous compounds ; stigmasterol ; and tetrahydrofolic acid.

This simple enumeration will be sufficient proof of the pertinence to the needs of the research worker which the volume maintains. Since a different editor-in-chief is appointed for each volume of *Biochemical Preparations* it is fitting to record here our thanks to Prof. Lardy, who has so successfully compiled and presented the volume under review.

F. H. Malpress

Hospital Infection

Causes and Prevention. By R. E. O. Williams, R. Blowers, L. P. Garrod and R. A. Shooter. Pp. x+307. (London: Lloyd-Luke (Medical Books), Ltd., 1960.) 35*s*. net.

A SYSTEMATIC approach to the causes and prevention of hospital infection is much to be welcomed. Accurate records are meagre and the problem is one which belongs to everybody and, consequently, to no one. This new book by four well-known specialists can fairly claim to provide a comprehensive review of how infections are spread, how they can be controlled and, more apposite, how they can be prevented.

Since streptococcal infections now cause no real difficulties—they still respond to penicillin and have acquired no resistance to the drug—the book is mainly concerned with the staphylococcal infections which, because of their resistant strains, are the main source of infection and worry in hospitals today. For a medical publication, the cautious and almost agnostic approach is refreshing—no views are put forward unless they can be substantiated with demonstrable facts. The text is clear and logically presented, and adds to the value of a book which should be useful not only to pathologists and bacteriologists but also to surgeons, pædiatricians, sister tutors, hospital administrators, and equally important, hospital architects.

Kathleen M. Hawkins

An Introduction to Statistical Thermodynamics

By Terrell L. Hill. (Addison-Wesley Series in Chemistry.) Pp. xiv+508. (Reading, Mass., and London: Addison-Wesley Publishing Company, 1960.) 74*s*.

THIS introductory text on equilibrium statistical thermodynamics is based on the elementary principles of quantum mechanics and covers a wide field of applications in both chemistry and physics. Classical statistics are not developed independently, but there is a short chapter on the transition from quantum statistics in which the treatment, however, is so curtailed as to be of doubtful value to the uninitiated. Indeed, because of the extensive coverage of modern developments, it has been necessary throughout the book to condense the mathematics in some measure, and the student who is specializing in either chemistry or physics might feel that the inclusion of much material, which inevitably must be outside the scope of his course, does not compensate for this lack of mathematical detail.

The book is divided into four parts, the first of which is devoted to a discussion of the various ensembles and to the statistical-mechanical treatment of the second and third laws of thermodynamics. The fundamentals having thus been established, their applications to systems of independent particles are next considered, and in the third part, which is concerned with interacting particles, there appears a comprehensive survey of the problems encountered in the study of liquids and solutions. Finally, distributions such as those of Fermi–Dirac and Bose–Einstein are derived.

Misleading statements noted include a reference to the temperature of a single molecule (p. 71) and an implication that the dimensions of both an area and a volume in classical phase-space are the same, namely those of Planck's constant (p. 113).

H. Steeple

British Scientific and Technical Books, 1953–57

Edited by L. J. Anthony. Pp. ix+251. (London: James Clarke and Co., Ltd., 1960. Published for Aslib.) 56*s*. net.

THIS volume is essentially a continuation of *British Scientific and Technical Books, 1935–1952*, following the pattern of that earlier bibliography and including entries for the more important and useful books on science and technology published in the British Commonwealth between January 1953 and December 1957. Entries are based on those in the *Aslib Book List* and relate primarily to books published through normal trade channels by commercial publishers. Government publications, monographs, and reports and papers issued by societies and institutions have been included only if they represent important contributions to the knowledge of the subject not otherwise obtainable. Entries for later editions of books noted in the earlier volume are included only if the new edition contains significant alterations or additions ; straightforward reprints are omitted. Besides including those books in such fields as documentation, libraries, psychology, planning and architecture which are of interest to technical readers, every effort has been made to include in the scientific and technical sections books which assist the understanding of the subject by non-technical readers.

The subject headings in the classified bibliography follow the order of the Universal Decimal Classification, but some modifications which have come into use since the issue of the latest Abridged English Edition have been used. Under each class heading entries are arranged alphabetically by author and the entries are annotated to indicate their scope and suitability for three different classes of readers or whether they are reference works such as dictionaries, encyclopædias, etc. There are an author index and a subject index. The volume is admirably produced, but its value would be appreciably enhanced if the time lag between the date of the latest entries and that of publication of the volume could be reduced ; on the present basis of compilation it does not seem too much to expect that this interval could be reduced by at least a year.

R. Brightman

PROPOSED MOLECULAR MODELS OF GRAMICIDIN S AND OTHER POLYPEPTIDES

By DR. DONALD T. WARNER
Research Laboratories, The Upjohn Co., Kalamazoo, Michigan

Introduction

ONE of the most interesting problems in protein and polypeptide chemistry is the tertiary structure or conformation of the amino-acid chain and the relation of this structure to the biological activity of the compound. Some of the probable forces holding the polypeptide chain units in position have been studied extensively; but since the initial work of Pauling *et al.*[1] the hydrogen-bonding forces between —C=O and —NH groups which are believed to result in helical configurations have played a dominant and almost overwhelming part in nearly all the proposed tertiary structures of even the simplest polypeptides. Although the hydrogen bonds between NH— and —C=O groups are important forces, there is at least some reason to question their stability in the aqueous system where biological activity is nearly always encountered. Edsall and Wyman[2] suggest the possibility that "in aqueous solutions a helical polypeptide chain is rather likely to unfold into a more open and random type of coil". In a similar manner Schellman[3], from a study of the urea-water system, has concluded that hydrogen bonds, taken by themselves, give a marginal stability to ordered structures, which may be enhanced or disrupted by interactions of side-chains.

These questions about the relative stability of —NH——O=C— hydrogen bonds in the competitive aqueous system have opened the way for the serious consideration of other forces which may be operative under biological conditions to influence the tertiary structure of proteins. The interesting work by Kauzmann[4] concerning the probable effect of the hydrophobic attraction of the non-polar side-chains of peptides or proteins is an example of a new emphasis in the problem of tertiary configuration. His recent review[5] of the forces responsible for maintaining the native configurations of proteins includes a more complete exposition of the hydrophobic attractions as well as the dispersion forces (London forces) which are closely related to them. Equally provocative has been the extensive work with poly-L-proline[6a-g]. In this polymer all the usual considerations, such as peptide —NH——O=C— hydrogen bonds, disulphide linkages, and electrostatic attractions, are completely absent so far as can be seen, and yet the poly-L-proline exists in two definite stable configurations which are seemingly dependent for their stability upon the solvent systems employed. One stabilizing force which could apparently be present in this polyamino-acid in aqueous solution would be the hydrophobic attractions of the non-polar side-chains. Thus the nearly planar pyrrolidine rings of the L-proline units in a molecular model can be piled above each other like a series of staggered plates with a spiral of carbonyl oxygen atoms going up around the outside of the pile. (Cowan and McGavin[6a] actually indicate that in the pyrrolidine ring the γ-carbon atom is about 0·5 Å. out of the plane.) Since the distance between these carbonyl oxygens on the spiral is such that a water molecule fits between two adjacent oxygens almost exactly in the model, it is perhaps not out of order to consider that such a spiral could be stabilized by a combination of hydrophobic attractions of the rings and hydrogen bonding of water molecules between carbonyl oxygen atoms to yield the so-called *trans* form of poly-L-proline (poly-L-proline II)[6g]. I have prepared such a model, but prefer not to present it for discussion since with available construction kits it is impossible to represent the γ-carbon displacement (0·5 Å. out of the plane of the ring), an item of considerable importance in a structure containing only proline units. It is interesting that poly-L-proline II (stable in the aqueous system) can be converted back to poly-L-proline I by acetic acid–propanol[6d], a solvent system which might be expected to disrupt hydrophobic attractions.

In my work on molecular models I have been most concerned with some of the natural products of intermediate size and well-established structure containing relatively few amino-acids. These smaller polypeptides have frequently been characterized not only with regard to their amino-acid sequences but also in other fine points of structure such as possible ester linkages, ε-amino lysine linkages, and the presence of D-amino-acids. Many of the polypeptide antibiotics and hormones are in this category. Since most of these molecules have interesting biological activity, and lend themselves fairly conveniently to the construction of molecular models, it was hoped that such a study would give some clue to structural similarities other than amino-acid sequence which might be the basis for a common biologically active unit.

Theoretical Considerations

In attempting to define a common structural feature in these highly reactive polypeptides, I first of all considered the possible conformations of the cyclic ring which is present, for example, in a molecule such as oxytocin. This disulphide stabilized structure has 22 atoms in the ring, and the intact cycle is essential for maximum activity in molecules which possess this system. However, in my opinion, one of the interesting structural features in this cycle is the presence of six amide linkages, and the fact that these groupings can be arranged in a strainless hexagonal configuration with the carbonyl oxygen atoms at the corners of the hexagon. For the purpose of illustrating this concept, a molecular model of a relatively simple (and hypothetical) cystine-stabilized structure,

$$\underbrace{NH_2\text{—Cys—(Ala)}_4\text{—Cys}}_{\text{S—S}}$$

is pictured in Fig. 1*A*.

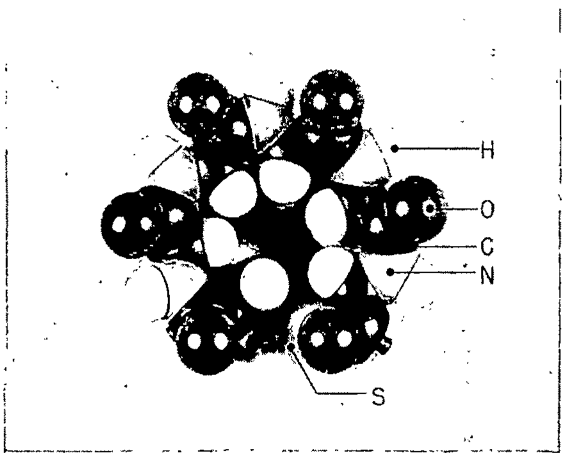

Fig. 1*A*

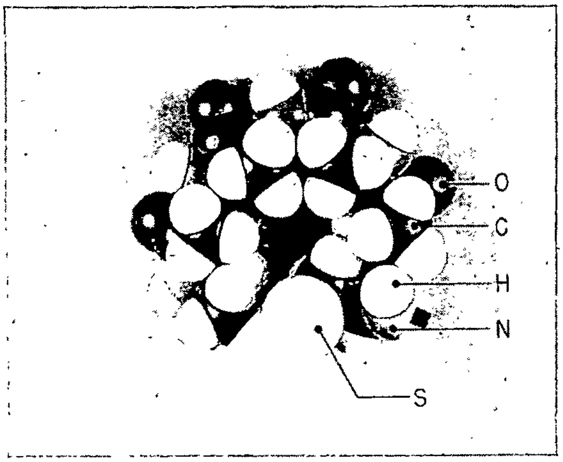

Fig. 1*B*

This amide side of the hexagon, which I shall refer to as the 'front' or hydrophilic side, shows a very compact arrangement of the α-carbon atoms as a central ring within the hexagon and the α-hydrogen atoms of the L configuration pointing inward to form a nearly circular pattern around an open central area. (In all these models, the absolute configuration for the L-amino-acids as determined by J. Trommel and J. M. Bijvoet[7], was used. All the models illustrated here were made with the Catalin space-filling molecular models (Catalin, Ltd., Waltham Abbey, Essex, England).) The other side of this hexagonal model, which I shall refer to in this and subsequent discussion of other models as the 'back' side or hydrophobic side, is shown in Fig. 1*B*. It will readily be seen that the arrangement of amide-groups suggested for the 'front side' has the consequence of bringing all the non-polar methyl groups on the 'back side' into very close proximity. Thus the possibilities for maximum hydrophobic attractions which are suggested as desirable for an aqueous environment by Kauzmann[4,5] are perhaps more rigidly satisfied by this hexagonal structure than by other possible conformations. In addition to these favourable non-polar interactions on the 'back side' of the model, the carbonyl oxygen atoms on the 'front side' of the plane are almost exactly 4·8 Å. from each other[8], which would be the proper distance to hydrogen bond one water molecule based on an oxygen–oxygen distance of about 2·90 Å. in liquid water (at 1·5° C.) and an H—O—H angle of 109°. Thus the proposed hexagonal configuration of Figs. 1*A* and *B* could be the favoured form in an aqueous environment by virtue of the co-operative combination of (*a*) 'back side' hydrophobic attractions and (*b*) 'front side' hydrogen bonding of water by adjacent carbonyl oxygen atoms.

In joining the disulphide linkage of the cystine unit, we have taken into consideration the most stable conformation of the —CH_2S—SCH_2-linkage with a dihedral angle of 90° between the methylene groups as discussed by Calvin[9]. This dihedral angle imposes certain restrictions on the approach distance of the two carbonyl oxygens of the cystine unit and may be a probable factor in the uniform spacing of these two atoms. Other implications of the configuration of the disulphide linkage on chain structure are discussed by Haurowitz[10]. Although Figs. 1*A* and *B* picture a hypothetical polypeptide containing the simplest non-polar side-chain of alanine with a cystine unit in order to present the general principles of our proposal, the models could represent a possible general conformation of the oxytocin ring.

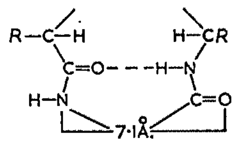
A second consideration in applying this concept of hexagonal structures as probable reactive units can be observed with the cyclic decapeptides such as gramicidin *S* (ref. 11), circulin[12], and tyrocidin *A* (ref. 13) or *B* (ref. 14). In one of the possible conformations, these molecules can be shown to be capable of existing as two fused hexagons somewhat analogous to the six-member and ten-member benzene–naphthalene situation. This approach to the structure of the cyclic decapeptides also offers some interesting clues to the structural necessity of certain D-amino acids, which I hope to point out as the discussion progresses.

A third consideration in this concept of hexagonal structures as reactive units concerns the open central position in the hexagon, which is readily apparent in Figs. 1*A* and *B*. Since this open central position is in a definite fixed position in the hexagon, it could serve as an opening through which a reactive side-chain group (for example, δ-NH_2 group of ornithine, γ-CO_2H of glutamic acid) could enter the 'front' side of the hexagon at a rigidly determined position. This possibility too will be discussed in greater detail for specific compounds.

Keeping in mind then the three concepts of (*a*) a hexagonal configuration with an amide or hydrophilic 'front' side and a side-chain or hydrophobic 'back' side, (*b*) the possibility that two or more hexagons may appear as fused units and (*c*) a fixed open centre in the hexagon for side-chain reactive groups, I propose to examine the complete models of some of the simpler naturally occurring polypeptides. In particular we are interested in gramicidin *S*, since a proposed conformation for this antibiotic has recently been published[15,16]. I would also like to extend this discussion to the antibiotics etamycin and actinomycin *D* (C_1) for reasons to be presented later.

Gramicidin S

The primary structure of gramicidin *S* is probably one of the best-established sequences of the polypeptide antibiotics[17] and in addition some of the X-ray dimensions and the overall shape of the molecule have been determined[15]. The proposed conformation of Hodgkin *et al.*[15] as adopted by Schwyzer[16] is based entirely on internal hydrogen bonding to hold the structure together. A model of their conformation is illustrated in Figs. 2*A* and *B*. This suggested structure places the component amino-acids essentially in two parallel chains joined by proline units at the ends, presumably because proline has been frequently associated with directional changes in the polypeptide chain. Only four of the eight possible —NH groups are actually engaged in intramolecular hydrogen bonding. The two proline residues, of course, have no —NH groups, and the other four —NH groups are presumed to be hydrogen bonded intermolecularly. On the 'front side' of this model (Fig. 2*A*) the two side-chains of ornithine are located above the plane of the amide linkages far from any association with other side-chains. Since these two side-chains are not apparently restricted to any position, the reactive amino-groups will not have a definite fixed place in this conformation. When the model is examined on the basis of Kauzmann's[4,5] discussion of hydrophobic attractions and dispersion forces, the Hodgkin–Schwyzer conformation[15,16] seems to offer little opportunity for maximum hydrophobic interaction of the alkyl side-chains. Not only is there considerable open space between non-polar groups on the same side of the principal plane of the molecule, but also some side-chains are actually on opposite sides of the plane. In fact, it would appear from the models that, in general, the *trans* configuration of the amide-group is less favourable for maximum hydrophobic attraction of side-chains on adjacent amino-acid units since the α-carbon atoms carrying the side-chains are always farther apart when the amide linkage is *trans*. In a similar manner, although Kauzmann indicates that aromatic rings will be in the most favoured position when they are close together, their configuration[15,16] finds the two benzene rings of the respective D-phenylalanine units as far apart as they could possibly be, at the opposite ends of the parallel chains. The structure indicates no particular geometrical advantage in having the D-form of phenylalanine instead of the L-isomer at that position. The overall dimensions of the model do not seem to be particularly close to the rectangular dimensions of 11 Å. × 19 Å. suggested by Hodgkin's X-ray data[15]. Indeed, if one lays out diagrammatically the distances involved between the two parallel chains (taking a liberal value of 3 Å. for the —O——H—N hydrogen bond):



then the average width of the proposed rectangle is about 7 Å. rather than the 11 Å. value determined by the X-ray method. One or two of the unbonded carbonyl oxygens may be about 10 Å. apart, but that would represent the maximum width at one or two places only. The overall length of the model as shown would correspond to a value of about 24 Å., although this could be varied somewhat by pointing the benzene rings downward in an isolated position.

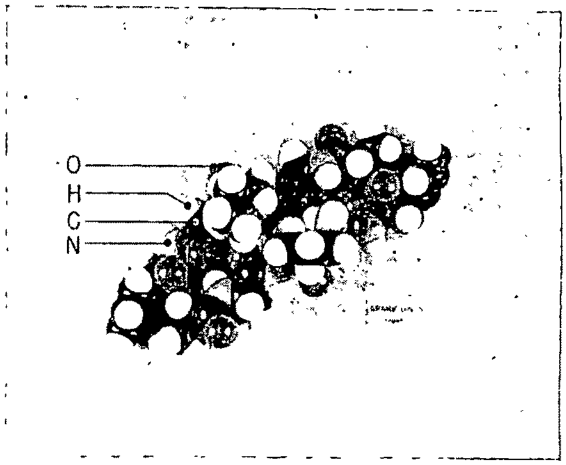


Fig. 2*A*

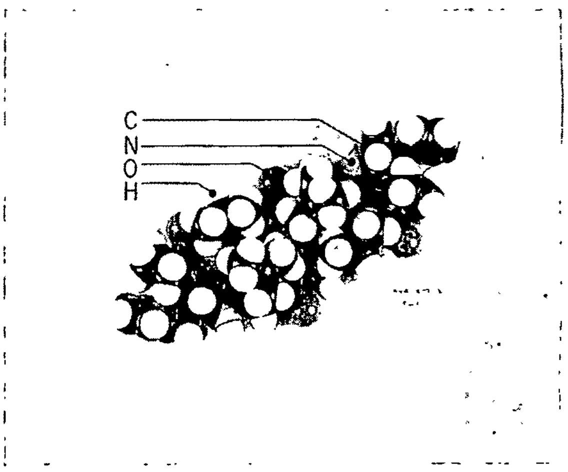

Fig. 2*B*

As an alternative suggestion for the conformation of gramicidin *S*, I would like to discuss the structure which is indicated in Figs. 3*A* and *B*. The formulation of this model has been based on my previous observation that the cyclic decapeptide ring can be readily arranged in the shape of two fused hexagons, a virtually strainless structure employing the usual bond-angles. In this fused system, the carbonyl oxygen atoms again form the corners of the hexagons, and the α-carbon atoms form two closely knit rings within the individual units. Now in a model of such a cyclic decapeptide, if all the amino-acids were L-amino-acids, the α-carbon atoms would project only a ring of α-hydrogen atoms toward the centre of the molecule, and at the fusion point of the two hexagons there would be a considerable open space. However, in the case of the gramicidin *S* decapeptide there are two D-phenylalanine molecules in the cycle just five units apart. If these two components are placed at the juncture position of the two rings, the opposite D-configuration at that position projects its non-polar side-chain (instead of the single α-hydrogen atom) into the central open area and the open space is neatly filled. Indeed, the —CH_2— groups of the two D-phenylalanine side-chains in this suggested conformation so direct their respective benzene rings into the central space that the two rings are exactly side by side. Not only does this projection of the side-chains completely fill the open fusion junction but it also fulfils elegantly Kauzmann's suggestion[5] that "the aromatic rings of phenylalanine will prefer to be close to one another" in the most desirable hydrophobic arrangement. The smaller central open area in the individual hexagonal units is still available for the entrance of the δ-amino ornithine groups from the 'back side' of the structure. It will be noted that, if one prefers to presume that proline units are associated with a change in the direction of the polypeptide chain (a point which may still be open to question), then the proline units adjacent to the D-phenylalanine units are also located at the proper positions. In this conformation a look at the 'back side' (Fig. 3*B*) of gramicidin *S* is even more revealing, since it clearly shows the attractive possibilities for maximum hydrophobic bonding. With the two benzene rings fitted nicely side by side, these aromatic substituents are also flanked by the nearly planar rings of the two proline units to form four compact layers. On either side of this central compact layer we have the non-polar groups of valine, ornithine, and leucine fitted closely together with maximum hydrophobic attraction. The δ-amino groups of the two ornithine side-chains are thus brought firmly into position in the two small open centres of the individual hexagon units, and appear in a fixed position in the 'front side' of the structure (Fig. 3*A*). The general shape of the 'back side' of gramicidin *S* in our proposed model is roughly rectangular. Because of the layered arrangement of the pro-phe-phe-pro side-chains it is possible to calculate the width of this rectangle from the standard approach distances of aromatic nuclei and the van der Waals's radii of methylene groups[18]. This calculated value is 10·8 Å., very close to the observed value of 11 Å. The length estimated from the Catalin model is about 16–17 Å., which is not in complete agreement with the observed value of 19 Å. However, these dimensions do not take into account the possible contribution to the overall size by three moles of water and two moles of ethanol known to be present in at least one of the crystals examined[15]. I would like to emphasize again that I am proposing this conformation as the one which might be stabilized by forces operating in an aqueous system, which may or may not be different in their magnitude or direction from forces operating in the crystal state or in a non-aqueous environment.

The points which seem to favour our conformation of gramicidin *S* (Figs. 3*A* and *B*) may be summarized as follows:

(*a*) The overall size and shape of this conformation as indicated from the model and actual contact distances seem to fit the X-ray data perhaps somewhat more satisfactorily than the previously proposed conformation of Hodgkin and Schwyzer[15,16].

(*b*) The structure gives maximum aggregation of hydrophobic groups, together with a most favourable placing of the aromatic rings of the D-phenylalanine units.

(*c*) The fused hexagon arrangement indicates a probable specific structural advantage or requirement for the presence of the two D-phenylalanine units in the molecule, a point that is not so apparent in the alternate arrangements thus far proposed.

(*d*) The smaller open central areas in the two hexagonal units provide spaces for the rigid arrangement of the two δ-amino-ornithine groups at fixed distances from each other on the 'front side' of the molecule. This 'front side' may be regarded as the hydrophilic side of the structure, and may be the reactive surface of the molecule.

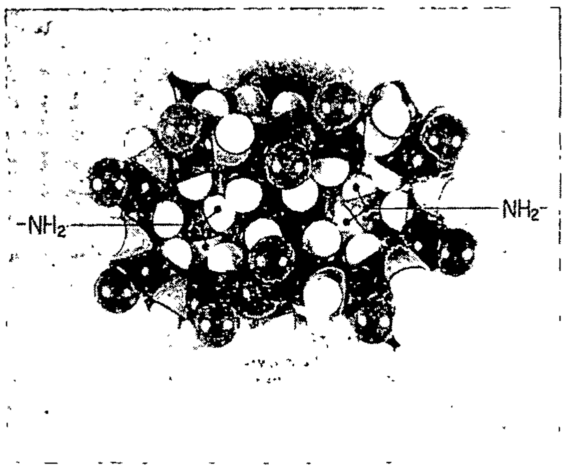

Fig. 3*A*

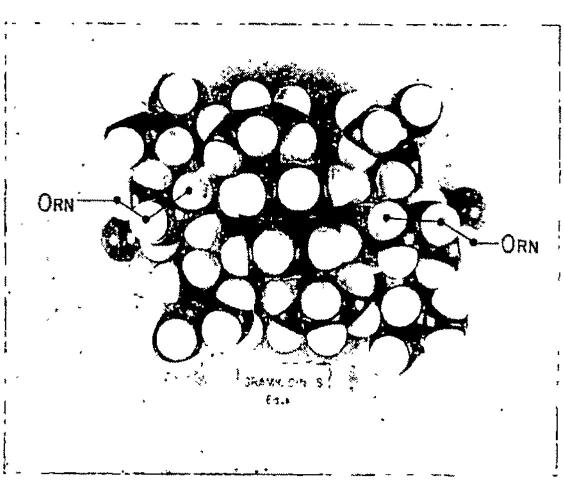

Fig. 3*B*

One other feature of the 'front side' (Fig. 3*A*) of gramicidin *S* may be worth mentioning. Schmidt[15] emphasizes in a discussion of the X-ray data that "there appear to be many groups about 4·8 Å. apart". Similar reflexions of approximately 5 Å. were observed by Cowan and Hodgkin[19] in their work with insulin and gramicidin *B*. It may be suggested that eight of the ten oxygen atoms at adjacent corners of the fused hexagons are approximately 4·8 Å. apart as estimated from the models and from diagrams based on measured angles and interatomic distances. The two centrally located amino groups are also at a similar distance from the carbonyl oxygen groups.

Etamycin and Other Polypeptides

The complete lack of —NH groups already noted for poly-L-proline is a feature which is shared to a somewhat lesser extent by at least two classes of naturally occurring polypeptide antibiotics. Thus, for example, in etamycin[20] and the whole spectrum of actinomycin antibiotics[21a–d] a majority of the amino-acids in the molecule have secondary amino groups (such as sarcosine, N-methylvaline and others) which prevent these units from participating in —NH bonding with other carbonyl groups. Therefore the tertiary structure of these compounds is more probably determined by other forces such as hydrophobic bonding, at least when compared with compounds having a full quota of —NH groupings. Indeed, as if to augment the low number of —NH bonds, the percentage of amino-acids with non-polar (that is, hydrophobic) side-chains is also very high in etamycin as well as the actinomycins, so that both effects would operate in an aqueous system toward configurations with a high degree of possible hydrophobic bonding. In these two types of structures, salt linkages and disulphide bonds are also absent. Both compounds also contain D-amino-acids which I think may be structurally expedient to promote closer hydrophobic fitting as in the case of gramicidin *S*.

Using these concepts of maximum hydrophobic bonding in aqueous systems, I have prepared a model of etamycin and photographed it from the 'front' (amide side) in Fig. 4*A* and the 'back' (hydrophobic side) in Fig. 4*B*. Fig. 4*A* shows the overall compact configuration which this proposed arrangement permits. Into the centre of the hexagonal unit it brings the phenolic hydroxyl group of the 3-hydroxypicolinic acid, held in that position by the benzene ring of phenylsarcosine. It will be noted that, with the exception of the ester-linked L-threonine, each of the other L-amino-acids of etamycin contributes its single α-hydrogen atom to the central ring surrounding the hydroxyl group of the hydroxypicolinic acid. However, the D-allohydroxyproline, having the opposite configuration, points its β-methylene group into the central area, which also brings the γ-carbon containing the hydroxyl group alongside the pyridine ring of the picolinic acid. This hydroxyl group of the D-allohydroxyproline assumes a very interesting and significant position in the proposed conformation. First of all, it lies immediately adjacent to the nitrogen atom of the pyridine ring; and consequently the —N——H—O— bonding observed by Pressman[22] for water molecules with the ring nitrogen of *iso*nicotinate, nicotinate, and picolinate, will be a highly probable attraction. When the hydrogen atom of this hydroxyl group is pointed toward the ring nitrogen, the oxygen atom is turned in the proper direction so that it can hydrogen-bond very neatly on its 'back side' with the —NH group of the picolinate–threonine amide bond as well as the —NH group of the threonine -D-leucine bond. Some of these possible interactions are seen more clearly on the other side of the model (Fig. 4*B*). The —NH grouping of the D-leucine amide link to threonine is best accommodated in the ring structure in the *trans* configuration. With two D-amino-acids adjacent to each other in the etamycin chain sequence, steric interference permits only one of the side-chains to be arranged in the central area of the hexagon. The three probable interactions which were mentioned for the hydroxyl group of D-allohydroxyproline strongly favour its inclusion in the central area instead of the D-leucine. As a consequence the rather bulky non-polar side-chain of D-leucine is pushed to the outside, a situation which is best accomplished by the indicated *trans* amide linkage at the threonine-D-leucine junction, and then simultaneously favoured by the resulting hydrogen bond with the hydroxyl group of its D-allohydroxyproline neighbour. So far as the 'front side' of the conformation (Fig. 4*A*) is concerned, the presence of two adjacent D-amino-acid residues produces a 'change of direction' in the amino-acid chain so that the carbonyl oxygen of D-leucine is crowded outside the hexagon formed by the other six carbonyl oxygen atoms.

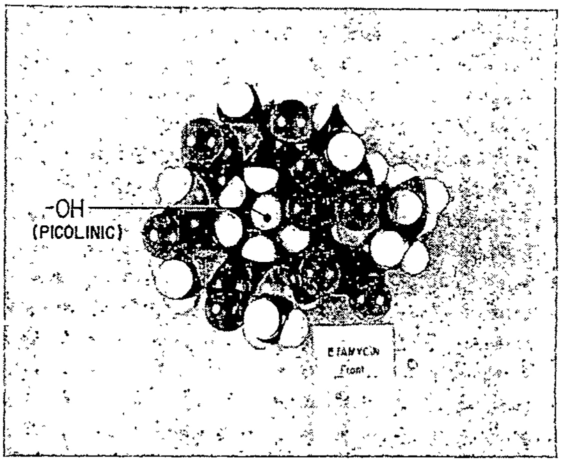

Fig. 4*A*

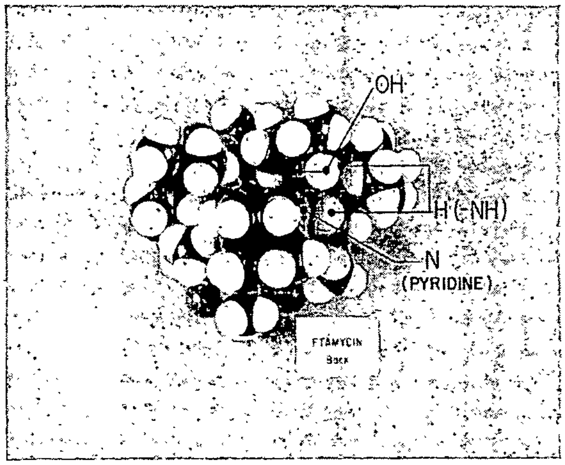

Fig. 4*B*

Other features of the hydrophobic 'back side' of etamycin (Fig. 4*B*) are the very close fitting of the aromatic rings of benzene (phenylsarcosine) and pyridine (picolinic acid) placed side by side, and the other non-polar groups compactly arranged around the two rings. The D-allohydroxyproline ring is particularly well fitted against the pyridine ring, and the entire conformation agrees well with Kauzmann's suggestions[5] about hydrophobic bonding and dispersion forces. In this proposed conformation of etamycin, hydrophobic attractions and hydrogen bonding possibilities can both be present to a maximum extent, although the suggested bonding would not involve a carbonyl oxygen, but the hydroxyl group of D-allohydroxyproline. This model of etamycin also shows quite nicely that the hydroxyl group in the D-allo isomer is in a better position for hydrogen bonding than the hydroxyl group of the more common hydroxyproline.

The third molecular model I shall discuss in detail is actinomycin *D* (C_1). From the work of Brockman *et al.*[21a–c] and Bullock and Johnson[21d], the actinomycins have been shown to contain a substituted phenoxazine chromophore attached to two individual cyclic pentapeptide lactone rings through the amino-group of threonine, while the hydroxy group of threonine forms the lactone juncture. Models of the structure of actinomycin *D* as it appears in the literature can be made; but the two pentapeptide rings are quite strained, and there is, of course, a certain amount of 'free rotation' about the amide bond of the threonine–chromophore junctions. Consequently the entire conformation has little structural rigidity and a low degree of hydrophobic interaction, especially between the chromophore and the non-polar side-chains. However, if one examines the chemical evidence for the two individual lactone rings, the methanolic sodium hydroxide hydrolysis[23], consuming two equivalents of alkali, is equally consistent, in my opinion, with a decapeptide dilactone ring in a continuous cycle and attached at two points to the chromophore. Similarly, the alkaline peroxide degradation of the chromophore[21d] to yield two pentapeptide fragments would proceed equally well from a decapeptide dilactone. Even the recent synthesis of actinomycin C_3 by Brockman and Lackner[24] is not unequivocal proof for the two individual pentapeptide lactone rings. Schwyzer and Sieber[25] have demonstrated previously that the pentapeptide, val-orn-leu-phe-pro (L,L,L,D,L), preferentially forms the cyclic decapeptide, gramicidin *S*, instead of the expected cyclic pentapeptide. Consequently the formation of the decapeptide dilactone should be considered in the actinomycin C_3 synthesis. It is interesting that Brockman[26] also considered the possibility of the decapeptide dilactone in his earlier work, but discarded it later because of his views that the chromophore is formed biologically from the oxidative fusion of the pentapeptide lactone of 3-oxo-4-methyl-anthranilic acid[21c].

Because of the distinct possibility that the actinomycin molecule may be a decapeptide dilactone, I would like to present a model of this alternate structure for consideration as a very likely primary structure and conformation of actinomycin *D* (C_1). The suggested amino-acid sequence of the decapeptide dilactone is given in Fig. 5.

The positions of the abbreviated amino-acid symbols correspond approximately to the carbonyl oxygen positions of the amino-acids in the molecular model (Fig. 6*A*), with the

$$\underset{\displaystyle O}{\overset{\|}{—C}}—\underset{\displaystyle R}{\overset{|}{CH}}—NH—$$

direction counter-clockwise. In the case of the threonine, the —NH points toward (and above) the chromophore while the —OH forms the lactone with N-methylvaline.

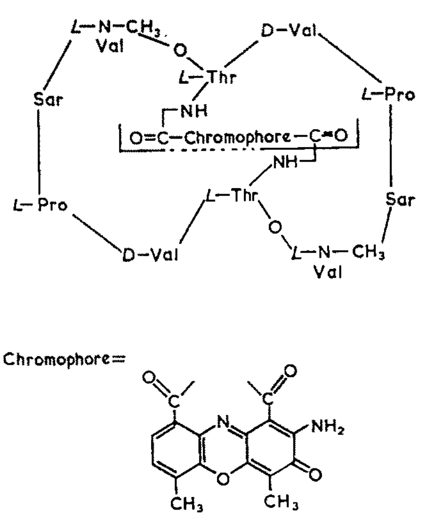

Fig. 5. Probable amino-acid sequence of actinomycin *D* (C_1)

The molecular models of actinomycin *D* (C_1) are illustrated in Fig. 6*A* ('front side') and 6*B* ('back side'). This proposed structure for actinomycin places it in the same class of compounds as gramicidin *S*, circulin and the tyrocidins. In the form of the decapeptide dilactone, the component amino-acids surround and support the chromophore whereas in the alternate case of two pentapeptide lactones these rings circled above the chromophore. The decapeptide dilactone therefore gives maximum hydrophobic interaction. This is apparent also from the 'front side' (Fig. 6*A*). The two molecules of D-valine bring the —CH and one CH_3 group of the side-chain into the central open space next to the chromophore, thus effectively shielding this resonating system as well as supporting it in the central portion of the molecule. (Substitution of L-valine in the model gives a much less satisfactory fit.) Thus, our proposed configuration of the molecule indicates again a definite, structural, space-filling preference for the D-amino-acid. This utility was also suggested for the D-phenylalanine units in gramicidin *S* and for the D-allohydroxyproline and D-leucine in the case of etamycin. It will be noted that here, too, as in the etamycin and gramicidin *S* models, the D-amino-acid is associated with a change in direction of the amino-acid chain; for in order to accommodate the bulky D-valine side-chain in the centre of the structure, the threonine carbonyl group points toward the centre and consequently projects its side-chain outward toward the ester linkage with N-methyl-L-valine. Although actinomycin *D* has only four possible —NH groups for hydrogen bonding, it will be noted that two of these —NH——O=C— hydrogen bonds are nicely formed between the —NH group of one threonine unit and the carbonyl oxygen of the other threonine unit at the junction of the two hexagons.

With the rather rigid chromophore grouping in actinomycin *D*, it should be possible to measure quite accurately the distance between the carbonyl oxygen atoms at the centres of the decapeptide dilactone. Although interatomic distances for phenoxazine are not recorded, a fair estimate may perhaps be obtained from the values for phenazine and benzoic acid[27]. The value so obtained would be about 7·2–7·4 Å., depending on the angles selected between the carbonyl group and the aromatic ring. The value estimated from the Catalin models is about 7·3 Å. (measured tangentially to the two carbonyl oxygen atoms).

The hydrophobic 'back side' of the actinomycin *D* (C_1) (Fig. 6*B*) shows a central location of the chromophore. The symmetry of the picture is quite apparent, being roughly rectangular or elliptical in shape with matching corners and sides. Here, too, the resonating chromophore system is seen to be well protected by non-polar, hydrophobic groups, almost like an electrical insulating layer. I should perhaps emphasize again that this structure would, in our opinion, be a probably preferred configuration for the aqueous (or biological) system, and might not be present with solvents which would rupture hydrophobic bonds. This 'back side' of actinomycin *D*

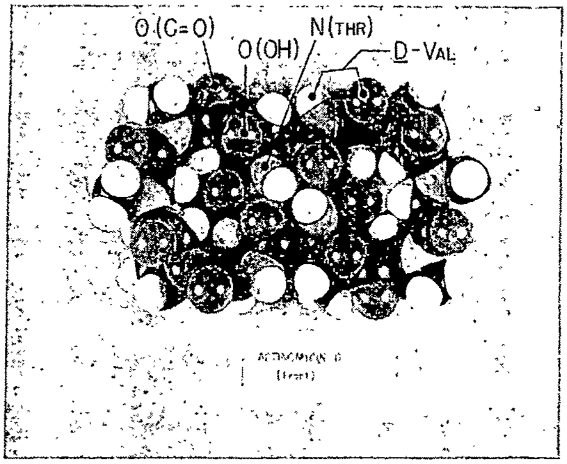

Fig. 6A

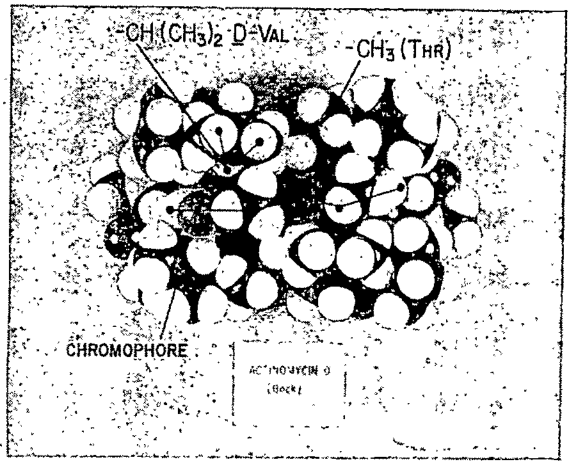

Fig. 6B

shows a slight open space between the threonine methyl group (which was purposely moved slightly away from the chromophore to pinpoint its position) and the adjacent methyl group of D-valine. When this particular valine methyl group is replaced by an ethyl group, the space along the sides of the chromophore is even more uniformly filled, and the resulting amino-acid turns out to have the structure of D-allo-*iso*leucine[28]. It was of interest to us that the configuration of D-allo*iso*leucine was predicted from consideration of the open space in the model before we had checked the actual assignment of the structure, but this result could, of course, have been fortuitous. The model containing two moles of D-allo*iso*leucine would be actinomycin C_3.

One other feature of the 'back side' of actinomycin *D* (Fig. 6*B*) is perhaps worth indicating in this conformation. The long, slender shape of the chromophore group requires as much space as possible at the ends to accommodate the benzene rings and especially the amino substituent of the phenoxazine nucleus. This space is conveniently provided in this particular conformation by having sarcosine units with their minimum-sized α-CH_2 groups exactly in line with the ends of the chromophore at that point. The rigid arrangement of the ends of the chromophore relative to the sarcosine units may also be an important point in the recent acid degradation studies with actinomycin C_3. In these experiments[29a] concentrated hydrochloric acid at 37° selectively splits the molecule in only one place at a sarcosine–methyl valine linkage. From Fig. 6*B* it is apparent that the sarcosine–methyl valine juncture at the left end of the chromophore is near the chromophore amino group, but the similar amide bond at the right end of the chromophore does not have a similar neighbouring group. Such adjacent amino-groups are known to contribute an increased acid stability to the glycosidic linkage in neobiosamines[30] and we have observed a similar stabilizing effect in the very slow acid degradation of the glycosamine polymer, chitosan[31]. Consequently this particular decapeptide dilactone conformation also offers a plausible explanation for the selective acid hydrolysis of one of the sarcosine–methyl valine bonds and the relative stability of the other.

In the course of our work with these molecular models we have prepared similar proposed conformations of other structures such as the complete oxytocin molecule and the cyclic decapeptide, circulin. The circulin model may be especially interesting because it shows how a single D-amino-acid (D-leucine) can effectively fill the open centre of the two fused hexagons which may be the preferred conformation for the cyclic decapeptide antibiotics. The recent disclosure of the formulæ of circulin *A* and *B* by Koffler and his associates[32a,b] has prompted me to include a single model (Fig. 7) showing mainly the decapeptide ring, with only the α-hydrogen atoms (but not the side-chains) of the nine L-amino-acids, and the $—CH_2CH(CH_3)_2$ side-chain of the D-leucine. The D-isomer side-chain may also function as a structural spacing unit to separate the two central carbonyl oxygen atoms. This may also be true for the two D-phenylalanine side-chains in gramicidin *S*.

Concluding Remarks

It will, of course, be appreciated that the proposed 'fused hexagon' conformation which has been discussed for cyclic decapeptides of the antibiotic type may also be capable of extension to the active centre of an enzyme, such as trypsin, where a disulphide-stabilized decapeptide is presumably part of the reactive unit[33]. If the two reactive centres in such a trypsin cyclic decapeptide are at approximately the same distance as the two centres of the actinomycin chromophore (about 7·3 Å.), then it could perhaps be significant that the distance between

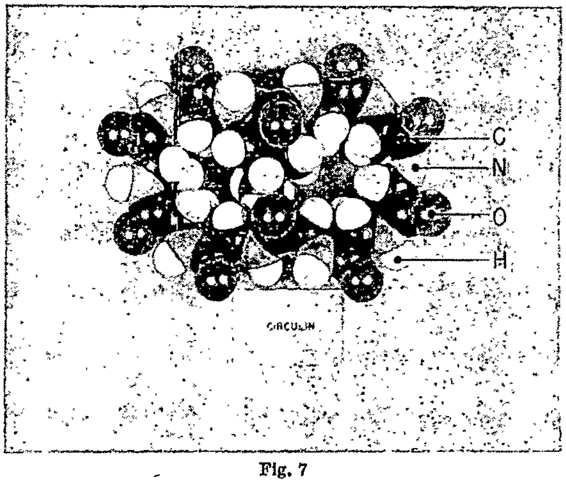

Fig. 7

the ε-amino group of lysine and the carbon atom of its carbonyl amide group (where anion attack in hydrolysis might be expected) is definitely approximately 7·2–7·5 Å. as judged by the Catalin model of the extended chain. This dimension was also estimated at 7·4–7·5 Å. diagrammatically from the interatomic distances and angles given for DL-α-norleucine (ref. 27, *M* 207), arbitrarily using the α-NH_2 angle with the α-C atom as a rough approximation for the angle of the ε-amino group with the ε-carbon atom in the extended chain configuration. Such a space separation of the reactive groups would allow attachment of the ε-amino group of lysine at one point and hydrolysis of the amide linkage at the other point. With the incomplete information thus far available concerning the active centre of trypsin this is admittedly a very speculative consideration, but the indicated dimensions are at least consistent.

Our considerable experience with these models in the construction of decapeptides and other slightly smaller polypeptides substantiates clearly the points raised by Platt[34] in his discussion of the need for better models. We noted difficulties especially in the gramicidin *S* model, where the bulky groups had to be held in place by small bolts and rubber bands to simulate hydrophobic attraction. As a result small spaces sometimes appear between the joined atoms in the photographs which are the result of mechanical weakness of the model bonds and slight differences in bond-angles rather than steric hindrance in the actual structure. No doubt these difficulties can be surmounted, and the problem is strictly an economic problem so far as the model suppliers are concerned. In spite of these difficulties, the models have been a great aid in visualizing the conformations which I have presented for gramicidin *S*, etamycin and actinomycin *D*. I think that the conformations show quite clearly the compact hydrophobic attractions which can be present in molecules with fairly complex side-chains, and therefore suggest that these conformations may probably be favoured by the aqueous, biological systems. Whether *cis* amide bonds (allowing the closest hydrophobic attraction of non-polar groups) or *trans* amide bonds (which seem to be at present favoured but offer less compact hydrophobic attractions) are actually present in the aqueous system is probably a major consideration. The comments by Pauling[35] concerning the probable instability of the *cis* amide linkage which is associated with the presumed orbital overlap of α-hydrogen atoms were based on a van der Waals's radius for hydrogen of 1·2–1·4 Å. This argument should perhaps be re-examined on the basis of the somewhat smaller 'interference radius' of hydrogen which some workers regard as a more accurate measure of possible steric hindrance[36a–d]. The models also clearly show that, in a cyclic hexapeptide with *cis* amide linkages, the carbon–hydrogen bond at the tetrahedral α-carbon atom projects upward at about a 20° angle with respect to the main plane of the hexapeptide ring. Consequently a C—H distance of 1·07 Å. is equivalent to an 'in-plane' projection of about 1·00 Å., so that any crowding of neighbouring α-hydrogen atoms is further relieved. In the light of these considerations the *cis* configuration of the amide bond may be consistent with a desirable close-fitting structure instead of a sterically unstable conformation. Its presence is certainly consistent with maximum hydrophobic interactions which may be highly effective in the aqueous system.

I wish to thank many of my colleagues at the Upjohn Co. for their helpfulness in the preparation of this manuscript and their encouragement of the work. I am particularly grateful to Prof. C. H. Li for his suggestions and interest. I want to thank Mr. Eugene Beals of our photography group for his patient help in preparing the pictures of the molecular models. The co-operation of Mr. J. E. S. Whitney of Catalin, Ltd., in preparing the special model atoms of peptide nitrogen for use in constructing these conformations is appreciated.

Note added in proof. Since this manuscript was submitted for publication, papers, by Klotz and Franzen[37] on the stability of interpeptide hydrogen bonds in aqueous systems, and by Tanford *et al.*[38] on hydrophobic bonds and the structural stability of native proteins, have appeared which are pertinent to the validity of the conformations proposed.

With regard to Figs. 3*A* and 3*B*, the possibility that the L-leu-D-phe amide junction may involve a *trans* amide bond with the —NH— pointing toward the hexagonal centre is suggested. Similar considerations could apply to Fig. 7 and minor changes in the arrangement of the D-leu unit in Figs. 4*A* and 4*B* might improve the hydrophobic picture.
